

B5000 Carbon Fiber Calipers

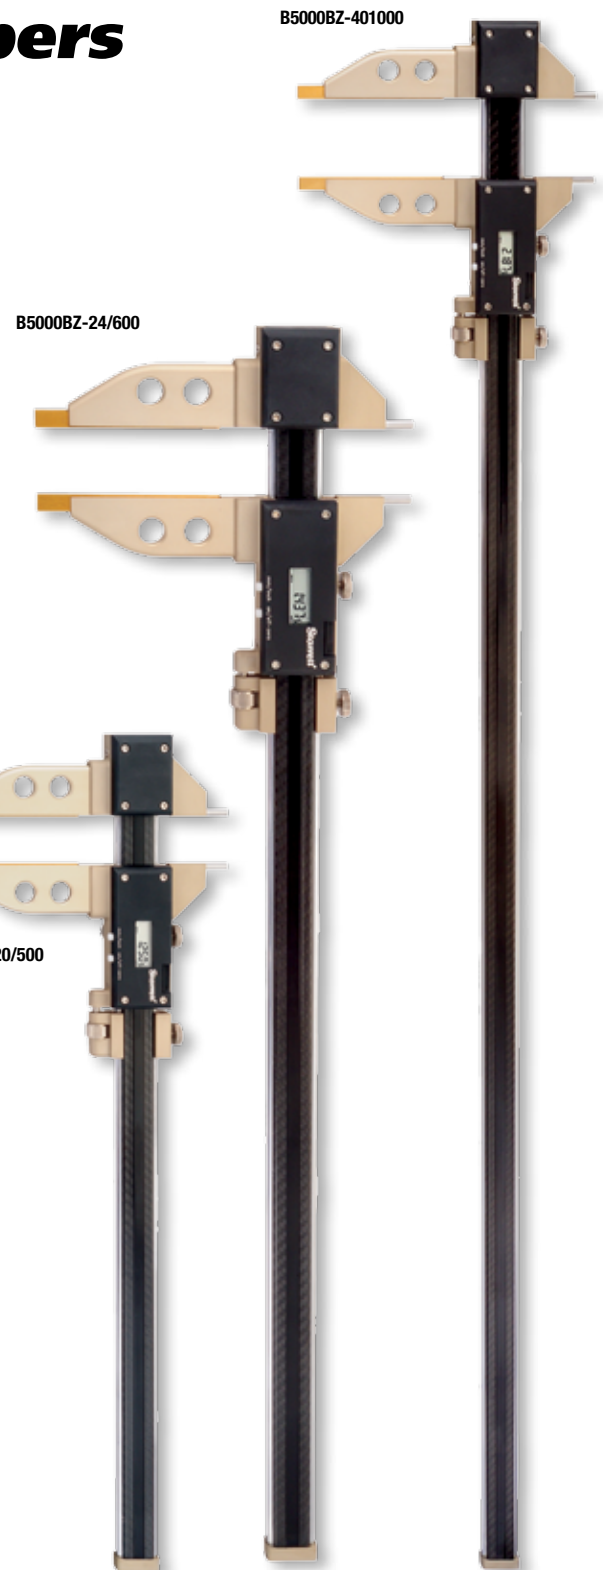

The B5000 Carbon Fiber Electronic Calipers are lighter and easier to manipulate than traditional large calipers for large part measurement. These tools are coolant resistant and utilize carbon fiber to reduce weight. In addition, the measurement jaws have titanium carbide faces for long life and superior flatness.

The initial offering includes 0-20"/0-500mm, 0-24"/0-600mm, and 0-40"/0-1000mm outside capacity tools.

These tools have a port and can be used with the Starrett DataSure® Wireless Data Collection Systems. DataSure® is particularly valuable with these tools due to problems with traditional data wires in large measurement

Features & Specifications

- Inch/mm mode button. When an RS232 cable is installed the button becomes a send button.
- ON/OFF button
- Two preset modes, allow setting of zero and setting to a master
- Hold feature will freeze the display
- RS232 port allows data transmission using a DataSure® Wireless Data Collection System
- Uses one CR2032 lithium battery
- Resolution: 0.0005"/0.01 mm
