

Instrument Security Procedures

Models:

9170, 9170-R, 9171, 9171-R, 9172, 9172-R, 9173, 9173-R

Product Name:

Metrology Well Calibrator

Instrument Description:

High accuracy thermometer calibrator

Memory Description:

The 917x contains a small amount of non-volatile memory that is primarily used to store instrument settings such as the temperature set-points and the instrument calibration adjustments. The non-volatile memory may also store two temperature readings, the opening and closing switch temperatures during a switch test procedure. No other measurement data is recorded or stored.

Memory Cleaning:

The 917x has no provision for clearing non-volatile memory, as such action would adversely affect the operation and performance of the instrument.
