

# 7000 Series Phase Noise Tester / Signal Source Analyzer

## Features

- All-In-One Compact Measurement System
- Measurements Down to  $-190$  dBc/Hz
- Offset Range from 0.01 Hz to 100 MHz
- Highest Flexibility & Dynamic Range By Selectable Internal or External References
- Programmable Low Noise Power Supplies
- Powerful GUI and Programming Interface
- External Battery Pack Option

## Applications

- High-Speed Production Testing of Phase Noise
- VCO Testing
- Additive Phase Noise Characterization of Amplifiers, Transmitters, Mixers
- Ultra-Low Phase Noise Crystal Oscillator Analysis
- Time Stability Analysis of Clocks
- Aerospace and Defense

## 7000 Series Datasheet v1.22

Phase Noise Tester / Signal Source Analyzer from  
1 MHz to 7, 26, or 40 GHz

## Introduction

The 7000 series is an integrated solution that offers an indispensable set of measurement functions for evaluating signal sources ranging from VHF to microwave frequencies such as crystal oscillators, PLL synthesizers, clocks, phase-locked or free-running VCOs, DROs, SAW or YIG oscillators, and others.

The flexible instrument comprises a two-channel cross-correlation system with two internal tunable references sources and also allows measurements with externally fed references.

The 7000 series supports many other functions including:

- Absolute and residual phase noise measurements
- Amplitude noise measurements
- Pulsed absolute and residual phase noise measurements
- Two channel 100 MHz FFT analyzer
- Transient measurements (frequency, phase, amplitude versus time)
- Spectrum analysis
- Frequency counter function / power meter

Additionally, the unit offers:

- Two programmable low noise DC supplies up to 15 V and 600 mA current capability
- Three low noise tuning voltages for -5 to +22 V voltage range

It is a compact and powerful instrument available with LAN (VXI-11), USBTMC, or with GPIB (optionally) interfaces. Platform independent intuitive graphical user interface (GUI), API library, and powerful SCPI command language set are available.

## Available Options:

- **GPIB:** IEEE-488.2, 1987 programming interface
- **LN:** ultra low close to carrier phase noise
- **P:** pulsed RF measurement capability
- **AM:** Amplitude noise measurement capability
- **BURST:** Pulse train measurements, masking of pulses
- **APN:** Additive phase noise measurement
- **TRAN:** Transient analysis
- **TSTAB:** Time stability analysis
- **VCO:** Voltage-controlled oscillator characterization
- **SPEC:** Spectrum monitoring

Series  
7000

## Signal Specifications

The specifications in the following pages describe the warranted performance of the instrument for  $23 \pm 5 \text{ }^\circ\text{C}$  after a 30 minute warm-up period. Typical specifications describe expected, but not warranted performance. Min and Max specifications are warranted.

Specifications include guard-bands to account for the expected statistical performance distribution, measurement uncertainties, and changes in performance due to environmental conditions.

Parameter	Min.	Typ.	Max.	Note

Output Resistance		$< 0.5 \Omega$		
DC current meas. range	0 mA		550 mA	Per channel
Resolution		100 $\mu\text{A}$		

## Performance Data Plots

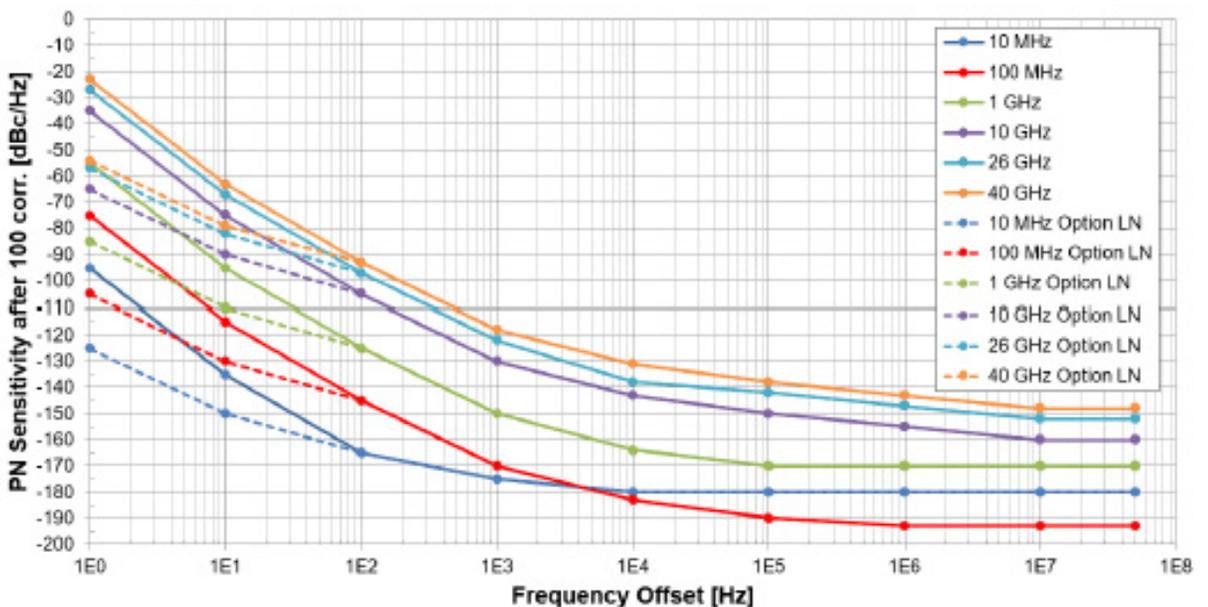

### Phase Noise Sensitivity (standard and option LN) Internal References

Measurement time ~10 seconds, after first cross-correlation; further correlations will improve sensitivity by 5 dB for 10, 10 dB for 100, and 15 dB for 1000 respective correlations performed. The plot show typical performance.

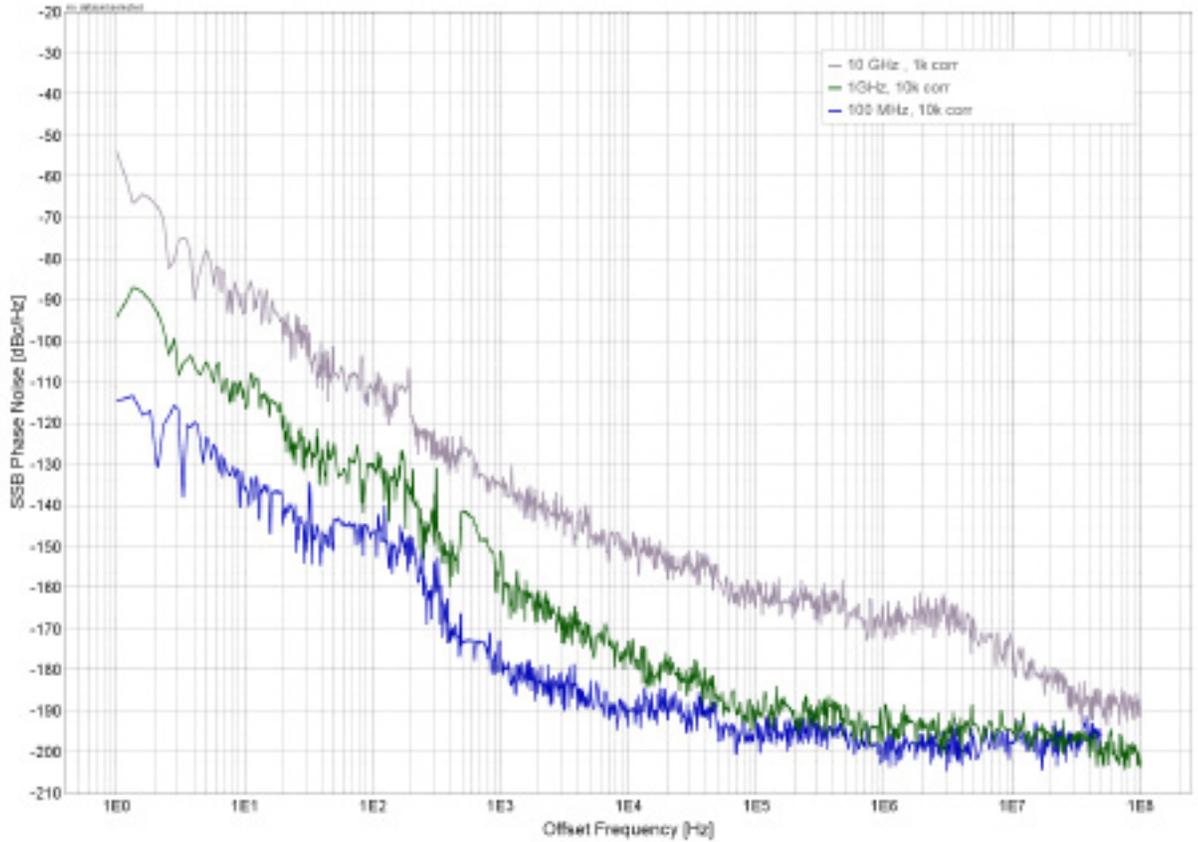

### After 1 Correlation

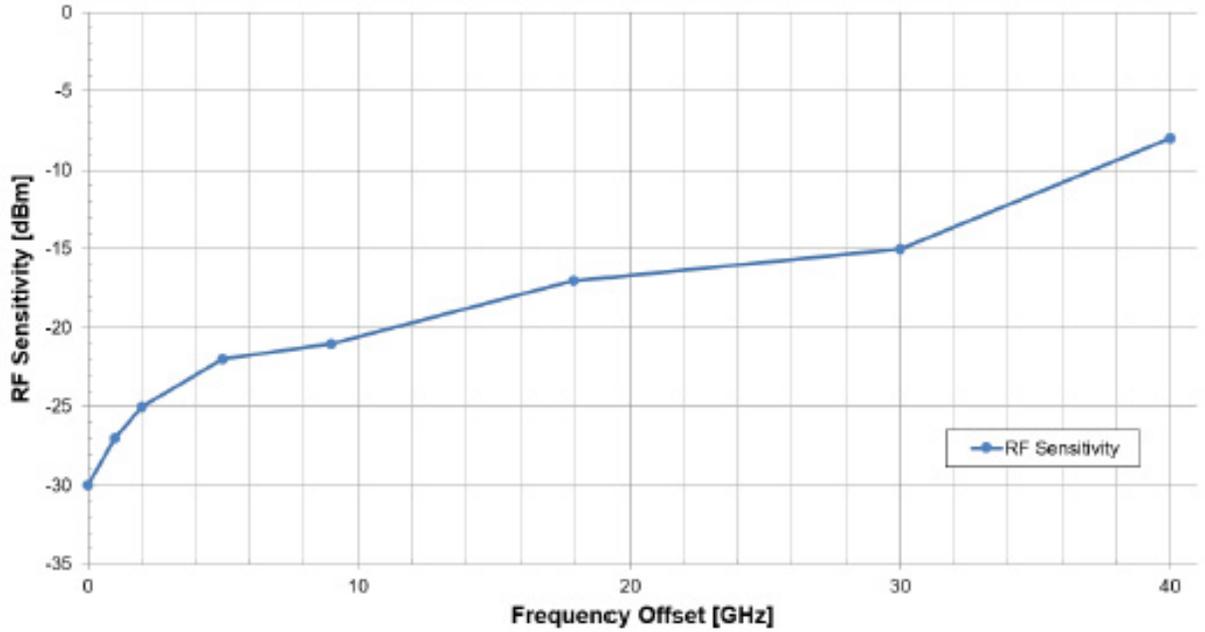

### After 100 Correlation

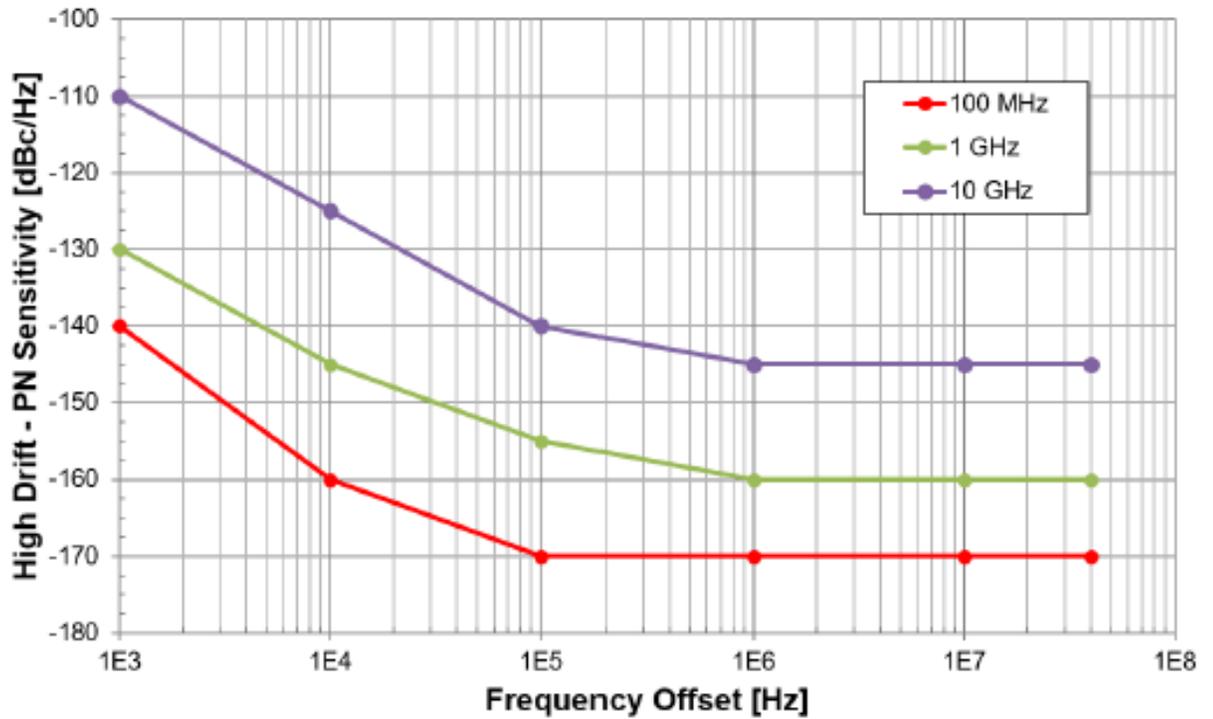

## 7000 Series

**Typical Noisefloor Example**  
(after >1k correlations at 100MHz, 1GHz, 10GHz)

Typical RF Sensitivity 5 MHz to 40 GHz (blue trace, in dBm)

Phase Noise Sensitivity - High Drift

## Phase Noise Measurement Time

Total measurement time consists of setup time, transfer time plus the number of performed correlations times the time per correlation. The measurement times below are normalized to one correlation for nominal RBW settings per correlation and measurement times > 2 seconds.

	Time per correlation (sec)	Default Nr. of points (settable)
0.1 Hz to 100 MHz	80	250 per decade
1 Hz to 100 MHz	8	250 per decade
10 Hz to 100 MHz	0.8	250 per decade
100 Hz to 100 MHz	0.1	250 per decade
1 kHz to 100 MHz	0.01	250 per decade
10 kHz to 100 MHz	< 0.004	250 per decade

## Absolute Phase Noise Sensitivity Internal References (with Option LN)

Abs. PN with INTERNAL references (option LN)	OFFSET						
	1 Hz	10 Hz	100 Hz	1 kHz	10 kHz	100 kHz	1 MHz
10 MHz	-115	-140	-155	-165	-172	-175	-175
100 MHz	-95	-120	-135	-160	-172	-178	-178
1 GHz	-75	-100	-115	-140	-155	-160	-160
3 GHz	-65	-90	-105	-130	-145	-150	-155
10 GHz	-55	-80	-95	-120	-135	-140	-145
25 GHz	-45	-70	-85	-110	-130	-135	-140
Remarks:	Test conditions: carrier power: $\geq 5$ dBm; after one correlation						

Series 7000

## Absolute Phase Noise Sensitivity External References

Abs. PN with EXTERNAL references	OFFSET						
	1 Hz	10 Hz	100 Hz	1 kHz	10 kHz	100 kHz	1 MHz
10 MHz	-135	-150	-155	-170	-175	-175	-175
100 MHz	-120	-130	-140	-170	-178	-178	-178
1 GHz	-100	-110	-125	-155	-170	-170	-170
3 GHz	-95	-110	-125	-155	-170	-170	-170
10 GHz	-90	-110	-120	-145	-155	-155	-155
18 GHz	-85	-105	-115	-120	-140	-145	-145
Remarks:	Test conditions: carrier power: $\geq 5$ dBm; after one correlation						

## Additive Phase Noise Sensitivity Single channel

Additive PN (1 channel)	OFFSET						
	1 Hz	10 Hz	100 Hz	1 kHz	10k Hz	100 kHz	1 MHz
$10 \text{ MHz} \leq f \leq 1 \text{ GHz}$	-130	-140	-150	-160	-170	-170	-170
$1 \text{ GHz} < f \leq 4 \text{ GHz}$	-130	-140	-150	-160	-170	-170	-170
$4 \text{ GHz} < f \leq 16 \text{ GHz}$	-115	-125	-135	-145	-150	-155	-160
Remarks:	Test conditions: RF carrier power: $\geq 10$ dBm; REF $\geq 13$ dBm Two channel cross-correlation can improve noise floor by 5 dB per 10x correlations.						

## Transient Analysis

Frequency measurement uncertainty is  $\pm$  (resolution + time-base uncertainty). Tabulated resolutions are measured with the 7000 series and DUT locked to the same 10 MHz reference. Input level 0 dBm.

### Transient Measurement- Wideband: Frequency Resolution vs. Time Resolution (residual FM, 5% video bandwidth, typical)

Time Resolution	16 ns	128 ns	500 ns	1 $\mu$ s	$\geq 10$ $\mu$ s
Frequency Band	Frequency Resolution [Hz]				
5 to 100 MHz	3 k	100	30	15	10
20 to 400 MHz	5k	700	200	100	20
80 to 1.6 GHz	10 k	1 k	200	100	50
320 to 3 GHz	30 k	1.5 k	300	150	150
1.3 to 26 GHz	100 k	6 k	2 k	1 k	1 k
5.2 GHz to FMAX	500 k	20 k	4 k	2 k	2 k

### Transient Measurement- Narrowband: Frequency Resolution vs. Time Resolution (residual FM, 80 MHz Span, 5% video bandwidth, typical)

Time Resolution	16 ns	128 ns	500 ns	1 $\mu$ s	10 $\mu$ s	$\geq 20$ $\mu$ s
Frequency Range	Frequency Resolution [Hz]					
< 200 MHz	1.5 K	50	10	4	4	4
< 800 MHz	2.5 K	150	15	10	4	4
< 2 GHz	2.5 K	500	20	10	4	4
< 20 GHz	30 K	4 K	150	70	20	7
> 20 GHz	50 K	4 K	400	150	50	15

### Narrowband: Transient Measurement Frequency Resolution vs. Time Resolution (residual FM, 1.25 MHz Span, no video bandwidth, typical)

Time Resolution	256 ns	500 ns	1 $\mu$ s	10 $\mu$ s	$\geq 20$ $\mu$ s
Frequency Range	Frequency Resolution [Hz]				
< 200 MHz	60	30	15	1.5	0.5
< 800 MHz	70	30	15	1.5	1.5
< 2 GHz	100	40	15	3	1.5
< 20 GHz	1 k	300	150	30	15
> 20 GHz	3 k	1 k	400	60	30

# 7000 Series Phase Noise Tester / Signal Source Analyzer

Series  
7000

## Narrowband: Transient Measurement Frequency Resolution vs. Time Resolution (residual FM, 200 kHz Span, no video bandwidth, typical)

Time Resolution	1 $\mu$ s	10 $\mu$ s	$\geq 20$ $\mu$ s
Frequency Range	Frequency Resolution [Hz]		
< 200 MHz	1	0.5	0.3
< 800 MHz	1.5	0.5	0.3
< 2 GHz	3	1	0.4
< 20 GHz	20	10	3
> 20 GHz	50	20	10

## Data Processing Capabilities

Graphical user interface: The analyzer employs a graphical user interface based on Windows OS.

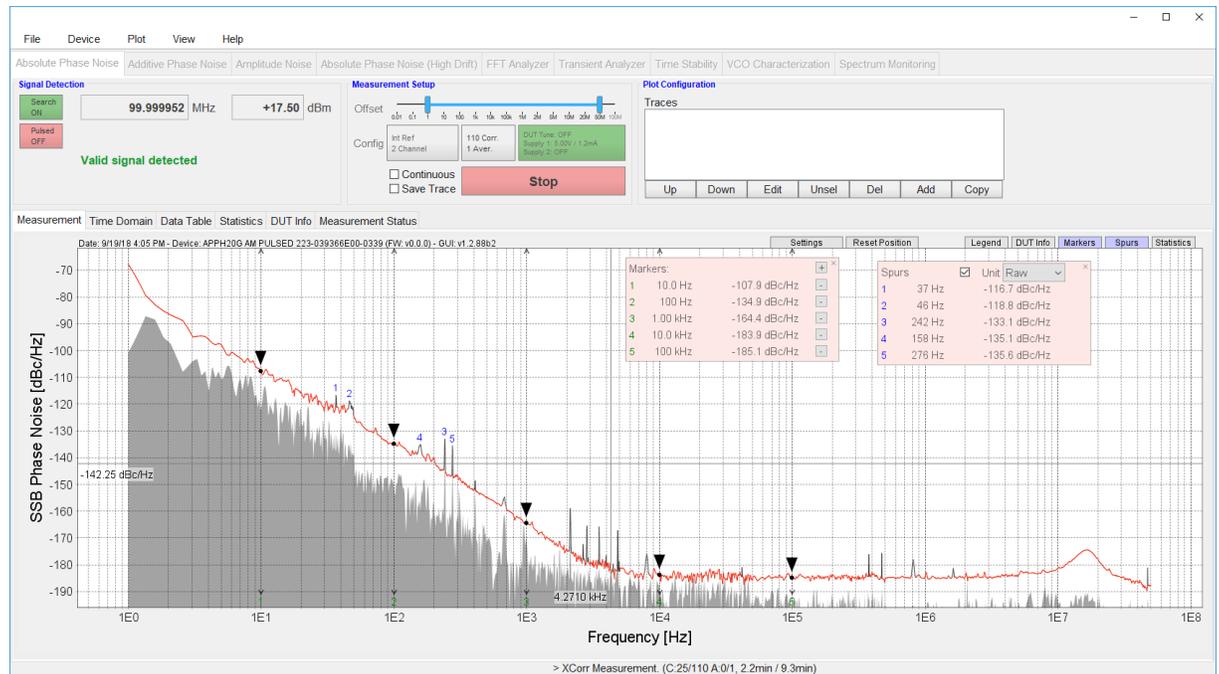

<b>Display Functions</b>	Phase Noise, Time Domain, Data Table, Residual, Statistics
<b>Trace Functions</b>	
Data Traces	Display current measurement and/or multiple memory data (up to 16 traces)
Title	Add customized title to each measurement window
Auto-Scale	Automatically selects scale resolution and reference value to vertically center the trace.
Statistics	Calculates and displays mean, standard deviation, and peak-to-peak deviation of the trace.
<b>Marker Functions</b>	16 independent markers

## Connectors

Front panel:

### RF Inputs

**RF IN:** SMA female (for model 7070 / Model 7300); K female (for Model 7340)

**REF1 IN HIGH / LOW, REF2 IN HIGH/LOW:** SMA Female

### DC Outputs

**REF1 TUNE, REG2 TUNE:** BNC female

### Operation

**Switch I/O:** DC Power Switch

**POWER, READY, REMOTE:** Status LED

### Rear Panel:

### HF/VHF/AUX Inputs

**BASEBAND CH1, BASEBAND CH2:** BNC female

**REF IN 10 MHz**

**EXT TRIG:** BNC Female

### DC Outputs

**DC SUPPLY CH2, D C SUPPLY CH2:** BNC female

### Operation

**LAN:** RJ-45

**USB B:** USB 2.0 device

**DC 24V:** DC Power Plug (24V, 2A)

**GPIB (Option GPIB):** IEEE-488 GPIB Connector

Series  
7000

# 7000 Series Phase Noise Tester / Signal Source Analyzer

## General Characteristics

### Remote programming interfaces

Ethernet 100BaseT LAN interface,  
USB 2.0 host & device  
GPIB (IEEE-488.2,1987) with listen and talk (optional)  
Control language SCPI Version 1999.0

**Power requirements** 24 V  $\pm$  3.0 VDC ; 70 W maximum

**Mains adapter supplied** 100-240 VAC in/ 24 V 4.0 A DC out

**Operating temperature range** 0 to 40 °C

**Storage temperature range** -40 to 70 °C

**Operating and storage altitude** up to 15,000 feet (4600 m)

notice

Complies with EMC regulations and directives for emission and immunity to interference (EN 61326-1 Industrial, EN/IEC 61326-2-1)

Complies with applicable Safety regulations in line with IEC/EN 61010-1

**Weight**  $\leq$  10 kg (21 lbs) net

**Dimensions** Incel Rubber: 154 mm H x 467.5 mm W x 342 mm L [6.1 in H x 18.4 in W x 13.5 L]  
With handle: 154 mm H x 520 mm W x 342 mm L [6.1 in H x 20.5 in W x 13.5 in L]  
Handle: radius 230 mm [9 in]; can be turned 360° in 30° steps

\*Specifications subject to change

## Options

- **GPIB:** IEEE-488.2,1987 programming interface
- **LN:** ultra low close to carrier phase noise
- **P:** pulsed RF measurement capability
- **AM:** Amplitude noise measurement capability
- **BURST:** Pulse train measurements, masking of pulses
- **APN:** Additive phase noise measurement
- **TRAN:** Transient analysis
- **TSTAB:** Time stability analysis
- **VCO:** Voltage-controlled oscillator characterization
- **SPEC:** Spectrum monitoring
