

MEGOHMMETERS

Widest Range of Insulation Test Instruments

An array of
Megohmmeters
to choose from

AEMC® Instruments offers the widest range of insulation test instruments allowing us to have the right instrument for all your testing needs. Automated test functions and calculations eliminates errors, saves time and money. Our megohmmeters are designed to the latest safety standards. They are rugged, weather resistant, accurate, reliable and built to perform.

Our products are backed by over 130 years of experience in test and measurement equipment, and encompass the latest international standards for quality and safety.

Understanding Insulation Resistance Testing

Why have an insulation testing program?

A regular insulation resistance testing program is strongly recommended to prevent electrical shocks, assure personnel safety and to eliminate shutdown time. It helps to detect deterioration of insulation in order to schedule repair work such as: vacuum cleaning, steam cleaning, drying and rewinding or testing newly installed conductors. It is also helpful when evaluating the quality of the repairs before the equipment is put back into operation.

What causes insulation failure?

Some of the more common causes of insulation failure include: overloading conductors, excessive heat or cold, moisture, dirt, corrosive vapors, oil, vibration, aging and nicked wiring.

What tests are used to detect insulation deterioration?

There are numerous maintenance tests for assessing insulation quality. The three tests primarily used to test motor, generator and transformer insulation are: **Polarization index, Spot reading and Step voltage.**

Polarization index: Developed for testing rotating machinery like form-wound motors and generators. This method results in a ratio of the IR value at 10-minutes divided by the 1-minute value. Rotating machinery and insulation materials that present a 1-minute reading of > 5000 MΩ are not recommended to be PI tested as an assessment tool by the IEEE.

Spot reading: The most basic method of insulation resistance testing. A test voltage is applied for a fixed amount of time and a reading is taken. Ideally, measurements should always be taken at the same temperature that is exceeding the dew point. Different temperature testing results should be manually corrected to a base reference temperature, typically 68 °F, for a more complete comparison. These tests become more meaningful when performed as part of a periodic preventative maintenance program to track trends in the insulation values over time to help predict failure.

Step voltage: This method is looking for any reduction of insulation resistance at higher voltages. This test will create electrical stresses on internal insulation cracks that may not be revealed at lower voltages. When a test sample shows a high IR value at a lower voltage then a low value at a higher voltage, this will be an indication to investigate further the condition of the test sample. This can reveal deterioration of insulation due to aging or mechanical damage. Step voltage testing is also used as a way to dry wet cables or equipment. Gradual voltage steps, applied for increasingly longer durations, can facilitate drying through heating.

What equipment is necessary for conducting insulation resistance tests?

- Megohmmeter with a timed test function
- Temperature indicator
- Humidity meter (*not necessary if equipment temperature is above the dew point*)

Model 6555 performing a single-phase test on a three-phase transformer.

APPLICATIONS

- Motors (*AC and DC*), transformers, cables, switchgears and electrical wiring installations
- Test industrial commercial wiring and motor control centers
- Acceptance testing and preventative maintenance
- Domestic and industrial contracting
- Dielectric Absorption Ratio (DAR) and Polarization Index (PI) measurements
- Spot reading, high resistance or absorption tests
- Timed resistance measurements
- Low insulation test range for testing old or flooded installations
- Drying out conductors
- Continuity checks
- Cable testing (*including telecom*)
- Test transformers, heaters, relays, circuit breakers

Four Questions for Selecting the Proper Megohmmeter

What is the proper voltage range?

Typically 2x equipment operating voltage up to 1000 V and equal to the operating voltages above 1000 V

What is the desired power source?

Battery, AC powered or hand-cranked

What is the resistance range of interest?

MΩ, GΩ, TΩ

What type of display is preferred?

Analog is best for trend analysis. While digital gives the exact reading and shows trend.

1000 V Hand-Cranked Megohmmeter

MODEL 6503

Designed for acceptance testing and preventative maintenance of wiring, cables, switchgear and motors

Ideal for use in areas affected by floods

MODEL	6503	
INSULATION TESTS		
Test Ranges*	250 V	(1 to 500) MΩ
	500 V	(1 to 500) MΩ
	1000 V	(10 to 5000) MΩ (5 GΩ)
Short Circuit Current	5 mA (max)	
Voltage Measurement / Safety Check	(0 to 600) V _{ac}	
Accuracy (MΩ)	± 2.5 % of Full Scale Length	
Automatic Discharge	8 s / μF	
SAFETY		
Test Voltage Indicator	Green LED indicates proper test voltage and crank speed <i>(If the LED is not ON during testing, the reading is not valid)</i>	
Safety Rating	600 V CAT II, 300 V CAT III	

*DC test voltage generated in full across the entire measurement range. Consult factory for NIST Calibration prices.

PRODUCT INCLUDES

Soft carrying case, (3) color-coded (red/black/blue) leads and alligator clips, black test probe and user manual.

CAT. #	DESCRIPTION
2126.52	Megohmmeter Model 6503 (Hand-cranked, (250, 500, 1000) V

MORE

FEATURES

- No batteries or power needed to operate
- Test voltages of (250, 500, and 1000) V
- Insulation measurements to 5000 MΩ
- LED indicates constant voltage output and proper cranked speed controlled by voltage regulator
- Automatic discharge when measurement is finished
- Auto-Ranging – dual scale operation for better sensitivity and easier readings
- Designed for harsh environments: marine, mining, heavy-duty field, industrial and military use
- Compact self-contained package; folded crank
- Voltage displayed prior to, during, and at the end of test
- Large direct reading scale

APPLICATIONS

- Acceptance testing and preventative maintenance
- Test motors, cables, switchgears and electrical wiring installations
- Continuity checks
- Check domestic and industrial wiring

Digital, Analog & Multifunction Hand-held Megohmmeters

MODELS 6522 & 6526

Ideal for testing cables, small motors, pumps, transformers and industrial equipment

(6526 only)

MODELS	6522	6526
INSULATION TESTS		
Test Voltages	(250, 500, and 1000) V	(50, 100, 250, 500, and 1000) V
Insulation Resistance	40 GΩ (40,000 MΩ)	200 GΩ (200,000 MΩ)
PI / DAR Ratios	No	Yes
Test Lock		Yes
Timer		(0 to 40) min
Auto Discharge		Yes
Automatic Test Inhibit		> 25 V
DMM FUNCTIONS		
Voltage		700 V _{AC} / DC
Resistance	–	1000 kΩ
Continuity	10 Ω	10 Ω, 100 Ω
Test Current		200 mA
Capacitance Measurement	–	0.1 n to 10 μF
Frequency	–	(15.3 to 800) Hz
GENERAL FUNCTIONS		
Alarm / Δ Rel	No / No	Yes / Yes
Auto Power OFF		Yes
Data Hold		Yes
Test Lead Compensation		Yes
Remote Probe		Yes (optional)
Memory	–	1300 measurements
Bluetooth®	–	2.1 Class II
DataView® Software	–	Included
Display Type		Digital w / Analog Bargraph
Display Counts		4000
Backlight		Yes
Power Supply		(6) AA Alkaline
Magnetic Mount		Yes

MODEL 6529

Insulation tester ideal for maintenance and repair operations on electrical equipment such as motors, cables, and more

(with leads connected)

MODEL		6529
AC/DC VOLTAGE MEASUREMENT		
Range	700 V _{AC} , 700 V _{AC+DC}	
Accuracy	DC	± (1 % R + 1 ct)
	AC+DC	± (1.2 % R + 1 ct)
Resolution	1 V	
Frequency Range	DC & (30 to 440) Hz	
Input Impedance	25 MΩ	
INSULATION MEASUREMENT		
Test Voltage / Resistance Range		
	50 V	(0.010 to 420.0) MΩ
	100 V	(0.020 to 420.0) MΩ
	250 V	(0.050 to 4200) MΩ
	500 V	(0.100 to 4200) MΩ
	1000 V	0.20 MΩ to 11.00 GΩ
Measurement Accuracy		
	40 Ω / 40 MΩ / 400 MΩ	± (1.5 % R + 10 cts)
	4.2 GΩ	± (4 % R + 10 cts)
	11 GΩ	± (10 % R + 10 cts) (1000 V range)
CONTINUITY MEASUREMENT		
Range	(0 to 40) Ω (200 mA test current ≤ 2 Ω)	
Accuracy	1.2 % R + 3 cts	
Resolution Max	0.01 Ω	
Leads Compensation	Up to 5 Ω	
Threshold	Audible signal triggered, Selectable ≤ (1 or 2) Ω	
RESISTANCE MEASUREMENT		
Range	(0 to 400) kΩ (Auto ranging)	
Accuracy	± (1.2 R + 3 cts)	
Resolution Max	0.1 Ω	
DMR Mode	Compares successive measurements to a reference value with alarm indication and red backlit display if deviation changes by the programmed %. The difference between the new reading and the reference measurement, along with the % deviation is displayed.	
GENERAL		
Timed Test	1 s to 39.59 min selectable	
Display	LCD with backlight	
Power Supply	(6) AA alkaline batteries (NEDA 15 A or IEC LR6)	
Battery Life (5 s ON, 25 s OFF)	> 2000 measurement in MΩ, > 300 h in V _{AC} / DC, > 6000 measurement in Continuity Test	
Dimensions	(8.54 x 3.54 x 2.44) in (217 x 90 x 62) mm	
Weight	1.68 lb (762 g)	
Operating Temperature	(14 to 122) °F (-10 to 50) °C, 90 % RH	
SAFETY		
Safety Rating	600 V CAT IV	

Consult factory for NIST Calibration prices.

US Design Patent US D890,617 S

PRODUCTS INCLUDE

Includes soft carrying case, set of (2) 5 ft color-coded (red/black) silicone leads and alligator clips, (2) color-coded (red/black) test probes (Rated 1000 V CAT IV, UL V2), (6) 1.5 V AA batteries and user manual.

TRUE MegOhmmeter®

FEATURES

- True Megohmmeter®
- Lightweight, compact, rugged and easy to handle
- Selectable test voltages (50, 100, 250, 500 and 1000) V
- Basic DMM functions; Volts, Continuity, Resistance
- DAR and PI ratio test functions
- Dual line display to view the insulation value and real-time test voltage simultaneously in an easy-to-read format
- Intuitive Pass/Fail indication
- Automatic test inhibit
- 2-color backlighting easily shows alarm conditions
- Shockproof sheath for excellent handling
- Automatic power-off function to optimize the battery life
- Programmable alarm thresholds

CAT. # DESCRIPTION

2126.55 Megohmmeter Model 6529 (Digital, (50, 100, 250, 500) V, 1 kV, 420 k-Ohm, Continuity, Alarm, Timer & PI/DAR)

1000 V Digital & Multifunction Hand-held Megohmmeter

The 6529 is a True Megohmmeter® in compliance with IEC 61010 and designed with features and functions for use in the field: lightweight, compact, rugged and easy to handle, even when wearing gloves. Its construction and interface are intended to simplify its use. Its functions as both an insulation tester and a basic multimeter. An intuitive Pass/Fail indication offering a blue/red backlight makes it very easy to identify defective conditions. The DMR function (*unique to AEMC® Instruments*) provides the capability to compare measurements to a known reference quickly recognizing potential problems. Multimeter functions include AC/DC voltage, resistance and continuity.

SCREEN DISPLAYS

Megohmmeter and Resistance Modes

Megohmmeter Ratio Modes

DAR and PI measurements are selected by successive presses of the SET UP button until PI or DAR appear in the upper display

DAR Test Time Measurement
Default measurements are at 30 seconds and 1 minute

PI Test Time Measurement
Default measurements are at 1 minute and 10 minutes

Continuity Mode

Continuity Measurement and Test Current Indicates Pass Condition

Continuity Measurement and Test Current Red Backlight and X indicates Alarm (Fail) Condition

DIFFERENTIAL MODE RESISTANCE (DMR)

The DMR mode or relative mode, is typically used for the purpose of checking that all resistances of a given installation or run (*batch*) are within the allowed tolerance which is set by a user programmable percentage.

1. Start by setting the threshold %
2. Make the first measurement and press the **TEST** button to record it. This will be the reference measurement.

3. At each new measurement, the instrument indicates the difference between the new reading and the reference measurement, along with the difference in %.

If the difference is below the programmed threshold, the symbol is displayed.

If the difference exceeds the programmed threshold, the **X** symbol is displayed and the backlight turns red.

Safety Rating	600 V CAT III	

FEATURES

- Test voltage selections of (50, 100, 250, 500 and 1000) V
- Insulation measurements to 4000 GΩ (4 TΩ)
- Direct measurement of DAR and PI values
- Direct measurement of sample capacitance
- Display of test voltage and run time
- Fully programmable and controllable on a PC
- Programmable test run times and PI times
- Smooth and Alarm functions
- Automatic test inhibition (if live sample > 25 V)
- Automatic discharge and display of discharge voltage
- Large dual display with time, voltage and measurement
- Bright blue electroluminescent backlight
- Auto Power OFF when not in use
- Extensive memory function to store results in files specific to a sample
- DataView® displays report generated results and graphs
- Remote operation with optional test probe
- Rugged, dual wall, water-resistant field case with detachable lead/accessory pouch

Consult factory for NIST Calibration prices.

PRODUCT INCLUDES

Detachable accessory pouch, (2) 5 ft color-coded (red/blue) leads, (1) black shielded lead, (3) color-coded (red/black/blue) alligator clips, (1) black test probe, (1) 5 ft USB A-B cable, US 115 V power cord, rechargeable NiMH battery, spare fuses, and a USB drive with DataView® software and user manual.

CAT. #	DESCRIPTION
2130.03	Megohmmeter Model 1060 (Digital, with Analog Bargraph, Backlight, Alarm, Timer, (50, 100, 250, 500, 1000) V, Auto DAR/PI, Resistance, Continuity, DataView® software, 128 kB Memory)

Technical Assistance (800) 343-1391

5000 V Digital, Analog & Graphical Megohmmeters

MODELS 5050, 5060 & 5070

Ideal for large motors, generators, transformers, and more. AC/battery powered, GΩ/TΩ measurement range, and multifunction capability for comprehensive testing.

Models 5050, 5060 and 5070, the latest design in 5000 V Megohmmeters. The features and functions incorporated in this product family are the results of many years of analyzing how megohmmeters are used in everyday applications. The most advanced technology available has been applied to automate and facilitate the testing process for these applications.

Many features incorporated in the Models 5050, 5060 and 5070 include automatic calculation and presentation of the Dielectric Absorption Ratio (DAR), Polarization Index (PI) and Dielectric Discharge (DD). The PI ratio times are also user defined. The Model 5070 is the only megohmmeter to offer both a graphical plot of the test right on the instrument, as well as a digital presentation of the test results, along with the ability to program up to three step voltage profiles, each containing up to five steps.

These megohmmeters are designed with the highest level of safety features built in. All units are packaged in a rugged insulated case. They incorporate test inhibit capabilities which will not allow test voltages to be generated if a live sample is detected. The test terminals are recessed to ensure operating safety. The test leads, rated for 5000 V for both testing and measurement, are the only truly safety approved 5000 V leads on the market today. All three models can be operated from an internal rechargeable battery system or from AC line power.

TRUE MegOhmmeter®

DATAVIEW®
(5060 & 5070)

APPLICATIONS

- Test insulation on cables, transformers, motors, generators, insulators and wiring installations
- High resistance or absorption tests
- Spot reading tests
- Timed resistance measurements
- Dielectric Absorption Ratio (DAR) and Polarization Index (PI) tests
- Multi-layer insulation testing (*Dielectric Discharge*)
- Test old or water damaged installations over long time runs
- Motor insulation resistance measurements
- Programmable alarm settings
- Predictive maintenance by storing results in PC for trend analysis (*Model dependent*)
- User selectable voltage testing to provide application specific testing

CAT. #	DESCRIPTION
2130.20	Megohmmeter Model 5050 (Digital, Analog Bargraph, Backlight, Alarm, Timer, (500, 1000, 2500, 5000) V, Auto DAR/PI/DD)
2130.21	Megohmmeter Model 5060 (Digital, Analog Bargraph, Backlight, Alarm, Timer, (500, 1000, 2500, 5000) V, Auto DAR/PI/DD, USB w/DataView® Software)
2130.30	Megohmmeter Model 5070 (Graphical, Analog Bargraph, Backlight, Alarm, Timer, (500, 1000, 2500, 5000) V, StepV, Auto DAR/PI/DD, USB with DataView® software)

5000 V Digital, Analog & Graphical Megohmmeters

FEATURES

- Test voltage combinations of (500, 1000, 2500 and 5000) V
- Insulation measurements from 10 kΩ to 10,000 GΩ (10 TΩ)
- Selectable and programmable test voltage (40 to 5100) V
- Automatic calculation of DAR, PI and DD ratios
- Direct measurement and display of Capacitance and Leakage Current
- Display resistance, test voltage and run time
- Programmable test run times and PI ratio times
- Smooth and Alarm functions
- Automatic test inhibition
- Automatic discharge and display of discharge voltage
- Large dual-display with time, voltage and measurements shown (*Models 5050 and 5060*)
- Graphic and digital display of test voltage, resistance and more (*Model 5070*)
- Bright blue electroluminescent backlight
- Programmable test voltage lock-out
- Programmable alarm setting
- Auto power-down when not in use
- AC or DC powered with rechargeable NiMH batteries
- Rugged, weatherproof field case
- Includes DataView® software for data retrieval, real-time display, analysis and report generation (*Models 5060 and 5070*)
- Designed and built to IEC safety standards

PRODUCT INCLUDES

Extra large classic tool bag, set of (3) 10 ft color-coded (red/black/blue) leads with clips (5000 V) (red/black/blue), (1) blue guard terminal jumper lead, fuse 0.1 A 380 V, rechargeable battery pack (installed), US 115 V power cord, and user manual.

FEATURES

- True Megohmmeter®
- Simple operation
- Test inhibition if terminal voltage > 40 % of test voltage
- Test voltage selections of (500, 1000, 2500 and 5000) V
- Insulation measurements from 10 kΩ to 10,000 GΩ (10 TΩ)
- Adjustable and programmable test voltage (40 to 5100) V
- Automatic calculation of DAR and PI values
- Direct measurement and display of capacitance and leakage current
- Display resistance, test voltage and run time
- Programmable PI ratio times
- Automatic test inhibition (if live sample > 40 % of test voltage)
- Automatic discharge and display of discharge voltage
- Large backlight LCD dual-display with time, voltage and measurements shown
- Portable, rugged, dual wall, water-resistant field case
- Designed and built to IEC safety standards
- Operates on battery or line power

10,000 V/15,000 V Digital Megohmmeters

MODELS 6550 & 6555

Expert tools for testing insulation safely and accurately ideal for use on rotating machinery, transformers and cables operating at higher voltages

The Megohmmeter Models 6550 and 6555 are the right tools for testing insulation safely and accurately, and are ideal for use on rotating equipment and machinery operating at 10 kV or higher. They are fully automated 10,000 V and 15,000 V graphical insulation testers. They provide insulation measurements up to 29,000 G Ω (29 T Ω), (model dependent). Test results include DAR, PI, DD, ΔR , Capacitance, Leakage Current, as well as programmable temperature correction of resistance readings.

The Models 6550 & 6555 also offer the ability to program up to three step voltage profiles from 40 V to (10 or 15) kV (model dependent), each containing up to ten steps. They also include three ramp profiles and three programmable test voltages in addition to the standard fixed voltages of (500, 1000, 2500, 5000, 10,000 and 15,000) V. These units have a USB interface and a data storage function, which permits storage of test results in files specific to the device under test. The included DataView[®] software runs tests directly from a PC and creates data analysis reports.

PRODUCT INCLUDES

Small classic tool bag, set of (3) 10 ft color-coded (red/blue/black) safety leads with clips (3000 V CAT III), (1) 15 kV jumper lead (blue), optical USB cable, 115 V US power cord, 9.6 V rechargeable NiMH batteries, and a USB drive with DataView[®] software and user manual.

TRUE MegOhmmeter[®]

DATAVIEW[®]
AUTOMATIC REPORT
GENERATION

FEATURES

- True Megohmmeter[®]
- Fixed or programmable test voltage from 40 V to (10/15) kV
- Wide measurement range from 10 k Ω to 30 T Ω
- 5 mA short circuit current
- Step and Ramp voltage testing
- Automatic calculation of DAR/PI/DD / ΔR (ppm/V) ratios
- Large, backlit graphical LCD screen with digital display, bargraph and R(t)+V(t), I(t) and I(V) graphs
- Multiple test modes: voltage ramp and step with Burn-In, Early-Break and I-Limit modes
- Three filter settings to optimize measurement stability
- Calculation of R at a reference temperature
- Storage of 80,000 measurements
- Includes DataView[®] software for data retrieval, real-time display, analysis and report generation
- Optically-isolated USB communication for transfer onto PC and report generation with DataView[®] software

AEMC
INSTRUMENTS
Measure Up
WITH AEMC INSTRUMENTS

Configure All Functions of Models 1060, 5060, 5070, 6526, 6534, 6550 & 6555

- Print reports of all test results
- Select test voltage and run tests from your computer with a simple click and execute process
- Capture and display data in real-time
- Retrieve data from the instrument's memory:
 - Over 1500 insulation resistance measurements (*Model dependent*)
 - Storage of 80,000 measurements (*Model dependent*)
- Display DAR and PI ratios
- Plot graphs of manual and timed tests
- Include your analysis comments section with the report
- Store a library of set ups for different applications
- Certification of results through report generation
- Free updates are available on our website www.aemc.com

Tree structured status screen provides the ability to select connected instruments, configure instruments, see the instrument's status and review stored test results.

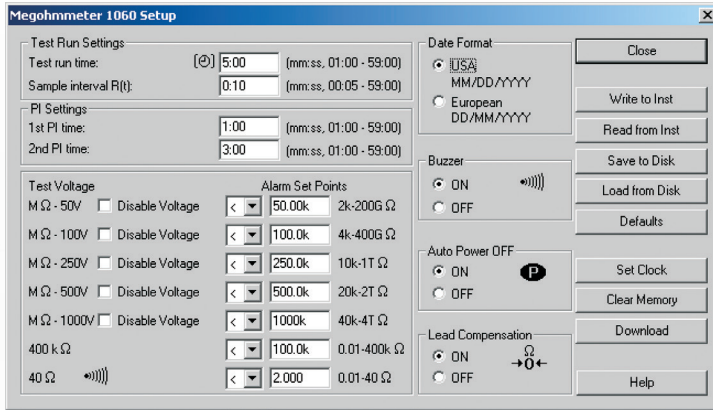

DataView® Software automatically recognizes the instrument when it is connected to the PC allowing communication through the corresponding control panel. The tree structure menu offers direct access to the data recorded in the instrument and its configuration.

Other Functions Available:

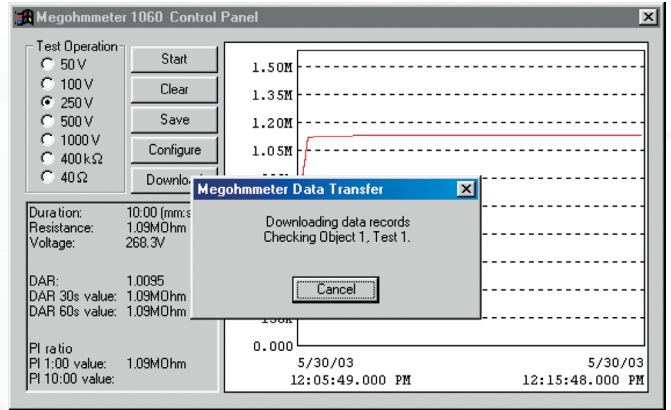

- Start and stop tests from your PC
- Real-time display of active tests
- DAR and PI ratio programming and display
- Graphical plot of the tests
- Generate reports from test results

Configuration & Analysis Screens

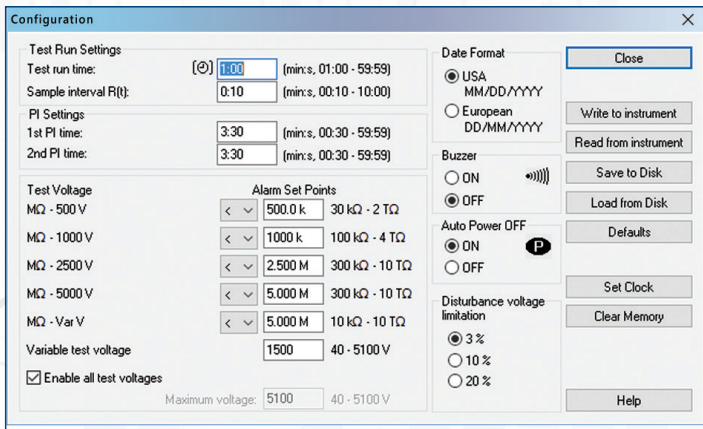

DataView® Data Analysis & Reporting Software

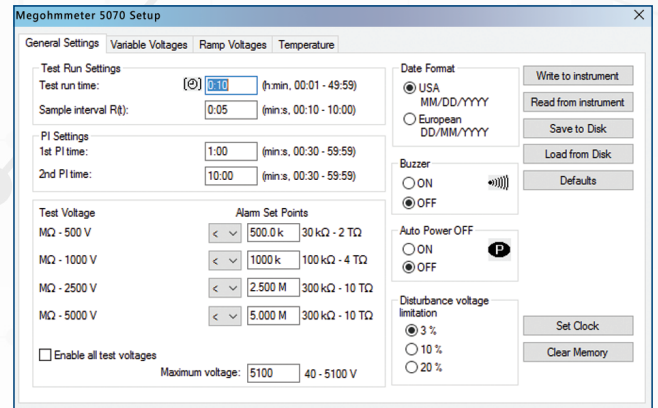

Clear and easy setup of all functions from one dialog box.

A simple press of the download button from either the setup or run dialog boxes will show all test results stored in the Model 1060.

Configuration screen allows you to set alarm levels, test time and to read and write configurations from and to the instrument.

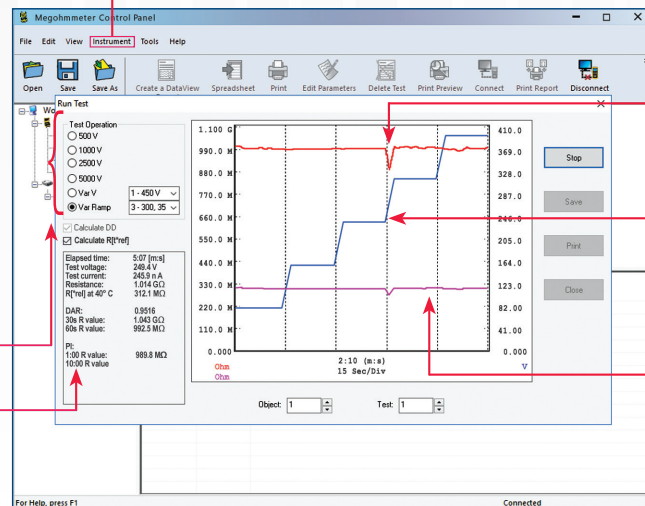

Four tabbed dialog boxes allow for clear and easy setup of all functions of the Model 5070, including setup for variable voltage and alarm set points, as well as step voltage tests and temperature compensation.

Two easy clicks (Instrument > Run Test) start test and graphs results

Test voltage selection

Test result status box displays complete test results in real-time

Insulation resistance during the test run

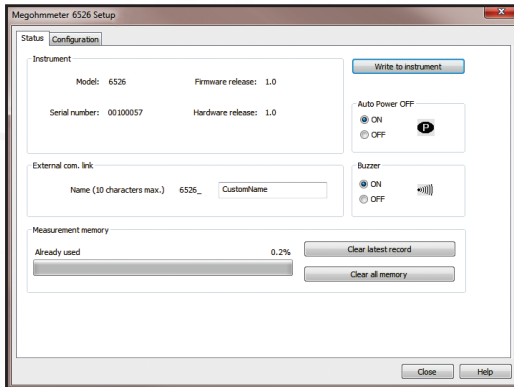

Step voltage during the test run

Insulation resistance with temperature compensation

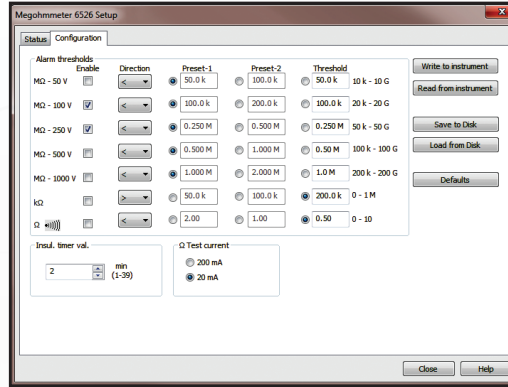

Run test and display text and graphical results from one dialog box. Model 5070 also displays step voltage.

Configuration & Analysis Screens

DataView® Data Analysis & Reporting Software

Status screen allows you to assign a unique name for the instrument and to check and clear memory as needed.

Configuration screen allows you to set alarm levels, test time and to read and write configurations from and to the instrument.

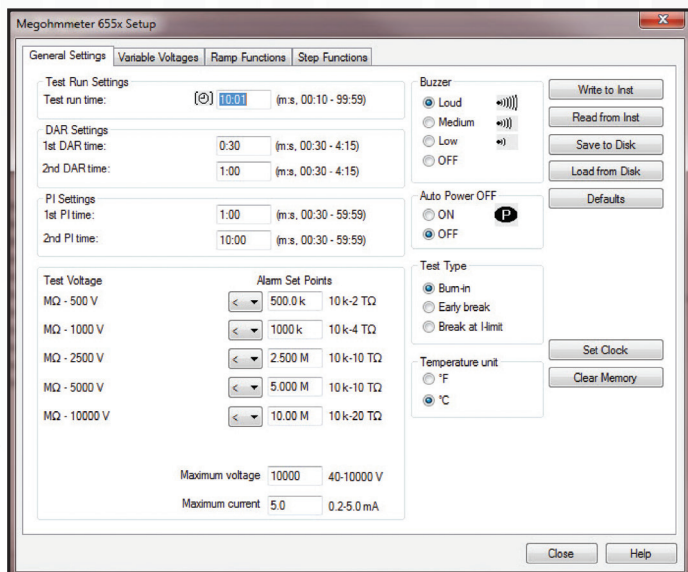

Select individual or multiple tests to download and review on your computer.

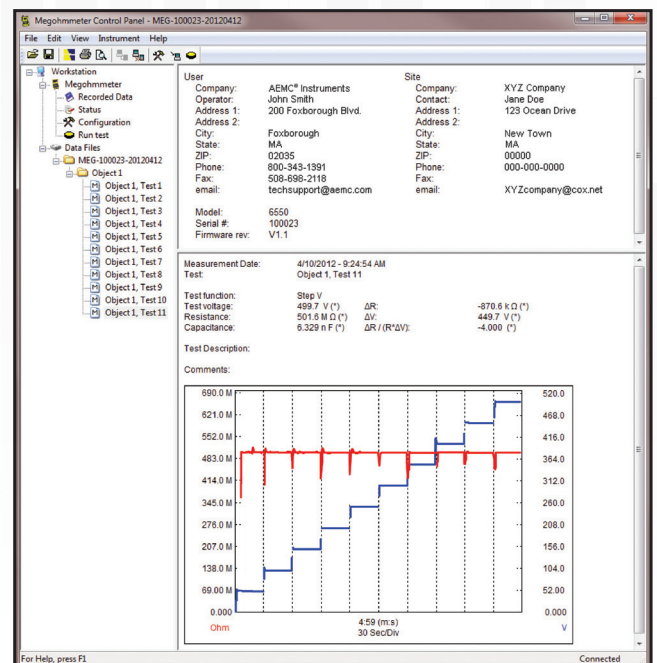

Select test conditions and start a test from the PC and display real-time measurement results graphically.

Stop a test in progress and display the test results.

Clear and straight forward setup of parameters.

Easy identification of all stored test results.

Megohmmeter Selection Guide

10 V & 100 V Megohmmeters

AEMC® Instruments offers low voltage insulation testers designed for both field and shop use. They are well suited for measuring the qualities of phone cables, data cables and ESD Floor Testing. Measurement of AC and DC voltage, resistance, continuity, cable capacitance, cable length and AC current can also be performed.

500 V Megohmmeters

AEMC® Instruments offers a complete line of insulation testers designed to test the quality of insulation on equipment powered from sources up to 240 V using test voltages up to 500 V. Both analog and digital meters are available. AC powered, battery powered and hand-cranked models are available. Measurements can be in the $M\Omega$, $G\Omega$ and $T\Omega$ range. Most models offer multifunction capability, measuring AC/DC volts, resistance and continuity, as well as insulation resistance.

1000 V Megohmmeters

AEMC® Instruments offers a complete line of insulation testers designed to test the quality of insulation using 1000 V test voltage (required for testing equipment powered from sources up to 480 VAC). Both analog and digital meters are available. AC powered, battery powered and hand-cranked models are available. Many models can measure into the $G\Omega$ and $T\Omega$ range. Most models offer multifunction capability, measuring AC/DC volts, resistance and continuity, as well as insulation resistance. Both hand-held instruments and rugged instruments built into portable cases are available.

5000 V Megohmmeters

AEMC® Instruments offers a complete line of insulation testers designed to test the quality of insulation using 5000 V test voltages required for testing large motors, generators, transformers, cables and large rotating machinery. AC powered and battery powered models are available. All models can measure into the $G\Omega$ and $T\Omega$ ranges. All models offer multifunction capability, measuring AC/DC volts, resistance and continuity, as well as insulation resistance.

10 kV & 15 kV Megohmmeters

AEMC® Instruments offers a complete line of safe and accurate insulation testers that are ideal for use on rotating equipment and machinery operating at 10 kV or higher. They are the only fully automated (10,000 and 15,000) V graphical insulation testers. They provide insulation measurements up to 29,000 $G\Omega$ (29 $T\Omega$). Test results include DAR, PI, DD, ΔR , Capacitance, Leakage Current, as well as programmable temperature correction of resistance readings.
