- **Save, Recording** (under the **Save** hardkey or the **Save** icon in the **File** panel)
- **Recall, Recording** (under the **Recall** hardkey or the **Recall** icon in the **File** panel)
- **Sweep, Recording** (this tab)
- **Sweep, "Playback"** on page 1536
- **Input/Output, "Data Source"** on page 2223

NOTE

A complete tutorial for **Record/Playback** functionality, including how to load and save recording files, can be found in the help for the tab **"Data Source"** on page 2223 under **Input/Output**.

This menu includes the following display-only fields:

Sample Rate

Displays the sample rate of the saved IQ data file. If you have not saved an IQ data file, the value is 0.

Sample Points

Displays the total number of sample points in the saved IQ data file. If you have not saved an IQ data file, the value is 0.

Sampling Time

Displays the total sample time of the saved IQ data file. If you have not saved an IQ data file, the value is 0.

Saved Channels [Mode: 5G NR, VMA, WLAN]

Displays the channel index/number of the saved IQ data file. If you have not saved an IQ data file, no value is displayed.

This control is designed for multi-channel I/Q data recording and playback.

3.6.9.4 Playback

Contains parameters for playback of saved recording files recalled to the instrument.

Recording and playback of signal data files is a multi-step process that involves controls in several menus:

- **Save, Recording** (under the **Save** hardkey or the **Save** icon in the **File** panel)
- **Recall, Recording** (under the **Recall** hardkey or the **Recall** icon in the **File** panel)
- **Sweep, "Recording" on page 1535**
- **Sweep, Playback** (this tab)
- **Input/Output, "Data Source" on page 2223**

NOTE

A complete tutorial for **Record/Playback** functionality, including how to load and save recording files, can be found in the help for the tab **"Data Source" on page 2223** under the **Input/Output** menu.

This menu includes the following display-only fields:

Sample Points

Displays the total number of sample points in the recalled IQ data file. If you have not recalled an IQ data file, the value is 0.

Sampling Time

Displays the total sample time of the recalled IQ data file. If you have not recalled an IQ data file, the value is 0.

Input Channels [Mode: 5G NR, VMA, WLAN]

Displays the input channel number of the recalled IQ data file. If you have not recalled an IQ data file, the default value of 1 is displayed.

This control is designed for multi-channel I/Q data recording and playback.

Playback Mode

Specifies the mode of IQ data to be played back and analyzed:

- **Fixed:** Playback Stop value is ignored. Measurement will analyze the first chunk of IQ data start from Playback Start repeatedly

- Iterative: Measurement will analyze the IQ data chunk by chunk between Playback Start and Playback Stop, if the last chunk is not complete it will be ignored and start from the first chunk again

| | |
|----------------|--|
| Remote Command | :CALCulate:<meas>:PLAY:MODE FIXed ITERative :CALCulate:<meas>:PLAY:MODE? |
| | Where <meas> is the mnemonic for the current measurement, for example, EVM |
| Example | For EVM measurement in 5G NR Mode: :CALC:EVM:PLAY:MODE CONT :CALC:EVM:PLAY:MODE? |
| Preset | FIX |
| State Saved | Saved in instrument state |
| Range | Fixed Iterative |

Playback Start

Once you have loaded an IQ data file using **Recall**, **Recording**, this control enables you to specify the start position of the IQ data playback range to be analyzed. If its value is less than zero, an additional zero is inserted at the beginning of the IQ data.

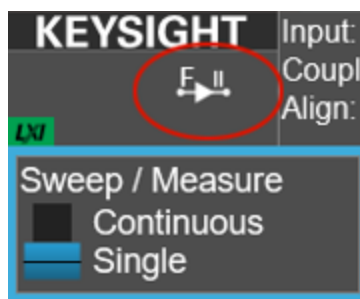

To go to a specific location in the recalled I/Q data, enter the desired **Playback Start** point.

You can use this control to examine the data you recalled from the recording file. How you proceed depends on whether you are in **Continuous** or **Single** mode. To determine which mode you are in, look at the first panel on the left in the **Meas Bar** above the data display.

If the panel looks like this, you are in **Continuous** mode:

If the panel looks like this, you are in **Single** mode:

3 WLAN Mode
3.6 Modulation Analysis Measurement

The **F** indicates that the instrument is using data from a file (if you wish to return to looking at data at the analyzer input, change the **Data Source** control in the **Input/Output, Data Source** menu from **File** back to **Input**.)

To examine the data you loaded:

Continuous mode

In this mode, turn the knob or use the **Up/Down** keys on the front panel to move through records in the recording. You will see **Playback Start** change from 0 to successively higher values as you move deeper into the data.

Single mode

In this mode, you can only look at one record. Set the **Playback Start** time to the desired offset from zero, then press **Restart**. A single record will be displayed. Note that until you press **Restart**, the “invalid data” indicator (yellow asterisk) is displayed in each window. After you press **Restart**, the invalid data indicator disappears.

| | |
|----------------|--|
| Remote Command | <code>:CALCulate:<meas>:PLAY:START <time></code> <code>:CALCulate:<meas>:PLAY:START?</code> |
| | Where <meas> is the mnemonic for the current measurement, for example, EVM |
| Example | For EVM measurement in 5G NR Mode: <code>:CALC:EVM:PLAY:STAR 0.01 s</code> <code>:CALC:EVM:PLAY:STAR?</code> |
| Preset | 0 |
| State Saved | Saved in instrument state |
| Min/Max | -/+Sample Points in IQ file / Sample Rate in IQ file |

Playback Stop

Specifies the stop position of the IQ data playback range to be analyzed, when “Playback Mode” is iterative.

| | |
|----------------|--|
| Remote Command | <code>:CALCulate:<meas>:PLAY:STOP <time></code> <code>:CALCulate:<meas>:PLAY:STOP?</code> |
| | Where <meas> is the mnemonic for the current measurement, for example, EVM |
| Example | For EVM measurement in 5G NR Mode: <code>:CALC:EVM:PLAY:STOP 0.01 s</code> <code>:CALC:EVM:PLAY:STOP?</code> |
| Preset | 0 |
| State Saved | No |
| Min | 0 |
| Max | Sample Points in IQ file x Sample Rate |

Step Forward

Move to next chunk of IQ data when "Playback Mode" on page 1537 is iterative.

| | |
|----------------|--|
| Remote Command | <code>:CALCulate:<meas>:PLAY:STEP:FORward</code> Where <code><meas></code> is the mnemonic for the current measurement, for example, <code>EVM</code> |
| Example | For EVM measurement in 5G NR Mode: <code>:CALC:EVM:PLAY:STEP:FORW</code> |
| State Saved | Saved in instrument state |

Sample Rate

Displays the sample rate of the recalled IQ data file if the recalled file format contains sampling rate information (`.csv`, `.sdf`, `.txt`). In this case, the *control* is grayed-out.

`BIN` and `BINX` files do not include sampling rate information inside the file, so after recalling one of these files, you must set **Sample Rate** manually. When you save a file in these formats, you must specify the sample rate, as displayed under **Sweep, Recording**.

| | |
|----------------|--|
| Remote Command | <code>:CALCulate:<meas>:PLAY:SRATe <freq></code> <code>:CALCulate:<meas>:PLAY:SRATe?</code> Where <code><meas></code> is the mnemonic for the current measurement, for example, <code>EVM</code> |
| Example | For EVM measurement in 5G NR Mode: <code>:CALC:EVM:PLAY:SRAT 122.88MHz</code> <code>:CALC:EVM:PLAY:SRAT?</code> |
| Couplings | Displays only after recalling <code>.csv</code> , <code>.sdf</code> , or <code>.txt</code> files Settable after recalling <code>.bin</code> or <code>.binx</code> files |
| Preset | 0 |
| State Saved | No |
| Min | 0 |

3.6.10 Trace

Lets you control the acquisition, display, storage, detection and manipulation of trace data for the available traces.

3.6.10.1 Settings

Allows you to adjust parameters for the available traces.

Trace Smoothing

NOTE This parameter is available when Evm vs. Symbol trace is selected.

Toggles the smoothing function between On and Off. If set to On, the EVM vs. Symbol is smoothed with smoothing window length from 1 to 21847 symbols.

| | |
|----------------|---|
| Remote Command | <pre>:DISPlay:EVM:VIEW3:WINDow[1]:TRACe:SMOoth:POINts <integer> :DISPlay:EVM:VIEW3:WINDow[1]:TRACe:SMOoth:POINts? :DISPlay:EVM:VIEW3:WINDow[1]:TRACe:SMOoth[:STATe] ON OFF 1 0 :DISPlay:EVM:VIEW3:WINDow[1]:TRACe:SMOoth[:STATe]?</pre> |
| Example | <pre>:DISP:EVM:VIEW3:WIND:TRAC:SMO:POIN 10 :DISP:EVM:VIEW3:WIND:TRAC:SMO:POIN?</pre> |
| Preset | 1 symbol OFF |
| State Saved | Yes |
| Min | 1 symbol |
| Max | 21847 symbols |

3.7 WLAN MIMO Modulation Analysis Measurement

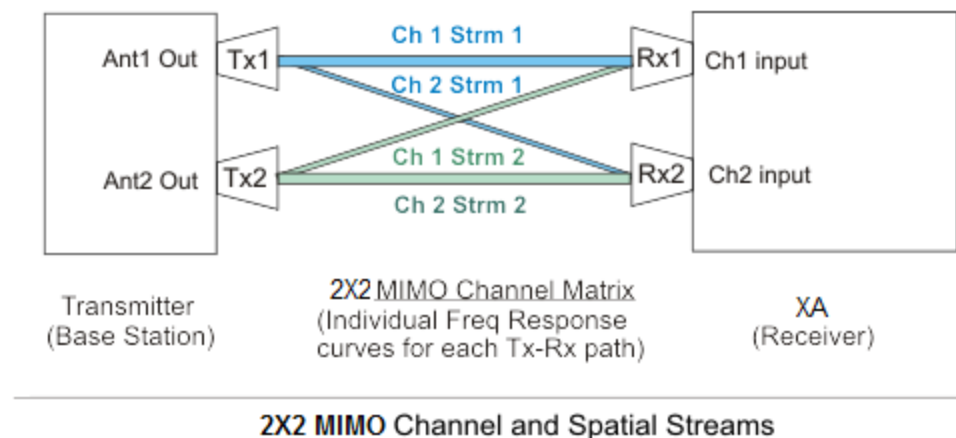

To support higher order MIMO implementation, the characterization of the design becomes more complicated. Therefore, the tests become even more complicated.

WLAN MIMO Modulation Analysis Measurement enables engineers to characterize their MIMO designs by providing signal formats demodulation and the EVM performance results for multiple channels, cross-channel and streams. It can also display the results in time-domain or frequency-domain.

The measurement provides simultaneous measurements for multiple channels when connecting to multiple instruments.

Here we take 2-Channel MIMO measurement as an example:

The 2x2 MIMO system is comprised of 2 input channels and 2 spatial streams. So, it has four input-channel/spatial-stream paths: Ch1 Strm1, Ch1 Strm2, Ch2 Strm1, and Ch2 Strm2.

WLAN MIMO EVM measurement is available on the platforms of EXM and VXT.

Here is the hardware requirements for MIMO configuration:

| | |
|----------------|--|
| EXT E6640A | Option E6640A-M22 supports 2x2 MIMO Option E6640A-M33 supports 2x2 or 3x3 MIMO Option E6640A-M44 supports 2x2, 3x3 or 4x4 MIMO |
| VXT M9421A | Option M9421A-MMO supports 2x2, 3x3 or 4x4 MIMO Option M9421A-MMO and M9421A-MTS support 2x2, 3x3, 4x4, 6x6 or 8x8 MIMO |
| VXT M9410A/11A | Option M941xA-MMO supports 2x2, 3x3 or 4x4 MIMO Option M941xA-MMO and M941xA-MTS support 2x2, 3x3, 4x4, 6x6 or 8x8 MIMO |

3 WLAN Mode
3.7 WLAN MIMO Modulation Analysis Measurement

VXT M9415A/16A Option M941xA-MMO supports 2x2, 3x3 or 4x4 MIMO

If the requirements cannot be satisfied, an error message, “Setting conflict, radio standard xxx is not supported”, will be displayed.

3.7.1 WLAN MIMO Modulation Analysis Measurement Commands

NOTE This measurement only supports 802.11n, 802.11ac, 802.11ax and 802.11be.

The following commands are used to retrieve the measurement results:

```
:CONFigure:EVMMimo  
:CONFigure:EVMMimo:NDEFault  
:INITiate:EVMMimo  
:FETCh:EVMMimo[n]?  
:READ:EVMMimo[n]?  
:MEASure:EVMMimo[n]?
```

WLAN MIMO Modulation Analysis Measurement Results

When Radio Standard is 80+80 MHz, these results are for one segment. Use SCPI command EVMM:RESult:SEGment to specify the specific segment index. See ["MIMO Result Segment Number \(Remote Command Only\)" on page 1294](#) for details.

| Index: n | Results Returned |
|----------------------|--|
| 0* | Returns unprocessed I/Q trace data of Capture Interval, as a series of trace point values for Channel m Channel index m can be set and queried through EVMM:RESult:CHAN command. See for "MIMO Result Channel Index (Remote Command Only)" on page 1293 details The I values are listed first in each pair, using the 0 through even-indexed values. The Q values are the odd-indexed values |
| 1(or not specified)* | Returns the comma-separated EVM results in stream order. The EVM scalar results for each stream are: <ol style="list-style-type: none">1. RMS EVM Max (dB)2. RMS EVM Avg (dB)3. Peak EVM Max (dB)4. Peak EVM Avg (dB)5. Pilot EVM Max (dB)6. Pilot EVM Avg (dB)7. Data EVM Max (dB) |

| Index: n | Results Returned |
|----------|---|
| | 8. Data EVM Avg (dB) |
| | 9. CPE EVM Max (dB) |
| | 10. CPE EVM Avg (dB) |
| | When MIMO Type is 2X2, this result gives stream 1 EVM scalar results first, then stream 2 EVM scalar results. When MIMO Type is 3X3, stream 1, 2 and 3 EVM scalar results are provided in order. When MIMO Type is 4X4, returns 40 comma-separated EVM scalar results are provided in stream order. When MIMO Type is 8x8, returns 80 comma-separated EVM scalar results are provided in stream order |
| 2 | Returns a value of the pass/fail (0.0 = passed, or 1.0 = failed) results determined by testing the result of RMS EVM. Only when all the stream RMS EVM Average results are passed, will this value be passed |
| 3* | Returns series of floating-point numbers that alternately represent I and Q pairs of the corrected measured trace for stream m. Stream index m can be set and queried through EVMM:RESult:STReam command. See "MIMO Result Stream Index (Remote Command Only)" on page 1293 for details The magnitude of each I and Q pair are normalized to 1.0, when the IQ Normalize is turned on. The first number is the in-phase (I) sample and the second is the quadrature-phase (Q) sample |
| 4* | Returns series of floating-point numbers (in dB) that represent each sample in the Stream EVM vs. Carrier trace of Capture Interval for stream m. Stream index m can be set and queried through EVMM:RESult:STReam command. See "MIMO Result Stream Index (Remote Command Only)" on page 1293 for details |
| 5* | Returns series of floating-point numbers (in dB) that represent each sample in the Stream EVM vs. Symbol trace of Capture Interval for stream m. The first number is the symbol 0 decision point. Stream index m can be set and queried through EVMM:RESult:STReam command. "MIMO Result Stream Index (Remote Command Only)" on page 1293 for details |
| 6* | Returns series of floating-point numbers that represent each sample in the Channel Response for stream m channel k. Stream index m can be set and queried through EVMM:RESult:STReam command. See "MIMO Result Stream Index (Remote Command Only)" on page 1293 for details. Channel index k can be set and queried through EVMM:RESult:CHAN command. See "MIMO Result Channel Index (Remote Command Only)" on page 1293 for details |
| 7* | Returns comma-separated EVM scalar results in channel order. The EVM scalar results for each channel are: <ol style="list-style-type: none"> <li data-bbox="375 1415 602 1442">1. RMS EVM Max (dB) <li data-bbox="375 1470 602 1497">2. RMS EVM Avg (dB) <li data-bbox="375 1524 602 1551">3. Peak EVM Max (dB) <li data-bbox="375 1579 602 1606">4. Peak EVM Avg (dB) <li data-bbox="375 1633 602 1661">5. Pilot EVM Max (dB) <li data-bbox="375 1688 602 1715">6. Pilot EVM Avg (dB) <li data-bbox="375 1743 602 1770">7. Data EVM Max (dB) <li data-bbox="375 1797 602 1824">8. Data EVM Avg (dB) |

3 WLAN Mode
 3.7 WLAN MIMO Modulation Analysis Measurement

| Index: n | Results Returned |
|----------|--|
| 9. | Freq Error Max (Hz) |
| 10. | Freq Error Avg (Hz) |
| 11. | Freq Error Ppm Max (ppm) |
| 12. | Freq Error Ppm Avg (ppm) |
| 13. | Sym Clock Error Max (ppm) |

| 25 | <p>Returns comma separated floating point array of Burst Info displayed in the upper window of Burst Info</p> |

| Index: n | Results Returned |
|----------|--|
| | <p>view for 802.11n/ac/ah/af/ax/be. If Radio Standard is not any of the above, -999.0 is returned</p> <p>There are 5 entries for each burst info type in the result, which are in order:</p> <ol style="list-style-type: none"> 1. Burst Info Type ** 2. Modulation Format 3. length (in symbol) 4. power (in watt) 5. EVM (in percent, example: if this value is 2.14, it means 2.14%) <p>The length of this result = 5 × the total number of burst types</p> <p>Modulation Format is represented by integer, which is translated as below:</p> <p>BPSK = 0; QPSK = 1; 16QAM = 2; 64QAM = 3; 256QAM = 4; 1024QAM = 6; (Please be noted that 1024QAM is 6 instead of 5) 4096QAM = 7</p> <p>The results of power and EVM are given in their linear representation. Please use the following equation for calculating the decibel values</p> $\text{Power(dBm)} = 10 \cdot \lg(10 \cdot \text{power readout value}) + 10.0;$ $\text{EVM(dB)} = 20 \cdot \lg(\text{EVM readout value}/100);$ |
| 26 | Returns the Decode bits of L-SIG Signal if Radio Standard is 802.11n/ac/ax/be; otherwise, returns -999.0 |
| 27 | <p>Returns the FFT SEM Worst Margin Info including the in-band part of all offsets for channel k, if FFT SEM is enabled and Radio Standard is not 80+80 MHz</p> <p>When Radio Standard is not 80+80 MHz, returns worst margin frequency (relative to center) and max delta limit value pairs of Center Part-, Center Part+, Offset A-, A+, B-, B+, C-, C+, D- and D+ for channel k</p> <p>When Radio Standard is 80+80 MHz, returns floating point -999.0</p> <p>To enable FFT SEM, see "FFT SEM Enable" on page 1282 for details</p> <p>To enable offset D, see "Enable FFT SEM Offset D (Remote Command Only)" on page 1283 for details. By default, only Offset A, B, C are enabled;</p> <p>For definition of Offset A-, A+, B-, B+, C-, C+, D- and D+, please refer to WLAN Spectrum Emission Mask measurement</p> <p>Center Part- refers to frequency range from Start Freq of A- to Center Frequency;</p> <p>Center Part+ refers to frequency range from Center Frequency to Start Freq of A+</p> <p>Channel index k can be set and queried through EVMM:RESult:CHAN command. See "MIMO Result Channel Index (Remote Command Only)" on page 1293 for details</p> |
| 28* | Returns the comma-separated Time Offset of burst sync point for each channel when Radio Standard is 802.11n/ac/ax/be; Otherwise, returns -999.0 |

3 WLAN Mode
3.7 WLAN MIMO Modulation Analysis Measurement

| Index: n | Results Returned |
|----------|--|
| | The length of this result = channel count. When MIMO Type is 2×2, Averaged Time Offset for channel 1 and channel 2 are returned; when MIMO Type is 3×3, Averaged Time Offset for channels 1, 2 and 3 are returned, ..., etc. |
| 29* | Returns the comma-separated Max and Avg Degree CPE results in stream order. The Degree CPE results for each stream are: 1. Degree CPE Max (degree) 2. Degree CPE Avg (degree) |
| | The length of this result = stream count. When MIMO Type is 2×2, Degree CPE Max and Avg results for stream 1 and stream 2 are returned; when MIMO Type is 3×3, Degree CPE Max and Avg results for streams 1, 2 and 3 are returned, ..., etc. |
| 30 | User Info Summary including PSDU CRC |

NOTE

The results will be available only when radio standard is 802.11ax/11be/11ac/11n

The returned results are users' information summary, including signal filed user specific information and some other information such as EVM, power, etc.

The total number of results = 30 * Number of Users. Each user information contains 30 items

The 30 items are:

1. STA-ID for 11be/ax, Symbol Length for 11ac, invalid for 11n
2. Nsts (number of spatial streams)
3. TxBeamforming (1 means to apply steering matrix, 0 means otherwise) for 11be/ax, invalid for 11ac/n
4. MCS Index
5. Modulation Format
6. DCM (1 means with DCM, 0 means without) for 11be/ax, invalid for 11ac/n
7. Coding (1 means LDPC, 0 means BCC) for 11be/ax, invalid for 11ac/n
8. RU Size of each user for 11be/ax, invalid for 11ac/n
9. Start SubCarrier Index for the RU allocation for 11be/ax, invalid for 11ac/n
10. Stop SubCarrier Index for the RU allocation for 11be/ax, invalid for 11ac/n
11. Power(dBm)
12. EVM(dB)
13. EVM pass fail (1 means fail, 0 means pass)
14. Data rate (Mbps)
15. RU Index for 11be/ax, invalid for 11ac/n

| Index: n | Results Returned |
|----------|---|
| 16. | IQGainImbalance (dB) for 11be/ax, invalid for 11ac/n |
| 17. | IQQuadratureError(degree) for 11be/ax, invalid for 11ac/n |
| 18. | IQTimingSkewError (picoseconds) for 11be/ax, invalid for 11ac/n |
| 19. | PoweMax(dBm) |
| 20. | PowerMin(dBm) |
| 21. | PSDU CRC (1 means Fail, 0 means Pass, -999 means Invalid), (if the Firmware Version is below A.22.00, it returns Invalid. Pass/Fail indicator is valid when Data Decode is ON.) |

| 37 | <p>Decoded bits for each user. It's only available for 802.11n/ac/ax/af/be</p> <p>Note that, if the Firmware Version is prior to A.23.00 or the version of N9077EM1x-1FP is prior to 2109.0228, it returns -999.0</p> <p>The first value is the user number to indicate how many users the decoded bits are for If the user number = N, then from 2nd to (N + 1)th values indicate the decoded bits number for each user Then from (N+2)th to (2N + 1)th values indicate the PSDU CRC status for each user (1 means Fail, 0 means Pass, -999 means Invalid. Pass/Fail indicator is valid when Data Decode is ON) From (2N+2)th to end values are some int16 integers which indicate the decoded bits. Each integer can be converted to 16 bits For example, if there are 3 users, 1st user contains 100 bits, 2nd contains 300 bits and 3rd user contains 500 bits. Then if you query EVM37, you can get an array like,</p> <p>Returned Value Notes</p> <p>3 The decoded bits are used for 3 users</p> <p>100 decoded bits 1~100 are for the 1st user</p> <p>200 decoded bits 101~300 are for the 2nd user</p> <p>500 decoded bits 301~800 are for the 3rd use</p> <p>0 PSDU CRC status is Pass for the 1st user</p> <p>0 PSDU CRC status is Pass for the 2nd user</p> <p>0 PSDU CRC status is Pass for the 3rd user</p> <p>9216 The number of integers (from 9216 to 7253) is $800/16 = 50$. There are 50 integer values As you convert the 50 decimal values to binary, you can get totally 800 bits, for example, 1st integer 9216 = 0010 0100 0000 0000, there are 16 bits, from b0 to b15, then 2nd integer can be converted to another 16 bits, from b16 to b31, etc. The 1st 100 bits are for user1 and 2nd 200 bits are for user 2 and 3rd 300 bits are for user 3</p> <p>...</p> <p>7253</p> <p>So, the returned values contain:</p> <ol style="list-style-type: none"> 1. user number 2. bits number for 1st user 3. bits number for 2nd user ... · N+1. bits number for Nth user · N+2. the CRC status for 1st user |

3.7.2 Views

The WLAN MIMO Modulation Analysis measurement has up to 14 views. You can select the desired measurement view from the selections listed in the table below. There are two available commands, allowing you to select the view using either a string ID or a numeric ID value.

`:DISP:EVMM:VIEW[:SEL] <string ID>`

`:DISP:EVMM:VIEW:NSEL <numeric ID>`

| View Name | String ID | Numeric ID | View Description |
|------------------------|----------------------|------------|--|
| Stream IQ Polar | <code>IQPMimo</code> | 9 | Provides a combination view of I/Q Measured Polar Vector graph, Channel and Stream Numeric Results data |
| Frequency Response | <code>FRMimo</code> | 10 | Provides an overlay of all the individual Stream(X) Channel(X) Frequency Response trace data results |
| EVM vs. Carrier | <code>EVCMimo</code> | 11 | Provides an RMS EVM vs. Subcarrier graph |
| EVM vs. Symbol | <code>EVSMimo</code> | 12 | Provides an RMS EVM vs. Symbol graph |
| Channel Matrix | <code>CHMMimo</code> | 15 | Provides the linear average over all subcarriers of the Equalizer Channel Frequency Response for each available channel/stream |
| Stream Results Summary | <code>STSMimo</code> | 13 | Provides the stream numeric summary results |

| View Name | String ID | Numeric ID | View Description |
|-----------------------------------|-------------|------------|---|
| Channel Results Summary | CHSMimo | 14 | Provides the channel numeric summary results |
| Burst & Signal Info | BIMimo | 16 | Provides a summary view on Burst Info and Signal Info |
| Equalizer Impulse Response | EIRMimo | 17 | Provides the equalizer impulse response between the input stream X and input channel X (where X is the selected stream/channel) |
| SEM Summary | SEMMimo | 18 | Provides the SEM results for all channels |
| Spectral Flatness | SFMimo | 20 | Provides the spectral flatness results for all channels |
| User Info Summary (11ax) | USERinfo | 23 | Provides the MCS, Modulation Format, Power, EVM and RU size for each user |
| User Information Summary (11be) | EHTUserinfo | 26 | Provides the MCS, Modulation Format, Power, EVM and RU size for each user |
| User Information Summary (11ac/n) | VHTUserinfo | 27 | Provides the MCS, Modulation Format, Power, EVM for each user |

Channel Matrix is not available for SISO 802.11ax/ac 80MHz + 80MHz.

SEM Summary is only available when 'FFT SEM Enable' is on.

User Info Summary is only available for 802.11n/ac/ax/be.

More Information

Some of these Views are multiple-window views. When in a multiple window View, you select a window by touching it. The menu controls may sometimes change depending on which window is selected.

Whenever the View changes, the default menu is Frequency, unless otherwise specified in the View description.

Some of these views may have different layout and different window count for different MIMO type and Radio Standard.

This is a list of Views and its associated Windows by default (MIMO 2x2, 11n 20M).

3.7.2.1 Stream IQ Polar

This view has the following windows:

- Stream X I/Q Measured Polar Graph (multiple)
- Channel Metrics Result
- Stream Metrics Result

Example `:DISP:EVMM:VIEW IQPM`

3.7.2.2 Burst & Signal Info

This view has the following windows:

- Burst Info
- Signal Info

Example `:DISP:EVMM:VIEW BIM`

3.7.2.3 User Information Summary (11ax)

This view has the following windows:

- User Information Summary
- HE-SIG-B User Field
- HE-SIG-B Common Field

Example `:DISP:EVMM:VIEW USER`

3.7.2.4 EVM vs. Carrier

This view has the following windows:

- Stream X EVM vs. Carrier (multiple)

Example `:DISP:EVMM:VIEW EVCM`

3.7.2.5 EVM vs. Symbol

This view has the following window:

- Stream/Channel X EVM vs. Symbol (multiple)

Example `:DISP:EVMM:VIEW EVSM`

3.7.2.6 Stream Results Summary

This view has the following windows:

- Stream Results Summary

Example `:DISP:EVMM:VIEW STSM`

3.7.2.7 Channel Results Summary

This view has the following window:

- Channel Results Summary

Example `:DISP:EVMM:VIEW CHSM`

3.7.2.8 Spectral Flatness

This view has the following windows:

- Stream X Channel X Spectral Flatness (multiple)

Example `:DISP:EVMM:VIEW SFM`

3.7.2.9 Channel Matrix

This view has the following window:

- Channel Matrix

Example `:DISP:EVMM:VIEW CHMM`

3.7.2.10 Frequency Response

This view has the following windows:

- Stream X Channel Y Frequency Response (multiple)

Example `:DISP:EVMM:VIEW FRM`

3.7.2.11 Equalizer Impulse Response

This view has the following windows:

- Stream X Channel Y Equalizer Impulse Response (multiple)

Example `:DISP:EVMM:VIEW EIRM`

3.7.2.12 SEM Summary

This view has the following windows:

- Channel X SEM (multiple)

Example `:DISP:EVMM:VIEW SEMM`

3.7.2.13 User Information Summary (11be)

This view has the following windows:

- User Information Summary
- EHT-SIG User Field
- EHT-SIG Common Field

Example `:DISP:EVM:VIEW EHTU`

3.7.2.14 User Information Summary (11ac/n)

This view has the following windows:

- User Information Summary

Example `:DISP:EVM:VIEW EHTU`

3.7.2.15 Unused Tone Error

This view has the following windows:

- Unused Tone Error
- Unused Tone Error Metrics

Example `:DISP:EVMM:VIEW UTER`

3.7.3 Windows

| View | Marker Operation |
| Stream IQ Polar | No |

3.7.3.4 IQ Polar Stream Metrics

The Stream Metrics window appears in the following View:

| | |
|------------------|------------------|
| View | Marker Operation |
| Stream I/Q Polar | No |

3.7.3.5 Stream X Channel Y Frequency Response

MIMO Channel frequency Response shows an overlay of all the individual Stream(X) Channel(Y) Frequency Response trace data results. The Stream(X) Channel(Y) Frequency Response trace is the channel frequency response for the specified spatial stream and measurement hardware input channel, X means the stream number, Y means the channel number. The MIMO Channel Frequency Response trace enables each measurement stream(X) channel(Y) frequency response trace data result to be easily viewed and compared on a single display. The number of measurement traces will equal the total number of Stream(X) Channel(Y) Frequency

Response traces in the measurement. The trace data result values in the MIMO Channel Frequency Response trace are identical to the equivalent data results in the Strm(X) Ch(Y) Channel Frequency Response trace.

StrmX ChY Channel Frequency Response is the channel frequency response for the specified spatial stream and measurement hardware input channel, where X is the stream NO and Y is the channel NO. The StrmX ChY Channel Frequency Response is computed as the reciprocal of the StrmX ChY Equalizer Impulse Response. The Channel Frequency Response provides one complex value for each subcarrier plus an interpolated value for the middle unused null subcarrier. The equalizer frequency response is normally estimated from the Channel Estimation Sequence (HT-LTF) portion of the OFDM preamble. When the Equalization Training parameter is set to Preamble & Data, the equalizer frequency response is estimated using both the Channel Estimation Sequence (HT-LTF) and the payload Data.

This Stream X Channel Y Frequency Response appears in the following View:

| | |
|--------------------|---------------------------------------|
| View | Marker Operation |
| Frequency Response | Yes [SubCarrier - Frequency Response] |

3.7.3.6 Stream X EVM vs. Carrier

The Stream X EVM vs. Carrier window appears in the following View:

| | |
|-----------------|--------------------------------|
| View | Marker Operation |
| EVM vs. Carrier | Yes (Carrier - Magnitude EVM) |

3.7.3.7 Stream X EVM vs. Symbol

The Stream X EVM vs. Symbol window appears in the following View:

| | |
|----------------|-------------------------------|
| View | Marker Operation |
| EVM vs. Symbol | Yes (Symbol - Magnitude EVM) |

3.7.3.8 Channel Matrix

MIMO Channel Matrix is only available for multiple channel measurements.

MIMO Channel Matrix shows the linear average over all subcarriers of the Equalizer Channel Frequency Response for each available channel/stream. Each value in the table is a complex value (displayed in real + j imag format). The MIMO Channel Matrix is used to look at the spatial spreading done by the transmitter.

These results are not averaged even when averaging is turned on.

The Channel Matrix window appears in the following View:

3 WLAN Mode
3.7 WLAN MIMO Modulation Analysis Measurement

| | |
|----------------|------------------|
| View | Marker Operation |

3.7.3.9 Stream Results Summary

Shows the stream numeric summary results.

The Stream Results Summary window appears in the following View:

| | |
|------------------------|------------------|
| View | Marker Operation |
| Stream Results Summary | No |

3.7.3.10 Channel Results Summary

Shows the stream numeric summary results.

CrossPwr

The CrossPwr values in the OFDM Error Summary is the average of the power level of the err1 terms and of the err2 terms for all subcarriers.

Currently, there are 2 data streams and 2 input channels. The simplest case has stream1 connected directly to input1, and stream2 connected directly to input2. This is called a "Direct Map" setup. In this case, the channel response matrix at each subcarrier ideally becomes:

$$\begin{bmatrix} 1 & 0 \end{bmatrix}$$
$$\begin{bmatrix} 0 & 1 \end{bmatrix}$$

However, in a real transmitter there will be leakage of stream1 into transmitter2, and stream2 into transmitter1, resulting in a channel response matrix that looks more like:

$$\begin{bmatrix} \sim 1 & \text{err1} \end{bmatrix}$$
$$\begin{bmatrix} \text{err2} & \sim 1 \end{bmatrix}$$

The err1 and err2 terms represent the leakage. There is a matrix like this for each subcarrier in the system. The CrossPwr values in the OFDM Error Summary is the average of the power level of the err1 terms and of the err2 terms for all subcarriers. The values are normalized so that Ch1 CrossPwr is the ratio of stream2power / stream1power present on channel1, and Ch2 CrossPwr is the ratio of stream1power / stream2power present on channel2.

For a transmitter in Direct Map mode, the ideal value for the CrossPwr is 0 (-780dB). The actual value provides a useful measure of how much crosstalk is present between the two RF chains of the transmitter. If the transmitter is not in Direct Map mode, then the ideal values for the CrossPwr will no longer be zero but will instead

depend on how the transmitter is mixing the two data streams. The next most common configuration has $\text{input1} = \text{stream1} + \text{stream2}$, and $\text{input2} = \text{stream1} - \text{stream2}$. In this case, the cross-power terms in the channel matrix have the same power as the other terms, and the ideal value for the CrossPwr is 1 (0dB). The amount by which CrossPwr deviates from 0dB is a useful indication of the crosstalk between the two RF chains, but the value no longer reflects the actual undesired crosstalk.

Sync Corr

SynCorr (Sync Correlation) is the correlation coefficient between the measured preamble and an ideal preamble. This can be used as an indication of the quality of the preamble. Sync Correlation is computed on the initial Legacy Short Training Field (L-STF) part of the preamble. A value of 1 indicates perfect correlation and a value of 0 indicates no correlation.

The Channel Results Summary window appears in the following View:

| | |
|-------------------------|------------------|
| View | Marker Operation |
| Channel Results Summary | No |

3.7.3.11 Burst Info

The Burst Info window appears in the following View:

| | |
|---------------------|------------------|

3.7.3.12 Signal Info

The Signal Info window appears in the following View:

| | |
|---------------------|------------------|
| View | Marker Operation |
| Burst & Signal Info | No |

3.7.3.13 Stream X Channel Y Equalizer Impulse Response

StrmX ChY EI Response for 802.11n/ac modulation is the equalizer impulse response between the input stream X and input channel Y (where X is the selected stream and Y is selected channel).

StrmX ChY EI Response shows the impulse response of the equalization filter. How the StrmX ChY Eq Impulse Response is computed depends on the selection for the Equalization Training parameter. If the Equalization Training parameter is set to Preamble Only, the Eq Impulse is computed using only the Channel Estimation Sequence (HT-LTF) portion of the preamble. If the parameter is set to Preamble,

3 WLAN Mode
3.7 WLAN MIMO Modulation Analysis Measurement

Pilots & Data, the Eq Impulse is computed using both the Channel Estimation Sequence (HT-LTF) portion of the preamble and the data symbols. The latter option is typically more accurate.

The Stream X Channel Y Equalizer Impulse Response window appears in the following View:

| | |
|----------------------------|--|
| View | Marker Operation |
| Equalizer Impulse Response | Yes (Time - Equalizer Response Response) |

3.7.3.14 Channel X SEM

The Channel X SEM window appears in the following View:

3.7.3.21 Unused Tone Error

This window appears in the following View:

| | | |
|---------------------|-------------------------|----------|
| View | Size | Position |
| Unused Tone Error | One half, full width | Upper |
| Marker Operation | Yes (Carrier - Power) | |
| Corresponding Trace | Unused Tone Error trace | |

3.7.3.22 Unused Tone Error Metrics

This window appears in the following View:

| | | |
|---------------------|---------------------------|----------|
| View | Size | Position |
| Unused Tone Error | One half, full width | Lower |
| Marker Operation | No | |
| Corresponding Trace | Unused Tone Error Metrics | |

3.7.4 Amplitude

3.7.4.1 Y Scale

The Y Scale Tab contains controls that pertain to the Y axis parameters of the measurement. These parameters control how data on the vertical (Y) axis is displayed and control instrument settings that affect the vertical axis.

Ref Value

Sets the value for the absolute power reference. The functionality depends on the selected window. The reference line is at the top, center, or bottom of the graticule, depending on the value of the Ref Position function.

| | |
|----------------|---|
| Remote Command | <code>:DISPlay:EVMMimo:WINDow[1] 2 ... 9:TRACe:Y[:SCALE]:RLEVel <real></code> <code>:DISPlay:EVMMimo:WINDow[1] 2 ... 9:TRACe:Y[:SCALE]:RLEVel?</code> |
| Example | <code>:DISP:EVMM:WIND:TRAC:Y:RLEV 10</code> <code>:DISP:EVMM:WIND:TRAC:Y:RLEV?</code> |
| Couplings | When Auto Scaling is On (default), this value is automatically determined by the measurement result. When you set a value manually, Auto Scaling changes to Off |
| Preset | Auto |
| State Saved | Yes |
| Min/Max | See table below |

Table of Ref Value parameters

| Group | Result | Min | Max | Unit Terminator | Resolution |
|-----------|----------------------------|------|-----|-----------------|------------|
| Demod | EVM vs. Carrier | -250 | 250 | dB | 0.01 |
| | EVM vs. Symbol | -250 | 250 | dB | 0.01 |
| | Spectral Flatness | -20 | 20 | dB | 0.01 |
| | Unused Tone Error | -250 | 250 | dB | 0.01 |
| Response | Frequency Response | -250 | 250 | dB | 0.01 |
| | Equalizer Impulse Response | -250 | 250 | dB | 0.01 |
| Pre Demod | SEM Summary | -250 | 250 | dBm | 0.01 |

Scale/Div

For measurements that support a logarithmic Y-Axis, Scale/Div sets the height of one division of the graticule in the current Y-Axis unit.

Scale/Div also determines the displayed amplitude range in the log plot graph. Since there are usually 10 vertical graticule division on the display, the total amplitude range of the graph is typically 10x this amount. For example, if Scale/Div is 10 dB, then the total range of the graph is 100 dB.

| | |
|----------------|---|
| Remote Command | <code>:DISPlay:EVMMimo:WINDow[1] 2 ... 9:TRACe:Y[:SCALE]:PDIVision <real></code> <code>:DISPlay:EVMMimo:WINDow[1] 2 ... 9:TRACe:Y[:SCALE]:PDIVision?</code> |
| Example | <code>:DISP:EVMM:WIND:TRAC:Y:PDIV 5</code> <code>:DISP:EVMM:WIND:TRAC:Y:PDIV?</code> |
| Couplings | When Auto Scaling is On, this value is automatically determined by the measurement result When you set a value manually, Auto Scaling automatically changes to Off |
| Preset | Auto |
| State Saved | Saved in instrument state |
| Min/Max | See table below |

Table of Ref Value parameters

| Group | Result | Min | Max | Unit Terminator | Resolution |
|-----------|----------------------------|-----|-----|-----------------|------------|
| Demod | EVM vs. Carrier | 0.1 | 20 | dB | 0.01 |
| | EVM vs. Symbol | 0.1 | 20 | dB | 0.01 |
| | Spectral Flatness | 0.1 | 5 | dB | 0.01 |
| | Unused Tone Error | 0.1 | 20 | dB | 0.01 |
| Response | Frequency Response | 0.1 | 20 | dB | 0.01 |
| | Equalizer Impulse Response | 0.1 | 20 | dB | 0.01 |
| Pre Demod | SEM Summary | 0.1 | 20 | dB | 0.01 |

Ref Position

Positions the reference level at the top, center or bottom of the Y Scale display. Changing the reference position does not change the reference level value.

Auto Scaling

Toggles the Auto Scaling function between On and Off. When the **Restart** front-panel key is pressed, this function automatically determines the scale per division and reference values based on the measurement results.

When you set a value to either Scale/Div or Ref Value manually, Auto Scaling automatically changes to Off.

| | | | | | | | | | | | | | | | |
|----------------------------|--|-----------------|-----|----------------|-----|-------------------|----|-------------------|-----|--------------------|----|----------------------------|----|-------------|----|
| Remote Command | <code>:DISPlay:EVMMimo:WINDow[1] 2 ... 9:TRACe:Y[:SCALE]:COUPle 0 1 OFF ON</code> <code>:DISPlay:EVMMimo:WINDow[1] 2 ... 9:TRACe:Y[:SCALE]:COUPle?</code> | | | | | | | | | | | | | | |
| Example | <code>:DISP:EVMM:WIND:TRAC:Y:COUP OFF</code> <code>:DISP:EVMM:WIND:TRAC:Y:COUP?</code> | | | | | | | | | | | | | | |
| Couplings | When Auto Scaling is On, upon pressing the Restart front-panel key, this function automatically switches the scale per division and reference values into the defaults When you set a value to either Scale/Div or Ref Value manually, Auto Scaling automatically changes to Off | | | | | | | | | | | | | | |
| Preset | The following table defines the preset values <table border="1" data-bbox="389 1318 1406 1629"> <tr> <td>EVM vs. Carrier</td> <td>OFF</td> </tr> <tr> <td>EVM vs. Symbol</td> <td>OFF</td> </tr> <tr> <td>Spectral Flatness</td> <td>ON</td> </tr> <tr> <td>Unused Tone Error</td> <td>OFF</td> </tr> <tr> <td>Frequency Response</td> <td>ON</td> </tr> <tr> <td>Equalizer Impulse Response</td> <td>ON</td> </tr> <tr> <td>SEM Summary</td> <td>ON</td> </tr> </table> | EVM vs. Carrier | OFF | EVM vs. Symbol | OFF | Spectral Flatness | ON | Unused Tone Error | OFF | Frequency Response | ON | Equalizer Impulse Response | ON | SEM Summary | ON |

3.7.4.2 Range (Non-attenuator models)

Only available for Keysight's modular signal analyzers and certain other Keysight products, such as VXT and M941xE.

State Saved No

Range

Represents the amplitude of the largest sinusoidal signal that could be present within the IF without being clipped by the ADC. For signals with high peak-to-average ratios, the range may need to exceed the rms signal power by a significant amount to avoid clipping.

This is a measurement global setting.

Remote Command `[:SENSe]:POWer[:RF]:RANGe <real>`

Command `[:SENSe]:POWer[:RF]:RANGe?`

Example `:POW:RANG 10 dBm`

`:POW:RANG?`

Notes The MIN and MAX values are affected by the External Gain parameters, and by the **Center Frequency**. The hardware compensates for frequency response and alters the Range setting.

Preset 0 dBm

State Saved Yes

Min/Max -/+100

Annotation Meas Bar

Adjust Range for Min Clipping

Sets the combination of attenuation and gain based on the current measured signal level so that clipping will be at a minimum.

This is an "immediate action" function, that is, it executes once, when the key is pressed.

This key does not appear in measurements that do not support this functionality.

Remote Command `[:SENSe]:POWer[:RF]:RANGe:OPTimize IMMEDIATE`

Notes Executing Adjust Range for Min Clipping initiates the measurement

Dependencies Does not appear in the Swept SA and Monitor Spectrum measurements

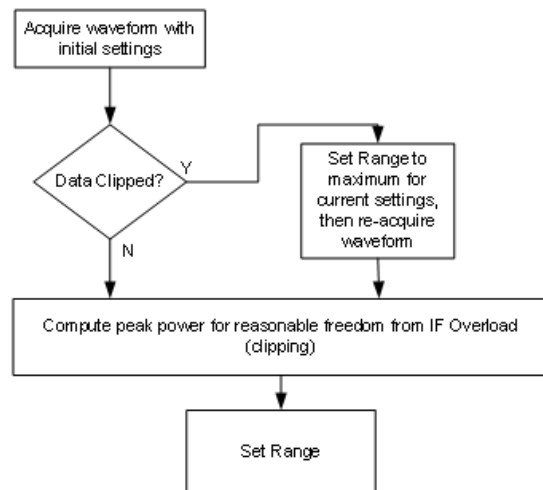

Pre-Adjust for Min Clipping

If this function is **ON**, it applies the adjustment described under Adjust Range For Min Clipping each time a measurement restarts. Therefore, in Continuous measurement mode, it only executes before the first measurement.

| | |
|----------------|--|
| Remote Command | <code>[:SENSe]:POWer[:RF]:RANGe:OPTimize:ATTenuation OFF ON ELEctrical COMBined</code> <code>[:SENSe]:POWer[:RF]:RANGe:OPTimize:ATTenuation?</code> |
| Notes | Because there is no attenuator control available in these models, the control displays only ON and OFF choices. However, for SCPI compatibility with other platforms, all three parameters (ELEctrical , COMBined , and ON) are honored and all are mapped to ELEctrical , so if any of these three parameters is sent, a subsequent query will return ELEC |
| Dependencies | Does not appear in the Swept SA and Monitor Spectrum measurements |
| Preset | OFF for Swept SA measurement; ON for all other measurements that support Pre-Adjust for Min Clipping |
| State Saved | Saved in instrument state |

Adjustment Algorithm

The algorithm for the adjustment is documented below:

Peak-to-Average Ratio

Used with "[Range \(Non-attenuator models\)](#)" on page 1769 to optimize the level control in the instrument. The value is the ratio, in dB, of the peak power to the average power of the signal to be measured. A ratio of 0 should be used for sinusoidal signals; for 802.11g OFDM signals use 9 dB.

All Modes show the current value of Peak-to-Average ratio on the control. However, some Modes do not permit changing the value. In these situations, the control is grayed-out.

| | | |
|----------------|--|-------|
| Remote Command | <code>[:SENSe]:POWer[:RF]:RANGe:PARatio <real></code> <code>[:SENSe]:POWer[:RF]:RANGe:PARatio?</code> | |
| Example | <code>:POW:RANG:PAR 12 dB</code> | |
| Notes | In some Modes, this parameter is read-only; meaning the value will appear on the control and query via SCPI, but is not changeable. In such applications the control is grayed-out. Attempts to change the value via SCPI are ignored, but no error message is generated | |
| Dependencies | Does not appear in Spectrum Analyzer Mode | |
| Preset | VXT Models M9410A/11A | 0 dB |
| | All Others | 10 dB |
| State Saved | Saved in instrument state | |
| Min | 0 dB | |
| Max | VXT Models M9410A/11A | 50 dB |
| | All Others | 20 dB |

Mixer Lvl Offset

This is an advanced setting to adjust target Range at the input mixer, which in turn affects the signal level in the instrument's IF. This setting can be used when additional optimization is needed after setting "[Peak-to-Average Ratio](#)" on page 1771. Positive values of offset optimize noise performance over distortion, negative values optimize distortion performance over noise.

| | | |
|----------------|--|--------|
| Remote Command | <code>[:SENSe]:POWer[:RF]:RANGe:MIXer:OFFSet <real></code> <code>[:SENSe]:POWer[:RF]:RANGe:MIXer:OFFSet?</code> | |
| Example | <code>:POW:RANG:MIX:OFFS -5 dB</code> | |
| Preset | 0 dB | |
| State Saved | Saved in instrument state | |
| Min | VXT Models M9410A/11A | -34 dB |
| | All Others | -35 dB |
| Max | 30 dB | |

3.7.4.3 Signal Path

Contains controls that pertain to the routing of the signal through the frontend of the instrument.

In general, only appears in instruments whose hardware supports this signal routing. For example, this tab does not appear in many of the modular instrument products, including VXT Model M9420A, or UXM.

This tab *does* appear in VXT Models M9410A/11A/15A/16A and M9410E/11E/15E/16E, because ["Software Preselection" on page 1788](#) is under this tab, and VXT Models M9410A/11A/15A/16A and M9410E/11E/15E/16E implement a version of Software Preselection.

Presel Center

Adjusts the centering of the preselector filter to optimize the amplitude accuracy at the frequency of the selected marker. If the selected marker is not on when **Presel Center** is pressed, the instrument turns on the selected marker, performs a peak search, and then performs centering on the marker's center frequency. If the selected marker is already on and between the start and stop frequencies of the instrument, the instrument performs the preselector calibration on that marker's frequency. If the selected marker is already on, but outside the frequency range between **Start Freq** and **Stop Freq**, the instrument first performs a peak search, and then performs centering on the marker's center frequency.

The value displayed on ["Preselector Adjust" on page 1774](#) changes to reflect the new preselector tuning.

Certain considerations should be observed to ensure proper operation, as detailed in ["Proper Preselector Operation" on page 1152](#).

| | |
|----------------|---|
| Remote Command | <code>[:SENSe] :POWer [:RF] :PCENter</code> |
| Example | <code>:POW:PCEN</code> |
| Notes | The rules outlined above under the control description apply for the remote command as well as the key. The result of the command depends on marker position, etc. Any message generated by the control press is also generated in response to the remote command |
| Dependencies | Does not appear in CXA-m, nor in VXT Models M9410A/11A/15A/16A, M9410E/11E/15E/16E Grayed-out if the microwave preselector is off <ul style="list-style-type: none"> - If the selected marker's frequency is below Band 1, an advisory message is generated "Preselector not used in this frequency range" and no action is taken - Grayed-out if entirely in Band 0, that is, if Stop Freq is below about 3.6 GHz Grayed-out if entirely above 50 GHz, that is, if Start Freq is above 50 GHz - Blanked in models that do not include a preselector, such as Option 503. If the remote command |

| | |
|------------------------------|--|
| | is sent in these instruments, accepted without error, and the query always returns 0 |
| | - Grayed-out in the Spectrogram View |
| Couplings | The active marker position determines where the centering will be attempted If the instrument is in a measurement such as averaging when centering is initiated, the act of centering the preselector restarts averaging, but the first average trace will not be taken until the centering is completed The offset applied to do the centering appears in " Preselector Adjust " on page 1774 |
| Status Bits/OPC dependencies | When centering the preselector, *OPC does not return true until the process is complete and a subsequent measurement has completed, nor are results returned in response to :READ or :MEASure queries The Measuring bit remains set (true) while this command is operating, and does not go false until the subsequent sweep/measurement has completed |

Proper Preselector Operation

Certain considerations should be observed to ensure proper operation:

1. If the selected marker is **Off**, the instrument turns on a marker, performs a peak search, and adjusts the preselector using the selected marker's frequency. It uses the "highest peak" peak search method unqualified by threshold or excursion, so that there is no chance of a 'no peak found' error. It continues with that peak, even if it is the peak of just noise. Therefore, for this operation to work properly, there should be a signal on-screen in a preselected range for the peak search to find
2. If the selected marker is already **On**, the instrument attempts the centering at that marker's frequency. There is no preselector for signals below about 3.6 GHz, so if the marker is on a signal below 3.6 GHz, no centering is attempted, and an advisory message is generated
3. In some models, the preselector can be bypassed. If it is bypassed, no centering is attempted in that range and a message is generated

Preselector Adjust

Lets you manually adjust the preselector filter frequency to optimize its response to the signal of interest. Only available when "[Presel Center](#)" on page 1773 is available.

For general purpose signal analysis, using **Presel Center** is recommended. Centering the filter minimizes the impact of long-term preselector drift. **Preselector Adjust** can be used instead to manually optimize the preselector. One application of manual optimization would be to peak the preselector response, which both optimizes the signal-to-noise ratio and minimizes amplitude variations due to small (short-term) preselector drifting.

3 WLAN Mode
 3.7 WLAN MIMO Modulation Analysis Measurement

When **Presel Center** is performed, the offset applied to do the centering becomes the new value of **Preselector Adjust**.

| | |
|------------------------------|--|
| Remote Command | <code>[:SENSe]:POWer[:RF]:PADJust <freq></code> <code>[:SENSe]:POWer[:RF]:PADJust?</code> |
| Example | <code>:POW:PADJ 100KHz</code> <code>:POW:PADJ?</code> |
| Notes | The value on the control is displayed to 0.1 MHz resolution |
| Dependencies | <ul style="list-style-type: none"> - Does not appear in CXA-m - Does not appear in VXT Models M9410A/11A/15A/16A - Does not appear in M9410E/11E/15E/16E - Grayed-out if microwave preselector is off - Grayed-out if entirely in Band 0, that is, if Stop Freq is lower than about 3.6 GHz - Grayed-out if entirely above 50 GHz, that is, if Start Freq is higher than 50 GHz - Blank in models that do not include a preselector, such as Option 503. If the command is sent in these instruments, it is accepted without error, and the query always returns 0 - Grayed-out in the Spectrogram View |
| Preset | 0 MHz |
| State Saved | The Preselector Adjust value set by " Presel Center " on page 1773, or by manually adjusting Preselector Adjust Not saved in instrument state, and does not survive a Preset or power cycle |
| Min/Max | -/+500 MHz |
| Backwards Compatibility SCPI | <code>[:SENSe]:POWer[:RF]:MW:PADJust</code> <code>[:SENSe]:POWer[:RF]:MMW:PADJust</code> Backwards Compatibility Command |
| Notes | The command has no effect, and the query always returns MWAVE |
| Backwards Compatibility SCPI | <code>[:SENSe]:POWer[:RF]:PADJust:PRESelector MWAVE MMWave EXTERNAL</code> <code>[:SENSe]:POWer[:RF]:PADJust:PRESelector?</code> |

Internal Preamp

Accesses a menu of controls for the internal preamps. Turning on the preamp gives a better noise figure, but a poorer inter-modulation distortion (TOI) to noise floor dynamic range. You can optimize this setting for your measurement.

The instrument takes the preamp gain into account as it sweeps. If you sweep outside of the range of the preamp, the instrument will also account for that. The displayed result always reflects the correct gain.

For some measurements, when the preamp is on and any part of the displayed frequency range is below the lowest frequency for which the preamp has specifications, a warning condition message appears in the status line. For example, for a preamp with a 9 kHz lowest specified frequency: "Preamp: Accy unspec'd below 9 kHz".

| Selection | Example | Note |
|------------|-------------------------------------|---|
| Off | :POW:GAIN OFF | |
| Low Band | :POW:GAIN ON :POW:GAIN:BAND LOW | Sets the internal preamp to use only the low band. The frequency range of the installed (optional) low-band preamp is displayed in square brackets on the Low Band selection in the dropdown |
| Full Range | :POW:GAIN ON :POW:GAIN:BAND FULL | Sets the internal preamp to use its full range. The low band (0-3.6 GHz, 0-3.4 GHz, 0-3 GHz, depending on the model) is supplied by the low band preamp and the frequencies above low band are supplied by the high band preamp The frequency range of the installed (optional) low-band preamp is displayed in square brackets on the Full Range selection in the dropdown. If the high band option is not installed the Full Range selection does not appear |

NOTE

The maximum **Center Frequency for Low Band**, displayed in square brackets, can change based on the selected IFBW for measurements that support IFBW (for example, Waveform measurement across all Modes that support it). In certain models (such as N9042B & N9032B), IFBW values ≤ 40 MHz have a maximum **Low Band** frequency of 3.6 GHz, while $40 \text{ MHz} < \text{IFBW} \leq 1 \text{ GHz}$ have a maximum of 3.3 GHz, and $1 \text{ GHz} < \text{IFBW} \leq 1.5 \text{ GHz}$ have a maximum of 3.5 GHz. IFBW values $> 1.5 \text{ GHz}$ do not support a **Center Frequency** that can reach the **Low Band** maximum frequency. In these cases, **N/A** is displayed in the square brackets for **Low Band**.

Remote Command `[:SENSe]:POWer[:RF]:GAIN:BAND LOW | FULL`
`[:SENSe]:POWer[:RF]:GAIN:BAND?`

Example `:POW:GAIN:BAND LOW`
`:POW:GAIN:BAND?`

Dependencies Not available on all hardware platforms. If the preamp is not present or is unlicensed, this control is not shown

Does not appear in VXT Models M9410A/11A/15A/16A nor in M9410E/11E/15E/16E
If `:POW:GAIN:BAND FULL` is sent when a low band preamp is available, the preamp band parameter is set to `LOW` instead of `FULL`, and an "Option not installed" message is generated

3 WLAN Mode
3.7 WLAN MIMO Modulation Analysis Measurement

| | |
|----------------|--|
| | Not available when the electronic/soft attenuator is enabled |
| Preset | LOW |
| State Saved | Saved in instrument state |
| Annotation | <p>When the USB Preamp is not connected to USB, the Preamp annotation in the Meas Bar says “Off” if the preamp is off and displays the frequency range of the low band or full range preamp depending on the setting. For example, if the Preamp is set to Low Band and the Low Band is 3.6 GHz the annotation says “3.6 GHz”. If it is a 13.6 GHz preamp and it is set to Full Range the annotation says “13.6 GHz”</p> <p>When the USB Preamp is connected to USB, the Preamp annotation says “Preamp: USB” if the internal preamp is off or “Preamp: USB, Int” if the internal preamp is on (only for measurements that support the USB preamp)</p> |
| | Auto Function |
| Remote Command | <code>[:SENSe]:POWer[:RF]:GAIN[:STATe] OFF ON 0 1</code> <code>[:SENSe]:POWer[:RF]:GAIN[:STATe]?</code> |
| Example | <code>:POW:GAIN OFF</code> <code>:POW:GAIN?</code> |
| Preset | OFF |

LNA

Lets you turn the Low Noise Amplifier (**LNA**) on or off.

LNA is an additional preamplifier that provides superior DANL and frequency range compared to "[Internal Preamp](#)" on page 1775. LNA provides lower system noise figure, especially at frequencies above 100 MHz, and can be operated up to the full range of 50 GHz instruments.

For best possible sensitivity, **LNA** can be turned on *together* with "[Internal Preamp](#)" on page 1775, although if you operate both preamps together, note that the TOI (distortion) specifications are impacted. The sensitivity improvement of this combination is substantial when operating in high band (frequencies above 3.6 GHz).

For more details about annotation, see "[More Information](#)" on page 1156

| | |
|----------------|---|
| Remote Command | <code>[:SENSe]:POWer[:RF]:GAIN:LNA[:STATe] OFF ON 0 1</code> <code>[:SENSe]:POWer[:RF]:GAIN:LNA[:STATe]?</code> |
| Example | <code>:POW:GAIN:LNA ON</code> |
| Dependencies | <p>Requires Option LNA, except for VXT models M9415A/16A</p> <p>Does not appear in VXT models M9420A/10A/11A</p> <p>M9410E/11E/15E/16E support LNA</p> <p>May not appear in some measurements</p> <p>LNA is not available when the electronic/soft attenuator is enabled</p> |

| | |
|-------------|----------------|
| Preset | OFF |
| State Saved | Saved in State |

More Information

When **LNA** is installed, the preamp annotation changes to show the state of both **LNA** and **Internal Preamp**. Below is an example:

```
Atten: 8 dB
Pre: Int on, LNA on
μW Path: LNP, On
Source: Off
```

Note that when operating entirely in the low band (below about 3.6 GHz), if **LNA** is on, **Internal Preamp** is switched off (even if you have its switch set to **ON**). This is because the noise performance is actually degraded in low band if both preamps are on. In this case, the annotation reflects the actual state of the two preamps, but the **Internal Preamp** annotation displays in amber, to warn you that the actual state of **Internal Preamp** does not match its switch control display:

```
Atten: 8 dB
Pre: Int off, LNA on
μW Path: LNP, On
Source: Off
```

μW Path Control

Options for this control include **μW Preselector Bypass** (Option MPB), **Low Noise Path** (Option LNP) and **Full Bypass Enable** in the High Band path circuits.

When the μW Preselector is bypassed, flatness is improved, but will be subject to spurs from out of band interfering signals. When **Low Noise Path Enable** is selected, the instrument automatically bypasses certain circuitry in the high frequency bands that can contribute to noise, when it is appropriate based on other instrument settings.

For most applications, the preset state is **Standard Path**, which provides the best remote-control throughput, minimizes acoustic noise from switching and minimizes the risk of wear in the hardware switches, particularly in remote test scenarios where both low band and high band setups will follow in rapid succession. In this path, the bypass of the low band/high band switch and microwave preamp is never activated, which can cause some noise degradation but preserves the life of the bypass switch.

For applications that utilize the wideband IF paths, the preset state is **μW Preselector Bypass**, if option MPB is present. This is because, when using a wideband IF such as the 140 MHz IF, the μW Preselector's bandwidth can be

3 WLAN Mode
 3.7 WLAN MIMO Modulation Analysis Measurement

narrower than the available IF bandwidth, causing degraded amplitude flatness and phase linearity, so it is desirable to bypass the preselector in the default case.

You may choose **Low Noise Path Enable** for a lower noise floor, especially in the 21–26.5 GHz region, though without improving many measures of dynamic range, and without giving the best possible noise floor. The preamp, if purchased and used, gives better noise floor than does **Low Noise Path Enable**, but the preamp’s compression threshold and third-order intercept are much poorer than that of **Low Noise Path Enable**.

A fourth choice is **Full Bypass Enable**, which combines **μW Preselector Bypass** and **Low Noise Path Enable**. Because this can bypass most of the circuitry between the input and the first mixer, care should be taken when using this setting to avoid damaging the mixer. **Full Bypass Enable** is only available if both options LNP and MPB are present, as well as option FBP.

| Path | Example | Note |
|-----------------------|-------------------|--|
| Standard Path | :POW:MW:PATH STD | Normal setting for most measurements. μW Preselector in circuit, Low Noise Path disabled |
| Low Noise Path Enable | :POW:MW:PATH LNP | See " Low Noise Path Enable " on page 1161 |
| μW Preselector Bypass | :POW:MW:PATH MPB | See " μW Preselector Bypass " on page 1163 |
| Full Bypass Enable | :POW:MW:PATH FULL | See " Full Bypass Enable " on page 1163 |

| | |
|----------------|--|
| Remote Command | <code>[:SENSe] :POWer [:RF] :MW :PATH STD LNPPath MPBypass FULL</code> <code>[:SENSe] :POWer [:RF] :MW :PATH?</code> |
| Example | <code>:POW:MW:PATH LNP</code> Enables the Low Noise path <code>:POW:MW:PATH?</code> |
| Notes | When " Presel Center " on page 1773 is performed, the instrument momentarily switches to the Standard Path, regardless of the setting of μW Path Control The DC Block will always be switched in when the low noise path is switched in, to protect succeeding circuitry from DC. Note that this does not mean “when the low noise path is enabled” but when, based on the Low Noise Path rules, the path is actually switched in. This can happen when the selection is Low Noise Path Enable or Full Bypass Enable . In the case where the DC Block is switched in, the instrument is now AC-coupled. However, if you selected DC coupling, the UI would still behave as though it were DC-coupled, including all annunciation, warnings, status bits, and responses to SCPI queries. This is because, based on other settings, the instrument could switch out the low noise path at any time and hence go back to being DC-coupled Alignment switching ignores the settings in this menu, and restores them when finished |
| Dependencies | Does not appear in CXA-m, VXT Models M9410A/11A/15A/16A, nor in M9410E/11E/15E/16E, BBIQ and External Mixing – The Low Noise Path Enable selection does not appear unless Option LNP is present and licensed |

- The **μW Preselector Bypass** selection does not appear unless Option MPB is present and licensed
- The **Full Bypass Enable** selection does not appear unless options LNP and MPB are both present as well as option FBP

In any of these cases, if the required options are not present and the SCPI command is sent, error -241, "Hardware missing; Option not installed" is generated

Low Noise Path Enable and **Full Bypass Enable** are grayed-out if the current measurement does not support them

Low Noise Path Enable and **Full Bypass Enable** are not supported in Avionics and MMR Modes (non-modulation measurements). In any of these cases (that is, the feature is not supported in either measurement or Mode), if the SCPI command is sent, the following error is generated: -221, "Setting Conflict; Feature not supported for this measurement"

| Preset | Mode | Value |
|--------|-----------------|---|
| | IQ Analyzer | MPB option present and licensed: MPB |
| | Pulse | MPB option not present and licensed: STD |
| | RTSA | |
| | Avionics | |
| | All other Modes | STD |

| Couplings | See " μW Path Control Auto " on page 1158 above |
| Preset | ON |
| Range | ON OFF |

Low Noise Path Enable

Low Noise Path Enable provides a lower noise floor under some circumstances, particularly when operating in the 21–26.5 GHz region. With the Low Noise Path enabled, the low band/high band switch and microwave preamp are bypassed whenever *all* the following are true:

- The instrument is not in the Low Band, meaning:
- the start frequency is above 3.5 GHz and
- the stop frequency is above 3.6 GHz
- The internal preamp is not installed, or if installed, is set to **Off** or **Low Band**

Note that this means that, when any part of a sweep is done in Low Band, the Low Noise Path is not used, whether or not the **Low Noise Path Enable** is selected in the user interface. Also, if the preamp is turned on, the Low Noise Path is not used, whether or not the **Low Noise Path Enable** is selected in the user interface. The only time the Low Noise Path is used is when **Low Noise Path Enable** is selected, the sweep is completely in High Band (> 3.6 GHz) and no preamp is in use.

For measurements that use IQ acquisition, the low noise path is used when **Center Frequency** is in High Band (> 3.6 GHz) and no preamp is in use. In other words, the rules above are modified to use only the center frequency to qualify which path to switch in. This is not the case for FFTs in the Swept SA measurement; they use the same rules as swept measurements.

Note that the Low Noise Path, while giving improved DANL, has the disadvantage of decreased TOI performance and decreased gain compression performance relative to the standard path.

Note also that the bypass switch is a mechanical switch and has finite life, so if the **Low Noise Path Enable** is selected, it is possible to cause frequent cycling of this switch by frequently changing instrument settings such that the above conditions hold true only some of the time. A user making tests of this nature should consider opting for the **Standard Path**, which will never throw the bypass switch, at the expense of some degraded noise performance.

The low noise path is useful for situations where the signal level is so low that the instrument performance is dominated by noise even with 0 dB attenuation, but still

high enough that the preamp option would have excessive third-order intermodulation or compression. The preamp, if purchased and used, gives better noise floor than does the “Low Noise Path.” However, its compression threshold and third-order intercept are much poorer than that of the non-preamp path.

There are some applications, typically for signals around -30 dBm, for which the third-order dynamic range of the standard path is good enough, but the noise floor is not low enough even with 0 dB input attenuation. When the third-order dynamic range of the preamp path is too little and the noise floor of the standard path is too high, the Low Noise Path can provide the best dynamic range

The graph below illustrates the concept. It shows, in red, the performance of an instrument at different attenuation settings, both with the preamp on and off, in a measurement that is affected by both instrument noise and instrument TOI. The green shows the best available dynamic range, offset by 0.5 dB for clarity. The blue shows how the best available dynamic range improves for moderate signal levels with the low noise path switched in. In this illustration, the preamp improves the noise floor by 15 dB while degrading the third-order intercept by 30 dB, and the low noise path reduces loss by 8 dB. The attenuator step size is 2 dB.

There are other times where selecting the low noise path improves performance, too. Compression-limited measurements such as finding the nulls in a pulsed-RF spectrum can profit from the low noise path in a way similar to the TOI-limited measurement illustrated. Accuracy can be improved when the low noise path allows the optimum attenuation to increase from a small amount like 0, 2 or 4 dB to a

larger amount, giving better return loss at the instrument input. Harmonic measurements, such as second and third harmonic levels, are much improved using the low noise path because of the superiority of that path for harmonic (though not intermodulation) distortion performance.

μW Preselector Bypass

Toggles the preselector bypass switch for band 1 and higher. When the microwave preselector is on, the signal path is preselected. When the microwave preselector is off, the signal path is not preselected. The preselected path is the normal path for the instrument.

The preselector is a tunable bandpass filter which prevents signals away from the frequency of interest from combining in the mixer to generate in-band spurious signals (images). The consequences of using a preselector filter are its limited bandwidth, the amplitude and phase ripple in its passband, and any amplitude and phase instability due to center frequency drift.

Option MPB or pre-selector bypass provides an unpreselected input mixer path for certain X-Series signal analyzers with frequency ranges above 3.6 GHz. This signal path allows a wider bandwidth and less amplitude variability, which is an advantage when doing modulation analysis and broadband signal analysis. The disadvantage is that, without the preselector, image signals will be displayed. Another disadvantage of bypassing the preselector is increased LO emission levels at the front panel input port.

Image responses are separated from the real signal by twice the 1st IF. For IF Paths of 10 MHz and 25 MHz, the 1st IF is 322.5 MHz, so the image response and the real signal will be separated by 645 MHz. The 1st IF will be different for other IF Path settings. When viewing a real signal and its corresponding image response in internal mixing, the image response will be to the left of the real signal.

Also, the image response and the real signal typically have the same amplitude and exhibit the same shape factor.

However, if Option FS1 (Fast Sweep Capability) is enabled, the image response in the Swept SA measurement appears lower in amplitude and has a much wider shape factor compared to the real signal.

Full Bypass Enable

With **Full Bypass Enable** selected, the microwave preselector is bypassed. In addition, the low band/high band switch and microwave preamp are bypassed whenever *all* the following are true:

- The instrument is not in the Low Band, meaning:
- the start frequency is above 3.5 GHz and

- the stop frequency is above 3.6 GHz.
- the internal preamp is not installed or if installed, is set to **Off** or **Low Band**

Note that this means that, when any part of a sweep is done in Low Band, the Low Noise Path is not used, whether or not the **Full Bypass Enable** is selected in the user interface. Also, if the preamp is turned on, the Low Noise Path is not used, whether or not the **Full Bypass Enable** is selected in the user interface. The only time the Low Noise Path is used is when **Full Bypass Enable** is selected, the sweep is completely in High Band (> 3.6 GHz) and no preamp is in use.

CAUTION

When **Full Bypass Enable** is selected, and "**Y Scale**" on page 1745 is set to 0 dB, there will be a direct AC connection between the input and the first converter when the Low Noise Path switches in (when Start Freq >3.6 GHz and the Preamp is either not licensed, set to Low Band, or Off). This puts the first converter at considerable risk to be damaged by high AC power. Consequently, whenever **Full Bypass Enable** is selected, a warning message appears in the status bar:

"Full Bypass Enabled, maximum safe input power reduced"

Microwave Preselector Bypass Backwards Compatibility

| | |
|---------------------------------|--|
| Example | Bypass the microwave preselector: :POW:MW:PRES OFF |
| Notes | Included for Microwave Preselector Bypass backwards compatibility The ON parameter sets the STD path (:POW:MW:PATH STD) The OFF parameter sets path MPB (:POW:MW:PATH MPB) |
| Preset | ON |
| Backwards Compatibility SCPI | [:SENSe]:POWer[:RF]:MW:PRESelector[:STATe] ON OFF 0 1 [:SENSe]:POWer[:RF]:MW:PRESelector[:STATe]? |

Frequency Extender Preselection Bypass

Only applies to the high frequency path of the Frequency Extender, and only if the Frequency Extender allows it. For example, the V3050A high frequency path is 50 – 110 GHz and *does* allow control of the preselector bypass.

When the Frequency Extender's preselection is bypassed, flatness is improved, but will be subject to spurs from out-of-band interfering signals. For bandwidths greater than 2.5 [GHz], it is recommended that the signal bypass the Frequency Extender Preselector since the max bandwidth of the Preselector can be as narrow as 2.5 [GHz].

For most applications, the preset state is **OFF**, which gives the best remote-control throughput, minimizes acoustic noise from switching, minimizes out of band spurs, and minimizes the risk of wear in the hardware switches.

Preselector and Bandwidth Conflict

When the Frequency Extender Preselector is applied and the signal bandwidth is greater than 2.5 [GHz], then a settings alert message will show to warn the user that the signal may be distorted due to the limitation of the Frequency Extender Preselector bandwidth.

An example of the settings alert message is shown below.

Settings Alert message in the Status Bar at the bottom of the display.

Settings Alert message in the error queue

| Type | ID | |
|---|-----|---|
|  | 159 | Settings Alert - DETECTED;Presel/Meas BW conflict |

Allow Full Bypass in Auto

Enable or disable Full Bypass in μ W Path Auto rule. See "[μW Path Control](#)" on page 1778.

When this function is **ON**, and "[μW Path Control](#)" on page 1778 is in **AUTO**, it is possible for the auto rules to select the **FULL** Bypass state, which bypasses both the Preamp and the Microwave Preselector. Otherwise, the auto rules never select the **FULL** Bypass state. This is convenient when making wideband measurements, but it also adds some risk of damage to the first converter.

CAUTION

When **Full Bypass Enable** is selected, and "[Y Scale](#)" on page 1745 is set to 0 dB, there will be a direct AC connection between the input and the first converter when the Low Noise Path switches in (when Start Freq > 3.6 GHz and the Preamp is either not licensed, set to **Low Band** or **Off**). This puts the first converter at considerable risk to be damaged by high AC power. Consequently, whenever **Full Bypass Enable** is selected, a warning message appears in the status bar:

“Full Bypass Enabled, maximum safe input power reduced”

Software Preselection

Provided in some instruments, either to compensate for issues with provided hardware preselection or to provide the preselection function when there is no hardware preselector.

N9041B

Software Preselection compensates for the frequency range limit of the microwave preselector. Since the microwave preselector only goes up to 50 GHz, software preselection must be used to suppress and separate images above 50 GHz. The specific algorithm used for software preselection is specified by the SW Preselection Type selection – Normal or Advanced.

In N9041B, **Software Preselection** only applies for frequencies above 50 GHz, therefore it is only used for RF Input 2. Even if turned on, it is not used for other inputs, and never for frequencies below 50 GHz. This is why the label of this control contains the parenthetical note “(>~50 GHz)”.

Note that in N9041B, in Swept SA measurement, **Software Preselection** works even if the measurement is using an FFT Sweep Type. In measurements other than Swept SA, Software Preselection is not used if the measurement is using an FFT sweep type.

N9042B+V3050A

Software Preselection compensates for the frequency range limit of the microwave preselector. Since the microwave preselector only goes up to 50 GHz, software preselection must be used to suppress and separate images above 50 GHz. The

3 WLAN Mode
 3.7 WLAN MIMO Modulation Analysis Measurement

specific algorithm used for software preselection is specified by the SW Preselection Type selection – Normal or Advanced.

For N9042B+V3050A, Software Preselection only applies for frequencies above 50 GHz, therefore it is only used for External RF. Even if it is turned on, it will not be used for other inputs and never for frequencies below 50 GHz. This is why the label of this control contains the parenthetical note “(>~50 GHz)”.

Note that for N9042B+V3050A, in the Swept SA measurement, Software Preselection works even if the measurement is using an FFT Sweep Type. In measurements other than Swept SA, Software Preselection is not used if the measurement is using an FFT Sweep Type.

VXT models M9410A/11A/15A/16A

Software Preselection is used to provide the preselection function, as there is no hardware preselector in these models. Two background traces are taken and compared point by point, and the point with the lowest amplitude from the two traces is used. This provides a method to reduce spurs that are internally generated within the VXT, but you should note the following when using Software Preselection:

- There is some speed cost due to the need to take multiple captures
- Taking the point with the lowest amplitude in each trace will make the average noise level lower at all points that do not have a spur. This can reduce the accuracy of the measurement of noise and noise-like signals

Because of the difficulty in identifying spurs manually, you are recommended to leave Software Preselection **ON** at all times in VXT models M9410A/11A. If you turn it off in order to speed up your measurement or improve noise accuracy, be aware of unwanted onscreen spurs.

| | |

| | |
|-------------|---------------------------|
| State Saved | Saved in instrument state |
|-------------|---------------------------|

SW Preselection Type

Specifies the algorithm used for software preselection.

Two hidden sweeps occur in succession. The second sweep is offset in LO frequency by $2 * IF / N$. For each point in each trace, the smaller amplitude from the two traces is taken and placed in that point in the selected trace. The Peak detector is auto-selected to improve the image suppression effectiveness. Responses of each trace that lie on top of one another will remain and are valid signals. Other signals are images, which are suppressed. The action of taking the smaller of the two traces will make the average noise level lower in all points that do not have an image, thus reducing the accuracy of the measurement of noise and noise-like signals.

- **NORMa1** - mathematically removes all image and multiple responses of signals present at the input
- **ADVanced** - any trace processing (such as “max hold” or trace averaging) is performed on the points of both candidate traces before the “select minimum” operation occurs. This form of processing works better for non-stationary signals, such as pulsed-RF signals

| | | |
|----------------|--|----------|
| Remote Command | [:SENSe]:POWer[:RF]:SWPResel NORMa1 ADVanced [:SENSe]:POWer[:RF]:SWPResel? | |
| Example | :POW:SWPR NORM :POW:SWPR? | |
| Dependencies | Only appears in N9041B and N9042B+V3050A. Only appears in measurements that use the Swept method Grayed-out when " Software Preselection " on page 1788 is OFF. The grayout message is “Unavailable unless SW Presel enabled” | |
| Preset | N9041B | ADVanced |
| | N9042B+V3050A | NORMa1 |
| State Saved | Saved in instrument state | |

SW Preselection BW

Specifies the effective bandwidth to be used for Software Preselection.

The options are:

3 WLAN Mode
 3.7 WLAN MIMO Modulation Analysis Measurement

- **NORMa1** – when making Swept measurements, a software preselection algorithm is used which takes up to 4 background acquisitions, then post-processes the result. This algorithm can remove images from signals with an occupied bandwidth up to around 3 GHz. (Default/Preset setting). When making FFT measurements, this algorithm is not used, instead the same algorithm is used as for **NARRow** (below)
- **NARRow**– a software preselection algorithm is used which takes two background acquisitions, then post-processes the result to detect and remove images from wideband signals with occupied bandwidths up to 2 GHz. This increases the risk of images failing to be rejected, but improves the measurement speed

| | |
|----------------|--|
| Remote Command | <code>[:SENSe]:POWer[:RF]:SWPResel:BW NORMa1 NARRow</code> <code>[:SENSe]:POWer[:RF]:SWPResel:BW?</code> |
| Example | <code>:POW:SWPR:BW NARR</code> |
| Dependencies | Only appears in N9041B and N9042B+V3050A. Only appears in measurements that use the Swept method Grayed-out when " Software Preselection " on page 1788 is OFF . The grayout message is "Unavailable unless SW Presel enabled" For N9042B+V3050A, the parameter is SCPI-only, and always set to NARRow when Software Preselection is enabled |
| Preset | N9041B NORMa1 N9042B+V3050A NARRow |
| State Saved | Saved in instrument state |

High Freq Prefilter

Lets you set the state of Prefilter for center frequencies above 1310 MHz.

In VXT Models M9410A/11A and M9410E/11E in bypass frequency range (1310MHz~5GHz), the Receiver RF path has a bank of filters that come after the RF Attenuator in the signal path. Since this bank of filters precedes the mixer they are known as the "Prefilter" bank. Their purpose is to eliminate unwanted in-band mixing products by filtering out all but the desired frequencies before the signals get to the mixer. There are 13 prefilter bands to cover the frequencies between 9 kHz and 6000 MHz. The Prefilter provides the necessary rejection of the unwanted signal.

| | |
|----------------|--|
| Remote Command | <code>[:SENSe]:<measurement>:PFILter[:STATe] ON OFF 1 0</code> <code>[:SENSe]:<measurement>:PFILter[:STATe]?</code> |
| Example | Enable High Freq Prefilter for the Complex Spectrum Measurement in BASIC Mode: <code>:SPEC:PFIL ON</code> |

| | |
|--------------|--|
| | Enable High Freq Prefilter for the IQ Waveform Measurement, in multiple Modes: :WAV:PFIL ON |
| | Enable High Freq Prefilter for the Swept SA Measurement in SA Mode: :SAN:PFIL ON |
| Dependencies | Only appears in VXT models M9410A/11A with center frequency above 1310 MHz, and M9410E/11E in frequency range 1310MHz~5GHz |
| Preset | See " Prefilter Presets " on page 1170 below |
| State Saved | Saved in instrument state |

Prefilter Presets

3.7.5 BW

The BW key opens the bandwidth menu.

3.7.5.1 Settings

The Settings tab contains the basic Bandwidth functions. In most measurements it is the only tab under Bandwidth.

Info BW

Enables you to specify the information bandwidth for the analyzer. This is used to set the hardware filter of the ADC.

| | |
|----------------|--|
| Remote Command | <code>[:SENSe]:EVMmimo:BANDwidth[:RESolution] <freq></code> <code>[:SENSe]:EVMmimo:BANDwidth[:RESolution]?</code> |
| Example | <code>:EVMm:BAND 1 kHz</code> <code>:EVMm:BAND?</code> |
| Dependencies | Grayed out if Radio Std Detection is auto with disabled message: Info BW is fixed when Radio Std Detection is auto |
| Preset | 25 MHz Info BW is limited by hardware capability and coupled by Radio Standard: if Radio Std is 802.11n-20M = 25MHz if Radio Std is 802.11n-40M = 40MHz if Radio Std is 802.11ac-20M = 25MHz if Radio Std is 802.11ac-40M = 40MHz if Radio Std is 802.11ac-80M or 80M+ 80M = 80MHz if Radio Std is 802.11ac-160M = 160MHz if Radio Std is 802.11ax-20M = 25MHz if Radio Std is 802.11ax-40M = 40MHz if Radio Std is 802.11ax-80M or 80M+ 80M = 80MHz if Radio Std is 802.11ax-160M = 160MHz if Radio Std is 802.11be-20M = 25MHz if Radio Std is 802.11be-40M = 40MHz if Radio Std is 802.11be-80M = 80MHz if Radio Std is 802.11be-160M = 160MHz if Radio Std is 802.11be-320M = 320MHz |
| State Saved | Saved in instrument state |
| Min | 1 kHz |
| Max | The analyzer's max Info BW is Option dependent: VXT models M9420A/21A (VXT): No Option = 40.0 MHz Option B40 = 40.0 MHz |

Option B85 = 80.0 MHz
Option B1X = 160.0 MHz
Option U-B85 = Upgrade from 40.0 MHz to 80.0 MHz
Option U-B1X = Upgrade from 80.0 MHz to 160.0 MHz
VXT models M9410A/11A (VXT2):
Option B40 = 40.0 MHz
M941xA-B3X = 300.0 MHz
M941xA-B6X = 600.0 MHz
M94xA-B12 = 1.2 GHz
M94xAU-B6X = Upgrade from 300.0 MHz to 600.0 MHz
M94xAU-B12 = Upgrade from 300.0 MHz to 1.2 GHz
M94xAU-BU1 = Upgrade from 600.0 MHz to 1.2 GHz
VXT models M9415A/16A(VXT3):
M941xA-B4X = 400.0 MHz
M941xA-B8X = 800.0 MHz
M941xA-B12 = 1.2 GHz
M941xAU-B6X = Upgrade from 400.0 MHz to 800.0 MHz
M941xAU-B12 = Upgrade from 400.0 MHz to 1.2 GHz
M941xAU-BU2 = Upgrade from 800.0 MHz to 1.2 GHz
All other models:
B1Y=160 MHz, B1X=140 MHz, B1A=125 MHz, B85= 85 MHz, B40=40 MHz, B25=25 MHz
When Info BW auto coupled by Radio Std exceeds max BW of hardware, there will be an error message: "Invalid result; Wider BW required"
If BW is less than Radio Std default value, there will be a conditional warning message: "Setting Alert; BW is less than xxx"

3.7.6 Display

The Display key opens the Display Menu, which lets you configure display items for the current Mode, Measurement View or Window.

3.7.6.1 View

See "[Views](#)" on page 1129

View

Contains controls for selecting the current **View**, and for editing User Views.

User View

Lets you choose a View from the saved User Views for the current measurement. This panel only appears if a User View exists for the current measurement.

| | |
|------------------------------|--|
| Remote Command | <code>:DISPlay:VIEW:ADVanced:SElect <alphanumeric></code> <code>:DISPlay:VIEW:ADVanced:SElect?</code> |
| Example | Select Baseband as the current View <code>:DISP:VIEW:ADV:SEL "Baseband"</code> |
| Notes | <p>You must be in the measurement whose View you are trying to set to send the command. You can only set Views for the current measurement using this command</p> <p>For predefined views, the parameter is derived from the view name that is shown in the View list in the user interface. For example, if you are trying to select the Trace Zoom view in the Swept SA measurement, you send:</p> <pre>:DISP:VIEW:ADV:SEL "Trace Zoom"</pre> <p>because "Trace Zoom" is the name of the View as seen in the Mode/Meas dialog or in the Display, View menu</p> <p>You <i>cannot</i> use the legacy View parameter (which in this case would be <code>TZOOM</code>) with</p> <pre>:DISP:VIEW:ADV:SEL</pre> <p><code><alphanumeric></code> is case insensitive; you can specify mixed case, however the name will be evaluated on a single case. Thus, both of the following forms work:</p> <pre>:DISP:VIEW:ADV:SEL "Trace Zoom"</pre> <pre>:DISP:VIEW:ADV:SEL "TRACE ZOOM"</pre> <p>If the specified view is not a valid View, the query returns the error message "-224, Illegal parameter value; View with the name <alphanumeric> does not exist"</p> <p>If the display is disabled (via <code>:DISP:ENAB OFF</code>) then the error message "-221, Settings conflict; View SCPI cannot be used while Display is disabled" is generated</p> |
| Backwards Compatibility SCPI | <p>The legacy node</p> <pre>:DISPlay:VIEW[:SElect]</pre> <p>is retained for backwards compatibility, but it only supports predefined views</p> |

Restore Layout to Default

Restores the Layout to the default for Basic.

Modified Views are very temporary; if you exit the current measurement they are discarded, and they are not saved in State. To retain this View for later use, and to be able to return easily to your original Basic View, you can save your edited View as a "User View".

Save Layout as New View

Saves your new View as a User View. An alpha keyboard appears, which lets you name your new View; the default is the old View name plus a number.

| | |
|----------------|--|
| Remote Command | <code>:DISPlay:VIEW:ADVanced:NAME <alphanumeric></code> |
| Example | <code>:DISP:VIEW:ADV:NAME "Baseband"</code> Creates a new View named Baseband from the current View, and selects it as the current View |
| Notes | <code><alphanumeric></code> is case insensitive; you can specify mixed case, however the name will be evaluated on a single case If <code><alphanumeric></code> name already exists as a View, the error message "-224, Illegal parameter value; View <alphanumeric> already exists" is generated If the display is disabled (via <code>:DISP:ENAB OFF</code>) then the error message "-221, Settings conflict; User View SCPI cannot be used while Display is disabled" is generated |

Re-Save User View

You can re-edit a User View; if you make changes, then an asterisk will appear next to the User View's name. You can then tap **Re-Save User View** to save it back to its existing name, or **Save Layout as New View** to add another, new User View.

This is a front panel function only, there is no remote command available to perform this function. To do this remotely, you must first perform **Save Layout as New View**, then delete the old User View and rename the new one with the name of the View you just deleted.

Rename User View

You can rename the current View by giving it a new unique name. Only User Views can be renamed, if the current View is a Predefined View, an error occurs.

| | |
|----------------|---|
| Remote Command | <code>:DISPlay:VIEW:ADVanced:REName <alphanumeric></code> |
| Example | <code>:DISP:VIEW:ADV:REN "Baseband"</code> |
| Notes | <code><alphanumeric></code> is case insensitive; you can specify mixed case, however the name will be evaluated on a single case If the <code><alphanumeric></code> specifying the new name is already present in the list of View names, the error message "-224, Illegal parameter value; View <alphanumeric> already exists" is generated If the current View is a Predefined View, the error message "-224, Illegal parameter value; Cannot rename a Predefined View" is generated If the display is disabled (via <code>:DISP:ENAB OFF</code>) then the error message "-221, Settings conflict; View SCPI cannot be used while Display is disabled" is generated |

Delete User View

You can delete the current View if it is a User View. The default view becomes the current view for the Measurement.

| | |
|----------------|---|
| Remote Command | <code>:DISPlay:VIEW:ADVanced:DELeTe</code> |
| Example | <code>:DISP:VIEW:ADV:DEL</code> |
| Notes | <p><code><alphanumeric></code> is case insensitive; you can specify mixed case, however the name will be evaluated on a single case</p> <p>If the <code><alphanumeric></code> is not present in the list of View names, the error message “-224, Illegal parameter value; View <alphanumeric> does not exist” is generated</p> <p>If the current View is a Predefined View, the error message “-224, Illegal parameter value; Cannot delete a Predefined View” is generated</p> <p>If the display is disabled (via <code>:DISP:ENAB OFF</code>) then the error message “-221, Settings conflict; View SCPI cannot be used while Display is disabled” is generated</p> |

Delete All User Views

Deletes all previously saved User Views. The default view becomes the current view for the Measurement if a User View was the current view when this command was executed.

| | |
|----------------|--|
| Remote Command | <code>:DISPlay:VIEW:ADVanced:DELeTe:ALL</code> |
| Example | <code>:DISP:VIEW:ADV:DEL:ALL</code> |
| Notes | Disabled if there are no User Views |

View Editor Remote Commands

The following remote commands help you manage Views and User Views. Note that the SCPI node for User Views handles both Predefined and User Views. The legacy nodes, `:DISPlay:VIEW[:SElect]` and `:DISPlay:VIEW:NSEL`, are retained for backwards compatibility, but they only support predefined views.

View Listing Query

Returns a string containing a comma-separated list of names for *all* the Views, including User Views, available for the current Measurement.

| | |
|----------------|--|
| Remote Command | <code>:DISPlay:VIEW:ADVanced:CATalog?</code> |
|----------------|--|

| | |
|---------|---|
| Example | <code>:DISP:VIEW:ADV:CAT?</code> |
| Notes | Returns a quoted string of the available Views for the current measurement, separated by commas. The list includes names for <i>all</i> the Views, including User Views, available for the current Measurement Example: <code>"Normal,Trace Zoom,Spectrogram,Baseband,myView1,yourView1"</code> No distinction is made between Predefined and User Views If you switch measurements with the display disabled (via <code>:DISP:ENAB OFF</code>), then query the list of available Views, the result is undefined |

User View Listing Query

Returns a string containing a comma-separated list of names for *only* the User Views available for the current Measurement.

| | |
|----------------|--|
| Remote Command | <code>:DISPlay:VIEW:ADVanced:USER:CATalog?</code> |
| Example | <code>:DISP:VIEW:ADV:USER:CAT?</code> |
| Notes | Returns a quoted string of the available User Views for the current measurement, separated by commas. Example: <code>"Baseband,myView1,yourView1"</code> If you switch measurements with the display disabled (see "Display Enable (Remote Command Only)" on page 1804), then query the list of available Views, the result is undefined |

3.7.6.2 Meas Display

The Meas Display tab contains controls for setting the display for the current window.

I/Q Polar Vec/Constln

Specifies the format of the Polar Vector graph display. You can select the following format:

- Constellation (Constellation only)

| | |
|----------------|---|
| Remote Command | <code>:DISPlay:EVMMimo:VIEW[1]:WINDow[1]:TRACe:POLar CONSTln</code> <code>:DISPlay:EVMMimo:VIEW[1]:WINDow[1]:TRACe:POLar?</code> |
| Example | <code>:DISP:EVMM:VIEW:WIND:TRAC:POL CONS</code> <code>:DISP:EVMM:VIEW:WIND:TRAC:POL ?</code> |

3 WLAN Mode
 3.7 WLAN MIMO Modulation Analysis Measurement

| | |
|-------------|---|
| Couplings | Default Value is coupled with Radio Std |
| Preset | CONS |
| State Saved | Saved in instrument state |

I/Q Points

Specifies the number of I/Q Points displayed for the I/Q measured polar graph.

| | |
|----------------|---|
| Remote Command | <code>:DISPlay:EVMMimo:VIEW[1]:WINDow[1]:TRACe:IQPoints <integer></code> <code>:DISPlay:EVMMimo:VIEW[1]:WINDow[1]:TRACe:IQPoints?</code> |
| Example | <code>:DISP:EVMM:VIEW:WIND:TRAC:IQP 10</code> <code>:DISP:EVMM:VIEW:WIND:TRAC:IQP?</code> |
| Notes | Default, Max values are coupled with Radio Std and Meas Interval |
| Couplings | Change the Meas Interval will set the I/Q Points as the same number as Meas Interval when Meas Interval is no bigger than 24564, otherwise, it will be clipped to 24564 |
| Preset | 60 symbols |
| State Saved | Saved in instrument state |
| Min | 1 |
| Max | Meas Interval, when Meas Interval <= 24564 24564, when Meas Interval > 24564 |

I/Q Points Offset

Specifies the number of points offset from the first one in the Meas Interval.

| | |
|----------------|---|
| Remote Command | <code>:DISPlay:EVMMimo:VIEW[1]:WINDow[1]:TRACe:IQOFset <integer></code> <code>:DISPlay:EVMMimo:VIEW[1]:WINDow[1]:TRACe:IQOFset?</code> |
| Example | <code>:DISP:EVMM:VIEW:WIND:TRAC:IQOF 10</code> <code>:DISP:EVMM:VIEW:WIND:TRAC:IQOF?</code> |
| Notes | Max Value is coupled with Meas Interval and I/Q Points |
| Couplings | Change of Meas Interval will set the I/Q Points Offset to be 0 |
| Preset | 0 |
| State Saved | Saved in instrument state |
| Min | 0 |
| Max | Meas Interval – I/Q Points |

I/Q Rotation

Toggles the display rotation function between On and Off. If set to On, the I/Q polar vector or I/Q polar constellation graph is rotated from 0 to 359.5 degrees.

| | |
|----------------|--|
| Remote Command | <code>:DISPlay:EVMMimo:VIEW[1]:WINDow[1]:TRACe:ROTation <real></code> <code>:DISPlay:EVMMimo:VIEW[1]:WINDow[1]:TRACe:ROTation?</code> <code>:DISPlay:EVMMimo:VIEW[1]:WINDow[1]:TRACe:ROTation:STATe 0 1 OFF ON</code> <code>:DISPlay:EVMMimo:VIEW[1]:WINDow1:TRACe:ROTation:STATe?</code> |
| Example | <code>:DISP:EVMM:VIEW:WIND:TRAC:ROT 45</code> <code>:DISP:EVMM:VIEW:WIND:TRAC:ROT?</code> |
| Preset | 45.0 • OFF |
| State Saved | Saved in instrument state |
| Range | On Off |
| Min | 0 |
| Max | 359.5 • |

U-Sig No

The U-SIG content shall be identical in each non-punctured 20 MHz subchannels within each 80 MHz subblock, while it can be different in each 80 MHz subblocks when BW is greater than 80MHz.

You can choose 'U-SIG No' to see decoded information for each 80 MHz subblock.

| | |
|----------------|---|
| Remote Command | <code>:DISPlay:EVMMimo:USIG[:NUMBer] <integer></code> <code>:DISPlay:EVMMimo:USIG[:NUMBer]?</code> |
| Example | <code>:DISP:EVMM:USIG 1</code> <code>:DISP:EVMM:USIG?</code> |
| Preset | 1 |
| State Saved | Saved in instrument state |
| Min | 1 |
| Max | 1 for 11be 20M/40M/80M 2 for 11be 160M 4 for 11be 320M |

EHT SIG No

For OFDMA transmission or non-OFDMA transmission to multiple users, EHT-SIG field when BW is greater than 80 MHz contains two EHT-SIG content channels per 80 MHz and the EHT-SIG content channels per 80 MHz are allowed to carry different information.

You can choose EHT-SIG No to see EHT-SIG filed decoded information for each 80 MHz subblock.

| | |
|----------------|---|
| Remote Command | <code>:DISPlay:EVMMimo:EHTSig[:NUMBer] <integer></code> <code>:DISPlay:EVMMimo:EHTSig[:NUMBer]?</code> |
| Example | <code>:DISP:EVMM:EHTS 1</code> <code>:DISP:EVMM:EHTS?</code> |
| Preset | 1 |
| State Saved | Saved in instrument state |
| Min | 1 |
| Max | 1 for 11be 20M/40M/80M 2 for 11be 160M 4 for 11be 320M |

3.7.6.3 Annotation

Contains controls for setting up the annotation for the current Mode or Measurement.

Graticule

Turns the display graticule On or Off for all windows with graticules in all measurements in the current Mode. Also turns the graticule Y-Axis annotation on and off.

| | |
|----------------|---|
| Remote Command | <code>:DISPlay:GRATicule[:STATe] OFF ON 0 1</code> <code>:DISPlay:GRATicule[:STATe]?</code> |
| Example | <code>:DISP:GRAT OFF</code> |
| Notes | The graticule is the set of horizontal and vertical lines that make up the grid/divisions for the X-Axis and Y-Axis |
| Preset | ON |
| State Saved | Saved in instrument state |
| Backwards | <code>:DISPlay:WINDow[1]:TRACe:GRATicule:GRID[:STATe] OFF ON 0 1</code> |

| | |
|-----------------------|---|
| Compatibility SCPI | <code>:DISPlay:WINDow[1]:TRACe:GRATicule:GRID[:STATe]?</code> This command is accepted for backwards compatibility with older instruments, but the WINDow , TRACe and GRID parameters are ignored |
|-----------------------|---|

Screen Annotation

Controls the display of the annunciation and annotation around the graticule, including any annotation on lines (such as the display line, the threshold line, etc.) and the Y-Axis annotation, for all windows with screen annotation in all measurements in the current Mode.

This does *not* include marker annotation (or the N dB result). When **OFF**, the graticule expands to fill the entire graticule area, leaving only the 1.5% gap above the graticule, as described in the **Trace** section.

| | |
|----------------|--|
| Remote Command | <code>:DISPlay:ANNotation:SCReen[:STATe] OFF ON 0 1</code> <code>:DISPlay:ANNotation:SCReen[:STATe]?</code> |
| Example | <code>:DISP:ANN:SCR OFF</code> |
| Dependencies | Grayed-out and forced to OFF when System Display Settings, Annotation is OFF |
| Preset | ON This remains OFF through a Preset when System Display Settings, Annotation is set to OFF |
| State Saved | Saved in instrument state |

Trace Annotation

Turns on and off the labels on the traces, showing their detector (or their Math Mode) as described in the **Trace** section, for all windows in all measurements in the current Mode for which Trace Annotation on/off is supported.

If Trace Math is being performed on a trace, then the Trace Math annotation replaces the detector annotation.

For measurements that support limit lines, this key also turns on and off the labels on the Limit Lines. The label is the Limit number annotation and Limit Comment displayed on the graph. If the length of the comment is greater than 20 characters, the first 8 characters and the last 8 characters are displayed, joined with

| | |
|----------------|--|
| Remote Command | <code>:DISPlay:ANNotation:TRACe[:STATe] ON OFF 1 0</code> <code>:DISPlay:ANNotation:TRACe[:STATe]?</code> |
| Example | <code>:DISP:ANN:TRAC OFF</code> |
| Preset | OFF |
| State Saved | Saved in instrument state |

Control Annotation

Turns on and off the display of values on the Active Function controls for all measurements in the current Mode. This is a security feature.

| | |
|----------------|--|
| Remote Command | <code>:DISPlay:ACTivefunc[:STATe] ON OFF 1 0</code> <code>:DISPlay:ACTivefunc[:STATe]?</code> |
| Example | <code>:DISP:ACT OFF</code> |
| Dependencies | Grayed out and forced to OFF when System Display Settings, Annotation is OFF |
| Preset | ON This remains OFF through a Preset when System Display Settings, Annotation is set to OFF |
| State Saved | Saved in instrument state |

Meas Bar

Turns the Measurement Bar at the top of the screen on and off for all measurements in the current Mode. When **OFF**, the graticule area expands to fill the area formerly occupied by the Measurement Bar.

| | |
|----------------|--|
| Remote Command | <code>:DISPlay:ANNotation:MBAR[:STATe] OFF ON 0 1</code> <code>:DISPlay:ANNotation:MBAR[:STATe]?</code> |
| Example | <code>:DISP:ANN:MBAR OFF</code> |
| Dependencies | Grayed out and forced to OFF when System Display Settings, Annotation is OFF |
| Preset | ON This remains OFF through a Preset when System Display Settings, Annotation is set to OFF |
| State Saved | Saved in instrument state |

Display Enable (Remote Command Only)

Turns the display on/off, including the display drive circuitry. The backlight stays lit to confirm that the instrument is on. The display enable setting is mode global. There are three reasons for turning the display off:

1. To increase speed as much as possible by freeing the instrument from having to update the display
2. To reduce emissions from the display, drive circuitry
3. For security purposes

If you have turned off the display:

- and you are in local operation, the display can be turned back on by pressing any key or by sending `:SYSTem:DEFaults MISC` or `:DISPlay:ENABle ON` (neither `*RST` nor `:SYSTem:PRESet` enable the display)
- and you are in remote operation, the display can be turned back on by pressing the **Local** or **Esc** keys, or by sending `:SYSTem:DEFaults MISC` or `:DISPlay:ENABle ON` (neither `*RST` nor `:SYSTem:PRESet` enable the display)
- and you are using either the `:SYSTem:KLOCK` command or GPIB local lockout, then *no* front-panel key press will turn the display back on. You must turn it back on remotely.

If the display is **OFF**, many SCPI commands related to User Views and Multiscreen functionality do not work, and return the error messages “-221, Settings conflict; Screen SCPI cannot be used when Display is disabled” or “221, Settings conflict; View SCPI cannot be used while Display is disabled”. These commands include:

| Name | Command |
|----------------------------|--|
| Select User View | <code>:DISPlay:VIEW:ADVanced:SElect</code> |
| Rename User View | <code>:DISPlay:VIEW:ADVanced:REName</code> |
| Delete User View | <code>:DISPlay:VIEW:ADVanced:DElete</code> |
| Create User View | <code>:DISPlay:VIEW:ADVanced:NAME</code> |
| Select Screen | <code>:INSTrument:SCReen:SElect</code> |
| Delete Screen | <code>:INSTrument:SCReen:DElete</code> |
| Delete All But This Screen | <code>:INSTrument:SCReen:DElete:ALL</code> |
| Add Screen | <code>:INSTrument:SCReen:CREate</code> |
| Rename Screen | <code>:INSTrument:SCReen:REName</code> |
| Sequencer On/Off | <code>:SYSTem:SEQuencer</code> |

| | |
|-------------------------------|---|
| Remote Command | <code>:DISPlay:ENABle OFF ON 0 1</code> <code>:DISPlay:ENABle?</code> |
| Example | <code>:DISP:ENAB OFF</code> |
| Couplings | <code>:DISP:ENAB OFF</code> turns Backlight OFF and <code>:DISP:ENAB ON</code> turns Backlight ON , but changing Backlight settings does <i>not</i> change the state of <code>:DISP:ENAB</code> |
| Preset | ON Set by <code>:SYST:DEF MISC</code> , but not affected by <code>*RST</code> or <code>:SYSTem:PRESet</code> |
| State Saved | Not saved in instrument state |
| Backwards Compatibility Notes | <code>:SYST:PRES</code> no longer turns on <code>:DISPlay:ENABle</code> as it did in legacy analyzers |

3.7.7 Frequency

The Freq key opens the Frequency menu, which contains controls that allow you to control the Frequency and Channel parameters of the instrument.

3.7.7.1 Settings

The Settings Tab contains controls that pertain to the X axis parameters of the measurement. These parameters control how data on the vertical (X) axis is displayed and control instrument settings that affect the horizontal axis.

Center Frequency

Sets the frequency that corresponds to the horizontal center of the graticule (when frequency Scale Type is set to linear). While adjusting the Center Frequency the Span is held constant, this means that both Start Frequency and Stop Frequency will change.

| | |
|----------------|---|
| Remote Command | <code>[:SENSe]:FREQuency:CENTer <freq></code> <code>[:SENSe]:FREQuency:CENTer?</code> |
| Example | <code>:FREQ:CENT 50 MHz</code> <code>:FREQ:CENT UP</code> changes the center frequency to 150 MHz if you use <code>FREQ:CENT:STEP 100 MHz</code> to set the center frequency step size to 100 MHz <code>:FREQ:CENT?</code> |
| Notes | Preset and Max values are dependent on Hardware Options If no terminator (e.g., MHz) is sent the terminator Hz is used. If a terminator with unit other than Frequency is used, an invalid suffix error message is generated. |
| Preset | Depends on instrument maximum frequency, mode, measurement, and selected input |
| State Saved | Saved in instrument state |
| Min | Depends on instrument maximum frequency, mode, measurement, and selected input |
| Max | Depends on instrument maximum frequency, mode, measurement, and selected input |

Center Frequency Segment1

This key is only available when radio standard is 802.11ac/ax 80+80MHz.

This parameter sets the center frequency of Segment 1.

Note that the SCPI command will set this center frequency even if radio standard is NOT 802.11ac/ax 80+80MHz.

| | |
|----------------|--|
| Remote Command | <code>[:SENSe] :FREQuency :CENTer :SEGMENT1 <freq></code> <code>[:SENSe] :FREQuency :CENTer :SEGMENT1?</code> |
| Example | <code>:FREQ:CENTer:SEGM1 5.53 GHz</code> <code>:FREQ:CENTer:SEGM1?</code> |
| Notes | For an 80+80 MHz channel, the Segment 1 will be the lower or upper segment. The center frequency of this Segment1 is independent from the center frequency of Segment2 |
| Preset | 5.21 GHz |
| State Saved | Saved in instrument state |
| Min | Depends on instrument minimum center frequency Same as Center Frequency |
| Max | Depends on instrument maximum center frequency Same as Center Frequency |

Center Frequency Segment2

This key is only available when radio standard is 802.11ac/ax 80+80MHz and when the active measurement is SEM, CHP or Modulation Analysis.

This parameter sets the center frequency of Segment 2.

Note that the SCPI command will set this center frequency even if radio standard is NOT 802.11ac/ax 80+80MHz.

| | |
|----------------|--|
| Remote Command | <code>[:SENSe] :FREQuency :CENTer :SEGMENT2 <freq></code> <code>[:SENSe] :FREQuency :CENTer :SEGMENT2?</code> |
| Example | <code>:FREQ:CENTer:SEGM2 5.53 GHz</code> <code>:FREQ:CENTer:SEGM2?</code> |
| Notes | For an 80+80 MHz channel, the Segment 2 will be the lower or upper segment. The center frequency of this Segment2 is independent from the center frequency of Segment1 |
| Preset | 5.45 GHz |
| State Saved | Saved in instrument state |
| Min | Depends on instrument minimum center frequency Same as Center Frequency |
| Max | Depends on instrument maximum center frequency Same as Center Frequency |

CF Step

Changes the step size for the center frequency and start and stop frequency functions. Once a step size has been selected and the center frequency function is active, the step keys (and the UP/DOWN parameters for Center Frequency from

3 WLAN Mode
 3.7 WLAN MIMO Modulation Analysis Measurement

remote commands) change the center frequency by the step-size value. The step size function is useful for finding harmonics and sidebands beyond the current frequency span of the analyzer.

Note that the start and stop frequencies also step by the CF Step value.

| | |
|----------------|---|
| Remote Command | <code>[:SENSe]:FREQuency:CENTer:STEP[:INCRement] <freq></code> <code>[:SENSe]:FREQuency:CENTer:STEP[:INCRement]?</code> |
| Example | <code>:FREQ:CENT:STEP 500 MHz</code> <code>:FREQ:CENT UP !increases the current center frequency value by 500 MHz</code> <code>:FREQ:CENT:STEP?</code> |
| Notes | Preset and Max values are depending on Hardware Options (503, 507, 508, 513, 526) Preset and Max values are dependent on Hardware Options (5xx) |
| Dependencies | Span, RBW, Center frequency If the electronic/soft attenuator is enabled, any attempt to change the value of the center frequency >3.6 GHz by pressing the Up-arrow key, fails and results in an advisory message. If the equivalent SCPI command is sent, this same message is generated as part of a "-221, Settings conflict" warning |
| Couplings | When auto-coupled in a non-zero span, the center frequency step size is set to 10% of the span. When auto-coupled in zero span, the center frequency step size is set to the equivalent -3 dB RBW value |
| Preset | Auto |
| State Saved | Saved in instrument state |
| Min | - (the maximum frequency of the instrument). That is, 27 GHz max freq instrument has a CF step range of +/- 27 GHz. Note that this is the maximum frequency given the current settings of the instrument, so in External Mixing, for example, it is the maximum frequency of the current mixer band |
| Max | The maximum frequency of the instrument. That is, 27 GHz max freq instrument has a CF step range of +/- 27 GHz. Note that this is the maximum frequency given the current settings of the instrument, so in External Mixing, for example, it is the maximum frequency of the current mixer band |
| Remote Command | <code>[:SENSe]:FREQuency:CENTer:STEP:AUTO OFF ON 0 1</code> <code>[:SENSe]:FREQuency:CENTer:STEP:AUTO?</code> |
| Example | <code>:FREQ:CENT:STEP:AUTO ON</code> <code>:FREQ:CENT:STEP:AUTO?</code> |
| Preset | ON |

3.7.8 Marker

Accesses a menu that enables you to select, set up and control the markers for the current measurement.

If there are no active markers, **Marker** selects marker 1, sets it to Normal and places it at the center of the display.

If the selected marker is Off, it is set to Normal and placed it at the center of the screen on the trace which is determined by the Marker Trace on the Properties tab.

For more detailed information on the types of Markers and the interaction between Markers, see the Marker section of the Swept SA measurement.

3.7.8.1 Select Marker

Specifies the selected marker. The term “selected marker” is used throughout this document to specify which marker will be affected when you change marker settings, perform a Peak Search, and so on.

You can change the window where a Marker is placed on by changing Marker Window on the Properties tab.

The Select Marker control appears above the menu panel, indicating that it applies to all controls in the Marker menu panels. Select Marker is blanked if you select a tab whose controls do NOT depend on the selected marker (for example, Counter).

On any menu tab for which Select Marker displays, the first control is always Marker X.

| | |
|-------------|---|
| Notes | The selected marker is remembered even when not in the Marker menu and is used if a Search is done or a Band Function is turned on or for Signal Track or Continuous Peak |
| Preset | Marker 1 |
| State Saved | The number of the selected marker is saved in instrument state |

3.7.8.2 Settings

The controls on the Settings tab include the Marker active function and a radio button selection of the marker control mode (Normal, Delta, or Off) for the selected marker, as well as additional functions that help you use markers.

Marker X

Set the X Axis value of the selected marker in the current X Axis Scale unit. If the marker mode is off, the SCPI command has no affect other than to cause the marker to become selected.

NOTE

The X label and value can change if the marker is moved to a window with a different domain.

If the marker mode is Normal, the Marker X position is absolute.

If the mode is Delta, then the X position is relative to the reference marker.

3 WLAN Mode

3.7 WLAN MIMO Modulation Analysis Measurement

The valid X positions are the actual data points in the trace; the marker cannot be located between points. If a SCPI command attempts to place the marker between two points, the X value snaps to the closest point.

Note that for Vector or Constellation format, the X axis is perpendicular to the screen (because the screen axes are used to show the real and imaginary parts of the Y value), so adjusting the X value in this case only causes the marker to move horizontally if the real Y value changes.

| | |
|----------------|---|
| Remote Command | <code>:CALCulate:EVMMimo:MARKer[1] 2 ... 12:X <real></code> <code>:CALCulate:EVMMimo:MARKer[1] 2 ... 12:X?</code> |
| Example | <code>:CALC:EVMM:MARK:X 0.325</code> <code>:CALC:EVMM:MARK:X?</code> |
| Notes | Marker X does not go outside the bounds of the data. If you attempt to set it to a value outside the bounds, it is clipped at the closest limit and error -222 Data Out of Range is generated If suffix is sent, it must match the X units for the trace the marker is on. Otherwise, error -138, "Suffix not allowed" is generated If you try to read or set the position of a Delta marker, remember that the position is in relative units |
| Couplings | See "Coupling of Delta and Reference markers" on page 1188 |
| Preset | None until marker is turned on |
| State Saved | Saved in instrument state |
| Min/Max | Depends on trace data / Depends on trace data |

Marker X Position (Remote Command Only)

Via SCPI, the marker position can also be set or queried in trace points. In this case, the position setting or reading is absolute regardless of control mode.

The entered value in Trace Points is immediately translated into the current domain units for setting the value of the marker. The marker's value in domain units, NOT trace points, is preserved if a change is made to the X Axis scale settings. Thus, if you use this command to place a marker on point 500, which happens at that time to correspond to 13 GHz, and then you change the Start Frequency so that point 500 is no longer 13 GHz, the marker stays at 13 GHz, NOT at point 500.

If the trace marker is on a 2-dimensional domain, the points are numbered in the following way:

Starting at the minimum X and Z position, this point is numbered 0. Each time you increment the point number, increment the X value to the next available value. When X reaches the maximum X position, then reset X to the minimum and increment the Z value. Then continue incrementing the X position in the same manner as before.

Note that for symbol tables, which have no axes, incrementing the X position in points moves the marker consecutively through all table entries.

| | |
|----------------|--|
| Remote Command | :CALCulate:EVMMimo:MARKer[1] 2 ... 12:X:POStion <real> :CALCulate:EVMMimo:MARKer[1] 2 ... 12:X:POStion? |
| Example | :CALC:EVMM:MARK:X:POS 25 :CALC:EVMM:MARK:X:POS? |
| Notes | When a marker mode is changed from off to any other mode, the X position is set to mid-screen |
| Preset | None until marker is turned on |
| State Saved | Saved in instrument state |
| Min/Max | Depends on trace data / Depends on trace data |

Coupling of Delta and Reference markers

The following coupling rules apply from the front panel and also if the equivalent SCPI commands are sent.

Pressing the Delta key causes the selected marker to become a delta marker if it is not already. Also, the selected marker's reference is affected as follows:

- If the reference marker was off, it is turned on as a normal marker.
- The reference marker is moved to the trace of the selected marker and set to the same position as the selected marker.
- If the delta marker has a marker function turned on, the reference marker takes on the same function (with the same band limits).

Exception: Pressing Delta when the selected marker's mode is not yet Delta does not move or change a reference marker that is already turned on (Normal, or Delta) and on the same trace as the selected marker. It merely changes the selected marker's mode to Delta and shows the current offset between it and the reference. If you press Delta again (when the selected marker is already in Delta mode) then the reference is moved and modified as described above.

When a delta marker is changed to any other control mode, the reference marker is turned off.

If you move a delta marker to a different trace, it is forced to Normal mode and the reference is turned off.

A delta marker is forced to Normal mode if you turn its reference off or if you move its reference to another trace. (In the latter case the reference is not turned off.)

If you change the selected marker's reference (using the Marker, Properties, Relative To), the selected marker is forced to Delta mode. This change of the selected marker to Delta mode causes its new reference's control mode and position to change as described above.

Marker Mode

Sets the marker control mode to **Normal**, **Delta**, or **Off**.

All interactions and dependencies detailed under the control description are enforced when the remote command is sent. If the selected marker is Off, pressing Marker sets it to Normal and places it at the center of the screen on the trace determined by the **Marker Trace** rules.

The default active function is the active function for the currently selected marker control mode. If the current control mode is Off, there is no active function, and the active function is turned off.

| | |
|----------------|--|
| Remote Command | <code>:CALCulate:EVMMimo:MARKer[1] 2 ... 12:MODE POSition DELTa OFF</code> <code>:CALCulate:EVMMimo:MARKer[1] 2 ... 12:MODE?</code> |
| Example | <code>:CALC:EVMM:MARK3:MODE POS</code> <code>:CALC:EVMM:MARK3:MODE?</code> |
| Preset | OFF |
| State Saved | Saved in instrument state |
| Range | Normal DELTa (D) Off |

Backwards Compatibility SCPI Commands

Sets or queries the state of a marker. Setting a marker which is OFF to state ON or 1 puts it in Normal mode and places it at the center of the screen.

| | |
|------------------------------|--|
| Example | <code>:CALC:EVMMimo:MARK3:STAT ON</code> <code>:CALC:EVMMimo:MARK3:STAT?</code> |
| Preset | OFF |
| State Saved | Saved in instrument state |
| Range | On Off |
| Backwards Compatibility SCPI | <code>:CALCulate:EVMMimo:MARKer[1] 2 ... 12:STATE OFF ON 0 1</code> <code>:CALCulate:EVMMimo:MARKer[1] 2 ... 12:STATE?</code> |

Delta Marker (Reset Delta)

Pressing this button is exactly the same as pressing the “Delta” selection on the Marker Mode radio button. The selected marker becomes a Delta Marker. If the selected marker is already a Delta marker, the reference marker is moved to the current position of the selected marker, thus resetting the Delta to zero.

Marker Settings Diagram

The Marker Settings Diagram lets you configure the Marker system using a visual utility.

All Markers Off

Turns off all markers.

Remote Command :CALCulate:EVMMimo:MARKer:AOff

Example :CALC:EVMM:MARK:AOff

Couple Markers

When this function is On, moving any marker causes an equal X Axis movement of every other marker which is not Off. “equal X Axis movement” means to preserve the difference between each marker’s X Axis value (in the fundamental x-axis units of the trace that marker is on), and the X Axis value of the marker being moved (in the same fundamental x-axis units).

Remote Command :CALCulate:EVMMimo:MARKer:COUPle[:STATe] ON | OFF | 1 | 0
:CALCulate:EVMMimo:MARKer:COUPle[:STATe]?

Example :CALC:EVMM:MARK:COUP ON
:CALC:EVMM:MARK:COUP?

Notes In general, when coupling is turned on then all Normal or Delta markers with the same (or equivalent) domain as the selected marker move in the same manner as the selected marker. See ["More Information" on page 1190](#)

Preset OFF
(presets on Mode Preset and All Markers Off)

State Saved Saved in instrument state

More Information

Coupling is relative between markers on the same trace (so that their relative positions in the domain are maintained). Coupling can be absolute between markers on different traces that have equivalent domains. That is, they have the same position in the domain, if possible. (As an example of equivalent domains, demodulated symbol positions can be derived from time by using the current symbol rate). When you move the selected marker, then others on related traces track it. This enables you to correlate different measurement results. For example, you can place a marker at a particular symbol time on an error vector magnitude

display, have tracking markers on the symbol table and pre-demod time trace showing you the symbol value, and the actual time-varying signal value at the same point in time.

Absolute coupling is performed only for the lowest numbered Normal or Delta marker on each trace. All other markers on a trace couple relatively. When you turn on marker coupling, the subset of markers that have the same domain as the selected marker track it and all other markers remain at their current location. The absolutely coupled markers within this subset is moved at this time to match the domain setting of the selected marker, with the relatively coupled markers following accordingly to maintain offsets within their respective traces. Those markers with different domains remain at their current location. When you select a marker with a different domain than the previously selected marker, the subset of markers with that domain go through the same procedure.

Any marker that coupling would move outside its range of X values, remains at the closest limiting value. If the coupled markers are on data that do not have the same domain resolution, then they are positioned as close to each other as possible.

If markers change mode or trace, or trace data is changed below them, the coupling rules are immediately applied to the new set.

3.7.8.3 Peak Search

The controls on the Peak Search tab allow you to move the marker to selected peaks of the signal, giving you enormous analysis capabilities, particularly when combined with the Delta Marker function.

NOTE

Pressing the Peak Search hardkey automatically moves you to the Peak Search page of the Marker menu AND performs a Peak Search.

NOTE

Pressing the Peak Search tab once you are already IN the Marker menu does NOT perform a Peak Search.

Marker X

See "[Marker X](#)" on page 1186 control on the Settings tab.

Peak Search

Pressing the Peak Search control moves the selected marker to the trace point which has the maximum y-axis value for that marker's trace.

NOTE

Pressing the Peak Search hardkey automatically moves you to the Peak Search page of the Marker menu AND performs a Peak Search.

Remote Command :CALCulate:EVMMimo:MARKer[1]|2|...|12:MAXimum

Example :CALC:EVMM:MARK2:MAX
 :The command SYST:ERR? can be used to query the errors to determine if a peak is found. The message “No peak found” will be returned after an unsuccessful search

Next Peak

Pressing Next Peak moves the selected marker to the peak that is next lower in amplitude than the current marker value. If there is no valid peak lower than the current marker position, a “No peak found” message is generated, and the marker is not moved.

If the selected marker was off, then it is turned on as a normal marker and a peak search is performed.

Remote Command :CALCulate:EVMMimo:MARKer[1]|2|...|12:MAXimum:NEXT

Example :CALC:EVMM:MARK2:MAX:NEXT

State Saved Not saved in instrument state

Next Pk Right

Pressing Next Pk Right moves the selected marker to the nearest peak right of the current marker that meets all enabled peak criteria. If there is no valid peak to the right of the current marker position, a “No peak found” message is generated, and the marker is not moved.

If the selected marker was off, then it is turned on as a normal marker and a peak search is performed.

Remote Command :CALCulate:EVMMimo:MARKer[1]|2|...|12:MAXimum:RIGHT

Example :CALC:EVMM:MARK2:MAX:RIGH

Notes Sending this command selects the subopcoded marker

State Saved Not saved in instrument state

Next Pk Left

Pressing Next Pk Left moves the selected marker to the nearest peak left of the current marker that meets all enabled peak criteria. If there is no valid peak to the left of the current marker position, a “No peak found” message is generated, and the marker is not moved. If the selected marker was off, then it is turned on as a normal marker and a peak search is performed.

| | |
|----------------|---|
| Remote Command | <code>:CALCulate:EVMMimo:MARKer[1] 2 ... 12:MAXimum:LEFT</code> |
| Example | <code>:CALC:EVMM:MARK2:MAX:LEFT</code> |
| State Saved | Not saved in instrument state |

Minimum Peak

Moves the selected marker to the minimum y-axis value on the current trace. Minimum (negative) peak searches do not have to meet the peak search criteria. It just looks for the lowest y-axis value. If the selected marker is Off, it is turned on before the minimum search is performed.

| | |
|----------------|--|
| Remote Command | <code>:CALCulate:EVMMimo:MARKer[1] 2 ... 12:MINimum</code> |
| Example | <code>:CALC:EVMM:MARK2:MIN</code> |
| Notes | Sending this command selects the subcoded marker |
| State Saved | Not saved in instrument state |

Pk-Pk Search

Finds and displays the amplitude and frequency (or time, if in zero span) differences between the highest and lowest y-axis value. It places the selected marker on the minimum value on its selected trace. And it places that marker's reference marker on the peak of its selected trace.

This function turns on the reference marker and sets its mode to Normal if it is not already on.

The rules for finding the maximum peak are exactly the same as for **Peak Search**, including the use of the peak criteria rules. However, the minimum trace value is not required to meet any criteria other than being the minimum y-axis value in the trace.

If the selected marker is off, a delta type marker is turned on and the peak-to-peak search is done. If the selected marker is on, but it is not a delta marker, then it is changed to delta which turns on the reference marker if needed, and then it performs the peak-to-peak function.

| | |
|----------------|---|
| Remote Command | :CALCulate:EVMMimo:MARKer[1] 2 ... 12:PTPeak |
| Example | :CALC:EVMM:MARK:PTP |
| Notes | Turns on the Marker D active function Sending this command selects the subopcoded marker |
| Dependencies | Pk-Pk Search is not available when Coupled Markers is on |
| Couplings | The selected marker becomes a delta marker if not already in delta mode |
| State Saved | Not saved in instrument state |

Marker Delta

Pressing this button is exactly the same as pressing the “Delta” selection on the Marker Mode radio button on the Settings tab. The selected marker becomes a Delta Marker. If the selected marker is already a Delta marker, the reference marker is moved to the current position of the selected marker, thus resetting the Delta to zero.

The control is duplicated here in the Peak Search menu to allow you to conveniently perform a peak search and change the marker’s control mode to Delta without having to access two separate menus.

3.7.8.4 Properties

The controls on the Properties tab are used to set certain properties of the selected marker.

Marker X

See "[Marker X](#)" on page 1186 control on the Settings tab.

Relative To

Selects the marker to which the selected marker is relative (its reference marker).

Every marker has another marker to which it is relative. This marker is referred to as the “reference marker” for that marker. This attribute is set by the **Marker, Properties, Relative To** key. The marker must be a **Delta** marker to make this attribute relevant. If it is a **Delta** marker, the reference marker determines how the marker is controlled and how its value is displayed. A marker cannot be relative to itself.

| | |
|----------------|---|
| Remote Command | :CALCulate:EVMMimo:MARKer[1] 2 ... 12:REference <integer> |
| Command | :CALCulate:EVMMimo:MARKer[1] 2 ... 12:REference? |

3 WLAN Mode
3.7 WLAN MIMO Modulation Analysis Measurement

| | |
|-------------|--|
| Example | <code>:CALC:EVMM:MARK:REF 5</code> <code>:CALC:EVMM:MARK:REF?</code> |
| Notes | This command causes the marker specified with the subopcode to become selected Range (for SCPI command): 1 to 12. If the range is exceeded the value is clipped A marker cannot be relative to itself so that choice is not available, and if sent from SCPI generates error -221: "Settings conflict; marker cannot be relative to itself." When queried a single value is returned (the specified marker numbers relative marker) |
| Couplings | The act of specifying the selected marker's reference marker makes the selected marker a Delta marker If the reference marker is off it is turned on in Normal mode at the delta marker location. |
| Preset | The preset default "Relative To" marker (reference marker) is the next higher numbered marker (current marker +1). For example, if marker 2 is selected, then it's default reference marker is marker 3. The exception is marker 12, which has a default reference of marker 1 Set to the defaults by using Restore Mode Defaults . This is not reset by Marker Off , All Markers Off , or Preset |
| State Saved | Saved in instrument state Not affected by Marker Off and hence not affected by Preset or power cycle |
| Min/Max | 1/12 |

Marker Trace

Assigns the specified marker to the designated trace.

| | |
|----------------|---|
| Remote Command | <code>:CALCulate:EVMMimo:MARKer[1] 2 ... 12:TRACe:INDex 1 ... 9</code> <code>:CALCulate:EVMMimo:MARKer[1] 2 ... 12:TRACe:INDex?</code> |
| Example | <code>:CALC:EVMM:MARK:TRAC:IND 2</code> <code>:CALC:EVMM:MARK:TRAC:IND?</code> |
| Preset | 1 |
| State Saved | Saved in instrument state |
| Range | 1 2 3 4 5 6 7 8 9 |

Marker Settings Diagram

The Marker Settings Diagram lets you configure the Marker system using a visual utility. This is the same as the "[Marker Settings Diagram](#)" on page 1190 control on the Settings tab.

3.7.9 Meas Setup

The Meas Setup menu panel contains functions for setting up the measurement parameters and also contains functions for setting up parameters global to all measurements in the mode.

3.7.9.1 Settings

The Settings tab contains frequently used Meas Setup functions to which you will want the fastest access.

Avg|Burst Number

Used to specify the number of data acquisitions that are averaged. After the specified number of average counts, the averaging mode (termination control) setting determines the averaging action.

Avg number is the number of bursts, is NOT the number of data acquisition. If search length is large enough to include all the bursts, acquisition will only execute once (single mode). If the bursts number include in one capture is smaller than average number, multi capture and measurement is necessary.

- On – Sets measurement averaging on
- Off – Sets measurement averaging off

| | |
|----------------|---|
| Remote Command | <code>[:SENSe]:EVMmimo:AVERage:COUNT <integer></code> <code>[:SENSe]:EVMmimo:AVERage:COUNT?</code> |
| Example | <code>:EVMm:AVER:COUN 1</code> <code>:EVMm:AVER:COUN?</code> |
| Preset | 10 |
| State Saved | Saved in instrument state |
| Min | 1 |
| Max | 10000 |

Averaging On/Off

Turns averaging on or off.

| | |
|----------------|--|
| Remote Command | <code>[:SENSe]:EVMmimo:AVERage[:STATe] OFF ON 0 1</code> <code>[:SENSe]:EVMmimo:AVERage[:STATe]?</code> |
|----------------|--|

3 WLAN Mode
3.7 WLAN MIMO Modulation Analysis Measurement

| | |
|-------------|--|
| Example | <code>:EVMm:AVER OFF</code> <code>:EVMm:AVER?</code> |
| Couplings | As Radio Std Detection is set to Auto, Average State is coupled to OFF |
| Preset | <code>ON</code> |
| State Saved | Saved in instrument state |
| Range | On Off |

Avg Mode

Selects the type of termination control used for the averaging function. This determines the averaging action after the specified number of data acquisitions (average count) is reached.

- Exponential - After the average count is reached, each successive data acquisition is exponentially weighted and combined with the existing average
- Repeat - After reaching the average count, the averaging is reset, and a new average is started

The default value is Exp.

| | |
|----------------|--|
| Remote Command | <code>[[:SENSe]:EVMmimo:AVERage:TCONtrol EXPonential REPeat</code> <code>[[:SENSe]:EVMmimo:AVERage:TCONtrol?</code> |
| Example | <code>:EVMm:AVER:TCON REP</code> <code>:EVMm:AVER:TCON?</code> |
| Preset | <code>EXPonential</code> |
| State Saved | Saved in instrument state |
| Range | Exponential Repeat |

MIMO Type

This parameter specifies the MIMO Type.

| | |
|----------------|--|
| Remote Command | <code>[[:SENSe]:EVMmimo:TYPE M1M1 M2M2 M3M3 M4M4 M6M6 M8M8</code> <code>[[:SENSe]:EVMmimo:TYPE?</code> |
| Example | <code>:EVMm:TYPE M3M3</code> <code>:EVMm:TYPE?</code> |
| Notes | There are constraints on remote analyzer configuration for a selected MIMO type in E6640A. VXT models have no such restrictions <ul style="list-style-type: none"> - For E6640A: For MIMO 2x2, valid remote analyzer configurations are as follows: |

TRX1 (Primary) + TRX2 (Secondary module) (Note 1)
 TRX3 (Primary) + TRX4 (Secondary module) (Note 1)
 TRX2 (Primary) + TRX3 (Secondary module) (Note 2)
 TRX2 (Primary) + TRX4 (Secondary module) (Note 2)

For MIMO 3x3, valid remote analyzer configurations are as follows:
 TRX1 (Primary) + TRX2 (Secondary module) + TRX3 (Secondary module)
 TRX2 (Primary) + TRX3 (Secondary module) + TRX4 (Secondary module)

For MIMO 4x4, the valid remote analyzer configuration is as follows:
 TRX1 (Primary) + TRX2 (Secondary module) + TRX3 (Secondary module) + TRX4 (Secondary module)

For 80+80 MHz MIMO 2x2 (set MIMO Type to 2x2 and set radio standard to 802.11ac 80+80MHz.), then valid remote analyzer connection is as follows, In which the first segment 80 MHz MIMO2x2 runs on TRX1+TRX2, the second segment 80 MHz MIMO2x2 runs on TRX3 and TRX4. 4 TRXs involved actually, although the MIMO type is set to MIMO 2x2

TRX1 (Primary) + TRX2 (Secondary module) + TRX3 (Secondary module) + TRX4 (Secondary module)

During MIMO EVM measurement the configuration is checked; if an invalid remote configuration for the current MIMO type is detected, then an error message is displayed: "Setting Conflict; Invalid remote configuration for current MIMO type"

Note 1: With this configuration, users are still able to start another separate MIMO2x2 on the left two modules. In other words, this configuration allows up to two MIMO2x2 measurements to run on a 4-up system respectively

Note 2: Cannot start another separate MIMO 2x2 on left two modules with this configuration. In other words, this configuration allows only one MIMO2x2 measurement even if it's a 4-up system

- For VXT models M9420A/21A:
 If M9421A-MMO is present, 2x2, 3x3 and 4x4 MIMO button appear
 If M9421A-MMO and M9421A-MTS are present, 8x8 MIMO button appear
- For VXT models M9410A/11A:
 If M941xA-MMO is present, 2x2, 3x3 and 4x4 MIMO button appear
 If M941xA-MMO and M941xA-MTS are present, 8x8 MIMO button appear (cross chassis MIMO)
- For VXT models M9415A /16A :
 If M941xA-MMO is present, 2x2, 3x3 and 4x4 MIMO button appear

| | |
|-------------|---|
| Preset | M2M2 |
| State Saved | Yes |
| Range | M1M1 M2M2 M3M3 M4M4 M6M6 M8M8 |

Matrix Type

This parameter specifies the Matrix Type.

Remote Command `[:SENSe]:EVMmimo:MTYPE DMAP | FOURier | AUTO`

| | |
|-------------|--|
| | <code>[:SENSe] :EVMmimo :MTYPE?</code> |
| Example | <code>:EVMmimo :MTYP DMAP</code> <code>:EVMmimo :MTYP?</code> |
| Preset | <code>DMAP</code> |
| State Saved | Yes |
| Range | <code>DMAP FOURier AUTO</code> |

Meas Setup Summary Table

The Meas Setup Summary Table lets you view and access many of the parameters in the Meas Setup menus on one screen.

Common

You can set up the following parameters on the same page.

- Avg|Burst Number
- Average Mode
- Phase Noise Optimization
- LO Dither
- IF Gain
- Search Length
- Meas Interval
- Meas Offset
- Result Length
- Max Result Length

Demod

You can set up the following parameters on the same page.

- Modulation Format
- Chip Rate
- Descramble

- Equalizer
- IQ Normalize
- Multi-Carrier Filter
- Spectrum

Else

You can set up the following parameters on the same page.

- Clock Adjust
- Track Phase
- Reference Filter
- Reference Filter Alpha/BT
- Measurement Filter
- IQ Compensation
- IQ Gain Imbalance
- Quadrature Error
- Timing Skew

Stream Selection

This parameter specifies how to decide the number of Spatial Streams for 802.11n/ac/ax/be SU signals.

Stream Selection can be set to Manual, Automatic or From SIG (Recommended).

When Automatic is selected, the number of HT-LTF/VHT-LTF/HE-LTF/EHT-LTF symbols in the preamble is used to automatically determine the number of spatial streams. This works in most cases but will fail on some signals which use non-square MIMO (more transmit antennas than spatial streams).

When Manual is selected, Stream Number is used.

When From SIG is selected, the number of spatial streams can be found from HT-SIG/VHT-SIG/HE-SIGA/EHT-SIG of the preamble. Assuming the signal has the correct SIG symbols, this method of determining the number of spatial streams is more robust than the automatic setting. This method can correctly handle all

3 WLAN Mode

3.7 WLAN MIMO Modulation Analysis Measurement

802.11n/ac/ax/be signal formats regardless of the number of streams, input channels, or HT-LTF/VHT-LTF/HE-LTF/EHT-LTF symbols.

This method will be used in the case that you have fewer measurement channels than transmit channels from your 802.11n/ac/ax/be transmitter, and your transmitter is transmitting a Direct Map signal, you can partially demodulate the signal by connecting your available measurement channels to some of the transmit channels. This is because each transmitter of a Direct Map signal is essentially independent of the other transmitters.

| | |
|----------------|---|
| Remote Command | <code>[[:SENSe]:EVMmimo:STReam:SELection AUTO MANual SIG</code> <code>[[:SENSe]:EVMmimo:STReam:SELection?</code> |
| Example | <code>:EVMm:STR:SEL SIG</code> <code>:EVMm:STR:SEL?</code> |
| Preset | SIG |
| State Saved | Saved in instrument state |
| Range | Auto Man From SIG |

Stream Number

Stream Number specifies how many spatial streams 802.11n/ac/ax/be signal contains when Stream Selection is Manual.

| | |
|----------------|---|
| Remote Command | <code>[[:SENSe]:EVMmimo:STReam[:NUMBer] <integer></code> <code>[[:SENSe]:EVMmimo:STReam[:NUMBer]?</code> |
| Example | <code>:EVMm:STReam 1</code> <code>:EVMm:STR?</code> |
| Preset | 1 |
| State Saved | Saved in instrument state |
| Min | 1 |
| Max | 16 |

Spur Avoidance

Because the VXT models M9410A/11A/15A/16A are direct-conversion (zero-IF) receivers, feedthrough leakage from the local oscillator appears as a spurious signal (spur) at the center frequency. The Spur Avoidance function is provided to eliminate this spur, at the expense of some measurement speed.

When Spur Avoidance is enabled (the default), the analyzer uses a software algorithm to remove this spur from the displayed measurement data, but the algorithm only operates under certain conditions. Specifically, it only operates when the $BW \leq \max BW / 2.5$.

You can disable this function in order to speed up your measurement. When Spur Avoidance is turned Off, a warning message will appear in the status bar as “Settings Alert; Spur Avoidance Off”. This is to alert you that measurement accuracy might be impacted because you have defeated the spur avoidance algorithm.

| | |
|----------------|--|
| Remote Command | <code>[:SENSe]:EVMmimo:SAVoid[:STATe] ON OFF 0 1</code> <code>[:SENSe]:EVMmimo:SAVoid[:STATe]?</code> |
| Example | <code>:EVMm:SAVoid ON</code> <code>:EVMm:SAVoid?</code> |
| Dependencies | This control only appears in VXT models M9410A/11A/15A/16A |
| Preset | ON |
| State Saved | Saved in instrument state |
| Range | On Off |

More Information

Maximum digital IF BW is limited by both Option and Center frequency.

For VXT models M9410A/11A:

Option limitation:

| Option | Max Digital IF BW |
|--------|-------------------|
| B40 | 40 MHz |
| B3X | 300 MHz |
| B6X | 600 MHz |
| B12 | 1200 MHz |

Center frequency limitation:

| Center Frequency | Max Digital IF BW |
|--|-------------------------------|
| 330 MHz ~ 380 MHz | $(CF - 330 \text{ MHz}) * 2$ |
| 380 MHz ~ 550 MHz | 100 MHz |
| 550 MHz ~ 1310 MHz | 200 MHz |
| 1310 MHz ~ 2000 MHz (without Option EP6) | 600 MHz |
| 2000 MHz ~ 5480 MHz (without Option EP6) | 1200 MHz |
| 5480 MHz ~ 6080 MHz (without Option EP6) | $(6080 \text{ MHz} - CF) * 2$ |
| 1310 MHz ~ 1900 MHz (Option EP6) | 600 MHz |
| 1900 MHz ~ 6000 MHz (Option EP6) | 1200 MHz |
| 6000 MHz ~ 6600 MHz (Option EP6) | $(6600 \text{ MHz} - CF) * 2$ |

For VXT models M9415A/16A:

Option limitation:

3 WLAN Mode
 3.7 WLAN MIMO Modulation Analysis Measurement

| Option | Max Digital IF BW |
|--------|-------------------|
| B4X | 400 MHz |
| B8X | 800 MHz |
| B12 | 1200 MHz |

Center frequency limitation:

| Center Frequency | Max Digital IF BW |
|-----------------------|----------------------|
| 330 MHz ~ 380 MHz | (CF - 330 MHz) * 2 |
| 380 MHz ~ 550 MHz | 100 MHz |
| 550 MHz ~ 1310 MHz | 200 MHz |
| 1310 MHz ~ 2000 MHz | 600 MHz |
| 2000 MHz ~ 12300 MHz | 1200 MHz |
| 12300 MHz ~ 12900 MHz | (12900 MHz - CF) * 2 |

Auto Leveling

Performs auto-leveling for MIMO EVM measurements. A dialog box containing the results of auto-leveling will show up after the process is done. When processing auto-leveling by SCPI, the dialog box will not show up. You can query the result by SCPI though, see "[More Information](#)" on page 1204.

| | |
|----------------|--|
| Remote Command | <code>CALCulate:EVMMimo:LEVel:AUTO</code> |
| Example | <code>:CALC:EVMM:LEV:AUTO</code> |
| Dependencies | Only appears in modular products, such as VXT model M9410A or E6630A This control is enabled when radio device is not 802.11ac 80+80MHz and is grayed-out otherwise |

More Information

Here is the detail for parameters in the dialog box.

| Value | SCPI | Unit of returned | Notes |
|----------------------|--|------------------|---|
| Peak Power | :CALCulate:EVM:LEVel:PEAK? :CALC:EVM:LEV:PEAK? | dBm | Queries the peak power of the burst |
| Trigger Level | :CALCulate:EVM:LEVel:TRIGger? :CALC:EVM:LEV:TRIG? | dBm | Queries the recommended video trigger level |
| Max Packet Length | :CALCulate:EVM:LEVel:TIME? :CALC:EVM:LEV:TIME? | second | Queries the max packet length |
| Max Symbol/Chip Used | :CALCulate:EVM:LEVel:POINt? :CALC:EVM:LEV:POIN? | None | Queries the number of the max symbol/chip used in the burst. For 11b/g, this value is the total number of chips. For OFDM format, this value is the total number of symbols |

Auto Couple

Immediately puts all **Auto/Man** functions into **Auto**. **Auto Couple** is confined to the current measurement only. It does not affect other measurements in the Mode.

In the **Auto** state, **Auto/Man** functions are said to be “coupled”, meaning their values change as you make changes to other values in the measurement. This helps ensure accurate measurements and optimum dynamic range. **Auto Couple** is an immediate action function, and when it is executed, all the **Auto/Man** controls for the current measurement are set to **Auto**, and all measurement settings coupled to the **Auto/Man** parameters are automatically set to their optimal values.

For further details of measurement-specific settings (if any), see "[Measurement-Specific Details](#)" on page 1205 below.

| | |
|------------------------------|--------------------|
| Remote Command | :COUPle ALL |
| Example | :COUP ALL |
| Backwards Compatibility SCPI | :COUPLE ALL NONE |

Backwards
Compatibility
Notes

:COUP:NONE puts all Auto/Man parameters in manual mode, decoupling all the coupled instrument parameters. It is retained for backwards compatibility and is *not* recommended for making measurements or new designs

All **Auto/Man** parameter couplings in the measurement are set to **Auto**. This includes couplings that may be unavailable or grayed-out due to the current state. For example, in the Swept SA measurement, there is no **Auto/Man** coupling for **RBW** while in Zero Span. Nonetheless, if **Auto Couple** were executed while in Zero Span, it would set **RBW** to Auto "behind the scenes" so that, on exit from Zero Span, it would be in **Auto**.

Any **Auto/Man** selection specific (local) to the other measurements in the current Mode are not affected by **Auto Couple**. Any functions that are *not* coupled with other instrument parameters, such as ranging or leveling variables, such as **AutoRange** or **AutoScale**, are not affected.

Executing **Auto Couple** generates the informational message, "All Auto/Man functions have been set to Auto".

Each parameter, upon being set to **Auto**, selects and sets the appropriate auto-coupled value based on that parameter's coupling rules. The Dependency Resolver orchestrates the couplings for parameters that depend on one or more other parameters. The coupling and dependency rules for each parameter are defined in the section describing that parameter.

Executing **Auto Couple** does *not* affect markers, marker functions, trace or display attributes, or any other instrument setting other than those specifically mentioned above.

Measurement-Specific Details

TOI (SA Mode only)

Parameters affected by **Auto Couple** are:

- Center Frequency Step
- Resolution Bandwidth
- Span/RBW Ratio
- Sweep Time
- Video BANDwidth VBW/RBW ratio
- Upper and Lower Tone (set to Sense)

- Zero span measurement Resolution Bandwidth
- Zero span measurement Dwell Time

Harmonics (SA Mode only)

Parameters affected by **Auto Couple** are:

- Resolution Bandwidth
- Fundamental Frequency
- Dwell Time
- Range Table Resolution Bandwidths
- Range Table Dwell Times

Meas Preset

Restores all the measurement parameters to their default values.

Remote Command :CONFigure:EVMMimo

Example :CONF:EVMM

3.7.9.2 Radio

Contains controls to select Radio Standard and settings.

Radio Std Detection

Enables automatic detection of the radio standard of a WLAN signal from DUT. The auto detection can detect all WLAN family, *except* 802.11ah.

This function is available for Modulation Analysis and Spectral Flatness measurements. In other measurements, when **Auto** is selected, error message “-221 Setting conflict, Auto detection is not available for current measurement” appears.

When **Radio Std Detection** is **Auto**, **Radio Std** is grayed-out.

When set to **Man**, the radio standard is determined by "[Radio Std](#)" on page 1835.

The default settings is **Manual**.

Remote [:SENSe]:RADio:STANdard[:WLAN]:DETECT:AUTO OFF | ON | 0 | 1

Command [:SENSe]:RADio:STANdard[:WLAN]:DETECT:AUTO?

|-------------|---|
| Example | <code>:RAD:STAN:DET:AUTO ON</code> <code>:RAD:STAN:DET:AUTO?</code> |
| Notes | Auto detection can detect all WLAN family, <i>except</i> 802.11ah The auto detection function is available for Modulation Analysis and Spectral Flatness measurements. In other measurements, if Auto is selected, error message “-221 Setting conflict, Auto detection is not available for current measurement” appears Auto Detection is <i>not</i> recommended for Multi-Carrier signals |
| Preset | OFF |
| State Saved | Saved in instrument state |

Radio Std

In this menu, 7 groups of WLAN standards can be selected:

1. 802.11a/b/g/j/p includes 802.11a/g/j/p, 802.11b/g, 802.11g DSSS-OFDM, 802.11j/p 10M, 802.11p 5M
2. 802.11n includes 802.11n 20MHz and 802.11n 40MHz
3. 802.11ac includes 802.11ac 20MHz, 802.11ac 40MHz, 802.11ac 80MHz, 802.11ac 80+80MHz and 802.11ac 160MHz
4. 802.11ah includes 802.11ah1MHz, 802.11ah2MHz, 802.11ah4MHz, 802.11ah 8MHz, and 802.11ah16MHz
5. 802.11af includes 802.11af 6MHz, 802.11af 7MHz and 802.11af 8MHz
6. 802.11ax includes 802.11ax 20MHz, 802.11ax 40MHz, 802.11ax 80MHz, 802.11ax 80+80MHz and 802.11ax 160MHz
7. 802.11be includes 802.11be 20MHz, 802.11be 40MHz, 802.11be 80MHz, 802.11be 160MHz and 802.11be 320MHz

Below each standard, parameters related to demodulation can be set, such as Modulation Format, Guard Interval, and so on.

| | |
|----------------|---|
| Remote Command | <code>[:SENSe]:RADio:STANdard[:WLAN] AG BG GDO N20 N40 AC20 AC40 AC80 ACT80 AC160 AH1 AH2 AH4 AH8 AH16 JP10 P5 AF6 AF7 AF8 AX20 AX40 AX80 AXT80 AX160 BE20 BE40 BE80 BE160 BE320</code> <code>[:SENSe]:RADio:STANdard[:WLAN]?</code> |
| Example | <code>:RAD:STAN AG</code> <code>:RAD:STAN?</code> |
| Notes | If the command is sent with unsupported parameters, an error is generated “Settings conflict; option not installed” For IQ measurements (CCDF, Power vs Time, Spectral Flatness, IQ Waveform or Modulation Accuracy), they are also limited by BW Option installed. when any radio standard is selected in an IQ measurement |

| | |
|-------------|--|
| | <p>which maximum BW could not meet this radio standard request, the “Invalid result; Wider BW required” message will be displayed, and the measurement should return invalid data:</p> <p>Enum value ACT80 means “AC Two 80MHz” (802.11ac 80+80 MHz)</p> <p>Enum value AXT80 means “AX Two 80MHz” (802.11ax 80+80 MHz)</p> |
| Preset | AG |
| State Saved | Saved in instrument state |
| Range | 802.11a/g/j/p (OFDM 20M) 802.11b/g (DSSS/CCK/PBCC) 802.11g (DSSS-OFDM) 802.11n (20 MHz) 802.11n (40 MHz) 802.11ac (20 MHz) 802.11ac (40 MHz) 802.11ac (80 MHz) 802.11ac (80 + 80MHz) 802.11ac (160MHz) 802.11ah(1MHz) 802.11ah(2MHz) 802.11ah(4MHz) 802.11ah(8MHz) 802.11ah(16MHz) 802.11j/p (OFDM 10M) 802.11p (OFDM 5M) 802.11af (6MHz) 802.11af (7Mhz) 802.11af (8MHz) 802.11ax (20 MHz) 802.11ax (40 MHz) 802.11ax (80 MHz) 802.11ax (80 + 80MHz) 802.11ax (160MHz) 802.11be (20 MHz) 802.11be (40 MHz) 802.11be (80 MHz) 802.11be (160MHz) 802.11be (320MHz) |

Modulation Format

Lets you specify the modulation format of the input signal. You can select Auto Detect to automatically detect the modulation format, or specify modulation format for your testing.

| | |
|----------------|---|
| Remote Command | <p>The values of <code><radio_std></code> and <code><options></code> in these commands depend on the desired Radio Standard. For available options, see "Radio Standard Keywords & Options" on page 1209 below</p> <pre>[:SENSe]:DEMod[:WLAN]:<radio_std>:FORMat <options> [:SENSe]:DEMod[:WLAN]:<radio_std>:FORMat?</pre> |
| Example | <pre>Radio Std = 802.11a/g/j/p (OFDM 20 MHz) :DEM:AG:FORM AUTO :DEM:AG:FORM? Radio Std = 802.11b/g (DSSS/CCK/PBCC) :DEM:BG:FORM AUTO :DEM:BG:FORM?</pre> |
| Dependencies | <p>4096 QAM is visible only if the license date is equal to or later than 2020.0630. It is enabled only in 11ac, 11ax and 11be and disabled in 802.11a/gj/p, 802.11n, 802.11ah and 802.11af. When 4096 QAM is disabled, you cannot select this control and setting 4096QAM through the SCPI command generates error message “QAM4096 is not a valid value”</p> <p>If the license version is earlier than 2020.0630, 4096 QAM key is invisible. Setting it through SCPI generates error message “Command protected; The enum item can be available while the corresponding licenses installed”</p> |

Subcarrier Spacing (Radio Std NOT 802.11b/g(DSSS/CCK/PBCC) or 802.11ax, 802.11be)

Specifies the subcarrier frequency spacing of the input signal. This parameter must match the actual subcarrier frequency spacing of the input signal, otherwise

3 WLAN Mode

3.7 WLAN MIMO Modulation Analysis Measurement

demodulation will fail. The default 312.5 kHz matches the 802.11a/g/n/ac standards.

HE Guard Interval Selection (Radio Std 802.11ax)

Specifies the guard interval (also called cyclic extension) length for each symbol time, as a fraction of the FFT length. The value must match the guard interval length actually used in the input signal in order for demodulation to work properly. The value should be between zero and one, and values outside that range are clipped to be within the range. The value is rounded to the nearest 1/128th. The 802.11ax HE Guard Interval is for HE part of signal, the Guard Interval of Non-HE part is fixed to 1/4. The Auto selection allows to detect 11ax HE Guard Interval automatically.

HE-LTF Size (Radio Std 802.11ax)

To indicate HE-LTF(the HE Long Training field) size, a HE PPDU supports 3 HE-LTF Sizes, which are 1x HE-LTF, 2x HE-LTF, and 4x HE-LTF. Duration of each 1x HE-LTF OFDM/2x HE-LTF OFDM/4x HE-LTF OFDM symbol without GI is 3.2us/6/4us/12.8us separately. In 11ax specification, HE-LTF size is always bundled

with CP length, for example, 1x HE-LTF + 0.8 μ s, 2x HE-LTF + 0.8 μ s, 2x HE-LTF + 1.6 μ s and 4x HE-LTF + 3.2 μ s, then 1x/2x/4x HE-LTF is HE-LTF Size which should be set here and 0.8 μ s/1.6 μ s/3.2 μ s are HE Guard Interval should be set by HE Guard Interval under mode setup/802.11ax, the HE Guard Interval should be 1/16, 1/8, 1/4, separately. The Auto Detect selection allows to detect 11ax HE-LTF Size automatically.

| | |
|------------------------------|--|
| Remote Command | Radio Std = 802.11ax 20 MHz <pre>[:SENSe]:DEMod[:WLAN]:AX20:HLTF:SIZE AUTO S1X S2X S4X SIG [:SENSe]:DEMod[:WLAN]:AX20:HLTF:SIZE?</pre> Radio Std = 802.11ax 40 MHz <pre>[:SENSe]:DEMod[:WLAN]:AX40:HLTF:SIZE AUTO S1X S2X S4X SIG [:SENSe]:DEMod[:WLAN]:AX40:HLTF:SIZE?</pre> Radio Std = 802.11ax 80 MHz <pre>[:SENSe]:DEMod[:WLAN]:AX80:HLTF:SIZE AUTO S1X S2X S4X SIG [:SENSe]:DEMod[:WLAN]:AX80:HLTF:SIZE?</pre> Radio Std = 802.11ax 80+80 MHz <pre>[:SENSe]:DEMod[:WLAN]:AXT80:HLTF:SIZE AUTO S1X S2X S4X SIG [:SENSe]:DEMod[:WLAN]:AXT80:HLTF:SIZE?</pre> Radio Std = 802.11ax 160 MHz <pre>[:SENSe]:DEMod[:WLAN]:AX160:HLTF:SIZE AUTO S1X S2X S4X SIG [:SENSe]:DEMod[:WLAN]:AX160:HLTF:SIZE?</pre> |

EHT Subcarrier Spacing (Radio Std 802.11be)

Specifies the EHT subcarrier frequency spacing of the input signal. This parameter must match the actual EHT subcarrier frequency spacing of the input signal,

3 WLAN Mode

3.7 WLAN MIMO Modulation Analysis Measurement

otherwise demodulation will fail. The default 78.125 kHz matches the 802.11be standards.

| State Saved | Saved in instrument state |
| Min/Max | 1 Hz / 1.25 MHz |

EHT Guard Interval Selection (Radio Std 802.11be)

Specifies the guard interval (also called cyclic extension) length for each symbol time, as a fraction of the FFT length. The value must match the guard interval length actually used in the input signal in order for demodulation to work properly. The value should be between zero and one, and values outside that range are clipped to be within the range. The value is rounded to the nearest 1/128th. The 802.11be EHT Guard Interval is for EHT part of signal, the Guard Interval of Non-EHT part is fixed to 1/4. The Auto selection allows to detect 11be EHT Guard Interval automatically.

3.7.9.3 Time

The Time tab configures the signal capture configuration parameters.

Search Length

Sets the length of time to acquire the input signal. This defines the length of time that the burst search is performed.

The analyzer searches within the specified search length, find all burst positions within this search length, and demodulates burst one by one if average state is on and average number is still not reached. If one acquisition does not include total required bursts, multi capture is needed. So, if you want to get results for continues bursts, make sure search length is large enough to include all the bursts. Otherwise multi acquisitions will be performed.

Meas Interval

This parameter specifies the measurement interval (length), in symbol times, of the portion of the OFDM burst that will be analyzed. This analyzed portion of the OFDM burst starts at a measurement offset specified by Meas Offset.

| | |
|----------------|---|
| Remote Command | <code>[:SENSe] :EVMmimo :TIME :INTerval <integer></code> <code>[:SENSe] :EVMmimo :TIME :INTerval?</code> |
| Example | <code>:EVMmimo :TIME :INT 15</code> <code>:EVMmimo :TIME :INT?</code> |
| Preset | For 802.11a/g/j/p (OFDM), 802.11g (DSSS-OFDM), 802.11n/ac//ah/af/ax/be: 16 symbols For 802.11b/g (DSSS/CCK/PBCC): 2794 chips |
| State Saved | Saved in instrument state |
| Min | 1 symbol |
| Max | 21848 symbols Max value is also limited by Hardware capability |

Meas Offset

This parameter specifies the measurement offset, in symbol times, of the portion of the OFDM burst that will be analyzed. The length of this analyzed portion of the OFDM burst is specified by Meas Interval.

3 WLAN Mode
3.7 WLAN MIMO Modulation Analysis Measurement

The measurement interval and offset are relative to the ideal starting point of the PLCP preamble portion of the burst. For a signal that uses the long PLCP format, the ideal starting point of the PLCP preamble is exactly 128 symbol times (128*11 chip times) before the start of the SFD sync pattern. For a signal that uses the short PLCP format, the ideal starting point of the PLCP preamble is exactly 56 symbol times (56*11 chip times) before the start of the SFD sync pattern.

| | |
|----------------|---|
| Remote Command | <code>[:SENSe]:EVMMimo:TIME:OFFSet <integer></code> <code>[:SENSe]:EVMMimo:TIME:OFFSet?</code> |
| Example | <code>:EVMM:TIME:OFFS 15</code> <code>:EVMM:TIME:OFFS?</code> |
| Preset | 0 symbols |
| State Saved | Saved in instrument state |
| Min | 0 symbols |
| Max | If Result Length is Auto, then the specified measurement offset will be clipped to be less than or equal to the value of Max Result Length – Meas Interval If Result Length is Man, then the specified measurement offset will be clipped to be less than or equal to the value of Result Length – Meas Interval |

Result Length

If From HT-Sig is On:

The result length is detected from the High Throughput Signal Field. It compares the decode length information to the Max Result Length parameter and uses the smaller value as the measurement result length.

If From HT-Sig is Off:

When Result Length is Auto, the analyzer automatically determines the measurement result length by burst search. It compares the detected result length to the Max Result Length parameter and uses the smaller value as the measurement result length.

When Result Length is Man, it compares the input result length to the Result Length parameter and uses the smaller value as the measurement.

| | |
|----------------|---|
| Remote Command | <code>[:SENSe]:EVMMimo:TIME:RESult:LENGth <integer></code> <code>[:SENSe]:EVMMimo:TIME:RESult:LENGth?</code> <code>[:SENSe]:EVMMimo:TIME:RESult:LENGth:AUTO OFF ON 0 1</code> <code>[:SENSe]:EVMMimo:TIME:RESult:LENGth:AUTO?</code> |
| Example | <code>:EVMM:TIME:RES:LENG 10</code> <code>:EVMM:TIME:RES:LENG?</code> <code>:EVMM:TIME:RES:LENG:AUTO ON</code> |

| | |
|-------------|--|
| | <code>:EVMm:TIME:RES:LENG:AUTO?</code> |
| Preset | 802.11a/g/j/p (OFDM), 801.11g (DSSS-OFDM), 802.11n/ac/ah/af/ax/be: 16 symbols 802.11b/g (DSSS/CCK/PBCC): 2816 chips ON |
| State Saved | Saved in instrument state Saved in instrument state |
| Range | Auto Man |
| Min | 2 symbols |
| Max | 21848 symbols |

Max Result Length

Max Result Length specifies a maximum result length.

If the auto-detected length is greater than the specified maximum result length, the maximum result length is used instead.

The actual results returned will be for a subset of this maximum, as specified by the Meas Interval and Meas Offset, and will be further limited to the auto-detected result length if that is shorter than the maximum result length.

| | |
|----------------|---|
| Remote Command | <code>[[:SENSe]:EVMmimo:TIME:RESult:LENGth:MAX <integer></code> <code>[[:SENSe]:EVMmimo:TIME:RESult:LENGth:MAX?</code> |
| Example | <code>:EVMm:TIME:RES:LENG:MAX 45</code> <code>:EVMm:TIME:RES:LENG:MAX?</code> |
| Preset | 802.11a/g/j/p (OFDM), 801.11g (DSSS-OFDM)802.11n/ac/ah/af/ax/be: 16 symbols 802.11b/g (DSSS/CCK/PBCC): 2816 chips |
| State Saved | Saved in instrument state |
| Min | 2 symbols |
| Max | 21848 symbols |

From SIG Symbols

- If From SIG Syms is On:

The Result Length is detected from the High Throughput Signal Field. It compares the decoded length information to the Max Result Length parameter and uses the smaller value as the measurement result length.

3 WLAN Mode
 3.7 WLAN MIMO Modulation Analysis Measurement

- If From SIG Syms Off:
 - When Result Length is Auto, the analyzer automatically determines the measurement result length by burst search. It compares the detected result length to Max Result Length parameter and uses the smaller value as the measurement result length.
 - When Result Length is Man, it compares the input result length to the Result Length parameter and uses the smaller value as the measurement.

| | |
|----------------|--|
| Remote Command | <code>[:SENSe]:EVMmimo:TIME:RESult:SIG OFF ON 0 1</code> <code>[:SENSe]:EVMmimo:TIME:RESult:SIG?</code> |
| Example | <code>:EVMm:TIME:RES:SIG ON</code> <code>:EVMm:TIME:RES:SIG?</code> |
| Notes | The result length is determined by decoding the HT-SIG symbols and using the HT Length field. The value of Max Result Length specifies a maximum result length for the pulse; any pulse longer than that will be treated as though that were the length of the pulse |
| Preset | OFF |
| State Saved | Saved in instrument state |
| Range | On Off |

Burst Power Meas Offset

To measure power of a specified period, this parameter specifies the measuring start time of a burst.

| | |
|----------------|--|
| Remote Command | <code>[:SENSe]:EVM:TIME:BPOWer:OFFSet <time></code> <code>[:SENSe]:EVM:TIME:BPOWer:OFFSet?</code> |
| Example | <code>:EVM:TIME:BPOW:OFFS 1us</code> <code>:EVM:TIME:BPOW:OFFS?</code> |
| Dependencies | Only available for 11n/ac/ax/be and 11agjp when radio std detection is auto |
| Preset | <code>1us</code> |
| State Saved | Saved in instrument state |
| Min/Max | -/+3 ms |

Burst Power Meas Length

To measure power of a specified period, this parameter specifies the measurement length.

| | |
|----------------|--|
| Remote Command | <code>[:SENSe]:EVM:TIME:BPOWer:LENGth <time></code> <code>[:SENSe]:EVM:TIME:BPOWer:LENGth?</code> |
| Example | <code>:EVM:TIME:BPOW:LENG 10us</code> <code>:EVM:TIME:BPOW:LENG?</code> |
| Dependencies | Only available for 11n/ac/ax/be and 11agjp when Radio Std detection is auto |
| Preset | <code>20us</code> |
| State Saved | Saved in instrument state |
| Min/Max | 1us/6 ms |

3.7.9.4 Sync

Configure the synchronization parameters.

Symbol Timing Adjust

The extended OFDM symbol time period (T_S) consists of a guard interval (T_{GI}) plus a "useful symbol time period" (T_{FFT}).

This parameter adjusts the demodulation start time to begin earlier within each extended symbol time. The shift is specified as a percentage of the T_{FFT} length.

3 WLAN Mode

3.7 WLAN MIMO Modulation Analysis Measurement

| | |
|----------------|---|
| Remote Command | <code>:CALCulate:EVMMimo:SYMBOL:ADJUST <percent></code> <code>:CALCulate:EVMMimo:SYMBOL:ADJUST?</code> <code>:CALCulate:EVMMimo:SYMBOL:ADJUST:AUTO ON OFF 1 0</code> <code>:CALCulate:EVMMimo:SYMBOL:ADJUST:AUTO?</code> |
| Example | <code>:EVMM:SYMB:ADJ -3.125</code> <code>:EVMM:SYMB:ADJ?</code> <code>:EVMM:SYMB:ADJ:AUTO ON</code> <code>:EVMM:SYMB:ADJ:AUTO?</code> |
| Notes | When Symbol Timing Adjust is Auto checked, the demodulation algorithm chooses the symbol timing adjust value automatically; When Symbol Timing Adjust is Auto unchecked, the manually set Symbol Timing Adjust value is used in demodulation The Min Value of Symbol Timing Adjust is $-100.0 * \text{Guard Interval}$ The value of Symbol Timing Adjust clipped to times of 1/128. (For 11n, Bebob 's support can be clipped to 1/256, to keep simple, we use 1/128 also) |
| Preset | -3.125% OFF |
| State Saved | Saved in instrument state Saved in instrument state |
| Range | Auto Man |
| Min | $-100.0 * \text{Guard Interval}$ |
| Max | 0.0 |

Track Amplitude

This parameter is available when Radio Std is NOT 802.11b/g(DSSS/CCK/PBCC).

Track Amplitude specifies whether the analyzer tracks amplitude changes in the pilot subcarriers. When Track Amplitude is selected, the analyzer applies pilot subcarrier amplitude error correction to the pilot and data subcarriers. This is in addition to Track Phase and Track Timing error correction, if selected.

| | |
|----------------|--|
| Remote Command | <code>:CALCulate:EVMMimo:PILOT:TRACK:AMPLitude OFF ON 0 1</code> <code>:CALCulate:EVMMimo:PILOT:TRACK:AMPLitude?</code> |
| Example | <code>:CALC:EVMM:PIL:TRAC:AMPL 1</code> <code>:CALC:EVMM:PIL:TRAC:AMPL?</code> |
| Preset | OFF |
| State Saved | Saved in instrument state |
| Range | On Off |

Track Phase

Radio Std is NOT 802.11b/g (DSSS/CCK/PBCC)

The Track Phase parameter specifies whether the analyzer tracks phase changes and which data part will be used to calculate the phase error correction. When Track Phase is ON, the analyzer applies tracked phase error correction to the pilot and data subcarriers. If Track Phase from pilot, only pilot will be used to calculate phase error correction; if Track Phase from pilot & data, both pilot and data carriers will be used to calculate phase error correction. This is in addition to Track Amplitude and Track Timing error correction if selected.

| | |
|----------------|---|
| Remote Command | <code>:CALCulate:EVMMimo:PILot:TRACk:PHASe:SOURce PILOT PDATa</code> <code>:CALCulate:EVMMimo:PILot:TRACk:PHASe:SOURce?</code> <code>:CALCulate:EVMMimo:PILot:TRACk:PHASe OFF ON 0 1</code> <code>:CALCulate:EVMMimo:PILot:TRACk:PHASe?</code> |
| Example | <code>:CALC:EVMM:PILOT:TRAC:PHAS:SOUR PIL</code> <code>:CALC:EVMM:PILOT:TRAC:PHAS:SOUR?</code> <code>:CALC:EVMM:PILOT:TRAC:PHAS 0</code> <code>:CALC:EVMM:PILOT:TRAC:PHAS?</code> |
| Notes | PDATa is only available for 802.11n/ac/ax/be |
| Preset | PILOT ON |
| State Saved | Saved in instrument state |

Radio Std IS 802.11b/g (DSSS/CCK/PBCC)

This parameter specifies whether to perform phase tracking, to track carrier frequency changes during the course of the WLAN burst. The default is OFF, because the 802.11b/g standards do not appear to call for phase tracking. If this parameter is ON, phase tracking is performed after all frequency/phase/timing synchronization, and before any equalization or computation of EVM.

| | |
|----------------|--|
| Remote Command | <code>:CALCulate:EVMMimo:TRACk:PHASe OFF ON 0 1</code> <code>:CALCulate:EVMMimo:TRACk:PHASe?</code> |
| Example | <code>:CALC:EVMM:TRAC:PHAS ON</code> <code>:CALC:EVMM:TRAC:PHAS?</code> |
| Preset | OFF |

| | |
|-------------|---------------------------|
| State Saved | Saved in instrument state |
| Range | On Off |

Track Timing

The Track Timing parameter specifies whether the analyzer tracks timing changes in the pilot subcarriers. When Track Timing is selected the analyzer applies pilot subcarrier timing error correction (frequency offset correction) to the pilot and data subcarriers. This is in addition to Track Amplitude and Track Phase error correction if selected.

| | |
|----------------|--|
| Remote Command | <code>:CALCulate:EVMMimo:PILot:TRACk:TIMing OFF ON 0 1</code> <code>:CALCulate:EVMMimo:PILot:TRACk:TIMing?</code> |
| Example | <code>:CALC:EVMM:PIl:TRAC:TIM 1</code> <code>:CALC:EVMM:PIl:TRAC:TIM?</code> |
| Preset | OFF |
| State Saved | Saved in instrument state |
| Range | On Off |

Track Mode

The Tracking Mode parameter specifies where the Pilot Tracking occurs. Traditional single channel modulation always has the phase tracked after the equalizer. With multiple data streams, that may not be the best place to do it. If the phase noise is being generated by the receiver, the signal after the equalizer has a mixture of phase noise from the two oscillators. Because of this mixing, it is difficult to track the phase noise after applying the equalizer. The Pre EQ tracking algorithm tracks and remove the phase noise before the equalizer. The Post EQ tracks and removes the phase noise after the equalizer and is the default Tracking Mode.

Typically, if the phase noise is primarily caused by the receiver rather than the transmitter, it's beneficial to select Pre EQ and do pilot tracking before the equalizer. If the phase noise primarily comes from the transmitter and the phase noise from the receiver is minimal, select Post EQ. Try both, look at the EVM and use the one that gives the best result.

| | |
|----------------|--|
| Remote Command | <code>:CALCulate:EVMMimo:PILot:TRACk:MODE POSTeq PREeq</code> <code>:CALCulate:EVMMimo:PILot:TRACk:MODE?</code> |
| Example | <code>:CALC:EVMM:PILot:TRACk:MODE POST</code> <code>:CALC:EVMM:PILot:TRACk:MODE?</code> |
| Preset | POSTeq |

| | |
|-------------|---------------------------|
| State Saved | Saved in instrument state |
| Range | Post EQ Pre EQ |

Frequency Sync

Frequency Sync determines which portion of data is used for carrier frequency offset estimation in modulation analysis.

| | |
|----------------|--|
| Remote Command | <code>[:SENSe]:EVMmimo:FREQuency:SYNC PPILot PPData PREamble</code> <code>[:SENSe]:EVMmimo:FREQ:SYNC?</code> |
| Example | <code>:EVMm:FREQ:SYNC PPIl</code> <code>:EVMm:FREQ:SYNC?</code> |
| Notes | Preamble & Pilot is the default value to keep the backward compatibility Preamble, Pilot & Data, and Preamble only are new options for customer to choose |
| Preset | <code>PPILot</code> |
| State Saved | Saved in instrument state |
| Range | Preamble & Pilot Preamble,Pilot & Data Preamble Only |

3.7.9.5 Demod

Configure the demodulation parameters.

Subcarrier Selection

This parameter specifies whether the demodulation results are for all subcarriers in the signal, or for a single subcarrier , or for just the pilot subcarriers.

| | |
|----------------|--|
| Remote Command | <code>:CALCulate:EVMmimo:SUBCarrier ALL PILOt SINGle</code> <code>:CALCulate:EVMmimo:SUBCarrier?</code> |
| Example | <code>:CALC:EVMm:SUBC ALL</code> <code>:CALC:EVMm:SUBC?</code> |
| Preset | ALL |
| State Saved | Saved in instrument state |
| Range | All Pilot Single |

Single Subcarrier

This parameter specifies the demodulation results are for which subcarrier. When Subcarrier Selection selects Single, this number will indicate which subcarrier is

3 WLAN Mode
3.7 WLAN MIMO Modulation Analysis Measurement

used to do demodulation.

NOTE

It is available when Subcarriers Selection is selected as Single.

| Remote Command | :CALCulate:EVMMimo:SUBCarrier:COUNT <integer> | | | | | | | | | | | | | | | | | | | | |
|--|--|-------|---------|---------------------------------|--------|--|--------|----------------------------------|----------|------------------|----------|--------------------|----------|--------------------|----------|---------------------------------------|----------|---------------------|------------|------------------|------------|

Equalizer Training

This specifies how the equalizer is initialized, or “trained”. The valid values are Channel Estimation Seq Only and Channel Estimation Seq & Data. The value Channel Estimation Seq Only, which is the default, specifies that the equalizer is trained using only the channel estimation sequence (also called the “long sync”) portion of the burst preamble. The standards imply that the equalizer should be implemented this way when measuring EVM, and this matches how a real receiver would probably implement an equalizer.

The value and Channel Estimation Seq & Data specifies that the equalizer should be trained using both the channel estimation sequence and the entire data portion of the burst. This usually gives a more accurate estimate of the equalizer response. It also typically lowers the EVM by between one and three dB.

| | |
|----------------|---|
| Remote Command | :CALCulate:EVMMimo:EQUalizer:TMODe SEQuence SDATa |
| Example | :CALC:EVMM:EQU:TMOD SDAT |

| | |
|-------------|---|
| | <code>:CALC:EVMM:EQU:TMOD?</code> |
| Preset | SEQ |
| State Saved | Saved in instrument state |
| Range | Channel Estimation Sequence Only Channel Estimation Sequence&Data |

I/Q Normalize

This parameter specifies if the I/Q signals will be normalized.

| | |
|----------------|--|
| Remote Command | <code>:CALCulate:EVMMimo:IQNorm OFF ON 0 1</code> <code>:CALCulate:EVMMimo:IQNorm?</code> |
| Example | <code>:CALC:EVMM:IQN ON</code> <code>:CALC:EVMM:IQN?</code> |
| Preset | ON |
| State Saved | Saved in instrument state |
| Range | On Off |

Multi-Carrier Filter

Specifies whether or not to apply a filter to filter out adjacent carriers.

When there are adjacent carriers to the BW of interest, this multi-carrier filter can be used to filter out the unwanted carriers and minimize leakage into the BW of interest.

| | |
|----------------|--|
| Remote Command | <code>:CALCulate:EVMMimo:MCFilter[:STATe] ON OFF 1 0</code> <code>:CALCulate:EVMMimo:MCFilter[:STATe]?</code> |
| Example | <code>:CALC:EVMM:MCF 1</code> <code>:CALC:EVMM:MCF?</code> |
| Notes | It's NOT available when Radio Standard is 802.11ac/ax 80+80MHz |
| Preset | OFF |
| State Saved | Saved in instrument state |
| Range | ON OFF |

Spectrum

Sets a spectrum to either normal or to inverted for demodulation related measurements. If set to INVert, the upper and lower spectrums are swapped.

The invert function conjugates the spectrum, which is equivalent to taking the negative of the quadrature component in demodulation. The correct setting (Normal

or Invert) depends on whether the signal at the input of the instrument has a high or a low side mix.

| | |
|----------------|---|
| Remote Command | <code>:CALCulate:EVMMimo:SPECTrum INVert NORMal</code> <code>:CALCualte:EVM:SPECTrum?</code> |
| Example | <code>:CALC:EVMM:SPEC INV</code> <code>:CALC:EVMM:SPEC?</code> |
| Preset | NORMal |
| State Saved | Saved in instrument state |
| Range | Normal Invert |

Channel Estimation Filter

This parameter is available when Radio Std is 802.11n/ac/ax/be.

Specify the filter type used to interpolate or smooth the channel response sequence.

- None/Linear: No interpolation filter is applied.
- Triangular: A simple triangular-weighted moving average, with special handling at the ends of the channel response to avoid biasing the end points , is applied to the channel response estimate before equalization.

The triangular weights applied to the subcarrier and adjacent subcarriers are as follows: 1 2 ... (N-1)/2 ... 2 1

- Wiener (default): a Wiener filter is applied to the channel response estimate before equalization.

Channel Estimation Filter will be coupled to 'None/Linear' when Equalizer Training switches to "Ch Est Seq & Data". Since "Wiener filter" and "Triangle filter" will degrade the "Least squared" estimated channel using both the channel estimation sequence and the entire data portion of the burst and then degrades the EVM performance.

| | |
|----------------|--|
| Remote Command | <code>:CALCulate:EVMMimo:CEFilter:TYPE WIENer TRIangle NONE</code> <code>:CALCulate:EVMMimo:CEFilter:TYPE??</code> |
| Example | <code>:CALC:EVMM:CEF:TYPE NONE</code> <code>:CALC:EVMM:CEF:TYPE?</code> |
| Dependencies | Only visible for 802.11n/ac/ax/be |
| Couplings | Coupled to None/Linear when Equalizer Training switches to Ch Est Seq & Data. Coupled to Wiener when Equalizer Training switches to Ch Est Seq Only |
| Preset | WIEN |
| State Saved | Saved in instrument state |
| Range | Wiener Triangle None/Linear |

Backwards :CALCulate:EVMMimo:SMEqualizer[:STATE] OFF | ON | 0 | 1
 Compatibility SCPI :CALCulate:EVMMimo:SMEqualizer[:STATE]?

Wiener Normalized Delay Spread

This parameter is available when Radio Std is 802.11n/ac/ax/be and channel estimation filter is Wiener.

Specify the estimated channel delay spread value for the system, which normalized by OFDM symbol interval.

Remote Command :CALCulate:EVMMimo:CEFilter:WNDSpread <real>
 :CALCulate:EVMMimo:CEFilter:WNDSpread?

Example :CALC:EVMM:CEF:WNDS 0.25
 :CALC:EVMM:CEF:WNDS?

Notes Only used in 802.11n/ac/ax/be
 It is visible when Channel Estimation Filter Selection is Wiener

Preset 0.125

State Saved Saved in instrument state

Min 0

Max 0.25

Triangle Filter Length

This parameter is available when Radio Std is 802.11n/ac/ax/be and Channel Estimation Filter is Triangle.

Specifies the total length of the triangle filter's impulse response.

Remote Command :CALCulate:EVMMimo:CEFilter:TFLength <integer>
 :CALCulate:EVMMimo:CEFilter:TFLength?

Example :CALC:EVMM:CEF:TFL 21
 :CALC:EVMM:CEF:TFL?

Notes Only used in 802.11n/ac/ax/be
 It is visible when Channel Estimation Filter Selection is Triangle
 The value must be an odd number

Preset 5 subcarriers

State Saved Saved in instrument state

Min 1

Max Depends on the Radio Standard as follows:

3 WLAN Mode
3.7 WLAN MIMO Modulation Analysis Measurement

| | Radio Standard | Max Value |
|---------------------------------|---|------------------|
| | 802.11n/ac 20MHz | 57 subcarriers |
| | 802.11n/ac 40M | 117 subcarriers |
| | 802.11ac80MHz/80+80MHz | 245 subcarriers |
| | 802.11ac160MHz | 501 subcarriers |
| | 802.11ax/be 20MHz | 245 subcarriers |
| | 802.11ax/be 40MHz | 489 subcarriers |
| | 802.11ax/be 80MHz 802.11ax 80+80MHz | 1001subcarriers |
| | 802.11ax/be 160MHz | 2025 subcarriers |
| | 802.11be 320MHz | 4073 subcarriers |
| Backwards Compatibility SCPI | :CALCulate:EVMMimo:SMEQualizer:LENGth <integer> :CALCulate:EVMMimo:SMEQualizer:LENGth? | |

Eq Training Using L-LTF

As this parameter is set to On, the channel estimation used by Equalizer is not only from HE-LTF part, but also from L-LTF part. If HE-LTF data ensures the same channel as L-LTF data, the algorithm is equivalent to extend the training sequence length to improve the estimation accuracy to improve EVM performance.

| | |
|----------------|--|
| Remote Command | :CALCulate:EVMMimo:EQUalizer:LLTF[:STATE] OFF ON 0 1 :CALCulate:EVMMimo:EQUalizer:LLTF[:STATE]? |
| Example | :CALC:EVMM:EQU:LLTF 1 :CALC:EVMM:EQU:LLTF? |
| Notes | Only used in 802.11n/ac/ax/be |
| Preset | OFF |
| State Saved | Yes |
| Range | ON OFF |

Data Decode

This parameter specifies whether to do data decode. When Data Decode is ON, the result PSDU CRC for multiuser will show in 'User Information Summary' for 11ax/11be/11ac/11n; the first user PSDU CRC result will show in Burst Info view.

| | |
|----------------|--|
| Remote Command | :CALCulate:EVMMimo:DECode:ENABle OFF ON 0 1 :CALCulate:EVMMimo:DECode:ENABle? |
| Example | :CALC:EVMM:DEC:ENAB ON |

| | |
|--------------|---|
| | :CALC:EVMM:DEC:ENAB? |
| Dependencies | It's not visible for 11b/g and 11ah It's grayed out for 11a when Radio Std Detection is Manual |
| Couplings | It will be coupled to ON when Radio Std Detection switch to Auto |
| Preset | OFF |
| State Saved | Saved in instrument state |
| Range | On Off |

Detect Non-HT PPDU

This parameter is used to control whether to detect non-HT PPDU when Radio Std is 11ax/11be.

When Detect Non-HT is Off, analyzer will not detect non-HT PPDU, just demode signal as HE or EHT PPDU. When Detect Non-HT is On, analyzer will detect non-HT PPDU first, if it's non-HT PPDU, demode signal as non-HT PPDU, otherwise just demode signal as HE or EHT PPDU.

| | |
|----------------|--|
| Remote Command | :CALCulate:EVMMimo:DETECT:NHT OFF ON 0 1 :CALCulate:EVMMimo:DETECT:NHT? |
| Example | :CALC:EVMM:DET:NHT ON :CALC:EVMM:DET:NHT? |
| Dependencies | It's only visible for 11ax/11be when Radio Std Detection is Manual |
| Preset | OFF |
| State Saved | Saved in instrument state |
| Range | On Off |

3.7.9.6 IQ Comp

This tab provides the capability to control separate compensation function explicitly.

Subcarrier I/Q Estimation

This parameter allows turn On or Off the estimation for IQ Gain Imbalance vs. subcarrier, IQ Quadrature Error vs. subcarrier in the input signal.

| | |
|----------------|--|
| Remote Command | :CALCulate:EVMMimo:IQEstimation OFF ON 0 1 :CALCulate:EVMMimo:IQEstimation? |
| Example | :CALC:EVMM:IQES ON :CALC:EVMM:IQES? |

3 WLAN Mode

3.7 WLAN MIMO Modulation Analysis Measurement

| | |
|-------------|--|
| Notes | The accuracy of the IQ gain imbalance and quadrature error estimation is affected by the receiver's ability to determine the correct ideal reference constellation points for each symbol in the modulated signal. Large IQ impairments may result in incorrect determination of reference points, which will lead to incorrect estimates for the IQ errors. Generally, the receiver can provide correct IQ estimation with greater levels of IQ impairment for lower-order modulation such as QPSK than for higher-order modulation such as 64QAM |
| Preset | OFF |
| State Saved | Saved in instrument state |
| Range | On Off |

I/Q Compensation

This parameter allows to turn On or Off the compensation for IQ Gain Imbalance, IQ Quadrature Error, and IQ Timing Skew found in the input signal.

If it is On, what the exact compensation functions are executed depends on the state of Explicit IQ Compensation: IQ Gain Imbalance, IQ Quadrature Error, IQ Timing Skew.

If it is Off, the compensation function will be bypassed.

| | |
|----------------|--|
| Remote Command | <code>[:SENSe]:EVMmimo:COMPensate OFF ON 0 1</code> <code>[:SENSe]:EVMmimo:COMPensate?</code> |
| Example | <code>:EVMm:COMP ON</code> <code>:EVMm:COMP?</code> |
| Notes | If I/Q Compensation is On, what the exact compensation functions are executed depends on the state of Explicit IQ Compensation: IQ Gain Imbalance, IQ Quadrature Error, IQ Timing Skew If I/Q Compensation is Off, the compensation function will be bypassed although IQ Compensation: IQ Gain Imbalance, IQ Quadrature Error, IQ Timing Skew are all On |
| Preset | OFF |
| State Saved | Saved in instrument state |
| Range | On Off |

I/Q Gain Imbalance

This parameter allows to turn On or Off the compensation for IQ Gain Imbalance found in the input signal.

If On, the IQ Gain imbalance in the signal will be compensated.

If Off, the IQ Gain Imbalance compensation will be bypassed.

| | |
|----------------|--|
| Remote Command | <code>:CALCulate:EVMmimo:COMPensate:GAIN[:STATe] OFF ON 0 1</code> |
|----------------|--|

| | |
|-------------|---|
| | <code>:CALCulate:EVMMimo:COMPensate:GAIN[:STATe]?</code> |
| Example | <code>:CALC:EVMM:COMP:GAIN 1</code> <code>:CALC:EVMM:COMP:GAIN?</code> |
| Preset | ON |
| State Saved | Saved in instrument state |
| Range | On Off |

Quadrature Error

This parameter allows to turn On or Off the compensation for Quadrature Error found in the input signal.

If On, the Quadrature Error in the signal will be compensated.

If Off, the Quadrature Error compensation will be bypassed.

| | |
|----------------|--|
| Remote Command | <code>:CALCulate:EVMMimo:COMPensate:QUADrature[:STATe] OFF ON 0 1</code> <code>:CALCulate:EVMMimo:COMPensate:QUADrature[:STATe]?</code> |
| Example | <code>:CALC:EVMM:COMP:QUAD 0</code> <code>:CALC:EVMM:COMP:QUAD?</code> |
| Preset | ON |
| State Saved | Saved in instrument state |
| Range | On Off |

Timing Skew

This parameter allows to turn On or Off the compensation for Timing Skew found in the input signal.

If On, the Timing Skew in the signal will be compensated.

If Off, the Timing Skew compensation will be bypassed.

| | |
|----------------|--|
| Remote Command | <code>:CALCulate:EVMMimo:COMPensate:TSKew[:STATe] OFF ON 0 1</code> <code>:CALCulate:EVMMimo:COMPensate:TSKew[:STATe]?</code> |
| Example | <code>:CALC:EVMM:COMP:TSK 1</code> <code>:CALC:EVMM:COMP:TSK?</code> |
| Preset | ON |
| State Saved | Saved in instrument state |
| Range | On Off |

Symbol Clock Error

This parameter compensates symbol clock error on a complete burst.

When measuring a long signal with a lot of symbols, the sample clock error may accumulate to a degree on which the EVM of some symbols on the rear position may deteriorate rapidly. It's recommended to turn this setting ON in order to continuously compensate sample clock error at the cost of increased measurement time.

When measuring a short signal with a few symbols, it's recommended to turn this setting OFF.

| | |
|----------------|--|
| Remote Command | <code>:CALCulate:EVMMimo:SCERror:COMPensation[:STATe] OFF ON 0 1</code> <code>:CALCulate:EVMMimo:SCERror:COMPensation[:STATe]?</code> |
| Example | <code>:CALC:EVMM:SCER:COMP 1</code> <code>:CALC:EVMM:SCER:COMP?</code> |
| Couplings | Coupled to OFF when switched to 11n/ac, coupled to ON when switched to 11ax/be |
| Preset | OFF |
| State Saved | Saved in instrument state |
| Range | On Off |

3.7.9.7 RU Allocation

NOTE This function is available when Radio Std is 802.11ax/be.

This tab provides the capability to control RU allocation settings.

RU Allocation Detection

RU allocation can be detected from SIG-B information automatically, but sometimes, customers want to test some signal which is not consistent with SIG-B or SIG-B is broken, then RU allocation should be manually filled in from UI or file loading.

When set to manual, use RU allocation defined in “Edit RU Allocation” to analysis signals, otherwise auto-detect RU allocation.

RU Allocation Auto Detection can successfully decode the TB signal with one and only one active RU. The rest inactive RUs will be decoded as multiple 26-tone RUs (RU26).

For the TB signal with more than one active RUs, RU Allocation Detection should be set to manual. Otherwise, the measurement results might not be accurate.

| | |
|----------------|--|
| Remote Command | <code>:CALCulate:EVMMimo:RUAllocation:DETECT:AUTO ON OFF 1 0</code> <code>:CALCulate:EVMMimo:RUAllocation:DETECT:AUTO?</code> |
| Example | <code>:CALC:EVMM:RUAl:DET:AUTO ON</code> <code>:CALC:EVMM:RUAl:DET:AUTO?</code> |
| Notes | Only available when Radio Std is 802.11ax/11be |
| Preset | ON |
| State Saved | Yes |
| Range | Auto Man Ff |

Edit RU Allocation

This function is available for 802.11ax.

RU allocation can be auto-detected for most cases. For a Trigger-Based signal with multi active RU, auto detection may not work; so it is necessary to manually configure RU allocation in the Edit RU Allocation dialog.

Edit RU allocation is a dialog which is designed to set RU allocation parameters, like RU arrangement, RU settings, and user settings.

"RU Allocation Index" on page 1256: You can set the RU allocation index for the each 20MHz sub band; this will determine the RU allocation, including RU Size and User Number, of each RU.

"RU Size" on page 1256: Apart from RU Allocation Index, you can also set RU size directly.

"RU State" on page 1258: You can set the state of each RU to On or Off.

"Tx Chain Number of Each RU" on page 1259: You can set the TX chain number of each RU.

"User Number of Each RU" on page 1259: Apart from the RU Allocation Index, you can also set the user number of each RU directly.

"User MCS" on page 1260: Modulation and Coding Schemas range from 0 to 13. Modulation Format can be determined by MCS.

"Spatial Stream Number of Each User" on page 1260: Spatial Stream Number of each user.

"Channel Coding Mode of Each User" on page 1260: Channel coding mode of each user.

"DCM of Each User " on page 1261: DCM state of each user.

More Information

802.11ax/be utilizes RU (Resource Unit) allocation to implement OFDMA.

AP (Access Point) will send RU allocation signaling (8 bits for each 20 MHz band) to indicate RU allocation pattern (including RU size and RU position). In order to demodulate OFDMA signal, it's required to set Modulation Format (BPSK/QPSK/16QAM/64QAM/256QAM/1024QAM/4096QAM) and MCS (Modulation and Coding Schemas, range from 0 to 11).

RU Size

This parameter determines the size of each RU.

This is a list of parameters, and the length of the list is the number of RUs.

| | |
|----------------|---|
| Remote Command | <code>[:SENSe] :DEMod [:WLAN] :RU :LIST :SIZE <integer>, <integer>, <integer>, ...</code> <code>[:SENSe] :DEMod [:WLAN] :RU :LIST :SIZE ?</code> |
| Example | <code>:DEMod :RU :LIST :SIZE 26, 26, 26, 26, 26, 26, 26, 26, 26, 26</code> <code>:DEMod :RU :LIST :SIZE ?</code> |
| Notes | The length of the list is variable and determined by the number of RUs |
| Dependencies | Only available for 802.11ax/ 802.11be |
| Preset | 242 |
| State Saved | Saved in instrument state |

| 996+996+996+[gap-484]+484 | 3478 |
| 996+996+996+484+[gap-484] | 3479 |
| 4x996 | 3984 |

'+' indicate this is an MRU. An MRU consists of selected combinations of multiple RUs of 26-tone RU, 52-tone RU, 106-tone RU, 242-tone RU, 484-tone RU, 996-tone RU, and 2.996-tone RU. [gap-xxx] represents a null allocation with size xxx.

RU State

Determines the state of each RU.

| | |
|----------------|---|
| Remote Command | <code>[:SENSE] :DEMod [:WLAN] :RU :LIST :STATE OFF ON 0 1,...</code> <code>[:SENSE] :DEMod [:WLAN] :RU :LIST :STATE ?</code> |
| Example | <code>:DEM :RU :LIST :STAT 1,1,0,0,0,0,0,0,0</code> <code>:DEM :RU :LIST :STAT ?</code> |
| Notes | The length of the list is variable and determined by the number of RUs |
| Dependencies | Only available for 802.11ax/ 802.11be |
| Preset | ON |
| State Saved | Saved in instrument state |

RU MCS

Determines MCS (modulation and coding schema) of each RU.

This is a list parameter, and the length of the list is the number of RUs.

| | |
|----------------|---|
| Remote Command | <code>[:SENSE] :DEMod [:WLAN] :RU :LIST :MCS <integer>, <integer>, <integer>, ...</code> <code>[:SENSE] :DEMod [:WLAN] :RU :LIST :MCS ?</code> |
|----------------|---|

| | |
|--------------|---|
| Example | <code>:DEM:RU:LIST:MCS 0,11,0,11,0,11,0,11,0</code> <code>:DEM:RU:LIST:MCS?</code> |
| Notes | The length of the list is variable and determined by the number of RUs |
| Dependencies | Only available for 802.11ax/ 802.11be |
| Preset | 0 |
| State Saved | Saved in instrument state |
| Min | 0 |
| Max | 11 |

RU Allocation Index

This parameter determines the RU allocation index for each 20MHz sub band. It may contain multiple small-size RUs/MRUs or a large-size RU/MRU that may span multiple 20MHz sub bands including the current sub band.

| | |
|----------------|--|
| Remote Command | <code>[:SENSe]:DEMod[:WLAN]:RU:ALlocation[01] 2 ... 16 <string></code> <code>[:SENSe]:DEMod[:WLAN]:RU:ALlocation[01] 2 ... 16?</code> |
| Example | <code>:DEM:RU:ALL '00000000'</code> <code>:DEM:RU:ALL?</code> |
| Notes | String length is 8 for 11ax and 9 for 11be. Valid character is only 0 and 1. |
| Dependencies | Only available for 11ax/be. |
| Preset | 11ax 11000000 11be 00100000 |
| State Saved | Saved in instrument state |

RU Size

This parameter determines the size of each RU.

This is a list of parameters, and the length of the list is the number of RUs.

| | |
|----------------|---|
| Remote Command | <code>[:SENSe]:DEMod[:WLAN]:RU:LIST:SIZE <integer>,<integer>,<integer>,...</code> <code>[:SENSe]:DEMod[:WLAN]:RU:LIST:SIZE?</code> |
| Example | <code>:DEM:RU:LIST:SIZE 26,26,26,26,26,26,26,26,26</code> <code>:DEM:RU:LIST:SIZE?</code> |
| Notes | The length of the list is variable and determined by the number of RUs |
| Dependencies | Only available for 802.11ax/ 802.11be |
| Preset | 242 |

3 WLAN Mode

| [gap-996]+996+996+996 | 2988 |
| 996+[gap-996]+996+996 | 2989 |
| 996+996+[gap-996]+996 | 2990 |
| 996+996+996+[gap-996] | 2991 |
| [gap-484]+484+996+996+996 | 3472 |
| 484+[gap-484]+996+996+996 | 3473 |
| 996+[gap-484]+484+996+996 | 3474 |
| 996+484+[gap-484]+996+996 | 3475 |
| 996+996+[gap-484]+484+996 | 3476 |
| 996+996+484+[gap-484]+996 | 3477 |
| 996+996+996+[gap-484]+484 | 3478 |
| 996+996+996+484+[gap-484] | 3479 |
| 4x996 | 3984 |

'+' indicate this is an MRU. An MRU consists of selected combinations of multiple RUs of 26-tone RU, 52-tone RU, 106-tone RU, 242-tone RU, 484-tone RU, 996-tone RU, and 2.996-tone RU. [gap-xxx] represents a null allocation with size xxx.

RU State

Determines the state of each RU.

This is a list of parameters, and the length of the list is the number of RUs.

3 WLAN Mode

3.7 WLAN MIMO Modulation Analysis Measurement

| | |
|----------------|--|
| Remote Command | <code>[:SENSe]:DEMod[:WLAN]:RU:LIST:STATe OFF ON 0 1,...</code> <code>[:SENSe]:DEMod[:WLAN]:RU:LIST:STATe?</code> |
| Example | <code>:DEM:RU:LIST:STAT 1,1,0,0,0,0,0,0,0</code> <code>:DEM:RU:LIST:STAT?</code> |
| Notes | The length of the list is variable and determined by the number of RUs |
| Dependencies | Only available for 802.11ax/ 802.11be |
| Preset | ON |
| State Saved | Saved in instrument state |

Tx Chain Number of Each RU

This parameter determines TX chain number of each RU.

This is a list of parameters, and the length of the list is the number of RUs.

| | |
|----------------|---|
| Remote Command | <code>[:SENSe]:DEMod[:WLAN]:RU:LIST:TXCHain <integer>,<integer>,<integer>,...</code> <code>[:SENSe]:DEMod[:WLAN]:RU:LIST:TXCHain?</code> |
| Example | <code>:DEM:RU:LIST:TXCH 1,1</code> <code>:DEM:RU:LIST:TXCH?</code> |
| Notes | The length of the list is variable and determined by the number of RUs |
| Dependencies | Only available for 802.11ax/ 802.11be |
| Preset | 1 |
| State Saved | Saved in instrument state |

User Number of Each RU

This parameter determines user number of each RU.

This is a list of parameters, and the length of the list is the number of RUs.

| | |
|----------------|---|
| Remote Command | <code>[:SENSe]:DEMod[:WLAN]:RU:LIST:USER <integer>,<integer>,<integer>,...</code> <code>[:SENSe]:DEMod[:WLAN]:RU:LIST:USER?</code> |
| Example | <code>:DEM:RU:LIST:USER 1,1</code> <code>:DEM:RU:LIST:USER?</code> |
| Notes | The length of the list is variable and determined by the number of RUs |
| Dependencies | Only available for 802.11ax/ 802.11be |
| Preset | 1 |
| State Saved | Saved in instrument state |

User MCS

Determines MCS (modulation and coding schema) of each RU.

This is a list parameter, and the length of the list is the number of users.

| | |
|----------------|---|
| Remote Command | <code>[:SENSe]:DEMod[:WLAN]:USER:LIST:MCS <integer>,<integer>,<integer>,...</code> <code>[:SENSe]:DEMod[:WLAN]:USER:LIST:MCS?</code> |
| Example | <code>:DEM:USER:LIST:MCS 0,11,0,11,0,11,0,11,0</code> <code>:DEM:USER:LIST:MCS?</code> |
| Notes | The length of the list is variable and determined by the number of RUs |
| Dependencies | Only available for 802.11ax/ 802.11be |
| Preset | 08 |
| State Saved | Saved in instrument state |
| Min | 0 |
| Max | 13 |

Spatial Stream Number of Each User

This parameter determines MCS (modulation and coding schema) of each RU.

This is a list parameter, and the length of the list is the number of users.

| | |
|----------------|---|
| Remote Command | <code>[:SENSe]:DEMod[:WLAN]:USER:LIST:STReam <integer>,<integer>,<integer>,...</code> <code>[:SENSe]:DEMod[:WLAN]:USER:LIST:STReam?</code> |
| Example | <code>:DEM:USER:LIST:STR 1,1</code> <code>:DEM:USER:LIST:STR?</code> |
| Notes | The length of the list is variable and determined by the number of RUs |
| Dependencies | Only available for 802.11ax/ 802.11be |
| Preset | 1 |
| State Saved | Saved in instrument state |

Channel Coding Mode of Each User

This parameter determines channel coding mode of each RU.

This is a list parameter, and the length of the list is the number of users.

| | |
|----------------|--|
| Remote Command | <code>[:SENSe]:DEMod[:WLAN]:USER:LIST:CCMode BCC LDPC, BCC LDPC, BCC LDPC,...</code> <code>[:SENSe]:DEMod[:WLAN]:USER:LIST:CCMode?</code> |
|----------------|--|

3 WLAN Mode
3.7 WLAN MIMO Modulation Analysis Measurement

| | |
|--------------|---|
| Example | <code>:DEM:USER:LIST:CCM LDPC,LDPC</code> <code>:DEM:USER:LIST:CCM?</code> |
| Notes | The length of the list is variable and determined by the number of RUs |
| Dependencies | Only available for 802.11ax/ 802.11be |
| Preset | LDPC |
| State Saved | Saved in instrument state |
| Range | BCC LDPC |

DCM of Each User

This parameter determines DCM (Dual Carrier Modulation) of each RU.

This is a list parameter, and the length of the list is the number of users.

| | |
|----------------|--|
| Remote Command | <code>[:SENSE]:DEMod[:WLAN]:USER:LIST:DCM OFF ON 0 1,...</code> <code>[:SENSE]:DEMod[:WLAN]:USER:LIST:DCM?</code> |
| Example | <code>:DEM:USER:LIST:DCM 0,0</code> <code>:DEM:USER:LIST:DCM?</code> |
| Notes | The length of the list is variable and determined by the number of RUs |
| Dependencies | Only available for 802.11ax/ 802.11be |
| Preset | ON |
| State Saved | Saved in instrument state |

Edit Trigger-Based PPDU

Only available for 802.11ax/be.

For a Trigger-Based signal, to decode it correctly, it is necessary to manually configure decode parameters in the “Edit Trigger-Based PPDU” dialog. If ‘Data Decode’ is disabled, there is no need to specify these parameters.

Pre-FEC Padding Factor

Specifies the Pre-FEC Padding Factor.

| | |
|----------------|---|
| Remote Command | <code>[:SENSE]:DEMod[:WLAN]:TB:PPFactor <integer></code> <code>[:SENSE]:DEMod[:WLAN]:TB:PPFactor?</code> |
| Example | <code>:DEM:TB:PPF 2</code> <code>:DEM:TB:PPF</code> |
| Dependencies | Available for 802.11ax/ 802.11be only |

| | |
|-------------|---------------------------|
| Preset | 1 |
| State Saved | Saved in instrument state |
| Min | 1 |
| Max | 4 |

PE Disambiguity

Specifies PE Disambiguity.

| | |
|----------------|---|
| Remote Command | <code>[:SENSe] :DEMod [:WLAN] :TB :PED OFF ON 0 1</code> <code>[:SENSe] :DEMod [:WLAN] :TB :PED ?</code> |
| Example | <code>:DEM :TB :PED 1</code> <code>:DEM :TB :PED ?</code> |
| Dependencies | Available for 802.11ax/ 802.11be only |
| Preset | OFF |
| State Saved | Saved in instrument state |

LDPC Extra Symbol Segment

Specifies the presence of the extra OFDM symbol for LDPC.

| | |
|----------------|---|
| Remote Command | <code>[:SENSe] :DEMod [:WLAN] :TB :LESS OFF ON 0 1</code> <code>[:SENSe] :DEMod [:WLAN] :TB :LESS ?</code> |
| Example | <code>:DEM :TB :LESS 1</code> <code>:DEM :TB :LESS ?</code> |
| Dependencies | Available for 802.11ax/ 802.11be only |
| Preset | OFF |
| State Saved | Saved in instrument state |

STBC

Enables/disables space time block coding. STBC encoder spreads constellation points from NSS spatial stream into NSTS space-time streams using a space-time block code. STBC is allowed only with single spatial stream and two space-time streams. STBC is not applied with 4x HE-LTF and 0.8 us GI.

| | |
|----------------|---|
| Remote Command | <code>[:SENSe] :DEMod [:WLAN] :TB :STBC OFF ON 0 1</code> <code>[:SENSe] :DEMod [:WLAN] :TB :STBC ?</code> |
| Example | <code>:DEM :TB :STBC 1</code> |

| | |
|--------------|-------------------------------|
| | :DEM:TB:STBC? |
| Dependencies | Available for 802.11ax only |
| Preset | OFF |
| State Saved | Saved in instrument state |

3.7.9.8 Limits

Accesses the Limits menu that allows you to set up the test limit for channel power or power spectral density.

Edit Limit

Edit Limit is a dialog which is designed to set the measurement test limit.

Edit Common Limit

This page defines the limit for all standards.

Freq Error

Sets a frequency error limit to warn you if the measured maximum frequency error value exceeds the limit.

| | |
|----------------|---|
| Remote Command | :CALCulate:EVMMimo:LIMit:FERRor <real> :CALCulate:EVMMimo:LIMit:FERRor ? |
| Example | :CALC:EVMM:LIM:FERR 15 :CALC:EVMM:LIM:FERR? |
| Couplings | If Radio Std is 802.11n or 802.11ax and Center Frequency for 5 GHz band, freq error limit will be coupled to 20.0 ppm |
| Preset | 802.11n 2.4GHz Band: 25.0ppm others: 20.0ppm |
| State Saved | Saved in instrument state |
| Min | 0 |
| Max | 500 ppm |

Symbol Clock Error

Sets a clock error limit to warn you if the measured maximum clock error value exceeds the limit.

| | |
|----------------|---|
| Remote Command | <code>:CALCulate:EVMMimo:LIMit:CERRor <real></code> <code>:CALCulate:EVMMimo:LIMit:CERRor ?</code> |
| Example | <code>:CALC:EVMM:LIM:CERR 15</code> <code>:CALC:EVMM:LIM:CERR?</code> |
| Couplings | If Radio Std is 802.11n or 802.11ax and Center Frequency for 5 GHz band, Clock Error limit will be coupled to 20.0ppm |
| Preset | If Radio Std is 802.11ac: 20.00 ppm If Radio Std is 802.11n, 802.11ax for 2.4 GHz Band: 25.0ppm |
| State Saved | Saved in instrument state |
| Min | 0 |
| Max | 100 ppm |

I/Q Offset (Center Freq Leakage, CFL)

Sets Center Freq Leakage limit to warn you if the measured average Center Freq Leakage exceeds the limit.

| | |
|----------------|---|
| Remote Command | <code>:CALCulate:EVMMimo:LIMit:CFLeakage <rel_ampl></code> <code>:CALCulate:EVMMimo:LIMit:CFLeakage?</code> |
| Example | <code>:CALC:EVMM:LIM:CFL -15</code> <code>:CALC:EVMM:LIM:CFL?</code> |
| Preset | If Radio Std is 802.11n (20 MHz): -15dB If Radio Std is 802.11n (40 MHz): -20 dB If Radio Std is 802.11ac: $-10\log_{10}(N)$ (N is fft length) 11ac 20M: -18dB 11ac 40M: -21dB 11ac 80M: -24dB 11ac 160M: -27dB If Radio Std is 802.11ax/be: -32 dB |
| State Saved | Saved in instrument state |
| Min | -100 |
| Max | 0 |

BPSK-1/2 RMS EVM

This parameter is available when Radio Std is 802.11n, or 802.11ac.

Sets BPSK coding rate 1/2 RMS EVM limit to warn you if the measured average RMS EVM value exceeds a limit.

| | |
|----------------|---|
| Remote Command | <code>:CALCulate:EVMMimo:LIMit:RMS:BPSK:R1B2 <rel_amp1></code> <code>:CALCulate:EVMMimo:LIMit:RMS:BPSK:R1B2</code> |
| Example | <code>:CALC:EVMM:LIM:RMS:BPSK:R1B2 -20</code> <code>:CALC:EVMM:LIM:RMS:BPSK:R1B2?</code> |
| Notes | This limit value is used in 802.11n, or 802.11ac |
| Preset | -5.00 dB |
| State Saved | Saved in instrument state |
| Min | -1000 |
| Max | 0 |

QPSK-1/2 RMS EVM

This parameter is available when Radio Std is 802.11n, or 802.11ac.

Sets QPSK coding rate 1/2 RMS EVM limit to warn you if the measured average RMS EVM value exceeds a limit.

| | |
|----------------|---|
| Remote Command | <code>:CALCulate:EVMMimo:LIMit:RMS:QPSK:R1B2 <rel_amp1></code> <code>:CALCulate:EVMMimo:LIMit:RMS:QPSK:R1B2</code> |
| Example | <code>:CALC:EVMM:LIM:RMS:QPSK:R1B2 -20</code> <code>:CALC:EVMM:LIM:RMS:QPSK:R1B2?</code> |
| Notes | This limit value is used in 802.11n, or 802.11ac |
| Preset | -10.00 dB |
| State Saved | Saved in instrument state |
| Min | -1000 |
| Max | 0 |

QPSK-3/4 RMS EVM

This parameter is available when Radio Std is 802.11n, or 802.11ac.

Sets QPSK coding rate 3/4 RMS EVM limit to warn you if the measured average RMS EVM value exceeds a limit.

| | |
|----------------|---|
| Remote Command | :CALCulate:EVMMimo:LIMit:RMS:QPSK:R3B4 <rel_amp1> :CALCulate:EVMMimo:LIMit:RMS:QPSK:R3B4 |
| Example | :CALC:EVMM:LIM:RMS:QPSK:R3B4 -20 :CALC:EVMM:LIM:RMS:QPSK:R3B4? |
| Notes | This limit value is used 802.11n, or 802.11ac |
| Preset | -13.00 dB |
| State Saved | Saved in instrument state |
| Min | -1000 |
| Max | 0 |

16QAM-1/2 RMS EVM

This parameter is available when Radio Std is 802.11n, or 802.11ac.

Sets 16QAM coding rate 1/2 RMS EVM limit to warn you if the measured average RMS EVM value exceeds a limit.

| | |
|----------------|---|
| Remote Command | :CALCulate:EVMMimo:LIMit:RMS:QA16:R1B2 <rel_amp1> :CALCulate:EVMMimo:LIMit:RMS:QA16:R1B2 |
| Example | :CALC:EVMM:LIM:RMS:QA16:R1B2 -20 :CALC:EVMM:LIM:RMS:QA16:R1B2? |
| Notes | This limit value is used 802.11n, or 802.11ac |
| Preset | -16.00 dB |
| State Saved | Saved in instrument state |
| Min | -1000 |
| Max | 0 |

16QAM-3/4 RMS EVM

This parameter is available when Radio Std is 802.11n, or 802.11ac.

Sets 16QAM coding rate 3/4 RMS EVM limit to warn you if the measured average RMS EVM value exceeds a limit.

| | |
|----------------|---|
| Remote Command | :CALCulate:EVMMimo:LIMit:RMS:QA16:R3B4 <rel_amp1> :CALCulate:EVMMimo:LIMit:RMS:QA16:R3B4 |
| Example | :CALC:EVMM:LIM:RMS:QA16:R3B4 -20 :CALC:EVMM:LIM:RMS:QA16:R3B4? |
| Notes | This limit value is used 802.11n, or 802.11ac |

3 WLAN Mode

64QAM-2/3 RMS EVM

This parameter is available when Radio Std is 802.11n, or 802.11ac.

Sets 64QAM coding rate 2/3 RMS EVM limit to warn you if the measured average RMS EVM value exceeds a limit.

| | |
|----------------|---|
| Remote Command | <code>:CALCulate:EVMMimo:LIMit:RMS:QA64:R2B3 <rel_amp1></code> |
| Command | <code>:CALCulate:EVMMimo:LIMit:RMS:QA64:R2B3</code> |
| Example | <code>:CALC:EVMM:LIM:RMS:QA64:R2B3 -20</code> <code>:CALC:EVMM:LIM:RMS:QA64:R2B3?</code> |
| Notes | This limit value is used 802.11n, or 802.11ac |
| Preset | -22.00 dB |
| State Saved | Saved in instrument state |
| Min | -1000 |
| Max | 0 |

64QAM-3/4 RMS EVM

This parameter is available when Radio Std is 802.11n, or 802.11ac.

Sets 64QAM coding rate 3/4 RMS EVM limit to warn you if the measured average RMS EVM value exceeds a limit.

| | |
|----------------|---|
| Remote Command | <code>:CALCulate:EVMMimo:LIMit:RMS:QA64:R3B4 <rel_amp1></code> |
| Command | <code>:CALCulate:EVMMimo:LIMit:RMS:QA64:R3B4</code> |
| Example | <code>:CALC:EVMM:LIM:RMS:QA64:R3B4 -20</code> <code>:CALC:EVMM:LIM:RMS:QA64:R3B4?</code> |
| Notes | This limit value is used 802.11n, or 802.11ac |
| Preset | -25.00 Db |
| State Saved | Saved in instrument state |
| Min | -1000 |
| Max | 0 |

64QAM-5/6 RMS EVM

This parameter is available when Radio Std is 802.11n, or 802.11ac.

Sets 64QAM coding rate 5/6 RMS EVM limit to warn you if the measured average RMS EVM value exceeds a limit.

| | |
|----------------|---|
| Remote Command | <code>:CALCulate:EVMMimo:LIMit:RMS:QA64:R5B6 <rel_amp1></code> <code>:CALCulate:EVMMimo:LIMit:RMS:QA64:R5B6</code> |
| Example | <code>:CALC:EVMM:LIM:RMS:QA64:R5B6 -20</code> <code>:CALC:EVMM:LIM:RMS:QA64:R5B6?</code> |
| Notes | This limit value is used 802.11n, or 802.11ac |
| Preset | -27.00 Db |
| State Saved | Saved in instrument state |
| Min | -1000 |
| Max | 0 |

256QAM-3/4 RMS EVM

This parameter is available when Radio Std is 802.11ac.

Sets 256QAM coding rate 3/4 RMS EVM limit to warn you if the measured average RMS EVM value exceeds a limit.

| | |
|----------------|---|
| Remote Command | <code>:CALCulate:EVMMimo:LIMit:RMS:QA256:R3B4 <rel_amp1></code> <code>:CALCulate:EVMMimo:LIMit:RMS:QA256:R3B4</code> |
| Example | <code>:CALC:EVMM:LIM:RMS:QA256:R3B4 -20</code> <code>:CALC:EVMM:LIM:RMS:QA256:R3B4?</code> |
| Notes | This limit value is used in 802.11ac |
| Preset | -30.00 Db |
| State Saved | Saved in instrument state |
| Min | -1000 |
| Max | 0 |

256QAM-5/6 RMS EVM

This parameter is available when Radio Std is 802.11ac.

Sets 256QAM coding rate 5/6 RMS EVM limit to warn you if the measured average RMS EVM value exceeds a limit.

3 WLAN Mode
 3.7 WLAN MIMO Modulation Analysis Measurement

| | |
|----------------|---|
| Remote Command | :CALCulate:EVMMimo:LIMit:RMS:QA256:R5B6 <rel_amp1> |
| Example | :CALC:EVMM:LIM:RMS:QA256:R5B6 -20 :CALC:EVMM:LIM:RMS:QA256:R5B6? |
| Notes | This limit value is used in 802.11ac |
| Preset | -32.00 Db |
| State Saved | Saved in instrument state |
| Min | -1000 |
| Max | 0 |

Edit 11ax/be Limit

This page defines the EVMM limit for 11ax/be:

- "Relative Constellation Error in common" on page 1269
- "Relative Constellation Error in trigger-based PPDU > max power of MCS7" on page 1271
- "Relative Constellation Error in trigger-based PPDU power <= max power of MCS7" on page 1273

Relative Constellation Error in common

This parameter is available when Radio Std is 802.11ax/be.

Specifies RMS EVM limits in a list of 16 elements for HE SU PPDU, HE extended rate SU PPDU and HE MU PPDU. Each element is an RMS EVM limit of a specific MCS and DCM state.

| | |
|----------------|---|
| Remote Command | :CALCulate:EVMMimo:LIMit:RMS:RCERror[:LIST]:COMMon <rel_amp1>,... :CALCulate:EVMMimo:LIMit:RMS:RCERror[:LIST]:COMMon? |
| Example | :CALC:EVMM:LIM:RMS:RCER:COMM -5, -10, -13, -16, -19, -22, -25, -27, -30, -32, -32, -32, -38, -38, -5, -5, -10, -13 :CALC:EVMM:LIM:RMS:RCER:COMM? |
| Notes | This limit value is only available in 802.11ax/be It's a comma separated list of 18 elements for 802.11ax MCS=0 without DCM, MCS=1 without DCM, MCS=2 without DCM, MCS=3 without DCM, MCS=4 without DCM, MCS=5 without DCM, MCS=6 without DCM, MCS=7 without DCM, MCS=8 without DCM, MCS=9 without DCM, MCS=10 without DCM, MCS=11 without DCM, MCS=12 without DCM, MCS=13 without DCM, MCS=0 with DCM, MCS=1 with DCM, MCS=3 with DCM, MCS=4 with DCM It's a list of 16 elements for 802.11be |

| | |
|------------------------------|--|
| | MCS=0, MCS=1, MCS=2, MCS=3, MCS=4, MCS=5, MCS=6, MCS=7, MCS=8, MCS=9, MCS=10, MCS=11, MCS=12, MCS=13, MCS=14, MCS = 15 |
| Dependencies | Only available for 802.11ax/be |
| Couplings | If Modulation is 1024-QAM, limit value should be -35 dB when Track Amplitude under Sync is On and -32 dB when Track Amplitude under Sync is Off |
| Preset | 11ax: -5, -10, -13, -16, -19, -22, -25, -27, -30, -32, -32, -32, -38, -38, -5, -5, -10, -13 11be: -5, -10, -13, -16, -19, -22, -25, -27, -30, -32, -32, -32, -38, -38, -5, -5 |
| State Saved | Saved in instrument state |
| Min | -1000.00 |
| Max | 0 |
| Backwards Compatibility SCPI | :CALCulate:EVMMimo:LIMit:RMS:AX[:LIST]:COMMon <rel_ampl>,... :CALCulate:EVMMimo:LIMit:RMS:AX[:LIST]:COMMon? |

More Information

11ax 18 elements are comma separated and defined as the following list, corresponding to a specific MCS index and DCM state.

| <rel_ampl>, ... | MCS Index | DCM State | RMS EVM Limit Preset value (dB) |
|-----------------|-----------|-----------|---------------------------------|
| #1 | 0 | OFF | -5 |
| #2 | 1 | OFF | -10 |
| #3 | 2 | OFF | -13 |

| #9 | 8 | OFF | -30 |
| #10 | 9 | OFF | -32 |
| #11 | 10 | OFF | -35/-32 |
| #12 | 11 | OFF | -35/-32 |
| #13 | 12 | OFF | -38 |
| #14 | 13 | OFF | -38 |
| #15 | 0 | ON | -5 |
| #16 | 1 | ON | -5 |
| #17 | 3 | ON | -10 |
| #18 | 4 | ON | -13 |

11be 16 elements are comma separated and defined as the following list, corresponding to a specific MCS index and DCM state.

3 WLAN Mode
 3.7 WLAN MIMO Modulation Analysis Measurement

| <rel_ampl>, ... | MCS Index | RMS EVM Limit Preset value (dB) |
|------------------------------|------------------|--|
| #1 | 0 | -5 |
| #2 | 1 | -10 |
| #3 | 2 | -13 |
| #4 | 3 | -16 |
| #5 | 4 | -19 |
| #6 | 5 | -22 |
| #7 | 6 | -25 |
| #8 | 7 | -27 |
| #9 | 8 | -30 |
| #10 | 9 | -32 |
| #11 | 10 | -35/-32 |
| #12 | 11 | -35/-32 |
| #13 | 12 | -38 |
| #14 | 13 | -38 |
| #15 | 14 | -5 |
| #16 | 15 | -5 |

Relative Constellation Error in trigger-based PPDU > max power of MCS7

This parameter is available when Radio Std is 802.11ax/be.

Specifies RMS EVM limits in a list of 18 or 16 elements for a HE/EHT trigger-based PPDU (dB) when its transmit power is greater than the maximum power of MCS7 (dB).

| | |
|----------------|---|
| Remote Command | <code>:CALCulate:EVMMimo:LIMit:RMS:RCERror[:LIST]:TBASed <rel_ampl>,...</code> <code>:CALCulate:EVMMimo:LIMit:RMS:RCERror[:LIST]:TBASed?</code> |

MCS of Trigger-based PPDU

This parameter is available only when Radio Std is 802.11ax/be.

MCS (Modulation Coding Scheme) information is defined in Trigger Frame, with a range from 0~11. HE Trigger-based PPDU format is used for a PPDU that is a response of a Trigger frame, which does not include MCS information. You need to manually set the MCS information to select EVM limit for your test.

See "[More Information about HE PPDU](#)" on page 1276.

| | |
|------------------------------|---|
| Remote Command | <code>:CALCulate:EVMMimo:TBASed:MCS <integer></code> <code>:CALCulate:EVMMimo:TBASed:MCS?</code> |
| Example | <code>:CALC:EVMM:TBAS:MCS 8</code> <code>:CALC:EVMM:TBAS:MCS?</code> |
| Dependencies | Only available for 11ax/be |
| Preset | 1 |
| State Saved | Saved in instrument state |
| Min | 0 |
| Max | 11 |
| Backwards Compatibility SCPI | <code>:CALCulate:EVMMimo:AX:TBASed:MCS <integer></code> <code>:CALCulate:EVMMimo:AX:TBASed:MCS?</code> |

More Information about HE PPDU

HE PPDU has four formats. The FORMAT parameter determines the overall structure of the PPDU:

- **HE SU PPDU format** is used for single-user PPDU, if FORMAT=HE_SU. In HE SU PPDU format, the HE-SIG-A field is not repeated. Support for the HE SU PPDU format is mandatory.
- **HE MU PPDU format** is used for a multi-user PPDU that is not a response of a Trigger frame, if FORMAT=HE_MU. It is similar to SU format, except that an HE-SIG-B field is present. Support for the HE MU PPDU format is mandatory.
- **HE extended range SU PPDU** format is used for single-user PPDU, if FORMAT=HE_EXT_SU. It is similar to SU format, except that the HE-SIG-A field is repeated.
- **HE trigger-based PPDU** format is used for a PPDU that is a response of a Trigger frame, if FORMAT=HE_TRIG. The preamble format is identical to the HE SU PPDU format until the HE-STF field.

More Information about EHT PPDU

EHT PPDU has two formats.

EHT MU PPDU format is used for transmission to one or more users if the PPDU is not a response to a triggering frame. In the EHT MU PPDU, the EHT-SIG field is present. It's used for non-OFDMA or OFDMA single or multiuser transmission.

EHT TB PPDU format is used for a transmission that is a response to a triggering frame from an AP. In the EHT TB PPDU, the EHT-SIG field is not present and the duration of the EHT-STF field is twice the duration of the EHT-STF field in the EHT MU PPDU.

DCM of Trigger-based PPDU

This is available only when Radio Std is 802.11ax/be.

DCM (Dual sub-Carrier Modulation) information is defined in Trigger Frame, applicable only to MCS 0,1,3,4.

HE Trigger-based PPDU format is used for a PPDU that is a response of a Trigger frame, which does not include DCM information. You need to manually set the DCM information to select EVM limit for your test.

See More Information about HE PPDU.

Remote Command :CALCulate:EVMMimo:TBASed:DCM ON | OFF | 1 | 0
 :CALCulate:EVMMimo:TBASed:DCM?

3.7.9.9 Advanced

The Advanced tab contains controls for setting advanced functions of the analyzer.

| | |
|--------------|--|
| Dependencies | This tab does not appear in EXM or VXT |
|--------------|--|

PhNoise Opt

Allows you to select the LO (local oscillator) phase noise behavior for various operating conditions

| | |
|----------------|--|
| Remote Command | <code>[:SENSe] :EVMMimo:FREQuency:SYNThesis[:STATe] 1 ... 5</code> <code>[:SENSe] :EVMMimo:FREQuency:SYNThesis[:STATe] ?</code> |
|----------------|--|

| | |
|--------------|---|
| Example | <code>:EVM:FREQ:SYNT 1</code> <code>:EVM:FREQ:SYNT?</code> |
| Notes | <p>Parameter:</p> <p>1: In instruments with EPO, balances close-in phase noise with spur avoidance. In instruments without EPO optimizes phase noise for small frequency offsets from the carrier</p> <p>2: optimizes phase noise for wide frequency offsets from the carrier</p> <p>3: optimizes LO for tuning speed</p> <p>4: In instruments with EPO, balances close-in phase noise with spur avoidance. In instruments without EPO this setting is accepted but no action taken</p> <p>5: In instruments with EPO, emphasizes spur avoidance with close-in phase noise performance. In instruments without EPO this setting is accepted but no action taken</p> <p>The actual behavior varies somewhat depending on model number and option; you always get fast tuning by choosing #3, but in some models, the “Fast Tuning” choice is identical to the “Best Close-In” choice. Specifically:</p> <ul style="list-style-type: none"> - Models with option EPO (for example UXA), have a two-stage local oscillator, which switches to a single loop for fast tuning - Models with option EP1 (for example PXA), have a two-loop local oscillator, which switches to a single loop for fast tuning - Models with option EP2 (available, for example, for MXA), use a different loop bandwidth for the fast-tuning choice, which is a compromise between tuning speed and phase noise, giving good tuning speed at all offsets, although not as good as for Close-In; this is useful when you have to look across a wide range of spans - In all other cases, Fast Tuning is the same as Best Close-In |
| Dependencies | This control does not appear in UXM, M9393A or M9391A |
| Preset | 3 |
| State Saved | Saved in instrument state |
| Range | <p>No Epx option:</p> <p>Best Close-In Phase Noise [offset < 20 kHz]</p> <p>Best Wide-Offset Phase Noise [offset > 30 kHz]</p> <p>Fast Tuning [same as Close-in]</p> <p>EPO:</p> <p>Best Close-In Phase Noise [offset < 600 kHz]</p> <p>Balance Noise & Spurs [offset < 600 kHz]</p> <p>Best Spurs</p> |

LO Dither

| | |
|----------------|---|
| Remote Command | <code>[:SENSe]:EVMmimo:LO:DITHer[:STATe] ON OFF 1 0</code> <code>[:SENSe]:EVMmimo:LO:DITHer[:STATe]?</code> |
| Example | <code>:EVMm:LO:DITH 1</code> <code>:EVMm:LO:DITH?</code> |
| Dependencies | This feature is only available when the instrument has the option H1G installed The LO Dither key is turned Off and grayed out when IFBW <= 255M. If the user pressed the grayed-out key, then a warning message "Feature only available with the H1G path" is shown If the user tries to set LO Dither to ON via SCPI, a message -221, "Settings conflict; Feature only available with the H1G path" is returned |
| Preset | 0 |

| | |
|-------------|----------|
| State Saved | Yes |
| Range | On Off |

IF Gain

In order to take full advantage of the RF dynamic range of the analyzer, we will offer a switched IF amplifier with approximately 10 dB of gain. When it can be turned on without an overload, the dynamic range is always better with it on than off. The control “IF Gain” can be used to set the IF Gain function to Auto, or to On (the extra 10 dB) or Off. These settings affect sensitivity and IF overloads.

Enables you to control an internally switched IF amplifier with approximately 10 dB of gain. This amplifier takes full advantage of the RF dynamic range of the analyzer. When it can be turned on without an overload, the dynamic range is always better when the amplifier is set to On, than when it is set to Off. The control “IF Gain” can be used to set the IF Gain function to Auto, or to On (the extra 10 dB) or Off. These settings affect sensitivity and IF overloads.

IF Gain Auto

Activates the auto rules for IF Gain.

| | |
|----------------|--|
| Remote Command | <code>[:SENSe]:EVMImo:IF:GAIN:AUTO[:STATe] OFF ON 0 1</code> <code>[:SENSe]:EVMImo:IF:GAIN:AUTO[:STATe]?</code> |
| Example | <code>:EVM:IF:GAIN:AUTO OFF</code> <code>:EVM:IF:GAIN:AUTO?</code> |
| Notes | This only applies to the RF input. It does not apply to baseband I/Q input |
| Dependencies | This control does not appear in UXM, M9393A or M9391A |
| Couplings | When either the auto attenuation is active (for example, with an electrical attenuator), or the optimize mechanical attenuator range is requested, the IF Gain setting is changed using the following rule The Auto selection sets IF Gain to ‘High Gain’ under any of the following conditions: the input attenuator is set to 0 dB the preamp is turned on, the Max Mixer Level is –20 dBm or lower For other settings, Auto sets IF Gain to ‘Low Gain’ |
| Preset | OFF |
| State Saved | Saved in instrument state |
| Range | Auto Man |

IF Gain Select

Selects the range of IF gain.

- High gain: set 10dB IF gain for better noise level measurements.
- Low gain: set 0dB IF gain for large signals.
- Other: allow to set arbitrary IF gain value within -12dB to 12dB. This selection is not available for B25 If bandwidth option.

When this parameter is changed, IF Gain Auto will become Man.

| | |
|----------------|--|
| Remote Command | <code>[:SENSe]:EVMmimo:IF:GAIN:SElect LOW HIGH OTHer</code> <code>[:SENSe]:EVMmimo:IF:GAIN:SElect?</code> |
| Example | <code>:EVM:IF:GAIN:LEV LOW</code> <code>:EVM:IF:GAIN:LEV?</code> |
| Dependencies | This control does not appear in UXM, M9393A or M9391A |
| Preset | LOW |
| State Saved | Saved in instrument state |
| Range | Low High Other |

Other IF Gain

This specifies the IF gain value. When IF gain is set to Other, this value will be used.

| | |
|----------------|--|
| Remote Command | <code>[:SENSe]:EVMmimo:IF:GAIN:LEVel <rel_amp1></code> <code>[:SENSe]:EVMmimo:IF:GAIN:LEVel?</code> |
| Example | <code>:EVM:IF:GINT:VAL -10</code> <code>:EVM:IF:GINT:VAL?</code> |
| Notes | It is not available for B25 IF bandwidth option It would be changed after pressing optimize EVM |
| Preset | 0 |
| State Saved | Saved in instrument state |
| Min | -12 |
| Max | 12 |

FFT SEM Enable

Enable/Disable the functionality of calculating SEM based on FFT. This is preset by measurement preset.

FFT SEM measurement uses fixed trigger source as RF Burst no matter what trigger source is in MIMO measurement. So proper RF Burst trigger level should be set to do the FFT SEM measurement.

| | |
|----------------|--|
| Remote Command | <code>:DIAGnostic:EVMMimo:SEMAsk:ENABled OFF ON 0 1</code> <code>:DIAGnostic:EVMMimo:SEMAsk:ENABled?</code> |
| Notes | This is an alias SCPI of [:SENSe]:EVMMimo:SEMAsk:ENABle Recommend to use [:SENSe]:EVMMimo:SEMAsk:ENABle |
| Preset | OFF |
| Range | On Off |

FFT Acquisition Time(Remote Command Only)

Sets the capture time of each acquisition for FFT SEM . This is preset by measurement preset.

| | |
|----------------|--|
| Remote Command | <code>:DIAGnostic:EVMMimo:TIME:FFT <time></code> <code>:DIAGnostic:EVMMmoi:TIME:FFT?</code> |
| Notes | This is an alias SCPI of [:SENSe]:EVMMimo:TIME:FFT Recommend to use [:SENSe]:EVMMimo:TIME:FFT |
| Preset | 32 us |
| Min/Max | 1 us / 9.9ms |

FFT SEM Trigger Delay (Remote Command Only)

Sets the trigger delay for FFT SEM. This is preset by measurement preset.

| | |
|----------------|--|
| Remote Command | <code>:DIAGnostic:EVMMimo:SEMAsk:TRIGger:DELay <time></code> <code>:DIAGnostic:EVMMimo:SEMAsk:TRIGger:DELay?</code> |
| Notes | This is an alias SCPI of [:SENSe]:EVMMimo:SEMAsk:TRIGger:DELay |
| Preset | 36 us |

Enable FFT SEM Offset D (Remote Command Only)

Sets the FFT SEM Offset D On/Off if Radio Standard is not 80+80 MHz. There are fixed 20 MHz btw start and stop frequency of Offset D. This is preset by measurement preset.

| | |
|----------------|--|
| Remote Command | <code>:DIAGnostic:EVMMimo:SEMAsk:WSPan 0 1 Off On</code> <code>:DIAGnostic:EVMMimo:SEMAsk:WSPan?</code> |
| Example | <code>:DIAG:EVMM:SEM:WSP 1</code> <code>:DIAG:EVMM:SEM:WSP?</code> |
| Notes | This is an alias SCPI of <code>[:SENSe]:EVMMimo:SEMAsk:WSPan 0 1 Off On</code> |
| Dependencies | This setting is available only when Radio Standard is not 80+80 MHz |
| Preset | 0 |

FFT SEM Multi-Burst (Remote Command Only)

Enable/Disable multiple burst processing for FFT SEM. When this setting is set to 1, multiple bursts captured in one acquisition are calculated for FFT SEM.

| | |
|----------------|---|
| Remote Command | <code>[:SENSe]:EVMMimo:SEMAsk:MBURst 0 1 Off On</code> <code>[:SENSe]:EVMMimo:SEMAsk:MBURst?</code> |
| Notes | Multiple Burst Processing is introduced to save sync time and data transfer time between primary and secondary modules when Average State is On and Average Number > 1. If Average State is Off, or Average Number = 1, Multiple Burst makes no difference with normal behavior |
| Dependencies | Only available when instrument is EXM or VXT. Otherwise, turning on Multi Burst will bring up error message: "MBurst detection Sem is not supported by this instrument" |
| Couplings | When FFT SEM Multi-Burst is turned On, the max value of FFT Acquisition Time is coupled with MIMO Type, Average Number and Sampling Rate as listed below: $(8000008 / \text{MIMO Channel Number} / \text{Average Number} - 1) / \text{Sampling Rate}$ When Radio Standard is <ul style="list-style-type: none"> - not 80+80 MHz, MIMO Channel Number is n, if MIMO Type is MnMn, e.g., for 4x4 MIMO, the value is 4 - 80+80 MHz, MIMO Channel Number is 2 x n, if MIMO Type is MnMn, e.g., for 4x4 MIMO, the value is 8 |
| Preset | 0 |

Cross-Correlated EVM

Cross-Correlated EVM (ccEVM) is a technique applied to RMS EVM measurement. It suppresses analyzer noise, resulting in a lower EVM floor. A 2-channel analyzer, or two analyzers, demodulate the same signal independently, and perform cross-correlation on the error vectors to cancel out uncorrelated noise added by the analyzer.

Differences in impedance mismatch and amplitude/phase unflatness between channels are examples of uncorrelated noise between analyzers.

| | |
|----------------|--|
| Remote Command | <code>[:SENSe]:EVMmimo:CCEVm[:ENABle] OFF ON 0 1</code> <code>[:SENSe]:EVMmimo:CCEVm[:ENABle]?</code> |
| Example | <code>:EVM:CCEV 1</code> <code>:EVM:CCEV?</code> |
| Notes | Before ccEVM, Remote Analyzer should be configured in Meas Setup\Global\Remote Analyzer Config |
| Dependencies | It is grayed out for 802.11ajgp/11b/11ah/11af, 802.11ac/ax 80MHz + 80MHz and Radio Std Detection is On |
| Preset | OFF |
| State Saved | Saved in instrument state |
| Range | On Off |

Power Reference Plane

Allows you to increase the power by 3 dB for Baseband I+jQ measurements. Options are:

| Menu | SCPI |
|----------|-----------------------|
| Baseband | <code>BASEband</code> |
| RF | <code>RF</code> |

| | |
|----------------|---|
| Remote Command | For valid <meas> values, see " Valid Measurement Keywords " on page 1285 <code>[:SENSe]:<meas>:POWer:IQ:REFeRence:PLANe RF BASEband</code> <code>[:SENSe]:<meas>:POWer:IQ:REFeRence:PLANe?</code> |
| Example | (Complex Spectrum measurement) <code>SPEC:POW:IQ:REF:PLAN BAS</code> <code>SPEC:POW:IQ:REF:PLAN?</code> |
| Dependencies | Only available if the I/Q input exists Enabled only when the input is I/Q and I/Q Path is I+jQ Disabled for all other conditions |
| Preset | <code>RF</code> |

State Saved Saved in instrument state

Valid Measurement Keywords

This function is available *only* in certain Modes and measurements. Only the following listed values of `<meas>` are valid.

| Mode(s) | Meas | <meas> |
|----------|--------------------------|----------|
| BASIC | Complex Spectrum | SPECTrum |
| BASIC | IQ Waveform | WAVEform |
| CQM | | |
| EDGE GSM | | |
| LTEAFDD | | |
| LTEATDD | | |
| MSR | | |
| NR5G | | |
| PNOISE | | |
| SRCOMMS | | |
| VMA | | |
| WCDMA | | |
| WLAN | | |
| WLAN | Modulation Analysis | EVM |
| WLAN | MIMO Modulation Analysis | EVMMimo |

Min Idle Time

Min Idle Time is the minimum idle time of 2 burst.

Burst start/stop detection window length = Min Idle Time * Sample Rate, if it's less than 28, then use 28 instead to avoid false detection.

| | |
|----------------|--|
| Remote Command | <code>[:SENSe]:EVM:BURSt:SEARch:ITIMe:MINimum <time></code> <code>[:SENSe]:EVM:BURSt:SEARch:ITIMe:MINimum?</code> |
| Example | <code>:EVM:BURS:SEAR:ITIM:MIN 1us</code> <code>:EVM:BURS:SEAR:ITIM:MIN?</code> |
| Preset | 1us |
| State Saved | Saved in instrument state |
| Min | 0.1us |
| Max | 20us |

3.7.9.10 Global

Remote Analyzer Config

The X-Series Signal Analyzers have a single RF channel. For the multi-channel measurement scenarios, such as MIMO, multiple X-Series Signal Analyzers can be configured to create a multi-analyzer system. The following setup establishes the LAN communication for the multi-analyzer system.

IP Address

Lets you enter a new IP address of the remote analyzer. After you enter the address you should press “Add” to add the analyzer at that address to the Available Analyzer List.

| | |
|-------------|---------|
| Preset | 0.0.0.0 |
| State Saved | No |

SCPI Socket Port

Let you enter a new SCPI socket port number of the remote analyzer. After you enter the number you should press “Add” to add the analyzer at that address to the Available Analyzer List.

| | |
|-------------|------|
| Preset | 5025 |
| State Saved | No |

Add Analyzer

Adds the new analyzer to the remote analyzer list. When pressing this softkey, the following items will be checked:

1. Whether it is a new one to the remote analyzer list.
2. Whether the IP address is valid.
3. Whether the SCPI socket port number is valid.
4. Whether the IP address is the local IP address or not.
5. Whether the IP address has been added or not.
6. Whether the IP address can be visited by TCPIP.

3 WLAN Mode

3.7 WLAN MIMO Modulation Analysis Measurement

If the items are OK, the new remote analyzer will be inserted at the end of the remote analyzer list.

The “Add” softkey will not work if the count of the list of the remote analyzers has reached 10.

| | |
|----------------|--|
| Remote Command | <code>:SYSTem:COMMunicate:ANALyzer:ADD[:IPADDRESS] <address string></code> |
| Example | <code>:SYST:COMM:ANAL:ADD "146.208.172.102:5025"</code> |
| Notes | <p>If no supported analyzer is found at the specified address, an error message will be generated, for example, “Invalid IP address and SCPI socket port 0.0.0.0:0000”</p> <p>The maximum number of analyzers is 10.If the user tries to add a new analyzer after the maximum number is reached, an error message will be generated, for example, “Maximum number of analyzer is reached.”</p> |

Verify Highlighted Analyzer

This key verifies the LAN interface connection to the Current Analyzer (It does NOT verify any signal connections.)

Each time after a new remote analyzer is inserted into the remote analyzer list, its state is “Unverified”.

When you press this key, the connection to the current analyzer will be verified. If the analyzer can be verified successfully, its “Verified” state will become “Yes”, otherwise its state will be “No”.

Verification includes the following items for all platforms:

1. Whether the remote analyzer with the IP address can be visited by TCPIP.
2. Whether XA is started in the remote analyzer.
3. Whether the firmware of the remote analyzer is A.13.00 or a newer one.
4. Whether the remote analyzer has B40 option or not.

And for modular platforms also include:

5. Whether the HW of the remote analyzer can support MIMO or not.
6. Whether the remote Application in the remote analyzer is available.

| | |
|----------------|---|
| Remote Command | <code>:SYSTem:COMMunicate:ANALyzer:VERify <address string></code> |
| Example | <code>:SYST:COMM:ANAL:VER "146.208.172.102:5025"</code> |
| Notes | The parameter of the SCPI command is the IP address and SCPI socket port number of the analyzer in the remote analyzer list |

If the parameter in an invalid IP address and SCPI socket port, for example an IP address with a wrong format or not in the list of the remote analyzers, an error message will be generated, for example, “Invalid IP address and SCPI socket port 0.0.0.0:0000”

Use the command “SYSTem:COMMunicate:ANALyzer:INFormation?” to obtain the result of the verification

Select Highlighted Analyzer

You can navigate up and down in the list with the up and down arrow keys and can select any entry by pressing the “Select Highlighted Analyzer” key.

Each time when pressing this key, the local analyzer will take the following actions:

1. Sets the current analyzer to the highlighted analyzer.
2. Checks the prerequisites of the highlighted analyzer (firmware version, options, etc.)
3. Switch the current Application in the selected remote analyzer to be the remote Application.
4. Lock the front panel of the selected remote analyzer.

| | |
|----------------|---|
| Remote Command | <code>:SYSTem:COMMunicate:ANALyzer:SElect[:IPAddress] <address string></code> <code>:SYSTem:COMMunicate:ANALyzer:SElect[:IPAddress]?</code> |
| Example | <code>:SYST:COMM:ANAL:SEL “146.208.172.102:5025”</code> <code>:SYST:COMM:ANAL:SEL?</code> returns all the selected analyzer |
| Notes | <p>The parameter of the SCPI command is the IP address and SCPI socket port number of the analyzer in the remote analyzer list. If command drops SCPI socket number, then default SCPI port number is taken</p> <p>In the “Analyzer Config” view, if an analyzer is selected successfully, then related “Selected” state will be “On”, or otherwise its state is “Off”. System will automatically choose one available channel number for new selected remote analyzer, which is displayed in “Ch” grid view</p> <p>If the parameter in an invalid IP address, for example an IP address with a wrong format or not in the remote analyzer list, an error message will be generated, for example, “0.0.0.0 is not a valid IP address.”</p> <p>If the local analyzer fails to select the highlighted analyzer, an error message, which is “0.0.0.0 cannot be selected.”, will be shown in the message area</p> <p>If the highlighted analyzer is already selected, an error message will be generated, for example, “0.0.0.0 is already selected”</p> <p>If an analyzer is selected successfully, “:SYSTem:COMMunicate:ANALyzer:IPAddress?” will return the IP address of the analyzers in the remote analyzer list. Otherwise, it will return an empty string</p> <p>Multiple remote analyzer selection is allowed, thus, to support high order MIMO test. If there is already one selected analyzer, When a new remote one is selected, system will automatically assign next available channel number to it</p> |

| | |
|---------|---|
| E6640A: | There are constraints on remote analyzer connection configuration in E6640A. For MIMO 2x2, valid remote analyzer connection is TRX1 (Primary) + TRX2 (Secondary module) or TRX3 (Primary) + TRX4 (Secondary module) 2-channel configuration. For MIMO 3x3, valid remote analyzer connection is TRX1 (Primary) + TRX2 (Secondary module) + TRX3 (Secondary module) 3-Channel configuration. To violate these rules will get error "System Error; Invalid Primary TRX module configuration" or "System Error; Invalid Secondary TRX module configuration" |
| Preset | The current analyzer selection is unaffected by a Mode Preset |

Release Highlighted Analyzer

Releases the highlighted remote analyzer.

When the user presses this softkey, the front panel of the highlighted analyzer will be unlocked.

| | |
|------------------------------|---|
| Remote Command | <code>:SYSTem:COMMunicate:ANALyzer:RELease:IPADdress <address string></code> |
| Example | <code>:SYST:COMM:ANAL:REL:IPAD "146.208.172.102:5125"</code> <code>release the specified remote analyzer</code> |
| Notes | In the "Analyzer Config" view, if the highlighted analyzer is released successfully, its "Channel Index" will be set to be -1 If the local analyzer fails to release the highlighted analyzer, a warning message, which is "0.0.0.0:0000 cannot be released.", will be shown in the message area. However, its "Channel Index" will also be set to be -1 If there is no highlighted analyzer, no action will be taken and an error message will be generated, for example, "There is no selected analyzer." |
| Backwards Compatibility SCPI | <code>:SYSTem:COMMunicate:ANALyzer:RELease</code> release the highlighted analyzer |

Release All (Remote Command Only)

Release all the selected remote analyzer. The front panel of all the listed remoted analyzer will be unlocked.

| | |
|----------------|--|
| Remote Command | <code>:SYSTem:COMMunicate:ANALyzer:RELease:ALL</code> |
| Example | <code>:SYST:COMM:ANAL:REL:ALL</code> |
| Notes | In the "Analyzer Config" view, if the analyzer is released successfully, its "Channel Index" will be set to be -1 If the local analyzer fails to release a remote analyzer, a warning message, which is "0.0.0.0:0000 cannot be released.", will be shown in the message area. However, its "Channel Index" will also be set to be -1 |

If there is no selected analyzer, no action will be taken and an error message will be generated, for example, "There is no selected analyzer."

Delete Highlighted Analyzer

Deletes the highlighted analyzer from the remote analyzer list. You will be prompted with a dialog box to make sure you REALLY want to do this. The prompt says "The highlighted analyzer will be permanently deleted from the list. Are you sure you want to do this? Press Enter to proceed or Cancel (ESC) to cancel."

| | |
|----------------|---|
| Remote Command | <code>:SYSTem:COMMunicate:ANALyzer:DELeTe[:IPAdDress] <address string></code> |
|----------------|---|

| | |
|---------|---|
| Example | <code>:SYST:COMM:ANAL:DEL "146.208.172.102:5025"</code> |
|---------|---|

| | |
|-------|---|
| Notes | <p>The parameter of this SCPI command is the IP address and SCPI socket port number of the analyzer in the remote analyzer list which the user wants to delete</p> <p>If the parameter is not a valid IP address and SCPI socket port number, for example, the IP address with a wrong format or not in the list of the remote analyzers, only the valid IP address will be accepted and an error message will be generated, for example, "Invalid IP address and SCPI socket port: 0.0.0.0:0000."</p> <p>If the user tries to delete a selected analyzer, the local analyzer will first try to release the selected analyzer and then remove it from the list of the remote analyzers. If there is some errors during releasing the selected analyzer, an error message will be generated, for example, "Cannot release 0.0.0.0:0000.". However, this analyzer will still be removed from the remote analyzer list</p> |
|-------|---|

Delete All

Deletes all analyzers in the remote analyzer list. You will be prompted with a dialog box to make sure you REALLY want to do this. The prompt says "All analyzers will be permanently deleted. Are you sure you want to do this? Press Enter to proceed or Cancel (ESC) to cancel."

| | |
|----------------|--|
| Remote Command | <code>:SYSTem:COMMunicate:ANALyzer:DELeTe:ALL</code> |
|----------------|--|

| | |
|---------|--------------------------------------|
| Example | <code>:SYST:COMM:ANAL:DEL:ALL</code> |
|---------|--------------------------------------|

| | |
|-------|---|
| Notes | <p>If there is a selected analyzer, the local analyzer will first try to release the selected analyzer and then remove it from the list of the remote analyzers. If there is some errors during releasing the selected analyzer, an error message will be generated, for example, "Cannot release 0.0.0.0:0000". However, this analyzer will still be removed from the remote analyzer list</p> |
|-------|---|

Query Analyzer Information (Remote Command Only)

Gets the information of the remote analyzer.

The query result will be returned in a string in the following format:

3 WLAN Mode
3.7 WLAN MIMO Modulation Analysis Measurement

Channel Index, Selection State, Verification State, IP Address, *IDN?
For example, "2, Selected, Verified, 146.208.172.102:5025, Keysight Technologies, N9020A, MY46471851, A.12.00_P0012"

| | |
|----------------|---|
| Remote Command | <code>:SYSTem:COMMunicate:ANALyzer:INFormation? <address string></code> |
| Example | <code>:SYST:COMM:ANAL:INF? "146.208.172.102:5025"</code> |
| Notes | The parameter of the SCPI command is the IP address and SCPI socket port number of the analyzer of the remote analyzer list If the parameter in an invalid IP address, for example an IP address with a wrong format or not in the list of the remote analyzers, an error message will be generated, for example, "Invalid IP address and SCPI socket port 0.0.0.0:0000." If the current analyzer is not selected, the Channel Index will be "-1" |

Query All Analyzer IP Addresses (Remote Command Only)

Gets the IP addresses of all analyzers in the list of the remote analyzers.

The query result will be returned in a string containing all IP addresses and SCPI socket port number of the analyzer in the remote analyzer list which is separated by comma:

146.208.172.102:5125,146.208.172.102:5225,146.208.172.102:5325

| | |
|----------------|--|
| Remote Command | <code>:SYSTem:COMMunicate:ANALyzer[:IPAdDress]?</code> |
| Example | <code>:SYST:COMM:ANAL?</code> |

Query remote analyzer MIMO capability (Remote Command Only)

Query the MIMO capability of the remote analyzers.

| | |
|----------------|--|
| Remote Command | <code>:SYSTem:COMMunicate:ANALyzer:MIMO:CAPability?</code> |
| Example | <code>:SYST:COMM:ANAL:MIMO:CAP?</code> |
| Notes | This command is intended for VXT but be compatible to EXM The query result will be returned in a string containing maxInputChan, maxOutputChan and Multi-box synchronization capability separated by comma of the remote analyzer If -MMO installed and -MTS installed, then return 8,8,1 If -MMO installed and -MTS not installed, then return 4,4,0 If -MMO not installed and -MTS installed, then return 1,1,1 If -MMO not installed and -MTS not installed, then return 1,1,0 |

Select RFIO Input Port Mode (Remote Command Only)

Select RFIO Input port mode.

The default value is Auto, secondary RFIO input port is following primary module RFIO input port.

When mode is Manual, secondary RFIO input port can be set that do not follow primary module RFIO input port

using **Set RFIO Input Port (Remote Command Only)**

| | |
|----------------|--|
| Remote Command | <code>:SYSTem:COMMunicate:ANALyzer:INPut:PORT:MODE AUTO MANua1</code> |
| Example | <code>:SYST:COMM:ANAL:INP:PORT:MODE MAN</code> <code>:SYST:COMM:ANAL:INP:PORT:MODE?</code> |
| Notes | "AUTO" means to all secondary modules RFIO port follow primary module RFIO port. "MANual" means to every secondary module can be set RFIO port. |
| Preset | AUTO |
| Range | AUTO MANual |

Set RFIO Input Port (Remote Command Only)

Set module RFIO input port.

The default channel index is 1 for primary module. When channel index is 1, query only SCPI. It returns primary

RFIO input port.

For example: `:SYSTem:COMMunicate:ANALyzer:INPut:PORT:CHANnel?`

The channel index 2~8 for secondary module. Set and query secondary module RFIO input port.

For example: `:SYSTem:COMMunicate:ANALyzer:INPut:PORT:CHANnel2 RFIO2`

`:SYSTem:COMMunicate:ANALyzer:INPut:PORT:CHANnel2?`

| | |
|----------------|---|
| Remote Command | <code>:SYSTem:COMMunicate:ANALyzer:INPut:PORT:CHANnel[1:8] RFIO1 ... RFIO8</code> |
| Example | <code>:SYST:COMM:ANAL:INP:PORT:CHAN2 RFIO2</code> <code>:SYST:COMM:ANAL:INP:PORT:CHAN2?</code> |
| Notes | Set specify module RFIO input port when RFIO Input Mode is set to "MANual". |
| Preset | RFIO1 |

| | |
|-------|---|
| Range | RFIO1 RFIO2 RFIO3 RFIO4 RFIO5 RFIO6 RFIO7 RFIO8 (E6680A:RFIO1~RFIO8; E6680E:RFIO1~RFIO4) |
|-------|---|

Restore Defaults

This control resets all of the functions in the Global Settings menu to Off. This also occurs when System, Restore Defaults, All Modes is pressed.

| | |
|---------------------------------|----------------------------|
| Remote Command | :INSTrument:COUPle:DEFault |
| Example | :INST:COUP:DEF |
| Backwards Compatibility SCPI | :GLOBal:DEFault |

3.7.9.11 MIMO Result Stream Index (Remote Command Only)

This parameter specifies the MIMO result related Stream Index.

| | |
|----------------|--|
| Remote Command | [:SENSe]:EVMMimo:RESult:STReam <integer> [:SENSe]:EVMMimo:RESult:STReam? |
| Example | :EVMM:RES:STR 2 :EVMM:RES:STR? |
| Notes | See " WLAN MIMO Modulation Analysis Measurement Results " on page 1103. Once the MIMO Result Stream Index is specified, the FETCh:EVMM<n>? will return the EVM results of the specified stream |
| Preset | 1 |
| State Saved | Yes |
| Min/Max | 1/8 |

3.7.9.12 MIMO Result Channel Index (Remote Command Only)

This parameter specifies the MIMO EVM result Channel Index.

| | |
|----------------|--|
| Remote Command | [:SENSe]:EVMMimo:RESult:CHANnel <integer> [:SENSe]:EVMMimo:RESult:CHANnel? |
| Example | :EVMM:RES:CHAN 2 :EVMM:RES:CHAN? |
| Notes | See " WLAN MIMO Modulation Analysis Measurement Results " on page 1103. Once the MIMO Result Channel Index is specified, the FETCh:EVMM<n>? will return the EVM results of the specified channel |
| Preset | 1 |
| State Saved | Yes |
| Min/Max | 1/8 |

3.7.9.13 MIMO Result Segment Number (Remote Command Only)

This parameter specifies the MIMO EVM result Segment Number for MIMO 2x2 80+80 MHz.

| | |
|----------------|--|
| Remote Command | <code>[:SENSe]:EVMMimo:RESult:SEGment <integer></code> <code>[:SENSe]:EVMMimo:RESult:SEGment?</code> |
| Example | <code>:EVMM:RES:SEGM 1</code> <code>:EVMM:RES:SEGM?</code> |
| Notes | See " WLAN MIMO Modulation Analysis Measurement Results " on page 1103. Once the MIMO Result Segment Number is specified, the <code>FETCH:EVMM<n>?</code> will return the EVM results of the specified segment |
| Preset | 1 |
| State Saved | Yes |
| Min/Max | 1/2 |

3.7.9.14 MIMO EVM Multi-Burst (Remote Command Only)

Enable/Disable multiple burst processing for MIMO EVM. When this setting is set to 1, multiple bursts captured in one acquisition are demodulated for averaging.

| | |
|----------------|---|
| Remote Command | <code>[:SENSe]:EVMMimo:EVM:MBURst 0 1 Off On</code> <code>[:SENSe]:EVMMimo:EVM:MBURst?</code> |
| Notes | Multiple Burst Processing is introduced to save sync time and data transfer time between primary and secondary modules when Average State is On and Average Number > 1. If Average State is Off, or Average Number = 1, Multiple Burst makes no difference with normal behavior |
| Dependencies | Only available when instrument is EXM or VXT. Otherwise, turning on Multi Burst will bring up error message: "MBurst detection EVM is not supported by this instrument" |
| Couplings | When MIMO EVM Multi-Burst is turned On, the max value of Search Length is coupled with MIMO Type, Average Number and Sampling Rate as listed below: $(8000008 / \text{MIMO Channel Number} / (\text{Average Number} + 1) - 1) / \text{Sampling Rate}$ When Radio Standard is <ul style="list-style-type: none"> - not 80+80 MHz, MIMO Channel Number is n, if MIMO Type is MnMn, e.g., for 4x4 MIMO, the value is 4 - 80+80 MHz, MIMO Channel Number is $2 \times n$, if MIMO Type is MnMn, e.g., for 4x4 MIMO, the value is 8 |
| Preset | 0 |

3.7.9.15 MIMO EVM Filter Short State (Remote Command Only)

This setting takes effect when MIMO EVM Multi-Burst is On. It is used to filter out the spurs in the Multi-Burst acquisition data.

| | |
|----------------|---|
| Remote Command | <code>[:SENSe]:EVMMimo:EVM:MBURst:FILTer 0 1 Off On</code> <code>[:SENSe]:EVMMimo:EVM:MBURst:FILTer?</code> |
| Notes | When MIMO EVM Multi-Burst State and this setting are both On, the width of the first burst captured in the acquisition is used as standard burst width. If a following burst width is less than that of the 1st burst. The shorter burst data will not be demodulated |
| Dependencies | This setting takes effect when MIMO EVM Multi-Burst is On |
| Preset | 0 |

3.7.10 Sweep

The Sweep key accesses controls that enable you configure and control the acquisition of data and the X-axis parameters of the instrument. These controls might include Continuous/Single, Pause/Resume, X Scale and number of Points.

3.7.10.1 Sweep/Control

Accesses controls that let you operate the sweep and control functions of the instrument, such as **Sweep Time** and **Continuous/Single**.

Sweep/Measure

Lets you toggle between **Continuous** and **Single** sweep or measurement operation. The single/continuous state is Meas Global, so the setting affects all measurements.

The front-panel key **Single/Cont** performs exactly the same function

See "[More Information](#)" on page 1296

| | |
|----------------|---|
| Remote Command | <code>:INITiate:CONTinuous OFF ON 0 1</code> <code>:INITiate:CONTinuous?</code> |
| Example | Put instrument into Single measurement operation: <code>:INIT:CONT 0</code> <code>:INIT:CONT OFF</code> Put instrument into Continuous measurement operation: <code>:INIT:CONT 1</code> <code>:INIT:CONT ON</code> |

| | |
|-------------------------------|--|
| Preset | ON Note that :SYST:PRES sets :INIT:CONT to ON , but *RST sets :INIT:CONT to OFF |
| State Saved | Saved in instrument state |
| Annunciation | The Single/Continuous icon in the Meas Bar changes depending on the setting: <ul style="list-style-type: none"> - A line with an arrow is Single - A loop with an arrow is Continuous |
| Backwards Compatibility Notes | X-Series A-models had Single and Cont hardkeys in place of the SweepSingleCont softkey. In the X-Series A-models, if in single measurement, the Cont hardkey (and :INIT:CONT ON) switched to continuous measurement, but never restarted a measurement and never reset a sweep X-Series B-models have a Cont/Single toggle control instead of Single and Cont hardkeys, but it is still true that, if in single measurement, the Cont/Single toggle control never restarts a measurement and never resets a sweep |

More Information

| | |
|-----------------|---|
| Continuous Mode | The instrument takes repetitive sweeps, averages, measurements, etc., when in continuous mode. If in average or Max/Min Hold, and the average/hold count reaches the Average/Hold Num , the count stops incrementing, but the instrument keeps sweeping See the Trace key description under Trace Average for the averaging formula used both before and after the Average/Hold Num is reached. The trigger condition must be met prior to each sweep The type of trace processing for multiple sweeps is set under the Trace key, with choices of Trace Average , Max Hold , or Min Hold |
| Single Mode | The instrument takes a single sweep when in Single mode, or if in average or Max/Min Hold, or if there is a Waterfall window displayed, it takes multiple sweeps until the average/hold count reaches the Average/Hold Num , then the count stops incrementing, and the instrument stops sweeping See the Trace key description under Trace Average for the averaging formula used. The trigger condition must be met prior to the sweep The type of trace processing for multiple sweeps is set under the Trace key, with choices of Trace Average , Max Hold , or Min Hold |

If the instrument is in **Single** measurement mode, pressing the **Cont/Single** toggle control does not zero the count and does not cause the sweep to be reset; the only action is to put the instrument into Continuous measurement operation.

If the instrument is already in **Continuous** sweep:

- **:INIT:CONT 1** has no effect
- **:INIT:CONT 0** places the instrument in Single Sweep but has no effect on the current sequence until $k = N$, at which point the current sequence will stop and the instrument will go to the idle state

See "**Restart**" on page 1853 for details of **:INIT:IMMediate**.

If the instrument is already in **Single** sweep, `:INIT:CONT OFF` has no effect.

If the instrument is already in **Single** sweep, then pressing **Cont/Single** in the middle of a sweep does not restart the sweep or sequence. Similarly, pressing **Cont/Single** does not restart the sweep or sequence if the sweep is not in the idle state (for example, if you are taking a very slow sweep, or the instrument is waiting for a trigger). Even though pressing **Cont/Single** in the middle of a sweep does not restart the sweep, sending `:INIT:IMM` does reset it.

If the instrument is in **Single** sweep, and *not* Averaging/Holding, and you want to take one more sweep, press **Restart**.

If the instrument is in **Single** sweep, *and* Averaging/Holding, and you want to take one more sweep without resetting the Average trace or count, go to **Meas Setup** and increment the average count by 1 by pressing the **Step-Up** key while **Average/Hold Num** is the active function. You can also do this by sending `:CALC:AVER:TCON UP`.

Restart

Restarts the current sweep, or measurement, or set of averaged/held sweeps or measurements. If you are Paused, pressing **Restart** performs a Resume.

The front-panel key **Restart** performs exactly the same function.

The **Restart** function is accessed in several ways:

- Pressing the **Restart** key
- Sending `:INIT:IMM`
- Sending `:INIT:REST`

See "[More Information](#)" on page 1298

| | |
|------------------------------|--|
| Remote Command | <code>:INITiate[:IMMEDIATE]</code> <code>:INITiate:REStart</code> |
| Example | <code>:INIT:IMM</code> <code>:INIT:REST</code> |
| Notes | <code>:INIT:REST</code> and <code>:INIT:IMM</code> perform exactly the same function |
| Couplings | Resets average/hold count k. For the first sweep overwrites all active (update = on) traces with new current data. For application modes, it resets other parameters as required by the measurement |
| Status Bits/OPC dependencies | This is an Overlapped command The <code>STATus:OPERation</code> register bits 0 through 8 are cleared , <i>except</i> bit 6 (Waiting for Periodic Sync). Initiating a measurement and Waiting for Periodic Sync could be asynchronous The <code>STATus:QUESTionable</code> register bit 9 (<code>INTEGRity</code> sum) is cleared The <code>SWEEPING</code> bit is set |

| | |
|-------------------------------|---|
| | The MEASURING bit is set |
| Backwards Compatibility Notes | For Spectrum Analysis Mode in ESA and PSA, the Restart hardkey and the :INIT:REST command restarted trace averages (displayed average count reset to 1) for a trace in Clear Write , but did not restart Max Hold and Min Hold In X-Series, the Restart hardkey and the :INIT:REST command restart not only Trace Average , but MaxHold and MinHold traces as well |

More Information

The **Restart** function first aborts the current sweep or measurement as quickly as possible. It then resets the sweep and trigger systems, sets up the measurement and initiates a new data measurement sequence with a new data acquisition (sweep) taken once the trigger condition is met.

If the instrument is in the process of aligning when a **Restart** is executed, the alignment finishes before the restart function is performed.

Even when set for **Single** operation, multiple sweeps may be taken when **Restart** is pressed (for example, when averaging/holding is on). Thus, when we say that **Restart** "restarts a measurement", depending on the current settings, we may mean that it:

- Restarts the current sweep
- Restarts the current measurement
- Restarts the current set of sweeps if any trace is in Trace Average, Max Hold or Min Hold
- Restarts the current set of measurements if Averaging, or Max Hold, or Min Hold is on for the measurement

If there is no Average or Max/Min Hold function (no trace in Trace Average or Hold, or **Average/Hold Num** set to 1), and no **Waterfall** window is being displayed, a single sweep is equivalent to a single measurement. A single sweep is taken after the trigger condition is met; and the instrument stops sweeping once that sweep has completed. However, with **Average/Hold Num** > 1, and at least one trace set to Trace Average, Max Hold, or Min Hold, or a **Waterfall** window being displayed, multiple sweeps/data acquisitions are taken for a single measurement. The trigger condition must be met prior to each sweep. The sweep is stopped when the average count k equals the number N set for **Average/Hold Num**.

Once the full set of sweeps has been taken, the instrument goes to the idle state. To take one more sweep without resetting the average count, increment the average count by 1, by pressing the **Step-Up** key while **Average/Hold Number** is the active function, or by sending the remote command **:CALC:AVER:TC ON UP**.

Trace Update

The numeric results are not blanked at any time during the restart cycle.

For slow sweeps (see **Trace Update** section in **Trace/Detector**), the traces are updated real-time during the sweep. There may be a special circumstance in application mode measurements where an exception is made and the traces and/or results need to be blanked before displaying the new results.

To summarize, the following list shows what happens to the trace data on various events:

| Event | Trace Effect |
|---|--|
| Clear/Write pressed (even if already in Clear/Write) | Set to mintracevalue |
| Max Hold pressed (even if already in Max Hold) | Set to mintracevalue |
| Min Hold pressed (even if already in Min Hold) | Set to maxtracevalue |
| Trace Average pressed (even if already in Trace Average) | Trace data unaffected but start new sweep/avg/hold |
| Restart pressed | Trace data unaffected but start new sweep/avg/hold |
| Parameter requiring restart changed (e.g., RBW) | Trace data unaffected but start new sweep/avg/hold |

Sweep and Trigger Reset

Resetting the sweep system resets the average/hold count k to 0. It also resets the set point counter to 0. Resetting the trigger system resets the internal auto trig timer to the value set by the **Auto Trig** control.

Averaging

The weighting factor used for averaging is k . This k is also the average/hold count for how many valid sweeps (data acquisitions) have been done. This k is used for comparisons with N , as those comparisons always needs to be based on valid completed sweeps.

The displayed average/hold, K , shows the count for the sweep (data acquisition) in progress. $K = k + 1$, with a limit of N . The displayed value K changes from its previous value to 1 as soon as the trigger condition for the first data acquisition (sweep) is met.

Pause/Resume

Pauses a measurement after the current data acquisition is complete.

When paused, the label on the control changes to **Resume**. Pressing **Resume** unpauses the measurement. When paused, pressing **Restart** performs a Resume.

| | |
|----------------|---|
| Remote Command | <code>:INITiate:PAUSE</code> <code>:INITiate:RESume</code> |
| Example | <code>:INIT:PAUS</code> <code>:INIT:RES</code> |
| Dependencies | Not displayed in Modes that do not support pausing |
| Annotation | Only on control |

3.7.10.2 X Scale

This tab accesses controls that enable you to set the horizontal scale parameters.

Ref Value

Sets the X reference value.

| | |
|----------------|---|
| Remote Command | <code>:DISPlay:EVMMimo:WINDow[1] 2 ... 9:TRACe:X[:SCALe]:RLEVel <real></code> <code>:DISPlay:EVMMimo:WINDow[1] 2 ... 9:TRACe:X[:SCALe]:RLEVel?</code> |
| Example | <code>:DISP:EVMM:WIND:TRAC:X:RLEV 10</code> <code>:DISP:EVMM:WIND:TRAC:X:RLEV?</code> |
| Couplings | If Auto Scaling is set to On, this value is automatically determined by the measurement result. When you set this value manually, Auto Scaling automatically changes to Off |
| Preset | See table below |
| State Saved | Yes Saved in instrument state |
| Min/Max | See table below |

Table of Ref Value parameters

| Group | Result | Min | Max | Unit Terminator | Default | Knob Increment | Step Key Increment |
|-------|-----------------|-------|------|-----------------|---------|----------------|--------------------|
| Demod | EVM vs. Carrier | -2048 | 2048 | Carr | -28 | 1 | 10 |

3 WLAN Mode
 3.7 WLAN MIMO Modulation Analysis Measurement

| Group | Result | Min | Max | Unit Terminator | Default | Knob Increment | Step Key Increment |
|-----------|----------------------------|--------|-------|----------------------|----------|----------------|--------------------|
| | EVM vs. Symbol | 0 | 21847 | Symb | 0 | 1 | 10 |
| | Spectral Flatness | -2048 | 2048 | Carr | -28 | 1 | 10 |
| | Unused Tone Error | -2048 | 2048 | Carr | -28 | 1 | 10 |
| Response | Frequency Response | -2048 | 2048 | Carr | -28 | 1 | 10 |
| | Equalizer Impulse Response | -1s | 1s | ks /s / ms / us / ns | -1.6us | 0.01us | 0.1us |
| Pre Demod | SEM Summary | -1000G | 1000G | Hz / kHz / MHz / GHz | 2.412GHz | 0.1MHz | 1MHz |

Scale/Div

Sets the horizontal scale.

| | |
|----------------|---|
| Remote Command | <code>:DISPlay:EVMMimo:WINDow[1] 2 ... 9:TRACe:X[:SCALe]:PDIVision <real></code> <code>:DISPlay:EVMMimo:WINDow[1] 2 ... 9:TRACe:X[:SCALe]:PDIVision?</code> |
| Example | <code>:DISP:EVMM:WIND2:TRAC:X:PDIV 500</code> <code>:DISP:EVMM:WIND2:TRAC:X:PDIV?</code> |
| Couplings | If Auto Scaling is set to On, this value is automatically determined by the measurement result. When you set this value manually, Auto Scaling automatically changes to Off |
| Preset | Auto |
| State Saved | Yes Saved in instrument state |
| Min/Max | See table below |

Table of Scale / Div parameters

| Group | Result | Min | Max | Unit Terminator | Default | Knob Increment | Step Key Increment |
|-----------|----------------------------|-----|--------|----------------------|---------|----------------|--------------------|
| Demod | EVM vs. Carrier | 0.1 | 409.6 | Carr | 5.6 | 1 | 10 |
| | EVM vs. Symbol | 0.1 | 2184.7 | Symb | 5.9 | 1 | 10 |
| | Spectral Flatness | 0.1 | 409.6 | Carr | 5.6 | 1 | 10 |
| | Unused Tone Error | 0.1 | 409.6 | Carr | 5.6 | 1 | 10 |
| Response | Frequency Response | 0.1 | 409.6 | Carr | 5.6 | 1 | 10 |
| | Equalizer Impulse Response | 1ns | 0.2s | ks /s / ms / us / ns | 0.32us | 0.01us | 0.1us |
| Pre Demod | SEM Summary | 1Hz | 10GHz | Hz / kHz / MHz / GHz | 1MHz | 0.1MHz | 1MHz |

Ref Position

Sets the reference position for the X axis to Left, Center or Right.

| Remote Command | <code>:DISPlay:EVMMimo:WINDow[1] 2 ... 9:TRACe:X[:SCALE]:RPOSition LEFT CENTER RIGHT</code> <code>:DISPlay:EVMMimo:WINDow[1] 2 ... 9:TRACe:X[:SCALE]:RPOSition?</code> | | | | | | | | |
|-------------------|--|--------|---------|-----------------|------|----------------|------|-------------------|------|
| Example | <code>:DISP:EVMM:WIND:TRAC:X:RPOS LEFT</code> <code>:DISP:EVMM:WIND:TRAC:X:RPOS?</code> | | | | | | | | |
| Preset | The following table defines the preset values: | | | | | | | | |
| | <table border="1"> <thead> <tr> <th>Result</th> <th>Default</th> </tr> </thead> <tbody> <tr> <td>EVM vs. Carrier</td> <td>LEFT</td> </tr> <tr> <td>EVM vs. Symbol</td> <td>LEFT</td> </tr> <tr> <td>Spectral Flatness</td> <td>LEFT</td> </tr> </tbody> </table> | Result | Default | EVM vs. Carrier | LEFT | EVM vs. Symbol | LEFT | Spectral Flatness | LEFT |
| Result | Default | | | | | | | | |
| EVM vs. Carrier | LEFT | | | | | | | | |
| EVM vs. Symbol | LEFT | | | | | | | | |
| Spectral Flatness | LEFT | | | | | | | | |

3 WLAN Mode
 3.7 WLAN MIMO Modulation Analysis Measurement

| | | |
|-------------|-------------------------------|------|
| | Frequency Response | LEFT |
| | Equalizer Impulse Response | LEFT |
| | SEM Summary | CENT |
| State Saved | Yes Saved in instrument state | |
| Range | Left Center Right | |

Auto Scaling

Toggles the scale coupling function between On and Off.

| | | |
|----------------|--|--|
| Remote Command | :DISPlay:EVMMimo:WINDow[1] 2 ... 9:TRACe:X[:SCALE]:COUPle 0 1 OFF ON | |
| | :DISPlay:EVMMimo:WINDow[1] 2 ... 9:TRACe:X[:SCALE]:COUPle? | |
| Example | :DISP:EVMM:WIND:TRAC:X:COUP ON :DISP:EVMM:WIND:TRAC:X:COUP? | |
| Couplings | When Auto Scaling is On and the Restart front-panel key is pressed, this function automatically determines the scale per division and reference values based on the measurement results When you set a value to either Scale/Div or Ref Value manually, Auto Scaling automatically changes to Off | |
| Preset | ON | |
| State Saved | Saved in instrument state | |
| Range | On Off | |

3.7.10.3 Recording

Displays the Sample Rate, Sample Points and Sample Time of the saved IQ data file.

Recording and playback of signal data files is a multi-step process that involves controls in several menus:

- **Save, Recording** (under the **Save** hardkey or the **Save** icon in the **File** panel)
- **Recall, Recording** (under the **Recall** hardkey or the **Recall** icon in the **File** panel)
- **Sweep, Recording** (this tab)
- **Sweep, "Playback"** on page 1536
- **Input/Output, "Data Source"** on page 2223

NOTE

A complete tutorial for **Record/Playback** functionality, including how to load and save recording files, can be found in the help for the tab **"Data Source"** on page

2223 under **Input/Output**.

This menu includes the following display-only fields:

Sample Rate

Displays the sample rate of the saved IQ data file. If you have not saved an IQ data file, the value is 0.

Sample Points

Displays the total number of sample points in the saved IQ data file. If you have not saved an IQ data file, the value is 0.

Sampling Time

Displays the total sample time of the saved IQ data file. If you have not saved an IQ data file, the value is 0.

Saved Channels [Mode: 5G NR, VMA, WLAN]

Displays the channel index/number of the saved IQ data file. If you have not saved an IQ data file, no value is displayed.

This control is designed for multi-channel I/Q data recording and playback.

3.7.10.4 Playback

Contains parameters for playback of saved recording files recalled to the instrument.

Recording and playback of signal data files is a multi-step process that involves controls in several menus:

- **Save, Recording** (under the **Save** hardkey or the **Save** icon in the **File** panel)
- **Recall, Recording** (under the **Recall** hardkey or the **Recall** icon in the **File** panel)
- **Sweep**, ["Recording" on page 1535](#)

- Sweep, Playback (this tab)
- Input/Output, "Data Source" on page 2223

NOTE

A complete tutorial for **Record/Playback** functionality, including how to load and save recording files, can be found in the help for the tab "**Data Source**" on page 2223 under the **Input/Output** menu.

This menu includes the following display-only fields:

Sample Points

Displays the total number of sample points in the recalled IQ data file. If you have not recalled an IQ data file, the value is 0.

Sampling Time

Displays the total sample time of the recalled IQ data file. If you have not recalled an IQ data file, the value is 0.

Input Channels [Mode: 5G NR, VMA, WLAN]

Displays the input channel number of the recalled IQ data file. If you have not recalled an IQ data file, the default value of 1 is displayed.

This control is designed for multi-channel I/Q data recording and playback.

Playback Mode

Specifies the mode of IQ data to be played back and analyzed:

- Fixed: Playback Stop value is ignored. Measurement will analyze the first chunk of IQ data start from Playback Start repeatedly
- Iterative: Measurement will analyze the IQ data chunk by chunk between Playback Start and Playback Stop, if the last chunk is not complete it will be ignored and start from the first chunk again

Remote Command :CALCulate:<meas>:PLAY:MODE FIXed | ITERative
 :CALCulate:<meas>:PLAY:MODE?

Where <meas> is the mnemonic for the current measurement, for example, EVM

Example For EVM measurement in 5G NR Mode:

| | |
|-------------|---------------------------|
| | :CALC:EVM:PLAY:MODE CONT |
| | :CALC:EVM:PLAY:MODE? |
| Preset | FIX |
| State Saved | Saved in instrument state |
| Range | Fixed Iterative |

Playback Start

Once you have loaded an IQ data file using **Recall, Recording**, this control enables you to specify the start position of the IQ data playback range to be analyzed. If its value is less than zero, an additional zero is inserted at the beginning of the IQ data.

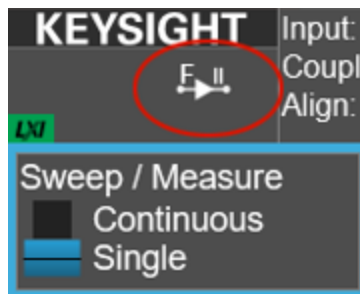

To go to a specific location in the recalled I/Q data, enter the desired **Playback Start** point.

You can use this control to examine the data you recalled from the recording file. How you proceed depends on whether you are in **Continuous** or **Single** mode. To determine which mode you are in, look at the first panel on the left in the **Meas Bar** above the data display.

If the panel looks like this, you are in **Continuous** mode:

If the panel looks like this, you are in **Single** mode:

The **F** indicates that the instrument is using data from a file (if you wish to return to looking at data at the analyzer input, change the **Data Source** control in the **Input/Output, Data Source** menu from **File** back to **Input**.)

To examine the data you loaded:

Continuous mode

3 WLAN Mode
 3.7 WLAN MIMO Modulation Analysis Measurement

In this mode, turn the knob or use the **Up/Down** keys on the front panel to move through records in the recording. You will see **Playback Start** change from 0 to successively higher values as you move deeper into the data.

Single mode

In this mode, you can only look at one record. Set the **Playback Start** time to the desired offset from zero, then press **Restart**. A single record will be displayed. Note that until you press **Restart**, the “invalid data” indicator (yellow asterisk) is displayed in each window. After you press **Restart**, the invalid data indicator disappears.

| | |
|----------------|--|
| Remote Command | <code>:CALCulate:<meas>:PLAY:START <time></code> <code>:CALCulate:<meas>:PLAY:START?</code> |
| | Where <code><meas></code> is the mnemonic for the current measurement, for example, <code>EVM</code> |
| Example | For EVM measurement in 5G NR Mode: <code>:CALC:EVM:PLAY:STAR 0.01 s</code> <code>:CALC:EVM:PLAY:STAR?</code> |
| Preset | 0 |
| State Saved | Saved in instrument state |
| Min/Max | -/+Sample Points in IQ file / Sample Rate in IQ file |

Playback Stop

Specifies the stop position of the IQ data playback range to be analyzed, when “Playback Mode” is iterative.

| | |
|----------------|--|
| Remote Command | <code>:CALCulate:<meas>:PLAY:STOP <time></code> <code>:CALCulate:<meas>:PLAY:STOP?</code> |
| | Where <code><meas></code> is the mnemonic for the current measurement, for example, <code>EVM</code> |
| Example | For EVM measurement in 5G NR Mode: <code>:CALC:EVM:PLAY:STOP 0.01 s</code> <code>:CALC:EVM:PLAY:STOP?</code> |
| Preset | 0 |
| State Saved | No |
| Min | 0 |
| Max | Sample Points in IQ file x Sample Rate |

Step Forward

Move to next chunk of IQ data when "**Playback Mode**" on page 1537 is iterative.

| | |
|----------------|--|
| Remote Command | <code>:CALCulate:<meas>:PLAY:STEP:FORward</code> |
|----------------|--|

| | |
|-------------|--|
| Command | Where <meas> is the mnemonic for the current measurement, for example, EVM |
| Example | For EVM measurement in 5G NR Mode: :CALC:EVM:PLAY:STEP:FORW |
| State Saved | Saved in instrument state |

Sample Rate

Displays the sample rate of the recalled IQ data file if the recalled file format contains sampling rate information (**.csv**, **.sdf**, **.txt**). In this case, the *control* is grayed-out.

BIN and **BINX** files do not include sampling rate information inside the file, so after recalling one of these files, you must set **Sample Rate** manually. When you save a file in these formats, you must specify the sample rate, as displayed under **Sweep, Recording**.

| | |
|----------------|--|
| Remote Command | :CALCulate:<meas>:PLAY:SRATe <freq> :CALCulate:<meas>:PLAY:SRATe? |
| | Where <meas> is the mnemonic for the current measurement, for example, EVM |
| Example | For EVM measurement in 5G NR Mode: :CALC:EVM:PLAY:SRAT 122.88MHz :CALC:EVM:PLAY:SRAT? |
| Couplings | Displays only after recalling .csv , .sdf , or .txt files Settable after recalling .bin or .binx files |
| Preset | 0 |
| State Saved | No |
| Min | 0 |

3.7.11 Trace

The **Trace** menu lets you control the acquisition, display, storage, detection and manipulation of trace data for the available traces.

3.7.11.1 Settings

Trace Smoothing

NOTE This parameter is available when Evm vs. Symbol trace is selected.

3 WLAN Mode
 3.7 WLAN MIMO Modulation Analysis Measurement

Toggles the smoothing function between On and Off. If set to On, the EVM vs. Symbol is smoothed with smoothing window length from 1 to 21847 symbols.

| | |
|----------------|---|
| Remote Command | <pre>:DISPlay:EVMMimo:VIEW3:WINDow[1]:TRACe:SMOoth:POINts <integer> :DISPlay:EVMMimo:VIEW3:WINDow[1]:TRACe:SMOoth:POINts? :DISPlay:EVMMimo:VIEW3:WINDow[1]:TRACe:SMOoth[:STATe] ON OFF 1 0 :DISPlay:EVMMimo:VIEW3:WINDow[1]:TRACe:SMOoth[:STATe]?</pre> |
| Example | <pre>:DISP:EVMM:VIEW3:WIND:TRAC:SMO:POIN 10 :DISP:EVMM:VIEW3:WIND:TRAC:SMO:POIN?</pre> |
| Preset | 1 symbol OFF |
| State Saved | Yes |
| Min | 1 symbol |
| Max | 21847 symbols |

3.8 Power vs Time Measurement

This measurement is designed for testing 802.11b signal. It measures power vs. time in the time domain. From envelop of power vs. time trace, transient periods (power-on ramp period or power-down ramp period) can be detected, then the transient periods can be compared with limits specified in specification for pass/fail judgment.

In this measurement, trigger must be provided by customer. Depending on trigger, the signal which is a little bit longer than one burst is captured. It starts from $-(\text{Ramp Time Length})/2$, in which Ramp Time Length indicates the ramp searching window and set by customer, ends to $(\text{Burst Time} + \text{Ramp Time Length})$, here, Burst Time is search length in which one entire RF burst must be included. Please note, the Burst Time should not be shorter than the actual burst length, otherwise power-down ramp may be lost. The captured data in search window is then smoothed to determine max power point. By using max power point, the ramp up and down can be determined in term of 10% to 90% power range of max power point. Some parameters mentioned above can be explained clearly from the figure below,

The Power vs Time measurement automatically handles all 802.11b signal formats, including the short preamble and the PBCC formats (though it doesn't decode the bits of the PBCC formats). The measurement also automatically handles all 802.11g formats that are compatible with 802.11b, including the PBCC22 and PBCC33 modes (though it again doesn't decode the bits of these PBCC formats).

Power vs. Time Measurement Commands

The following commands are used to retrieve the measurement results:

3 WLAN Mode
 3.8 Power vs Time Measurement

```
:CONFigure:PVTime
:CONFigure:PVTime:NDEFault
:INITiate:PVTime
:FETCh:PVTime[n]?
:READ:PVTime[n]?
:MEASure:PVTime[n]?
```

Remote Command SCPI Results for Power vs Time Measurement

| Index N | Results Returned |
|---------------------------|---|
| 0 | Returns unprocessed I/Q trace data, as a series of comma-separated trace points, in volts. The I values are listed first in each pair, using the 0 through even-indexed values. The Q values are the odd-indexed values. |
| not specified or n = 1 | Returns 12 comma-separated scalar results, in the following order: <ol style="list-style-type: none"> 1. Return -999.0 (BWCC to PSA WLAN) 2. Return Power-on Ramp Time (us) 3. Return Power-down Ramp Time (us) 4. Return overall PASS/FAIL (0:Pass, 1: Fail) 5. Return Power-on Ramp PASS/FAIL (0:Pass, 1: Fail) 6. Return Power-down Ramp PASS/FAIL (0:Pass, 1: Fail) 7. Return Start Level (dBm) for ramp up 8. Return Start Level (dBm) for ramp down 9. Return Stop Level (dBm) for ramp up 10. Return Stop Level (dBm) for ramp down 11. Return Max Ramp Up Time (us) (limit value) 12. Return Max Ramp Down Time (us) (limit value) |
| 2 | Return waveform of Power-on Ramp, the length is determined by Ramp Time Length |
| 3 | Return waveform of Power-down Ramp, the length is determined by Ramp Time Length |
| 4 | Return waveform of full burst, the length is actual burst length |

Selects the Power vs Time measurement.

3.8.1 Windows

The following windows are available in the Power vs Time measurement.

| Window | Number |
|-------------|--------|
| RF Envelope | 1 |
| Rise | 2 |
| Fall | 3 |
| Metrics | 4 |

3.8.1.1 RF Envelope

The RF Envelope window appears in the following View:

| View | Size | Position |
|-------|------------------|----------|
| Burst | Half, full Width | Upper |

3.8.1.2 Rise

This Rise window appears in the following View:

| View | Size | Position |
|---------------------|-------------------------------|------------|
| Rise & Fall | Two thirds, half Width | Upper left |
| Marker Operation | Yes | |
| Corresponding Trace | n=2 waveform of Power-On Ramp | |

3.8.1.3 Fall

The Fall window appears in the following View:

| View | Size | Position |
|---------------------|---------------------------------|-------------|
| Rise & Fall | Two thirds, half Width | Upper right |
| Marker Operation | Yes (Chips - EVM) | |
| Corresponding Trace | n=3 waveform of Power-Down Ramp | |

3.8.1.4 Metrics

The Metrics window appears in the following View:

| View | Size | Position |
|-------------|-----------------------|----------|
| Burst | One third, full width | Lower |
| Rise & Fall | | |

3 WLAN Mode
3.8 Power vs Time Measurement

Marker Operation No
Corresponding Trace None

Metrics window contains results of power-on ramp and power-down ramp.

| Name | Type | Description | Unit | Format |
|-----------------------|---------|--|------|-----------|
| Mean Power | float64 | Average power of burst in active part. | dBm | XX.XX dBm |
| Burst Width | float64 | Burst determined from ramp up and ramp down. | us | XX.XX us |
| Ramp Up Time | float64 | The duration of rising part of burst | us | XX.XX us |
| Ramp Up Start Level | float64 | The start level for rising part of burst | dBm | XX.XX dBm |
| Ramp Up Stop Level | float64 | The stop level for rising part of burst | dBm | XX.XX dBm |
| Ramp Down Time | float64 | The duration of falling part of burst | us | XX.XX % |
| Ramp Down Start Level | float64 | The start level for falling part of burst | dBm | XX.XX dBm |
| Ramp Down Stop Level | float64 | The stop level for falling part of burst | dBm | XX.XX dBm |

3.8.2 Amplitude

3.8.2.1 Y Scale

Contains controls that pertain to the Y axis parameters of the measurement. These parameters control how data on the vertical (Y) axis is displayed and control instrument settings that affect the vertical axis.

Ref Value

Sets the value for the absolute power reference. The reference line is at the top, center, or bottom of the graticule, depending on the value of the Ref Position function.

Remote Command `:DISPlay:PVTime:WINDow[1]|2|3:TRACe:Y[:SCALE]:RLEVel <real>`
`:DISPlay:PVTime:WINDow[1]|2|3:TRACe:Y[:SCALE]:RLEVel?`

Window numbers are as follows:

Burst: 1

Rise: 2

| | |
|-------------|---|
| | Fall: 3 |
| Example | <code>:DISP:PVT:WIND:TRAC:Y:SCAL:RLEV 5</code> <code>:DISP:PVT:WIND:TRAC:Y:SCAL:RLEV?</code> |
| Couplings | When Auto Scaling is On (default), this value is automatically determined by the measurement result. When you set a value manually, Auto Scaling changes to Off. Attenuation is not coupled to Ref Value. |
| Preset | 10.00 dBm ! 1-Burst 0.00 dBm ! 2-Rise 0.00 dBm ! 3-Fall |
| State Saved | Saved in instrument state |

Backwards Compatibility SCPI

Window Numbers used to be a combination of View and Window, now the VIEW node is not used and defaults to 1. All Windows are referenced through VIEW1. For backwards compatibility the old View and Window numbers are honored as below:

| Window | Old SCPI Command | New SCPI Command |
|-------------|--|--|
| PVT - Burst | <code>:DISP:PVT:VIEW [1]:WIND:TRAC:Y:SCAL:RLEV 5dBm</code> | <code>:DISP:PVT:WIND1:TRAC:Y:SCAL:RLEV 5dBm</code> |
| PVT - Rise | <code>:DISP:PVT:VIEW2:WIND:TRAC:Y:SCAL:RLEV 5dBm</code> | <code>:DISP:PVT:WIND2:TRAC:Y:SCAL:RLEV 5dBm</code> |
| PVT - Fall | <code>:DISP:PVT:VIEW2:WIND2:TRAC:Y:SCAL:RLEV 5dBm</code> | <code>:DISP:PVT:WIND3:TRAC:Y:SCAL:RLEV 5dBm</code> |

Scale/Div

Scale/Div sets the height of one division of the graticule in the current Y-Axis unit.

Scale/Div also determines the displayed amplitude range in the log plot graph. Since there are usually 10 vertical graticule division on the display, the total amplitude range of the graph is typically 10x this amount. For example, if Scale/Div is 10 dB, then the total range of the graph is 100 dB.

| | |
|----------------|--|
| Remote Command | <code>:DISPlay:PVT:ime:WINDow[1] 2 3:TRACe:Y[:SCALE]:PDIVision <rel_amp1></code> <code>:DISPlay:PVT:ime:WINDow[1] 2 3:TRACe:Y[:SCALE]:PDIVision?</code> |
| | Window numbers are as follows: Burst: 1 Rise: 2 Fall: 3 |
| Example | <code>:DISP:PVT:WIND:TRAC:Y:PDIV 5</code> 1-Burst for Transmit On/Off Power |

3 WLAN Mode
3.8 Power vs Time Measurement

| | |
|--------------|--|
| | <p><code>:DISP:PVT:WIND:TRAC:Y:PDIV?</code></p> <p>1-Burst for Transmit On/Off Power <code>:DISP:PVT:WIND2:TRAC:Y:PDIV 10</code></p> <p>2-Rise for Transmit On/Off Power <code>:DISP:PVT:WIND3:TRAC:Y:PDIV 10</code></p> <p>3-Fall for Transmit On/Off Power</p> |
| Dependencies | In measurements that support both Log and Lin scales, Scale/Div is grayed out in linear Y scale. Sending the equivalent SCPI command does change the Scale/Div, though it has no affect while in Lin. |
| Couplings | In measurements that support Auto Scaling, when the Auto Scaling is On, this value is automatically determined by the measurement result. When you set a value manually, Auto Scaling automatically changes to Off. |
| Preset | 10.00 dB / Div |
| State Saved | Saved in instrument state |
| Min | 0.10 dB |
| Max | 20dB |
| Annotation | <p><value> dB/ left upper of graph ! all measurements unless noted</p> <p>In log scale, the Scale/Div is shown in the upper left side of the display. In Lin mode, no annotation is displayed. ! Swept SA</p> |

Backwards Compatibility SCPI

Window Numbers used to be a combination of View and Window, now the VIEW parameter is not used and defaults to 1. All Windows are referenced through VIEW1. For backwards compatibility the old View and Window numbers are honored as below:

| Window | Old SCPI Command | New SCPI Command |
|--------|--|---|
| Burst | <code>:DISP:PVT:VIEW[1]:WIND:TRAC:Y:PDIV 10</code> | <code>:DISP:PVT:WIND1:TRAC:Y:PDIV 10</code> |
| Rise | <code>:DISP:PVT:VIEW2:WIND:TRAC:Y:PDIV 10</code> | <code>:DISP:PVT:WIND2:TRAC:Y:PDIV 10</code> |
| Fall | <code>:DISP:PVT:VIEW2:WIND2:TRAC:Y:PDIV 10</code> | <code>:DISP:PVT:WIND3:TRAC:Y:PDIV 10</code> |

Ref Position

Positions the reference level at the top, center, or bottom of the Y Scale display. Changing the reference position does not change the reference level value.

| | |
|----------------|--|
| Remote Command | <p><code>:DISPlay:PVT:ime:WINDow[1] 2 3:TRACe:Y[:SCALE]:RPOsition TOP CENTer BOTTom</code></p> <p><code>:DISPlay:PVT:ime:WINDow[1] 2 3:TRACe:Y[:SCALE]:RPOsition?</code></p> |
|----------------|--|

Window numbers are as follows:

| | |
|-------------|---|
| | Burst: 1 Rise: 2 Fall: 3 |
| Example | <pre>:DISP:PVT:WIND:TRAC:Y:RPOS CENT</pre> <p>1-Burst for Transmit On/Off Power</p> <pre>:DISP:PVT:WIND:TRAC:Y:RPOS?</pre> <p>1-Burst for Transmit On/Off Power</p> <pre>:DISP:PVT:WIND2:TRAC:Y:RPOS CENT</pre> <p>2-Rise for Transmit On/Off Power</p> <pre>:DISP:PVT:WIND3:TRAC:Y:RPOS CENT</pre> <p>3-Fall for Transmit On/Off Power</p> |
| Preset | TOP |
| State Saved | Saved in instrument state. |
| Range | Top Ctr Bot |
| Annotation | The greater than (>) and less than (<) symbols are displayed on both sides of the graph to indicate the Reference Position |

Backwards Compatibility SCPI

Window Numbers used to be a combination of View and Window, now the VIEW parameter is not used and defaults to 1. All Windows are referenced through VIEW1. For backwards compatibility the old View and Window numbers are honored as below:

| Window | Old SCPI Command | New SCPI Command |
|-------------|--|---------------------------------------|
| PVT - Burst | :DISP:PVT:VIEW[1]:WIND:TRAC:Y:RPOS CENT | :DISP:PVT:WIND[1]:TRAC:Y:RPOS CENT |
| PVT - Rise | :DISP:PVT:VIEW2:WIND:TRAC:Y:RPOS CENT | :DISP:PVT:WIND2:TRAC:Y:RPOS CENT |
| PVT - Fall | :DISP:PVT:VIEW2:WIND2:TRAC:Y:RPOS CENT | :DISP:PVT:WIND3:TRAC:Y:RPOS CENT |

Auto Scaling

Toggles the Auto Scaling function between On and Off.

| | |
|----------------|---|
| Remote Command | <pre>:DISPlay:PVT:ime:WINDow[1] 2 3:TRACe:Y[:SCALE]:COUPle 0 1 OFF ON</pre> <pre>:DISPlay:PVT:ime:WINDow[1] 2 3:TRACe:Y[:SCALE]:COUPle?</pre> |
|----------------|---|

Window numbers are as follows:

3 WLAN Mode
3.8 Power vs Time Measurement

| | |
|-------------|---|
| | Burst: 1 Rise: 2 Fall: 3 |
| Example | <pre>:DISP:PVT:WIND:TRAC:Y:COUP ON</pre> <p>1-Burst for Transmit On/Off Power</p> <pre>:DISP:PVT:WIND:TRAC:Y:COUP? !</pre> <p>1-Burst for Transmit On/Off Power</p> <pre>:DISP:PVT:WIND2:TRAC:Y:COUP ON</pre> <p>2-Rise for Transmit On/Off Power</p> <pre>:DISP:PVT:WIND3:TRAC:Y:COUP?</pre> <p>2-Fall for Transmit On/Off Power</p> |
| Couplings | When Auto Scaling is On, and the Restart front-panel key is pressed, this function automatically sets the scale per division to 10 dB and determines the reference values based on the measurement results. When you set a value to either Scale/Div or Ref Value manually, Auto Scaling automatically changes to Off. |
| Preset | 1 |
| State Saved | Saved in instrument state. |
| Range | On Off |

Backwards Compatibility SCPI

Window Numbers used to be a combination of View and Window, now the VIEW parameter is not used and defaults to 1. All Windows are referenced through VIEW1. For backwards compatibility the old View and Window numbers are honored as below:

| Window | Old SCPI Command | New SCPI Command |
|-------------|---------------------------------------|----------------------------------|
| PVT - Burst | :DISP:PVT:VIEW[1]:WIND:TRAC:Y:COUP ON | :DISP:PVT:WIND[1]:TRAC:Y:COUP ON |
| PVT - Rise | :DISP:PVT:VIEW2:WIND:TRAC:Y:COUP ON | DISP:PVT:WIND2:TRAC:Y:COUP ON |
| PVT - Fall | :DISP:PVT:VIEW2:WIND2:TRAC:Y:COUP ON | DISP:PVT:WIND3:TRAC:Y:COUP ON |

3.8.2.2 Attenuation

Controls the attenuator functions and interactions between the attenuation system components.

There are two attenuator configurations in the X-Series. One is a Dual-Attenuator configuration consisting of a mechanical attenuator and an optional electronic attenuator. The other configuration uses a single attenuator with combined

mechanical and electronic sections that controls all the attenuation functions. Different models in the X-Series come with different configurations.

- See ["Dual-Attenuator Configurations" on page 1318](#)
- See ["Single-Attenuator Configuration" on page 1319](#)

Most attenuation settings are the same for all measurements – they do not change as you change measurements. Settings like these are called “Meas Global” and are unaffected by **Meas Preset**.

Only available when the hardware set includes an input attenuator, which is typically only the case for Keysight’s benchtop instruments. For example, this tab does *not* appear in VXT models M9420A/10A/11A/15A/16A, M9410E/11E/15E/16E, nor in UXM. In UXM, all **Attenuation** and **Range** settings are disabled, as the expected input power level is handled by the Call Processing App that drives the DUT power control.

Dependencies In measurements that support the I/Q inputs, unavailable when I/Q is the selected input. Replaced by the **Range** tab in that case

Dual-Attenuator Configurations

Configuration 1: Mechanical attenuator + optional electronic attenuator

Configuration 2: Mechanical attenuator, no optional electronic attenuator

Note that Configuration 2 is not strictly speaking a dual-section attenuator, since there is no electronic section available. However, it behaves exactly like Configuration 1 without the Electronic Attenuator Option EA3, therefore for the sake of this document it is grouped into the “Dual-Attenuator” configuration.

Single-Attenuator Configuration

You can tell which attenuator configuration you have by pressing the Attenuation tab, which (in most Modes) opens the Attenuation menu. If the first control in the Attenuation menu says **Mech Atten** you have the Dual-Attenuator configuration. If the first control says **Atten** you have the Single-Attenuator configuration.

(Note that depending on the measurement, there may be no Auto/Man functionality on the Mech Atten control.)

In the Single-Attenuator configuration, you control the attenuation with a single control, as the fixed stage has only two states. In the Dual-Attenuator configuration, both stages have significant range, so you are given separate control of the mechanical and electronic attenuator stages.

When you have the Dual-Attenuator configuration, you may still have only a Single-Attenuator, because unless Option EA3 (the Electronic Attenuator option) is available, and you purchase it, you will have only the mechanical attenuator.

Full Range Atten

This control and **Attenuator Summary** only appear in N9041B, when the RF input is selected, the RF Input Port is set to RF Input 2, and the Full Range Attenuator is installed. The Full Range Attenuator adds a second input attenuator in front of RF Input 2, which enhances the protection and optimizes the performance of the extra internal mixers used by RF Input 2.

Remote Command `[:SENSe]:POWer[:RF]:FRATten <rel_amp>`
`[:SENSe]:POWer[:RF]:FRATten?`

Example `:POW:FRAT 14`

| : POW: FRAT? | |
|--------------|---|
| Notes | When you enter an amplitude value that falls between valid values, the value will be incremented to the next smallest valid value |
| Dependencies | Only appears if input RF is selected, RF Input Port 2 is selected, and the Full Range Attenuator exists |
| Couplings | This value is never changed by any coupling, but other couplings use this value. See Reference Level and " Mech Atten " on page 1753 command descriptions |
| Preset | 20 dB |
| State Saved | Saved in instrument state |
| Min | 0 dB |
| Max | Only valid values are 0, 6, 14, 20 dB |
| Annotation | <p>When the Input is RF, and the Input Port is RF Input 2, and the Full Range Attenuator is installed: On the Meas Bar, the field "Atten" displays as follows:</p> <ul style="list-style-type: none"> - If the sweep is entirely < 50 GHz, the value shown after "Atten:" is equal to Mech Atten + Elec Atten + Full Range Atten - If the sweep is entirely > 50 GHz, the value shown after "Atten:" is equal to Full Range Atten - If the sweep straddles 50 GHz, the value shown after "Atten:" is preceded by the symbol ">=" and is equal to Full Range Atten <p>In the Amplitude, "Y Scale" on page 1745 menu, and the Atten Meas Bar dropdown menu panel, a summary is displayed as follows: "Total Atten below 50 GHz" followed by the value of Full Range Atten + Mech Atten + Elec Atten "Total Atten above 50 GHz" followed by the value of Full Range Atten For example, if Mech Atten = 6 dB, Elec Atten = 4 dB, and Full Range Atten = 20 dB, the summary below is shown:</p> <ul style="list-style-type: none"> - Attenuator summary: - Total Atten below 50 GHz: 30 dB - Total Atten above 50 GHz: 20 dB |

Mech Atten

Labeled **Mech Atten** in Dual-Attenuator models, and **Atten** in Single-Attenuator models. In the Dual-Attenuator configuration, this control only affects the mechanical attenuator.

Lets you modify the attenuation applied to the RF input signal path. This value is normally auto-coupled to **Ref Level**, "**Internal Preamp**" on page 1775 Gain, any External Gain that is entered, and **Max Mixer Level** (if available), as described in the table below.

See "**Attenuator Configurations and Auto/Man**" on page 1322

3 WLAN Mode
3.8 Power vs Time Measurement

| | |
|----------------|--|
| Remote Command | <code>[:SENSe]:POWer[:RF]:ATTenuation <rel_amp1></code> <code>[:SENSe]:POWer[:RF]:ATTenuation?</code> |
| Example | <code>:POW:ATT 20</code> Dual-Attenuator configuration: sets the mechanical attenuator to 20 dB Single-Attenuator mode: sets the main attenuation to 20 dB (see below for definition of “main” attenuation) In either case, if the attenuator was in Auto, it is set to Manual |
| Dependencies | Some measurements do not support Auto setting of Mech Atten . In these measurements, the Auto/Man selection is not available, and the Auto/Man toggle function is not available In Dual-Attenuator configurations, when the electronic attenuator is enabled, the mechanical attenuator has no auto setting, and the Auto/Man toggle function is not available. The state of Auto/Man is remembered and restored when the electronic attenuator is once again disabled. This is described in more detail in "Elec Atten" on page 1756 See "Attenuator Configurations and Auto/Man" on page 1322 for more information on the Auto/Man functionality |
| Couplings | If the RF Input Port is the RF Input: <ul style="list-style-type: none"> – If the USB Preamp is connected to USB, use 0 dB for Mech Atten – Otherwise compute the auto-selected value of Mech Atten based on Reference Level, Int Preamp, External Gain, Ref Level Offset, Max Mixer Level, μW Path Control and IF Gain settings. Limit this value to be no less than 6 dB (total attenuation below 6 dB can never be chosen by Auto) – In N9041B, if the RF Input Port is RF Input 2, use the formula above and subtract the value of "Full Range Atten" on page 1752 from the result to determine the Mech Atten. Limit the value so that it is never lower than 0 dB and so that total attenuation, including Full Range Atten, is never less than 6 dB (total attenuation, including Full Range Atten below 6 dB, can never be chosen by Auto) <p>In External Mixing and BBIQ, where the attenuator is not in the signal path, the attenuator setting changes as described above when Mech Atten is in Auto, but no changes are made to the actual attenuator hardware setting until the input is changed back to the RF Input</p> <p>For CXA-m with Option FSA (Fine-Step Attenuator or 2 dB steps), the FSA-like behavior is only available when the frequency setting is <= 7.5 GHz. So, when the frequency is changed from below 7.5 GHz to above 7.5 GHz, the attenuation setting changes to a multiple of 10 dB that is no smaller than the previous setting. For example, 4 dB attenuation changes to 10 dB</p> |
| Preset | Auto The Auto value is 10 dB |
| State Saved | Saved in instrument state |
| Min | 0 dB The attenuation set by this control cannot be decreased below 6 dB with the knob or step keys. Values below 6 dB must be directly entered from the keypad or via SCPI. This protects against setting a dangerously small attenuation value, which can put the instrument at risk of damage to input circuitry. If the current mechanical attenuation is below 6 dB, it can be increased with the knob and step keys, but not decreased |

| | | |
|---|--|-------|
| Max | CXA Option 503 or 507 | 50 dB |
| | EXA | 60 dB |
| | All other models | 70 dB |
| <p>Note that in the Single-Attenuator configuration, the total of ATT and EATT cannot exceed 50 dB. So, if the EATT is set to 24 dB first, the main attenuation cannot be greater than 26 dB and will be reduced accordingly; if the main attenuator is set to 40 dB first, EATT cannot be greater than 10 dB</p> | | |
| Annotation | <p>The current value for Total Atten is displayed in the Measurement Bar at the top of the display. A value appears for Electronic Attenuation only if the Electronic Attenuator is enabled. The annotation appears as:</p> <p><i>Atten: <total> dB (e<elec>)</i></p> <p>The e letter is in amber in Single-Attenuator configurations</p> <p>For example:</p> <p>Dual-Attenuator configuration:</p> <p><i>Atten: 24 dB (e14)</i></p> <p>Indicating the total attenuation is at 24 dB and the electronic attenuation is at 14 dB</p> <p>Single-Attenuator configuration:</p> <p><i>A: 24 dB (e14)</i></p> <p>Indicating the total attenuation is at 24 dB and the “soft” attenuation is at 14 dB (see below for definition of “soft” attenuation)</p> <p>When in Manual, a # sign appears in front of Atten in the annotation</p> | |
| <p>Auto Function</p> | | |
| Remote Command | <pre>[:SENSe]:POWer[:RF]:ATTenuation:AUTO OFF ON 0 1 [:SENSe]:POWer[:RF]:ATTenuation:AUTO?</pre> | |
| Example | <p>Turn Auto Mech AttenON:</p> <pre>:POW:ATT:AUTO ON</pre> | |
| Dependencies | <pre>:POW:ATT:AUTO</pre> <p>is only available in measurements that support Auto, such as Swept SA</p> | |
| Preset | <pre>ON</pre> | |

Attenuator Configurations and Auto/Man

As described under "[Attenuation](#)" on page 1750, there are two distinct attenuator configurations available in the X-Series, the Single Attenuator and Dual-Attenuator configurations.

In Dual-Attenuator configurations, we have mechanical attenuation and electronic attenuation, and current total attenuation is the sum of electronic + mechanical attenuation.

In Single-Attenuator configurations, we refer to the attenuation set using "[Mech Atten](#)" on page 1320 (or `:POW:ATT`) as the “main” attenuation; and the attenuation that is set by `:POW:EATT` as the “soft” attenuation (`:POW:EATT` is honored even in

the Single-Attenuator configuration, for compatibility purposes). Then current total attenuation is the sum of main + soft attenuation.

See "[Elec Atten](#)" on page 1756 for more about "soft" attenuation.

NOTE

In some measurements, the **Mech Atten** control has an **Auto/Man** function. In these measurements, an **Auto/Man** switch is shown on the **Mech Atten** control:

Note that in configurations that include an Electronic Attenuator, this switch is only shown when the Electronic Attenuator is disabled.

In other measurements, **Mech Atten** has no **Auto/Man** function. In these measurements, no switch is shown on the **Mech Atten** control:

Mech Atten also appears with no switch, as above, in configurations that include an Electronic Attenuator but when the Electronic Attenuator is enabled.

Elec Atten

Controls the Electronic Attenuator in Dual-Attenuator configurations. Does not appear in Single-Attenuator configurations, because the control of both the mechanical and electronic stages of the Single-Attenuator is integrated into the single **Atten** control.

This control includes an **Enable/Disable** toggle switch; it is only possible to enter a value for the Electronic Attenuator when this switch is in the **Enable** position.

For more details of the Electronic Attenuator, see "[More Information](#)" on page 1325

| | |
|----------------|---|
| Remote Command | <code>[:SENSe]:POWer[:RF]:EATTenuation <rel_amp></code> <code>[:SENSe]:POWer[:RF]:EATTenuation?</code> |
| Example | <code>:POW:EATT 10</code> <code>:POW:EATT?</code> |
| Notes | Electronic Attenuation's specification is defined only when Mech Atten is 6 dB |

| | |
|--------------|---|
| Dependencies | <p>Only appears in Dual-Attenuator models with an Electronic Attenuator installed and licensed. Does not appear in models with the Single-Attenuator configuration, because in the Single-Attenuator configuration there is no “electronic attenuator”; there is only a single integrated attenuator (which has both a mechanical and electronic stage). However, in the Single-Attenuator configuration, EATT SCPI commands are accepted for compatibility with other X-series instruments, and set a “soft” attenuation. The “soft” attenuation is treated as an addition to the “main” attenuation value set by the Attenuation control or :POW:ATT, and affects the total attenuation displayed on the Attenuation control and the Meas Bar</p> <p>The electronic attenuator, and the “soft” attenuation function provided in Single-Attenuator configurations, are unavailable above the low band (0-3.6 GHz, 0-3.4 GHz, 0-3 GHz, depending on the model). If the low band range is from 0-3.6 GHz, and Stop Frequency of the instrument is > 3.6 GHz, then the Enabled/Disabled section of the Elec Atten control will be OFF and grayed-out</p> <p>If "Internal Preamp" on page 1775 is ON (that is, set to Low Band or Full), the electronic attenuator (and the “soft” attenuation function provided in Single-Attenuator configurations) is unavailable. In this case the Enabled/Disabled section of the Elec Atten control will be OFF and grayed-out</p> <p>If either of the above is true, and the SCPI command is sent, an error indicating that the electronic attenuator is unavailable is returned</p> <p>If both the above are true, pressing the control generates error message -221, in other words, the frequency range lockout takes precedence</p> <p>If the electronic/soft Attenuator is enabled, then the Stop Freq of the instrument is limited to 3.6 GHz and Internal Preamp is unavailable</p> <p>If "LNA" on page 1777 is ON, the electronic attenuator (and the “soft” attenuation function provided in Single-Attenuator configurations) is unavailable. In this case the Enabled/Disabled section of the Elec Atten control will be OFF and grayed-out. This coupling works in the following modes/measurements:</p> <ul style="list-style-type: none"> - Channel Power, Occupied BW, ACP, SEM, Spurious Emissions, Power Stat CCDF measurements in all Modes - Transmit On Off Power measurement in 5GNR Mode - Power vs. Time and Transmit Power measurement in GSM/EDGE Mode - Burst Power measurement in Spectrum Analyzer Mode <p>The SCPI-only “soft” electronic attenuation for the single-attenuator configuration is not available in all measurements; in particular, it is not available in the Swept SA measurement</p> |
| Couplings | Enabling and disabling the Electronic Attenuator affects the setting of the Mechanical Attenuator (in Dual-Attenuator configurations). This is described in more detail below and in "Mechanical Attenuator Transition Rules" on page 1325 |
| Preset | 0 dB |
| State Saved | Saved in instrument state |
| Min | 0 dB |
| Max | <p>Dual-Attenuator configuration: 24 dB</p> <p>Single-Attenuator configuration: the total of ATT and EATT cannot exceed 50 dB. So, if the EATT is set to 24 dB first, the main attenuation cannot be greater than 26 dB and will be reduced accordingly; if the main attenuator is set to 40 dB first, EATT cannot be greater than 10 dB</p> |
| Annotation | See Annotation under the Mech Atten control description |

Auto Function

| | |
|----------------|---|
| Remote Command | <code>[:SENSe]:POWer[:RF]:EATTenuation:STATe OFF ON 0 1</code> <code>[:SENSe]:POWer[:RF]:EATTenuation:STATe?</code> |
| Example | <code>:POW:EATT:STAT ON</code> <code>:POW:EATT:STAT?</code> |
| Preset | <code>OFF</code> (Disabled) for Swept SA measurement <code>ON</code> (Enabled) for all other measurements that support the electronic attenuator |

NOTE

The maximum **Center Frequency** for Low Band can change based on the selected IFBW for measurements that support IFBW (for example, Waveform measurement across all Modes that support it). In certain models (such as N9042B & N9032B), IFBW values ≤ 40 MHz have a maximum Low Band frequency of 3.6 GHz, while $40 \text{ MHz} < \text{IFBW} \leq 1 \text{ GHz}$ have a maximum of 3.3 GHz, and $1 \text{ GHz} < \text{IFBW} \leq 1.5 \text{ GHz}$ have a maximum of 3.5 GHz. This frequency is reflected in the disabled message displayed for Electrical Attenuator. For N9032B and N9042B IFBW values $> 1.5 \text{ GHz}$ do not support a **Center Frequency** that can reach the Low Band maximum frequency. In these cases, the Electrical Attenuator will remain disabled no matter the Center Frequency.

More Information

The electronic attenuator offers finer steps than the mechanical attenuator, has no acoustical noise, is faster, and is less subject to wear. These advantages primarily aid in remote operation and are negligible for front panel use. See ["Using the Electronic Attenuator: Pros and Cons" on page 1326](#) for a detailed discussion of the pros and cons of using the electronic attenuator.

For the Single-Attenuator configuration, for SCPI backwards compatibility, the “soft” attenuation feature replaces the Dual-Attenuator configuration’s electronic attenuator. All the same couplings and limitations apply. See ["Attenuator Configurations and Auto/Man" on page 1755](#)

Mechanical Attenuator Transition Rules

When the Electronic Attenuator is enabled, the Mechanical Attenuator transitions to a state that has no Auto function. Below are the rules for transitioning the Mechanical Attenuator. Note that the information below *only* applies to the Dual-Attenuator configurations, and *only* when the Electronic Attenuator is installed:

When the Electronic Attenuation is enabled from a disabled state:

- The Mechanical Attenuator is initialized to 10 dB (this is its optimal performance setting). You can then set it as desired with SCPI, numeric keypad, step keys, or

knob, and it behaves as it normally would in manual mode

- The Auto/Man state of (Mech) Atten is saved
- The Auto/Man toggle on the (Mech) Atten control disappears, and the auto rules are disabled
- The Electronic Attenuator is set to 10 dB less than the previous value of the Mechanical Attenuator, within the limitation that it must stay within the range of 0 to 24 dB of attenuation

Examples in the Dual-Attenuator configuration:

- Mech Atten at 20 dB. Elec Atten enabled, Mech Atten set to 10 dB, and Elec Atten set to 10 dB. New total attenuation equals the value before Elec Atten enabled
- Mech Atten at 0 dB. Elec Atten enabled, Mech Atten set to 10 dB, and Elec Atten set to 0 dB. New total attenuation does not equal the value before Elec Atten enabled
- Mech Atten at 40 dB. Elec Atten enabled, Mech Atten set to 10 dB, and Elec Atten set to 24 dB. New total attenuation does not equal the value before Elec Atten enabled

When the Electronic Attenuation is disabled from an enabled state:

- The Elec Atten control is grayed out
- The Auto/Man state of (Mech) Atten is restored
- If now in Auto, (Mech) Atten recouples
- If now in Man, (Mech) Atten is set to the value of total attenuation that existed before the Elec Atten was disabled. The resulting value is rounded up to the smallest value possible given the (Mech) Atten Step setting - (That is, 57 dB changes to 58 dB when (Mech) Atten Step is 2 dB)

Using the Electronic Attenuator: Pros and Cons

The electronic attenuator offers finer steps than the mechanical attenuator, has no acoustical noise, is faster, and is less subject to wear.

The “finer steps” advantage of the electronic attenuator is beneficial in optimizing the alignment of the instrument dynamic range to the signal power in the front panel as well as remote use. Thus, you can achieve improved relative signal measurement accuracy. Compared to a mechanical attenuator with 2 dB steps, the 1 dB resolution of the electronic attenuator only gives better resolution when the odd-decibel steps are used. Those odd-decibel steps are less accurately calibrated

than the even-decibel steps, so one tradeoff for this superior relative accuracy is reduced absolute amplitude accuracy.

Another disadvantage of the electronic attenuator is that the spectrum analyzer loses its "Auto" setting, making operation less convenient.

Also, the relationship between the dynamic range specifications (TOI, SHI, compression, and noise) and instrument performance are less well-known with the electrical attenuator. With the mechanical attenuator, TOI, SHI, and compression threshold levels increase dB-for-dB with increasing attenuation, and the noise floor does as well. With the electronic attenuator, there is an excess attenuation of about 1 to 3 dB between 0 and 3.6 GHz, making the effective TOI, SHI, and so forth, less well known. Excess attenuation is the actual attenuation relative to stated attenuation. Excess attenuation is accounted for in the instrument calibration.

Adjust Atten for Min Clipping

Sets the combination of mechanical and electronic attenuation and gain based on the current measured signal level so that clipping will be at a minimum.

This is an immediate action function, that is, it executes once, when the control is pressed.

The algorithms that are used for the adjustment are documented under ["Pre-Adjust for Min Clipping" on page 1760](#).

| | |
|----------------|---|
| Remote Command | <code>[:SENSe]:POWer[:RF]:RANGe:OPTimize IMMEDIATE</code> |
| Example | <code>:POW:RANG:OPT IMM</code> |
| Notes | Executing Adjust Atten for Min Clipping initiates the measurement |
| Dependencies | Does not appear in the Swept SA, RTSA, Monitor Spectrum and Complex Spectrum measurements Appears in the Waveform measurement in BASIC and 5G NR Modes |

Adjust Atten

Allows you to select;

- Electric attenuator only
- Combination of Electric attenuator and Mechanical attenuator

when `[:SENSe]:POWer[:RF]:RANGe:OPTimize IMMEDIATE` is executed.

| | |
|----------------|--|
| Remote Command | <code>[:SENSe]:POWer[:RF]:RANGe:OPTimize:TYPE EONLY COMBined</code> <code>[:SENSe]:POWer[:RF]:RANGe:OPTimize:TYPE?</code> |
| Example | <code>:POW:RANG:OPT:TYPE EONL</code> |

| | |
|--------------|---|
| | <code>:POW:RANG:OPT:TYPE?</code> |
| Dependencies | Does not appear in the Swept SA, RTSA, Monitor Spectrum and Complex Spectrum measurements Appears in the Waveform measurement in BASIC and 5G NR Modes |
| Preset | <code>COMBined</code> |
| State Saved | Saved in instrument state |

Pre-Adjust for Min Clipping

If this function is `ON`, it applies the adjustment described under "[Adjust Atten for Min Clipping](#)" on page 1759 each time a measurement restarts. Therefore, in Continuous measurement mode, it only executes before the first measurement.

In Dual-Attenuator models, you can set `Elec+Mech Atten`, in which case both attenuators participate in the autoranging, or `Elec Atten Only`, in which case the mechanical attenuator does not participate in the autoranging. This latter case results in less wear on the mechanical attenuator and is usually faster.

See "[Adjustment Algorithm](#)" on page 1329

| Selection | SCPI | Note |
|-----------------|-------------------------|--|
| Off | <code>OFF</code> | This is the default setting |
| On | <code>ON</code> | Available in Single-Attenuator instruments. For compatibility with models that do not have an input attenuator, the <code>ON</code> parameter is supported and mapped to <code>COMBined</code> |
| Elec Atten Only | <code>ELECTrical</code> | Selects only the electric attenuator to participate in auto ranging. This offers less wear on the mechanical attenuator and is usually faster |
| Elec+Mech Atten | <code>COMBined</code> | In Dual-Attenuator models, this selects both attenuators to participate in the autoranging |

| | |
|----------------|--|
| Remote Command | <code>[:SENSe]:POWer[:RF]:RANGe:OPTimize:ATTenuation OFF ON ELECTrical COMBined</code> <code>[:SENSe]:POWer[:RF]:RANGe:OPTimize:ATTenuation?</code> |
| Example | <code>:POW:RANG:OPT:ATT OFF</code> <code>:POW:RANG:OPT:ATT?</code> |
| Notes | The parameter option <code>ELECTrical</code> sets this function to <code>ON</code> in Single-Attenuator models The parameter option <code>COMBined</code> is mapped to <code>ELECTrical</code> in Single-Attenuator models. If you send <code>COMBined</code> , it sets the function to <code>ON</code> and returns <code>ELEC</code> to a query For SCPI compatibility with models that do not have an input attenuator, the <code>ON</code> parameter is honored and mapped to <code>COMBined</code> |
| Dependencies | Only appears in Dual-Attenuator models with an Electronic Attenuator installed In instruments with Dual-Attenuator model, when " Elec Atten " on page 1756 is <code>OFF</code> or grayed-out, |

3 WLAN Mode
 3.8 Power vs Time Measurement

"Pre-Adjust for Min Clipping" on page 1328 is grayed-out
 Does not appear in the Swept SA, RTSA, Monitor Spectrum and Complex Spectrum measurements
 Appears in the Waveform measurement in BASIC and 5G NR Modes

| | |
|-------------|---|
| Preset | OFF when Elec Atten is Disabled at preset, otherwise ELEC |
| State Saved | Saved in instrument state |
| Range | Dual-Attenuator models: Off Elec Atten Only Mech + Elec Atten Single-Attenuator models: Off On |

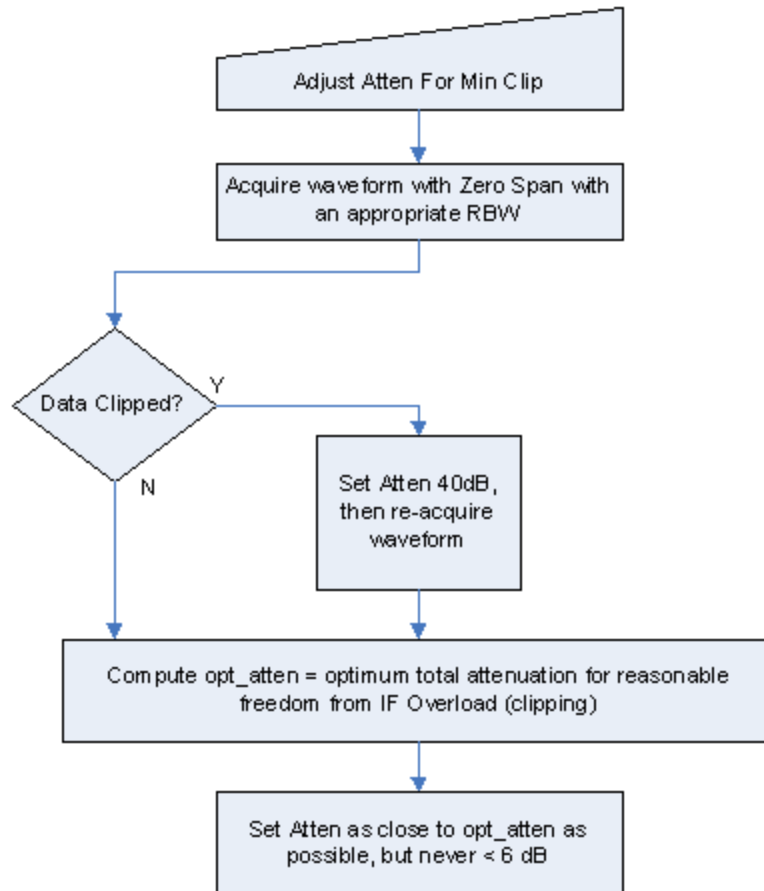

Backwards Compatibility Command

| | |
|------------------------------|--|
| Notes | ON aliases to "Elec Atten Only" (:POW:RANG:OPT:ATT ELEC) OFF aliases to "Off" (:POW:RANG:OPT:ATT OFF) :POW:RANG:AUTO? returns true if :POW:RANG:OPT:ATT is not OFF |
| Backwards Compatibility SCPI | [:SENSe] :POWer [:RF] :RANGe :AUTO ON OFF 1 0 [:SENSe] :POWer [:RF] :RANGe :AUTO? |

Adjustment Algorithm

The algorithms for the adjustment are documented below:

Single-Attenuator Models

Dual-Attenuator models

"Adjust Atten for Min Clipping" on page 1759 or "Pre-Adjust for Min Clipping" on page 1328 selection is Mech + Elec Atten:

3 WLAN Mode
 3.8 Power vs Time Measurement

vsd04

"Pre-Adjust for Min Clipping" on page 1328 selection is Elec Only.

Note that the **Mech Atten** value is not adjusted, and the value previously set is used. Therefore, there is a case that IF Overload is still observed depending on the input signal level and the Mech Atten setting.

Mech Atten Step

Controls the step size used when making adjustments to the input attenuation.

Labeled **Mech Atten Step** in Dual-Attenuator models and **Atten Step** in Single-Attenuator models. In the Dual-Attenuator configuration, only affects the step size of the mechanical attenuator.

Remote Command `[:SENSe]:POWer[:RF]:ATTenuation:STEP[:INCRement] 10 dB | 2 dB`

3 WLAN Mode
3.8 Power vs Time Measurement

| | |
|--------------|---|
| | <code>[:SENSe]:POWer[:RF]:ATTenuation:STEP[:INCRement]?</code> |
| Example | <code>:POW:ATT:STEP 2</code> <code>:POW:ATT:STEP?</code> |
| Notes | Has a toggle control on the front panel, but takes a specific value (in dB) when used remotely. The only valid values are 2 and 10 |
| Dependencies | Blanked in EXA, CXA and CXA-m if option FSA (2 dB steps) is not present. If blanked, attempts to set it via SCPI yield an error |
| Couplings | When the attenuation step size changes, the current mechanical attenuation value is adjusted (if necessary) to be quantized to the new step size. That is, if step is set to 10 dB, mech atten is increased if necessary so it is a multiple of 10 dB |
| Preset | EXA, CXA and CXA-m: 10 dB (2 dB with option FSA) All other models: 2 dB |
| State Saved | Saved in instrument state |

3.8.2.3 Range (Non-attenuator models)

Only available for Keysight's modular signal analyzers and certain other Keysight products, such as VXT and M941xE.

| | |
|-------------|----|
| State Saved | No |
|-------------|----|

Range

Represents the amplitude of the largest sinusoidal signal that could be present within the IF without being clipped by the ADC. For signals with high peak-to-average ratios, the range may need to exceed the rms signal power by a significant amount to avoid clipping.

This is a measurement global setting.

| | |
|----------------|---|
| Remote Command | <code>[:SENSe]:POWer[:RF]:RANGe <real></code> <code>[:SENSe]:POWer[:RF]:RANGe?</code> |
| Example | <code>:POW:RANG 10 dBm</code> <code>:POW:RANG?</code> |
| Notes | The MIN and MAX values are affected by the External Gain parameters, and by the Center Frequency The hardware compensates for frequency response and alters the Range setting |
| Preset | 0 dBm |
| State Saved | Yes |
| Min/Max | -/+100 |
| Annotation | Meas Bar |

Adjust Range for Min Clipping

Sets the combination of attenuation and gain based on the current measured signal level so that clipping will be at a minimum.

This is an "immediate action" function, that is, it executes once, when the key is pressed.

This key does not appear in measurements that do not support this functionality.

| | |
|----------------|---|
| Remote Command | <code>[:SENSe]:POWer[:RF]:RANGe:OPTimize IMMEDIATE</code> |
| Notes | Executing Adjust Range for Min Clipping initiates the measurement |
| Dependencies | Does not appear in the Swept SA and Monitor Spectrum measurements |

Pre-Adjust for Min Clipping

If this function is **ON**, it applies the adjustment described under Adjust Range For Min Clipping each time a measurement restarts. Therefore, in Continuous measurement mode, it only executes before the first measurement.

| | |
|----------------|--|
| Remote Command | <code>[:SENSe]:POWer[:RF]:RANGe:OPTimize:ATTenuation OFF ON ELECTrical COMBined</code> <code>[:SENSe]:POWer[:RF]:RANGe:OPTimize:ATTenuation?</code> |
| Notes | Because there is no attenuator control available in these models, the control displays only ON and OFF choices. However, for SCPI compatibility with other platforms, all three parameters (ELECTrical , COMBined , and ON) are honored and all are mapped to ELECTrical , so if any of these three parameters is sent, a subsequent query will return ELEC |
| Dependencies | Does not appear in the Swept SA and Monitor Spectrum measurements |
| Preset | OFF for Swept SA measurement; ON for all other measurements that support Pre-Adjust for Min Clipping |
| State Saved | Saved in instrument state |

Adjustment Algorithm

The algorithm for the adjustment is documented below:

3 WLAN Mode
3.8 Power vs Time Measurement

Peak-to-Average Ratio

Used with "[Range \(Non-attenuator models\)](#)" on page 1769 to optimize the level control in the instrument. The value is the ratio, in dB, of the peak power to the average power of the signal to be measured. A ratio of 0 should be used for sinusoidal signals; for 802.11g OFDM signals use 9 dB.

All Modes show the current value of Peak-to-Average ratio on the control. However, some Modes do not permit changing the value. In these situations, the control is grayed-out.

| | | |
|----------------|--|-------|
| Remote Command | <code>[:SENSe]:POWer[:RF]:RANGe:PARatio <real></code> <code>[:SENSe]:POWer[:RF]:RANGe:PARatio?</code> | |
| Example | <code>:POW:RANG:PAR 12 dB</code> | |
| Notes | In some Modes, this parameter is read-only; meaning the value will appear on the control and query via SCPI, but is not changeable. In such applications the control is grayed-out. Attempts to change the value via SCPI are ignored, but no error message is generated | |
| Dependencies | Does not appear in Spectrum Analyzer Mode | |
| Preset | VXT Models M9410A/11A | 0 dB |
| | All Others | 10 dB |
| State Saved | Saved in instrument state | |
| Min | 0 dB | |
| Max | VXT Models M9410A/11A | 50 dB |
| | All Others | 20 dB |

Mixer Lvl Offset

This is an advanced setting to adjust target Range at the input mixer, which in turn affects the signal level in the instrument's IF. This setting can be used when additional optimization is needed after setting "[Peak-to-Average Ratio](#)" on page 1771. Positive values of offset optimize noise performance over distortion, negative values optimize distortion performance over noise.

| | | |
|----------------|--|--------|
| Remote Command | <code>[:SENSe]:POWer[:RF]:RANGe:MIXer:OFFSet <real></code> <code>[:SENSe]:POWer[:RF]:RANGe:MIXer:OFFSet?</code> | |
| Example | <code>:POW:RANG:MIX:OFFS -5 dB</code> | |
| Preset | 0 dB | |
| State Saved | Saved in instrument state | |
| Min | VXT Models M9410A/11A | -34 dB |
| | All Others | -35 dB |
| Max | 30 dB | |

3.8.2.4 Signal Path

Contains controls that pertain to the routing of the signal through the frontend of the instrument.

In general, only appears in instruments whose hardware supports this signal routing. For example, this tab does not appear in many of the modular instrument products, including VXT Model M9420A, or UXM.

This tab *does* appear in VXT Models M9410A/11A/15A/16A and M9410E/11E/15E/16E, because "[Software Preselection](#)" on page 1788 is under this tab, and VXT Models M9410A/11A/15A/16A and M9410E/11E/15E/16E implement a version of Software Preselection.

Presel Center

Adjusts the centering of the preselector filter to optimize the amplitude accuracy at the frequency of the selected marker. If the selected marker is not on when **Presel Center** is pressed, the instrument turns on the selected marker, performs a peak search, and then performs centering on the marker's center frequency. If the selected marker is already on and between the start and stop frequencies of the instrument, the instrument performs the preselector calibration on that marker's frequency. If the selected marker is already on, but outside the frequency range

between **Start Freq** and **Stop Freq**, the instrument first performs a peak search, and then performs centering on the marker's center frequency.

The value displayed on "**Preselector Adjust**" on page 1774 changes to reflect the new preselector tuning.

Certain considerations should be observed to ensure proper operation, as detailed in "**Proper Preselector Operation**" on page 1337.

| | |
|------------------------------|---|
| Remote Command | <code>[:SENSe] :POWer [:RF] :PCENter</code> |
| Example | <code>:POW:PCEN</code> |
| Notes | The rules outlined above under the control description apply for the remote command as well as the key. The result of the command depends on marker position, etc. Any message generated by the control press is also generated in response to the remote command |
| Dependencies | Does not appear in CXA-m, nor in VXT Models M9410A/11A/15A/16A, M9410E/11E/15E/16E Grayed-out if the microwave preselector is off <ul style="list-style-type: none"> - If the selected marker's frequency is below Band 1, an advisory message is generated "Preselector not used in this frequency range" and no action is taken - Grayed-out if entirely in Band 0, that is, if Stop Freq is below about 3.6 GHz Grayed-out if entirely above 50 GHz, that is, if Start Freq is above 50 GHz - Blanked in models that do not include a preselector, such as Option 503. If the remote command is sent in these instruments, accepted without error, and the query always returns 0 - Grayed-out in the Spectrogram View |
| Couplings | The active marker position determines where the centering will be attempted If the instrument is in a measurement such as averaging when centering is initiated, the act of centering the preselector restarts averaging, but the first average trace will not be taken until the centering is completed The offset applied to do the centering appears in " Preselector Adjust " on page 1774 |
| Status Bits/OPC dependencies | When centering the preselector, *OPC does not return true until the process is complete and a subsequent measurement has completed, nor are results returned in response to <code>:READ</code> or <code>:MEASure</code> queries The Measuring bit remains set (true) while this command is operating, and does not go false until the subsequent sweep/measurement has completed |

Proper Preselector Operation

Certain considerations should be observed to ensure proper operation:

1. If the selected marker is **Off**, the instrument turns on a marker, performs a peak search, and adjusts the preselector using the selected marker's frequency. It uses the "highest peak" peak search method unqualified by threshold or excursion, so that there is no chance of a 'no peak found' error. It continues with that peak, even if it is the peak of just noise. Therefore, for this operation to work properly, there should be a signal on-screen in a preselected range for the peak

search to find

2. If the selected marker is already **On**, the instrument attempts the centering at that marker's frequency. There is no preselector for signals below about 3.6 GHz, so if the marker is on a signal below 3.6 GHz, no centering is attempted, and an advisory message is generated
3. In some models, the preselector can be bypassed. If it is bypassed, no centering is attempted in that range and a message is generated

Preselector Adjust

Lets you manually adjust the preselector filter frequency to optimize its response to the signal of interest. Only available when "**Presel Center**" on page 1773 is available.

For general purpose signal analysis, using **Presel Center** is recommended. Centering the filter minimizes the impact of long-term preselector drift. **Preselector Adjust** can be used instead to manually optimize the preselector. One application of manual optimization would be to peak the preselector response, which both optimizes the signal-to-noise ratio and minimizes amplitude variations due to small (short-term) preselector drifting.

When **Presel Center** is performed, the offset applied to do the centering becomes the new value of **Preselector Adjust**.

| | |
|----------------|--|
| Remote Command | <code>[:SENSe]:POWer[:RF]:PADJust <freq></code> <code>[:SENSe]:POWer[:RF]:PADJust?</code> |
| Example | <code>:POW:PADJ 100KHz</code> <code>:POW:PADJ?</code> |
| Notes | The value on the control is displayed to 0.1 MHz resolution |
| Dependencies | <ul style="list-style-type: none"> - Does not appear in CXA-m - Does not appear in VXT Models M9410A/11A/15A/16A - Does not appear in M9410E/11E/15E/16E - Grayed-out if microwave preselector is off - Grayed-out if entirely in Band 0, that is, if Stop Freq is lower than about 3.6 GHz - Grayed-out if entirely above 50 GHz, that is, if Start Freq is higher than 50 GHz - Blank in models that do not include a preselector, such as Option 503. If the command is sent in these instruments, it is accepted without error, and the query always returns 0 - Grayed-out in the Spectrogram View |
| Preset | 0 MHz |

| | |
|------------------------------|---|
| State Saved | The Preselector Adjust value set by " Presel Center " on page 1773, or by manually adjusting Preselector Adjust Not saved in instrument state, and does not survive a Preset or power cycle |
| Min/Max | -/+500 MHz |
| Backwards Compatibility SCPI | <code>[:SENSe]:POWer[:RF]:MW:PADJust</code> <code>[:SENSe]:POWer[:RF]:MMW:PADJust</code> Backwards Compatibility Command |
| Notes | The command has no effect, and the query always returns MWAVE |
| Backwards Compatibility SCPI | <code>[:SENSe]:POWer[:RF]:PADJust:PRESelector MWAVE MMWave EXTernal</code> <code>[:SENSe]:POWer[:RF]:PADJust:PRESelector?</code> |

Internal Preamp

Accesses a menu of controls for the internal preamps. Turning on the preamp gives a better noise figure, but a poorer inter-modulation distortion (TOI) to noise floor dynamic range. You can optimize this setting for your measurement.

The instrument takes the preamp gain into account as it sweeps. If you sweep outside of the range of the preamp, the instrument will also account for that. The displayed result always reflects the correct gain.

For some measurements, when the preamp is on and any part of the displayed frequency range is below the lowest frequency for which the preamp has specifications, a warning condition message appears in the status line. For example, for a preamp with a 9 kHz lowest specified frequency: "Preamp: Accy unspec'd below 9 kHz".

| Selection | Example | Note |
|------------|---|---|
| Off | <code>:POW:GAIN OFF</code> | |
| Low Band | <code>:POW:GAIN ON</code> <code>:POW:GAIN:BAND LOW</code> | Sets the internal preamp to use only the low band. The frequency range of the installed (optional) low-band preamp is displayed in square brackets on the Low Band selection in the dropdown |
| Full Range | <code>:POW:GAIN ON</code> <code>:POW:GAIN:BAND FULL</code> | Sets the internal preamp to use its full range. The low band (0-3.6 GHz, 0-3.4 GHz, 0-3 GHz, depending on the model) is supplied by the low band preamp and the frequencies above low band are supplied by the high band preamp The frequency range of the installed (optional) low-band preamp is displayed in square brackets on the Full Range selection in the dropdown. If the high band option is not installed the Full Range selection does not appear |

NOTE

The maximum **Center Frequency for Low Band**, displayed in square brackets, can change based on the selected IFBW for measurements that support IFBW (for example, Waveform measurement across all Modes that support it). In certain models (such as N9042B & N9032B), IFBW values ≤ 40 MHz have a maximum **Low Band** frequency of 3.6 GHz, while $40 \text{ MHz} < \text{IFBW} \leq 1 \text{ GHz}$ have a maximum of 3.3 GHz, and $1 \text{ GHz} < \text{IFBW} \leq 1.5 \text{ GHz}$ have a maximum of 3.5 GHz. IFBW values $> 1.5 \text{ GHz}$ do not support a **Center Frequency** that can reach the **Low Band** maximum frequency. In these cases, **N/A** is displayed in the square brackets for **Low Band**.

| | |
|----------------|---|
| Remote Command | <code>[:SENSe]:POWer[:RF]:GAIN:BAND LOW FULL</code> <code>[:SENSe]:POWer[:RF]:GAIN:BAND?</code> |
| Example | <code>:POW:GAIN:BAND LOW</code> <code>:POW:GAIN:BAND?</code> |
| Dependencies | Not available on all hardware platforms. If the preamp is not present or is unlicensed, this control is not shown Does not appear in VXT Models M9410A/11A/15A/16A nor in M9410E/11E/15E/16E If <code>:POW:GAIN:BAND FULL</code> is sent when a low band preamp is available, the preamp band parameter is set to <code>LOW</code> instead of <code>FULL</code> , and an "Option not installed" message is generated Not available when the electronic/soft attenuator is enabled |
| Preset | <code>LOW</code> |
| State Saved | Saved in instrument state |
| Annotation | When the USB Preamp is not connected to USB, the Preamp annotation in the Meas Bar says "Off" if the preamp is off and displays the frequency range of the low band or full range preamp depending on the setting. For example, if the Preamp is set to Low Band and the Low Band is 3.6 GHz the annotation says "3.6 GHz". If it is a 13.6 GHz preamp and it is set to Full Range the annotation says "13.6 GHz" When the USB Preamp is connected to USB, the Preamp annotation says "Preamp: USB" if the internal preamp is off or "Preamp: USB, Int" if the internal preamp is on (only for measurements that support the USB preamp) |

Auto Function

| | |
|----------------|--|
| Remote Command | <code>[:SENSe]:POWer[:RF]:GAIN[:STATe] OFF ON 0 1</code> <code>[:SENSe]:POWer[:RF]:GAIN[:STATe]?</code> |
| Example | <code>:POW:GAIN OFF</code> <code>:POW:GAIN?</code> |
| Preset | <code>OFF</code> |

LNA

Lets you turn the Low Noise Amplifier (LNA) on or off.

LNA is an additional preamplifier that provides superior DANL and frequency range compared to "Internal Preamp" on page 1775. LNA provides lower system noise figure, especially at frequencies above 100 MHz, and can be operated up to the full range of 50 GHz instruments.

For best possible sensitivity, LNA can be turned on *together* with "Internal Preamp" on page 1775, although if you operate both preamps together, note that the TOI (distortion) specifications are impacted. The sensitivity improvement of this combination is substantial when operating in high band (frequencies above 3.6 GHz).

For more details about annotation, see "More Information" on page 1341

| | |
|----------------|---|
| Remote Command | <code>[:SENSe]:POWer[:RF]:GAIN:LNA[:STATe] OFF ON 0 1</code> <code>[:SENSe]:POWer[:RF]:GAIN:LNA[:STATe]?</code> |
| Example | <code>:POW:GAIN:LNA ON</code> |
| Dependencies | Requires Option LNA, except for VXT models M9415A/16A Does not appear in VXT models M9420A/10A/11A M9410E/11E/15E/16E support LNA May not appear in some measurements LNA is not available when the electronic/soft attenuator is enabled |
| Preset | OFF |
| State Saved | Saved in State |

More Information

When LNA is installed, the preamp annotation changes to show the state of both LNA and Internal Preamp. Below is an example:

```
Atten: 8 dB
Pre: Int on, LNA on
µW Path: LNP, On
Source: Off
```

Note that when operating entirely in the low band (below about 3.6 GHz), if LNA is on, **Internal Preamp** is switched off (even if you have its switch set to ON). This is because the noise performance is actually degraded in low band if both preamps are on. In this case, the annotation reflects the actual state of the two preamps, but the **Internal Preamp** annotation displays in amber, to warn you that the actual state of **Internal Preamp** does not match its switch control display:

```
Atten: 8 dB
Pre: Int off, LNA on
µW Path: LNP, On
Source: Off
```

μW Path Control

Options for this control include **μW Preselector Bypass** (Option MPB), **Low Noise Path** (Option LNP) and **Full Bypass Enable** in the High Band path circuits.

When the μW Preselector is bypassed, flatness is improved, but will be subject to spurs from out of band interfering signals. When **Low Noise Path Enable** is selected, the instrument automatically bypasses certain circuitry in the high frequency bands that can contribute to noise, when it is appropriate based on other instrument settings.

For most applications, the preset state is **Standard Path**, which provides the best remote-control throughput, minimizes acoustic noise from switching and minimizes the risk of wear in the hardware switches, particularly in remote test scenarios where both low band and high band setups will follow in rapid succession. In this path, the bypass of the low band/high band switch and microwave preamp is never activated, which can cause some noise degradation but preserves the life of the bypass switch.

For applications that utilize the wideband IF paths, the preset state is **μW Preselector Bypass**, if option MPB is present. This is because, when using a wideband IF such as the 140 MHz IF, the μW Preselector's bandwidth can be narrower than the available IF bandwidth, causing degraded amplitude flatness and phase linearity, so it is desirable to bypass the preselector in the default case.

You may choose **Low Noise Path Enable** for a lower noise floor, especially in the 21–26.5 GHz region, though without improving many measures of dynamic range, and without giving the best possible noise floor. The preamp, if purchased and used, gives better noise floor than does **Low Noise Path Enable**, but the preamp's compression threshold and third-order intercept are much poorer than that of **Low Noise Path Enable**.

A fourth choice is **Full Bypass Enable**, which combines **μW Preselector Bypass** and **Low Noise Path Enable**. Because this can bypass most of the circuitry between the input and the first mixer, care should be taken when using this setting to avoid damaging the mixer. **Full Bypass Enable** is only available if both options LNP and MPB are present, as well as option FBP.

| Path | Example | Note |

Low Noise Path Enable

Low Noise Path Enable provides a lower noise floor under some circumstances, particularly when operating in the 21–26.5 GHz region. With the Low Noise Path enabled, the low band/high band switch and microwave preamp are bypassed whenever *all* the following are true:

- The instrument is not in the Low Band, meaning:
- the start frequency is above 3.5 GHz and
- the stop frequency is above 3.6 GHz
- The internal preamp is not installed, or if installed, is set to **Off** or **Low Band**

Note that this means that, when any part of a sweep is done in Low Band, the Low Noise Path is not used, whether or not the **Low Noise Path Enable** is selected in the user interface. Also, if the preamp is turned on, the Low Noise Path is not used,

3 WLAN Mode

3.8 Power vs Time Measurement

whether or not the **Low Noise Path Enable** is selected in the user interface. The only time the Low Noise Path is used is when **Low Noise Path Enable** is selected, the sweep is completely in High Band (> 3.6 GHz) and no preamp is in use.

For measurements that use IQ acquisition, the low noise path is used when **Center Frequency** is in High Band (> 3.6 GHz) and no preamp is in use. In other words, the rules above are modified to use only the center frequency to qualify which path to switch in. This is not the case for FFTs in the Swept SA measurement; they use the same rules as swept measurements.

Note that the Low Noise Path, while giving improved DANL, has the disadvantage of decreased TOI performance and decreased gain compression performance relative to the standard path.

Note also that the bypass switch is a mechanical switch and has finite life, so if the **Low Noise Path Enable** is selected, it is possible to cause frequent cycling of this switch by frequently changing instrument settings such that the above conditions hold true only some of the time. A user making tests of this nature should consider opting for the **Standard Path**, which will never throw the bypass switch, at the expense of some degraded noise performance.

The low noise path is useful for situations where the signal level is so low that the instrument performance is dominated by noise even with 0 dB attenuation, but still high enough that the preamp option would have excessive third-order intermodulation or compression. The preamp, if purchased and used, gives better noise floor than does the “Low Noise Path.” However, its compression threshold and third-order intercept are much poorer than that of the non-preamp path.

There are some applications, typically for signals around –30 dBm, for which the third-order dynamic range of the standard path is good enough, but the noise floor is not low enough even with 0 dB input attenuation. When the third-order dynamic range of the preamp path is too little and the noise floor of the standard path is too high, the Low Noise Path can provide the best dynamic range

The graph below illustrates the concept. It shows, in red, the performance of an instrument at different attenuation settings, both with the preamp on and off, in a measurement that is affected by both instrument noise and instrument TOI. The green shows the best available dynamic range, offset by 0.5 dB for clarity. The blue shows how the best available dynamic range improves for moderate signal levels with the low noise path switched in. In this illustration, the preamp improves the noise floor by 15 dB while degrading the third-order intercept by 30 dB, and the low noise path reduces loss by 8 dB. The attenuator step size is 2 dB.

There are other times where selecting the low noise path improves performance, too. Compression-limited measurements such as finding the nulls in a pulsed-RF spectrum can profit from the low noise path in a way similar to the TOI-limited measurement illustrated. Accuracy can be improved when the low noise path allows the optimum attenuation to increase from a small amount like 0, 2 or 4 dB to a larger amount, giving better return loss at the instrument input. Harmonic measurements, such as second and third harmonic levels, are much improved using the low noise path because of the superiority of that path for harmonic (though not intermodulation) distortion performance.

μW Preselector Bypass

Toggles the preselector bypass switch for band 1 and higher. When the microwave preselector is on, the signal path is preselected. When the microwave preselector is off, the signal path is not preselected. The preselected path is the normal path for the instrument.

The preselector is a tunable bandpass filter which prevents signals away from the frequency of interest from combining in the mixer to generate in-band spurious signals (images). The consequences of using a preselector filter are its limited bandwidth, the amplitude and phase ripple in its passband, and any amplitude and phase instability due to center frequency drift.

Option MPB or pre-selector bypass provides an unpreselected input mixer path for certain X-Series signal analyzers with frequency ranges above 3.6 GHz. This signal path allows a wider bandwidth and less amplitude variability, which is an advantage when doing modulation analysis and broadband signal analysis. The disadvantage is that, without the preselector, image signals will be displayed. Another disadvantage of bypassing the preselector is increased LO emission levels at the front panel input port.

Image responses are separated from the real signal by twice the 1st IF. For IF Paths of 10 MHz and 25 MHz, the 1st IF is 322.5 MHz, so the image response and the real signal will be separated by 645 MHz. The 1st IF will be different for other IF Path settings. When viewing a real signal and its corresponding image response in internal mixing, the image response will be to the left of the real signal.

Also, the image response and the real signal typically have the same amplitude and exhibit the same shape factor.

However, if Option FS1 (Fast Sweep Capability) is enabled, the image response in the Swept SA measurement appears lower in amplitude and has a much wider shape factor compared to the real signal.

Full Bypass Enable

With **Full Bypass Enable** selected, the microwave preselector is bypassed. In addition, the low band/high band switch and microwave preamp are bypassed whenever *all* the following are true:

- The instrument is not in the Low Band, meaning:
- the start frequency is above 3.5 GHz and
- the stop frequency is above 3.6 GHz.
- the internal preamp is not installed or if installed, is set to **Off** or **Low Band**

Note that this means that, when any part of a sweep is done in Low Band, the Low Noise Path is not used, whether or not the **Full Bypass Enable** is selected in the user interface. Also, if the preamp is turned on, the Low Noise Path is not used, whether or not the **Full Bypass Enable** is selected in the user interface. The only time the Low Noise Path is used is when **Full Bypass Enable** is selected, the sweep is completely in High Band (> 3.6 GHz) and no preamp is in use.

CAUTION

When **Full Bypass Enable** is selected, and "**Y Scale**" on page 1745 is set to 0 dB, there will be a direct AC connection between the input and the first converter when the Low Noise Path switches in (when Start Freq >3.6 GHz and the Preamp is either not licensed, set to Low Band, or Off). This puts the first converter at considerable risk to be damaged by high AC power. Consequently,

whenever **Full Bypass Enable** is selected, a warning message appears in the status bar:

“Full Bypass Enabled, maximum safe input power reduced”

Microwave Preselector Bypass Backwards Compatibility

| | |
|------------------------------|--|
| Example | Bypass the microwave preselector: <code>:POW:MW:PRES OFF</code> |
| Notes | Included for Microwave Preselector Bypass backwards compatibility The ON parameter sets the STD path (<code>:POW:MW:PATH STD</code>) The OFF parameter sets path MPB (<code>:POW:MW:PATH MPB</code>) |
| Preset | ON |
| Backwards Compatibility SCPI | <code>[:SENSe]:POWer[:RF]:MW:PRESelector[:STATe] ON OFF 0 1</code> <code>[:SENSe]:POWer[:RF]:MW:PRESelector[:STATe]?</code> |

Frequency Extender Preselection Bypass

Only applies to the high frequency path of the Frequency Extender, and only if the Frequency Extender allows it. For example, the V3050A high frequency path is 50 – 110 GHz and *does* allow control of the preselector bypass.

When the Frequency Extender’s preselection is bypassed, flatness is improved, but will be subject to spurs from out-of-band interfering signals. For bandwidths greater than 2.5 [GHz], it is recommended that the signal bypass the Frequency Extender Preselector since the max bandwidth of the Preselector can be as narrow as 2.5 [GHz].

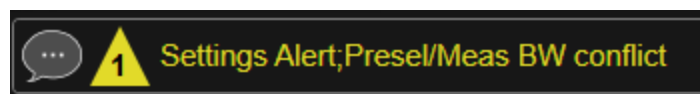

For most applications, the preset state is **OFF**, which gives the best remote-control throughput, minimizes acoustic noise from switching, minimizes out of band spurs, and minimizes the risk of wear in the hardware switches.

Preselector and Bandwidth Conflict

When the Frequency Extender Preselector is applied and the signal bandwidth is greater than 2.5 [GHz], then a settings alert message will show to warn the user that the signal may be distorted due to the limitation of the Frequency Extender Preselector bandwidth.

An example of the settings alert message is shown below.

Settings Alert message in the Status Bar at the bottom of the display.

Settings Alert message in the error queue

| Type | ID | |
|---|-----|---|
|  | 159 | Settings Alert - DETECTED;Presel/Meas BW conflict |

Allow Full Bypass in Auto

Enable or disable Full Bypass in μ W Path Auto rule. See " [\$\mu\$ W Path Control](#)" on page 1778.

When this function is **ON**, and " [\$\mu\$ W Path Control](#)" on page 1778 is in **AUTO**, it is possible for the auto rules to select the **FULL** Bypass state, which bypasses both the Preamp and the Microwave Preselector. Otherwise, the auto rules never select the **FULL** Bypass state. This is convenient when making wideband measurements, but it also adds some risk of damage to the first converter.

CAUTION

When **Full Bypass Enable** is selected, and "[Y Scale](#)" on page 1745 is set to 0 dB, there will be a direct AC connection between the input and the first converter when the Low Noise Path switches in (when Start Freq > 3.6 GHz and the Preamp is either not licensed, set to **Low Band** or **Off**). This puts the first converter at considerable risk to be damaged by high AC power. Consequently, whenever **Full Bypass Enable** is selected, a warning message appears in the status bar:

"Full Bypass Enabled, maximum safe input power reduced"

Software Preselection

Provided in some instruments, either to compensate for issues with provided hardware preselection or to provide the preselection function when there is no hardware preselector.

N9041B

Software Preselection compensates for the frequency range limit of the microwave preselector. Since the microwave preselector only goes up to 50 GHz, software preselection must be used to suppress and separate images above 50 GHz. The specific algorithm used for software preselection is specified by the SW Preselection Type selection – Normal or Advanced.

In N9041B, **Software Preselection** only applies for frequencies above 50 GHz, therefore it is only used for RF Input 2. Even if turned on, it is not used for other inputs, and never for frequencies below 50 GHz. This is why the label of this control contains the parenthetical note “(>~50 GHz)”.

Note that in N9041B, in Swept SA measurement, **Software Preselection** works even if the measurement is using an FFT Sweep Type. In measurements other than Swept SA, Software Preselection is not used if the measurement is using an FFT sweep type.

N9042B+V3050A

Software Preselection compensates for the frequency range limit of the microwave preselector. Since the microwave preselector only goes up to 50 GHz, software preselection must be used to suppress and separate images above 50 GHz. The specific algorithm used for software preselection is specified by the SW Preselection Type selection – Normal or Advanced.

For N9042B+V3050A, Software Preselection only applies for frequencies above 50 GHz, therefore it is only used for External RF. Even if it is turned on, it will not be used for other inputs and never for frequencies below 50 GHz. This is why the label of this control contains the parenthetical note “(>~50 GHz)”.

Note that for N9042B+V3050A, in the Swept SA measurement, Software Preselection works even if the measurement is using an FFT Sweep Type. In measurements other than Swept SA, Software Preselection is not used if the measurement is using an FFT Sweep Type.

VXT models M9410A/11A/15A/16A

Software Preselection is used to provide the preselection function, as there is no hardware preselector in these models. Two background traces are taken and compared point by point, and the point with the lowest amplitude from the two

traces is used. This provides a method to reduce spurs that are internally generated within the VXT, but you should note the following when using Software Preselection:

- There is some speed cost due to the need to take multiple captures
- Taking the point with the lowest amplitude in each trace will make the average noise level lower at all points that do not have a spur. This can reduce the accuracy of the measurement of noise and noise-like signals

Because of the difficulty in identifying spurs manually, you are recommended to leave Software Preselection **ON** at all times in VXT models M9410A/11A. If you turn it off in order to speed up your measurement or improve noise accuracy, be aware of unwanted onscreen spurs.

| | |

| Couplings | Affects Sweep Time Auto Tune supports Software Preselection , so Auto Tune should be performed after setting the Software Preselection state |
| Preset | N9041B OFF N9042B+V3050A ON M9410A/11A ON |
| State Saved | Saved in instrument state |

SW Preselection Type

Specifies the algorithm used for software preselection.

Two hidden sweeps occur in succession. The second sweep is offset in LO frequency by $2 * IF / N$. For each point in each trace, the smaller amplitude from the two traces is taken and placed in that point in the selected trace. The Peak detector is auto-selected to improve the image suppression effectiveness. Responses of each trace that lie on top of one another will remain and are valid signals. Other signals are images, which are suppressed. The action of taking the smaller of the two traces will make the average noise level lower in all points that do not have an image, thus reducing the accuracy of the measurement of noise and noise-like signals.

- **NORMa1** - mathematically removes all image and multiple responses of signals present at the input
- **ADVanced** - any trace processing (such as “max hold” or trace averaging) is performed on the points of both candidate traces before the “select minimum” operation occurs. This form of processing works better for non-stationary signals, such as pulsed-RF signals

| | |
|----------------|--|
| Remote Command | <code>[:SENSe]:POWer[:RF]:SWPResel NORMa1 ADVanced</code> <code>[:SENSe]:POWer[:RF]:SWPResel?</code> |

| Dependencies | Only appears in N9041B and N9042B+V3050A. Only appears in measurements that use the Swept method Grayed-out when "Software Preselection" on page 1788 is OFF. The grayout message is “Unavailable unless SW Presel enabled” |
| Preset | N9041B ADVanced N9042B+V3050A NORMa1 |
| State Saved | Saved in instrument state |

SW Preselection BW

Specifies the effective bandwidth to be used for Software Preselection.

The options are:

- **NORMa1** – when making Swept measurements, a software preselection algorithm is used which takes up to 4 background acquisitions, then post-processes the result. This algorithm can remove images from signals with an occupied bandwidth up to around 3 GHz. (Default/Preset setting). When making FFT measurements, this algorithm is not used, instead the same algorithm is used as for **NARRow** (below)
- **NARRow**– a software preselection algorithm is used which takes two background acquisitions, then post-processes the result to detect and remove images from wideband signals with occupied bandwidths up to 2 GHz. This increases the risk of images failing to be rejected, but improves the measurement speed

| | |
|----------------|---|
| Remote Command | <code>[:SENSe]:POWer[:RF]:SWPResel:BW NORMa1 NARRow</code> <code>[:SENSe]:POWer[:RF]:SWPResel:BW?</code> |
| Example | <code>:POW:SWPR:BW NARR</code> |
| Dependencies | Only appears in N9041B and N9042B+V3050A. Only appears in measurements that use the Swept |

High Freq Prefilter

Lets you set the state of Prefilter for center frequencies above 1310 MHz.

In VXT Models M9410A/11A and M9410E/11E in bypass frequency range (1310MHz~5GHz), the Receiver RF path has a bank of filters that come after the RF Attenuator in the signal path. Since this bank of filters precedes the mixer they are known as the "Prefilter" bank. Their purpose is to eliminate unwanted in-band mixing products by filtering out all but the desired frequencies before the signals get to the mixer. There are 13 prefilter bands to cover the frequencies between 9 kHz and 6000 MHz. The Prefilter provides the necessary rejection of the unwanted signal.

| | |
|----------------|---|
| Remote Command | <code>[:SENSE]:<measurement>:PFILter[:STATE] ON OFF 1 0</code> <code>[:SENSE]:<measurement>:PFILter[:STATE]?</code> |

3.8.3 BW

The BW key opens the bandwidth menu, which contains controls for the Resolution Bandwidth and Video Bandwidth functions of the instrument.

The Resolution BW functions control filter bandwidth and filter type. There are two filter types, Gaussian and Flattop. The Gaussian filters have a response curve that is parabolic on a log scale. The Flattop filter shape is a close approximation of a rectangular filter.

3.8.3.1 Settings

The Settings tab contains the basic Bandwidth functions. In most measurements it is the only tab under Bandwidth.

Info BW

Enables you to specify the information bandwidth for the analyzer. This is used to set the hardware filter of the ADC.

| | |
|----------------|--|
| Remote Command | <code>[:SENSe]:PVTIme:BAWdwidth[:RESolution] <freq></code> <code>[:SENSe]:PVTIme:BAWdwidth[:RESolution]?</code> |
| Example | <code>:PVT:BAWd 6 MHz</code> <code>:PVT:BAWd?</code> |
| Preset | if Radio Std is 802.11a/b/g = 25 MHz if Radio Std is 802.11n-20M, 802.11ac-20M or 802.11ax-20M = 25 MHz if Radio Std is 802.11n-40M, 802.11ac-40M or 802.11ax-40M = 40 MHz if Radio Std is 802.11ac-80M, 802.11ax-80M, 802.11ac-80M+ 80M or 802.11ax-80M+ 80M= 80 MHz if Radio Std is 802.11ac-160M or 802.11ax-160M = 160 MHz other Radio Std = 25 MHz This parameter is also hardware dependent. |
| State Saved | Yes |
| Min | 1 kHz |
| Max | Analyzer Max Info BW The analyzer's max info bandwidth is option dependent: VXT model M9421A: No Option = 40.0 MHz Option B40 = 40.0 MHz Option B85 = 80.0 MHz Option B1X = 160.0 MHz Option U-B85 = Upgrade from 40.0 MHz to 80.0 MHz Option U-B1X = Upgrade from 80.0 MHz to 160.0 MHz VXT models M9410A/11A: Option B40 = 40.0 MHz M941xA-B3X = 300.0 MHz M941xA-B6X = 600.0 MHz M94xA-B12 = 1.2 GHz M94xAU-B6X = Upgrade from 300.0 MHz to 600.0 MHz M94xAU-B12 = Upgrade from 300.0 MHz to 1.2 GHz M94xAU-BU1 = Upgrade from 600.0 MHz to 1.2 GHz VXT models M9415A: M9415A-B4X = 400.0 MHz M9415A-B8X = 800.0 MHz M9415A-B12 = 1.2 GHz |

M9415AU-B6X = Upgrade from 400.0 MHz to 800.0 MHz
M9415AU-B12 = Upgrade from 400.0 MHz to 1.2 GHz
M9415AU-BU2 = Upgrade from 800.0 MHz to 1.2 GHz
All other models:
B1Y=160 MHz, B1X=140 MHz, B1A=125 MHz, B85= 85 MHz, B40=40 MHz, B25=25 MHz, else 10 MHz
When Info BW auto coupled by Radio Std exceeds max BW of hardware, there will be an error message: Invalid result; Wider BW required.

Backwards Compatibility SCPI `[:SENSe] : <meas> : BWIDth [:RESolution]`

RBW Filter Type

Toggles the filter shapes between Gaussian and Flat (flattop).

| | |
|----------------|---|
| Remote Command | <code>[:SENSe] : PVTtime : BANDwidth : TYPE GAUSSian FLATtop</code> |
| Example | <code>[:SENSe] : PVTtime : BANDwidth : TYPE ?</code> <code>:PVT : BAND : TYPE FLAT</code> <code>:PVT : BAND : TYPE ?</code> |
| Preset | GAUSSian |
| State Saved | Saved in instrument state |
| Range | Gaussian Flattop |

3.8.4 Display

The Display key opens the Display Menu, which lets you configure display items for the current Mode, Measurement View or Window.

3.8.4.1 Meas Display

The Meas Display tab contains controls for setting up the display for the current Measurement, View or Window.

Ramp Lines

Turns the ramp lines On or Off.

| | |
|----------------|---|
| Remote Command | <code>:DISPlay : PVTtime : RAMP [:STATe] OFF ON 0 1</code> <code>:DISPlay : PVTtime : RAMP [:STATe] ?</code> |
| Example | <code>:DISP : PVT : RAMP ON</code> |

| | |
|-------------|------------------------------|
| | <code>:DISP:PVT:RAMP?</code> |
| Preset | ON |
| State Saved | Yes |
| Range | On Off |

3.8.4.2 Views

The Power vs. Time measurement has 2 views as follows.

| NO. | View | NO. of Windows | Window No. | Window |
|-----|-------------|----------------|------------|-------------|
| 1 | Burst | Dual | 1 | RF Envelope |
| | | | 2 | Metrics |
| 2 | Rise & Fall | Triple | 1 | Rise |
| | | | 2 | Fall |
| | | | 3 | Metrics |

These Views are multiple-window Views. When in a multiple window View, you select a window by touching it. The menu controls may sometimes change depending on which window is selected.

Whenever the View changes, the default menu is Frequency, unless otherwise specified in the View description.

You can select the desired measurement view from the selections listed in the table below. There are two available commands, allowing you to select the view using either a string ID or a numeric ID value.

- `:DISP:PVT:VIEW[:SEL] <string ID>`
- `:DISP:PVT:VIEW:NSEL <numeric ID>`

| View Name | String ID | Numeric ID | View Description |
|-------------|-----------|------------|---|
| Burst | ALL | 1 | Provides RF Envelope for a WLAN modulated burst and the Numeric Results data. |
| Rise & Fall | BOTH | 2 | Provides RF Power Ramp Up and Ramp down traces and Numeric Results data. |

View Selection by Name

| | |
|----------------|--|
| Remote Command | <code>:DISPlay:PVTime:VIEW[:SElect] ALL BOTH</code> <code>:DISPlay:PVTime:VIEW[:SElect]?</code> |
| Example | <code>:DISP:PVT:VIEW ALL</code> <code>:DISP:PVT:VIEW?</code> |

| | |
|-------------|----------------------------|
| Preset | ALL |
| State Saved | Saved in instrument state. |
| Range | Burst Rise & Fall |

View Selection by Number

| | |
|----------------|---|
| Remote Command | <code>:DISPlay:PVTime:VIEW:NSElect <integer></code> <code>:DISPlay:PVTime:VIEW:NSElect?</code> |
| Example | <code>:DISP:PVTime:VIEW:NSEL 2</code> <code>:DISP:PVTime:VIEW:NSEL?</code> |
| Preset | 1 |
| State Saved | Saved in instrument state. |
| Min | 1 |
| Max | 2 |

Burst

Windows:

- RF Envelope
- Metrics

Example `:DISP:PVT:VIEW ALL`

Rise & Fall

Windows:

- Rise
- Fall
- Metrics

Example `:DISP:PVT:VIEW BOTH`

3.8.4.3 Annotation

Contains controls for setting up the annotation for the current Mode or Measurement.

Graticule

Turns the display graticule On or Off for all windows with graticules in all measurements in the current Mode. Also turns the graticule Y-Axis annotation on and off.

| | |
|------------------------------|--|
| Remote Command | <code>:DISPlay:GRATicule[:STATe] OFF ON 0 1</code> <code>:DISPlay:GRATicule[:STATe]?</code> |
| Example | <code>:DISP:GRAT OFF</code> |
| Notes | The graticule is the set of horizontal and vertical lines that make up the grid/divisions for the X-Axis and Y-Axis |
| Preset | ON |
| State Saved | Saved in instrument state |
| Backwards Compatibility SCPI | <code>:DISPlay:WINDow[1]:TRACe:GRATicule:GRID[:STATe] OFF ON 0 1</code> <code>:DISPlay:WINDow[1]:TRACe:GRATicule:GRID[:STATe]?</code> This command is accepted for backwards compatibility with older instruments, but the WINDow , TRACe and GRID parameters are ignored |

Screen Annotation

Controls the display of the annunciation and annotation around the graticule, including any annotation on lines (such as the display line, the threshold line, etc.) and the Y-Axis annotation, for all windows with screen annotation in all measurements in the current Mode.

This does *not* include marker annotation (or the N dB result). When **OFF**, the graticule expands to fill the entire graticule area, leaving only the 1.5% gap above the graticule, as described in the **Trace** section.

| | |
|----------------|--|
| Remote Command | <code>:DISPlay:ANNotation:SCReen[:STATe] OFF ON 0 1</code> <code>:DISPlay:ANNotation:SCReen[:STATe]?</code> |
| Example | <code>:DISP:ANN:SCR OFF</code> |
| Dependencies | Grayed-out and forced to OFF when System Display Settings, Annotation is OFF |
| Preset | ON This remains OFF through a Preset when System Display Settings, Annotation is set to OFF |
| State Saved | Saved in instrument state |

Trace Annotation

Turns on and off the labels on the traces, showing their detector (or their Math Mode) as described in the **Trace** section, for all windows in all measurements in the current Mode for which Trace Annotation on/off is supported.

If Trace Math is being performed on a trace, then the Trace Math annotation replaces the detector annotation.

For measurements that support limit lines, this key also turns on and off the labels on the Limit Lines. The label is the Limit number annotation and Limit Comment displayed on the graph. If the length of the comment is greater than 20 characters, the first 8 characters and the last 8 characters are displayed, joined with

| | |
|----------------|--|
| Remote Command | <code>:DISPlay:ANNotation:TRACe[:STATe] ON OFF 1 0</code> <code>:DISPlay:ANNotation:TRACe[:STATe]?</code> |
| Example | <code>:DISP:ANN:TRAC OFF</code> |
| Preset | <code>OFF</code> |
| State Saved | Saved in instrument state |

Control Annotation

Turns on and off the display of values on the Active Function controls for all measurements in the current Mode. This is a security feature.

| | |
|----------------|--|
| Remote Command | <code>:DISPlay:ACTivefunc[:STATe] ON OFF 1 0</code> <code>:DISPlay:ACTivefunc[:STATe]?</code> |
| Example | <code>:DISP:ACT OFF</code> |
| Dependencies | Grayed out and forced to <code>OFF</code> when System Display Settings, Annotation is <code>OFF</code> |
| Preset | <code>ON</code> This remains <code>OFF</code> through a Preset when System Display Settings, Annotation is set to <code>OFF</code> |
| State Saved | Saved in instrument state |

Meas Bar

Turns the Measurement Bar at the top of the screen on and off for all measurements in the current Mode. When `OFF`, the graticule area expands to fill the area formerly occupied by the Measurement Bar.

| | |
|----------------|--|
| Remote Command | <code>:DISPlay:ANNotation:MBAR[:STATe] OFF ON 0 1</code> <code>:DISPlay:ANNotation:MBAR[:STATe]?</code> |
|----------------|--|

| | |
|--------------|--|
| Example | <code>:DISP:ANN:MBAR OFF</code> |
| Dependencies | Grayed out and forced to OFF when System Display Settings, Annotation is OFF |
| Preset | ON This remains OFF through a Preset when System Display Settings, Annotation is set to OFF |
| State Saved | Saved in instrument state |

Display Enable (Remote Command Only)

Turns the display on/off, including the display drive circuitry. The backlight stays lit to confirm that the instrument is on. The display enable setting is mode global. There are three reasons for turning the display off:

1. To increase speed as much as possible by freeing the instrument from having to update the display
2. To reduce emissions from the display, drive circuitry
3. For security purposes

If you have turned off the display:

- and you are in local operation, the display can be turned back on by pressing any key or by sending `:SYSTEM:DEFAULTS MISC` or `:DISPLAY:ENABLE ON` (neither `*RST` nor `:SYSTEM:PRESET` enable the display)
- and you are in remote operation, the display can be turned back on by pressing the **Local** or **Esc** keys, or by sending `:SYSTEM:DEFAULTS MISC` or `:DISPLAY:ENABLE ON` (neither `*RST` nor `:SYSTEM:PRESET` enable the display)
- and you are using either the `:SYSTEM:KLOCK` command or GPIB local lockout, then *no* front-panel key press will turn the display back on. You must turn it back on remotely.

If the display is **OFF**, many SCPI commands related to User Views and Multiscreen functionality do not work, and return the error messages “-221, Settings conflict; Screen SCPI cannot be used when Display is disabled” or “221, Settings conflict; View SCPI cannot be used while Display is disabled”. These commands include:

| Name | Command |
|------------------|--|
| Select User View | <code>:DISPLAY:VIEW:ADVANCED:SELECT</code> |
| Rename User View | <code>:DISPLAY:VIEW:ADVANCED:RENAME</code> |
| Delete User View | <code>:DISPLAY:VIEW:ADVANCED:DELETE</code> |
| Create User View | <code>:DISPLAY:VIEW:ADVANCED:NAME</code> |
| Select Screen | <code>:INSTRUMENT:SCREEN:SELECT</code> |
| Delete Screen | <code>:INSTRUMENT:SCREEN:DELETE</code> |

| Name | Command |
|-------------------------------|---|
| Delete All But This Screen | :INSTrument:SCReen:DELeTe:ALL |
| Add Screen | :INSTrument:SCReen:CREate |
| Rename Screen | :INSTrument:SCReen:REName |
| Sequencer On/Off | :SYSTem:SEQuencer |
| Remote Command | :DISPlay:ENABle OFF ON 0 1 :DISPlay:ENABle? |
| Example | :DISP:ENAB OFF |
| Couplings | :DISP:ENAB OFF turns Backlight OFF and :DISP:ENAB ON turns Backlight ON, but changing Backlight settings does <i>not</i> change the state of :DISP:ENAB |
| Preset | ON Set by :SYST:DEF MISC, but not affected by *RST or :SYSTem:PRESet |
| State Saved | Not saved in instrument state |
| Backwards Compatibility Notes | :SYST:PRES no longer turns on :DISPlay:ENABle as it did in legacy analyzers |

3.8.5 Freq

The Freq key opens the Frequency menu, which contains controls that allow you to control the Frequency and Channel parameters of the instrument.

Some features in the Frequency menu are the same for all measurements in the current Mode – they do not change as you change measurements. Settings like these are called “Meas Global” and are unaffected by Meas Preset. For example, the Center Freq setting is the same for all measurements – it does not change as you change measurements.

3.8.5.1 Settings

The Settings Tab contains controls that pertain to the X axis parameters of the measurement. These parameters control how data on the vertical (X) axis is displayed and control instrument settings that affect the horizontal axis.

Center Frequency

Sets the frequency that corresponds to the horizontal center of the graticule (when frequency Scale Type is set to linear). While adjusting the Center Frequency the

3 WLAN Mode
3.8 Power vs Time Measurement

Span is held constant, this means that both Start Frequency and Stop Frequency will change.

| | |
|----------------|--|
| Remote Command | <code>[:SENSe]:FREQuency:CENTer <freq></code> <code>[:SENSe]:FREQuency:CENTer?</code> |
| Example | <code>:FREQ:CENT 50 MHz</code> <code>:FREQ:CENT UP</code> changes the center frequency to 150 MHz if you use <code>FREQ:CENT:STEP 100 MHz</code> to set the center frequency step size to 100 MHz <code>:FREQ:CENT?</code> |
| Notes | This command sets the RF, External Mixing or I/Q Center Frequency depending on the selected input. For RF input it is equivalent to <code>FREQ:RF:CENT</code> For I/Q input it is equivalent to <code>FREQ:IQ:CENT</code> For External Mixer it is equivalent to <code>FREQ:EMIX:CENT</code> Preset and Max values are dependent on Hardware Options (5xx) If no terminator (e.g. MHz) is sent the terminator Hz is used. If a terminator with unit other than Frequency is used, an invalid suffix error message is generated. |
| Dependencies | The Center Frequency can be limited by Start or Stop Freq limits, if the Span is so large that Start or Stop reaches their limit. |
| Couplings | When operating in "swept span", any value of the Center Frequency or Span that is within the frequency range of the analyzer is allowed when the value is being set through the front panel numeric key pad or the SCPI command. The other parameter is forced to a different value if needed, to keep the Start and the Stop Frequencies within the analyzer's frequency range Coupling between center frequency and span: numeric (keypad) entries are treated differently than changing the value using the step keys (up/down arrows) or the knob. Similarly, for remote operation sending a numeric frequency value is treated differently than the UP DOWN keywords. <ul style="list-style-type: none">- Numeric entries (keypad or remote) - any value of center frequency or span (within the frequency range of the analyzer) is allowed. The other parameter is forced, as necessary, to keep the Start Freq and Stop Freq within the analyzer frequency range.- Knob or Step keys (up/down arrows) or UP DOWN keywords - the value of the parameter being changed (center frequency or span) is limited so the other parameter is not forced to a new value. Thus, if only the step keys and knob are used, you can get back to the initial Center Freq and Span by changing only the current parameter. NOTE: since out-of-range Start Freq and Stop Freq are never allowed, markers and trace math work nicely without requiring anything special for out-of-range conditions. |
| Preset | Depends on instrument maximum frequency, mode, measurement, and selected input. See "Center Frequency Presets" on page 1367 and "RF Center Freq" on page 1368 and "Ext Mix Center Freq" on page 1369 and "I/Q Center Freq" on page 1370 . |
| State Saved | Saved in instrument state |
| Min | Depends on instrument maximum frequency, mode, measurement, and selected input.. See "Center Frequency Presets" on page 1367 and "RF Center Freq" on page 1368 and "I/Q Center Freq" on page 1370 . |

| | |
|------------------------------|---|
| Max | Depends on instrument maximum frequency, mode, measurement, and selected input. See "Center Frequency Presets" on page 1367 and "RF Center Freq" on page 1368 and "I/Q Center Freq" on page 1370 . |
| Annotation | Center <value> appears in the lower left corner of the display. |
| Status Bits/OPC dependencies | Non-overlapped |

More Information

In measurements that also have Start Freq and Stop Freq controls, pressing Center Freq sets the frequency entry mode to Center/Span. In Center/Span mode, the center frequency and span values are displayed below the graticule, and the default active function in the Frequency menu is **Center Freq**. In the Start/Stop annotation mode, Start Freq and Stop Freq are displayed below the graticule instead of Center Freq and Span.

Pressing Center Freq also sets the frequency entry mode to Center/Span. In Center/Span mode, the center frequency and span values are displayed below the graticule, and the default active function in the Frequency menu is **Center Freq**.

When frequency Scale Type is set to log, pressing Center Freq sets the frequency that corresponds to the arithmetic mean of the start frequency and stop frequency, which is not at the horizontal center of the graticule.

The center frequency setting is the same for all measurements within a mode, that is, it is Meas Global. Some modes are also able to share a Mode Global center frequency value. If this is the case, the Mode will have a **Global** tab in its **Meas Setup** menu.

The **Center Freq** function sets (and queries) the Center Frequency for the currently selected input. If your analyzer has multiple inputs, and you select another input, the Center Freq changes to the value for that input. SCPI commands are available to directly set the Center Freq for a specific input.

Center Freq is remembered as you go from input to input. Thus you can set a Center Freq of 10 GHz with the RF Input selected, change to BBIQ and set a Center Freq of 20 MHz, then switch to External Mixing and set a Center Freq of 60 GHz, and when you go back to the RF Input the Center Freq will go back to 10 GHz; back to BBIQ and it is 20 MHz; back to External Mixing and it is 60 GHz.

- See ["RF Center Freq" on page 1368](#)
- See ["Ext Mix Center Freq" on page 1369](#)
- See ["I/Q Center Freq" on page 1370](#)
- See ["Center Frequency Presets" on page 1367](#)

Center Frequency Presets

The following table provides the Center Frequency Presets for the Spectrum Analyzer mode, and the Max Freq, for the various frequency options:

| Freq Option | CF after Mode Preset | Stop Freq after Mode Preset | Max Freq (can't tune above) |
|------------------------------|----------------------|-----------------------------|-----------------------------|
| 503 (all but CXA) | 1.805 GHz | 3.6 GHz | 3.7 GHz |
| 503 (CXA) | 1.505 GHz | 3.0 GHz | 3.08 GHz |
| 507 (all but CXA) | 3.505 GHz | 7.0 GHz | 7.1 GHz |
| 507 (CXA) | 3.755 GHz | 7.5 GHz | 7.58 GHz |
| 508 (all but MXE) | 1.805 GHz | 3.6 GHz | 8.5 GHz |
| 508 (MXE) | 4.205 GHz | 8.4 GHz | 8.5 GHz |
| 513 | 6.805 GHz | 13.6 GHz | 13.8 GHz |
| 526 (all but CXA and MXE) | 13.255 GHz | 26.5 GHz | 27.0 GHz* |
| 526 (CXA) | 13.255 GHz | 26.5 GHz | 26.55 GHz |
| 526 (MXE) | 1.805 GHz | 3.6 GHz | 27.0 GHz |
| 532 | 16.005 GHz | 32.0 GHz | 32.5 GHz |
| 543 | 21.505 GHz | 43.0 GHz | TBD |
| 544 | 22.005 GHz | 44.0 GHz | 44.5 GHz |
| 550 | 25.005 GHz | 50.0 GHz | 52 GHz |
| F06 (M9415A) | 1 GHz | 1.08 GHz | 6.6 GHz |
| F08 (M9415A) | 1 GHz | 1.08 GHz | 8.6 GHz |
| F12 (M9415A) | 1 GHz | 1.08 GHz | 12.9 GHz |

*For option 526, the Max CF in RTSA is 26.999999995 GHz.

Input 2:

| Model | CF after Mode Preset | Stop Freq after Mode Preset | Max Freq (can't tune above) |
|-------------|----------------------|-----------------------------|-----------------------------|
| CXA opt C75 | 0.7505 GHz | 1.5 GHz | 1.58 GHz |
| MXE | 505 MHz | 1 GHz | 1.000025 GHz |

Tracking Generator Frequency Limits (CXA only):

| Tracking Generator Option | Min Freq (clips to this freq when turn TG on and can't tune below while TG on) | If above this Freq, Stop Freq clipped to this Freq when TG turned on | Max Freq (can't tune above) while TG on |
|---------------------------|--|--|---|
| T03 | 9 kHz | 3.0 GHz | 3.08 GHz |
| T06 | 9 kHz | 6.0 GHz | 6.05 GHz |

The following table shows the Center Frequency Presets for modes other than Spectrum Analyzer:

| Mode | CF Preset for RF |
|------------|--------------------------------|
| WCDMA | 1 GHz |
| WIMAXOFDMA | 1 GHz |
| BASIC | 1 GHz |
| ADEMOD | 1 GHz |
| VSA | 1 GHz |
| TDSCDMA | 1 GHz |
| PNOISE | 1 GHz |
| LTE | 1 GHz |
| LTETDD | 1 GHz |
| MSR | 1 GHz |
| GSM | 935.2 MHz |
| NFIGURE | 1.505 GHz |
| PULSEX | Same as Spectrum Analyzer Mode |
| BT | 2.402GHz |

RF Center Freq

SCPI command for specifying the RF Center Frequency. This command will set the Center Frequency to be used when the RF input is selected, even if the RF input is not the input that is selected at the time the command is sent. Note that the **Center Freq** function in the **Frequency** menu on the front panel always applies to the currently selected input.

Remote Command [:SENSe]:FREQuency:RF:CENTer <freq>

3 WLAN Mode
3.8 Power vs Time Measurement

| | |
|--------------|---|
| | <code>[:SENSe] :FREQuency:RF:CENTer?</code> |
| Example | <code>:FREQ:RF:CENT 30 MHz</code> <code>:FREQ:RF:CENT?</code> |
| Notes | This command is the same in all modes, but the parameter is Measurement Global. So the value is independent in each mode and common across all the measurements in the mode. |
| Dependencies | If the electronic/soft attenuator is enabled, any attempt to set Center Frequency such that the Stop Frequency would be >3.6 GHz fails and results in an advisory message. If the equivalent SCPI command is sent, this same message is generated as part of a “-221, Settings conflict” warning. If Source Mode is set to Tracking, and the Max or Min Center Freq is therefore limited by the limits of the source, a warning message is generated “Data out of range; clipped to source max/min” if these limits are exceeded. Note that for an external source, these limits can be affected by the settings of Source Numerator, Source Denominator, and Power Sweep. |
| Preset | See table above |
| State Saved | Saved in instrument state. |
| Min | -79.999995 MHz, unless Source Mode is set to Tracking, in which case it is limited by the minimum frequency of the Source |
| Max | See table above. Basically instrument maximum frequency - 5 Hz. Note that, if the Source Mode is set to Tracking, the effective instrument maximum frequency may be limited by the source maximum frequency. If the knob or step keys are being used, also depends on the value of the other three interdependent parameters Span, Start Frequency and Stop Frequency. |

Ext Mix Center Freq

SCPI command for specifying the External Mixer Center Frequency. This command will set the Center Frequency to be used when the External Mixer is selected, even if the External Mixer input is not the input which is selected at the time the command is sent. Note that the **Center Freq** function in the **Frequency** menu on the front panel always applies to the currently selected input.

| | |
|----------------|---|
| Remote Command | <code>[:SENSe] :FREQuency:EMIXer:CENTer <freq></code> <code>[:SENSe] :FREQuency:EMIXer:CENTer?</code> |
| Example | <code>:FREQ:EMIX:CENT 60 GHz</code> <code>:FREQ:EMIX:CENT?</code> |
| Notes | This command is the same in all modes, but the parameter is Measurement Global. So the value is independent in each mode and common across all the measurements in the mode. |
| Couplings | When returning to External Mixing after having been switched to one of the other inputs (e.g., RF), you will come back into the settings that you had when you left External Mixing. So you will come back to the band you were in with the Center Frequency that you had. However, Span is not an input-dependent parameter, therefore you will bring the span over from the other input. Therefore, the analyzer comes back with the span from the previous input, limited as necessary by the current mixer setup. |

| | |
|-------------|--|
| Preset | <p>When a Mode Preset is performed while in External Mixing, the Start frequency of the current Mode is set to the nominal Min Freq of the lowest harmonic range in the Harmonic Table for the current mixer setup. Similarly, the Stop frequency of the current Mode is set to the nominal Max Freq of the highest harmonic range in the Harmonic Table. The Center Freq thus presets to the point arithmetically equidistant from these two frequencies.</p> <p>If the current measurement has a limited Span available to it, and cannot achieve the Span shown in the table (Span=Stop Freq – Start Freq), the analyzer uses the maximum Span the measurement allows, and still sets the Center Freq to the midpoint of the Start and Stop Freq values in the Harmonic Table.</p> <p>When Restore Input/Output Defaults is performed, the mixer presets to the 11970A, whose Start and Stop frequencies are 26.5 and 40 GHz respectively. The center of these two frequencies is 33.25 GHz. Therefore, after a Restore Input/Output Defaults, if you go into External Mixing and do a Mode Preset while in the Spectrum Analyzer Mode, the resulting Center Freq is 33.25 GHz.</p> |
| State Saved | Yes |
| Min | The minimum frequency in the currently selected mixer band + 5 Hz |
| Max | <p>The maximum frequency in the currently selected mixer band - 5 Hz</p> <p>If the knob or step keys are being used, also depends on the value of the other three interdependent parameters Span, Start Frequency and Stop Frequency</p> |

I/Q Center Freq

SCPI command for specifying the I/Q Center Frequency. This command will set the Center Frequency to be used when the I/Q input is selected, even if the I/Q input is not the input which is selected at the time the command is sent. Note that the **Center Freq** function in the **Frequency** menu on the front panel always applies to the currently selected input.

| | |
|----------------|--|
| Remote Command | <code>[:SENSe] :FREQuency :IQ :CENTer <freq></code> <code>[:SENSe] :FREQuency :IQ :CENTer ?</code> |
| Example | <code>:FREQ :IQ :CENT 30 MHz</code> |
| Notes | This command is the same in all modes, but the parameter is Measurement Global. So the value is independent in each mode and common across all the measurements in the mode. |
| Preset | 0 Hz |
| State Saved | Saved in instrument state. |
| Min | -40.049995 MHz |
| Max | 40.049995 MHz |

CF Step

Changes the step size for the center frequency and start and stop frequency functions. Once a step size has been selected and the center frequency function is active, the step keys (and the UP|DOWN parameters for Center Frequency from remote commands) change the center frequency by the step-size value. The step

3 WLAN Mode
3.8 Power vs Time Measurement

size function is useful for finding harmonics and sidebands beyond the current frequency span of the analyzer.

Note that the start and stop frequencies also step by the CF Step value.

| | |
|------------------------------|--|
| Remote Command | <code>[:SENSe]:FREQuency:CENTer:STEP[:INCRement] <freq></code> <code>[:SENSe]:FREQuency:CENTer:STEP[:INCRement]?</code> |
| Example | <code>:FREQ:CENT:STEP 500 MHz</code> <code>:FREQ:CENT UP</code> increases the current center frequency value by 500 MHz <code>:FREQ:CENT:STEP?</code> |
| Notes | Preset and Max values are depending on Hardware Options (503, 507, 508, 513, 526) Preset and Max values are dependent on Hardware Options (5xx) |
| Dependencies | Span, RBW, Center frequency If the electronic/soft attenuator is enabled, any attempt to change the value of the center frequency >3.6 GHz by pressing the Up-arrow key, fails and results in an advisory message. If the equivalent SCPI command is sent, this same message is generated as part of a "-221, Settings conflict" warning. |
| Couplings | When auto-coupled in a non-zero span, the center frequency step size is set to 10% of the span. When auto-coupled in zero span, the center frequency step size is set to the equivalent -3 dB RBW value. |
| Preset | Auto |
| State Saved | Saved in instrument state |
| Min | - (the maximum frequency of the instrument). That is, 27 GHz max freq instrument has a CF step range of +/- 27 GHz. Note that this is the maximum frequency given the current settings of the instrument, so in External Mixing, for example, it is the maximum frequency of the current mixer band. |
| Max | The maximum frequency of the instrument. That is, 27 GHz max freq instrument has a CF step range of +/- 27 GHz. Note that this is the maximum frequency given the current settings of the instrument, so in External Mixing, for example, it is the maximum frequency of the current mixer band. |
| Status Bits/OPC dependencies | non-overlapped |
| Remote Command | <code>[:SENSe]:FREQuency:CENTer:STEP:AUTO OFF ON 0 1</code> <code>[:SENSe]:FREQuency:CENTer:STEP:AUTO?</code> |
| Example | <code>:FREQ:CENT:STEP:AUTO ON</code> <code>:FREQ:CENT:STEP:AUTO?</code> |
| Preset | ON |

3.8.6 Marker

Accesses a menu that enables you to select, set up and control the markers for the current measurement. If there are no active markers, **Marker** selects marker 1, sets it to Normal and places it at the center of the display. If the selected marker is Off, it is

set to Normal and placed it at the center of the screen on the trace determined by the Marker Trace rules.

For more detailed information on the types of Markers and the interaction between Markers, see the Marker section of the Swept SA measurement.

3.8.6.1 Select Marker

Specifies the selected marker. The term “selected marker” is used throughout this document to specify which marker will be affected when you change marker settings, perform a Peak Search, etc.

The Select Marker control appears above the menu panel, indicating that it applies to all controls in the Marker menu panels. Select Marker is blanked if you select a tab whose controls do NOT depend on the selected marker (for example, Counter).

On any menu tab for which Select Marker displays, the first control is always Marker Frequency|Time.

| | |
|--------------|--|
| Notes | The selected marker is remembered even when not in the Marker menu and is used if a Search is done or a Band Function is turned on or for Signal Track or Continuous Peak. |
| Preset | Marker 1 |
| State Saved | The number of the selected marker is saved in instrument state. |
| Annunciation | Appears in the marker results block label for Normal , Delta and Fixed markers. |

3.8.6.2 Settings

The controls on the Settings tab include the Marker active function and a radio button selection of the marker control mode (Normal, Delta, or Off) for the selected marker, as well as additional functions that help you use markers.

Marker Time

Set the X Axis value of the selected marker in the current X Axis Scale unit. If the marker mode is off, the SCPI command has no affect other than to cause the marker to become selected.

NOTE

The X label and value can change if the marker is moved to a trace with a different domain.

If the marker mode is Normal, the Marker X position is absolute.

If the mode is Delta, then the X position is relative to the reference marker.

The valid X positions are the actual data points in the trace; the marker cannot be located between points. If a SCPI command attempts to place the marker between two points, the X value snaps to the closest point.

Note that for Vector or Constellation format, the X axis is perpendicular to the screen (because the screen axes are used to show the real and imaginary parts of the Y value), so adjusting the X value in this case only causes the marker to move horizontally if the real Y value changes.

| | |
|----------------|--|
| Remote Command | <code>:CALCulate:PVTime:MARKer[1] 2 ... 12:X <real></code> <code>:CALCulate:PVTime:MARKer[1] 2 ... 12:X?</code> |
| Example | <code>:CALC:PVTime:MARK:X 0.325</code> <code>:CALC:PVTime:MARK:X?</code> |
| Notes | Marker X does not go outside the bounds of the data. If you attempt to set it to a value outside the bounds, it is clipped at the closest limit and error -222 Data Out of Range is generated. If suffix is sent, it must match the X units for the trace the marker is on. Otherwise, error -138, "Suffix not allowed" is generated. If you try to read or set the position of a Delta marker, remember that the position is in relative units. |
| Couplings | See "Coupling of Delta and Reference markers" on page 1374. |
| Preset | None until marker is turned on. |
| State Saved | Yes |
| Min | Depends on trace data |
| Max | Depends on trace data |

SCPI only X position commands

Via SCPI, the marker position can also be set or queried in trace points. In this case, the position setting or reading is absolute regardless of control mode.

NOTE

The entered value in Trace Points is immediately translated into the current domain units for setting the value of the marker. The marker's value in domain units, NOT trace points, is preserved if a change is made to the X Axis scale settings. Thus, if you use this command to place a marker on point 500, which happens at that time to correspond to 13 GHz, and then you change the Start Frequency so that point 500 is no longer 13 GHz, the marker stays at 13 GHz, NOT at point 500.

If the trace the marker is on a 2-dimensional domain, then the points are numbered in the following way:

Starting at the minimum X and Z position, this point is numbered 0. Each time you increment the point number, increment the X value to the next available value. When X reaches the maximum X position, then reset X to the minimum and

increment the Z value. Then continue incrementing the X position in the same manner as before.

Note that for symbol tables, which have no axes, incrementing the X position in points moves the marker consecutively through all table entries.

| | |
|----------------|--|
| Remote Command | <code>:CALCulate:PVTime:MARKer[1] 2 ... 12[:X]:POsition <real></code> <code>:CALCulate:PVTime:MARKer[1] 2 ... 12[:X]:POsition?</code> |
| Example | <code>:CALC:PVTime:MARK:POS 25</code> <code>:CALC:PVTime:MARK:POS?</code> |
| Notes | When a marker mode is changed from off to any other mode, the X position is set to mid-screen. |
| Preset | None until marker is turned on. |
| State Saved | Yes |
| Min | Depends on trace data |
| Max | Depends on trace data |
| | Marker X Unit can be queried via SCPI. |
| Remote Command | <code>:CALCulate:PVTime:MARKer[1] 2 ... 12:X:UNIT?</code> |
| Example | <code>:CALC:PVTime:MARK:X:UNIT?</code> |
| Notes | Query Only |

Coupling of Delta and Reference markers

The following coupling rules apply from the front panel and also if the equivalent SCPI commands are sent.

Pressing the Delta key causes the selected marker to become a delta marker if it is not already. Also, the selected marker's reference is affected as follows:

- If the reference marker was off, it is turned on as a fixed marker.
- The reference marker is moved to the trace of the selected marker and set to the same position as the selected marker.
- If the delta marker has a marker function turned on, the reference marker takes on the same function (with the same band limits).

Exception: Pressing Delta when the selected marker's mode is not yet Delta does not move or change a reference marker that is already turned on (Normal, or Delta) and on the same trace as the selected marker. It merely changes the selected marker's mode to Delta and shows the current offset between it and the reference. If you press Delta again (when the selected marker is already in Delta mode) then the reference is moved and modified as described above.

When a delta marker is changed to any other control mode, if its reference marker is fixed then the reference marker is also turned off.

If you move a delta marker to a different trace, it is forced to Normal mode and if its reference is fixed, the reference is turned off.

A delta marker is forced to Normal mode if you turn its reference off or if you move its reference to another trace. (In the latter case the reference is not turned off even if it is fixed.)

If you change the selected marker's reference (using the Marker, Properties, Relative To), the selected marker is forced to Delta mode. This change of the selected marker to Delta mode causes its new reference's control mode and position to change as described above.

Marker Mode

Sets the marker control mode to **Normal**, **Delta**, or **Off**.

All interactions and dependencies detailed under the control description are enforced when the remote command is sent. If the selected marker is Off, pressing Marker sets it to Normal and places it at the center of the screen on the trace determined by the **Marker Trace** rules.

The default active function is the active function for the currently selected marker control mode. If the current control mode is Off, there is no active function and the active function is turned off.

| | |
|----------------|--|
| Remote Command | <code>:CALCulate:PVTime:MARKer[1] 2 ... 12:MODE POSition DELTa OFF</code> <code>:CALCulate:PVTime:MARKer[1] 2 ... 12:MODE?</code> |
| Example | <code>:CALC:PVTime:MARK3:MODE POS</code> <code>:CALC:PVTime:MARK3:MODE?</code> |
| Notes | NORMal is changed to POSition in the new SA. |
| Preset | OFF |
| State Saved | Saved in instrument state. |
| Range | Normal DELTa (D) Off |

Backward Compatibility SCPI Commands

Sets or queries the state of a marker. Setting a marker which is OFF to state ON or 1 puts it in Normal mode and places it at the center of the screen.

| | |
|----------------|--|
| Remote Command | <code>:CALCulate:PVTime:MARKer[1] 2 ... 12:STATe OFF ON 0 1</code> <code>:CALCulate:PVTime:MARKer[1] 2 ... 12:STATe?</code> |
| Example | <code>:CALC:PVTime:MARK3:STAT ON</code> |

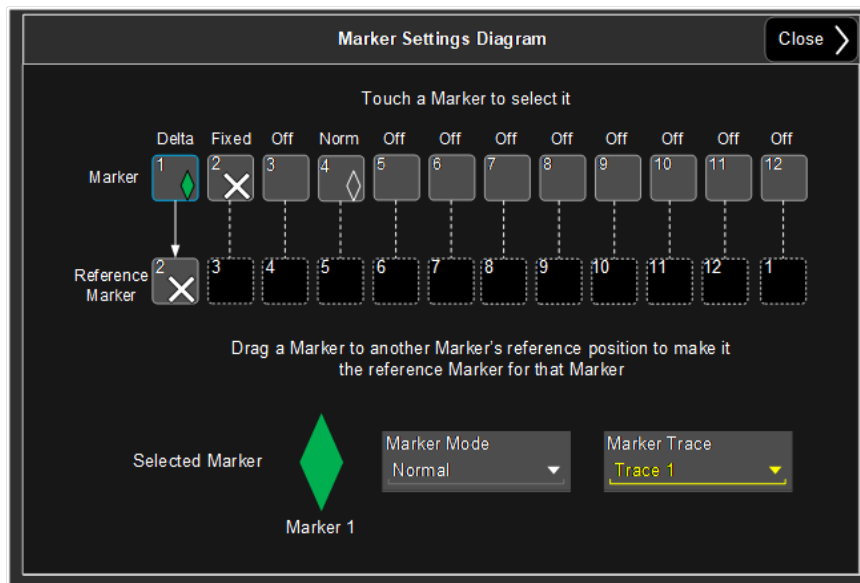

| | |
|-------------|---------------------------------------|
| | <code>:CALC:PVTime:MARK3:STAT?</code> |
| Preset | OFF |
| State Saved | Saved in instrument state |
| Range | On Off |

Delta Marker (Reset Delta)

Pressing this button is exactly the same as pressing the “Delta” selection on the Marker Mode radio button. The selected marker becomes a Delta Marker. If the selected marker is already a Delta marker, the reference marker is moved to the current position of the selected marker, thus resetting the Delta to zero.

Marker Settings Diagram

The Marker Settings Diagram lets you configure the Marker system using a visual utility.

All Markers Off

Turns off all markers.

| | |
|----------------|--|
| Remote Command | <code>:CALCulate:PVTime:MARKer:AOff</code> |
| Example | <code>:CALC:PVTime:MARK:AOff</code> |

Couple Markers

When this function is On, moving any marker causes an equal X Axis movement of every other marker which is not Off. "equal X Axis movement" means to preserve the difference between each marker's X Axis value (in the fundamental x-axis units of the trace that marker is on) and the X Axis value of the marker being moved (in the same fundamental x-axis units).

| | |
|----------------|---|
| Remote Command | <code>:CALCulate:PVTime:MARKer:COUPle[:STATe] ON OFF 1 0</code> <code>:CALCulate:PVTime:MARKer:COUPle[:STATe]?</code> |
| Example | <code>:CALC:PVTime:MARK:COUP ON</code> <code>:CALC:PVTime:MARK:COUP?</code> |
| Notes | In general, when coupling is turned on then all Normal or Delta markers with the same (or equivalent) domain as the selected marker move in the same manner as the selected marker. See " More Information " on page 1377 |
| Preset | OFF (presets on Mode Preset and All Markers Off) |
| State Saved | Saved in instrument state |

More Information

Coupling is relative between markers on the same trace (so that their relative positions in the domain are maintained). Coupling can be absolute between markers on different traces that have equivalent domains. That is, they have the same position in the domain, if possible. (As an example of equivalent domains, demodulated symbol positions can be derived from time by using the current symbol rate). When you move the selected marker, then others on related traces track it. This enables you to correlate different measurement results. For example, you can place a marker at a particular symbol time on an error vector magnitude display, have tracking markers on the symbol table and pre-demod time trace showing you the symbol value, and the actual time-varying signal value at the same point in time.

Absolute coupling is performed only for the lowest numbered Normal or Delta marker on each trace. All other markers on a trace couple relatively. When you turn on marker coupling, the subset of markers that have the same domain as the selected marker track it and all other markers remain at their current location. The absolutely coupled markers within this subset is moved at this time to match the domain setting of the selected marker, with the relatively coupled markers following accordingly to maintain offsets within their respective traces. Those markers with different domains remain at their current location. When you select a marker with a different domain than the previously selected marker, the subset of markers with that domain go through the same procedure.

Any marker that coupling would move outside its range of X values, remains at the closest limiting value. If the coupled markers are on data that do not have the same domain resolution, then they are positioned as close to each other as possible.

If markers change mode or trace, or trace data is changed below them, the coupling rules are immediately applied to the new set.

3.8.6.3 Peak Search

The controls on the Peak Search tab allow you to move the marker to selected peaks of the signal, giving you enormous analysis capabilities, particularly when combined with the Delta Marker function.

NOTE Pressing the Peak Search hardkey automatically moves you to the Peak Search page of the Marker menu AND performs a Peak Search.

NOTE Pressing the Peak Search tab once you are already IN the Marker menu does NOT perform a Peak Search.

Marker Time

Set the X Axis value of the selected marker in the current X Axis Scale unit. If the marker mode is off, the SCPI command has no affect other than to cause the marker to become selected.

NOTE The X label and value can change if the marker is moved to a trace with a different domain.

If the marker mode is Normal, the Marker X position is absolute.

If the mode is Delta, then the X position is relative to the reference marker.

The valid X positions are the actual data points in the trace; the marker cannot be located between points. If a SCPI command attempts to place the marker between two points, the X value snaps to the closest point.

Note that for Vector or Constellation format, the X axis is perpendicular to the screen (because the screen axes are used to show the real and imaginary parts of the Y value), so adjusting the X value in this case only causes the marker to move horizontally if the real Y value changes.

Coupling of Delta and Reference markers

The following coupling rules apply from the front panel and also if the equivalent SCPI commands are sent.

Pressing the Delta key causes the selected marker to become a delta marker if it is not already. Also, the selected marker's reference is affected as follows:

- If the reference marker was off, it is turned on as a fixed marker.
- The reference marker is moved to the trace of the selected marker and set to the same position as the selected marker.
- If the delta marker has a marker function turned on, the reference marker takes on the same function (with the same band limits).

Exception: Pressing Delta when the selected marker's mode is not yet Delta does not move or change a reference marker that is already turned on (Normal, or Delta) and on the same trace as the selected marker. It merely changes the selected marker's mode to Delta and shows the current offset between it and the reference. If you press Delta again (when the selected marker is already in Delta mode) then the reference is moved and modified as described above.

When a delta marker is changed to any other control mode, if its reference marker is fixed then the reference marker is also turned off.

If you move a delta marker to a different trace, it is forced to Normal mode and if its reference is fixed, the reference is turned off.

A delta marker is forced to Normal mode if you turn its reference off or if you move its reference to another trace. (In the latter case the reference is not turned off even if it is fixed.)

If you change the selected marker's reference (using the Marker, Properties, Relative To), the selected marker is forced to Delta mode. This change of the

selected marker to Delta mode causes its new reference's control mode and position to change as described above.

Peak Search

Pressing the Peak Search control moves the selected marker to the trace point which has the maximum y-axis value for that marker's trace.

NOTE

Pressing the Peak Search hardkey automatically moves you to the Peak Search page of the Marker menu AND performs a Peak Search.

| | |
|----------------|--|
| Remote Command | :CALCulate:PVTime:MARKer[1] 2 ... 12:MAXimum |
|----------------|--|

| | |
|---------|------------------------|
| Example | :CALC:PVTime:MARK2:MAX |
|---------|------------------------|

The command SYST:ERR? can be used to query the errors to determine if a peak is found. The message "No peak found" will be returned after an unsuccessful search.

Marker Delta

Pressing this button is exactly the same as pressing the "Delta" selection on the Marker Mode radio button on the Settings tab. The selected marker becomes a Delta Marker. If the selected marker is already a Delta marker, the reference marker is moved to the current position of the selected marker, thus resetting the Delta to zero.

The control is duplicated here in the Peak Search Menu to allow you to conveniently perform a peak search and change the marker's control mode to Delta without having to access two separate menus.

3.8.6.4 Properties

The controls on the Properties tab are used to set certain properties of the selected marker.

Marker Time

Set the X Axis value of the selected marker in the current X Axis Scale unit. If the marker mode is off, the SCPI command has no affect other than to cause the marker to become selected.

NOTE

The X label and value can change if the marker is moved to a trace with a different domain.

If the marker mode is Normal, the Marker X position is absolute.

If the mode is Delta, then the X position is relative to the reference marker.

The valid X positions are the actual data points in the trace; the marker cannot be located between points. If a SCPI command attempts to place the marker between two points, the X value snaps to the closest point.

Note that for Vector or Constellation format, the X axis is perpendicular to the screen (because the screen axes are used to show the real and imaginary parts of the Y value), so adjusting the X value in this case only causes the marker to move horizontally if the real Y value changes.

| | |
|----------------|--|
| Remote Command | <code>:CALCulate:PVTime:MARKer[1] 2 ... 12:X <real></code> <code>:CALCulate:PVTime:MARKer[1] 2 ... 12:X?</code> |
| Example | <code>:CALC:PVTime:MARK:X 0.325</code> <code>:CALC:PVTime:MARK:X?</code> |
| Notes | Marker X does not go outside the bounds of the data. If you attempt to set it to a value outside the bounds, it is clipped at the closest limit and error -222 Data Out of Range is generated. If suffix is sent, it must match the X units for the trace the marker is on. Otherwise, error -138, "Suffix not allowed" is generated. If you try to read or set the position of a Delta marker, remember that the position is in relative units. |
| Couplings | See " Coupling of Delta and Reference markers " on page 1383. |
| Preset | None until marker is turned on. |
| State Saved | Yes |
| Min | Depends on trace data |
| Max | Depends on trace data |

SCPI only X position commands

Via SCPI, the marker position can also be set or queried in trace points. In this case, the position setting or reading is absolute regardless of control mode.

NOTE

The entered value in Trace Points is immediately translated into the current domain units for setting the value of the marker. The marker's value in domain units, NOT trace points, is preserved if a change is made to the X Axis scale settings. Thus, if you use this command to place a marker on point 500, which happens at that time to correspond to 13 GHz, and then you change the Start Frequency so that point 500 is no longer 13 GHz, the marker stays at 13 GHz, NOT at point 500.

If the trace the marker is on a 2-dimensional domain, then the points are numbered in the following way:

Starting at the minimum X and Z position, this point is numbered 0. Each time you increment the point number, increment the X value to the next available value. When X reaches the maximum X position, then reset X to the minimum and increment the Z value. Then continue incrementing the X position in the same manner as before.

Note that for symbol tables, which have no axes, incrementing the X position in points moves the marker consecutively through all table entries.

| Notes | Query Only |

Coupling of Delta and Reference markers

The following coupling rules apply from the front panel and also if the equivalent SCPI commands are sent.

Pressing the Delta key causes the selected marker to become a delta marker if it is not already. Also, the selected marker's reference is affected as follows:

- If the reference marker was off, it is turned on as a fixed marker.
- The reference marker is moved to the trace of the selected marker and set to the same position as the selected marker.
- If the delta marker has a marker function turned on, the reference marker takes on the same function (with the same band limits).

Exception: Pressing Delta when the selected marker's mode is not yet Delta does not move or change a reference marker that is already turned on (Normal, or Delta) and on the same trace as the selected marker. It merely changes the selected marker's mode to Delta and shows the current offset between it and the reference. If

you press Delta again (when the selected marker is already in Delta mode) then the reference is moved and modified as described above.

When a delta marker is changed to any other control mode, if its reference marker is fixed then the reference marker is also turned off.

If you move a delta marker to a different trace, it is forced to Normal mode and if its reference is fixed, the reference is turned off.

A delta marker is forced to Normal mode if you turn its reference off or if you move its reference to another trace. (In the latter case the reference is not turned off even if it is fixed.)

If you change the selected marker's reference (using the Marker, Properties, Relative To), the selected marker is forced to Delta mode. This change of the selected marker to Delta mode causes its new reference's control mode and position to change as described above.

Relative To

Selects the marker to which the selected marker is relative (its reference marker).

Every marker has another marker to which it is relative. This marker is referred to as the “reference marker” for that marker. This attribute is set by the **Marker, Properties, Relative To** key. The marker must be a **Delta** marker to make this attribute relevant. If it is a **Delta** marker, the reference marker determines how the marker is controlled and how its value is displayed. A marker cannot be relative to itself.

| | |
|----------------|---|
| Remote Command | <code>:CALCulate:PVTime:MARKer[1] 2 ... 12:REference <integer></code> <code>:CALCulate:PVTime:MARKer[1] 2 ... 12:REference?</code> |
| Example | <code>:CALC:PVTime:MARK:REF 5</code> <code>:CALC:PVTime:MARK:REF?</code> |
| Notes | This command causes the marker specified with the subopcode to become selected. Range (for SCPI command): 1 to 12. If the range is exceeded the value is clipped. A marker cannot be relative to itself so that choice is not available, and if sent from SCPI generates error -221: “Settings conflict; marker cannot be relative to itself.” When queried a single value is returned (the specified marker numbers relative marker). |
| Couplings | The act of specifying the selected marker’s reference marker makes the selected marker a Delta marker. If the reference marker is off it is turned on in Normal mode at the delta marker location. |
| Preset | The preset default “Relative To” marker (reference marker) is the next higher numbered marker (current marker +1). For example, if marker 2 is selected, then it’s default reference marker is marker 3. The exception is marker 12, which has a default reference of marker 1. Set to the defaults by using Restore Mode Defaults . This is not reset by Marker Off, All Markers Off, or Preset . |

3 WLAN Mode
3.8 Power vs Time Measurement

Marker Settings Diagram

The Marker Settings Diagram lets you configure the Marker system using a visual utility.

3.8.7 Meas Setup

The Meas Setup menu panel contains functions for setting up the measurement parameters and also contains functions for setting up parameters global to all measurements in the mode.

3.8.7.1 Settings

The Settings tab contains frequently used Meas Setup functions to which you will want the fastest access.

Avg|Hold Number

- Used to specify the number of data acquisitions that are averaged. After the specified number of average counts, the averaging mode (termination control) setting determines the averaging action.
- On - Sets measurement averaging on.
- Off - Sets measurement averaging off.

Remote Command `[:SENSe]:PVTime:AVERage:COUNT <integer>`
`[:SENSe]:PVTime:AVERage:COUNT?`
`[:SENSe]:PVTime:AVERage[:STATe] OFF | ON | 0 | 1`
`[:SENSe]:PVTime:AVERage[:STATe]?`

| | |
|-------------|--|
| Example | <code>:PVT:AVER:COUN 1</code> <code>:PVT:AVER:COUN?</code> <code>:PVT:AVER OFF</code> <code>:PVT:AVER?</code> |
| Preset | 10 ON |
| State Saved | Yes |
| Min | 1 |
| Max | 10000 |

Average Type

Specifies the type of trace and result averaging to use.

This parameter is valid only for Measure Trace.

- Pwr Avg (RMS) - True power averaging that is equivalent to taking the RMS value of the voltage. It is the most accurate type of averaging
- Log-Pwr Avg (Video) - Simulates the traditional spectrum analyzer type of averaging by averaging the log of the power

| | |
|----------------|---|
| Remote Command | <code>[:SENSe]:PVT:ime:AVER:age:TYPE LOG RMS</code> <code>[:SENSe]:PVT:ime:AVER:age:TYPE?</code> |
| Example | <code>:PVT:AVER:TYPE LOG</code> <code>:PVT:AVER:TYPE?</code> |
| Preset | RMS |
| State Saved | Yes |
| Range | Pwr Avg (RMS) Log-Pwr Avg(Video) |

Averaging Mode

Selects the type of termination control used for the averaging function. This determines the averaging action after the specified number of data acquisitions (average count) is reached.

- Exponential - After the average count is reached, each successive data acquisition is exponentially weighted and combined with the existing average.
- Repeat - After reaching the average count, the averaging is reset and a new average is started.

The default value is Exponential.

| | |
|----------------|--|
| Remote Command | <code>[:SENSe]:PVTime:AVERage:TCONtrol EXPOnential REPeat</code> <code>[:SENSe]:PVTime:AVERage:TCONtrol?</code> |
| Example | <code>:PVT:AVER:TCON REP</code> <code>:PVT:AVER:TCON?</code> |
| Preset | EXPOnential |
| State Saved | Yes |
| Range | Exponential Repeat |

Burst Time

This parameter specifies the accurate burst length for RF burst to be measured. It is needed to be set as accurate as possible, or the ramp down time may be lost.

| | |
|------------------------------|--|
| Remote Command | <code>[:SENSe]:PVTime:BURSt:WIDTh <time></code> <code>[:SENSe]:PVTime:BURSt:WIDTh?</code> |
| Example | <code>:PVT:BURS:WIDT 1.0 ms</code> <code>:PVT:BURS:WIDT</code> |
| Preset | 965.455 us (1024bytes, 11M CCK modulation, long preamble) |
| State Saved | Yes |
| Min | 1.0 us |
| Max | 20.0 ms |
| Backwards Compatibility SCPI | <code>[:SENSe]:PVTime:BURSt:TIME <time></code> <code>[:SENSe]:PVTime:BURSt:TIME?</code> |

Ramp Time Length

This parameter indicates the searching window length from which the ramp on and down is searched. If it is set shorter than actual ramp time, the ramp may be lost.

| | |
|----------------|--|
| Remote Command | <code>[:SENSe]:PVTime:RSLength <time></code> <code>[:SENSe]:PVTime:RSLength?</code> |
| Example | <code>:PVT:RSL 1.0 ms</code> <code>:PVT:RSL?</code> |
| Preset | 15.0 us |
| State Saved | Yes |
| Min | 1.0 us |
| Max | 50.0 us |

IF Gain

In order to take full advantage of the RF dynamic range of the analyzer, we will offer a switched IF amplifier with approximately 10 dB of gain. When it can be turned on without an overload, the dynamic range is always better with it on than off. The control “IF Gain” can be used to set the IF Gain function to Auto, or to On (the extra 10 dB) or Off. These settings affect sensitivity and IF overloads.

Enables you to control an internally switched IF amplifier with approximately 10 dB of gain. This amplifier takes full advantage of the RF dynamic range of the analyzer. When it can be turned on without an overload, the dynamic range is always better when the amplifier is set to On, than when it is set to Off. The control “IF Gain” can be used to set the IF Gain function to Auto, or to On (the extra 10 dB) or Off. These settings affect sensitivity and IF overloads.

This only applies to the RF input. It does not apply to baseband I/Q input.

IF Gain Auto

Activates the auto rules for IF Gain.

| | |
|----------------|--|
| Remote Command | <code>[:SENSe]:PVTIme:IF:GAIN:AUTO[:STATe] OFF ON 0 1</code> <code>[:SENSe]:PVTIme:IF:GAIN:AUTO[:STATe]?</code> |
| Example | <code>:PVT:IF:GAIN:AUTO OFF</code> <code>:PVT:IF:GAIN:AUTO?</code> |
| Notes | This only applies to the RF input. It does not apply to baseband I/Q input |
| Dependencies | This control does not appear in UXM |
| Couplings | When either the auto attenuation works (for example, with the electrical attenuator) or optimize mechanical attenuator range is requested, the IF Gain setting is changed according to the following rule 'Auto' sets IF Gain to 'High Gain' under any of the following conditions: the input attenuator is set to 0 dB, the preamp is turned on, or the Max Mixer Level is -20 dBm or lower. For other settings, 'Auto' sets IF Gain to 'Low Gain' |
| Preset | OFF |
| State Saved | Yes |
| Range | Auto Man |

IF Gain State

Selects the range of IF gain.

| | |
|----------------|--|
| Remote Command | <code>[:SENSe]:PVTIme:IF:GAIN[:STATe] ON OFF 1 0</code> <code>[:SENSe]:PVTIme:IF:GAIN[:STATe]?</code> |
| Example | <code>:PVT:IF:GAIN OFF</code> <code>:PVT:IF:GAIN?</code> |
| Notes | Where ON = high gain OFF = low gain This only applies to the RF input. It does not apply to baseband I/Q input |
| Dependencies | This control does not appear in UXM |
| Couplings | When either the auto attenuation works (for example, with the electrical attenuator) or optimize mechanical attenuator range is requested, the IF Gain setting is changed according to the following rule 'Auto' sets IF Gain to 'High Gain' under any of the following conditions: the input attenuator is set to 0 dB, the preamp is turned on, or the Max Mixer Level is -20 dBm or lower. For other settings, 'Auto' sets IF Gain to 'Low Gain' |
| Preset | OFF |
| State Saved | Yes |
| Range | Low Gain High Gain |

Spur Avoidance

Because the VXT models M9410A/11A/15A are direct-conversion (zero-IF) receivers, feedthrough leakage from the local oscillator appears as a spurious signal (spur) at the center frequency. The Spur Avoidance function is provided to eliminate this spur, at the expense of some measurement speed.

When Spur Avoidance is enabled (the default), the analyzer uses a software algorithm to remove this spur from the displayed measurement data, but the algorithm only operates under certain conditions. Specifically, it only operates when the $BW \leq \max BW / 2.5$, see [More Information](#).

You can disable this function in order to speed up your measurement. When Spur Avoidance is turned Off, a warning message will appear in the status bar as "Settings Alert;Spur Avoidance Off". This is to alert you that measurement accuracy might be impacted because you have defeated the spur avoidance algorithm.

| | |
|----------------|--|
| Remote Command | <code>[:SENSe]:PVTIme:SAVoid[:STATe] ON OFF 0 1</code> <code>[:SENSe]:PVTIme:SAVoid[:STATe]?</code> |
| Example | <code>:PVT:SAV ON</code> <code>:PVT:SAV?</code> |
| Dependencies | This control only appears in VXT models M9410A/11A/15A |
| Preset | ON |

3 WLAN Mode
 3.8 Power vs Time Measurement

| | |
|-------------|---------------------------|
| State Saved | Saved in instrument state |
| Range | ON OFF |

More Information

Maximum digital IF BW is limited by both Option and Center frequency.

For VXT models M9410A/11A:

Bandwidth Option limitation:

| Option | Max Digital IF BW |
|--------|-------------------|
| B40 | 40 MHz |
| B3X | 300 MHz |
| B6X | 600 MHz |
| B12 | 1200 MHz |

Center frequency limitation:

| Center Frequency | Max Digital IF BW |
|--|-------------------------------|
| 330 MHz ~ 380 MHz | $(CF - 330 \text{ MHz}) * 2$ |
| 380 MHz ~ 550 MHz | 100 MHz |
| 550 MHz ~ 1310 MHz | 200 MHz |
| 1310 MHz ~ 2000 MHz (without Option EP6) | 600 MHz |
| 2000 MHz ~ 5480 MHz (without Option EP6) | 1200 MHz |
| 5480 MHz ~ 6080 MHz (without Option EP6) | $(6080 \text{ MHz} - CF) * 2$ |
| 1310 MHz ~ 1900 MHz (Option EP6) | 600 MHz |
| 1900 MHz ~ 6000 MHz (Option EP6) | 1200 MHz |
| 6000 MHz ~ 6600 MHz (Option EP6) | $(6600 \text{ MHz} - CF) * 2$ |

For VXT model M9415A:

Bandwidth Option limitation:

| Option | Max Digital IF BW |
|--------|-------------------|
| B4X | 400 MHz |
| B8X | 800 MHz |
| B12 | 1200 MHz |

Center frequency limitation:

| Center Frequency | Max Digital IF BW |
|-------------------|------------------------------|
| 330 MHz ~ 380 MHz | $(CF - 330 \text{ MHz}) * 2$ |
| 380 MHz ~ 550 MHz | 100 MHz |

| | |
|-----------------------|----------------------|
| 550 MHz ~ 1310 MHz | 200 MHz |
| 1310 MHz ~ 2000 MHz | 600 MHz |
| 2000 MHz ~ 12300 MHz | 1200 MHz |
| 12300 MHz ~ 12900 MHz | (12900 MHz - CF) * 2 |

Meas Setup Summary Table

The Meas Setup Summary Table lets you view and access many of the parameters in the Meas Setup menus on one screen.

Auto Couple

Immediately puts all **Auto/Man** functions into **Auto**. **Auto Couple** is confined to the current measurement only. It does not affect other measurements in the Mode.

In the **Auto** state, **Auto/Man** functions are said to be “coupled”, meaning their values change as you make changes to other values in the measurement. This helps ensure accurate measurements and optimum dynamic range. **Auto Couple** is an immediate action function, and when it is executed, all the **Auto/Man** controls for the current measurement are set to **Auto**, and all measurement settings coupled to the **Auto/Man** parameters are automatically set to their optimal values.

For further details of measurement-specific settings (if any), see "[Measurement-Specific Details](#)" on page 1393 below.

| | |
|-------------------------------|---|
| Remote Command | :COUPle ALL |
| Example | :COUP ALL |
| Backwards Compatibility SCPI | :COUPLE ALL NONE |
| Backwards Compatibility Notes | :COUP:NONE puts all Auto/Man parameters in manual mode, decoupling all the coupled instrument parameters. It is retained for backwards compatibility and is <i>not</i> recommended for making measurements or new designs |

All **Auto/Man** parameter couplings in the measurement are set to **Auto**. This includes couplings that may be unavailable or grayed-out due to the current state. For example, in the Swept SA measurement, there is no **Auto/Man** coupling for **RBW** while in Zero Span. Nonetheless, if **Auto Couple** were executed while in Zero Span, it would set **RBW** to Auto "behind the scenes" so that, on exit from Zero Span, it would be in **Auto**.

Any **Auto/Man** selection specific (local) to the other measurements in the current Mode are not affected by **Auto Couple**. Any functions that are *not* coupled with other

instrument parameters, such as ranging or leveling variables, such as **AutoRange** or **AutoScale**, are not affected.

Executing **Auto Couple** generates the informational message, "All Auto/Man functions have been set to Auto".

Each parameter, upon being set to **Auto**, selects and sets the appropriate auto-coupled value based on that parameter's coupling rules. The Dependency Resolver orchestrates the couplings for parameters that depend on one or more other parameters. The coupling and dependency rules for each parameter are defined in the section describing that parameter.

Executing **Auto Couple** *does not* affect markers, marker functions, trace or display attributes, or any other instrument setting other than those specifically mentioned above.

Measurement-Specific Details

TOI (SA Mode only)

Parameters affected by **Auto Couple** are:

- Center Frequency Step
- Resolution Bandwidth
- Span/RBW Ratio
- Sweep Time
- Video BANDwidth VBW/RBW ratio
- Upper and Lower Tone (set to Sense)
- Zero span measurement Resolution Bandwidth
- Zero span measurement Dwell Time

Harmonics (SA Mode only)

Parameters affected by **Auto Couple** are:

- Resolution Bandwidth
- Fundamental Frequency
- Dwell Time

- Range Table Resolution Bandwidths
- Range Table Dwell Times

Meas Preset

Restores all the measurement parameters to their default values.

| | |
|----------------|---|
| Remote Command | <code>:CONFigure:PVTime</code> |
| Example | <code>:CONF:PVT</code> |
| Couplings | Selecting Meas Preset restores all measurement parameters to these default values |

3.8.7.2 Radio

Contains controls to select Radio Standard and settings.

Radio Std

In this menu, 7 groups of WLAN standards can be selected:

1. 802.11a/b/g/j/p includes 802.11a/g/j/p, 802.11b/g, 802.11g DSSS-OFDM, 802.11j/p 10M, 802.11p 5M
2. 802.11n includes 802.11n 20MHz and 802.11n 40MHz
3. 802.11ac includes 802.11ac 20MHz, 802.11ac 40MHz, 802.11ac 80MHz, 802.11ac 80+80MHz and 802.11ac 160MHz
4. 802.11ah includes 802.11ah1MHz, 802.11ah2MHz, 802.11ah4MHz, 802.11ah 8MHz, and 802.11ah16MHz
5. 802.11af includes 802.11af 6MHz, 802.11af 7MHz and 802.11af 8MHz
6. 802.11ax includes 802.11ax 20MHz, 802.11ax 40MHz, 802.11ax 80MHz, 802.11ax 80+80MHz and 802.11ax 160MHz
7. 802.11be includes 802.11be 20MHz, 802.11be 40MHz, 802.11be 80MHz, 802.11be 160MHz and 802.11be 320MHz

Below each standard, parameters related to demodulation can be set, such as Modulation Format, Guard Interval, and so on.

| | |

|----------------|--|

3 WLAN Mode
3.8 Power vs Time Measurement

| | |
|-------------|---|
| | <code>[:SENSe] :RADio:STANdard [:WLAN] ?</code> |
| Example | <code>:RAD:STAN AG</code> <code>:RAD:STAN?</code> |
| Notes | If the command is sent with unsupported parameters, an error is generated “Settings conflict; option not installed” For IQ measurements (CCDF, Power vs Time, Spectral Flatness, IQ Waveform or Modulation Accuracy), they are also limited by BW Option installed. when any radio standard is selected in an IQ measurement which maximum BW could not meet this radio standard request, the “Invalid result; Wider BW required” message will be displayed, and the measurement should return invalid data: Enum value ACT80 means “AC Two 80MHz” (802.11ac 80+80 MHz) Enum value AXT80 means “AX Two 80MHz” (802.11ax 80+80 MHz) |
| Preset | AG |
| State Saved | Saved in instrument state |
| Range | 802.11a/g/j/p (OFDM 20M) 802.11b/g (DSSS/CCK/PBCC) 802.11g (DSSS-OFDM) 802.11n (20 MHz) 802.11n (40 MHz) 802.11ac (20 MHz) 802.11ac (40 MHz) 802.11ac (80 MHz) 802.11ac (80 + 80MHz) 802.11ac (160MHz) 802.11ah(1MHz) 802.11ah(2MHz) 802.11ah(4MHz) 802.11ah (8MHz) 802.11ah(16MHz) 802.11j/p (OFDM 10M) 802.11p (OFDM 5M) 802.11af (6MHz) 802.11af (7Mhz) 802.11af (8MHz) 802.11ax (20 MHz) 802.11ax (40 MHz) 802.11ax (80 MHz) 802.11ax (80 + 80MHz) 802.11ax (160MHz) 802.11be (20 MHz) 802.11be (40 MHz) 802.11be (80 MHz) 802.11be (160MHz) 802.11be (320MHz) |

3.8.7.3 Limits

Accesses the Limits menu that allows you to set up the test limit for channel power or power spectral density.

Max Ramp Up Time

It used as threshold which can judge whether the real measured ramp up time can be passed or not. If real measured ramp up time exceeds Max Ramp Up Time, then ramp up time measurement fails, otherwise, it passes.

| | |
|----------------|--|
| Remote Command | <code>:CALCulate:PVTime:LIMit:RUTime <time></code> <code>:CALCulate:PVTime:LIMit:RUTime?</code> |
| Example | <code>:CALC:PVT:LIM:RUT 2us</code> <code>:CALC:PVT:LIM:RUT?</code> |
| Preset | 2.0 us |
| State Saved | Yes |
| Min | 0.1 us |
| Max | 10.0 us |

Max Ramp Down Time

It used as threshold which can judge whether the real measured ramp down time can be passed or not. If real measured ramp down time exceeds Max Ramp Down Time, then ramp down time measurement fails, otherwise, it passes.

| | |
|----------------|--|
| Remote Command | <code>:CALCulate:PVTime:LIMit:RDTime <time></code> <code>:CALCulate:PVTime:LIMit:RDTime?</code> |
| Example | <code>:CALC:PVT:LIM:RDT 2us</code> <code>:CALC:PVT:LIM:RDT?</code> |
| Preset | 2.0 us |
| State Saved | Yes |
| Min | 0.1 us |
| Max | 10.0 us |

Fail

Specifies the fail condition of the limit for the ramp time.

- PowerUp Ramp - The measurement reports “FAIL” if the ramp up time exceeds the max ramp up time limit.
- Power Down Ramp - The measurement reports “FAIL” if the ramp down time exceeds the max ramp down time limit.
- Both - The measurement reports “FAIL” if both Up and Down fail.

| | |
|----------------|--|
| Remote Command | <code>:CALCulate:PVTime:FAIL UP DOWN BOTH</code> <code>:CALCulate:PVTime:FAIL?</code> |
| Example | <code>CALC:PVT:FAIL UP</code> <code>CALC:PVT:FAIL?</code> |
| Preset | BOTH |
| State Saved | Yes |
| Range | Up Down Both |

3.8.7.4 Threshold

Accesses the setup menu to set the thresholds used to find ramp up and ramp down part in burst signal.

Ramp Up Start Level

It specifies the relative value between ramp up start level and max power level measured in ramp time length.

| | |
|----------------|--|
| Remote Command | <code>[:SENSe]:PVTime:THReshold:UP:STARt <rel_amp1></code> <code>[:SENSe]:PVTime:THReshold:UP:STARt?</code> |
| Example | <code>:PVT:THR:UP:STAR -50.0</code> <code>:PVT:THR:UP:STAR?</code> |
| Preset | -20.00 dB |
| State Saved | Yes |
| Min | -120.00 dB |
| Max | 0.00 dB |

Ramp Up End Level

It specifies the relative value between ramp up end level and max power level measured in ramp time length.

| | |
|----------------|--|
| Remote Command | <code>[:SENSe]:PVTime:THReshold:UP:STOP <rel_amp1></code> <code>[:SENSe]:PVTime:THReshold:UP:STOP?</code> |
| Example | <code>:PVT:THR:UP:STOP -50.0</code> <code>:PVT:THR:UP:STOP?</code> |
| Preset | -0.915 dB |
| State Saved | Yes |
| Min | -120.00 dB |
| Max | 0.00 dB |

Ramp Down Start Level

It specifies the relative value between ramp down start level and max power level measured in ramp time length

| | |
|----------------|--|
| Remote Command | <code>[:SENSe]:PVTime:THReshold:DOWN:STARt <rel_amp1></code> <code>[:SENSe]:PVTime:THReshold:DOWN:STARt?</code> |
| Example | <code>:PVT:THR:DOWN:STAR -50.0</code> <code>:PVT:THR:DOWN:STAR?</code> |
| Preset | -0.915 dB |

| | |
|-------------|------------|
| State Saved | Yes |
| Min | -120.00 dB |
| Max | 0.00 dB |

Ramp Down End Level

It specifies the relative value between ramp down end level and max power level measured in ramp time length.

| | |
|----------------|---|
| Remote Command | <code>[:SENSe]:PVTIme:THReshold:DOWN:STOP <rel_aml></code> <code>[:SENSe]:PVTIme:THReshold:DOWN:STOP?</code> |
| Example | <code>:PVT:THR:DOWN:STOP -50.0</code> <code>:PVT:THR:DOWN:STOP?</code> |
| Preset | -20.00 dB |
| State Saved | Yes |
| Min | -120.00 dB |
| Max | 0.00 dB |

3.8.8 Sweep

The Sweep key contains controls which allow you to control the sweep and measurement functions of the analyzer, such as the sweep or measurement time and whether in Single sweep/measure or Continuous sweep/measure mode.

3.8.8.1 Sweep/Control

Accesses controls that let you operate the sweep and control functions of the instrument, such as **Sweep Time** and **Continuous/Single**.

Sweep/Measure

Lets you toggle between **Continuous** and **Single** sweep or measurement operation. The single/continuous state is Meas Global, so the setting affects all measurements.

The front-panel key **Single/Cont** performs exactly the same function

See "[More Information](#)" on page 1399

| | |
|----------------|--|
| Remote Command | <code>:INITiate:CONTInuous OFF ON 0 1</code> <code>:INITiate:CONTInuous?</code> |
| Example | Put instrument into Single measurement operation: |

| | |
|-------------------------------|---|
| | <pre>:INIT:CONT 0</pre> <pre>:INIT:CONT OFF</pre> <p>Put instrument into Continuous measurement operation:</p> <pre>:INIT:CONT 1</pre> <pre>:INIT:CONT ON</pre> |
| Preset | <p>ON</p> <p>Note that :SYST:PRES sets :INIT:CONT to ON, but *RST sets :INIT:CONT to OFF</p> |
| State Saved | Saved in instrument state |
| Annunciation | <p>The Single/Continuous icon in the Meas Bar changes depending on the setting:</p> <ul style="list-style-type: none"> - A line with an arrow is Single - A loop with an arrow is Continuous |
| Backwards Compatibility Notes | <p>X-Series A-models had Single and Cont hardkeys in place of the SweepSingleCont softkey. In the X-Series A-models, if in single measurement, the Cont hardkey (and INIT:CONT ON) switched to continuous measurement, but never restarted a measurement and never reset a sweep</p> <p>X-Series B-models have a Cont/Single toggle control instead of Single and Cont hardkeys, but it is still true that, if in single measurement, the Cont/Single toggle control never restarts a measurement and never resets a sweep</p> |

More Information

| | |
|-----------------|---|
| Continuous Mode | <p>The instrument takes repetitive sweeps, averages, measurements, etc., when in continuous mode. If in average or Max/Min Hold, and the average/hold count reaches the Average/Hold Num, the count stops incrementing, but the instrument keeps sweeping</p> <p>See the Trace key description under Trace Average for the averaging formula used both before and after the Average/Hold Num is reached. The trigger condition must be met prior to each sweep</p> <p>The type of trace processing for multiple sweeps is set under the Trace key, with choices of Trace Average, Max Hold, or Min Hold</p> |
| Single Mode | <p>The instrument takes a single sweep when in Single mode, or if in average or Max/Min Hold, or if there is a Waterfall window displayed, it takes multiple sweeps until the average/hold count reaches the Average/Hold Num, then the count stops incrementing, and the instrument stops sweeping</p> <p>See the Trace key description under Trace Average for the averaging formula used. The trigger condition must be met prior to the sweep</p> <p>The type of trace processing for multiple sweeps is set under the Trace key, with choices of Trace Average, Max Hold, or Min Hold</p> |

If the instrument is in **Single** measurement mode, pressing the **Cont/Single** toggle control does not zero the count and does not cause the sweep to be reset; the only action is to put the instrument into Continuous measurement operation.

If the instrument is already in **Continuous** sweep:

- `:INIT:CONT 1` has no effect
- `:INIT:CONT 0` places the instrument in Single Sweep but has no effect on the current sequence until $k = N$, at which point the current sequence will stop and the instrument will go to the idle state

See ["Restart" on page 1853](#) for details of `:INIT:IMMEDIATE`.

If the instrument is already in **Single** sweep, `:INIT:CONT OFF` has no effect.

If the instrument is already in **Single** sweep, then pressing **Cont/Single** in the middle of a sweep does not restart the sweep or sequence. Similarly, pressing **Cont/Single** does not restart the sweep or sequence if the sweep is not in the idle state (for example, if you are taking a very slow sweep, or the instrument is waiting for a trigger). Even though pressing **Cont/Single** in the middle of a sweep does not restart the sweep, sending `:INIT:IMM` does reset it.

If the instrument is in **Single** sweep, and *not* Averaging/Holding, and you want to take one more sweep, press **Restart**.

If the instrument is in **Single** sweep, *and* Averaging/Holding, and you want to take one more sweep without resetting the Average trace or count, go to **Meas Setup** and increment the average count by 1 by pressing the **Step-Up** key while **Average/Hold Num** is the active function. You can also do this by sending `:CALC:AVER:TCON UP`.

Restart

Restarts the current sweep, or measurement, or set of averaged/held sweeps or measurements. If you are Paused, pressing **Restart** performs a Resume.

The front-panel key **Restart** performs exactly the same function.

The **Restart** function is accessed in several ways:

- Pressing the **Restart** key
- Sending `:INIT:IMM`
- Sending `:INIT:REST`

See ["More Information" on page 1401](#)

| | |
|----------------|--|
| Remote Command | <code>:INITiate[:IMMEDIATE]</code> |
| Example | <code>:INIT:IMM</code> <code>:INIT:REST</code> |
| Notes | <code>:INIT:REST</code> and <code>:INIT:IMM</code> perform exactly the same function |

| | |
|-------------------------------|---|
| Couplings | Resets average/hold count k. For the first sweep overwrites all active (update = on) traces with new current data. For application modes, it resets other parameters as required by the measurement |
| Status Bits/OPC dependencies | This is an Overlapped command The STATUS:OPERation register bits 0 through 8 are cleared , <i>except</i> bit 6 (Waiting for Periodic Sync). Initiating a measurement and Waiting for Periodic Sync could be asynchronous The STATUS:QUESTionable register bit 9 (INTEGRity sum) is cleared The SWEEPING bit is set The MEASURING bit is set |
| Backwards Compatibility Notes | For Spectrum Analysis Mode in ESA and PSA, the Restart hardkey and the :INIT:REST command restarted trace averages (displayed average count reset to 1) for a trace in Clear Write , but did not restart Max Hold and Min Hold In X-Series, the Restart hardkey and the :INIT:REST command restart not only Trace Average , but MaxHold and MinHold traces as well |

More Information

The **Restart** function first aborts the current sweep or measurement as quickly as possible. It then resets the sweep and trigger systems, sets up the measurement and initiates a new data measurement sequence with a new data acquisition (sweep) taken once the trigger condition is met.

If the instrument is in the process of aligning when a **Restart** is executed, the alignment finishes before the restart function is performed.

Even when set for **Single** operation, multiple sweeps may be taken when **Restart** is pressed (for example, when averaging/holding is on). Thus, when we say that **Restart** "restarts a measurement", depending on the current settings, we may mean that it:

- Restarts the current sweep
- Restarts the current measurement
- Restarts the current set of sweeps if any trace is in Trace Average, Max Hold or Min Hold
- Restarts the current set of measurements if Averaging, or Max Hold, or Min Hold is on for the measurement

If there is no Average or Max/Min Hold function (no trace in Trace Average or Hold, or **Average/Hold Num** set to 1), and no **Waterfall** window is being displayed, a single sweep is equivalent to a single measurement. A single sweep is taken after the trigger condition is met; and the instrument stops sweeping once that sweep has completed. However, with **Average/Hold Num** >1, and at least one trace set to Trace Average, Max Hold, or Min Hold, or a **Waterfall** window being displayed, multiple sweeps/data acquisitions are taken for a single measurement. The trigger condition

must be met prior to each sweep. The sweep is stopped when the average count k equals the number N set for **Average/Hold Num**.

Once the full set of sweeps has been taken, the instrument goes to the idle state. To take one more sweep without resetting the average count, increment the average count by 1, by pressing the **Step-Up** key while **Average/Hold Number** is the active function, or by sending the remote command `:CALC:AVER:TCON UP`.

Trace Update

The numeric results are not blanked at any time during the restart cycle.

For slow sweeps (see **Trace Update** section in **Trace/Detector**), the traces are updated real-time during the sweep. There may be a special circumstance in application mode measurements where an exception is made and the traces and/or results need to be blanked before displaying the new results.

To summarize, the following list shows what happens to the trace data on various events:

| Event | Trace Effect |
|---|--|
| Clear/Write pressed (even if already in Clear/Write) | Set to mintracevalue |
| Max Hold pressed (even if already in Max Hold) | Set to mintracevalue |
| Min Hold pressed (even if already in Min Hold) | Set to maxtracevalue |
| Trace Average pressed (even if already in Trace Average) | Trace data unaffected but start new sweep/avg/hold |
| Restart pressed | Trace data unaffected but start new sweep/avg/hold |
| Parameter requiring restart changed (e.g., RBW) | Trace data unaffected but start new sweep/avg/hold |

Sweep and Trigger Reset

Resetting the sweep system resets the average/hold count k to 0. It also resets the set point counter to 0. Resetting the trigger system resets the internal auto trig timer to the value set by the **Auto Trig** control.

Averaging

The weighting factor used for averaging is k . This k is also the average/hold count for how many valid sweeps (data acquisitions) have been done. This k is used for comparisons with N , as those comparisons always needs to be based on valid completed sweeps.

The displayed average/hold, **K**, shows the count for the sweep (data acquisition) in progress. $K = k + 1$, with a limit of N. The displayed value **K** changes from its previous value to 1 as soon as the trigger condition for the first data acquisition (sweep) is met.

Pause/Resume

Pauses a measurement after the current data acquisition is complete.

When paused, the label on the control changes to **Resume**. Pressing **Resume** unpauses the measurement. When paused, pressing **Restart** performs a Resume.

| | |
|----------------|---|
| Remote Command | <code>:INITiate:PAUSE</code> <code>:INITiate:RESume</code> |
| Example | <code>:INIT:PAUS</code> <code>:INIT:RES</code> |
| Dependencies | Not displayed in Modes that do not support pausing |
| Annotation | Only on control |

3.8.8.2 X Scale

This tab accesses controls that enable you to configure the Sweep and Control functions of the analyzer, such as Sweep Rules.

Ref Value

Enables you to set the display X reference value.

| | |
|----------------|--|
| Remote Command | <code>:DISPlay:PVTtime:WINDow[1] 2 3:TRACe:X[:SCALE]:RLEVel <time></code> <code>:DISPlay:PVTtime:WINDow[1] 2 3:TRACe:X[:SCALE]:RLEVel?</code> |
| | Window numbers are as follows: Burst: 1 Rise: 2 Fall: 3 |
| Example | <code>:DISP:PVT:WIND:TRACE:X:RLEV 1s</code> 1-Burst for Transmit On/Off Power <code>:DISP:PVT:WIND:TRACE:X:RLEV?</code> 1-Burst for Transmit On/Off Power <code>:DISP:PVT:WIND2:TRAC:X:RLEV 1s</code> 2-Rise for Transmit On/Off Power <code>:DISP:PVT:WIND3:TRAC:X:RLEV 1s</code> |

| | |
|-------------|---|
| | 3-Fall for Transmit On/Off Power |
| Couplings | If X Auto Scaling is On, this value is automatically determined by the measurement result. When you set a value manually, X Auto Scaling automatically changes to Off. |
| Preset | -100us Because PVT measurement applies 100us margins at the left and right sides. To reduce the 100us wrong understanding, modify the default value from 0s to -100us to make the start time of trigger point at 0s. |
| State Saved | Saved in instrument state. |
| Min | -10.0 s |
| Max | 10.0s |
| Annotation | <value> s bottom left of graph |

Backwards Compatibility SCPI

Window Numbers used to be a combination of View and Window, now the VIEW parameter is not used and defaults to 1. All Windows are referenced through VIEW1. For backwards compatibility the old View and Window numbers are honored as below:

| Window | Old SCPI Command | New SCPI Command |
|-------------|---------------------------------------|---------------------------------|
| PVT - Burst | :DISP:PVT:VIEW[1]:WIND:TRAC:X:RLEV 1s | DISP:PVT:WIND[1]:TRAC:X:RLEV 1s |
| PVT - Rise | :DISP:PVT:VIEW2:WIND:TRAC:X:RLEV 1s | DISP:PVT:WIND2:TRAC:X:RLEV 1s |
| PVT - Fall | :DISP:PVT:VIEW2:WIND2:TRAC:X:RLEV 1s | DISP:PVT:WIND3:TRAC:X:RLEV 1s |

Scale/Div

Enables you to set the display X scale/division value.

| | |
|----------------|---|
| Remote Command | <code>:DISPlay:PVT:ime:WINDow[1] 2 3:TRACe:X[:SCALE]:PDIVision <time></code> <code>:DISPlay:PVT:ime:WINDow[1] 2 3:TRACe:X[:SCALE]:PDIVision?</code> |
| | Window numbers are as follows: Burst: 1 Rise: 2 Fall: 3 |
| Example | <code>:DISP:PVT:WIND:TRACE:X:PDIV 1ms</code> 1-Burst for Transmit On/Off Power <code>:DISP:PVT:WIND:TRACE:X:PDIV?</code> 1-Burst for Transmit On/Off Power <code>:DISP:PVT:WIND2:TRAC:X:PDIV 1ms</code> |

3 WLAN Mode
3.8 Power vs Time Measurement

| | |
|-------------|--|
| | 2-Rise for Transmit On/Off Power :DISP:PVT:WIND3:TRAC:X:PDIV 1ms |
| | 3-Fall for Transmit On/Off Power |
| Couplings | If X Auto Scaling is On, this value is automatically determined by the measurement result. When you set a value manually, X Auto Scaling automatically changes to Off. |
| Preset | 4 ms |
| State Saved | Saved in instrument state. |
| Min | 1.00 ns |
| Max | 1.0 s |

Backwards Compatibility SCPI

Window Numbers used to be a combination of View and Window, now the VIEW parameter is not used and defaults to 1. All Windows are referenced through VIEW1. For backwards compatibility the old View and Window numbers are honored as below:

| Window | Old SCPI Command | New SCPI Command |
|-------------|--|-----------------------------------|
| PVT - Burst | :DISP:PVT:VIEW[1]:WIND:TRAC:X:PDIV 1ms | :DISP:PVT:WIND[1]:TRAC:X:PDIV 1ms |
| PVT - Rise | :DISP:PVT:VIEW2:WIND:TRAC:X:PDIV 1ms | :DISP:PVT:WIND2:TRAC:X:PDIV 1ms |
| PVT - Fall | :DISP:PVT:VIEW2:WIND2:TRAC:X:PDIV 1ms | :DISP:PVT:WIND3:TRAC:X:PDIV 1ms |

Ref Position

Sets the reference position for the X axis to Left, Center or Right.

| | |
|----------------|---|
| Remote Command | :DISPlay:PVT:ime:WINDow[1] 2 3:TRACe:X[:SCALE]:RPOSition LEFT CENTER RIGHT :DISPlay:PVT:ime:WINDow[1] 2 3:TRACe:X[:SCALE]:RPOSition? |
|----------------|---|

Window numbers are as follows:

- Burst: 1
- Rise: 2
- Fall: 3

| | |
|---------|--|
| Example | :DISP:PVT:WIND:TRACE:X:RPOS LEFT 1-Burst for Transmit On/Off Power :DISP:PVT:WIND:TRACE:X:RPOS? 1-Burst for Transmit On/Off Power :DISP:PVT:WIND2:TRAC:X:RPOS LEFT 2-Rise for Transmit On/Off Power |
|---------|--|

| | |
|-------------|--|
| | <code>:DISP:PVT:WIND3:TRAC:X:RPOS RIGHT</code> |
| | 3-Fall for Transmit On/Off Power |
| Preset | CENter |
| State Saved | Yes Saved in instrument state. |
| Range | Left Ctr Right |

Backwards Compatibility SCPI

Window Numbers used to be a combination of View and Window, now the VIEW parameter is not used and defaults to 1. All Windows are referenced through VIEW1. For backwards compatibility the old View and Window numbers are honored as below:

| Window | Old SCPI Command | New SCPI Command |
|-------------|--|---|
| PVT - Burst | <code>:DISP:PVT:VIEW[1]:WIND:TRAC:X:RPOS LEFT</code> | <code>:DISP:PVT:WIND[1]:TRAC:X:RPOS LEFT</code> |
| PVT - Rise | <code>:DISP:PVT:VIEW2:WIND:TRAC:X:RPOS LEFT</code> | <code>DISP:PVT:WIND2:TRAC:X:RPOS LEFT</code> |
| PVT - Fall | <code>:DISP:PVT:VIEW2:WIND2:TRAC:X:RPOS LEFT</code> | <code>DISP:PVT:WIND3:TRAC:X:RPOS LEFT</code> |

Auto Scaling

Toggles the scale coupling function between On and Off.

| | |
|----------------|--|
| Remote Command | <code>:DISPlay:PVTime:WINDow[1] 2 3:TRACe:X[:SCALE]:COUPle 0 1 OFF ON</code> <code>:DISPlay:PVTime:WINDow[1] 2 3:TRACe:X[:SCALE]:COUPle?</code> |
| | Window numbers are as follows: Burst: 1 Rise: 2 Fall: 3 |
| Example | <code>:DISP:PVT:WIND:TRAC:X:COUP OFF</code> 1-Burst for Transmit On/Off Power <code>:DISP:PVT:WIND:TRAC:X:COUP?</code> 1-Burst for Transmit On/Off Power <code>:DISP:PVT:WIND2:TRAC:X:COUP OFF</code> 2-Rise for Transmit On/Off Power <code>:DISP:PVT:WIND3:TRAC:X:COUP ON</code> 3-Fall for Transmit On/Off Power |

3 WLAN Mode
3.8 Power vs Time Measurement

| | |
|-------------|--|
| Couplings | When Auto Scaling is On and the Restart front-panel key is pressed, this function automatically determines the scale per division and reference values based on the measurement results. When you set a value to either Scale/Div or Ref Value manually, Auto Scaling automatically changes to Off. |
| Preset | ON |
| State Saved | Saved in instrument state. |

Backwards Compatibility SCPI

Window Numbers used to be a combination of View and Window, now the VIEW parameter is not used and defaults to 1. All Windows are referenced through VIEW1. For backwards compatibility the old View and Window numbers are honored as below:

| Window | Old SCPI Command | New SCPI Command |
|-------------|---|-------------------------------------|
| PVT - Burst | :DISP:PVT:VIEW[1]:WIND:TRAC:X:COUP OFF | :DISP:PVT:WIND[1]:TRAC:X:COUP ON |
| PVT - Rise | :DISP:PVT:VIEW2:WIND:TRAC:X:COUP OFF | :DISP:PVT:WIND2:TRAC:X:COUP ON |
| PVT - Fall | :DISP:PVT:VIEW2:WIND2:TRAC:X:COUP OFF | :DISP:PVT:WIND3:TRAC:X:COUP ON |

3.8.9 Trace

The **Trace** menu lets you control the acquisition, display, storage, detection and manipulation of trace data for the available traces.

3.8.9.1 Trace Control

Max Hold Trace

This key allows you to make the Max Hold Trace visible or invisible in the display.

| | |
|----------------|--|
| Remote Command | :DISPlay:PVTiMe:VIEW[1]:WINDow[1]:TRACe:MAXHold[:STATe] ON OFF 1 0 :DISPlay:PVTiMe:VIEW[1]:WINDow[1]:TRACe:MAXHold[:STATe]? |
| Example | :DISP:PVT:VIEW:WIND:TRAC:MAXH ON :DISP:PVT:VIEW:WIND:TRAC:MAXH? |
| Preset | OFF |
| State Saved | Yes |
| Range | On Off |

Min Hold Trace

This key allows you to make the Min Hold Trace visible or invisible in the display.

| | |
|----------------|--|
| Remote Command | <code>:DISPlay:PVTiMe:VIEW[1]:WINDow[1]:TRACe:MINHold[:STATe] ON OFF 1 0</code> <code>:DISPlay:PVTiMe:VIEW[1]:WINDow[1]:TRACe:MINHold[:STATe]?</code> |
| Example | <code>:DISP:PVT:VIEW:WIND:TRAC:MINH ON</code> <code>:DISP:PVT:VIEW:WIND:TRAC:MINH?</code> |
| Preset | OFF |
| State Saved | Yes |
| Range | On Off |

3.9 Spectral Flatness Measurement

Variation in carrier flatness of OFDM signals in IEEE 802.11a/g/n/ac/ah/ax will reduce demodulation margins and degrade link performance.

The spectral flatness measurement applies to test carrier flatness of OFDM signals in IEEE Std 802.11a-1999(R2003), IEEE Std 802.11g-2003, IEEE Std 802.11n-2009, IEEE P802.11ac™/D1.1, IEEE P802.11ah™/D0.2, IEEE Std 802.11ax D1.0, IEEE Std 802.11be D0.2.

Measurement Algorithm

For 802.11a and 802.11g-ERP-OFDM and 802.11g-DSSS-OFDM: The spectrum flatness measurement measures energy flatness of sub-carriers in OFDM system. The average energy of the constellations in each of the spectral lines $-16 \dots -1$ and $+1 \dots +16$ will deviate no more than ± 2 dB from their average energy. The average energy of the constellations in each of the spectral lines $-26 \dots -17$ and $+17 \dots +26$ will deviate no more than $+2/-4$ dB from the average energy of spectral lines $-16 \dots -1$ and $+1 \dots +16$. The average energy can be computed by averaging energy on the sub-carriers from -16 to 16 . Please note, zero sub-carrier is not included in this computation phase.

For 802.11n in a 20 MHz channel and in corresponding 20 MHz transmission in a 40 MHz channel, the average energy of the constellations in each of the subcarriers with indices -16 to -1 and $+1$ to $+16$ shall deviate no more than ± 2 dB from their average energy. The average energy of the constellations in each of the subcarriers with indices -28 to -17 and $+17$ to $+28$ shall deviate no more than $+2/-4$ dB from the average energy of subcarriers with indices -16 to -1 and $+1$ to $+16$.

In a 40 MHz transmission (excluding PPDU in MCS 32 format and non-HT duplicate format) the average

energy of the constellations in each of the subcarriers with indices -42 to -2 and $+2$ to $+42$ shall deviate no

more than ± 2 dB from their average energy. The average energy of the constellations in each of the subcarriers with indices -43 to -58 and $+43$ to $+58$ shall deviate no more than $+2/-4$ dB from the average energy of subcarriers with indices -42 to -2 and $+2$ to $+42$.

In MCS 32 format and non-HT duplicate format the average energy of the constellations in each of the subcarriers with indices -42 to -33 , -31 to -6 , $+6$ to $+31$, and $+33$ to $+42$ shall deviate no more than ± 2 dB from

their average energy. The average energy of the constellations in each of the subcarriers with indices -43 to

-58 and +43 to +58 shall deviate no more than +2/-4 dB from the average energy of subcarriers with indices

-42 to -33, -31 to -6, +6 to +31, and +33 to +42.

The following table defined the Section 1, Section 2 and corresponding limits for each standard:

| | Section 1, +2/-2 dB limit | Section 2, +2/-4 dB limit |
|---|---|----------------------------------|
| 802.11a/g | -16 to -1 and +1 to +16 | -26 to -17 and +17 to +26 |
| 802.11n 20MHz Legacy | -16 to -1 and +1 to +16 | -26 to -17 and +17 to +26 |
| 802.11n 20MHz Mixed & Green Field Mode | -16 to -1 and +1 to +16 | -28 to -17 and +17 to +28 |
| 802.11n 40MHz Mixed & Green Field Mode | -42 to -2 and +2 to +42 | -43 to -58 and +43 to +58 |
| 802.11n 40MHz Legacy Mode (<=> Non-HT Duplicate Format) | -42 to -33, -31 to -6 and +6 to +31, +33 to +42 | -43 to -58 and +43 to +58 |
| 802.11n 40MHz MCS 32 Format | -42 to -33, -31 to -6 and +6 to +31, +33 to +42 | -43 to -58 and +43 to +58 |

The following table defined the Section 1, Section 2 and corresponding limits for 802.11ac standard:

| BandWith | Section 1 | Limit for Section 1 | Section 2, +4/-6 dB limit | Limit for Section |
|------------------------|--|----------------------------|---|--------------------------|
| 20MHz | -16 to -1 and +1 to +16 | +4/-4 dB | -28 to -17 and +17 to +28 | +4/-6 dB |
| 40MHz | -42 to -2 and +2 to +42 | +4/-4 dB | -43 to -58 and +43 to +58 | +4/-6 dB |
| 80MHz | -84 to -2 and +2 to +84 | +4/-4 dB | -122 to -85 and +85 to +122 | +4/-6 dB |
| 160MHz | -250 to -6 and +6 to +250 | +4/-6 | | |
| 40MHz Non-HT Duplicate | -42 to -33, -31 to -6, +6 to +31, and +33 to +42 | +4/-4 dB | -43 to -58 and +43 to +58 | +4/-6 dB |
| 80MHz Non-HT Duplicate | -84 to -70, -58 to -33, -31 to -6, +6 to +31, +33 to +58, +70 to +84 | +4/-4 dB | -122 to -97, -95 to -85 and +85 to +95, +97 to +122 | +4/-6 dB |

3 WLAN Mode
3.9 Spectral Flatness Measurement

The following tables defined the Section 1, Section 2 and corresponding limits for 802.11ah standard:

1. Normal mode S1G

| BandWith | Section 1 | Limit for Section 1 | Section 2, +/-6 dB limit | Limit for Section |
|----------|---------------------------|---------------------|-----------------------------|-------------------|
| 1MHz | -8 to -1 and +1 to +8 | +4/-4 dB | -13 to -9 and +9 to +13 | +4/-6 dB |
| 2MHz | -16 to -1 and +1 to +16 | +4/-4 dB | -28 to -17 and +17 to +28 | +4/-6 dB |
| 4MHz | -42 to -2 and +2 to +42 | +4/-4 dB | -58 to -43 and +43 to +58 | +4/-6 dB |
| 8MHz | -84 to -2 and +2 to +84 | +4/-4 dB | -122 to -85 and +85 to +122 | +4/-6 dB |
| 16MHz | -250 to -6 and +6 to +250 | +4/-6 | | |

2. 1MHz Duplicate mode

| BandWith | Section 1 | Limit for Section 1 | Section 2, +/-6 dB limit | Limit for Section |
|----------|--|---------------------|--|-------------------|
| 2MHz | -15 to -3 and +3 to +15 | +4/-4 dB | -29 to -17 and +17 to +29 | +4/-4 dB |
| 4MHz | -42 to -35, -29 to -17, -15 to -3, +3 to +15, +17 to +29, and +35 to +42 | +4/-4 dB | -61 to -49, -47 to -43, +43 to +47, and +49 to +61 | +4/-6 dB |
| 8MHz | -84 to -81, -79 to -67, -61 to -49, -47 to -35, -29 to -17, -15 to -3, +3 to +15, +17 to +29, +35 to +47, +49 to +61, +67 to +79, and +81 to +84 | +4/-4 dB | -125 to -113, -111 to -99, -93 to -85, +85 to +93, +99 to +111, and +113 to +125 | +4/-6 dB |
| 16MHz | -253 to -6 and +6 to +253 | +4/-6 | | |

3. 2MHz Duplicate mode

| BandWith | Section 1 | Limit for Section 1 | Section 2, +4/-6 dB limit | Limit for Section |
|----------|--|---------------------|--|-------------------|
| | | +4/-4 dB | | +4/-6 dB |
| 4MHz | -42 to -33, -31 to -6, +6 to +31, +33 to +42 | | -58 to -43 and +43 to +58 | |
| 8MHz | -84 to -70, -58 to -33, -31 to -6, +6 to +31, +33 to +58, +70 to +84 | +4/-4 dB | -122 to -97, -95 to -85, +85 to +95, +97 to +122 | +4/-6 dB |
| 16MHz | -250 to -6 and +6 to +250 | +4/-6 | | |

The following table defined the Section 1, Section 2 and corresponding limits for 802.11ax standard:

| BandWith | Section 1 | Limit for Section 1 | Section 2, +4/-6 dB limit | Limit for Section 2 |
|----------|--|---------------------|---|---------------------|
| 20MHz | -84 to -2 and +2 to +84 | +4/-4 dB | -122 to -85 and +85 to +122 | +4/-6 dB |
| | | +4/-4 dB | | +4/-6 dB |
| 40MHz | -168 to -3 and +3 to +168 | | -244 to -169 and +169 to +244 | |
| 80MHz | -344 to -3 and +3 to +344 | +4/-4 dB | -500 to -345 and +345 to +500 | +4/-6 dB |
| 160MHz | -696 to -515, -509 to -166, +166 to +509, and +515 to +696 | +4/-4dB | -1012 to -697, -165 to -12, +12 to +165 and +697 to +1012 | +4/-6 dB |

The following table defined the Section 1, Section 2 and corresponding limits for 802.11be standard:

| BandWith | Section | Limit for Section 1 without preamble puncturing | Limit for Section 2 without preamble puncturing |
|----------|--|---|---|
| 20MHz | -84 to -2 and +2 to +84 | +4/-4 dB | N/A |
| | -122 to -85 and +85 to +122 | +4/-6 dB | N/A |
| 40MHz | -168 to -3 and +3 to +168 | +4/-4 dB | N/A |
| | 244 to -169 and +169 to +244 | +4/-6 dB | N/A |
| 80MHz | -344 to -3 and +3 to +344 | +4/-4 dB | +4/-6 dB |
| | -500 to -345 and +345 to +500 | +4/-6 dB | +4/-6 dB |
| 160MHz | -696 to -515, -509 to -12, +12 to +509, and +515 to +696 | +4/-4dB | +4/-6 dB |

| BandWith | Section | Limit for Section 1 without preamble puncturing | Limit for Section 2 without preamble puncturing |
|----------|--|---|---|
| 320MHz | -1012 to -697 and +697 to +1012 | +4/-6 dB | +4/-6 dB |
| | -1400 to -1036, -1012 to -515, -509 to -12, +12 to +509, +515 to +1012, and +1036 to +1400 | +4/-4 dB | +4/-6 dB |
| | -2036 to -1539, -1533 to -1401, +1401 to +1533, and +1539 to +2036 | +4/-6 dB | +4/-6 dB |

Spectral Flatness Measurement Commands

The following commands are used to retrieve the measurement results:

```
:CONFigure:FLATness
:INITiate:FLATness
:FETCh:FLATness[n]?
:READ:FLATness[n]?
:MEASure:FLATness[n]?
```

Remote Command Results for Spectral Flatness Measurement

The following table displays the returned results from the (FETCh|MEASure|READ):FLAT commands, indexed by subopcode:

| Index n | Results Returned |
|------------------------|---|
| 0 | Returns unprocessed I/Q trace data, as a series of comma-separated trace points, in volts. The I values are listed first in each pair, using the 0 through even-indexed values. The Q values are the odd-indexed values. |
| not specified or n = 1 | Returns comma-separated scalar results, in the following order: <ol style="list-style-type: none"> 1. Return maximum peak energy deviation within all active sub-carriers. Different standard has different number of sub-carriers. Please refer to section 2.2, Measurement Algorithm. 2. Return PASS/FAIL (1:Fail, 0: Pass) 3. Return signal format; (each number represets one radio format, i.e, 8 represents 802.11ac 20M) <ul style="list-style-type: none"> 0: 802.11a/g; 1: 802.11n 20MHz Non-HT 2: 802.11n 20MHz HT-greenfield 3: 802.11n 20MHz HT-Mixed |

3 WLAN Mode
3.9 Spectral Flatness Measurement

| Index n | Results Returned |
|---------|---|
| 2 | Return float values which stand for the energy deviations of each spectral lines. The exact number of values refers to section 2.2, Measurement Algorithm. |
| 3 | Return Spectral Flatness results of each section – summary data for spectral flatness results of each section: <ol style="list-style-type: none">1. Max Subcarrier Flatness Value (dB) in section 1 – a floating point number in dB.2. Max Subcarrier Flatness Value to Upper Limit 1 (dB) – a floating point number in dB.3. Max Subcarrier Flatness Index for section 1 – an integer number4. Min Subcarrier Flatness Value (dB) in section 1 – a floating point number in dB.5. Min Subcarrier Flatness Value to Lower Limit 1 (dB) – a floating point number in dB.6. Min Subcarrier Flatness Index for section 1 – an integer number7. Max Subcarrier Flatness Value (dB) in section 2 – a floating point number in dB.8. Max Subcarrier Flatness Value to Upper Limit 2 (dB) – a floating point number in dB.9. Max Subcarrier Flatness Index for section 2 – an integer number10. Min Subcarrier Flatness Value (dB) in section 2 – a floating point number in dB.11. Min Subcarrier Flatness Value to Lower Limit 2 (dB) – a floating point number in dB.12. Min Subcarrier Flatness Index for section 2 – an integer number |

Selects the Spectral Flatness measurement.

3.9.1 Views

The Spectral Flatness measurement has only 1 view as follows.

Whenever the View changes, the default menu is Frequency.

| | |
|--------|---------|
| View | Window |
| Normal | Trace |
| | Metrics |

1. Trace: it's a Graphic window. There are 3 traces in this graph, Upper Limit, Lower Limit and Flatness trace. Limit Traces will not include the unused subcarriers, like #0 subcarrier in 802.11a. Flatness Trace will be combined by several blue points which indicates the position of subcarriers. If all the blue points fall between the limit lines, measurement will pass.

2. Metric: it's a window displaying the measured value of the subcarriers. The delta between this subcarrier value and relative upper limit value, and the index of this subcarrier, also an indicator "P/F" will be shown at the end to help judge if this extreme value can meet the limit check. The Section 1 and Section 2, please find the definitions in Measurement Algorithm. "Max Point to Upper Limit" means the maximum value measured in this measurement. "Min Point to Lower Limit" is very like the Max one, only the delta value will be calculated between the minimum value and lower limit value.

3.9.2 Windows

The following windows are available in the Spectral Flatness measurement.

| Window | Number |
|---------|--------|
| Trace | 1 |
| Metrics | 2 |

3.9.2.1 Trace

The Trace window appears in the following View:

| View | Size | Position |
|---------------------|--------------------------------|----------|
| Normal | Half, full Width | Upper |
| Marker Operation | Yes | |
| Corresponding Trace | Corrected measured trace (n=1) | |

3.9.2.2 Metrics

The Graphic window appears in the following View:

| View | Size | Position |
|---------------------|------------------|----------|
| Metrics | Half, full Width | Lower |
| Marker Operation | | No |
| Corresponding Trace | | |

3.9.3 Amplitude

The Amplitude front-panel key activates the Amplitude menu and selects Reference Value as the active function.

3.9.3.1 Y Scale

Contains controls that pertain to the Y axis parameters of the measurement. These parameters control how data on the vertical (Y) axis is displayed and control instrument settings that affect the vertical axis.

Ref Value

Controls the Ref value of the selected trace at the chosen Reference Position.

| | |
|----------------|---|
| Remote Command | <code>:DISPlay:FLATness:WINDow[1]:TRACe:Y[:SCALe]:RLEVel <real></code> |
| Example | <code>:DISP:FLAT:WIND:TRAC:Y:RLEV 1</code> <code>:DISP:FLAT:WIND:TRAC:Y:RLEV?</code> |
| Couplings | If Auto Scaling is On, this value is automatically determined by the measurement result. When a value is set manually, Auto Scaling is automatically set to Off. |
| Preset | If Radio Std is 802.11a/g-ERP-OFDM/g-DSSS-OFDM: -26 Carr If Radio Std is 802.11n 20MHz: -28 Carr If Radio Std is 802.11n 40MHz: -58 Carr If Radio Std is 802.11ac 20MHz: -28 Carr If Radio Std is 802.11ac 40MHz: -58 Carr If Radio Std is 802.11ac 80MHz: -122 Carr If Radio Std is 802.11ac 160M: -250 Carr If Radio Std is 802.11ah 1MHz: -13 Carr If Radio Std is 802.11ah 2MHz: -28 Carr If Radio Std is 802.11ah 4MHz: -58 Carr If Radio Std is 802.11ah 8MHz: -122 Carr If Radio Std is 802.11ah 16MHz: -250 Carr If Radio Std is 802.11ax 20MHz: -122 Carr If Radio Std is 802.11ax 40MHz: -244 Carr If Radio Std is 802.11ax 80MHz: -500 Carr If Radio Std is 802.11ax 160M: -1012 Carr If Radio Std is 802.11be 20MHz: -122 Carr If Radio Std is 802.11be 40MHz: -244 Carr |

| | |

| Min/Max | 0.1 carriers /51.2 carriers |

Ref Position

Sets the reference position for the Y axis to the left, center, or right of the display.

| | |
|----------------|---|
| Remote Command | <code>:DISPlay:FLATness:WINDow[1]:TRACe:Y[:SCALe]:RPOSition LEFT CENTer RIGHT</code> <code>:DISPlay:FLATness:WINDow[1]:TRACe:Y[:SCALe]:RPOSition?</code> |
| Example | <code>:DISP:FLAT:WIND:TRAC:Y:RPOS LEFT</code> <code>:DISP:FLAT:WIND:TRAC:Y:RPOS?</code> |

| | |
|-------------|--|
| Couplings | If Auto Scaling is set to On, the X Reference Position is determined by the trace data and this key is grayed out. |
| Preset | LEFT |
| State Saved | Saved in instrument state. |
| Range | Left Ctrl Right |

Auto Scaling

Toggles the scale coupling function between On and Off.

| | |
|----------------|---|
| Remote Command | <code>:DISPlay:FLATness:WINDow[1]:TRACe:Y[:SCALe]:COUPle 0 1 OFF ON</code> <code>:DISPlay:FLATness:WINDow[1]:TRACe:y[:SCALe]:COUPle?</code> |
| Example | <code>:DISP:FLAT:WIND:TRAC:Y:COUP ON</code> <code>:DISP:FLAT:WIND:TRAC:Y:COUP?</code> |
| Couplings | When this parameter is set to On, pressing the front-panel Restart key activates the scale coupling function, that automatically determines scale per division and reference values based on the measurement results. When you set a value to either Scale/Div or Ref Value manually, Auto Scaling is automatically set to Off. |
| Preset | ON |
| State Saved | Saved in instrument state. |
| Range | On Off |

3.9.3.2 Attenuation

Controls the attenuator functions and interactions between the attenuation system components.

There are two attenuator configurations in the X-Series. One is a Dual-Attenuator configuration consisting of a mechanical attenuator and an optional electronic attenuator. The other configuration uses a single attenuator with combined mechanical and electronic sections that controls all the attenuation functions. Different models in the X-Series come with different configurations.

- See ["Dual-Attenuator Configurations" on page 1420](#)
- See ["Single-Attenuator Configuration" on page 1420](#)

Most attenuation settings are the same for all measurements – they do not change as you change measurements. Settings like these are called “Meas Global” and are unaffected by **Meas Preset**.

Only available when the hardware set includes an input attenuator, which is typically only the case for Keysight’s benchtop instruments. For example, this tab does *not* appear in VXT models M9420A/10A/11A/15A/16A, M9410E/11E/15E/16E, nor in

UXM. In UXM, all **Attenuation** and **Range** settings are disabled, as the expected input power level is handled by the Call Processing App that drives the DUT power control.

Dependencies In measurements that support the I/Q inputs, unavailable when I/Q is the selected input. Replaced by the **Range** tab in that case

Dual-Attenuator Configurations

Configuration 1: Mechanical attenuator + optional electronic attenuator

Configuration 2: Mechanical attenuator, no optional electronic attenuator

Note that Configuration 2 is not strictly speaking a dual-section attenuator, since there is no electronic section available. However, it behaves exactly like Configuration 1 without the Electronic Attenuator Option EA3, therefore for the sake of this document it is grouped into the “Dual-Attenuator” configuration.

Single-Attenuator Configuration

You can tell which attenuator configuration you have by pressing the Attenuation tab, which (in most Modes) opens the Attenuation menu. If the first control in the

Attenuation menu says **Mech Atten** you have the Dual-Attenuator configuration. If the first control says **Atten** you have the Single-Attenuator configuration.

(Note that depending on the measurement, there may be no Auto/Man functionality on the Mech Atten control.)

In the Single-Attenuator configuration, you control the attenuation with a single control, as the fixed stage has only two states. In the Dual-Attenuator configuration, both stages have significant range, so you are given separate control of the mechanical and electronic attenuator stages.

When you have the Dual-Attenuator configuration, you may still have only a Single-Attenuator, because unless Option EA3 (the Electronic Attenuator option) is available, and you purchase it, you will have only the mechanical attenuator.

Full Range Atten

This control and **Attenuator Summary** only appear in N9041B, when the RF input is selected, the RF Input Port is set to RF Input 2, and the Full Range Attenuator is installed. The Full Range Attenuator adds a second input attenuator in front of RF Input 2, which enhances the protection and optimizes the performance of the extra internal mixers used by RF Input 2.

| | |
|----------------|---|
| Remote Command | <code>[:SENSe]:POWer[:RF]:FRATten <rel_amp1></code> <code>[:SENSe]:POWer[:RF]:FRATten?</code> |
| Example | <code>:POW:FRAT 14</code> <code>:POW:FRAT?</code> |
| Notes | When you enter an amplitude value that falls between valid values, the value will be incremented to the next smallest valid value |
| Dependencies | Only appears if input RF is selected, RF Input Port 2 is selected, and the Full Range Attenuator exists |
| Couplings | This value is never changed by any coupling, but other couplings use this value. See Reference Level and " Mech Atten " on page 1753 command descriptions |
| Preset | 20 dB |
| State Saved | Saved in instrument state |
| Min | 0 dB |

| | |
|------------|---|
| Max | Only valid values are 0, 6, 14, 20 dB |
| Annotation | <p>When the Input is RF, and the Input Port is RF Input 2, and the Full Range Attenuator is installed: On the Meas Bar, the field “Atten” displays as follows:</p> <ul style="list-style-type: none"> - If the sweep is entirely < 50 GHz, the value shown after “Atten:” is equal to Mech Atten + Elec Atten + Full Range Atten - If the sweep is entirely > 50 GHz, the value shown after “Atten:” is equal to Full Range Atten - If the sweep straddles 50 GHz, the value shown after “Atten:” is preceded by the symbol “>=” and is equal to Full Range Atten <p>In the Amplitude, "Y Scale" on page 1745 menu, and the Atten Meas Bar dropdown menu panel, a summary is displayed as follows: “Total Atten below 50 GHz” followed by the value of Full Range Atten + Mech Atten + Elec Atten “Total Atten above 50 GHz” followed by the value of Full Range Atten For example, if Mech Atten = 6 dB, Elec Atten = 4 dB, and Full Range Atten = 20 dB, the summary below is shown:</p> <ul style="list-style-type: none"> - Attenuator summary: - Total Atten below 50 GHz: 30 dB - Total Atten above 50 GHz: 20 dB |

Mech Atten

Labeled **Mech Atten** in Dual-Attenuator models, and **Atten** in Single-Attenuator models. In the Dual-Attenuator configuration, this control only affects the mechanical attenuator.

Lets you modify the attenuation applied to the RF input signal path. This value is normally auto-coupled to **Ref Level**, **"Internal Preamp"** on page 1775 Gain, any External Gain that is entered, and **Max Mixer Level** (if available), as described in the table below.

See **"Attenuator Configurations and Auto/Man"** on page 1424

| | |
|----------------|---|
| Remote Command | <pre>[:SENSe]:POWer[:RF]:ATTenuation <rel_amp> [:SENSe]:POWer[:RF]:ATTenuation?</pre> |
| Example | <pre>:POW:ATT 20</pre> <p>Dual-Attenuator configuration: sets the mechanical attenuator to 20 dB Single-Attenuator mode: sets the main attenuation to 20 dB (see below for definition of “main” attenuation) In either case, if the attenuator was in Auto, it is set to Manual</p> |
| Dependencies | Some measurements do not support Auto setting of Mech Atten . In these measurements, the Auto/Man selection is not available, and the Auto/Man toggle function is not available |

3 WLAN Mode
3.9 Spectral Flatness Measurement

| | | | | | | | |
|-----------------------|---|-----------------------|-------|-----|-------|------------------|-------|
| | <p>In Dual-Attenuator configurations, when the electronic attenuator is enabled, the mechanical attenuator has no auto setting, and the Auto/Man toggle function is not available. The state of Auto/Man is remembered and restored when the electronic attenuator is once again disabled. This is described in more detail in "Elec Atten" on page 1756</p> <p>See "Attenuator Configurations and Auto/Man" on page 1424 for more information on the Auto/Man functionality</p> | | | | | | |
| Couplings | <p>If the RF Input Port is the RF Input:</p> <ul style="list-style-type: none"> - If the USB Preamp is connected to USB, use 0 dB for Mech Atten - Otherwise compute the auto-selected value of Mech Atten based on Reference Level, Int Preamp, External Gain, Ref Level Offset, Max Mixer Level, μW Path Control and IF Gain settings. Limit this value to be no less than 6 dB (total attenuation below 6 dB can never be chosen by Auto) - In N9041B, if the RF Input Port is RF Input 2, use the formula above and subtract the value of "Full Range Atten" on page 1752 from the result to determine the Mech Atten. Limit the value so that it is never lower than 0 dB and so that total attenuation, including Full Range Atten, is never less than 6 dB (total attenuation, including Full Range Atten below 6 dB, can never be chosen by Auto) <p>In External Mixing and BBIQ, where the attenuator is not in the signal path, the attenuator setting changes as described above when Mech Atten is in Auto, but no changes are made to the actual attenuator hardware setting until the input is changed back to the RF Input</p> <p>For CXA-m with Option FSA (Fine-Step Attenuator or 2 dB steps), the FSA-like behavior is only available when the frequency setting is ≤ 7.5 GHz. So, when the frequency is changed from below 7.5 GHz to above 7.5 GHz, the attenuation setting changes to a multiple of 10 dB that is no smaller than the previous setting. For example, 4 dB attenuation changes to 10 dB</p> | | | | | | |
| Preset | <p>Auto</p> <p>The Auto value is 10 dB</p> | | | | | | |
| State Saved | Saved in instrument state | | | | | | |
| Min | <p>0 dB</p> <p>The attenuation set by this control cannot be decreased below 6 dB with the knob or step keys. Values below 6 dB must be directly entered from the keypad or via SCPI. This protects against setting a dangerously small attenuation value, which can put the instrument at risk of damage to input circuitry. If the current mechanical attenuation is below 6 dB, it can be increased with the knob and step keys, but not decreased</p> | | | | | | |
| Max | <table border="1"> <tr> <td>CXA Option 503 or 507</td> <td>50 dB</td> </tr> <tr> <td>EXA</td> <td>60 dB</td> </tr> <tr> <td>All other models</td> <td>70 dB</td> </tr> </table> <p>Note that in the Single-Attenuator configuration, the total of ATT and EATT cannot exceed 50 dB. So, if the EATT is set to 24 dB first, the main attenuation cannot be greater than 26 dB and will be reduced accordingly; if the main attenuator is set to 40 dB first, EATT cannot be greater than 10 dB</p> | CXA Option 503 or 507 | 50 dB | EXA | 60 dB | All other models | 70 dB |
| CXA Option 503 or 507 | 50 dB | | | | | | |
| EXA | 60 dB | | | | | | |
| All other models | 70 dB | | | | | | |
| Annotation | <p>The current value for Total Atten is displayed in the Measurement Bar at the top of the display. A value appears for Electronic Attenuation only if the Electronic Attenuator is enabled. The annotation appears as:</p> <p><i>Atten: <total> dB (e<elec>)</i></p> | | | | | | |

The e letter is in amber in Single-Attenuator configurations
 For example:
 Dual-Attenuator configuration:
Atten: 24 dB (e14)
 Indicating the total attenuation is at 24 dB and the electronic attenuation is at 14 dB
 Single-Attenuator configuration:
A: 24 dB (e14)
 Indicating the total attenuation is at 24 dB and the “soft” attenuation is at 14 dB (see below for definition of “soft” attenuation)
 When in Manual, a # sign appears in front of Atten in the annotation

Auto Function

| | |
|----------------|--|
| Remote Command | <code>[:SENSe]:POWer[:RF]:ATTenuation:AUTO OFF ON 0 1</code> <code>[:SENSe]:POWer[:RF]:ATTenuation:AUTO?</code> |
| Example | Turn Auto Mech Atten ON: <code>:POW:ATT:AUTO ON</code> |
| Dependencies | <code>:POW:ATT:AUTO</code> is only available in measurements that support Auto , such as Swept SA |
| Preset | <code>ON</code> |

Attenuator Configurations and Auto/Man

As described under "[Attenuation](#)" on page 1750, there are two distinct attenuator configurations available in the X-Series, the Single Attenuator and Dual-Attenuator configurations.

In Dual-Attenuator configurations, we have mechanical attenuation and electronic attenuation, and current total attenuation is the sum of electronic + mechanical attenuation.

In Single-Attenuator configurations, we refer to the attenuation set using "[Mech Atten](#)" on page 1422 (or `:POW:ATT`) as the “main” attenuation; and the attenuation that is set by `:POW:EATT` as the “soft” attenuation (`:POW:EATT` is honored even in the Single-Attenuator configuration, for compatibility purposes). Then current total attenuation is the sum of main + soft attenuation.

See "[Elec Atten](#)" on page 1756 for more about “soft” attenuation.

NOTE

In some measurements, the **Mech Atten** control has an **Auto/Man** function. In these measurements, an **Auto/Man** switch is shown on the **Mech Atten** control:

Note that in configurations that include an Electronic Attenuator, this switch is only shown when the Electronic Attenuator is disabled.

In other measurements, **Mech Atten** has no **Auto/Man** function. In these measurements, no switch is shown on the **Mech Atten** control:

Mech Atten also appears with no switch, as above, in configurations that include an Electronic Attenuator but when the Electronic Attenuator is enabled.

Elec Atten

Controls the Electronic Attenuator in Dual-Attenuator configurations. Does not appear in Single-Attenuator configurations, because the control of both the mechanical and electronic stages of the Single-Attenuator is integrated into the single **Atten** control.

This control includes an **Enable/Disable** toggle switch; it is only possible to enter a value for the Electronic Attenuator when this switch is in the **Enable** position.

For more details of the Electronic Attenuator, see ["More Information" on page 1427](#)

| | |
|----------------|--|
| Remote Command | <code>[:SENSe]:POWer[:RF]:EATTenuation <rel_amp1></code> <code>[:SENSe]:POWer[:RF]:EATTenuation?</code> |
| Example | <code>:POW:EATT 10</code> <code>:POW:EATT?</code> |
| Notes | Electronic Attenuation's specification is defined only when Mech Atten is 6 dB |
| Dependencies | Only appears in Dual-Attenuator models with an Electronic Attenuator installed and licensed. Does not appear in models with the Single-Attenuator configuration, because in the Single-Attenuator configuration there is no "electronic attenuator"; there is only a single integrated attenuator (which has both a mechanical and electronic stage). However, in the Single-Attenuator configuration, EATT SCPI commands are accepted for compatibility with other X-series instruments, and set a "soft" attenuation. The "soft" attenuation is treated as an addition to the "main" attenuation value set by the Attenuation control or <code>:POW:ATT</code> , and affects the total attenuation displayed on the Attenuation |

control and the Meas Bar

The electronic attenuator, and the “soft” attenuation function provided in Single-Attenuator configurations, are unavailable above the low band (0-3.6 GHz, 0-3.4 GHz, 0-3 GHz, depending on the model). If the low band range is from 0-3.6 GHz, and Stop Frequency of the instrument is > 3.6 GHz, then the **Enabled/Disabled** section of the **Elec Atten** control will be **OFF** and grayed-out

If "**Internal Preamp**" on page 1775 is **ON** (that is, set to Low Band or Full), the electronic attenuator (and the “soft” attenuation function provided in Single-Attenuator configurations) is unavailable. In this case the **Enabled/Disabled** section of the **Elec Atten** control will be **OFF** and grayed-out

If either of the above is true, and the SCPI command is sent, an error indicating that the electronic attenuator is unavailable is returned

If both the above are true, pressing the control generates error message -221, in other words, the frequency range lockout takes precedence

If the electronic/soft Attenuator is enabled, then the **Stop Freq** of the instrument is limited to 3.6 GHz and **Internal Preamp** is unavailable

If "**LNA**" on page 1777 is **ON**, the electronic attenuator (and the “soft” attenuation function provided in Single-Attenuator configurations) is unavailable. In this case the **Enabled/Disabled** section of the **Elec Atten** control will be **OFF** and grayed-out. This coupling works in the following modes/measurements:

- Channel Power, Occupied BW, ACP, SEM, Spurious Emissions, Power Stat CCDF measurements in all Modes
- Transmit On|Off Power measurement in 5GNR Mode
- Power vs. Time and Transmit Power measurement in GSM/EDGE Mode
- Burst Power measurement in Spectrum Analyzer Mode

The SCPI-only “soft” electronic attenuation for the single-attenuator configuration is not available in all measurements; in particular, it is not available in the Swept SA measurement

| | |
|-------------|---|
| Couplings | Enabling and disabling the Electronic Attenuator affects the setting of the Mechanical Attenuator (in Dual-Attenuator configurations). This is described in more detail below and in " Mechanical Attenuator Transition Rules " on page 1427 |
| Preset | 0 dB |
| State Saved | Saved in instrument state |
| Min | 0 dB |
| Max | Dual-Attenuator configuration: 24 dB Single-Attenuator configuration: the total of ATT and EATT cannot exceed 50 dB. So, if the EATT is set to 24 dB first, the main attenuation cannot be greater than 26 dB and will be reduced accordingly; if the main attenuator is set to 40 dB first, EATT cannot be greater than 10 dB |
| Annotation | See Annotation under the Mech Atten control description |

| Example | <code>:POW:EATT:STAT ON</code> |

:POW:EATT:STAT?

Preset **OFF** (Disabled) for Swept SA measurement
 ON (Enabled) for all other measurements that support the electronic attenuator

NOTE

The maximum **Center Frequency** for Low Band can change based on the selected IFBW for measurements that support IFBW (for example, Waveform measurement across all Modes that support it). In certain models (such as N9042B & N9032B), IFBW values ≤ 40 MHz have a maximum Low Band frequency of 3.6 GHz, while $40 \text{ MHz} < \text{IFBW} \leq 1 \text{ GHz}$ have a maximum of 3.3 GHz, and $1 \text{ GHz} < \text{IFBW} \leq 1.5 \text{ GHz}$ have a maximum of 3.5 GHz. This frequency is reflected in the disabled message displayed for Electrical Attenuator. For N9032B and N9042B IFBW values $> 1.5 \text{ GHz}$ do not support a **Center Frequency** that can reach the Low Band maximum frequency. In these cases, the Electrical Attenuator will remain disabled no matter the Center Frequency.

More Information

The electronic attenuator offers finer steps than the mechanical attenuator, has no acoustical noise, is faster, and is less subject to wear. These advantages primarily aid in remote operation and are negligible for front panel use. See ["Using the Electronic Attenuator: Pros and Cons" on page 1428](#) for a detailed discussion of the pros and cons of using the electronic attenuator.

For the Single-Attenuator configuration, for SCPI backwards compatibility, the "soft" attenuation feature replaces the Dual-Attenuator configuration's electronic attenuator. All the same couplings and limitations apply. See ["Attenuator Configurations and Auto/Man" on page 1755](#)

Mechanical Attenuator Transition Rules

When the Electronic Attenuator is enabled, the Mechanical Attenuator transitions to a state that has no Auto function. Below are the rules for transitioning the Mechanical Attenuator. Note that the information below *only* applies to the Dual-Attenuator configurations, and *only* when the Electronic Attenuator is installed:

When the Electronic Attenuation is enabled from a disabled state:

- The Mechanical Attenuator is initialized to 10 dB (this is its optimal performance setting). You can then set it as desired with SCPI, numeric keypad, step keys, or knob, and it behaves as it normally would in manual mode
- The Auto/Man state of (Mech) Atten is saved
- The Auto/Man toggle on the (Mech) Atten control disappears, and the auto rules are disabled

- The Electronic Attenuator is set to 10 dB less than the previous value of the Mechanical Attenuator, within the limitation that it must stay within the range of 0 to 24 dB of attenuation

Examples in the Dual-Attenuator configuration:

- Mech Atten at 20 dB. Elec Atten enabled, Mech Atten set to 10 dB, and Elec Atten set to 10 dB. New total attenuation equals the value before Elec Atten enabled
- Mech Atten at 0 dB. Elec Atten enabled, Mech Atten set to 10 dB, and Elec Atten set to 0 dB. New total attenuation does not equal the value before Elec Atten enabled
- Mech Atten at 40 dB. Elec Atten enabled, Mech Atten set to 10 dB, and Elec Atten set to 24 dB. New total attenuation does not equal the value before Elec Atten enabled

When the Electronic Attenuation is disabled from an enabled state:

- The Elec Atten control is grayed out
- The Auto/Man state of (Mech) Atten is restored
- If now in Auto, (Mech) Atten recouples
- If now in Man, (Mech) Atten is set to the value of total attenuation that existed before the Elec Atten was disabled. The resulting value is rounded up to the smallest value possible given the (Mech) Atten Step setting - (That is, 57 dB changes to 58 dB when (Mech) Atten Step is 2 dB)

Using the Electronic Attenuator: Pros and Cons

The electronic attenuator offers finer steps than the mechanical attenuator, has no acoustical noise, is faster, and is less subject to wear.

The “finer steps” advantage of the electronic attenuator is beneficial in optimizing the alignment of the instrument dynamic range to the signal power in the front panel as well as remote use. Thus, you can achieve improved relative signal measurement accuracy. Compared to a mechanical attenuator with 2 dB steps, the 1 dB resolution of the electronic attenuator only gives better resolution when the odd-decibel steps are used. Those odd-decibel steps are less accurately calibrated than the even-decibel steps, so one tradeoff for this superior relative accuracy is reduced absolute amplitude accuracy.

Another disadvantage of the electronic attenuator is that the spectrum analyzer loses its “Auto” setting, making operation less convenient.

Also, the relationship between the dynamic range specifications (TOI, SHI, compression, and noise) and instrument performance are less well-known with the

electrical attenuator. With the mechanical attenuator, TOI, SHI, and compression threshold levels increase dB-for-dB with increasing attenuation, and the noise floor does as well. With the electronic attenuator, there is an excess attenuation of about 1 to 3 dB between 0 and 3.6 GHz, making the effective TOI, SHI, and so forth, less well known. Excess attenuation is the actual attenuation relative to stated attenuation. Excess attenuation is accounted for in the instrument calibration.

Adjust Atten for Min Clipping

Sets the combination of mechanical and electronic attenuation and gain based on the current measured signal level so that clipping will be at a minimum.

This is an immediate action function, that is, it executes once, when the control is pressed.

The algorithms that are used for the adjustment are documented under ["Pre-Adjust for Min Clipping" on page 1760](#).

| | |
|----------------|---|
| Remote Command | <code>[:SENSe]:POWer[:RF]:RANGe:OPTimize IMMEDIATE</code> |
| Example | <code>:POW:RANG:OPT IMM</code> |
| Notes | Executing Adjust Atten for Min Clipping initiates the measurement |
| Dependencies | Does not appear in the Swept SA, RTSA, Monitor Spectrum and Complex Spectrum measurements Appears in the Waveform measurement in BASIC and 5G NR Modes |

Adjust Atten

Allows you to select;

- Electric attenuator only
- Combination of Electric attenuator and Mechanical attenuator

when `[:SENSe]:POWer[:RF]:RANGe:OPTimize IMMEDIATE` is executed.

| | |
|----------------|---|
| Remote Command | <code>[:SENSe]:POWer[:RF]:RANGe:OPTimize:TYPE EONLY COMBined</code> <code>[:SENSe]:POWer[:RF]:RANGe:OPTimize:TYPE?</code> |
| Example | <code>:POW:RANG:OPT:TYPE EONL</code> <code>:POW:RANG:OPT:TYPE?</code> |
| Dependencies | Does not appear in the Swept SA, RTSA, Monitor Spectrum and Complex Spectrum measurements Appears in the Waveform measurement in BASIC and 5G NR Modes |
| Preset | <code>COMBined</code> |
| State Saved | Saved in instrument state |

Pre-Adjust for Min Clipping

If this function is **ON**, it applies the adjustment described under "[Adjust Atten for Min Clipping](#)" on page 1759 each time a measurement restarts. Therefore, in Continuous measurement mode, it only executes before the first measurement.

In Dual-Attenuator models, you can set **Elec+Mech Atten**, in which case both attenuators participate in the autoranging, or **Elec Atten Only**, in which case the mechanical attenuator does not participate in the autoranging. This latter case results in less wear on the mechanical attenuator and is usually faster.

See "[Adjustment Algorithm](#)" on page 1431

| Selection | SCPI | Note |
|-----------------|-------------------|--|
| Off | OFF | This is the default setting |
| On | ON | Available in Single-Attenuator instruments. For compatibility with models that do not have an input attenuator, the ON parameter is supported and mapped to COMBined |
| Elec Atten Only | ELECTrical | Selects only the electric attenuator to participate in auto ranging. This offers less wear on the mechanical attenuator and is usually faster |
| Elec+Mech Atten | COMBined | In Dual-Attenuator models, this selects both attenuators to participate in the autoranging |

| | |
|----------------|--|
| Remote Command | <code>[:SENSe]:POWer[:RF]:RANGe:OPTimize:ATTenuation OFF ON ELECTrical COMBined</code> <code>[:SENSe]:POWer[:RF]:RANGe:OPTimize:ATTenuation?</code> |
| Example | <code>:POW:RANG:OPT:ATT OFF</code> <code>:POW:RANG:OPT:ATT?</code> |
| Notes | The parameter option ELECTrical sets this function to ON in Single-Attenuator models The parameter option COMBined is mapped to ELECTrical in Single-Attenuator models. If you send COMBined , it sets the function to ON and returns ELEC to a query For SCPI compatibility with models that do not have an input attenuator, the ON parameter is honored and mapped to COMBined |
| Dependencies | Only appears in Dual-Attenuator models with an Electronic Attenuator installed In instruments with Dual-Attenuator model, when " Elec Atten " on page 1756 is OFF or grayed-out, " Pre-Adjust for Min Clipping " on page 1430 is grayed-out Does not appear in the Swept SA, RTSA, Monitor Spectrum and Complex Spectrum measurements Appears in the Waveform measurement in BASIC and 5G NR Modes |
| Preset | OFF when Elec Atten is Disabled at preset, otherwise ELEC |
| State Saved | Saved in instrument state |

3 WLAN Mode
 3.9 Spectral Flatness Measurement

| | | |
|-------|---------------------------|---|
| Range | Dual-Attenuator models: | Off Elec Atten Only Mech + Elec Atten |
| | Single-Attenuator models: | Off On |

Backwards Compatibility Command

| | |
|------------------------------|--|
| Notes | <p>ON aliases to "Elec Atten Only" (:POW:RANG:OPT:ATT ELEC)</p> <p>OFF aliases to "Off" (:POW:RANG:OPT:ATT OFF)</p> <p>:POW:RANG:AUTO? returns true if :POW:RANG:OPT:ATT is not OFF</p> |
| Backwards Compatibility SCPI | <p>[:SENSe]:POWer[:RF]:RANGe:AUTO ON OFF 1 0</p> <p>[:SENSe]:POWer[:RF]:RANGe:AUTO?</p> |

Adjustment Algorithm

The algorithms for the adjustment are documented below:

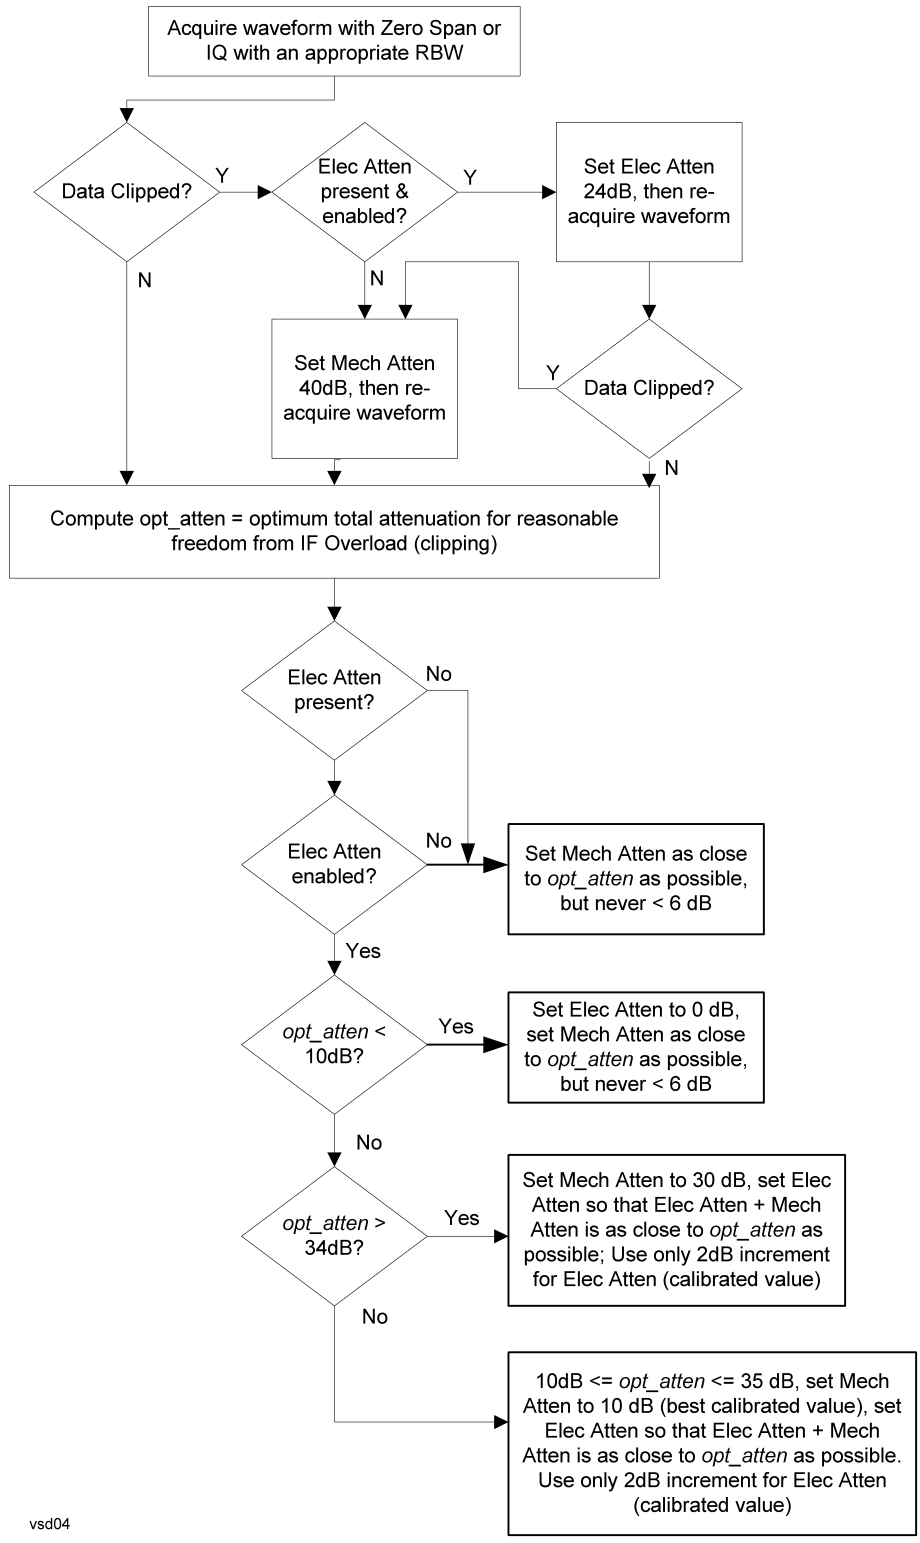

Single-Attenuator Models

Dual-Attenuator models

"Adjust Atten for Min Clipping" on page 1759 or "Pre-Adjust for Min Clipping" on page 1430 selection is Mech + Elec Atten:

3 WLAN Mode
 3.9 Spectral Flatness Measurement

vsd04

"Pre-Adjust for Min Clipping" on page 1430 selection is Elec Only.

Note that the **Mech Atten** value is not adjusted, and the value previously set is used. Therefore, there is a case that IF Overload is still observed depending on the input signal level and the Mech Atten setting.

Mech Atten Step

Controls the step size used when making adjustments to the input attenuation.

Labeled **Mech Atten Step** in Dual-Attenuator models and **Atten Step** in Single-Attenuator models. In the Dual-Attenuator configuration, only affects the step size of the mechanical attenuator.

Remote Command `[:SENSe]:POWer[:RF]:ATTenuation:STEP[:INCRement] 10 dB | 2 dB`

3 WLAN Mode
3.9 Spectral Flatness Measurement

| | |
|--------------|---|
| | <code>[:SENSe]:POWer[:RF]:ATTenuation:STEP[:INCRement]?</code> |
| Example | <code>:POW:ATT:STEP 2</code> <code>:POW:ATT:STEP?</code> |
| Notes | Has a toggle control on the front panel, but takes a specific value (in dB) when used remotely. The only valid values are 2 and 10 |
| Dependencies | Blanked in EXA, CXA and CXA-m if option FSA (2 dB steps) is not present. If blanked, attempts to set it via SCPI yield an error |
| Couplings | When the attenuation step size changes, the current mechanical attenuation value is adjusted (if necessary) to be quantized to the new step size. That is, if step is set to 10 dB, mech atten is increased if necessary so it is a multiple of 10 dB |
| Preset | EXA, CXA and CXA-m: 10 dB (2 dB with option FSA) All other models: 2 dB |
| State Saved | Saved in instrument state |

3.9.3.3 Range (Baseband Input models)

Only available when Option BBA is present (I/Q Baseband Inputs), the current measurement supports option BBA, and I/Q is the selected input. In these cases, replaces the **Attenuation** tab.

Each input channel (I and Q) has four internal gain ranges. The maximum allowed voltage in each gain range is slightly more than the nominal value, so the break point between ranges is a few millivolts higher than the nominal (setting a peak voltage of 0.502 mV will still map to the 0.5 V Peak range).

| Gain Setting | Volts RMS | Volts Peak | Volts Peak - Peak | dBm (50Ω) | Break Point |
|--------------|-----------|------------|-------------------|-----------|--------------|
| 0 dB | 0.7071 | 1.0 | 2.0 | 10 | n/a |
| 6 dB | 0.3536 | 0.5 | 1.0 | 4 | 0.502 V Peak |
| 12 dB | 0.1768 | 0.25 | 0.5 | -2 | 0.252 V Peak |
| 18 dB | 0.0884 | 0.125 | 0.25 | -8 | 0.127 V Peak |

| | |
|--------------|---|
| Dependencies | Available only when the selected input is I/Q. If the current measurement does not support baseband inputs, an error will be displayed: "No result; Meas invalid with I/Q inputs" |
| State Saved | No |

Range Auto/Man

The **Auto** setting for **Range** causes the range to be set based on the Y Scale settings. When **Range** is **Auto**, the I & Q Range are set based on the top of the Y Scale when the Y scale is in dB units (for example, power), or to the max(abs(top), abs(bottom)) when the Y scale reference is not at the top of the screen.

Not all measurements support **Range Auto/Man**. If **Auto** is not supported in the current measurement, this control is grayed-out, displaying **Man**, and **MAN** is returned to a SCPI query, but this does *not* change the Auto/Man setting for **Range**. When you switch to a measurement that supports **Auto**, it goes back to **Auto** if it was previously in **Auto** mode.

| | |
|----------------|--|
| Remote Command | <code>[:SENSe]:VOLTage:IQ:RANGe:AUTO OFF ON 0 1</code> <code>[:SENSe]:VOLTage:IQ:RANGe:AUTO?</code> |
| Example | Put the I Range and Q Range in manual <code>:VOLT:IQ:RANG:AUTO OFF</code> <code>:VOLT:IQ:RANG:AUTO?</code> |
| Dependencies | If Auto is not supported, sending the SCPI command generates an error |
| Couplings | When in Auto , both I Range and Q Range are set to the same value, computed as follows: Maximum absolute value is computed for the Y Scale. The top and bottom of the graph are computed based on Ref Value, Scale/Div, and Ref Position. Formula: $Y_{Max} = \max(\text{abs}(\text{top}), \text{abs}(\text{bottom}))$ The I Range and Q Range are then set to YMax |
| Preset | ON |
| State Saved | Saved in instrument state |
| Annotation | When in Man, the Range annotation is preceded by "#" This is an alternate form of the command to match the POWer form of the I Range and Q Range SCPI. |
| Remote Command | <code>[:SENSe]:POWer:IQ:RANGe:AUTO OFF ON 0 1</code> <code>[:SENSe]:POWer:IQ:RANGe:AUTO?</code> |
| Example | Put the I Range and Q Range in manual <code>:POW:IQ:RANG:AUTO OFF</code> <code>:POW:IQ:RANG:AUTO?</code> |
| Notes | <code>:POW:IQ:RANG:AUTO</code> is an alternate form of <code>:VOLT:IQ:RANG:AUTO</code> , to maintain consistency with I Range and Q Range, which support both the POWer and VOLTage forms of the command |
| Preset | ON |
| Range | Auto Man |

I Range

The internal gain range for the I channel when the Input Path is I Only or I and I/Q. Used for both the I and Q channels when the Input Path is I+jQ.

| | |
|----------------|---|
| Remote Command | <code>[:SENSe]:VOLTage:IQ[:I]:RANGe[:UPPer] <voltage></code> <code>[:SENSe]:VOLTage:IQ[:I]:RANGe[:UPPer]?</code> |
| Example | Set the I Range to 0.5 V Peak <code>:VOLT:IQ:RANG 0.5 V</code> |

3 WLAN Mode
3.9 Spectral Flatness Measurement

| | |
|----------------|---|
| | <code>:VOLT:IQ:RANG?</code> |
| Notes | The numeric entries are mapped to the smallest gain range whose break point is greater than or equal to the value, or 1 V Peak if the value is greater than 1 V |
| Couplings | When " Q Same as I " on page 1769 is On, the I Range value will be copied to " Q Range " on page 1768 Changing the value also sets Range = Man |
| Preset | Complex SPECTrum Measurement: 0.5 V Peak All others: 1 V Peak |
| State Saved | Saved in instrument state |
| Range | 1 V Peak (10 dBm @ 50 Ω) 0.5 V Peak (4 dBm @ 50Ω) 0.25 V Peak (-2 dBm @ 50Ω) 0.125 V Peak (-8 dBm @ 50Ω) |
| Min | 0.125 V |
| Max | 1 V |
| Annotation | The Range annotation replaces the RF Input context's "Atten" annotation "Rng: <I Range>". When Range = Man the annotation is preceded by "#" The I Range is not annotated in Input Path Q Only. When I Range and Q Range are the same, the annotation is "Rng: <Range>". When I Range and Q Range are different and the Input Path is Ind I/Q, the annotation is "Rng: <I Range>, <Q Range>" and "Peak" is removed from the text. Examples: "Rng: 1 V Peak" the I Range is 1 V Peak "Rng: 1 V, 0.5 V " the I Range is 1 V Peak and the Q Range is 0.5 V Peak This is an alternate form of the command to allow entry as a power. |
| Remote Command | <code>[:SENSe]:POWer:IQ[:I]:RANGe[:UPPer] <amp;1></code> <code>[:SENSe]:POWer:IQ[:I]:RANGe[:UPPer]?</code> |
| Example | Set the I Range to 0.5 V Peak when Reference Z is 50 Ω, and to 1.0 V Peak when Reference Z is 75 Ω <code>:POW:IQ:RANG 4 dBm</code> <code>:POW:IQ:RANG?</code> |
| Notes | The POWer form of the command is provided for convenience. It maps to the same underlying gain range parameter as the VOLTage form The Reference Z (not the I channel Input Z) is used to convert the power to peak voltage, which is then used to set the I Range as with the VOLTage form of the command. The power values of the 4 range states (1V Peak, 0.5V Peak, 0.25V Peak, and 0.125V Peak) will vary with Reference Z. Here are some examples: 50 Ω: 10, 4, -2, -8 75 Ω: 8.2, 2.2, -3.8, -9.8 600 Ω: -0.8, -6.8, -12.8, -18.9 |
| Preset | 10.0 dBm |
| Range | -20 dBm to 10 dBm |
| Min | -20 dBm |
| Max | 10 dBm |

Q Range

The internal gain range for the Q channel. **Q Range** only applies to Input Path Q Only and Ind I/Q. For input I+jQ "[I Range](#)" on page 1766 determines both I and Q channel range settings.

| | |
|----------------|---|
| Remote Command | <code>[:SENSe]:VOLTage:IQ:Q:RANGe[:UPPer] <voltage></code> <code>[:SENSe]:VOLTage:IQ:Q:RANGe[:UPPer]?</code> |
| Example | Set the Q Range to 0.5 V Peak: <code>:VOLT:IQ:Q:RANG 0.5 V</code> <code>:VOLT:IQ:Q:RANG?</code> |
| Notes | The numeric entries are mapped to the smallest gain range whose break point is greater than or equal to the value, or 1 V Peak if the value is greater than 1 V Q Range is only used for Input Path Q Only and Ind I/Q. For input I+jQ, " I Range " on page 1766 determines both I and Q channel range settings |
| Couplings | When " Q Same as I " on page 1769 is On, the " I Range " on page 1766 value is copied to Q Range and the range value keys are disabled Changing the value also sets Range = Man |
| Preset | 1 V Peak |
| State Saved | Saved in instrument state |
| Range | 1 V Peak (10 dBm @ 50Ω) 0.5 V Peak (4 dBm @ 50Ω) 0.25 V Peak (-2 dBm @ 50Ω) 0.125 V Peak (-8 dBm @ 50Ω) |
| Min | 0.125 V |
| Max | 1 V |
| Annotation | The Range annotation replaces the RF Input context's "Atten" annotation "Rng: <Q Range>". When Range = Man the annotation is preceded by "#" The Q Range is not annotated in Input Path I Only or I+jQ. When I Range and Q Range are the same, the annotation is "Rng: <Range>". When I Range and Q Range are different and the Input Path is Ind I/Q, the annotation is "Rng: <I Range>, <Q Range>" and "Peak" is removed from the text. Examples: "Rng: 1 V Peak" the Q Range is 1 V Peak "Rng: 1 V, 0.5 V" the I Range is 1 V Peak and the Q Range is 0.5 V Peak This is an alternate form of the command to allow entry as a power. |
| Remote Command | <code>[:SENSe]:POWer:IQ:Q:RANGe[:UPPer] <amp;gt;</code> <code>[:SENSe]:POWer:IQ:Q:RANGe[:UPPer]?</code> |
| Example | Sets the Q Range to 0.5 V Peak when Reference Z is 50 Ω, and to 1.0 V Peak when Reference Z is 75 Ω: <code>:POW:IQ:Q:RANG 4 dBm</code> <code>:POW:IQ:Q:RANG?</code> |
| Notes | The POWer form of the command is provided for convenience. It maps to the same underlying gain |

3 WLAN Mode
3.9 Spectral Flatness Measurement

range parameter as the **VOLTage** form of the command

The Reference Z (not the Q channel Input Z) is used to convert the power to peak voltage, which is then used to set the Q Range as with the **VOLTage** form of the command. The power values of the 4 range states (1V Peak, 0.5V Peak, 0.25V Peak, and 0.125V Peak) will vary with Reference Z. Here are some examples:

50 Ω: 10, 4, -2, -8

75 Ω: 8.2, 2.2, -3.8, -9.8

600 Ω: -0.8, -6.8, -12.8, -18.9

| | |
|--------|-------------------|
| Preset | 10.0 dBm |
| Range | -20 dBm to 10 dBm |
| Min | -20 dBm |
| Max | 10 dBm |

Q Same as I

Many, but not all, usages require the I and Q channels to have an identical setup. To simplify channel setup, **Q Same as I** causes the Q channel range to be mirrored from the I channel. That way, you only need to set up one channel (the I channel). The I channel values are copied to the Q channel, so at the time **Q Same as I** is Off, the I and Q channel setups will be identical.

| | |
|----------------|--|
| Remote Command | <code>[:SENSe] :VOLTage POWer:IQ:MIRROred OFF ON 0 1</code> <code>[:SENSe] :VOLTage POWer:IQ:MIRROred?</code> |
| Example | Turn off the mirroring of I Range to Q Range <code>:VOLT:IQ:MIRR OFF</code> <code>:POW:IQ:MIRR OFF</code> |
| Couplings | When ON , the " I Range " on page 1766 value is mirrored (copied) to the " Q Range " on page 1768 |
| Preset | ON |
| State Saved | Saved in instrument state |
| Range | OFF ON |

3.9.3.4 Range (Non-attenuator models)

Only available for Keysight's modular signal analyzers and certain other Keysight products, such as VXT and M941xE.

| | |
|-------------|----|
| State Saved | No |
|-------------|----|

Range

Represents the amplitude of the largest sinusoidal signal that could be present within the IF without being clipped by the ADC. For signals with high peak-to-average ratios, the range may need to exceed the rms signal power by a significant amount to avoid clipping.

This is a measurement global setting.

| | |
|----------------|---|
| Remote Command | <code>[:SENSE]:POWER[:RF]:RANGE <real></code> <code>[:SENSE]:POWER[:RF]:RANGE?</code> |
| Example | <code>:POW:RANG 10 dBm</code> <code>:POW:RANG?</code> |
| Notes | The MIN and MAX values are affected by the External Gain parameters, and by the Center Frequency . The hardware compensates for frequency response and alters the Range setting. |
| Preset | 0 dBm |
| State Saved | Yes |
| Min/Max | -/+100 |
| Annotation | Meas Bar |

Adjust Range for Min Clipping

Sets the combination of attenuation and gain based on the current measured signal level so that clipping will be at a minimum.

This is an "immediate action" function, that is, it executes once, when the key is pressed.

This key does not appear in measurements that do not support this functionality.

| | |
|----------------|--|
| Remote Command | <code>[:SENSE]:POWER[:RF]:RANGE:OPTimize IMMEDIATE</code> |
| Notes | Executing Adjust Range for Min Clipping initiates the measurement. |
| Dependencies | Does not appear in the Swept SA and Monitor Spectrum measurements. |

Pre-Adjust for Min Clipping

If this function is **ON**, it applies the adjustment described under Adjust Range For Min Clipping each time a measurement restarts. Therefore, in Continuous measurement mode, it only executes before the first measurement.

| | |
|----------------|---|
| Remote Command | <code>[:SENSE]:POWER[:RF]:RANGE:OPTimize:ATTenuation OFF ON ELECTRICAL COMBined</code> |
|----------------|---|

3 WLAN Mode
3.9 Spectral Flatness Measurement

| | |
|--------------|--|
| | <code>[:SENSe]:POWer[:RF]:RANGe:OPTimize:ATTenuation?</code> |
| Notes | Because there is no attenuator control available in these models, the control displays only ON and OFF choices. However, for SCPI compatibility with other platforms, all three parameters (ELECTrical , COMBined , and ON) are honored and all are mapped to ELECTrical , so if any of these three parameters is sent, a subsequent query will return ELEC |
| Dependencies | Does not appear in the Swept SA and Monitor Spectrum measurements |
| Preset | OFF for Swept SA measurement; ON for all other measurements that support Pre-Adjust for Min Clipping |
| State Saved | Saved in instrument state |

Adjustment Algorithm

The algorithm for the adjustment is documented below:

Peak-to-Average Ratio

Used with "[Range \(Non-attenuator models\)](#)" on page 1769 to optimize the level control in the instrument. The value is the ratio, in dB, of the peak power to the average power of the signal to be measured. A ratio of 0 should be used for sinusoidal signals; for 802.11g OFDM signals use 9 dB.

All Modes show the current value of Peak-to-Average ratio on the control. However, some Modes do not permit changing the value. In these situations, the control is grayed-out.

| | |
|----------------|--|
| Remote Command | <code>[:SENSe]:POWer[:RF]:RANGe:PARatio <real></code> <code>[:SENSe]:POWer[:RF]:RANGe:PARatio?</code> |
| Example | <code>:POW:RANG:PAR 12 dB</code> |
| Notes | In some Modes, this parameter is read-only; meaning the value will appear on the control and query |

| | | |
|--------------|---|-------|
| | via SCPI, but is not changeable. In such applications the control is grayed-out. Attempts to change the value via SCPI are ignored, but no error message is generated | |
| Dependencies | Does not appear in Spectrum Analyzer Mode | |
| Preset | VXT Models M9410A/11A | 0 dB |
| | All Others | 10 dB |
| State Saved | Saved in instrument state | |
| Min | 0 dB | |
| Max | VXT Models M9410A/11A | 50 dB |
| | All Others | 20 dB |

Mixer Lvl Offset

This is an advanced setting to adjust target Range at the input mixer, which in turn affects the signal level in the instrument's IF. This setting can be used when additional optimization is needed after setting "[Peak-to-Average Ratio](#)" on page 1771. Positive values of offset optimize noise performance over distortion, negative values optimize distortion performance over noise.

| | | |
|----------------|--|--------|
| Remote Command | <code>[:SENSe]:POWer[:RF]:RANGe:MIXer:OFFSet <real></code> <code>[:SENSe]:POWer[:RF]:RANGe:MIXer:OFFSet?</code> | |
| Example | <code>:POW:RANG:MIX:OFFS -5 dB</code> | |
| Preset | 0 dB | |
| State Saved | Saved in instrument state | |
| Min | VXT Models M9410A/11A | -34 dB |
| | All Others | -35 dB |
| Max | 30 dB | |

3.9.3.5 Signal Path

Contains controls that pertain to the routing of the signal through the frontend of the instrument.

In general, only appears in instruments whose hardware supports this signal routing. For example, this tab does not appear in many of the modular instrument products, including VXT Model M9420A, or UXM.

This tab *does* appear in VXT Models M9410A/11A/15A/16A and M9410E/11E/15E/16E, because ["Software Preselection" on page 1788](#) is under this tab, and VXT Models M9410A/11A/15A/16A and M9410E/11E/15E/16E implement a version of Software Preselection.

Presel Center

Adjusts the centering of the preselector filter to optimize the amplitude accuracy at the frequency of the selected marker. If the selected marker is not on when **Presel Center** is pressed, the instrument turns on the selected marker, performs a peak search, and then performs centering on the marker's center frequency. If the selected marker is already on and between the start and stop frequencies of the instrument, the instrument performs the preselector calibration on that marker's frequency. If the selected marker is already on, but outside the frequency range between **Start Freq** and **Stop Freq**, the instrument first performs a peak search, and then performs centering on the marker's center frequency.

The value displayed on ["Preselector Adjust" on page 1774](#) changes to reflect the new preselector tuning.

Certain considerations should be observed to ensure proper operation, as detailed in ["Proper Preselector Operation" on page 1444](#).

| | |
|-----------------|---|
| Remote Command | <code>[:SENSe] :POWer [:RF] :PCENter</code> |
| Example | <code>:POW:PCEN</code> |
| Notes | The rules outlined above under the control description apply for the remote command as well as the key. The result of the command depends on marker position, etc. Any message generated by the control press is also generated in response to the remote command |
| Dependencies | Does not appear in CXA-m, nor in VXT Models M9410A/11A/15A/16A, M9410E/11E/15E/16E Grayed-out if the microwave preselector is off <ul style="list-style-type: none"> - If the selected marker's frequency is below Band 1, an advisory message is generated "Preselector not used in this frequency range" and no action is taken - Grayed-out if entirely in Band 0, that is, if Stop Freq is below about 3.6 GHz Grayed-out if entirely above 50 GHz, that is, if Start Freq is above 50 GHz - Blanked in models that do not include a preselector, such as Option 503. If the remote command is sent in these instruments, accepted without error, and the query always returns 0 - Grayed-out in the Spectrogram View |
| Couplings | The active marker position determines where the centering will be attempted If the instrument is in a measurement such as averaging when centering is initiated, the act of centering the preselector restarts averaging, but the first average trace will not be taken until the centering is completed The offset applied to do the centering appears in "Preselector Adjust" on page 1774 |
| Status Bits/OPC | When centering the preselector, *OPC does not return true until the process is complete and a |

dependencies subsequent measurement has completed, nor are results returned in response to `:READ` or `:MEASure` queries
The **Measuring** bit remains set (true) while this command is operating, and does not go false until the subsequent sweep/measurement has completed

Proper Preselector Operation

Certain considerations should be observed to ensure proper operation:

1. If the selected marker is **Off**, the instrument turns on a marker, performs a peak search, and adjusts the preselector using the selected marker's frequency. It uses the "highest peak" peak search method unqualified by threshold or excursion, so that there is no chance of a 'no peak found' error. It continues with that peak, even if it is the peak of just noise. Therefore, for this operation to work properly, there should be a signal on-screen in a preselected range for the peak search to find
2. If the selected marker is already **On**, the instrument attempts the centering at that marker's frequency. There is no preselector for signals below about 3.6 GHz, so if the marker is on a signal below 3.6 GHz, no centering is attempted, and an advisory message is generated
3. In some models, the preselector can be bypassed. If it is bypassed, no centering is attempted in that range and a message is generated

Preselector Adjust

Lets you manually adjust the preselector filter frequency to optimize its response to the signal of interest. Only available when **"Presel Center"** on page 1773 is available.

For general purpose signal analysis, using **Presel Center** is recommended. Centering the filter minimizes the impact of long-term preselector drift. **Preselector Adjust** can be used instead to manually optimize the preselector. One application of manual optimization would be to peak the preselector response, which both optimizes the signal-to-noise ratio and minimizes amplitude variations due to small (short-term) preselector drifting.

When **Presel Center** is performed, the offset applied to do the centering becomes the new value of **Preselector Adjust**.

Internal Preamp

Accesses a menu of controls for the internal preamps. Turning on the preamp gives a better noise figure, but a poorer inter-modulation distortion (TOI) to noise floor dynamic range. You can optimize this setting for your measurement.

The instrument takes the preamp gain into account as it sweeps. If you sweep outside of the range of the preamp, the instrument will also account for that. The displayed result always reflects the correct gain.

For some measurements, when the preamp is on and any part of the displayed frequency range is below the lowest frequency for which the preamp has specifications, a warning condition message appears in the status line. For example, for a preamp with a 9 kHz lowest specified frequency: "Preamp: Accy unspec'd below 9 kHz".

| Selection | Example | Note |
|------------|--|---|
| Off | :POW:GAIN OFF | |
| Low Band | :POW:GAIN ON :POW:GAIN:BAND LOW | Sets the internal preamp to use only the low band. The frequency range of the installed (optional) low-band preamp is displayed in square brackets on the Low Band selection in the dropdown |
| Full Range | :POW:GAIN ON :POW:GAIN:BAND FULL | Sets the internal preamp to use its full range. The low band (0-3.6 GHz, 0-3.4 GHz, 0-3 GHz, depending on the model) is supplied by the low band preamp and the frequencies above low band are supplied by the high band preamp The frequency range of the installed (optional) low-band preamp is displayed in square brackets on the Full Range selection in the dropdown. If the high band option is not installed the Full Range selection does not appear |

NOTE

The maximum **Center Frequency for Low Band**, displayed in square brackets, can change based on the selected IFBW for measurements that support IFBW (for example, Waveform measurement across all Modes that support it). In certain models (such as N9042B & N9032B), IFBW values ≤ 40 MHz have a maximum **Low Band** frequency of 3.6 GHz, while $40 \text{ MHz} < \text{IFBW} \leq 1 \text{ GHz}$ have a maximum of 3.3 GHz, and $1 \text{ GHz} < \text{IFBW} \leq 1.5 \text{ GHz}$ have a maximum of 3.5 GHz. IFBW values $> 1.5 \text{ GHz}$ do not support a **Center Frequency** that can reach the **Low Band** maximum frequency. In these cases, **N/A** is displayed in the square brackets for **Low Band**.

| | |
|----------------|--|
| Remote Command | <code>[:SENSe]:POWer[:RF]:GAIN:BAND LOW FULL</code> <code>[:SENSe]:POWer[:RF]:GAIN:BAND?</code> |
| Example | <code>:POW:GAIN:BAND LOW</code> <code>:POW:GAIN:BAND?</code> |
| Dependencies | Not available on all hardware platforms. If the preamp is not present or is unlicensed, this control is not shown Does not appear in VXT Models M9410A/11A/15A/16A nor in M9410E/11E/15E/16E If <code>:POW:GAIN:BAND FULL</code> is sent when a low band preamp is available, the preamp band parameter is set to <code>LOW</code> instead of <code>FULL</code> , and an "Option not installed" message is generated Not available when the electronic/soft attenuator is enabled |
| Preset | <code>LOW</code> |
| State Saved | Saved in instrument state |
| Annotation | When the USB Preamp is not connected to USB, the Preamp annotation in the Meas Bar says "Off" if the preamp is off and displays the frequency range of the low band or full range preamp depending on the setting. For example, if the Preamp is set to Low Band and the Low Band is 3.6 GHz the annotation says "3.6 GHz". If it is a 13.6 GHz preamp and it is set to Full Range the annotation says "13.6 GHz" |

3 WLAN Mode
3.9 Spectral Flatness Measurement

When the USB Preamp is connected to USB, the Preamp annotation says "Preamp: USB" if the internal preamp is off or "Preamp: USB, Int" if the internal preamp is on (only for measurements that support the USB preamp)

| Remote Command | <code>[:SENSe]:POWer[:RF]:GAIN[:STATe] OFF ON 0 1</code> <code>[:SENSe]:POWer[:RF]:GAIN[:STATe]?</code> |
| Example | <code>:POW:GAIN OFF</code> <code>:POW:GAIN?</code> |
| Preset | <code>OFF</code> |

LNA

Lets you turn the Low Noise Amplifier (**LNA**) on or off.

LNA is an additional preamplifier that provides superior DANL and frequency range compared to "[Internal Preamp](#)" on page 1775. LNA provides lower system noise figure, especially at frequencies above 100 MHz, and can be operated up to the full range of 50 GHz instruments.

For best possible sensitivity, **LNA** can be turned on *together* with "[Internal Preamp](#)" on page 1775, although if you operate both preamps together, note that the TOI (distortion) specifications are impacted. The sensitivity improvement of this combination is substantial when operating in high band (frequencies above 3.6 GHz).

For more details about annotation, see "[More Information](#)" on page 1448

| | |
|----------------|--|
| Remote Command | <code>[:SENSe]:POWer[:RF]:GAIN:LNA[:STATe] OFF ON 0 1</code> <code>[:SENSe]:POWer[:RF]:GAIN:LNA[:STATe]?</code> |
| Example | <code>:POW:GAIN:LNA ON</code> |
| Dependencies | Requires Option LNA, except for VXT models M9415A/16A Does not appear in VXT models M9420A/10A/11A M9410E/11E/15E/16E support LNA May not appear in some measurements LNA is not available when the electronic/soft attenuator is enabled |
| Preset | <code>OFF</code> |
| State Saved | Saved in State |

More Information

When **LNA** is installed, the preamp annotation changes to show the state of both **LNA** and **Internal Preamp**. Below is an example:

```
Atten: 8 dB
Pre: Int on, LNA on
μW Path: LNP, On
Source: Off
```

Note that when operating entirely in the low band (below about 3.6 GHz), if **LNA** is on, **Internal Preamp** is switched off (even if you have its switch set to **ON**). This is because the noise performance is actually degraded in low band if both preamps are on. In this case, the annotation reflects the actual state of the two preamps, but the **Internal Preamp** annotation displays in amber, to warn you that the actual state of **Internal Preamp** does not match its switch control display:

```
Atten: 8 dB
Pre: Int off, LNA on
μW Path: LNP, On
Source: Off
```

μW Path Control

Options for this control include **μW Preselector Bypass** (Option MPB), **Low Noise Path** (Option LNP) and **Full Bypass Enable** in the High Band path circuits.

When the **μW Preselector** is bypassed, flatness is improved, but will be subject to spurs from out of band interfering signals. When **Low Noise Path Enable** is selected, the instrument automatically bypasses certain circuitry in the high frequency bands that can contribute to noise, when it is appropriate based on other instrument settings.

For most applications, the preset state is **Standard Path**, which provides the best remote-control throughput, minimizes acoustic noise from switching and minimizes the risk of wear in the hardware switches, particularly in remote test scenarios where both low band and high band setups will follow in rapid succession. In this path, the bypass of the low band/high band switch and microwave preamp is never activated, which can cause some noise degradation but preserves the life of the bypass switch.

For applications that utilize the wideband IF paths, the preset state is **μW Preselector Bypass**, if option MPB is present. This is because, when using a wideband IF such as the 140 MHz IF, the **μW Preselector**'s bandwidth can be narrower than the available IF bandwidth, causing degraded amplitude flatness and phase linearity, so it is desirable to bypass the preselector in the default case.

You may choose **Low Noise Path Enable** for a lower noise floor, especially in the 21-26.5 GHz region, though without improving many measures of dynamic range, and

3 WLAN Mode
3.9 Spectral Flatness Measurement

without giving the best possible noise floor. The preamp, if purchased and used, gives better noise floor than does **Low Noise Path Enable**, but the preamp's compression threshold and third-order intercept are much poorer than that of **Low Noise Path Enable**.

A fourth choice is **Full Bypass Enable**, which combines **μW Preselector Bypass** and **Low Noise Path Enable**. Because this can bypass most of the circuitry between the input and the first mixer, care should be taken when using this setting to avoid damaging the mixer. **Full Bypass Enable** is only available if both options LNP and MPB are present, as well as option FBP.

| Path | Example | Note |
|-----------------------|-------------------|--|
| Standard Path | :POW:MW:PATH STD | Normal setting for most measurements. μW Preselector in circuit, Low Noise Path disabled |
| Low Noise Path Enable | :POW:MW:PATH LNP | See " Low Noise Path Enable " on page 1453 |
| μW Preselector Bypass | :POW:MW:PATH MPB | See " μW Preselector Bypass " on page 1455 |
| Full Bypass Enable | :POW:MW:PATH FULL | See " Full Bypass Enable " on page 1455 |

| | |
|----------------|--|
| Remote Command | <code>[:SENSe]:POWer[:RF]:MW:PATH STD LNPath MPBypass FULL</code> <code>[:SENSe]:POWer[:RF]:MW:PATH?</code> |
| Example | <code>:POW:MW:PATH LNP</code> Enables the Low Noise path <code>:POW:MW:PATH?</code> |
| Notes | When " Presel Center " on page 1773 is performed, the instrument momentarily switches to the Standard Path, regardless of the setting of μW Path Control The DC Block will always be switched in when the low noise path is switched in, to protect succeeding circuitry from DC. Note that this does not mean "when the low noise path is enabled" but when, based on the Low Noise Path rules, the path is actually switched in. This can happen when the selection is Low Noise Path Enable or Full Bypass Enable . In the case where the DC Block is switched in, the instrument is now AC-coupled. However, if you selected DC coupling, the UI would still behave as though it were DC-coupled, including all annunciation, warnings, status bits, and responses to SCPI queries. This is because, based on other settings, the instrument could switch out the low noise path at any time and hence go back to being DC-coupled Alignment switching ignores the settings in this menu, and restores them when finished |
| Dependencies | Does not appear in CXA-m, VXT Models M9410A/11A/15A/16A, nor in M9410E/11E/15E/16E, BBIQ and External Mixing <ul style="list-style-type: none"> - The Low Noise Path Enable selection does not appear unless Option LNP is present and licensed - The μW Preselector Bypass selection does not appear unless Option MPB is present and licensed - The Full Bypass Enable selection does not appear unless options LNP and MPB are both present as well as option FBP |

In any of these cases, if the required options are not present and the SCPI command is sent, error - 241, "Hardware missing; Option not installed" is generated

Low Noise Path Enable and **Full Bypass Enable** are grayed-out if the current measurement does not support them

Low Noise Path Enable and **Full Bypass Enable** are not supported in Avionics and MMR Modes (non-modulation measurements). In any of these cases (that is, the feature is not supported in either measurement or Mode), if the SCPI command is sent, the following error is generated: -221, "Setting Conflict; Feature not supported for this measurement"

Low Noise Path Enable

Low Noise Path Enable provides a lower noise floor under some circumstances, particularly when operating in the 21–26.5 GHz region. With the Low Noise Path enabled, the low band/high band switch and microwave preamp are bypassed whenever *all* the following are true:

- The instrument is not in the Low Band, meaning:
- the start frequency is above 3.5 GHz and
- the stop frequency is above 3.6 GHz
- The internal preamp is not installed, or if installed, is set to **Off** or **Low Band**

Note that this means that, when any part of a sweep is done in Low Band, the Low Noise Path is not used, whether or not the **Low Noise Path Enable** is selected in the user interface. Also, if the preamp is turned on, the Low Noise Path is not used, whether or not the **Low Noise Path Enable** is selected in the user interface. The only time the Low Noise Path is used is when **Low Noise Path Enable** is selected, the sweep is completely in High Band (> 3.6 GHz) and no preamp is in use.

For measurements that use IQ acquisition, the low noise path is used when **Center Frequency** is in High Band (> 3.6 GHz) and no preamp is in use. In other words, the rules above are modified to use only the center frequency to qualify which path to switch in. This is not the case for FFTs in the Swept SA measurement; they use the same rules as swept measurements.

Note that the Low Noise Path, while giving improved DANL, has the disadvantage of decreased TOI performance and decreased gain compression performance relative to the standard path.

Note also that the bypass switch is a mechanical switch and has finite life, so if the **Low Noise Path Enable** is selected, it is possible to cause frequent cycling of this switch by frequently changing instrument settings such that the above conditions hold true only some of the time. A user making tests of this nature should consider opting for the **Standard Path**, which will never throw the bypass switch, at the expense of some degraded noise performance.

The low noise path is useful for situations where the signal level is so low that the instrument performance is dominated by noise even with 0 dB attenuation, but still high enough that the preamp option would have excessive third-order intermodulation or compression. The preamp, if purchased and used, gives better noise floor than does the “Low Noise Path.” However, its compression threshold and third-order intercept are much poorer than that of the non-preamp path.

There are some applications, typically for signals around –30 dBm, for which the third-order dynamic range of the standard path is good enough, but the noise floor is not low enough even with 0 dB input attenuation. When the third-order dynamic

range of the preamp path is too little and the noise floor of the standard path is too high, the Low Noise Path can provide the best dynamic range

The graph below illustrates the concept. It shows, in red, the performance of an instrument at different attenuation settings, both with the preamp on and off, in a measurement that is affected by both instrument noise and instrument TOI. The green shows the best available dynamic range, offset by 0.5 dB for clarity. The blue shows how the best available dynamic range improves for moderate signal levels with the low noise path switched in. In this illustration, the preamp improves the noise floor by 15 dB while degrading the third-order intercept by 30 dB, and the low noise path reduces loss by 8 dB. The attenuator step size is 2 dB.

There are other times where selecting the low noise path improves performance, too. Compression-limited measurements such as finding the nulls in a pulsed-RF spectrum can profit from the low noise path in a way similar to the TOI-limited measurement illustrated. Accuracy can be improved when the low noise path allows the optimum attenuation to increase from a small amount like 0, 2 or 4 dB to a larger amount, giving better return loss at the instrument input. Harmonic measurements, such as second and third harmonic levels, are much improved using the low noise path because of the superiority of that path for harmonic (though not intermodulation) distortion performance.

μW Preselector Bypass

Toggles the preselector bypass switch for band 1 and higher. When the microwave preselector is on, the signal path is preselected. When the microwave preselector is off, the signal path is not preselected. The preselected path is the normal path for the instrument.

The preselector is a tunable bandpass filter which prevents signals away from the frequency of interest from combining in the mixer to generate in-band spurious signals (images). The consequences of using a preselector filter are its limited bandwidth, the amplitude and phase ripple in its passband, and any amplitude and phase instability due to center frequency drift.

Option MPB or pre-selector bypass provides an unpreselected input mixer path for certain X-Series signal analyzers with frequency ranges above 3.6 GHz. This signal path allows a wider bandwidth and less amplitude variability, which is an advantage when doing modulation analysis and broadband signal analysis. The disadvantage is that, without the preselector, image signals will be displayed. Another disadvantage of bypassing the preselector is increased LO emission levels at the front panel input port.

Image responses are separated from the real signal by twice the 1st IF. For IF Paths of 10 MHz and 25 MHz, the 1st IF is 322.5 MHz, so the image response and the real signal will be separated by 645 MHz. The 1st IF will be different for other IF Path settings. When viewing a real signal and its corresponding image response in internal mixing, the image response will be to the left of the real signal.

Also, the image response and the real signal typically have the same amplitude and exhibit the same shape factor.

However, if Option FS1 (Fast Sweep Capability) is enabled, the image response in the Swept SA measurement appears lower in amplitude and has a much wider shape factor compared to the real signal.

Full Bypass Enable

With **Full Bypass Enable** selected, the microwave preselector is bypassed. In addition, the low band/high band switch and microwave preamp are bypassed whenever *all* the following are true:

- The instrument is not in the Low Band, meaning:
- the start frequency is above 3.5 GHz and
- the stop frequency is above 3.6 GHz.
- the internal preamp is not installed or if installed, is set to **Off** or **Low Band**

Note that this means that, when any part of a sweep is done in Low Band, the Low Noise Path is not used, whether or not the **Full Bypass Enable** is selected in the user

interface. Also, if the preamp is turned on, the Low Noise Path is not used, whether or not the **Full Bypass Enable** is selected in the user interface. The only time the Low Noise Path is used is when **Full Bypass Enable** is selected, the sweep is completely in High Band (> 3.6 GHz) and no preamp is in use.

CAUTION

When **Full Bypass Enable** is selected, and "**Y Scale**" on page 1745 is set to 0 dB, there will be a direct AC connection between the input and the first converter when the Low Noise Path switches in (when Start Freq >3.6 GHz and the Preamp is either not licensed, set to Low Band, or Off). This puts the first converter at considerable risk to be damaged by high AC power. Consequently, whenever **Full Bypass Enable** is selected, a warning message appears in the status bar:

"Full Bypass Enabled, maximum safe input power reduced"

Microwave Preselector Bypass Backwards Compatibility

| | |
|------------------------------|--|
| Example | Bypass the microwave preselector: <code>:POW:MW:PRES OFF</code> |
| Notes | Included for Microwave Preselector Bypass backwards compatibility The ON parameter sets the STD path (<code>:POW:MW:PATH STD</code>) The OFF parameter sets path MPB (<code>:POW:MW:PATH MPB</code>) |
| Preset | ON |
| Backwards Compatibility SCPI | <code>[:SENSe]:POWer[:RF]:MW:PRESelector[:STATe] ON OFF 0 1</code> <code>[:SENSe]:POWer[:RF]:MW:PRESelector[:STATe]?</code> |

Frequency Extender Preselection Bypass

Only applies to the high frequency path of the Frequency Extender, and only if the Frequency Extender allows it. For example, the V3050A high frequency path is 50 – 110 GHz and *does* allow control of the preselector bypass.

When the Frequency Extender's preselection is bypassed, flatness is improved, but will be subject to spurs from out-of-band interfering signals. For bandwidths greater than 2.5 [GHz], it is recommended that the signal bypass the Frequency Extender Preselector since the max bandwidth of the Preselector can be as narrow as 2.5 [GHz].

For most applications, the preset state is **OFF**, which gives the best remote-control throughput, minimizes acoustic noise from switching, minimizes out of band spurs, and minimizes the risk of wear in the hardware switches.

Preselector and Bandwidth Conflict

When the Frequency Extender Preselector is applied and the signal bandwidth is greater than 2.5 [GHz], then a settings alert message will show to warn the user that the signal may be distorted due to the limitation of the Frequency Extender Preselector bandwidth.

An example of the settings alert message is shown below.

Settings Alert message in the Status Bar at the bottom of the display.

Settings Alert message in the error queue

| Type | ID | |
|---|-----|--|
|  | 159 | Settings Alert - DETECTED; Presel/Meas BW conflict |

Allow Full Bypass in Auto

Enable or disable Full Bypass in μ W Path Auto rule. See " [\$\mu\$ W Path Control](#)" on page 1778.

When this function is **ON**, and " [\$\mu\$ W Path Control](#)" on page 1778 is in **AUTO**, it is possible for the auto rules to select the **FULL** Bypass state, which bypasses both the Preamp and the Microwave Preselector. Otherwise, the auto rules never select the **FULL** Bypass state. This is convenient when making wideband measurements, but it also adds some risk of damage to the first converter.

CAUTION

When **Full Bypass Enable** is selected, and "[Y Scale](#)" on page 1745 is set to 0 dB, there will be a direct AC connection between the input and the first converter when the Low Noise Path switches in (when Start Freq > 3.6 GHz and the Preamp is either not licensed, set to **Low Band** or **Off**). This puts the first converter at considerable risk to be damaged by high AC power. Consequently, whenever **Full Bypass Enable** is selected, a warning message appears in the status bar:

"Full Bypass Enabled, maximum safe input power reduced"

Remote Command [:SENSe]:POWer[:RF]:MW:PATH:AUTO:FULL ON | OFF | 1 | 0
 [:SENSe]:POWer[:RF]:MW:PATH:AUTO:FULL?

| | |
|--------------|---|
| Example | <code>:POW:MW:PATH:AUTO:FULL ON</code> <code>:POW:MW:PATH:AUTO:FULL?</code> |
| Dependencies | Only appears if Option FBP is installed, and in the following measurements <ul style="list-style-type: none"> - 5GNRMode: Modulation Analysis and IQ Waveform - WLAN Mode: IQ Waveform - Channel Quality Mode: Group Delay and Noise Power Ratio |
| Preset | <code>OFF</code> |
| State Saved | Saved in instrument state |

Software Preselection

Provided in some instruments, either to compensate for issues with provided hardware preselection or to provide the preselection function when there is no hardware preselector.

N9041B

Software Preselection compensates for the frequency range limit of the microwave preselector. Since the microwave preselector only goes up to 50 GHz, software preselection must be used to suppress and separate images above 50 GHz. The specific algorithm used for software preselection is specified by the SW Preselection Type selection – Normal or Advanced.

In N9041B, **Software Preselection** only applies for frequencies above 50 GHz, therefore it is only used for RF Input 2. Even if turned on, it is not used for other inputs, and never for frequencies below 50 GHz. This is why the label of this control contains the parenthetical note “(>~50 GHz)”.

Note that in N9041B, in Swept SA measurement, **Software Preselection** works even if the measurement is using an FFT Sweep Type. In measurements other than Swept SA, Software Preselection is not used if the measurement is using an FFT sweep type.

N9042B+V3050A

Software Preselection compensates for the frequency range limit of the microwave preselector. Since the microwave preselector only goes up to 50 GHz, software preselection must be used to suppress and separate images above 50 GHz. The specific algorithm used for software preselection is specified by the SW Preselection Type selection – Normal or Advanced.

For N9042B+V3050A, Software Preselection only applies for frequencies above 50 GHz, therefore it is only used for External RF. Even if it is turned on, it will not be

3 WLAN Mode
3.9 Spectral Flatness Measurement

used for other inputs and never for frequencies below 50 GHz. This is why the label of this control contains the parenthetical note “(>~50 GHz)”.

Note that for N9042B+V3050A, in the Swept SA measurement, Software Preselection works even if the measurement is using an FFT Sweep Type. In measurements other than Swept SA, Software Preselection is not used if the measurement is using an FFT Sweep Type.

VXT models M9410A/11A/15A/16A

Software Preselection is used to provide the preselection function, as there is no hardware preselector in these models. Two background traces are taken and compared point by point, and the point with the lowest amplitude from the two traces is used. This provides a method to reduce spurs that are internally generated within the VXT, but you should note the following when using Software Preselection:

- There is some speed cost due to the need to take multiple captures
- Taking the point with the lowest amplitude in each trace will make the average noise level lower at all points that do not have a spur. This can reduce the accuracy of the measurement of noise and noise-like signals

Because of the difficulty in identifying spurs manually, you are recommended to leave Software Preselection **ON** at all times in VXT models M9410A/11A. If you turn it off in order to speed up your measurement or improve noise accuracy, be aware of unwanted onscreen spurs.

| | |
|----------------|--|
| Remote Command | <code>[:SENSe]:POWer[:RF]:SWPrese1:STATe 0 1 ON OFF</code> <code>[:SENSe]:POWer[:RF]:SWPrese1:STAT?</code> |
| Example | <code>:POW:SWPR:STAT 1</code> <code>:POW:SWPR:STAT?</code> |
| Dependencies | Only appears in N9041B, N9042B+V2050A, VXT models M9410A/11A and M9410E/11E. Does not appear in all measurements |
| Couplings | Affects Sweep Time Auto Tune supports Software Preselection , so Auto Tune should be performed after setting the Software Preselection state |
| Preset | N9041B OFF N9042B+V3050A ON M9410A/11A ON |
| State Saved | Saved in instrument state |

SW Preselection Type

Specifies the algorithm used for software preselection.

Two hidden sweeps occur in succession. The second sweep is offset in LO frequency by $2 * IF / N$. For each point in each trace, the smaller amplitude from the two traces is taken and placed in that point in the selected trace. The Peak detector is auto-selected to improve the image suppression effectiveness. Responses of each trace that lie on top of one another will remain and are valid signals. Other signals are images, which are suppressed. The action of taking the smaller of the two traces will make the average noise level lower in all points that do not have an image, thus reducing the accuracy of the measurement of noise and noise-like signals.

- **NORMa1** - mathematically removes all image and multiple responses of signals present at the input
- **ADVanced** - any trace processing (such as “max hold” or trace averaging) is performed on the points of both candidate traces before the “select minimum” operation occurs. This form of processing works better for non-stationary signals, such as pulsed-RF signals

| | |
|----------------|--|
| Remote Command | <code>[:SENSe]:POWer[:RF]:SWPreSel NORMa1 ADVanced</code> <code>[:SENSe]:POWer[:RF]:SWPreSel?</code> |
| Example | <code>:POW:SWPR NORM</code> <code>:POW:SWPR?</code> |
| Dependencies | Only appears in N9041B and N9042B+V3050A. Only appears in measurements that use the Swept method Grayed-out when "Software Preselection" on page 1788 is OFF. The grayout message is “Unavailable unless SW Presel enabled” |
| Preset | N9041B ADVanced N9042B+V3050A NORMa1 |
| State Saved | Saved in instrument state |

SW Preselection BW

Specifies the effective bandwidth to be used for Software Preselection.

The options are:

- **NORMa1** – when making Swept measurements, a software preselection algorithm is used which takes up to 4 background acquisitions, then post-processes the result. This algorithm can remove images from signals with an occupied

3 WLAN Mode
3.9 Spectral Flatness Measurement

bandwidth up to around 3 GHz. (Default/Preset setting). When making FFT measurements, this algorithm is not used, instead the same algorithm is used as for **NARRow** (below)

- **NARRow**– a software preselection algorithm is used which takes two background acquisitions, then post-processes the result to detect and remove images from wideband signals with occupied bandwidths up to 2 GHz. This increases the risk of images failing to be rejected, but improves the measurement speed

| | |
|----------------|--|
| Remote Command | <code>[:SENSe]:POWer[:RF]:SWPreSel:BW NORMa1 NARRow</code> <code>[:SENSe]:POWer[:RF]:SWPreSel:BW?</code> |
| Example | <code>:POW:SWPR:BW NARR</code> |
| Dependencies | Only appears in N9041B and N9042B+V3050A. Only appears in measurements that use the Swept method Grayed-out when " Software Preselection " on page 1788 is OFF . The grayout message is "Unavailable unless SW Presel enabled" For N9042B+V3050A, the parameter is SCPI-only, and always set to NARRow when Software Preselection is enabled |
| Preset | N9041B NORMa1 N9042B+V3050A NARRow |
| State Saved | Saved in instrument state |

High Freq Prefilter

Lets you set the state of Prefilter for center frequencies above 1310 MHz.

In VXT Models M9410A/11A and M9410E/11E in bypass frequency range (1310MHz~5GHz), the Receiver RF path has a bank of filters that come after the RF Attenuator in the signal path. Since this bank of filters precedes the mixer they are known as the "Prefilter" bank. Their purpose is to eliminate unwanted in-band mixing products by filtering out all but the desired frequencies before the signals get to the mixer. There are 13 prefilter bands to cover the frequencies between 9 kHz and 6000 MHz. The Prefilter provides the necessary rejection of the unwanted signal.

| | |
|----------------|--|
| Remote Command | <code>[:SENSe]:<measurement>:PFILter[:STATe] ON OFF 1 0</code> <code>[:SENSe]:<measurement>:PFILter[:STATe]?</code> |
| Example | Enable High Freq Prefilter for the Complex Spectrum Measurement in BASIC Mode: <code>:SPEC:PFIL ON</code> Enable High Freq Prefilter for the IQ Waveform Measurement, in multiple Modes: <code>:WAV:PFIL ON</code> |

| | |
|--------------|--|
| | Enable High Freq Prefilter for the Swept SA Measurement in SA Mode: :SAN:PFIL ON |
| Dependencies | Only appears in VXT models M9410A/11A with center frequency above 1310 MHz, and M9410E/11E in frequency range 1310MHz~5GHz |
| Preset | See " Prefilter Presets " on page 1462 below |
| State Saved | Saved in instrument state |

Prefilter Presets

| Meas | Mode | Preset |
|------|---|--------|
| SPEC | BASIC | OFF |
| WAV | BASIC, WCDMA, WLAN, LTEAFDD, LTEATDD, 5GNR, VMA | OFF |
| MON | WCDMA, WLAN, LTEAFDD, LTEATDD, 5GNR, VMA | OFF |

3.9.4 BW

The BW key opens the bandwidth menu, which contains controls for the Resolution Bandwidth of the instrument.

The Resolution BW functions control filter bandwidth and filter type. There are two filter types, Gaussian and Flattop. The Gaussian filters have a response curve that is parabolic on a log scale. The Flattop filter shape is a close approximation of a rectangular filter.

3.9.4.1 Settings

The Settings tab contains the basic Bandwidth functions.

Info BW

Enables you to specify the information bandwidth for the analyzer. This is used to set the hardware filter of the ADC.

| | |
|----------------|---|
| Remote Command | <code>[:SENSe]:FLATness:BANDwidth[:RESolution] <freq></code> <code>[:SENSe]:FLATness:BANDwidth[:RESolution]?</code> |
| Example | <code>:FLAT:BAND 6 MHz</code> <code>:FLAT:BAND?</code> |
| Preset | if Radio Std is 802.11a/b/g: 25MHz if Radio Std is802.11n 20MHz : 25MHz if Radio Std is802.11n 40MHz : 40MHz if Radio Std is802.11ac 20MHz : 25MHz if Radio Std is802.11ac 40MHz : 40MHz if Radio Std is802.11ac 80MHz : 80MHz if Radio Std is802.11ac 160MHz : 160MHz if Radio Std is 802.11ah-1MHz : 3MHz if Radio Std is 802.11ah-2M : 3MHz if Radio Std is 802.11ah-4M : 4MHz if Radio Std is 802.11ah-8M : 8MHz if Radio Std is 802.11ah-16M: 16MHz if Radio Std is 802.11j/p-10M: 10MHz if Radio Std is 802.11p-5M: 5MHz If Radio Std is 802.11af 6M or 802.11af 7M: 5.3333MHz If Radio Std is 802.11af 8M: 7.1111MHz if Radio Std is802.11ax/be 20MHz : 25MHz if Radio Std is802.11ax/be 40MHz : 40MHz if Radio Std is802.11ax/be 80MHz : 80MHz if Radio Std is802.11ax/be 160MHz : 160MHz if Radio Std is802.11be 320MHz : 320MHz |
| State Saved | Saved in instrument state. |
| Min/Max | 1 kHz/The analyzer's Max Info Bandwidth is dependent on the BW options: VXT model M9421A: No Option = 40.0 MHz Option B40 = 40.0 MHz |

Option B85 = 80.0 MHz
 Option B1X = 160.0 MHz
 Option U-B85 = Upgrade from 40.0 MHz to 80.0 MHz
 Option U-B1X = Upgrade from 80.0 MHz to 160.0 MHz

3.9.5 Display

The Display key opens the Display Menu, which lets you configure display items for the current Mode, Measurement, View or Window.

3.9.5.1 Meas Display

The Meas Display tab contains controls for setting up the display for the current Measurement, View or Window.

Limit Lines

Turns the limit lines On or Off.

| | |
|----------------|--|
| Remote Command | <code>:DISPlay:FLATness:RAMP[:STATE] OFF ON 0 1</code> <code>:DISPlay:FLATness:RAMP[:STATE]?</code> |
| Example | <code>:DISP:FLAT:RAMP ON</code> <code>:DISP:FLAT:RAMP?</code> |
| Preset | ON |
| State Saved | Saved in instrument state. |

3.9.5.2 Views

The Spectral Flatness measurement has only 1 view as follows.

Whenever the View changes, the default menu is Frequency.

| | |
|--------|---------|
| View | Window |
| Normal | Trace |
| | Metrics |

1. Trace: it's a Graphic window. There are 3 traces in this graph, Upper Limit, Lower Limit and Flatness trace. Limit Traces will not include the unused subcarriers, like #0 subcarrier in 802.11a. Flatness Trace will be combined by several blue points which indicates the position of subcarriers. If all the blue points fall between the limit lines, measurement will pass.

2. Metric: it's a window displaying the measured value of the subcarriers. The delta between this subcarrier value and relative upper limit value, and the index of this subcarrier, also an indicator "P/F" will be shown at the end to help judge if this extreme value can meet the limit check. The Section 1 and Section 2, please find the definitions in Measurement Algorithm. "Max Point to Upper Limit" means the maximum value measured in this measurement. "Min Point to Lower Limit" is very like the Max one, only the delta value will be calculated between the minimum value and lower limit value.

3.9.5.3 Annotation

Contains controls for setting up the annotation for the current Mode or Measurement.

Graticule

Turns the display graticule On or Off for all windows with graticules in all measurements in the current Mode. Also turns the graticule Y-Axis annotation on and off.

| | |
|------------------------------|--|
| Remote Command | <code>:DISPlay:GRATicule[:STATe] OFF ON 0 1</code> |
| Example | <code>:DISP:GRAT OFF</code> |
| Notes | The graticule is the set of horizontal and vertical lines that make up the grid/divisions for the X-Axis and Y-Axis |
| Preset | ON |
| State Saved | Saved in instrument state |
| Backwards Compatibility SCPI | <code>:DISPlay:WINDow[1]:TRACe:GRATicule:GRID[:STATe] OFF ON 0 1</code> <code>:DISPlay:WINDow[1]:TRACe:GRATicule:GRID[:STATe]?</code> This command is accepted for backwards compatibility with older instruments, but the WINDow , TRACe and GRID parameters are ignored |

Screen Annotation

Controls the display of the annunciation and annotation around the graticule, including any annotation on lines (such as the display line, the threshold line, etc.) and the Y-Axis annotation, for all windows with screen annotation in all measurements in the current Mode.

This does *not* include marker annotation (or the N dB result). When **OFF**, the graticule expands to fill the entire graticule area, leaving only the 1.5% gap above the graticule, as described in the **Trace** section.

3 WLAN Mode
3.9 Spectral Flatness Measurement

| | |
|----------------|--|
| Remote Command | <code>:DISPlay:ANNotation:SCReen[:STATe] OFF ON 0 1</code> <code>:DISPlay:ANNotation:SCReen[:STATe]?</code> |
| Example | <code>:DISP:ANN:SCR OFF</code> |
| Dependencies | Grayed-out and forced to OFF when System Display Settings, Annotation is OFF |
| Preset | ON This remains OFF through a Preset when System Display Settings, Annotation is set to OFF |
| State Saved | Saved in instrument state |

Trace Annotation

Turns on and off the labels on the traces, showing their detector (or their Math Mode) as described in the **Trace** section, for all windows in all measurements in the current Mode for which Trace Annotation on/off is supported.

If Trace Math is being performed on a trace, then the Trace Math annotation replaces the detector annotation.

For measurements that support limit lines, this key also turns on and off the labels on the Limit Lines. The label is the Limit number annotation and Limit Comment displayed on the graph. If the length of the comment is greater than 20 characters, the first 8 characters and the last 8 characters are displayed, joined with

| | |
|----------------|--|
| Remote Command | <code>:DISPlay:ANNotation:TRACe[:STATe] ON OFF 1 0</code> <code>:DISPlay:ANNotation:TRACe[:STATe]?</code> |
| Example | <code>:DISP:ANN:TRAC OFF</code> |
| Preset | OFF |
| State Saved | Saved in instrument state |

Control Annotation

Turns on and off the display of values on the Active Function controls for all measurements in the current Mode. This is a security feature.

| | |
|----------------|--|
| Remote Command | <code>:DISPlay:ACTivefunc[:STATe] ON OFF 1 0</code> <code>:DISPlay:ACTivefunc[:STATe]?</code> |
| Example | <code>:DISP:ACT OFF</code> |
| Dependencies | Grayed out and forced to OFF when System Display Settings, Annotation is OFF |
| Preset | ON This remains OFF through a Preset when System Display Settings, Annotation is set to OFF |
| State Saved | Saved in instrument state |

Meas Bar

Turns the Measurement Bar at the top of the screen on and off for all measurements in the current Mode. When **OFF**, the graticule area expands to fill the area formerly occupied by the Measurement Bar.

| | |
|----------------|--|
| Remote Command | <code>:DISPlay:ANNotation:MBAR[:STATe] OFF ON 0 1</code> <code>:DISPlay:ANNotation:MBAR[:STATe]?</code> |
| Example | <code>:DISP:ANN:MBAR OFF</code> |
| Dependencies | Grayed out and forced to OFF when System Display Settings, Annotation is OFF |
| Preset | ON This remains OFF through a Preset when System Display Settings, Annotation is set to OFF |
| State Saved | Saved in instrument state |

Display Enable (Remote Command Only)

Turns the display on/off, including the display drive circuitry. The backlight stays lit to confirm that the instrument is on. The display enable setting is mode global. There are three reasons for turning the display off:

1. To increase speed as much as possible by freeing the instrument from having to update the display
2. To reduce emissions from the display, drive circuitry
3. For security purposes

If you have turned off the display:

- and you are in local operation, the display can be turned back on by pressing any key or by sending `:SYSTem:DEFaults MISC` or `:DISPlay:ENABle ON` (neither `*RST` nor `:SYSTem:PRESet` enable the display)
- and you are in remote operation, the display can be turned back on by pressing the **Local** or **Esc** keys, or by sending `:SYSTem:DEFaults MISC` or `:DISPlay:ENABle ON` (neither `*RST` nor `:SYSTem:PRESet` enable the display)
- and you are using either the `:SYSTem:KLOCK` command or GPIB local lockout, then *no* front-panel key press will turn the display back on. You must turn it back on remotely.

If the display is **OFF**, many SCPI commands related to User Views and Multiscreen functionality do not work, and return the error messages “-221, Settings conflict; Screen SCPI cannot be used when Display is disabled” or “221, Settings conflict; View SCPI cannot be used while Display is disabled”. These commands include:

3 WLAN Mode
3.9 Spectral Flatness Measurement

| Name | Command |
|----------------------------|-------------------------------|
| Select User View | :DISPlay:VIEW:ADVanced:SElect |
| Rename User View | :DISPlay:VIEW:ADVanced:REName |
| Delete User View | :DISPlay:VIEW:ADVanced:DElete |
| Create User View | :DISPlay:VIEW:ADVanced:NAME |
| Select Screen | :INSTrument:SCReen:SElect |
| Delete Screen | :INSTrument:SCReen:DElete |
| Delete All But This Screen | :INSTrument:SCReen:DElete:ALL |
| Add Screen | :INSTrument:SCReen:CREate |
| Rename Screen | :INSTrument:SCReen:REName |
| Sequencer On/Off | :SYSTem:SEQuencer |

| | |
|-------------------------------|---|
| Remote Command | :DISPlay:ENABle OFF ON 0 1 :DISPlay:ENABle? |
| Example | :DISP:ENAB OFF |
| Couplings | :DISP:ENAB OFF turns Backlight OFF and :DISP:ENAB ON turns Backlight ON, but changing Backlight settings does <i>not</i> change the state of :DISP:ENAB |
| Preset | ON Set by :SYST:DEF MISC, but not affected by *RST or :SYSTem:PRESet |
| State Saved | Not saved in instrument state |
| Backwards Compatibility Notes | :SYST:PRES no longer turns on :DISPlay:ENABle as it did in legacy analyzers |

3.9.6 Freq

The Freq key opens the Frequency menu, which contains controls that allow you to control the Frequency and Channel parameters of the instrument.

3.9.6.1 Settings

The Settings Tab contains controls that pertain to the X axis parameters of the measurement. These parameters control how data on the vertical (X) axis is displayed and control instrument settings that affect the horizontal (Y) axis.

Center Frequency

Sets the frequency that corresponds to the horizontal center of the graticule. While adjusting the Center Frequency the Span is held constant, this means that both Start Frequency and Stop Frequency will change.

| | |
|----------------|--|
| Remote Command | <code>[:SENSe] :FREQuency :CENTer <freq></code> <code>[:SENSe] :FREQuency :CENTer?</code> |
| Example | <code>:FREQ:CENT 50 MHz</code> <code>:FREQ:CENT?</code> |
| Notes | This command sets the RF, External Mixing or I/Q Center Frequency depending on the selected input. For RF input it is equivalent to <code>FREQ:RF:CENT</code> For I/Q input it is equivalent to <code>FREQ:IQ:CENT</code> For External Mixer it is equivalent to <code>FREQ:EMIX:CENT</code> Preset and Max values are dependent on Hardware Options. If no terminator (e.g. MHz) is sent the terminator Hz is used. If a terminator with unit other than Frequency is used, an invalid suffix error message is generated. |
| Dependencies | The Center Frequency can be limited by Start or Stop Freq limits, if the Span is so large that Start or Stop reaches their limit. |
| Couplings | When operating in "swept span", any value of the Center Frequency or Span that is within the frequency range of the analyzer is allowed when the value is being set through the front panel numeric key pad or the SCPI command. The other parameter is forced to a different value if needed, to keep the Start and the Stop Frequencies within the analyzer's frequency range Coupling between center frequency and span: numeric (keypad) entries are treated differently than changing the value using the step keys (up/down arrows) or the knob. Similarly, for remote operation sending a numeric frequency value is treated differently than the UP DOWN keywords. <ul style="list-style-type: none">- Numeric entries (keypad or remote) - any value of center frequency or span (within the frequency range of the analyzer) is allowed. The other parameter is forced, as necessary, to keep the Start Freq and Stop Freq within the analyzer frequency range.- Knob or Step keys (up/down arrows) or UP DOWN keywords - the value of the parameter being changed (center frequency or span) is limited so the other parameter is not forced to a new value. Thus, if only the step keys and knob are used, you can get back to the initial Center Freq and Span by changing only the current parameter. NOTE: since out-of-range Start Freq and Stop Freq are never allowed, markers and trace math work nicely without requiring anything special for out-of-range conditions. |
| Preset | Depends on instrument maximum frequency, mode, measurement, and selected input. See "Center Frequency Presets" on page 1472 and "RF Center Freq" on page 1474 and "Ext Mix Center Freq" on page 1474 and "I/Q Center Freq" on page 1475 . |
| State Saved | Saved in instrument state |
| Min | Depends on instrument maximum frequency, mode, measurement, and selected input.. |

| | |
|------------------------------|---|
| | See "Center Frequency Presets" on page 1472 and "RF Center Freq" on page 1474 and "I/Q Center Freq" on page 1475 . |
| Max | Depends on instrument maximum frequency, mode, measurement, and selected input. See "Center Frequency Presets" on page 1472 and "RF Center Freq" on page 1474 and "I/Q Center Freq" on page 1475 . |
| Status Bits/OPC dependencies | Non-overlapped |

More Information

In measurements that also have Start Freq and Stop Freq controls, pressing Center Freq sets the frequency entry mode to Center/Span. In Center/Span mode, the center frequency and span values are displayed below the graticule, and the default active function in the Frequency menu is **Center Freq**. In the Start/Stop annotation mode, Start Freq and Stop Freq are displayed below the graticule instead of Center Freq and Span.

Pressing Center Freq also sets the frequency entry mode to Center/Span. In Center/Span mode, the center frequency and span values are displayed below the graticule, and the default active function in the Frequency menu is **Center Freq**.

When frequency Scale Type is set to log, pressing Center Freq sets the frequency that corresponds to the arithmetic mean of the start frequency and stop frequency, which is not at the horizontal center of the graticule.

The center frequency setting is the same for all measurements within a mode, that is, it is Meas Global. Some modes are also able to share a Mode Global center frequency value. If this is the case, the Mode will have a **Global** tab in its **Meas Setup** menu.

The **Center Freq** function sets (and queries) the Center Frequency for the currently selected input. If your analyzer has multiple inputs, and you select another input, the Center Freq changes to the value for that input. SCPI commands are available to directly set the Center Freq for a specific input.

Center Freq is remembered as you go from input to input. Thus you can set a Center Freq of 10 GHz with the RF Input selected, change to BBIQ and set a Center Freq of 20 MHz, then switch to External Mixing and set a Center Freq of 60 GHz, and when you go back to the RF Input the Center Freq will go back to 10 GHz; back to BBIQ and it is 20 MHz; back to External Mixing and it is 60 GHz.

- See ["RF Center Freq" on page 1474](#)
- See ["Ext Mix Center Freq" on page 1474](#)
- See ["I/Q Center Freq" on page 1475](#)

See "Center Frequency Presets" on page 1472

Center Frequency Presets

The following table provides the Center Frequency Presets for the Spectrum Analyzer mode, and the Max Freq, for the various frequency options:

| Freq Option | CF after Mode Preset | Stop Freq after Mode Preset | Max Freq (can't tune above) |
|------------------------------|----------------------|-----------------------------|-----------------------------|
| 503 (all but CXA) | 1.805 GHz | 3.6 GHz | 3.7 GHz |
| 503 (CXA) | 1.505 GHz | 3.0 GHz | 3.08 GHz |
| 507 (all but CXA) | 3.505 GHz | 7.0 GHz | 7.1 GHz |
| 507 (CXA) | 3.755 GHz | 7.5 GHz | 7.58 GHz |
| 508 (all but MXE) | 1.805 GHz | 3.6 GHz | 8.5 GHz |
| 508 (MXE) | 4.205 GHz | 8.4 GHz | 8.5 GHz |
| 513 | 6.805 GHz | 13.6 GHz | 13.8 GHz |
| 526 (all but CXA and MXE) | 13.255 GHz | 26.5 GHz | 27.0 GHz* |
| 526 (CXA) | 13.255 GHz | 26.5 GHz | 26.55 GHz |
| 526 (MXE) | 1.805 GHz | 3.6 GHz | 27.0 GHz |
| 532 | 16.005 GHz | 32.0 GHz | 32.5 GHz |
| 543 | 21.505 GHz | 43.0 GHz | |
| 544 | 22.005 GHz | 44.0 GHz | 44.5 GHz |
| 550 | 25.005 GHz | 50.0 GHz | 52 GHz |
| F06 (M9415A) | 1 GHz | 1.08 GHz | 6.6 GHz |
| F08 (M9415A) | 1 GHz | 1.08 GHz | 8.6 GHz |
| F12 (M9415A) | 1 GHz | 1.08 GHz | 12.9 GHz |

3 WLAN Mode
 3.9 Spectral Flatness Measurement

*For option 526, the Max CF in RTSA is 26.999999995 GHz.

Input 2:

| Model | CF after Mode Preset | Stop Freq after Mode Preset | Max Freq (can't tune above) |
|-------------|----------------------|-----------------------------|-----------------------------|
| CXA opt C75 | 0.7505 GHz | 1.5 GHz | 1.58 GHz |
| MXE | 505 MHz | 1 GHz | 1.000025 GHz |

Tracking Generator Frequency Limits (CXA only):

| Tracking Generator Option | Min Freq (clips to this freq when turn TG on and can't tune below while TG on) | If above this Freq, Stop Freq clipped to this Freq when TG turned on | Max Freq (can't tune above) while TG on |
|---------------------------|--|--|---|
| T03 | 9 kHz | 3.0 GHz | 3.08 GHz |
| T06 | 9 kHz | 6.0 GHz | 6.05 GHz |

The following table shows the Center Frequency Presets for modes other than Spectrum Analyzer:

| Mode | CF Preset for RF |
|------------|--------------------------------|
| WCDMA | 1 GHz |
| WIMAXOFDMA | 1 GHz |
| BASIC | 1 GHz |
| ADEMOD | 1 GHz |
| VSA | 1 GHz |
| TDSCDMA | 1 GHz |
| PNOISE | 1 GHz |
| LTE | 1 GHz |
| LTETDD | 1 GHz |
| MSR | 1 GHz |
| GSM | 935.2 MHz |
| NFIGURE | 1.505 GHz |
| PULSEX | Same as Spectrum Analyzer Mode |
| BT | 2.402GHz |

RF Center Freq

SCPI command for specifying the RF Center Frequency. This command will set the Center Frequency to be used when the RF input is selected, even if the RF input is not the input that is selected at the time the command is sent. Note that the **Center Freq** function in the **Frequency** menu on the front panel always applies to the currently selected input.

| | |
|----------------|--|
| Remote Command | <code>[:SENSe] :FREQuency:RF:CENTer <freq></code> <code>[:SENSe] :FREQuency:RF:CENTer?</code> |
| Example | <code>:FREQ:RF:CENT 30 MHz</code> <code>:FREQ:RF:CENT?</code> |
| Notes | This command is the same in all modes, but the parameter is Measurement Global. So the value is independent in each mode and common across all the measurements in the mode. |
| Dependencies | If the electronic/soft attenuator is enabled, any attempt to set Center Frequency such that the Stop Frequency would be >3.6 GHz fails and results in an advisory message. If the equivalent SCPI command is sent, this same message is generated as part of a “-221, Settings conflict” warning. If Source Mode is set to Tracking, and the Max or Min Center Freq is therefore limited by the limits of the source, a warning message is generated, “Data out of range; clipped to source max/min” if these limits are exceeded. Note that for an external source, these limits can be affected by the settings of Source Numerator, Source Denominator, and Power Sweep. |
| Preset | See table above |
| State Saved | Saved in instrument state. |
| Min | -79.999995 MHz, unless Source Mode is set to Tracking, in which case it is limited by the minimum frequency of the Source |
| Max | See table above. Basically instrument maximum frequency - 5 Hz. Note that, if the Source Mode is set to Tracking, the effective instrument maximum frequency may be limited by the source maximum frequency. If the knob or step keys are being used, also depends on the value of the other three interdependent parameters Span, Start Frequency and Stop Frequency. |

Ext Mix Center Freq

SCPI command for specifying the External Mixer Center Frequency. This command will set the Center Frequency to be used when the External Mixer is selected, even if the External Mixer input is not the input which is selected at the time the command is sent. Note that the **Center Freq** function in the **Frequency** menu on the front panel always applies to the currently selected input.

| | |
|----------------|--|
| Remote Command | <code>[:SENSe] :FREQuency:EMIXer:CENTer <freq></code> <code>[:SENSe] :FREQuency:EMIXer:CENTer?</code> |
| Example | <code>:FREQ:EMIX:CENT 60 GHz</code> |

3 WLAN Mode
3.9 Spectral Flatness Measurement

| | <code>:FREQ:EMIX:CEN?</code> |
|-------------|--|
| Notes | This command is the same in all modes, but the parameter is Measurement Global. So the value is independent in each mode and common across all the measurements in the mode. |
| Couplings | When returning to External Mixing after having been switched to one of the other inputs (e.g., RF), you will come back into the settings that you had when you left External Mixing. So you will come back to the band you were in with the Center Frequency that you had. However, Span is not an input-dependent parameter, therefore you will bring the span over from the other input. Therefore, the analyzer comes back with the span from the previous input, limited as necessary by the current mixer setup. |
| Preset | <p>When a Mode Preset is performed while in External Mixing, the Start frequency of the current Mode is set to the nominal Min Freq of the lowest harmonic range in the Harmonic Table for the current mixer setup. Similarly, the Stop frequency of the current Mode is set to the nominal Max Freq of the highest harmonic range in the Harmonic Table. The Center Freq thus presets to the point arithmetically equidistant from these two frequencies.</p> <p>If the current measurement has a limited Span available to it, and cannot achieve the Span shown in the table (Span=Stop Freq – Start Freq), the analyzer uses the maximum Span the measurement allows, and still sets the Center Freq to the midpoint of the Start and Stop Freq values in the Harmonic Table.</p> <p>When Restore Input/Output Defaults is performed, the mixer presets to the 11970A, whose Start and Stop frequencies are 26.5 and 40 GHz respectively. The center of these two frequencies is 33.25 GHz. Therefore, after a Restore Input/Output Defaults, if you go into External Mixing and do a Mode Preset while in the Spectrum Analyzer Mode, the resulting Center Freq is 33.25 GHz.</p> |
| State Saved | Yes |
| Min | The minimum frequency in the currently selected mixer band + 5 Hz |
| Max | <p>The maximum frequency in the currently selected mixer band - 5 Hz</p> <p>If the knob or step keys are being used, also depends on the value of the other three interdependent parameters Span, Start Frequency and Stop Frequency</p> |

I/Q Center Freq

SCPI command for specifying the I/Q Center Frequency. This command will set the Center Frequency to be used when the I/Q input is selected, even if the I/Q input is not the input which is selected at the time the command is sent. Note that the **Center Freq** function in the **Frequency** menu on the front panel always applies to the currently selected input.

| | |
|----------------|--|
| Remote Command | <code>[:SENSe] :FREQuency:IQ:CENTer <freq></code> <code>[:SENSe] :FREQuency:IQ:CENTer?</code> |
| Example | <code>:FREQ:IQ:CEN 30 MHz</code> |
| Notes | This command is the same in all modes, but the parameter is Measurement Global. So the value is independent in each mode and common across all the measurements in the mode. |

| | |
|-------------|----------------------------|
| Preset | 0 Hz |
| State Saved | Saved in instrument state. |
| Min | -40.049995 MHz |
| Max | 40.049995 MHz |

CF Step

Changes the step size for the center frequency and start and stop frequency functions. Once a step size has been selected and the center frequency function is active, the step keys (and the UP|DOWN parameters for Center Frequency from remote commands) change the center frequency by the step-size value. The step size function is useful for finding harmonics and sidebands beyond the current frequency span of the analyzer.

Note that the start and stop frequencies also step by the CF Step value.

| | |
|------------------------------|--|
| Remote Command | <code>[:SENSe] :FREQuency :CENTer :STEP [:INCRement] <freq></code> <code>[:SENSe] :FREQuency :CENTer :STEP [:INCRement] ?</code> |
| Example | <code>:FREQ:CENT:STEP 500 MHz</code> <code>:FREQ:CENT UP</code> increases the current center frequency value by 500 MHz <code>:FREQ:CENT:STEP?</code> |
| Notes | Preset and Max values are depending on Hardware Options (503, 507, 508, 513, 526) Preset and Max values are dependent on Hardware Options (5xx) |
| Dependencies | Span, RBW, Center frequency If the electronic/soft attenuator is enabled, any attempt to change the value of the center frequency >3.6 GHz by pressing the Up-arrow key, fails and results in an advisory message. If the equivalent SCPI command is sent, this same message is generated as part of a "-221, Settings conflict" warning. |
| Couplings | When auto-coupled in a non-zero span, the center frequency step size is set to 10% of the span. When auto-coupled in zero span, the center frequency step size is set to the equivalent -3 dB RBW value. |
| Preset | Auto |
| State Saved | Saved in instrument state |
| Min | – (the maximum frequency of the instrument). That is, 27 GHz max freq instrument has a CF step range of +/- 27 GHz. Note that this is the maximum frequency given the current settings of the instrument, so in External Mixing, for example, it is the maximum frequency of the current mixer band. |
| Max | The maximum frequency of the instrument. That is, 27 GHz max freq instrument has a CF step range of +/- 27 GHz. Note that this is the maximum frequency given the current settings of the instrument, so in External Mixing, for example, it is the maximum frequency of the current mixer band. |
| Status Bits/OPC dependencies | non-overlapped |

| | |
|----------------|--|
| Remote Command | <code>[:SENSe]:FREQuency:CENTer:STEP:AUTO OFF ON 0 1</code> |
| Example | <code>:FREQ:CENt:STEP:AUTO ON</code> <code>:FREQ:CENt:STEP:AUTO?</code> |
| Preset | ON |

3.9.7 Marker

Accesses a menu that enables you to select, set up and control the markers for the current measurement. If there are no active markers, **Marker** selects marker 1, sets it to Normal and places it at the center of the display. If the selected marker is Off, it is set to Normal and placed it at the center of the screen on the trace determined by the Marker Trace rules.

For more detailed information on the types of Markers and the interaction between Markers, see the Marker section of the Swept SA measurement.

3.9.7.1 Select Marker

Specifies the selected marker. The term “selected marker” is used throughout this document to specify which marker will be affected when you change marker settings, perform a Peak Search, etc.

The Select Marker control appears above the menu panel, indicating that it applies to all controls in the Marker menu panels. Select Marker is blanked if you select a tab whose controls do NOT depend on the selected marker (for example, Counter).

On any menu tab for which Select Marker displays, the first control is always Marker Frequency|Time.

| | |
|-------------|--|
| Notes | The selected marker is remembered even when not in the Marker menu and is used if a Search is done or a Band Function is turned on or for Signal Track or Continuous Peak. |
| Preset | Marker 1 |
| State Saved | The number of the selected marker is saved in instrument state. |

3.9.7.2 Settings

The controls on the Settings tab include the Marker active function and a radio button selection of the marker control mode (Normal, Delta, or Off) for the selected marker, as well as additional functions that help you use markers.

Marker X Value

Set the X Axis value of the selected marker in the current X Axis Scale unit.

If the marker mode is off, the SCPI command has no affect other than to cause the marker to become selected.

If the marker mode is Normal, the Marker X position is absolute.

If the mode is Delta, then the X position is relative to the reference marker.

The valid X positions are the actual data points in the trace; the marker cannot be located between points. If a SCPI command attempts to place the marker between two points, the X value snaps to the closest point.

| | |
|----------------|--|
| Remote Command | <code>:CALCulate:FLATness:MARKer[1] 2 ... 12:X <real></code> <code>:CALCulate:FLATness:MARKer[1] 2 ... 12:X?</code> |
| Example | <code>:CALC:FLATness:MARK:X 0.325</code> <code>:CALC:FLATness:MARK:X?</code> |
| Notes | Marker X does not go outside the bounds of the data. If you attempt to set it to a value outside the bounds, it is clipped at the closest limit and error -222 "Data Out of Range" is generated. If suffix is sent, it must match the X units for the trace the marker is on. Otherwise, error -138, "Suffix not allowed" is generated. If you try to read or set the position of a Delta marker, remember that the position is in relative units. |
| Couplings | See "Coupling of Delta and Reference markers" on page 1479 . |
| Preset | None until marker is turned on. |
| State Saved | Yes |
| Min/Max | Depends on trace data / Depends on trace data |

SCPI only X position commands

Via SCPI, the marker position can also be set or queried in trace points. In this case, the position setting or reading is absolute regardless of control mode.

NOTE

The entered value in Trace Points is immediately translated into the current domain units for setting the value of the marker. The marker's value in domain units, NOT trace points, is preserved if a change is made to the X Axis scale settings. Thus, if you use this command to place a marker on point 500, which happens at that time to correspond to 13 GHz, and then you change the Start Frequency so that point 500 is no longer 13 GHz, the marker stays at 13 GHz, NOT at point 500.

If the trace the marker is on a 2-dimensional domain, then the points are numbered in the following way:

Starting at the minimum X and Z position, this point is numbered 0. Each time you increment the point number, increment the X value to the next available value. When X reaches the maximum X position, then reset X to the minimum and increment the Z value. Then continue incrementing the X position in the same manner as before.

Note that for symbol tables, which have no axes, incrementing the X position in points moves the marker consecutively through all table entries.

| | |
|----------------|--|
| Remote Command | <code>:CALCulate:FLATness:MARKer[1] 2 ... 12[:X]:POSition <real></code> <code>:CALCulate:FLATness:MARKer[1] 2 ... 12[:X]:POSition?</code> |
| Example | <code>:CALC:FLATness:MARK:POS 25</code> <code>:CALC:FLATness:MARK:POS?</code> |
| Notes | When a marker mode is changed from off to any other mode, the X position is set to mid-screen. |
| Preset | None until marker is turned on. |
| State Saved | Yes |
| Min/Max | Depends on trace data / Depends on trace data |

Marker X Unit can be queried via SCPI.

| | |
|----------------|---|
| Remote Command | <code>:CALCulate:FLATness:MARKer[1] 2 ... 12:X:UNIT?</code> |
| Example | <code>:CALC:FLATness:MARK:X:UNIT?</code> |
| Notes | Query Only |

Coupling of Delta and Reference markers

The following coupling rules apply from the front panel and also if the equivalent SCPI commands are sent.

Pressing Delta causes the selected marker to become a delta marker if it is not already. Also, the selected marker's reference is affected as follows:

- If the reference marker was off, it is turned on as a Normal marker.
- The reference marker is moved to the trace of the selected marker and set to the same position as the selected marker.
- If the delta marker has a marker function turned on, the reference marker takes on the same function (with the same band limits).

Exception: Pressing Delta when the selected marker's mode is not yet Delta does not move or change a reference marker that is already turned on (Normal or Delta) and on the same trace as the selected marker. It merely changes the selected marker's mode to Delta and shows the current offset between it and the reference. If you press Delta again (when the selected marker is already in Delta mode) then the reference is moved and modified as described above.

When a delta marker is changed to any other control mode, if its reference marker is Normal then the reference marker is also turned off.

If you move a delta marker to a different trace, it is forced to Normal mode and the reference is turned off.

A delta marker is forced to Normal mode if you turn its reference off or if you move its reference to another trace. (In the latter case the reference is not turned off even if it is Normal.)

If you change the selected marker's reference (using the Marker, Properties, Relative To), the selected marker is forced to Delta mode. This change of the selected marker to Delta mode causes its new reference's control mode and position to change as described above.

Marker Mode

Sets the marker control mode to **Normal**, **Delta**, or **Off**.

All interactions and dependencies detailed under the control description are enforced when the remote command is sent. If the selected marker is Off, pressing Marker sets it to Normal and places it at the center of the screen on the trace determined by the **Marker Trace** rules.

The default active function is the active function for the currently selected marker control mode. If the current control mode is Off, there is no active function and the active function is turned off.

| | |
|----------------|--|
| Remote Command | <code>:CALCulate:FLATness:MARKer[1] 2 ... 12:MODE POSition DELTa OFF</code> <code>:CALCulate:FLATness:MARKer[1] 2 ... 12:MODE?</code> |
| Example | <code>:CALC:FLATness:MARK3:MODE POS</code> <code>:CALC:FLATness:MARK3:MODE?</code> |
| Notes | NORMal is changed to POSition in the new SA. |
| Preset | OFF |
| State Saved | Saved in instrument state. |
| Range | Normal DELTa (D) Off |

Backward Compatibility SCPI Commands

Sets or queries the state of a marker. Setting a marker which is OFF to state ON or 1 puts it in Normal mode and places it at the center of the screen.

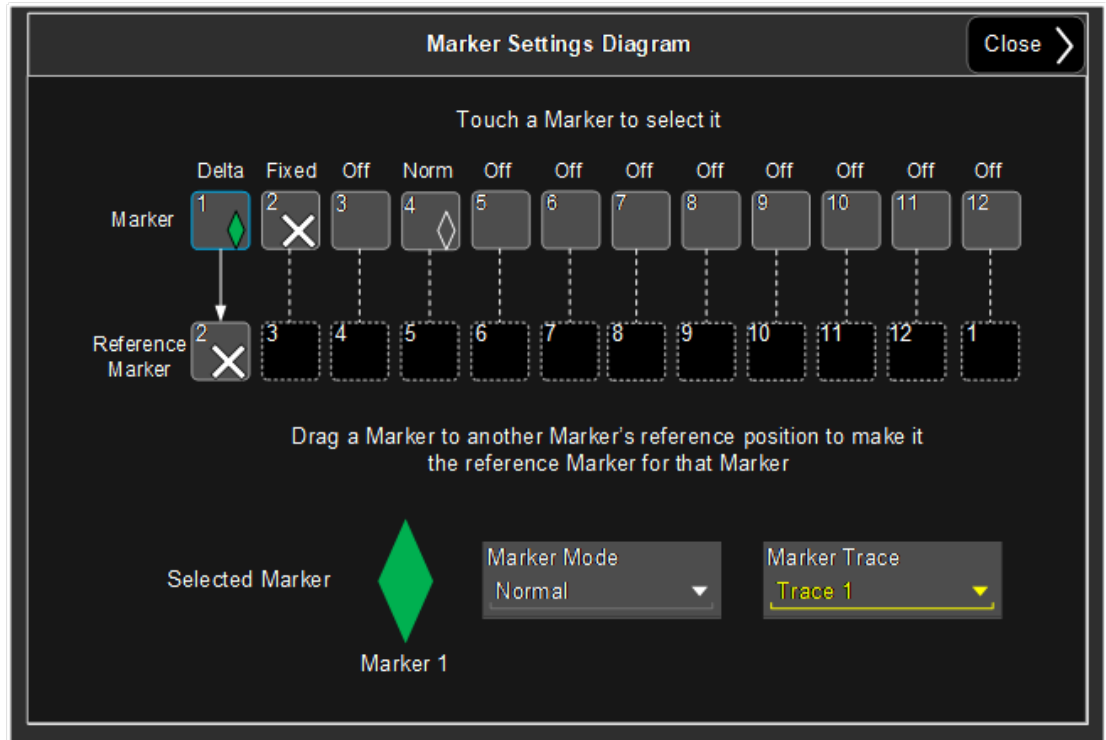

| | |
|----------------|--|
| Remote Command | <code>:CALCulate:FLATness:MARKer[1] 2 ... 12:STATe OFF ON 0 1</code> <code>:CALCulate:FLATness:MARKer[1] 2 ... 12:STATe?</code> |
| Example | <code>:CALC:FLATness:MARK3:STAT ON</code> <code>:CALC:FLATness:MARK3:STAT?</code> |
| Preset | OFF |
| State Saved | Saved in instrument state |
| Range | On Off |

Delta Marker (Reset Delta)

Pressing this button is exactly the same as pressing the “Delta” selection on the Marker Mode radio button. The selected marker becomes a Delta Marker. If the selected marker is already a Delta marker, the reference marker is moved to the current position of the selected marker, thus resetting the Delta to zero.

Marker Settings Diagram

The Marker Settings Diagram lets you configure the Marker system using a visual utility.

All Markers Off

Turns off all markers.

| | |
|----------------|---------------------------------|
| Remote Command | :CALCulate:FLATness:MARKer:AOFF |
| Example | :CALC:FLATness:MARK:AOFF |

Couple Markers

When this function is On, moving any marker causes an equal X Axis movement of every other marker which is not Off. “equal X Axis movement” means to preserve the difference between each marker’s X Axis value (in the fundamental x-axis units of the trace that marker is on) and the X Axis value of the marker being moved (in the same fundamental x-axis units).

| | |
|----------------|--|
| Remote Command | :CALCulate:FLATness:MARKer:COUple[:STATe] ON OFF 1 0 |
| Example | :CALC:FLATness:MARK:COUP ON :CALC:FLATness:MARK:COUP? |

Notes In general, when coupling is turned on then all Normal or Delta markers with the same (or equivalent)

| | |
|-------------|--|
| | domain as the selected marker move in the same manner as the selected marker. See " Peak Search " on page 1483 |
| Preset | OFF |
| State Saved | Saved in instrument state |

More Information

Coupling is relative between markers on the same trace (so that their relative positions in the domain are maintained). Coupling can be absolute between markers on different traces that have equivalent domains. That is, they have the same position in the domain, if possible. (As an example of equivalent domains, demodulated symbol positions can be derived from time by using the current symbol rate). When you move the selected marker, then others on related traces track it. This enables you to correlate different measurement results. For example, you can place a marker at a particular symbol time on an error vector magnitude display, have tracking markers on the symbol table and pre-demod time trace showing you the symbol value, and the actual time-varying signal value at the same point in time.

Absolute coupling is performed only for the lowest numbered Normal or Delta marker on each trace. All other markers on a trace couple relatively. When you turn on marker coupling, the subset of markers that have the same domain as the selected marker track it and all other markers remain at their current location. The absolutely coupled markers within this subset is moved at this time to match the domain setting of the selected marker, with the relatively coupled markers following accordingly to maintain offsets within their respective traces. Those markers with different domains remain at their current location. When you select a marker with a different domain than the previously selected marker, the subset of markers with that domain go through the same procedure.

Any marker that coupling would move outside its range of X values, remains at the closest limiting value. If the coupled markers are on data that do not have the same domain resolution, then they are positioned as close to each other as possible.

If markers change mode or trace, or trace data is changed below them, the coupling rules are immediately applied to the new set.

3.9.7.3 Peak Search

The controls on the Peak Search tab allow you to move the marker to selected peaks of the signal, giving you enormous analysis capabilities, particularly when combined with the Delta Marker function.

NOTE Pressing the Peak Search hardkey automatically moves you to the Peak Search page of the Marker menu AND performs a Peak Search.

NOTE Pressing the Peak Search tab once you are already IN the Marker menu does NOT perform a Peak Search.

Marker X Value

The Marker Frequency control is the fundamental control that you use to move a marker around on the trace. This is the same as the "Marker X Value" on page 1478 on the Settings tab.

Peak Search

Pressing the Peak Search control moves the selected marker to the trace point which has the maximum y-axis value for that marker's trace.

NOTE Pressing the Peak Search hardkey automatically moves you to the Peak Search page of the Marker menu AND performs a Peak Search.

Remote Command :CALCulate:FLATness:MARKer[1]|2|...|12:MAXimum

Example :CALC:FLATness:MARK2:MAX

The command SYST:ERR? can be used to query the errors to determine if a peak is found. The message "No peak found" will be returned after an unsuccessful search.

Next Peak

Pressing Next Peak moves the selected marker to the peak that is next lower in amplitude than the current marker value. If there is no valid peak lower than the current marker position, a "No peak found" message is generated and the marker is not moved.

If the selected marker was off, it is turned on as a normal marker and a peak search is performed.

Remote Command :CALCulate:FLATness:MARKer[1]|2|...|12:MAXimum:NEXT

Example :CALC:FLATness:MARK2:MAX:NEXT

State Saved Not Saved in instrument state

Next Pk Right

Pressing Next Pk Right moves the selected marker to the nearest peak right of the current marker that meets all enabled peak criteria. If there is no valid peak to the right of the current marker position, a “No peak found” message is generated and the marker is not moved.

If the selected marker was off, then it is turned on as a normal marker and a peak search is performed.

| | |
|----------------|---|
| Remote Command | <code>:CALCulate:FLATness:MARKer[1] 2 ... 12:MAXimum:RIGHT</code> |
| Example | <code>:CALC:FLATness:MARK2:MAX:RIGH</code> |
| Notes | Sending this command selects the subopcoded marker. |
| State Saved | Not Saved in instrument state |

Next Pk Left

Pressing Next Pk Left moves the selected marker to the nearest peak left of the current marker that meets all enabled peak criteria. If there is no valid peak to the left of the current marker position, a “No peak found” message is generated and the marker is not moved.

If the selected marker was off, then it is turned on as a normal marker and a peak search is performed.

In the Code Domain measurement in WCDMA, pressing this control moves the selected marker to the nearest active channel left of the current marker when Marker Trace is either Code Domain Power or Code Domain Error. In other cases, moves the selected marker to the highest peak left of the current marker.

In the Mod Accuracy measurement in WCDMA, pressing this control moves the selected marker to the nearest active channel left of the current marker when Marker Trace is Code Domain Power. In other cases, moves the selected marker to the highest peak left of the current marker.

In LTE/LTE-Advanced modulation analysis measurements, if the format is complex (vector or constellation), the marker moves back in time to the next peak. A valid peak is one for which the displayed Y-axis values drop monotonically on both sides of the local maximum at least 4% of the distance between the top and bottom of the display grid before the values begin to rise again.

| | |
|----------------|---|
| Remote Command | <code>:CALCulate:MARKer[1] 2 ... 12:MAXimum:LEFT</code> <code>:CALCulate:FLATness:MARKer[1] 2 ... 12:MAXimum:LEFT</code> |
| Example | <code>:CALC:MARK2:MAX:LEFT</code> <code>:CALC:FLAT:MARK2:MAX:LEFT</code> |

State Saved Not Saved in instrument state.

Minimum Peak

Moves the selected marker to the minimum y-axis value on the current trace. Minimum (negative) peak searches do not have to meet the peak search criteria. It just looks for the lowest y-axis value. If the selected marker is Off, it is turned on before the minimum search is performed.

Remote Command `:CALCulate:MARKer[1]|2|...|12:MINimum`
 `:CALCulate:FLATness:MARKer[1]|2|...|12:MINimum`

Example `:CALC:MARK:MIN`
 (Selects marker 1 and moves it to the minimum amplitude value.)
 `:CALC:FLAT:MARK2:MIN`

Notes Sending this command selects the subopcoded marker.

State Saved Not Saved in instrument state.

Pk-Pk Search

Finds and displays the amplitude and frequency (or time, if in zero span) differences between the highest and lowest y-axis value. It places the selected marker on the minimum value on its selected trace. And it places that marker's reference marker on the peak of its selected trace.

This function turns on the reference marker and sets its mode to **Normal** if it is not already on. (These markers may be on two different traces.)

The rules for finding the maximum peak are exactly the same as for **Peak Search**, including the use of the peak criteria rules. However, the minimum trace value is not required to meet any criteria other than being the minimum y-axis value in the trace.

If the selected marker is off, a delta type marker is turned on and the peak-to-peak search is done. If the selected marker is on, but it is not a delta marker, then it is changed to delta which turns on the reference marker if needed, and then it performs the peak-to-peak function.

Remote Command `:CALCulate:MARKer[1]|2|...|12:PTPeak`
 `:CALCulate:FLATness:MARKer[1]|2|...|12:PTPeak`

Example `:CALC:MARK:PTP`
 `:CALC:FLAT:MARK:PTP`

Notes Turns on the Marker D function.
 Sending this command selects the subopcoded marker.

Dependencies Pk-Pk Search is not available when **Coupled Markers** is on.

| | |
|-------------|--|
| Couplings | The selected marker becomes a delta marker if not already in delta mode. |
| State Saved | Not Saved in instrument state. |

Marker Delta

Pressing this button is exactly the same as pressing the “Delta” selection on the ["Marker Mode" on page 1480](#) radio button on the Settings tab. The selected marker becomes a Delta Marker.

If the selected marker is already a Delta marker, the reference marker is moved to the current position of the selected marker, thus resetting the Delta to zero.

The control is duplicated here in the Peak Search Menu to allow you to conveniently perform a peak search and change the marker’s control mode to Delta without having to access two separate menus.

3.9.7.4 Properties

The controls on the Properties tab are used to set certain properties of the selected marker.

Marker X Value

The Marker Frequency control is the fundamental control that you use to move a marker around on the trace. This is the same as the ["Marker X Value" on page 1478](#) on the Settings tab.

Relative To

Selects the marker to which the selected marker is relative (its reference marker).

Every marker has another marker to which it is relative. This marker is referred to as the “reference marker” for that marker. This attribute is set by the **Marker, Properties, Relative To**. The marker must be a **Delta** marker to make this attribute relevant. If it is a **Delta** marker, the reference marker determines how the marker is controlled and how its value is displayed.

A marker cannot be relative to itself.

| | |
|----------------|---|
| Remote Command | <code>:CALCulate:FLATness:MARKer[1] 2 ... 12:REFerence <integer></code> |
| Example | <code>:CALC:FLAT:MARK:REF 5</code> <code>:CALC:FLAT:MARK:REF?</code> |

| | |
|-------------|--|
| Notes | <p>This command causes the marker specified with the subopcode to become selected.</p> <p>Range (for SCPI command): 1 to 12. If the range is exceeded the value is clipped.</p> <p>A marker cannot be relative to itself so that choice is not available, and if sent from SCPI generates error -221: "Settings conflict; marker cannot be relative to itself."</p> <p>When queried a single value is returned (the specified marker numbers relative marker).</p> |
| Couplings | <p>The act of specifying the selected marker's reference marker makes the selected marker a Delta marker.</p> <p>If the reference marker is off it is turned on in Normal mode at the delta marker location.</p> |
| Preset | <p>2 3 4 5 6 7 8 9 10 11 12 1</p> <p>The preset default "Relative To" marker (reference marker) is the next higher numbered marker (current marker +1). For example, if marker 2 is selected, then it's default reference marker is marker 3. The exception is marker 12, which has a default reference of marker 1.</p> <p>Set to the defaults by using Restore Mode Defaults. This is not reset by Marker Off, All Markers Off, or Preset.</p> |
| State Saved | <p>Saved in instrument state.</p> <p>Not affected by Marker Off and hence not affected by Preset or power cycle.</p> |
| Min/Max | 1/12 |

Marker Trace

Assigns the specified marker to the designated trace.

| | |
|----------------|---|
| Remote Command | <pre>:CALCulate:FLATness:MARKer[1] 2 ... 12:TRACe FLATness ULIMit LLIMit</pre> <pre>:CALCulate:FLATness:MARKer[1] 2 ... 12:TRACe?</pre> |
| Example | <pre>:CALC:FLATness:MARK:TRAC FLAT</pre> <pre>:CALC:FLATness:MARK:TRAC?</pre> |
| Preset | FLAT |
| State Saved | Saved in instrument state. |

Marker Settings Diagram

The Marker Settings Diagram lets you configure the Marker system using a visual utility. This is the same as the "[Marker Settings Diagram](#)" on page 1481 on the Settings tab.

3.9.8 Meas Setup

The Meas Setup menu panel contains functions for setting up the measurement parameters and also contains functions for setting up parameters global to all measurements in the mode.

3.9.8.1 Settings

The Settings tab contains frequently used Meas Setup functions to which you will want the fastest access.

Avg|Hold Number

Used to specify the number of data acquisitions that are averaged. After the specified number of average counts, the averaging mode (termination control) setting determines the averaging action.

- On - Sets measurement averaging on.
- Off - Sets measurement averaging off.

| | |
|----------------|---|
| Remote Command | <code>[:SENSe]:FLATness:AVERage:COUNT <integer></code> <code>[:SENSe]:FLATness:AVERage:COUNT?</code> |
| Example | <code>:FLAT:AVER:COUN 1</code> <code>:FLAT:AVER:COUN?</code> |
| Preset | 10 |
| State Saved | Saved in instrument state. |
| Min/Max | 1/10000 |

Turns averaging on or off.

| | |
|----------------|--|
| Remote Command | <code>[:SENSe]:FLATness:AVERage[:STATe] OFF ON 0 1</code> <code>[:SENSe]:FLATness:AVERage[:STATe]?</code> |
| Example | <code>:FLAT:AVER OFF</code> <code>:FLAT:AVER?</code> |
| Preset | ON |
| State Saved | Yes |
| Range | On Off |

Averaging Mode

Selects the type of termination control used for the averaging function. This determines the averaging action after the specified number of data acquisitions (average count) is reached.

- Exponential: After the average count is reached, each successive data acquisition is exponentially weighted and combined with the existing average.
- Repeat: After reaching the average count, the averaging is reset and a new average is started.

| | |
|----------------|--|
| Remote Command | <code>[:SENSe]:FLATness:AVERage:TCONtrol EXPOnential REPeat</code> <code>[:SENSe]:FLATness:AVERage:TCONtrol?</code> |
| Example | <code>:FLAT:AVER:TCON REP</code> <code>:FLAT:AVER:TCON?</code> |
| Preset | EXPOnential |
| State Saved | Saved in instrument state. |
| Range | Exponential Repeat |

Search Length

Enables you to specify the Search Length for WLAN spectral flatness measurement. Please note, this parameter determines the length of data to be acquired. In order to assure channel estimation, preamble should be included in, therefore Search Length should not be less than summation of long preamble, short preamble and payload, or actual data.

| | |
|----------------|---|
| Remote Command | <code>[:SENSe]:FLATness:SLEngth <time></code> <code>[:SENSe]:FLATness:SLEngth?</code> |
| Example | <code>:FLAT:SLEN 1ms</code> <code>:FLAT:SLEN?</code> |
| Preset | 700.00 us |
| State Saved | Saved in instrument state. |
| Min/Max | For Option B25 (BW 25 MHz): 28.0 us / 88.89 ms For OptionB40 or Wider (BW 40 MHz or wider): 28.0 us/(4.0e6/Info BW/1.25) |

Symbol Timing Adjustment

Normally, when demodulating of an OFDM symbol, the guard interval is skipped over, and an FFT is performed on the last portion of the symbol time. However, this means that the FFT would include the transition region between this symbol and the following symbol. To avoid this, it is generally beneficial to back up away from the end of the symbol time, and use a part of the guard interval.

3 WLAN Mode
 3.9 Spectral Flatness Measurement

This parameter Symbol Timing Adjust controls how far the FFT part of the symbol is adjusted away from the end of the symbol time. The value is in terms of percent of the used (FFT) part of the symbol time.

The value must be between zero (meaning no adjustment) and $-100 \times \text{Guard Interval}$. Values outside of that range are clipped to the limit. Note that this parameter value is negative, because the FFT start time is moved back by this parameter.

| | |
|----------------|---|
| Remote Command | <code>[:SENSe]:FLATness:TADJust <percent></code> <code>[:SENSe]:FLATness:TADJust?</code> |
| Example | <code>:FLAT:TADJ -3.125</code> <code>:FLAT:TADJ?</code> |
| Preset | -3.125% |
| State Saved | Saved in instrument state. |
| Min/Max | $-100.0 \times \text{Guard Interval} / 0.0$ |

Sync Training Sequence

This parameter specifies synchronization method to use when synchronizing to the start of the OFDM burst. The valid values are Short or Long.

A value of Short means to search for and synchronize to an 802.11a preamble short symbol sequence. Short value should not be used for 802.11g DSSS-OFDM, because the DSSS-OFDM preamble does not contain the short symbol sequence.

A value of Long means to search for and synchronize to an 802.11a/g preamble long symbol sequence (also called the channel estimation sequence).

NOTE

Available when Radio Std is 802.11a/g/j/p OFDM.

| | |
|----------------|--|
| Remote Command | <code>[:SENSe]:FLATness:STSequence LONG SHORt</code> <code>[:SENSe]:FLATness:STSequence?</code> |
| Example | <code>:FLAT:STS LONG</code> <code>:FLAT:STS?</code> |
| Preset | SHORt |
| State Saved | Saved in instrument state. |
| Range | Long Short |

Equalizer Training

This specifies how the equalizer is initialized, or “trained”. The valid values are Channel Estimation Seq Only and Channel Estimation Seq & Data. The value Channel Estimation Seq Only, which is the default, specifies that the equalizer is trained using only the channel estimation sequence (also called the “long sync”) portion of the burst preamble. The 802.11a/g/n standards imply that the equalizer should be implemented this way when measuring EVM, and this matches how a real receiver would probably implement an equalizer.

The value and Channel Estimation Seq & Data specifies that the equalizer should be trained using both the channel estimation sequence and the entire data portion of the burst. This usually gives a more accurate estimate of the equalizer response.

| | |
|----------------|--|
| Remote Command | <code>:CALCulate:FLATness:EQUalizer:TMODe Sequence SDATa</code> <code>:CALCulate:FLATness:EQUalizer:TMODe?</code> |
| Example | <code>:CALC:FLAT:EQU:TMOD SDAT</code> <code>:CALC:FLAT:EQU:TMOD?</code> |
| Preset | SEQ |
| State Saved | Saved in instrument state |
| Range | Channel Estimation Sequence Only Channel Estimation Sequence&Data |

Evaluation Option

This parameter allows you to choose either “magnitude of channel estimation” or “subcarrier received values” to evaluate spectral flatness.

| | |
|----------------|---|
| Remote Command | :CALCulate:FLATness:EVALuation CESTimation SCValues |
| Example | :CALCulate:FLATness:EVALuation? :CALC:FLAT:EVAL CEST :CALC:FLAT:EVAL? |
| Preset | CESTimation |
| State Saved | Yes |
| Range | CESTimation SCValues |

Meas Setup Summary Table

The Meas Setup Summary Table lets you view and access many of the parameters in the Meas Setup menus on one screen.

Auto Couple

The Auto Couple control immediately puts all Auto/Man functions into Auto. The Auto Couple action is confined to the current measurement only. It does not affect other measurements in the mode.

In the Auto state, Auto/Man functions are said to be “coupled”, meaning their value will change depending on changes you make to other values in the measurement. This helps ensure accurate measurements and optimum dynamic range. Auto Couple is an immediate action function, and when it is executed, all the Auto/Man controls for the current measurement are set to Auto and all measurement settings coupled to the Auto/Man parameters are automatically set to their optimal value.

| | |
|-------------------------------|--|
| Remote Command | :COUPle ALL |
| Example | :COUP ALL |
| Backwards Compatibility Notes | :COUPLE NONE puts all Auto/Man parameters in manual mode, decoupling all the coupled instrument parameters. It is retained for backwards compatibility and is not recommended for making measurements. |

Meas Preset

Restores all the measurement parameters to their default values.

| | |
|----------------|---|
| Remote Command | <code>:CONFigure:FLATness</code> |
| Example | <code>:CONF:FLAT</code> |
| Couplings | Selecting Meas Preset restores all measurement parameters to these default values |

3.9.8.2 Radio

Contains controls to select Radio Standard and settings.

Radio Std Detection

Enables automatic detection of the radio standard of a WLAN signal from DUT. The auto detection can detect all WLAN family, *except* 802.11ah.

This function is available for Modulation Analysis and Spectral Flatness measurements. In other measurements, when **Auto** is selected, error message “-221 Setting conflict, Auto detection is not available for current measurement” appears.

When **Radio Std Detection** is **Auto**, **Radio Std** is grayed-out.

When set to **Man**, the radio standard is determined by "[Radio Std](#)" on page 1835.

The default settings is **Manual**.

| | |
|----------------|---|
| Remote Command | <code>[:SENSE]:RADio:STANdard[:WLAN]:DETECT:AUTO OFF ON 0 1</code> <code>[:SENSE]:RADio:STANdard[:WLAN]:DETECT:AUTO?</code> |
| Example | <code>:RAD:STAN:DET:AUTO ON</code> <code>:RAD:STAN:DET:AUTO?</code> |
| Notes | Auto detection can detect all WLAN family, <i>except</i> 802.11ah The auto detection function is available for Modulation Analysis and Spectral Flatness measurements. In other measurements, if Auto is selected, error message “-221 Setting conflict, Auto detection is not available for current measurement” appears Auto Detection is <i>not</i> recommended for Multi-Carrier signals |
| Preset | <code>OFF</code> |
| State Saved | Saved in instrument state |

Radio Std

In this menu, 7 groups of WLAN standards can be selected:

1. 802.11a/b/g/j/p includes 802.11a/g/j/p, 802.11b/g, 802.11g DSSS-OFDM, 802.11j/p 10M, 802.11p 5M

3 WLAN Mode
3.9 Spectral Flatness Measurement

2. 802.11n includes 802.11n 20MHz and 802.11n 40MHz
3. 802.11ac includes 802.11ac 20MHz, 802.11ac 40MHz, 802.11ac 80MHz, 802.11ac 80+80MHz and 802.11ac 160MHz
4. 802.11ah includes 802.11ah1MHz, 802.11ah2MHz, 802.11ah4MHz, 802.11ah 8MHz, and 802.11ah16MHz
5. 802.11af includes 802.11af 6MHz, 802.11af 7MHz and 802.11af 8MHz
6. 802.11ax includes 802.11ax 20MHz, 802.11ax 40MHz, 802.11ax 80MHz, 802.11ax 80+80MHz and 802.11ax 160MHz
7. 802.11be includes 802.11be 20MHz, 802.11be 40MHz, 802.11be 80MHz, 802.11be 160MHz and 802.11be 320MHz

Below each standard, parameters related to demodulation can be set, such as Modulation Format, Guard Interval, and so on.

| | |
|----------------|---|
| Remote Command | <code>[:SENSe]:RADio:STANdard[:WLAN] AG BG GDO N20 N40 AC20 AC40 AC80 ACT80 AC160 AH1 AH2 AH4 AH8 AH16 JP10 P5 AF6 AF7 AF8 AX20 AX40 AX80 AXT80 AX160 BE20 BE40 BE80 BE160 BE320</code> <code>[:SENSe]:RADio:STANdard[:WLAN]?</code> |
| Example | <code>:RAD:STAN AG</code> <code>:RAD:STAN?</code> |
| Notes | If the command is sent with unsupported parameters, an error is generated “Settings conflict; option not installed” For IQ measurements (CCDF, Power vs Time, Spectral Flatness, IQ Waveform or Modulation Accuracy), they are also limited by BW Option installed. when any radio standard is selected in an IQ measurement which maximum BW could not meet this radio standard request, the “Invalid result; Wider BW required” message will be displayed, and the measurement should return invalid data: Enum value ACT80 means “AC Two 80MHz” (802.11ac 80+80 MHz) Enum value AXT80 means “AX Two 80MHz” (802.11ax 80+80 MHz) |
| Preset | AG |
| State Saved | Saved in instrument state |
| Range | 802.11a/g/j/p (OFDM 20M) 802.11b/g (DSSS/CCK/PBCC) 802.11g (DSSS-OFDM) 802.11n (20 MHz) 802.11n (40 MHz) 802.11ac (20 MHz) 802.11ac (40 MHz) 802.11ac (80 MHz) 802.11ac (80 + 80MHz) 802.11ac (160MHz) 802.11ah(1MHz) 802.11ah(2MHz) 802.11ah(4MHz) 802.11ah(8MHz) 802.11ah(16MHz) 802.11j/p (OFDM 10M) 802.11p (OFDM 5M) 802.11af (6MHz) 802.11af (7Mhz) 802.11af (8MHz) 802.11ax (20 MHz) 802.11ax (40 MHz) 802.11ax (80 MHz) 802.11ax (80 + 80MHz) 802.11ax (160MHz) 802.11be (20 MHz) 802.11be (40 MHz) 802.11be (80 MHz) 802.11be (160MHz) 802.11be (320MHz) |

Modulation Format

Lets you specify the modulation format of the input signal. You can select Auto Detect to automatically detect the modulation format, or specify modulation format for your testing.

| | |
|----------------|---|
| Remote Command | The values of <code><radio_std></code> and <code><options></code> in these commands depend on the desired Radio Standard. For available options, see " Radio Standard Keywords & Options " on page 1497 below <code>[:SENSe]:DEMod[:WLAN]:<radio_std>:FORMat <options></code> <code>[:SENSe]:DEMod[:WLAN]:<radio_std>:FORMat?</code> |
| Example | Radio Std = 802.11a/g/j/p (OFDM 20 MHz) <code>:DEM:AG:FORM AUTO</code> <code>:DEM:AG:FORM?</code> Radio Std = 802.11b/g (DSSS/CCK/PBCC) <code>:DEM:BG:FORM AUTO</code> <code>:DEM:BG:FORM?</code> |
| Dependencies | 4096 QAM is visible only if the license date is equal to or later than 2020.0630. It is enabled only in 11ac, 11ax and 11be and disabled in 802.11a/g/j/p, 802.11n, 802.11ah and 802.11af. When 4096 QAM is disabled, you cannot select this control and setting 4096QAM through the SCPI command generates error message "QAM4096 is not a valid value" If the license version is earlier than 2020.0630, 4096 QAM key is invisible. Setting it through SCPI generates error message "Command protected; The enum item can be available while the corresponding licenses installed" |

Subcarrier Spacing (Radio Std NOT 802.11b/g(DSSS/CCK/PBCC) or 802.11ax, 802.11be)

Specifies the subcarrier frequency spacing of the input signal. This parameter must match the actual subcarrier frequency spacing of the input signal, otherwise demodulation will fail. The default 312.5 kHz matches the 802.11a/g/n/ac standards.

Remote Command

```
Radio Std = 802.11a/g/j/p(OFDM 20 MHz)
[:SENSe]:DEMod[:WLAN]:AG:SUBCarrier:SPACing <freq>
[:SENSe]:DEMod[:WLAN]:AG:SUBCarrier:SPACing?

Guard Interval Selection (Radio Std NOT 802.11b/g(DSSS/CCK/PBCC) or 802.11ax/be)

Specifies the guard interval (also called cyclic extension) length for each symbol time, as a fraction of the FFT length. The value must match the guard interval length actually used in the input signal in order for demodulation to work properly. The value should be between zero and one, and values outside that range are clipped to be within the range. The value is rounded to the nearest 1/128th.

Other Guard Interval (Radio Std NOT 802.11b/g(DSSS/CCK/PBCC) or 802.11ax, 802.11be)

Specifies the guard interval (also called cyclic extension) length for each symbol time.

When "[Guard Interval Selection \(Radio Std NOT 802.11b/g\(DSSS/CCK/PBCC\) or 802.11ax/be\)](#)" on page 1504 is set to **Other**, this value is available and used as Guard Interval.

HE Subcarrier Spacing (Radio Std 802.11ax)

Specifies the HE subcarrier frequency spacing of the input signal. This parameter must match the actual HE subcarrier frequency spacing of the input signal, otherwise demodulation will fail. The default 78.125 kHz matches the 802.11ax standards.

| | |
|----------------|--|

HE Guard Interval Selection (Radio Std 802.11ax)

Specifies the guard interval (also called cyclic extension) length for each symbol time, as a fraction of the FFT length. The value must match the guard interval length actually used in the input signal in order for demodulation to work properly. The value should be between zero and one, and values outside that range are clipped to be within the range. The value is rounded to the nearest 1/128th. The 802.11ax HE Guard Interval is for HE part of signal, the Guard Interval of Non-HE part is fixed to 1/4. The Auto selection allows to detect 11ax HE Guard Interval automatically.

HE-LTF Size (Radio Std 802.11ax)

To indicate HE-LTF(the HE Long Training field) size, a HE PPDU supports 3 HE-LTF Sizes, which are 1x HE-LTF, 2x HE-LTF, and 4x HE-LTF. Duration of each 1x HE-LTF OFDM/2x HE-LTF OFDM/4x HE-LTF OFDM symbol without GI is 3.2us/6.4us/12.8us separately. In 11ax specification, HE-LTF size is always bundled with CP length, for example, 1x HE-LTF + 0.8 μ s, 2x HE-LTF + 0.8 μ s, 2x HE-LTF + 1.6 μ s and 4x HE-LTF + 3.2 μ s, then 1x/2x/4x HE-LTF is HE-LTF Size which should be set here and 0.8us/1.6us/3.2us are HE Guard Interval should be set by HE Guard Interval under mode setup/802.11ax, the HE Guard Interval should be 1/16, 1/8, 1/4, separately. The Auto Detect selection allows to detect 11ax HE-LTF Size automatically.

To be compatible with PSA existing commands, the X-Series WLAN Spectral Flatness measurement also provides the BWCC commands to configure the limit parameters, those commands will accept array parameters rather than single one, and the default values will be kept the same.

Upper Limit Section 1

This parameter allows you to specify upper deviation limit (dB) of the Section 1.

| | |
|----------------|---|
| Remote Command | <code>:CALCulate:FLATness:LIMit:UPPer:SECTion1 <rel_amp></code> |
| Example | <code>:CALC:FLAT:LIM:UPP:SECT1 2.0</code> <code>:CALC:FLAT:LIM:UPP:SECT1?</code> |

| | |
|-------------|------------------|
| Preset | 4.00 dB |
| State Saved | Yes |
| Min/Max | 0.10 dB/10.00 dB |

Lower Limit Section 1

This parameter allows you to specify lower deviation limit (dB) of the Section 1.

| | |
|----------------|---|
| Remote Command | <code>:CALCulate:FLATness:LIMit:LOWer:SECTion1 <rel_amp></code> |
| Example | <code>:CALC:FLAT:LIM:LOW:SECT1 2.0</code> <code>:CALC:FLAT:LIM:LOW:SECT1?</code> |
| Preset | -4.00 dB |
| State Saved | Yes |
| Min/Max | -10.00 dB/-0.1 dB |

Upper Limit Section 2

This parameter allows you to specify upper deviation limit (dB) of the Section 2.

| | |
|----------------|---|
| Remote Command | <code>:CALCulate:FLATness:LIMit:UPPer:SECTion2 <rel_amp></code> |
| Example | <code>:CALC:FLAT:LIM:UPP:SECT2 2.0</code> <code>:CALC:FLAT:LIM:UPP:SECT2?</code> |
| Preset | 4.00 dB |
| State Saved | Yes |
| Min/Max | 0.10 dB/10.00 dB |

Lower Limit Section 2

This parameter allows you to specify lower deviation limit (dB) of the Section 2.

| | |
|----------------|---|
| Remote Command | <code>:CALCulate:FLATness:LIMit:LOWer:SECTion2 <rel_amp></code> |
| Example | <code>:CALC:FLAT:LIM:LOW:SECT2 2.0</code> <code>:CALC:FLAT:LIM:LOW:SECT2?</code> |
| Preset | -4.00 dB |
| State Saved | Yes |
| Min/Max | -10.00 dB/-0.1 dB |

3.9.8.4 Advanced

The menu panel contains functions for the advanced measurement parameters and also contains functions for setting up parameters global to all measurements in the mode.

Dependencies This tab does not appear in EXM or VXT.

Phase Noise Optimization

Allows you to select the LO (local oscillator) phase noise behavior for various operating conditions.

| | |
|----------------|--|
| Remote Command | <code>[:SENSe]:FLATness:FREQuency:SYNThesis[:STATe] 1 2 3 4 5</code> <code>[:SENSe]:FLATness:FREQuency:SYNThesis[:STATe]?</code> |
| Example | <code>:FLAT:FREQ:SYNT 1</code> <code>:FLAT:FREQ:SYNT?</code> |
| Notes | <p>Parameter:</p> <p>1: In instruments with EPO, balances close-in phase noise with spur avoidance. In instruments without EPO optimizes phase noise for small frequency offsets from the carrier.</p> <p>2: optimizes phase noise for wide frequency offsets from the carrier.</p> <p>3: optimizes LO for tuning speed</p> <p>4: In instruments with EPO, balances close-in phase noise with spur avoidance. In instruments without EPO this setting is accepted but no action taken.</p> <p>5: In instruments with EPO, emphasizes spur avoidance with close-in phase noise performance. In instruments without EPO this setting is accepted but no action taken.</p> <p>The actual behavior varies somewhat depending on model number and option; you always get fast tuning by choosing #3, but in some models, the “Fast Tuning” choice is identical to the “Best Close-In” choice. Specifically:</p> <ul style="list-style-type: none"> – Models with option EPO (for example UXA), have a two stage local oscillator, which switches to a single loop for fast tuning – Models with option EP1 (for example PXA), have a two-loop local oscillator, which switches to a single loop for fast tuning – Models with option EP2 (available, for example, for MXA), use a different loop bandwidth for the fast-tuning choice, which is a compromise between tuning speed and phase noise, giving good tuning speed at all offsets, although not as good as for Close-In; this is useful when you have to look across a wide range of spans <p>In all other cases, Fast Tuning is the same as Best Close-In.</p> |
| Dependencies | This control does not appear in UXM, M9393A or M9391A. |
| Preset | 3 |

| State Saved | Saved in instrument state |
|-------------|--|
| Range | No EPx option: Best Close-In f Noise [offset < 20 kHz] Best Wide-Offset f Noise [offset > 30 kHz] Fast Tuning [same as Close-in] EPO: Best Close-In f Noise [offset < 600 kHz] Balance Noise & Spurs [offset < 600 kHz] Best Spurs [offset < 600 kHz] Best Wide-Offset f Noise [offset > 800 kHz] Fast Tuning EP1: Best Close-In f Noise [offset < 140 kHz] Best Wide-Offset f Noise [offset > 160 kHz] Fast Tuning [single loop] EP2 & EP3: Best Close-In f Noise [offset < 70 kHz] Best Wide-Offset f Noise [offset > 100 kHz] Fast Tuning [medium loop bw] EP4: Best Close-In f Noise [offset < 90 kHz] Best Wide-Offset f Noise [offset > 130 kHz] Fast Tuning [same as Close-in] |

IF Gain

In order to take full advantage of the RF dynamic range of the analyzer, we will offer a switched IF amplifier with approximately 10 dB of gain. When it can be turned on without an overload, the dynamic range is always better with it on than off. The control “IF Gain” can be used to set the IF Gain function to Auto, or to On (the extra 10 dB) or Off. These settings affect sensitivity and IF overloads.

Enables you to control an internally switched IF amplifier with approximately 10 dB of gain. This amplifier takes full advantage of the RF dynamic range of the analyzer. When it can be turned on without an overload, the dynamic range is always better when the amplifier is set to On, than when it is set to Off. The control “IF Gain” can be used to set the IF Gain function to Auto, or to On (the extra 10 dB) or Off. These settings affect sensitivity and IF overloads.

This only applies to the RF input. It does not apply to baseband I/Q input.

IF Gain Auto

Activates the auto rules for IF Gain.

| | |
|----------------|--|
| Remote Command | <code>[:SENSe]:FLATness:IF:GAIN:AUTO[:STATe] OFF ON 0 1</code> <code>[:SENSe]:FLATness:IF:GAIN:AUTO[:STATe]?</code> |
| Example | <code>:FLAT:IF:GAIN:AUTO OFF</code> <code>:FLAT:IF:GAIN:AUTO?</code> |
| Notes | This only applies to the RF input. It does not apply to baseband I/Q input |
| Dependencies | This control does not appear in UXM |
| Couplings | When either the auto attenuation works (for example, with the electrical attenuator) or optimize mechanical attenuator range is requested, the IF Gain setting is changed according to the following rule 'Auto' sets IF Gain to 'High Gain' under any of the following conditions: the input attenuator is set to 0 dB, the preamp is turned on, or the Max Mixer Level is -20 dBm or lower. For other settings, 'Auto' sets IF Gain to 'Low Gain' |
| Preset | OFF |
| State Saved | Yes |
| Range | Auto Man |

IF Gain State

Selects the range of IF gain.

| | |
|----------------|--|
| Remote Command | <code>[:SENSE]:FLATness:IF:GAIN[:STATE] ON OFF 1 0</code> <code>[:SENSE]:FLATness:IF:GAIN[:STATE]?</code> |
| Example | <code>:FLAT:IF:GAIN OFF</code> <code>:FLAT:IF:GAIN?</code> |
| Notes | Where ON = high gain OFF = low gain This only applies to the RF input. It does not apply to baseband I/Q input |
| Dependencies | This control does not appear in UXM |
| Couplings | When either the auto attenuation works (for example, with the electrical attenuator) or optimize mechanical attenuator range is requested, the IF Gain setting is changed according to the following rule 'Auto' sets IF Gain to 'High Gain' under any of the following conditions: the input attenuator is set to 0 dB, the preamp is turned on, or the Max Mixer Level is -20 dBm or lower. For other settings, 'Auto' sets IF Gain to 'Low Gain' |
| Preset | OFF |
| State Saved | Yes |
| Range | Low Gain High Gain |

Spectrum

Sets a spectrum to either normal or to inverted for demodulation related measurements. If set to INVert, the upper and lower spectrums are swapped.

The invert function conjugates the spectrum, which is equivalent to taking the negative of the quadrature component in demodulation. The correct setting (Normal or Invert) depends on whether the signal at the input of the instrument has a high or a low side mix.

| | |
|----------------|---|
| Remote Command | <code>:CALCulate:FLATness:SPECTrum INVert NORMal</code> <code>:CALCulate:FLATness:SPECTrum?</code> |
| Example | <code>:CALC:FLAT:SPEC INV</code> <code>:CALC:FLAT:SPEC?</code> |
| Preset | NORMal |
| State Saved | Saved in instrument state |
| Range | Normal Invert |

3.9.9 Sweep

The Sweep key contains controls which allow you to control the sweep and measurement functions of the analyzer, such as the sweep or measurement time

and whether in Single sweep/measure or Continuous sweep/measure mode.

3.9.9.1 Sweep/Control

This tab accesses controls that enable you to operate the Sweep and Control functions of the analyzer, such as Sweep Time and Continuous/Single

Sweep/Measure

Allows you to toggle between Continuous and Single sweep or measurement operation. The single/continuous state is Meas Global so the setting will affect all measurements.

The front-panel key **Single/Cont** performs this exact same function

| | |
|-------------------------------|--|
| Remote Command | <code>:INITiate:CONTinuous OFF ON 0 1</code> <code>:INITiate:CONTinuous?</code> |
| Example | <p><code>:INIT:CONT 0</code></p> <p>puts analyzer in Single measurement operation.</p> <p><code>:INIT:CONT OFF</code></p> <p>puts analyzer in Single measurement operation.</p> <p><code>:INIT:CONT 1</code></p> <p>puts analyzer in Continuous measurement operation.</p> <p><code>:INIT:CONT ON</code></p> <p>puts analyzer in Continuous measurement operation</p> |
| Preset | ON (Note that SYST:PRESet sets INIT:CONT to ON but *RST sets INIT:CONT to OFF) |
| State Saved | Saved in instrument state |
| Annunciation | The Single/Continuous icon in the Meas Bar changes depending on the setting. A line with an arrow is single, a loop with an arrow is Continuous. |
| Backwards Compatibility Notes | <p>For Spectrum Analysis mode in ESA and PSA, there is no Cont hardkey, instead there is a Sweep Single/Cont softkey. In these analyzers, switching the Sweep Single/Cont softkey from Single to Cont restarts averages (displayed average count reset to 1), but does not restart Max Hold and Min Hold.</p> <p>The X-Series A-models have Single and Cont hardkeys in place of the SweepSingleCont softkey. In the X-Series A-models, if in single measurement, the Cont hardkey (and INIT:CONT ON) switches to continuous measurement, but never restarts a measurement and never resets a sweep.</p> <p>The X-Series B-models have a Cont/Single toggle control instead of Single and Cont hardkeys, but it is still true that, if in single measurement, the Cont/Single toggle control never restarts a measurement and never resets a sweep.</p> <p>For Spectrum Analysis mode in ESA and PSA, the Single hardkey and the INITiate:IMM switched from continuous measurement to single measurement and restarted sweeps and averages (displayed average count reset to 1), but did not restart Max Hold and Min Hold. In the X-Series, the Restart</p> |

control and the INITiate:IMM command initiate a sweep/ measurement/ average sequence/hold sequence including **MaxHold** and **MinHold**.

For Spectrum Analysis mode in ESA and PSA, the **Single** hardkey restarted the sweep regardless of whether or not you were in an active sweep or sweep sequence. In the X-Series, **Restart** does this.

INIT[:IMM] in ESA & PSA Spectrum Analysis Mode does an implied ABORT. In some other PSA Modes, INIT[:IMM] is ignored if not in the idle state. This conforms to SCPI specified operation for INIT[:IMM] as shown in SCPI Command Reference section 24.7.2. The X-Series follows the ESA/PSA SA Mode model, which may cause some Modes to have compatibility problems.

More Information

With **Avg/Hold Num** (in the **Meas Setup** menu) set to **Off** or set to **On** with a value of 1, a sweep is taken after the trigger condition is met; and the analyzer continues to take new sweeps after the current sweep has completed and the trigger condition is again met. However, with **Avg/Hold Num** set to **On** with a value >1, multiple sweeps (data acquisitions) are taken for the measurement. The trigger condition must be met prior to each sweep. The sweep is not stopped when the average count k equals the number N set for **Avg/Hold Num** is reached, but the number k stops incrementing. A measurement average usually applies to all traces, marker results, and numeric results. But sometimes it only applies to the numeric results.

If the analyzer is in Single measurement, pressing the **Cont/Single** toggle control does not change k and does not cause the sweep to be reset; the only action is to put the analyzer into Continuous measurement operation.

If it is already in continuous sweep:

- the INIT:CONT 1 command has no effect
- the INIT:CONT 0 command will place the analyzer in Single Sweep but will have no effect on the current sequence until k = N, at which point the current sequence will stop and the instrument will go to the idle state.

If you are already in single sweep, the INIT:CONT OFF command has no effect.

If you are already in Single Sweep, then pressing the **Cont/Single** toggle control in the middle of a sweep does not restart the sweep or sequence. Similarly, pressing the **Cont/Single** toggle control does not restart the sweep or sequence if the sweep is not in the idle state (for example, if you are taking a very slow sweep, or the analyzer is waiting for a trigger). Even though pressing the **Cont/Single** toggle control in the middle of a sweep does not restart the sweep, sending INIT:IMMEDIATE does reset it.

If in Single (and not Averaging) and you want to take one more sweep, press **Restart**. If in Single and Averaging and you want to take one more sweep without resetting the Average trace or count, simply go to Meas Setup, and increment the average count by 1 by pressing the step up key while **Average/Hold Number** is the active

function. You can also do this by sending the remote command CALC:AVER:TCON UP.

Restart

The Restart function restarts the current sweep, or measurement, or set of averaged/held sweeps or measurements. If you are Paused, pressing Restart does a Resume.

The front-panel key **Restart** performs this exact same function

The Restart function is accessed in several ways:

- Pressing the Restart key
- Sending the remote command INIT:IMMEDIATE
- Sending the remote command INIT:RESTART

See "[More Information](#)" on page 1532

| | |
|-------------------------------|--|
| Remote Command | :INITiate[:IMMEDIATE] :INITiate:RESTART |
| Example | :INIT:IMM :INIT:REST |
| Notes | :INITiate:RESTART and :INITiate:IMMEDIATE perform exactly the same function. |
| Couplings | Resets average/hold count k. For the first sweep overwrites all active (update=on) traces with new current data. For application modes, it resets other parameters as required by the measurement. |
| Status Bits/OPC dependencies | This is an Overlapped command. The STATUS:OPERation register bits 0 through 8 are cleared. The STATUS:QUESTionable register bit 9 (INTegrity sum) is cleared. The SWEEPING bit is set. The MEASURING bit is set. |
| Backwards Compatibility Notes | For Spectrum Analysis mode in ESA and PSA, the Restart hardkey and the INITiate:RESTART command restart trace averages (displayed average count reset to 1) for a trace in Clear Write , but did not restart Max Hold and Min Hold . In the X-Series, the Restart hardkey and the INITiate:RESTART command restart not only Trace Average , but MaxHold and MinHold traces as well. For wireless comms modes in ESA and PSA, the Restart hardkey and the INITiate:RESTART command restart every measurement, which includes all traces and numeric results. There is no change to this operation. |

More Information

The **Restart** function first aborts the current sweep or measurement as quickly as possible. It then resets the sweep and trigger systems, sets up the measurement and initiates a new data measurement sequence with a new data acquisition (sweep) taken once the trigger condition is met.

If the analyzer is in the process of aligning when a Restart is executed, the alignment finishes before the restart function is performed.

Even when set for Single operation, multiple sweeps may be taken when Restart is pressed (for example, when averaging/holding is on). Thus when we say that Restart "restarts a measurement," we may mean:

- It restarts the current sweep
- It restarts the current measurement
- It restarts the current set of sweeps if any trace is in Trace Average, Max Hold or Min Hold
- It restarts the current set of measurements if Averaging, or Max Hold, or Min Hold is on for the measurement
- depending on the current settings.

With Average/Hold Number (in Meas Setup menu) set to 1, or Averaging off, or no trace in Trace Average or Hold, a single sweep is equivalent to a single measurement. A single sweep is taken after the trigger condition is met; and the analyzer stops sweeping once that sweep has completed. However, with Average/Hold Number >1 and at least one trace set to Trace Average, Max Hold, or Min Hold (SA Measurement) or Averaging on (most other measurements), multiple sweeps/data acquisitions are taken for a single measurement. The trigger condition must be met prior to each sweep. The sweep is stopped when the average count k equals the number N set for Average/Hold Number. A measurement average usually applies to all traces, marker results, and numeric results; but sometimes it only applies to the numeric results.

Once the full set of sweeps has been taken, the analyzer will go to the idle state. To take one more sweep without resetting the average count, increment the average count by 1, by pressing the step up key while Average/Hold Number is the active function, or sending the remote command `CALC:AVER:TCON UP`.

Pause/Resume

Pauses a measurement after the current data acquisition is complete.

When Paused, the label on the control changes to Resume. Pressing Resume unpauses the measurement. When you are Paused, pressing **Restart** does a Resume.

3 WLAN Mode
3.9 Spectral Flatness Measurement

| | |
|----------------|---|
| Remote Command | :INITiate:PAUSE |
| Example | :INIT:PAUS |
| Dependencies | Not displayed in Modes that do not support Pausing. |
| Annotation | Only on control |

| | |
|----------------|---|
| Remote Command | :INITiate:RESume |
| Example | :INIT:RES |
| Dependencies | Not displayed in Modes that do not support Pausing. |
| Annotation | Only on control |

3.9.9.2 X Scale

This tab accesses controls that enable you to configure the Sweep and Control functions of the analyzer, such as Sweep Rules.

Ref Value

Controls the X value of the selected trace at the chosen X Reference Position.

| | |
|----------------|--|
| Remote Command | :DISPlay:FLATness:WINDow[1]:TRACe:X[:SCALE]:RLEVel <real> :DISPlay:FLAT:WINDow[1]:TRACe:X[:SCALE]:RLEVel? |
| Example | :DISP:FLAT:WIND:TRAC:X:RLEV 1 :DISP:FLAT:WIND:TRAC:X:RLEV? |
| Couplings | If Auto Scaling is On, this value is automatically determined by the measurement result. When a value is set manually, Auto Scaling is automatically set to Off. |
| Preset | If Radio Std is 802.11a/g-ERP-OFDM/g-DSSS-OFDM: -26 Carr If Radio Std is 802.11n 20MHz: -28 Carr If Radio Std is 802.11n 40MHz: -58 Carr If Radio Std is 802.11ac 20MHz: -28 Carr If Radio Std is 802.11ac 40MHz: -58 Carr If Radio Std is 802.11ac 80MHz: -122 Carr If Radio Std is 802.11ac 160MHz: -250 Carr If Radio Std is 802.11ah 1MHz: -13 Carr If Radio Std is 802.11ah 2MHz: -28 Carr If Radio Std is 802.11ah 4MHz: -58 Carr If Radio Std is 802.11ah 8MHz: -122 Carr If Radio Std is 802.11ah 16MHz: -250 Carr If Radio Std is 802.11ax 20MHz: -122 Carr |

Ref Position

Sets the reference position for the X axis to the left, center, or right of the display.

| | |
|----------------|---|
| Remote Command | <code>:DISPlay:FLATness:WINDow[1]:TRACe:X[:SCALe]:RPOSition LEFT CENTer RIGHT</code> <code>:DISPlay:FLATness:WINDow[1]:TRACe:X[:SCALe]:RPOSition?</code> |
| Example | <code>:DISP:FLAT:WIND:TRAC:X:RPOS LEFT</code> <code>:DISP:FLAT:WIND:TRAC:X:RPOS?</code> |
| Couplings | If Auto Scaling is set to On, the X Reference Position is determined by the trace data and this key is grayed out. (Forceful: error -221) |
| Preset | LEFT |
| State Saved | Yes |
| Range | Left Ctr Right |

Auto Scaling

Toggles the scale coupling function between On and Off.

| | |
|----------------|---|
| Remote Command | <code>:DISPlay:FLATness:WINDow[1]:TRACe:X[:SCALe]:COUPlE 0 1 OFF ON</code> <code>:DISPlay:FLATness:WINDow[1]:TRACe:X[:SCALe]:COUPlE?</code> |
| Example | <code>:DISP:FLAT:WIND:TRAC:X:COUP ON</code> <code>:DISP:FLAT:WIND:TRAC:X:COUP?</code> |
| Couplings | When this parameter is set to On, pressing the front-panel Restart key activates the scale coupling function, that automatically determines scale per division and reference values based on the measurement results. When you set a value to either Scale/Div or Ref Value manually, Auto Scaling is automatically set to Off. |
| Preset | ON |
| State Saved | Yes |
| Range | On Off |

3.9.9.3 Recording

Displays the Sample Rate, Sample Points and Sample Time of the saved IQ data file.

Recording and playback of signal data files is a multi-step process that involves controls in several menus:

- **Save, Recording** (under the **Save** hardkey or the **Save** icon in the **File** panel)
- **Recall, Recording** (under the **Recall** hardkey or the **Recall** icon in the **File** panel)

- Sweep, Recording (this tab)
- Sweep, "Playback" on page 1536
- Input/Output, "Data Source" on page 2223

NOTE

A complete tutorial for **Record/Playback** functionality, including how to load and save recording files, can be found in the help for the tab "**Data Source**" on page 2223 under **Input/Output**.

This menu includes the following display-only fields:

Sample Rate

Displays the sample rate of the saved IQ data file. If you have not saved an IQ data file, the value is 0.

Sample Points

Displays the total number of sample points in the saved IQ data file. If you have not saved an IQ data file, the value is 0.

Sampling Time

Displays the total sample time of the saved IQ data file. If you have not saved an IQ data file, the value is 0.

Saved Channels [Mode: 5G NR, VMA, WLAN]

Displays the channel index/number of the saved IQ data file. If you have not saved an IQ data file, no value is displayed.

This control is designed for multi-channel I/Q data recording and playback.

3.9.9.4 Playback

Contains parameters for playback of saved recording files recalled to the instrument.

Recording and playback of signal data files is a multi-step process that involves controls in several menus:

- **Save, Recording** (under the **Save** hardkey or the **Save** icon in the **File** panel)
- **Recall, Recording** (under the **Recall** hardkey or the **Recall** icon in the **File** panel)
- **Sweep, "Recording"** on page 1535
- **Sweep, Playback** (this tab)
- **Input/Output, "Data Source"** on page 2223

NOTE

A complete tutorial for **Record/Playback** functionality, including how to load and save recording files, can be found in the help for the tab **"Data Source"** on page 2223 under the **Input/Output** menu.

This menu includes the following display-only fields:

Sample Points

Displays the total number of sample points in the recalled IQ data file. If you have not recalled an IQ data file, the value is 0.

Sampling Time

Displays the total sample time of the recalled IQ data file. If you have not recalled an IQ data file, the value is 0.

Input Channels [Mode: 5GNR, VMA, WLAN]

Displays the input channel number of the recalled IQ data file. If you have not recalled an IQ data file, the default value of 1 is displayed.

This control is designed for multi-channel I/Q data recording and playback.

Playback Mode

Specifies the mode of IQ data to be played back and analyzed:

- **Fixed:** Playback Stop value is ignored. Measurement will analyze the first chunk of IQ data start from Playback Start repeatedly
- **Iterative:** Measurement will analyze the IQ data chunk by chunk between Playback Start and Playback Stop, if the last chunk is not complete it will be ignored and start from the first chunk again

| | |
|----------------|--|
| Remote Command | :CALCulate:<meas>:PLAY:MODE FIXed ITERative :CALCulate:<meas>:PLAY:MODE? |
| Example | Where <meas> is the mnemonic for the current measurement, for example, EVM For EVM measurement in 5G NR Mode: :CALC:EVM:PLAY:MODE CONT :CALC:EVM:PLAY:MODE? |
| Preset | FIX |
| State Saved | Saved in instrument state |
| Range | Fixed Iterative |

Playback Start

Once you have loaded an IQ data file using **Recall**, **Recording**, this control enables you to specify the start position of the IQ data playback range to be analyzed. If its value is less than zero, an additional zero is inserted at the beginning of the IQ data.

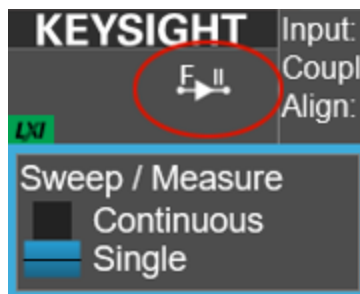

To go to a specific location in the recalled I/Q data, enter the desired **Playback Start** point.

You can use this control to examine the data you recalled from the recording file. How you proceed depends on whether you are in **Continuous** or **Single** mode. To determine which mode you are in, look at the first panel on the left in the **Meas Bar** above the data display.

If the panel looks like this, you are in **Continuous** mode:

If the panel looks like this, you are in **Single** mode:

The **F** indicates that the instrument is using data from a file (if you wish to return to looking at data at the analyzer input, change the **Data Source** control in the **Input/Output, Data Source** menu from **File** back to **Input**.)

3 WLAN Mode
3.9 Spectral Flatness Measurement

To examine the data you loaded:

Continuous mode

In this mode, turn the knob or use the **Up/Down** keys on the front panel to move through records in the recording. You will see **Playback Start** change from 0 to successively higher values as you move deeper into the data.

Single mode

In this mode, you can only look at one record. Set the **Playback Start** time to the desired offset from zero, then press **Restart**. A single record will be displayed. Note that until you press **Restart**, the “invalid data” indicator (yellow asterisk) is displayed in each window. After you press **Restart**, the invalid data indicator disappears.

| | |
|----------------|--|
| Remote Command | <code>:CALCulate:<meas>:PLAY:START <time></code> <code>:CALCulate:<meas>:PLAY:START?</code> |
| | Where <code><meas></code> is the mnemonic for the current measurement, for example, <code>EVM</code> |
| Example | For EVM measurement in 5G NR Mode: <code>:CALC:EVM:PLAY:STAR 0.01 s</code> <code>:CALC:EVM:PLAY:STAR?</code> |
| Preset | 0 |
| State Saved | Saved in instrument state |
| Min/Max | -/+Sample Points in IQ file / Sample Rate in IQ file |

Playback Stop

Specifies the stop position of the IQ data playback range to be analyzed, when “Playback Mode” is iterative.

| | |
|----------------|--|
| Remote Command | <code>:CALCulate:<meas>:PLAY:STOP <time></code> <code>:CALCulate:<meas>:PLAY:STOP?</code> |
| | Where <code><meas></code> is the mnemonic for the current measurement, for example, <code>EVM</code> |
| Example | For EVM measurement in 5G NR Mode: <code>:CALC:EVM:PLAY:STOP 0.01 s</code> <code>:CALC:EVM:PLAY:STOP?</code> |
| Preset | 0 |
| State Saved | No |
| Min | 0 |
| Max | Sample Points in IQ file x Sample Rate |

Step Forward

Move to next chunk of IQ data when "Playback Mode" on page 1537 is iterative.

| | |
|----------------|--|
| Remote Command | <code>:CALCulate:<meas>:PLAY:STEP:FORward</code> Where <code><meas></code> is the mnemonic for the current measurement, for example, <code>EVM</code> |
| Example | For EVM measurement in 5G NR Mode: <code>:CALC:EVM:PLAY:STEP:FORW</code> |
| State Saved | Saved in instrument state |

Sample Rate

Displays the sample rate of the recalled IQ data file if the recalled file format contains sampling rate information (`.csv`, `.sdf`, `.txt`). In this case, the *control* is grayed-out.

`BIN` and `BINX` files do not include sampling rate information inside the file, so after recalling one of these files, you must set **Sample Rate** manually. When you save a file in these formats, you must specify the sample rate, as displayed under **Sweep, Recording**.

| | |
|----------------|--|
| Remote Command | <code>:CALCulate:<meas>:PLAY:SRATe <freq></code> <code>:CALCulate:<meas>:PLAY:SRATe?</code> Where <code><meas></code> is the mnemonic for the current measurement, for example, <code>EVM</code> |
| Example | For EVM measurement in 5G NR Mode: <code>:CALC:EVM:PLAY:SRAT 122.88MHz</code> <code>:CALC:EVM:PLAY:SRAT?</code> |
| Couplings | Displays only after recalling <code>.csv</code> , <code>.sdf</code> , or <code>.txt</code> files Settable after recalling <code>.bin</code> or <code>.binx</code> files |
| Preset | 0 |
| State Saved | No |
| Min | 0 |

3.9.10 Trace

This function is not available.

3.10 Power Stat CCDF Measurement

Many modern digitally-modulated signals look noise-like in the time and frequency domain, requiring statistical measurement of these signals for meaningful characterization and differentiation. The **Power Statistics Complementary Cumulative Distribution Function (CCDF)** measurement displays curves to characterize the higher-level power statistics of digitally modulated signals. The curves can be useful in determining design parameters for digital communications systems.

The Power Statistics CCDF measurement displays probability on the Y-Axis and amplitude on the X-axis, for a display of the statistical amplitude distribution of a signal. This distribution can be affected by many factors. For example, modulation filtering, modulation format, combining the multiple signals at different frequencies, number of active codes, and correlation between symbols on different codes with spread spectrum systems will all affect measurement results. These factors are all related to modulation and signal parameters. External factors such as signal compression and expansion by nonlinear components, group delay distortion from filtering, and power control within the observation interval also affect the measurement.

The power measured in power statistics CCDF curves is actually instantaneous envelope power defined by the equation:

$$P = (I^2 + Q^2) / Z_0$$

where I & Q are the quadrature voltage components of the waveform, and Z_0 is the characteristic impedance.

A CCDF curve is defined by how much time the waveform spends at or above a given power level. The percent of time the signal spends at or above the level defines the probability for that particular power level. For capturing a lower probability down to 0.0001%, this measurement is made in the single mode by pressing Single. To make the power statistics CCDF measurement, the instrument uses digital signal processing (DSP) to sample the input signal in the channel bandwidth. The Gaussian distribution line as the band-limited Gaussian noise CCDF reference line, the user-definable reference trace, and the currently measured trace can be displayed on a semi-log graph. If the currently measured trace is above the user reference trace, it means that the higher peak power levels against the average power are included in the input signal.

Power Stat CCDF Measurement Commands

The general functionality of ["CONFigure" on page 2568](#), ["INITiate" on page 2569](#), ["FETCh" on page 2569](#), ["MEASure" on page 2571](#), and ["READ" on page 2570](#) are described in the section **SCPI Operation and Results Query** in the topic

Programming the Instrument.

The following measurement commands and queries are used to configure the measurement:

| | |
|---|---|
| <code>:INITiate:PSTatistic</code> | Initiates a trigger cycle for the PST measurement, but does not return any data. You must then use <code>:FETC:PST[n]?</code> to retrieve data |
| <code>:CONFigure?</code> | Does not change any measurement settings Returns the long form name of current measurement, in this case, PSTatistic |
| <code>:CONFigure:PSTatistic</code> | Selects PST measurement with Meas Setup settings in preset state – same as "Meas Preset" on page 1615 |
| <code>:CONFigure:PSTatistic:NDEFault</code> | Selects PST measurement <i>without</i> affecting settings |

The following queries are used to retrieve the results:

| | |
|---------------------------------------|--|
| <code>:FETCh:PSTatistic?</code> | Retrieves the data specified by n |
| <code>:MEASure:PSTatistic [n]?</code> | Switches to PST measurement, restores default values, starts the measurement, then retrieves the data specified by n |
| <code>:READ:PSTatistic[n]?</code> | Starts the measurement, then retrieves the data specified by n |

Measurement Results for Power Stat CCDF

The following table describes the results returned by the `:FETCh`, `:MEASure`, and `:READ` queries listed above, according to the index value **n**.

| n | Results Returned | | | | | | | | | | | | | | | | | | | | | | | | |
|---------------------|---|--------------|------|--------------|---|---------------------|-----|---|--|---|---|--|--|---|---------------------------------------|--|---|---|--|---|--|--|---|---|--|
| 0 | Returns unprocessed I/Q trace data, as a series of trace point values, in volts. The I values are listed first in each pair, using the 0 through even-indexed values. The Q values are the odd-indexed values | | | | | | | | | | | | | | | | | | | | | | | | |
| 1, or not specified | Returns 11 scalar results: <table border="1" data-bbox="360 1402 1408 1757"> <thead> <tr> <th>#</th> <th>Item</th> <th>Unit, if any</th> </tr> </thead> <tbody> <tr> <td>1</td> <td>Average input power</td> <td>dBm</td> </tr> <tr> <td>2</td> <td>Probability at the average input power level</td> <td>%</td> </tr> <tr> <td>3</td> <td>Power level that has 10 % of the power</td> <td></td> </tr> <tr> <td>4</td> <td>Power level that has 1 % of the power</td> <td></td> </tr> <tr> <td>5</td> <td>Power level that has 0.1 % of the power</td> <td></td> </tr> <tr> <td>6</td> <td>Power level that has 0.01 % of the power</td> <td></td> </tr> <tr> <td>7</td> <td>Power level that has 0.001 % of the power</td> <td></td> </tr> </tbody> </table> | # | Item | Unit, if any | 1 | Average input power | dBm | 2 | Probability at the average input power level | % | 3 | Power level that has 10 % of the power | | 4 | Power level that has 1 % of the power | | 5 | Power level that has 0.1 % of the power | | 6 | Power level that has 0.01 % of the power | | 7 | Power level that has 0.001 % of the power | |
| # | Item | Unit, if any | | | | | | | | | | | | | | | | | | | | | | | |
| 1 | Average input power | dBm | | | | | | | | | | | | | | | | | | | | | | | |
| 2 | Probability at the average input power level | % | | | | | | | | | | | | | | | | | | | | | | | |
| 3 | Power level that has 10 % of the power | | | | | | | | | | | | | | | | | | | | | | | | |
| 4 | Power level that has 1 % of the power | | | | | | | | | | | | | | | | | | | | | | | | |
| 5 | Power level that has 0.1 % of the power | | | | | | | | | | | | | | | | | | | | | | | | |
| 6 | Power level that has 0.01 % of the power | | | | | | | | | | | | | | | | | | | | | | | | |
| 7 | Power level that has 0.001 % of the power | | | | | | | | | | | | | | | | | | | | | | | | |

| n Results Returned | | | |
|--------------------|--|--|--------------|
| # | Item | | Unit, if any |
| 8 | Power level that has 0.0001 % of the power | | |
| 9 | Peak power | | dB |
| 10 | Count | | |
| 11 | Power level that has 0.00001% of the power if "Minimum Probability" on page 1547 is PP7 (0.00001 %) This value is returned only when PP7 is selected | | |
| 2 | <p>Returns a series of 5001 floating point numbers (in percent) that represent the current measured power stat trace. This is the probability at particular power levels (average power), in the following order:</p> <ol style="list-style-type: none"> 1. Probability at 0.0 dB power 2. Probability at 0.01 dB power 3. Probability at 0.02 dB power <p>...</p> <ol style="list-style-type: none"> 5000. Probability at 49.9 dB power 5001. Probability at 50.0 dB power | | |
| 3 | <p>Returns a series of 5001 floating point numbers (in percent) that represent the Gaussian trace. This is the probability at particular power levels (average power), in the following order:</p> <ol style="list-style-type: none"> 1. Probability at 0.0 dB power 2. Probability at 0.01 dB power 3. Probability at 0.02 dB power <p>...</p> <ol style="list-style-type: none"> 5000. Probability at 49.9 dB power 5001. Probability at 50.0 dB power | | |
| 4 | <p>Returns a series of 5001 floating point numbers (in percent) that represent the user-definable reference trace. This is the probability at particular power levels (average power), in the following order:</p> <ol style="list-style-type: none"> 1. Probability at 0.0 dB power 2. Probability at 0.01 dB power 3. Probability at 0.02 dB power <p>...</p> <ol style="list-style-type: none"> 5000. Probability at 49.9 dB power 5001. Probability at 50.0 dB power | | |

3.10.1 Views

In the **LTEATDD** and **5GNR** Modes, this measurement has two views: "Normal" on page 1544 and **Slot**. In all other Modes, there is only a single view (**Normal**).

These are multiple-window Views. When in a multiple-window View, you select a window by touching it. The menu controls may sometimes change depending on which window is selected.

3.10.1.1 Normal

Windows: ["Metrics" on page 1545](#), ["Graph" on page 1544](#)

The Power Stat CCDF measurement provides CCDF curves and power statistics metrics. This is common for both Uplink (MS) and Downlink (BTS).

Example `:PST:SLTV OFF`

3.10.2 Windows

Three window types are defined:

1. ["Graph" on page 1544](#)
2. Slot
3. ["Metrics" on page 1545](#)

Slot only appears in LTEATDD and 5GNR Modes.

3.10.2.1 Graph

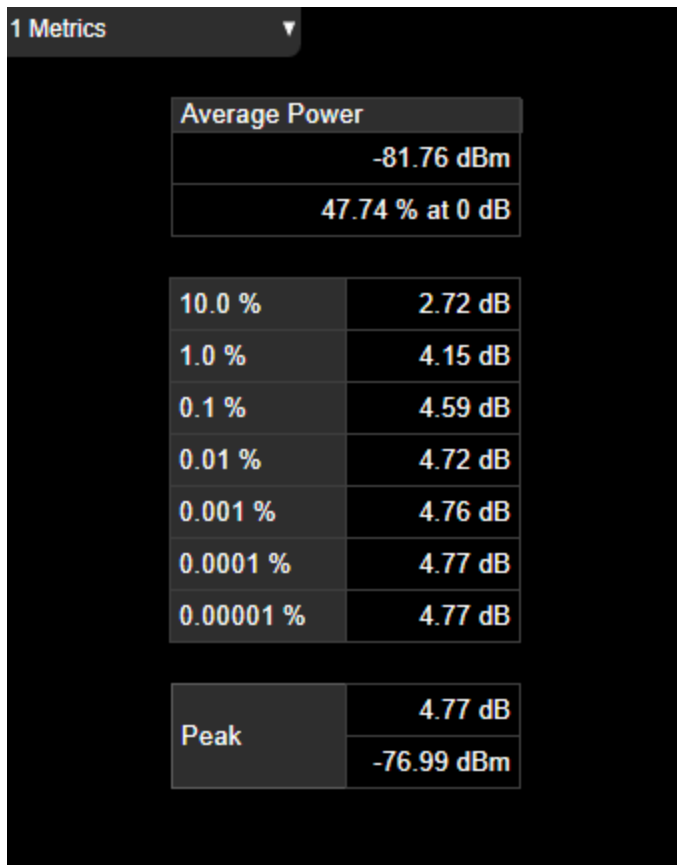

Displays Amplitude versus probability

3 WLAN Mode
3.10 Power Stat CCDF Measurement

3.10.2.2 Metrics

Displays the textual results of the Power Stat CCDF measurement.

For the list of $n = 1$ measurement results, see "Measurement Results for Power Stat CCDF" on page 1542 above.

| Name | Unit | Corresponding Results | Results Item for $n = 1$ | Explanation |
|---------------|------|--|--------------------------|-------------|
| Average Power | dBm | Average input power | 1 | 99.99 dBm |
| Average Power | % | Probability at the average input power level | 2 | 99.99 % |
| 10.0% | dB | Power level that has 10 % of the power | 3 | 99.99 dB |
| 1.0% | dB | Power level that has 1 % of the power | 4 | 99.99 dB |
| 0.1% | dB | Power level that has 0.1 % of the power | 5 | 99.99 dB |
| 0.01% | dB | Power level that has 0.01 % of the power | 6 | 99.99 dB |
| 0.001% | dB | Power level that has 0.001 % of the power | 7 | 99.99 dB |

3 WLAN Mode
3.10 Power Stat CCDF Measurement

| Name | Unit | Corresponding Results | Results Item for n = 1 | Explanation |
|----------|------|---|------------------------|-------------|
| 0.0001% | dB | Power level that has 0.0001 % of the power | 8 | 99.99 dB |
| 0.00001% | dB | Power level that has 0.00001% of the power if " Minimum Probability " on page 1547 is PP7 (0.00001 %) | 11 | 99.99 dB |
| Peak | dB | Peak power | 9 | 99.99 dB |
| Peak | dBm | Not available via remote commands | n/a | 99.99 dBm |

3.10.3 Amplitude

Activates the **Amplitude** menu and selects **Reference Level** or **Reference Value** as the active function, depending on the measurement.

Some features in this menu apply to multiple measurements. Some other features apply only to specific measurements and their controls are blanked or grayed-out in measurements that do not support the feature.

3.10.3.1 Y Scale

Contains controls that pertain to the Y axis parameters of the measurement. These parameters control how data on the vertical (Y) axis is displayed and control instrument settings that affect the vertical axis.

Minimum Probability

Sets the minimum probability range.

| | |
|----------------|---|
| Remote Command | <code>:CALCulate:PStatistic:RANGe[:PROBability]:MINimum PP2 ... PP7</code> For parameter values, see " Parameter Options " on page 1548 below <code>:CALCulate:PStatistic:RANGe[:PROBability]:MINimum?</code> |
| Example | <code>:CALC:PST:RANG:MIN PP6</code> <code>:CALC:PST:RANG:MIN?</code> |
| Preset | PP6 |
| State Saved | Yes |
| Range | 1 % 0.1 % 0.01 % 0.001 % 0.0001 % 0.00001 % |

Parameter Options

| Option | Value |
|--------|--------------------|
| PP2 | 1.0e-2 (1 %) |
| PP3 | 1.0e-3 (0.1 %) |
| PP4 | 1.0e-4 (0.01 %) |
| PP5 | 1.0e-5 (0.001 %) |
| PP6 | 1.0e-6 (0.0001 %) |
| PP7 | 1.0e-7 (0.00001 %) |

3.10.3.2 Attenuation

Controls the attenuator functions and interactions between the attenuation system components.

There are two attenuator configurations in the X-Series. One is a Dual-Attenuator configuration consisting of a mechanical attenuator and an optional electronic attenuator. The other configuration uses a single attenuator with combined mechanical and electronic sections that controls all the attenuation functions. Different models in the X-Series come with different configurations.

- See ["Dual-Attenuator Configurations" on page 1548](#)
- See ["Single-Attenuator Configuration" on page 1549](#)

Most attenuation settings are the same for all measurements – they do not change as you change measurements. Settings like these are called “Meas Global” and are unaffected by **Meas Preset**.

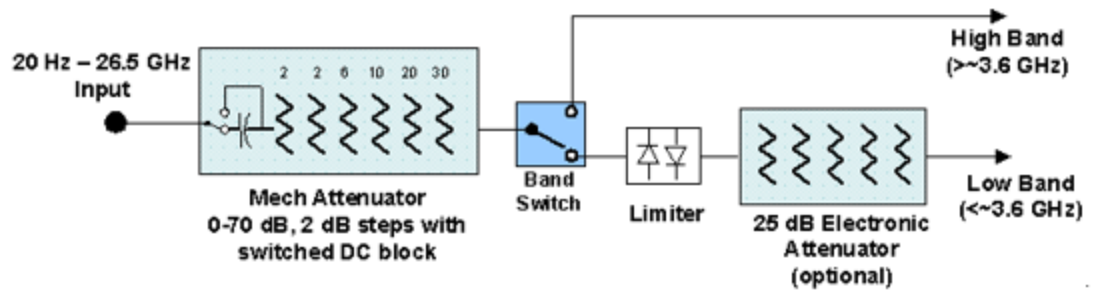

Only available when the hardware set includes an input attenuator, which is typically only the case for Keysight’s benchtop instruments. For example, this tab does *not* appear in VXT models M9420A/10A/11A/15A/16A, M9410E/11E/15E/16E, nor in UXM. In UXM, all **Attenuation** and **Range** settings are disabled, as the expected input power level is handled by the Call Processing App that drives the DUT power control.

Dependencies In measurements that support the I/Q inputs, unavailable when I/Q is the selected input. Replaced by the **Range** tab in that case

Dual-Attenuator Configurations

Configuration 1: Mechanical attenuator + optional electronic attenuator

3 WLAN Mode
 3.10 Power Stat CCDF Measurement

Configuration 2: Mechanical attenuator, no optional electronic attenuator

Note that Configuration 2 is not strictly speaking a dual-section attenuator, since there is no electronic section available. However, it behaves exactly like Configuration 1 without the Electronic Attenuator Option EA3, therefore for the sake of this document it is grouped into the “Dual-Attenuator” configuration.

Single-Attenuator Configuration

You can tell which attenuator configuration you have by pressing the Attenuation tab, which (in most Modes) opens the Attenuation menu. If the first control in the Attenuation menu says **Mech Atten** you have the Dual-Attenuator configuration. If the first control says **Atten** you have the Single-Attenuator configuration.

Dual Attenuator

Single Attenuator

(Note that depending on the measurement, there may be no Auto/Man functionality on the Mech Atten control.)

In the Single-Attenuator configuration, you control the attenuation with a single control, as the fixed stage has only two states. In the Dual-Attenuator configuration, both stages have significant range, so you are given separate control of the mechanical and electronic attenuator stages.

When you have the Dual-Attenuator configuration, you may still have only a Single-Attenuator, because unless Option EA3 (the Electronic Attenuator option) is available, and you purchase it, you will have only the mechanical attenuator.

Full Range Atten

This control and **Attenuator Summary** only appear in N9041B, when the RF input is selected, the RF Input Port is set to RF Input 2, and the Full Range Attenuator is installed. The Full Range Attenuator adds a second input attenuator in front of RF Input 2, which enhances the protection and optimizes the performance of the extra internal mixers used by RF Input 2.

| | |
|----------------|---|
| Remote Command | <code>[:SENSe]:POWer[:RF]:FRATten <rel_amp1></code> <code>[:SENSe]:POWer[:RF]:FRATten?</code> |
| Example | <code>:POW:FRAT 14</code> <code>:POW:FRAT?</code> |
| Notes | When you enter an amplitude value that falls between valid values, the value will be incremented to the next smallest valid value |
| Dependencies | Only appears if input RF is selected, RF Input Port 2 is selected, and the Full Range Attenuator exists |
| Couplings | This value is never changed by any coupling, but other couplings use this value. See Reference Level and " Mech Atten " on page 1753 command descriptions |
| Preset | 20 dB |
| State Saved | Saved in instrument state |
| Min | 0 dB |
| Max | Only valid values are 0, 6, 14, 20 dB |
| Annotation | When the Input is RF , and the Input Port is RF Input 2 , and the Full Range Attenuator is installed: On the Meas Bar, the field "Atten" displays as follows: <ul style="list-style-type: none"> - If the sweep is entirely < 50 GHz, the value shown after "Atten:" is equal to Mech Atten + Elec Atten + Full Range Atten - If the sweep is entirely > 50 GHz, the value shown after "Atten:" is equal to Full Range Atten - If the sweep straddles 50 GHz, the value shown after "Atten:" is preceded by the symbol ">=" and is equal to Full Range Atten |

In the **Amplitude**, "**Y Scale**" on page 1745 menu, and the Atten **Meas Bar** dropdown menu panel, a summary is displayed as follows:

"Total Atten below 50 GHz" followed by the value of Full Range Atten + Mech Atten + Elec Atten

"Total Atten above 50 GHz" followed by the value of Full Range Atten

For example, if Mech Atten = 6 dB, Elec Atten = 4 dB, and Full Range Atten = 20 dB, the summary below is shown:

- Attenuator summary:
- Total Atten below 50 GHz: 30 dB
- Total Atten above 50 GHz: 20 dB

Mech Atten

Labeled **Mech Atten** in Dual-Attenuator models, and **Atten** in Single-Attenuator models. In the Dual-Attenuator configuration, this control only affects the mechanical attenuator.

Lets you modify the attenuation applied to the RF input signal path. This value is normally auto-coupled to **Ref Level**, "**Internal Preamp**" on page 1775 Gain, any External Gain that is entered, and **Max Mixer Level** (if available), as described in the table below.

See "**Attenuator Configurations and Auto/Man**" on page 1553

| | |
|----------------|---|
| Remote Command | <code>[:SENSe]:POWer[:RF]:ATTenuation <rel_aml></code> <code>[:SENSe]:POWer[:RF]:ATTenuation?</code> |
| Example | <code>:POW:ATT 20</code> Dual-Attenuator configuration: sets the mechanical attenuator to 20 dB Single-Attenuator mode: sets the main attenuation to 20 dB (see below for definition of "main" attenuation) In either case, if the attenuator was in Auto, it is set to Manual |
| Dependencies | Some measurements do not support Auto setting of Mech Atten . In these measurements, the Auto/Man selection is not available, and the Auto/Man toggle function is not available In Dual-Attenuator configurations, when the electronic attenuator is enabled, the mechanical attenuator has no auto setting, and the Auto/Man toggle function is not available. The state of Auto/Man is remembered and restored when the electronic attenuator is once again disabled. This is described in more detail in " Elec Atten " on page 1756 See " Attenuator Configurations and Auto/Man " on page 1553 for more information on the Auto/Man functionality |
| Couplings | If the RF Input Port is the RF Input: - If the USB Preamp is connected to USB, use 0 dB for Mech Atten - Otherwise compute the auto-selected value of Mech Atten based on Reference Level , Int Preamp , |

External Gain, Ref Level Offset, Max Mixer Level, μ W Path Control and IF Gain settings. Limit this value to be no less than 6 dB (total attenuation below 6 dB can never be chosen by Auto)

- In N9041B, if the RF Input Port is RF Input 2, use the formula above and subtract the value of "**Full Range Atten**" on page 1752 from the result to determine the **Mech Atten**. Limit the value so that it is never lower than 0 dB and so that total attenuation, including **Full Range Atten**, is never less than 6 dB (total attenuation, including **Full Range Atten** below 6 dB, can never be chosen by Auto)

In External Mixing and BBIQ, where the attenuator is not in the signal path, the attenuator setting changes as described above when **Mech Atten** is in **Auto**, but no changes are made to the actual attenuator hardware setting until the input is changed back to the RF Input

For CXA-m with Option FSA (Fine-Step Attenuator or 2 dB steps), the FSA-like behavior is only available when the frequency setting is ≤ 7.5 GHz. So, when the frequency is changed from below 7.5 GHz to above 7.5 GHz, the attenuation setting changes to a multiple of 10 dB that is no smaller than the previous setting. For example, 4 dB attenuation changes to 10 dB

| | | | | | | | |
|-----------------------|--|-----------------------|-------|-----|-------|------------------|-------|
| Preset | Auto The Auto value is 10 dB | | | | | | |
| State Saved | Saved in instrument state | | | | | | |
| Min | 0 dB The attenuation set by this control cannot be decreased below 6 dB with the knob or step keys. Values below 6 dB must be directly entered from the keypad or via SCPI. This protects against setting a dangerously small attenuation value, which can put the instrument at risk of damage to input circuitry. If the current mechanical attenuation is below 6 dB, it can be increased with the knob and step keys, but not decreased | | | | | | |
| Max | <table border="1"> <tr> <td>CXA Option 503 or 507</td> <td>50 dB</td> </tr> <tr> <td>EXA</td> <td>60 dB</td> </tr> <tr> <td>All other models</td> <td>70 dB</td> </tr> </table> <p>Note that in the Single-Attenuator configuration, the total of ATT and EATT cannot exceed 50 dB. So, if the EATT is set to 24 dB first, the main attenuation cannot be greater than 26 dB and will be reduced accordingly; if the main attenuator is set to 40 dB first, EATT cannot be greater than 10 dB</p> | CXA Option 503 or 507 | 50 dB | EXA | 60 dB | All other models | 70 dB |
| CXA Option 503 or 507 | 50 dB | | | | | | |
| EXA | 60 dB | | | | | | |
| All other models | 70 dB | | | | | | |
| Annotation | <p>The current value for Total Atten is displayed in the Measurement Bar at the top of the display. A value appears for Electronic Attenuation only if the Electronic Attenuator is enabled. The annotation appears as:</p> <p><i>Atten: <total> dB (e<elec>)</i></p> <p>The e letter is in amber in Single-Attenuator configurations</p> <p>For example:</p> <p>Dual-Attenuator configuration: <i>Atten: 24 dB (e14)</i></p> <p>Indicating the total attenuation is at 24 dB and the electronic attenuation is at 14 dB</p> <p>Single-Attenuator configuration: <i>A: 24 dB (e14)</i></p> <p>Indicating the total attenuation is at 24 dB and the "soft" attenuation is at 14 dB (see below for definition of "soft" attenuation)</p> | | | | | | |

When in Manual, a # sign appears in front of Atten in the annotation

Auto Function

| | |
|----------------|--|
| Remote Command | <code>[:SENSe]:POWer[:RF]:ATTenuation:AUTO OFF ON 0 1</code> <code>[:SENSe]:POWer[:RF]:ATTenuation:AUTO?</code> |
| Example | Turn Auto Mech Atten ON: <code>:POW:ATT:AUTO ON</code> |
| Dependencies | <code>:POW:ATT:AUTO</code> is only available in measurements that support Auto , such as Swept SA |
| Preset | ON |

Attenuator Configurations and Auto/Man

As described under "[Attenuation](#)" on page 1750, there are two distinct attenuator configurations available in the X-Series, the Single Attenuator and Dual-Attenuator configurations.

In Dual-Attenuator configurations, we have mechanical attenuation and electronic attenuation, and current total attenuation is the sum of electronic + mechanical attenuation.

In Single-Attenuator configurations, we refer to the attenuation set using "[Mech Atten](#)" on page 1551 (or `:POW:ATT`) as the "main" attenuation; and the attenuation that is set by `:POW:EATT` as the "soft" attenuation (`:POW:EATT` is honored even in the Single-Attenuator configuration, for compatibility purposes). Then current total attenuation is the sum of main + soft attenuation.

See "[Elec Atten](#)" on page 1756 for more about "soft" attenuation.

NOTE

In some measurements, the **Mech Atten** control has an **Auto/Man** function. In these measurements, an **Auto/Man** switch is shown on the **Mech Atten** control:

Note that in configurations that include an Electronic Attenuator, this switch is only shown when the Electronic Attenuator is disabled.

In other measurements, **Mech Atten** has no **Auto/Man** function. In these measurements, no switch is shown on the **Mech Atten** control:

Mech Atten also appears with no switch, as above, in configurations that include an Electronic Attenuator but when the Electronic Attenuator is enabled.

Elec Atten

Controls the Electronic Attenuator in Dual-Attenuator configurations. Does not appear in Single-Attenuator configurations, because the control of both the mechanical and electronic stages of the Single-Attenuator is integrated into the single **Atten** control.

This control includes an **Enable/Disable** toggle switch; it is only possible to enter a value for the Electronic Attenuator when this switch is in the **Enable** position.

For more details of the Electronic Attenuator, see ["More Information" on page 1556](#)

| | |
|----------------|--|
| Remote Command | <code>[:SENSe]:POWer[:RF]:EATTenuation <rel_amp1></code> <code>[:SENSe]:POWer[:RF]:EATTenuation?</code> |
| Example | <code>:POW:EATT 10</code> <code>:POW:EATT?</code> |
| Notes | Electronic Attenuation's specification is defined only when Mech Atten is 6 dB |
| Dependencies | <p>Only appears in Dual-Attenuator models with an Electronic Attenuator installed and licensed. Does not appear in models with the Single-Attenuator configuration, because in the Single-Attenuator configuration there is no "electronic attenuator"; there is only a single integrated attenuator (which has both a mechanical and electronic stage). However, in the Single-Attenuator configuration, EATT SCPI commands are accepted for compatibility with other X-series instruments, and set a "soft" attenuation. The "soft" attenuation is treated as an addition to the "main" attenuation value set by the Attenuation control or <code>:POW:ATT</code>, and affects the total attenuation displayed on the Attenuation control and the Meas Bar</p> <p>The electronic attenuator, and the "soft" attenuation function provided in Single-Attenuator configurations, are unavailable above the low band (0-3.6 GHz, 0-3.4 GHz, 0-3 GHz, depending on the model). If the low band range is from 0-3.6 GHz, and Stop Frequency of the instrument is > 3.6 GHz, then the Enabled/Disabled section of the Elec Atten control will be OFF and grayed-out</p> <p>If "Internal Preamp" on page 1775 is ON (that is, set to Low Band or Full), the electronic attenuator (and the "soft" attenuation function provided in Single-Attenuator configurations) is unavailable. In this case the Enabled/Disabled section of the Elec Atten control will be OFF and grayed-out</p> <p>If either of the above is true, and the SCPI command is sent, an error indicating that the electronic attenuator is unavailable is returned</p> <p>If both the above are true, pressing the control generates error message -221, in other words, the</p> |

3 WLAN Mode
3.10 Power Stat CCDF Measurement

frequency range lockout takes precedence

If the electronic/soft Attenuator is enabled, then the **Stop Freq** of the instrument is limited to 3.6 GHz and **Internal Preamp** is unavailable

If "**LNA**" on page 1777 is **ON**, the electronic attenuator (and the "soft" attenuation function provided in Single-Attenuator configurations) is unavailable. In this case the **Enabled/Disabled** section of the **Elec Atten** control will be **OFF** and grayed-out. This coupling works in the following modes/measurements:

- Channel Power, Occupied BW, ACP, SEM, Spurious Emissions, Power Stat CCDF measurements in all Modes
- Transmit On|Off Power measurement in 5GNR Mode
- Power vs. Time and Transmit Power measurement in GSM/EDGE Mode
- Burst Power measurement in Spectrum Analyzer Mode

The SCPI-only "soft" electronic attenuation for the single-attenuator configuration is not available in all measurements; in particular, it is not available in the Swept SA measurement

| | |
|-------------|---|
| Couplings | Enabling and disabling the Electronic Attenuator affects the setting of the Mechanical Attenuator (in Dual-Attenuator configurations). This is described in more detail below and in " Mechanical Attenuator Transition Rules " on page 1556 |
| Preset | 0 dB |
| State Saved | Saved in instrument state |
| Min | 0 dB |
| Max | Dual-Attenuator configuration: 24 dB Single-Attenuator configuration: the total of ATT and EATT cannot exceed 50 dB. So, if the EATT is set to 24 dB first, the main attenuation cannot be greater than 26 dB and will be reduced accordingly; if the main attenuator is set to 40 dB first, EATT cannot be greater than 10 dB |
| Annotation | See Annotation under the Mech Atten control description |

Auto Function

| | |
|----------------|---|
| Remote Command | <code>[:SENSe]:POWer[:RF]:EATTenuation:STATe OFF ON 0 1</code> <code>[:SENSe]:POWer[:RF]:EATTenuation:STATe?</code> |
| Example | <code>:POW:EATT:STAT ON</code> <code>:POW:EATT:STAT?</code> |
| Preset | OFF (Disabled) for Swept SA measurement ON (Enabled) for all other measurements that support the electronic attenuator |

NOTE

The maximum **Center Frequency** for Low Band can change based on the selected **IFBW** for measurements that support **IFBW** (for example, **Waveform** measurement across all Modes that support it). In certain models (such as **N9042B** & **N9032B**), **IFBW** values ≤ 40 MHz have a maximum Low Band frequency of 3.6 GHz, while $40 \text{ MHz} < \text{IFBW} \leq 1 \text{ GHz}$ have a maximum of

3.3 GHz, and $1 \text{ GHz} < \text{IFBW} \leq 1.5 \text{ GHz}$ have a maximum of 3.5 GHz. This frequency is reflected in the disabled message displayed for Electrical Attenuator. For N9032B and N9042B IFBW values $> 1.5 \text{ GHz}$ do not support a **Center Frequency** that can reach the Low Band maximum frequency. In these cases, the Electrical Attenuator will remain disabled no matter the Center Frequency.

More Information

The electronic attenuator offers finer steps than the mechanical attenuator, has no acoustical noise, is faster, and is less subject to wear. These advantages primarily aid in remote operation and are negligible for front panel use. See ["Using the Electronic Attenuator: Pros and Cons" on page 1557](#) for a detailed discussion of the pros and cons of using the electronic attenuator.

For the Single-Attenuator configuration, for SCPI backwards compatibility, the "soft" attenuation feature replaces the Dual-Attenuator configuration's electronic attenuator. All the same couplings and limitations apply. See ["Attenuator Configurations and Auto/Man" on page 1755](#)

Mechanical Attenuator Transition Rules

When the Electronic Attenuator is enabled, the Mechanical Attenuator transitions to a state that has no Auto function. Below are the rules for transitioning the Mechanical Attenuator. Note that the information below *only* applies to the Dual-Attenuator configurations, and *only* when the Electronic Attenuator is installed:

When the Electronic Attenuation is enabled from a disabled state:

- The Mechanical Attenuator is initialized to 10 dB (this is its optimal performance setting). You can then set it as desired with SCPI, numeric keypad, step keys, or knob, and it behaves as it normally would in manual mode
- The Auto/Man state of (Mech) Atten is saved
- The Auto/Man toggle on the (Mech) Atten control disappears, and the auto rules are disabled
- The Electronic Attenuator is set to 10 dB less than the previous value of the Mechanical Attenuator, within the limitation that it must stay within the range of 0 to 24 dB of attenuation

Examples in the Dual-Attenuator configuration:

- Mech Atten at 20 dB. Elec Atten enabled, Mech Atten set to 10 dB, and Elec Atten set to 10 dB. New total attenuation equals the value before Elec Atten enabled

3 WLAN Mode

3.10 Power Stat CCDF Measurement

- Mech Atten at 0 dB. Elec Atten enabled, Mech Atten set to 10 dB, and Elec Atten set to 0 dB. New total attenuation does not equal the value before Elec Atten enabled
- Mech Atten at 40 dB. Elec Atten enabled, Mech Atten set to 10 dB, and Elec Atten set to 24 dB. New total attenuation does not equal the value before Elec Atten enabled

When the Electronic Attenuation is disabled from an enabled state:

- The Elec Atten control is grayed out
- The Auto/Man state of (Mech) Atten is restored
- If now in Auto, (Mech) Atten recouples
- If now in Man, (Mech) Atten is set to the value of total attenuation that existed before the Elec Atten was disabled. The resulting value is rounded up to the smallest value possible given the (Mech) Atten Step setting - (That is, 57 dB changes to 58 dB when (Mech) Atten Step is 2 dB)

Using the Electronic Attenuator: Pros and Cons

The electronic attenuator offers finer steps than the mechanical attenuator, has no acoustical noise, is faster, and is less subject to wear.

The “finer steps” advantage of the electronic attenuator is beneficial in optimizing the alignment of the instrument dynamic range to the signal power in the front panel as well as remote use. Thus, you can achieve improved relative signal measurement accuracy. Compared to a mechanical attenuator with 2 dB steps, the 1 dB resolution of the electronic attenuator only gives better resolution when the odd-decibel steps are used. Those odd-decibel steps are less accurately calibrated than the even-decibel steps, so one tradeoff for this superior relative accuracy is reduced absolute amplitude accuracy.

Another disadvantage of the electronic attenuator is that the spectrum analyzer loses its “Auto” setting, making operation less convenient.

Also, the relationship between the dynamic range specifications (TOI, SHI, compression, and noise) and instrument performance are less well-known with the electrical attenuator. With the mechanical attenuator, TOI, SHI, and compression threshold levels increase dB-for-dB with increasing attenuation, and the noise floor does as well. With the electronic attenuator, there is an excess attenuation of about 1 to 3 dB between 0 and 3.6 GHz, making the effective TOI, SHI, and so forth, less well known. Excess attenuation is the actual attenuation relative to stated attenuation. Excess attenuation is accounted for in the instrument calibration.

Adjust Atten for Min Clipping

Sets the combination of mechanical and electronic attenuation and gain based on the current measured signal level so that clipping will be at a minimum.

This is an immediate action function, that is, it executes once, when the control is pressed.

The algorithms that are used for the adjustment are documented under "[Pre-Adjust for Min Clipping](#)" on page 1760.

| | |
|----------------|---|
| Remote Command | <code>[:SENSe]:POWer[:RF]:RANGe:OPTimize IMMEDIATE</code> |
| Example | <code>:POW:RANG:OPT IMM</code> |
| Notes | Executing Adjust Atten for Min Clipping initiates the measurement |
| Dependencies | Does not appear in the Swept SA, RTSA, Monitor Spectrum and Complex Spectrum measurements Appears in the Waveform measurement in BASIC and 5G NR Modes |

Adjust Atten

Allows you to select;

- Electric attenuator only
- Combination of Electric attenuator and Mechanical attenuator

when `[:SENSe]:POWer[:RF]:RANGe:OPTimize IMMEDIATE` is executed.

| | |
|----------------|---|
| Remote Command | <code>[:SENSe]:POWer[:RF]:RANGe:OPTimize:TYPE EONLY COMBined</code> <code>[:SENSe]:POWer[:RF]:RANGe:OPTimize:TYPE?</code> |
| Example | <code>:POW:RANG:OPT:TYPE EONL</code> <code>:POW:RANG:OPT:TYPE?</code> |
| Dependencies | Does not appear in the Swept SA, RTSA, Monitor Spectrum and Complex Spectrum measurements Appears in the Waveform measurement in BASIC and 5G NR Modes |
| Preset | <code>COMBined</code> |
| State Saved | Saved in instrument state |

Pre-Adjust for Min Clipping

If this function is **ON**, it applies the adjustment described under "[Adjust Atten for Min Clipping](#)" on page 1759 each time a measurement restarts. Therefore, in Continuous measurement mode, it only executes before the first measurement.

3 WLAN Mode
3.10 Power Stat CCDF Measurement

In Dual-Attenuator models, you can set **Elec+Mech Atten**, in which case both attenuators participate in the autoranging, or **Elec Atten Only**, in which case the mechanical attenuator does not participate in the autoranging. This latter case results in less wear on the mechanical attenuator and is usually faster.

See ["Adjustment Algorithm" on page 1560](#)

| Selection | SCPI | Note |
|-----------------|-------------------|--|
| Off | OFF | This is the default setting |
| On | ON | Available in Single-Attenuator instruments. For compatibility with models that do not have an input attenuator, the ON parameter is supported and mapped to COMBined |
| Elec Atten Only | ELECTrical | Selects only the electric attenuator to participate in auto ranging. This offers less wear on the mechanical attenuator and is usually faster |
| Elec+Mech Atten | COMBined | In Dual-Attenuator models, this selects both attenuators to participate in the autoranging |

| | | |
|----------------|--|---|
| Remote Command | [:SENSe]:POWer[:RF]:RANGe:OPTimize:ATTenuation OFF ON ELECTrical COMBined [:SENSe]:POWer[:RF]:RANGe:OPTimize:ATTenuation? | |
| Example | :POW:RANG:OPT:ATT OFF :POW:RANG:OPT:ATT? | |
| Notes | The parameter option ELECTrical sets this function to ON in Single-Attenuator models The parameter option COMBined is mapped to ELECTrical in Single-Attenuator models. If you send COMBined , it sets the function to ON and returns ELEC to a query For SCPI compatibility with models that do not have an input attenuator, the ON parameter is honored and mapped to COMBined | |
| Dependencies | Only appears in Dual-Attenuator models with an Electronic Attenuator installed In instruments with Dual-Attenuator model, when "Elec Atten" on page 1756 is OFF or grayed-out, "Pre-Adjust for Min Clipping" on page 1558 is grayed-out Does not appear in the Swept SA, RTSA, Monitor Spectrum and Complex Spectrum measurements Appears in the Waveform measurement in BASIC and 5G NR Modes | |
| Preset | OFF when Elec Atten is Disabled at preset, otherwise ELEC | |
| State Saved | Saved in instrument state | |
| Range | Dual-Attenuator models: | Off Elec Atten Only Mech + Elec Atten |
| | Single-Attenuator models: | Off On |

Backwards Compatibility Command

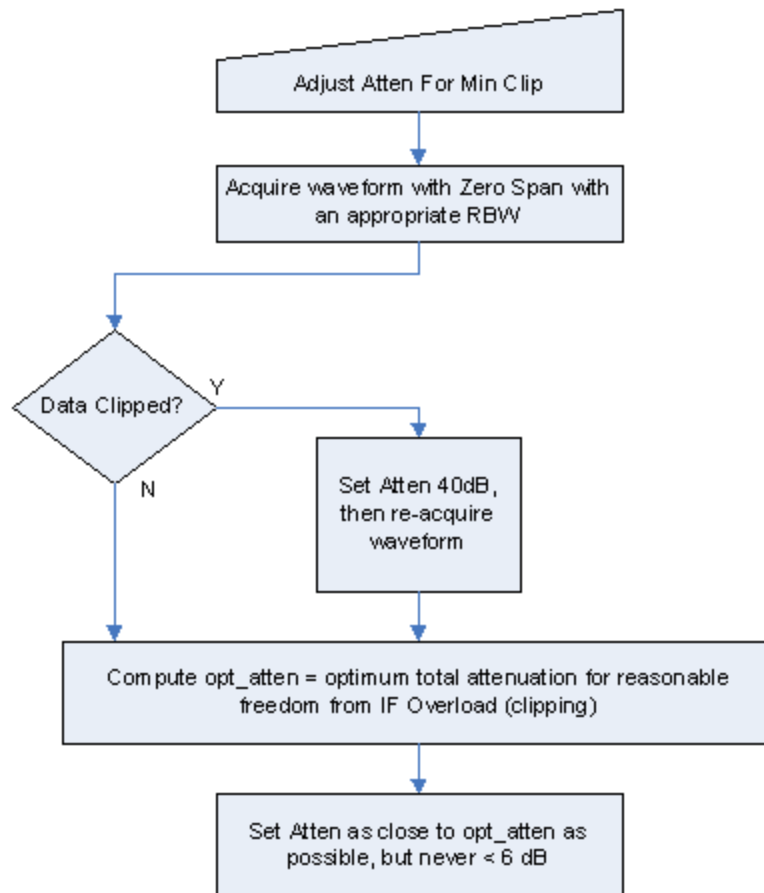

| | |
|-------|--|
| Notes | ON aliases to "Elec Atten Only" (:POW:RANG:OPT:ATT ELEC) OFF aliases to "Off" (:POW:RANG:OPT:ATT OFF) |
|-------|--|

| | |
|-------------------------|---|
| | <code>:POW:RANG:AUTO?</code> returns true if <code>:POW:RANG:OPT:ATT</code> is not <code>OFF</code> |
| Backwards Compatibility | <code>[:SENSe]:POWer[:RF]:RANGe:AUTO ON OFF 1 0</code> |
| SCPI | <code>[:SENSe]:POWer[:RF]:RANGe:AUTO?</code> |

Adjustment Algorithm

The algorithms for the adjustment are documented below:

Single-Attenuator Models

Dual-Attenuator models

"Adjust Atten for Min Clipping" on page 1759 or "Pre-Adjust for Min Clipping" on page 1558 selection is Mech + Elec Atten:

3 WLAN Mode
 3.10 Power Stat CCDF Measurement

vsd04

"Pre-Adjust for Min Clipping" on page 1558 selection is Elec Only.

Note that the **Mech Atten** value is not adjusted, and the value previously set is used. Therefore, there is a case that IF Overload is still observed depending on the input signal level and the Mech Atten setting.

Mech Atten Step

Controls the step size used when making adjustments to the input attenuation.

Labeled **Mech Atten Step** in Dual-Attenuator models and **Atten Step** in Single-Attenuator models. In the Dual-Attenuator configuration, only affects the step size of the mechanical attenuator.

Remote Command `[:SENSe]:POWer[:RF]:ATTenuation:STEP[:INCRement] 10 dB | 2 dB`

| | |
|--------------|---|
| | <code>[:SENSe]:POWer[:RF]:ATTenuation:STEP[:INCRement]?</code> |
| Example | <code>:POW:ATT:STEP 2</code> <code>:POW:ATT:STEP?</code> |
| Notes | Has a toggle control on the front panel, but takes a specific value (in dB) when used remotely. The only valid values are 2 and 10 |
| Dependencies | Blanked in EXA, CXA and CXA-m if option FSA (2 dB steps) is not present. If blanked, attempts to set it via SCPI yield an error |
| Couplings | When the attenuation step size changes, the current mechanical attenuation value is adjusted (if necessary) to be quantized to the new step size. That is, if step is set to 10 dB, mech atten is increased if necessary so it is a multiple of 10 dB |
| Preset | EXA, CXA and CXA-m: 10 dB (2 dB with option FSA) All other models: 2 dB |
| State Saved | Saved in instrument state |

3.10.3.3 Range (Baseband Input models)

Only available when Option BBA is present (I/Q Baseband Inputs), the current measurement supports option BBA, and I/Q is the selected input. In these cases, replaces the **Attenuation** tab.

Each input channel (I and Q) has four internal gain ranges. The maximum allowed voltage in each gain range is slightly more than the nominal value, so the break point between ranges is a few millivolts higher than the nominal (setting a peak voltage of 0.502 mV will still map to the 0.5 V Peak range).

| Gain Setting | Volts RMS | Volts Peak | Volts Peak - Peak | dBm (50Ω) | Break Point |
|--------------|-----------|------------|-------------------|-----------|--------------|
| 0 dB | 0.7071 | 1.0 | 2.0 | 10 | n/a |
| 6 dB | 0.3536 | 0.5 | 1.0 | 4 | 0.502 V Peak |
| 12 dB | 0.1768 | 0.25 | 0.5 | -2 | 0.252 V Peak |
| 18 dB | 0.0884 | 0.125 | 0.25 | -8 | 0.127 V Peak |

| | |
|--------------|---|
| Dependencies | Available only when the selected input is I/Q. If the current measurement does not support baseband inputs, an error will be displayed: "No result; Meas invalid with I/Q inputs" |
| State Saved | No |

Range Auto/Man

The **Auto** setting for **Range** causes the range to be set based on the Y Scale settings. When **Range** is **Auto**, the I & Q Range are set based on the top of the Y Scale when the Y scale is in dB units (for example, power), or to the max(abs(top), abs(bottom)) when the Y scale reference is not at the top of the screen.

Not all measurements support **Range Auto/Man**. If **Auto** is not supported in the current measurement, this control is grayed-out, displaying **Man**, and **MAN** is returned to a SCPI query, but this does *not* change the Auto/Man setting for **Range**. When you switch to a measurement that supports **Auto**, it goes back to **Auto** if it was previously in **Auto** mode.

| | |
|----------------|--|
| Remote Command | <code>[:SENSe]:VOLTage:IQ:RANGe:AUTO OFF ON 0 1</code> <code>[:SENSe]:VOLTage:IQ:RANGe:AUTO?</code> |
| Example | Put the I Range and Q Range in manual <code>:VOLT:IQ:RANG:AUTO OFF</code> <code>:VOLT:IQ:RANG:AUTO?</code> |
| Dependencies | If Auto is not supported, sending the SCPI command generates an error |
| Couplings | When in Auto , both I Range and Q Range are set to the same value, computed as follows: Maximum absolute value is computed for the Y Scale. The top and bottom of the graph are computed based on Ref Value, Scale/Div, and Ref Position. Formula: $Y_{Max} = \max(\text{abs}(\text{top}), \text{abs}(\text{bottom}))$ The I Range and Q Range are then set to YMax |
| Preset | ON |
| State Saved | Saved in instrument state |
| Annotation | When in Man, the Range annotation is preceded by "#" This is an alternate form of the command to match the POWer form of the I Range and Q Range SCPI. |
| Remote Command | <code>[:SENSe]:POWer:IQ:RANGe:AUTO OFF ON 0 1</code> <code>[:SENSe]:POWer:IQ:RANGe:AUTO?</code> |
| Example | Put the I Range and Q Range in manual <code>:POW:IQ:RANG:AUTO OFF</code> <code>:POW:IQ:RANG:AUTO?</code> |
| Notes | <code>:POW:IQ:RANG:AUTO</code> is an alternate form of <code>:VOLT:IQ:RANG:AUTO</code> , to maintain consistency with I Range and Q Range, which support both the POWer and VOLTage forms of the command |
| Preset | ON |
| Range | Auto Man |

I Range

The internal gain range for the I channel when the Input Path is I Only or I and I/Q. Used for both the I and Q channels when the Input Path is I+jQ.

| | |
|----------------|---|
| Remote Command | <code>[:SENSe]:VOLTage:IQ[:I]:RANGe[:UPPer] <voltage></code> <code>[:SENSe]:VOLTage:IQ[:I]:RANGe[:UPPer]?</code> |
| Example | Set the I Range to 0.5 V Peak <code>:VOLT:IQ:RANG 0.5 V</code> |

3 WLAN Mode
3.10 Power Stat CCDF Measurement

| | |
|----------------|---|
| | <code>:VOLT:IQ:RANG?</code> |
| Notes | The numeric entries are mapped to the smallest gain range whose break point is greater than or equal to the value, or 1 V Peak if the value is greater than 1 V |
| Couplings | When " Q Same as I " on page 1769 is On, the I Range value will be copied to " Q Range " on page 1768 Changing the value also sets Range = Man |
| Preset | Complex SPECTrum Measurement: 0.5 V Peak All others: 1 V Peak |
| State Saved | Saved in instrument state |
| Range | 1 V Peak (10 dBm @ 50 Ω) 0.5 V Peak (4 dBm @ 50Ω) 0.25 V Peak (-2 dBm @ 50Ω) 0.125 V Peak (-8 dBm @ 50Ω) |
| Min | 0.125 V |
| Max | 1 V |
| Annotation | The Range annotation replaces the RF Input context's "Atten" annotation "Rng: <I Range>". When Range = Man the annotation is preceded by "#" The I Range is not annotated in Input Path Q Only. When I Range and Q Range are the same, the annotation is "Rng: <Range>". When I Range and Q Range are different and the Input Path is Ind I/Q, the annotation is "Rng: <I Range>, <Q Range>" and "Peak" is removed from the text. Examples: "Rng: 1 V Peak" the I Range is 1 V Peak "Rng: 1 V, 0.5 V " the I Range is 1 V Peak and the Q Range is 0.5 V Peak This is an alternate form of the command to allow entry as a power. |
| Remote Command | <code>[:SENSe]:POWer:IQ[:I]:RANGe[:UPPer] <amp;1></code> <code>[:SENSe]:POWer:IQ[:I]:RANGe[:UPPer]?</code> |
| Example | Set the I Range to 0.5 V Peak when Reference Z is 50 Ω, and to 1.0 V Peak when Reference Z is 75 Ω <code>:POW:IQ:RANG 4 dBm</code> <code>:POW:IQ:RANG?</code> |
| Notes | The POWer form of the command is provided for convenience. It maps to the same underlying gain range parameter as the VOLTage form The Reference Z (not the I channel Input Z) is used to convert the power to peak voltage, which is then used to set the I Range as with the VOLTage form of the command. The power values of the 4 range states (1V Peak, 0.5V Peak, 0.25V Peak, and 0.125V Peak) will vary with Reference Z. Here are some examples: 50 Ω: 10, 4, -2, -8 75 Ω: 8.2, 2.2, -3.8, -9.8 600 Ω: -0.8, -6.8, -12.8, -18.9 |
| Preset | 10.0 dBm |
| Range | -20 dBm to 10 dBm |
| Min | -20 dBm |
| Max | 10 dBm |

Q Range

The internal gain range for the Q channel. **Q Range** only applies to Input Path Q Only and Ind I/Q. For input I+jQ "[I Range](#)" on page 1766 determines both I and Q channel range settings.

| | |
|----------------|---|
| Remote Command | <code>[:SENSe]:VOLTage:IQ:Q:RANGe[:UPPer] <voltage></code> <code>[:SENSe]:VOLTage:IQ:Q:RANGe[:UPPer]?</code> |
| Example | Set the Q Range to 0.5 V Peak: <code>:VOLT:IQ:Q:RANG 0.5 V</code> <code>:VOLT:IQ:Q:RANG?</code> |
| Notes | The numeric entries are mapped to the smallest gain range whose break point is greater than or equal to the value, or 1 V Peak if the value is greater than 1 V Q Range is only used for Input Path Q Only and Ind I/Q. For input I+jQ, " I Range " on page 1766 determines both I and Q channel range settings |
| Couplings | When " Q Same as I " on page 1769 is On, the " I Range " on page 1766 value is copied to Q Range and the range value keys are disabled Changing the value also sets Range = Man |
| Preset | 1 V Peak |
| State Saved | Saved in instrument state |
| Range | 1 V Peak (10 dBm @ 50Ω) 0.5 V Peak (4 dBm @ 50Ω) 0.25 V Peak (-2 dBm @ 50Ω) 0.125 V Peak (-8 dBm @ 50Ω) |
| Min | 0.125 V |
| Max | 1 V |
| Annotation | The Range annotation replaces the RF Input context's "Atten" annotation "Rng: <Q Range>". When Range = Man the annotation is preceded by "#" The Q Range is not annotated in Input Path I Only or I+jQ. When I Range and Q Range are the same, the annotation is "Rng: <Range>". When I Range and Q Range are different and the Input Path is Ind I/Q, the annotation is "Rng: <I Range>, <Q Range>" and "Peak" is removed from the text. Examples: "Rng: 1 V Peak" the Q Range is 1 V Peak "Rng: 1 V, 0.5 V" the I Range is 1 V Peak and the Q Range is 0.5 V Peak This is an alternate form of the command to allow entry as a power. |
| Remote Command | <code>[:SENSe]:POWer:IQ:Q:RANGe[:UPPer] <amp;gt;</code> <code>[:SENSe]:POWer:IQ:Q:RANGe[:UPPer]?</code> |
| Example | Sets the Q Range to 0.5 V Peak when Reference Z is 50 Ω, and to 1.0 V Peak when Reference Z is 75 Ω: <code>:POW:IQ:Q:RANG 4 dBm</code> <code>:POW:IQ:Q:RANG?</code> |
| Notes | The POWer form of the command is provided for convenience. It maps to the same underlying gain |

range parameter as the **VOLTage** form of the command

The Reference Z (not the Q channel Input Z) is used to convert the power to peak voltage, which is then used to set the Q Range as with the **VOLTage** form of the command. The power values of the 4 range states (1V Peak, 0.5V Peak, 0.25V Peak, and 0.125V Peak) will vary with Reference Z. Here are some examples:

50 Ω: 10, 4, -2, -8

75 Ω: 8.2, 2.2, -3.8, -9.8

600 Ω: -0.8, -6.8, -12.8, -18.9

| | |
|--------|-------------------|
| Preset | 10.0 dBm |
| Range | -20 dBm to 10 dBm |
| Min | -20 dBm |
| Max | 10 dBm |

Q Same as I

Many, but not all, usages require the I and Q channels to have an identical setup. To simplify channel setup, **Q Same as I** causes the Q channel range to be mirrored from the I channel. That way, you only need to set up one channel (the I channel). The I channel values are copied to the Q channel, so at the time **Q Same as I** is Off, the I and Q channel setups will be identical.

| | |
|----------------|--|
| Remote Command | <code>[:SENSe] :VOLTage POWer:IQ:MIRROred OFF ON 0 1</code> <code>[:SENSe] :VOLTage POWer:IQ:MIRROred?</code> |
| Example | Turn off the mirroring of I Range to Q Range <code>:VOLT:IQ:MIRR OFF</code> <code>:POW:IQ:MIRR OFF</code> |
| Couplings | When ON , the " I Range " on page 1766 value is mirrored (copied) to the " Q Range " on page 1768 |
| Preset | ON |
| State Saved | Saved in instrument state |
| Range | OFF ON |

3.10.3.4 Range (Non-attenuator models)

Only available for Keysight's modular signal analyzers and certain other Keysight products, such as VXT and M941xE.

| | |
|-------------|----|
| State Saved | No |
|-------------|----|

Range

Represents the amplitude of the largest sinusoidal signal that could be present within the IF without being clipped by the ADC. For signals with high peak-to-average ratios, the range may need to exceed the rms signal power by a significant amount to avoid clipping.

This is a measurement global setting.

| | |
|----------------|---|
| Remote Command | <code>[:SENSe]:POWer[:RF]:RANGe <real></code> <code>[:SENSe]:POWer[:RF]:RANGe?</code> |
| Example | <code>:POW:RANG 10 dBm</code> <code>:POW:RANG?</code> |
| Notes | The MIN and MAX values are affected by the External Gain parameters, and by the Center Frequency . The hardware compensates for frequency response and alters the Range setting. |
| Preset | 0 dBm |
| State Saved | Yes |
| Min/Max | -/+100 |
| Annotation | Meas Bar |

Adjust Range for Min Clipping

Sets the combination of attenuation and gain based on the current measured signal level so that clipping will be at a minimum.

This is an "immediate action" function, that is, it executes once, when the key is pressed.

This key does not appear in measurements that do not support this functionality.

| | |
|----------------|--|
| Remote Command | <code>[:SENSe]:POWer[:RF]:RANGe:OPTimize IMMEDIATE</code> |
| Notes | Executing Adjust Range for Min Clipping initiates the measurement. |
| Dependencies | Does not appear in the Swept SA and Monitor Spectrum measurements. |

Pre-Adjust for Min Clipping

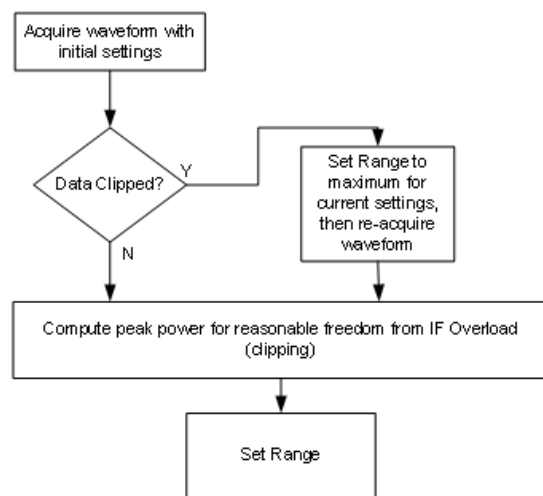

If this function is **ON**, it applies the adjustment described under Adjust Range For Min Clipping each time a measurement restarts. Therefore, in Continuous measurement mode, it only executes before the first measurement.

| | |
|----------------|---|
| Remote Command | <code>[:SENSe]:POWer[:RF]:RANGe:OPTimize:ATTenuation OFF ON ELECTRICAL COMBined</code> |
|----------------|---|

| | |
|--------------|--|
| | <code>[:SENSe]:POWer[:RF]:RANGe:OPTimize:ATTenuation?</code> |
| Notes | Because there is no attenuator control available in these models, the control displays only ON and OFF choices. However, for SCPI compatibility with other platforms, all three parameters (ELECTrical , COMBined , and ON) are honored and all are mapped to ELECTrical , so if any of these three parameters is sent, a subsequent query will return ELEC |
| Dependencies | Does not appear in the Swept SA and Monitor Spectrum measurements |
| Preset | OFF for Swept SA measurement; ON for all other measurements that support Pre-Adjust for Min Clipping |
| State Saved | Saved in instrument state |

Adjustment Algorithm

The algorithm for the adjustment is documented below:

Peak-to-Average Ratio

Used with "[Range \(Non-attenuator models\)](#)" on page 1769 to optimize the level control in the instrument. The value is the ratio, in dB, of the peak power to the average power of the signal to be measured. A ratio of 0 should be used for sinusoidal signals; for 802.11g OFDM signals use 9 dB.

All Modes show the current value of Peak-to-Average ratio on the control. However, some Modes do not permit changing the value. In these situations, the control is grayed-out.

| | |
|----------------|--|
| Remote Command | <code>[:SENSe]:POWer[:RF]:RANGe:PARatio <real></code> <code>[:SENSe]:POWer[:RF]:RANGe:PARatio?</code> |
| Example | <code>:POW:RANG:PAR 12 dB</code> |
| Notes | In some Modes, this parameter is read-only; meaning the value will appear on the control and query |

| | | |
|--------------|---|-------|
| | via SCPI, but is not changeable. In such applications the control is grayed-out. Attempts to change the value via SCPI are ignored, but no error message is generated | |
| Dependencies | Does not appear in Spectrum Analyzer Mode | |
| Preset | VXT Models M9410A/11A | 0 dB |
| | All Others | 10 dB |
| State Saved | Saved in instrument state | |
| Min | 0 dB | |
| Max | VXT Models M9410A/11A | 50 dB |
| | All Others | 20 dB |

Mixer Lvl Offset

This is an advanced setting to adjust target Range at the input mixer, which in turn affects the signal level in the instrument's IF. This setting can be used when additional optimization is needed after setting "[Peak-to-Average Ratio](#)" on page 1771. Positive values of offset optimize noise performance over distortion, negative values optimize distortion performance over noise.

| | | |
|----------------|--|--------|
| Remote Command | <code>[:SENSe]:POWer[:RF]:RANGe:MIXer:OFFSet <real></code> <code>[:SENSe]:POWer[:RF]:RANGe:MIXer:OFFSet?</code> | |
| Example | <code>:POW:RANG:MIX:OFFS -5 dB</code> | |
| Preset | 0 dB | |
| State Saved | Saved in instrument state | |
| Min | VXT Models M9410A/11A | -34 dB |
| | All Others | -35 dB |
| Max | 30 dB | |

3.10.3.5 Signal Path

Contains controls that pertain to the routing of the signal through the frontend of the instrument.

In general, only appears in instruments whose hardware supports this signal routing. For example, this tab does not appear in many of the modular instrument products, including VXT Model M9420A, or UXM.

This tab *does* appear in VXT Models M9410A/11A/15A/16A and M9410E/11E/15E/16E, because ["Software Preselection" on page 1788](#) is under this tab, and VXT Models M9410A/11A/15A/16A and M9410E/11E/15E/16E implement a version of Software Preselection.

Presel Center

Adjusts the centering of the preselector filter to optimize the amplitude accuracy at the frequency of the selected marker. If the selected marker is not on when **Presel Center** is pressed, the instrument turns on the selected marker, performs a peak search, and then performs centering on the marker's center frequency. If the selected marker is already on and between the start and stop frequencies of the instrument, the instrument performs the preselector calibration on that marker's frequency. If the selected marker is already on, but outside the frequency range between **Start Freq** and **Stop Freq**, the instrument first performs a peak search, and then performs centering on the marker's center frequency.

The value displayed on ["Preselector Adjust" on page 1774](#) changes to reflect the new preselector tuning.

Certain considerations should be observed to ensure proper operation, as detailed in ["Proper Preselector Operation" on page 1572](#).

| | |
|-----------------|---|
| Remote Command | <code>[:SENSe] :POWer [:RF] :PCENter</code> |
| Example | <code>:POW:PCEN</code> |
| Notes | The rules outlined above under the control description apply for the remote command as well as the key. The result of the command depends on marker position, etc. Any message generated by the control press is also generated in response to the remote command |
| Dependencies | Does not appear in CXA-m, nor in VXT Models M9410A/11A/15A/16A, M9410E/11E/15E/16E Grayed-out if the microwave preselector is off <ul style="list-style-type: none"> - If the selected marker's frequency is below Band 1, an advisory message is generated "Preselector not used in this frequency range" and no action is taken - Grayed-out if entirely in Band 0, that is, if Stop Freq is below about 3.6 GHz Grayed-out if entirely above 50 GHz, that is, if Start Freq is above 50 GHz - Blanked in models that do not include a preselector, such as Option 503. If the remote command is sent in these instruments, accepted without error, and the query always returns 0 - Grayed-out in the Spectrogram View |
| Couplings | The active marker position determines where the centering will be attempted If the instrument is in a measurement such as averaging when centering is initiated, the act of centering the preselector restarts averaging, but the first average trace will not be taken until the centering is completed The offset applied to do the centering appears in "Preselector Adjust" on page 1774 |
| Status Bits/OPC | When centering the preselector, *OPC does not return true until the process is complete and a |

dependencies subsequent measurement has completed, nor are results returned in response to `:READ` or `:MEASure` queries
The **Measuring** bit remains set (true) while this command is operating, and does not go false until the subsequent sweep/measurement has completed

Proper Preselector Operation

Certain considerations should be observed to ensure proper operation:

1. If the selected marker is **Off**, the instrument turns on a marker, performs a peak search, and adjusts the preselector using the selected marker's frequency. It uses the "highest peak" peak search method unqualified by threshold or excursion, so that there is no chance of a 'no peak found' error. It continues with that peak, even if it is the peak of just noise. Therefore, for this operation to work properly, there should be a signal on-screen in a preselected range for the peak search to find
2. If the selected marker is already **On**, the instrument attempts the centering at that marker's frequency. There is no preselector for signals below about 3.6 GHz, so if the marker is on a signal below 3.6 GHz, no centering is attempted, and an advisory message is generated
3. In some models, the preselector can be bypassed. If it is bypassed, no centering is attempted in that range and a message is generated

Preselector Adjust

Lets you manually adjust the preselector filter frequency to optimize its response to the signal of interest. Only available when **"Presel Center"** on page 1773 is available.

For general purpose signal analysis, using **Presel Center** is recommended. Centering the filter minimizes the impact of long-term preselector drift. **Preselector Adjust** can be used instead to manually optimize the preselector. One application of manual optimization would be to peak the preselector response, which both optimizes the signal-to-noise ratio and minimizes amplitude variations due to small (short-term) preselector drifting.

When **Presel Center** is performed, the offset applied to do the centering becomes the new value of **Preselector Adjust**.

| | |
|----------------|--|
| Remote Command | <code>[:SENSe]:POWer[:RF]:PADJust <freq></code> <code>[:SENSe]:POWer[:RF]:PADJust?</code> |
| Example | <code>:POW:PADJ 100KHz</code> <code>:POW:PADJ?</code> |
| Notes | The value on the control is displayed to 0.1 MHz resolution |
| Dependencies | - Does not appear in CXA-m |

3 WLAN Mode
3.10 Power Stat CCDF Measurement

- Does not appear in VXT Models M9410A/11A/15A/16A
- Does not appear in M9410E/11E/15E/16E
- Grayed-out if microwave preselector is off
- Grayed-out if entirely in Band 0, that is, if Stop Freq is lower than about 3.6 GHz
- Grayed-out if entirely above 50 GHz, that is, if Start Freq is higher than 50 GHz
- Blank in models that do not include a preselector, such as Option 503. If the command is sent in these instruments, it is accepted without error, and the query always returns 0
- Grayed-out in the **Spectrogram View**

| | |
|------------------------------|---|
| Preset | 0 MHz |
| State Saved | The Preselector Adjust value set by " Presel Center " on page 1773, or by manually adjusting Preselector Adjust Not saved in instrument state, and does not survive a Preset or power cycle |
| Min/Max | -/+500 MHz |
| Backwards Compatibility SCPI | <code>[:SENSe]:POWer[:RF]:MW:PADJust</code> <code>[:SENSe]:POWer[:RF]:MMW:PADJust</code> Backwards Compatibility Command |
| Notes | The command has no effect, and the query always returns MWAVE |
| Backwards Compatibility SCPI | <code>[:SENSe]:POWer[:RF]:PADJust:PRESelector MWAVE MMWave EXTERNAL</code> <code>[:SENSe]:POWer[:RF]:PADJust:PRESelector?</code> |

Internal Preamp

Accesses a menu of controls for the internal preamps. Turning on the preamp gives a better noise figure, but a poorer inter-modulation distortion (TOI) to noise floor dynamic range. You can optimize this setting for your measurement.

The instrument takes the preamp gain into account as it sweeps. If you sweep outside of the range of the preamp, the instrument will also account for that. The displayed result always reflects the correct gain.

For some measurements, when the preamp is on and any part of the displayed frequency range is below the lowest frequency for which the preamp has specifications, a warning condition message appears in the status line. For example, for a preamp with a 9 kHz lowest specified frequency: "Preamp: Accy unspec'd below 9 kHz".

| Selection | Example | Note |
|------------|--|---|
| Off | :POW:GAIN OFF | |
| Low Band | :POW:GAIN ON :POW:GAIN:BAND LOW | Sets the internal preamp to use only the low band. The frequency range of the installed (optional) low-band preamp is displayed in square brackets on the Low Band selection in the dropdown |
| Full Range | :POW:GAIN ON :POW:GAIN:BAND FULL | Sets the internal preamp to use its full range. The low band (0-3.6 GHz, 0-3.4 GHz, 0-3 GHz, depending on the model) is supplied by the low band preamp and the frequencies above low band are supplied by the high band preamp The frequency range of the installed (optional) low-band preamp is displayed in square brackets on the Full Range selection in the dropdown. If the high band option is not installed the Full Range selection does not appear |

NOTE

The maximum **Center Frequency for Low Band**, displayed in square brackets, can change based on the selected IFBW for measurements that support IFBW (for example, Waveform measurement across all Modes that support it). In certain models (such as N9042B & N9032B), IFBW values ≤ 40 MHz have a maximum **Low Band** frequency of 3.6 GHz, while $40 \text{ MHz} < \text{IFBW} \leq 1 \text{ GHz}$ have a maximum of 3.3 GHz, and $1 \text{ GHz} < \text{IFBW} \leq 1.5 \text{ GHz}$ have a maximum of 3.5 GHz. IFBW values $> 1.5 \text{ GHz}$ do not support a **Center Frequency** that can reach the **Low Band** maximum frequency. In these cases, **N/A** is displayed in the square brackets for **Low Band**.

| | |
|----------------|--|
| Remote Command | <code>[:SENSe]:POWer[:RF]:GAIN:BAND LOW FULL</code> <code>[:SENSe]:POWer[:RF]:GAIN:BAND?</code> |
| Example | <code>:POW:GAIN:BAND LOW</code> <code>:POW:GAIN:BAND?</code> |
| Dependencies | Not available on all hardware platforms. If the preamp is not present or is unlicensed, this control is not shown Does not appear in VXT Models M9410A/11A/15A/16A nor in M9410E/11E/15E/16E If <code>:POW:GAIN:BAND FULL</code> is sent when a low band preamp is available, the preamp band parameter is set to <code>LOW</code> instead of <code>FULL</code> , and an "Option not installed" message is generated Not available when the electronic/soft attenuator is enabled |
| Preset | <code>LOW</code> |
| State Saved | Saved in instrument state |
| Annotation | When the USB Preamp is not connected to USB, the Preamp annotation in the Meas Bar says "Off" if the preamp is off and displays the frequency range of the low band or full range preamp depending on the setting. For example, if the Preamp is set to Low Band and the Low Band is 3.6 GHz the annotation says "3.6 GHz". If it is a 13.6 GHz preamp and it is set to Full Range the annotation says "13.6 GHz" |

3 WLAN Mode
3.10 Power Stat CCDF Measurement

When the USB Preamp is connected to USB, the Preamp annotation says "Preamp: USB" if the internal preamp is off or "Preamp: USB, Int" if the internal preamp is on (only for measurements that support the USB preamp)

Auto Function

| | |
|----------------|--|
| Remote Command | <code>[:SENSe]:POWer[:RF]:GAIN[:STATe] OFF ON 0 1</code> <code>[:SENSe]:POWer[:RF]:GAIN[:STATe]?</code> |
| Example | <code>:POW:GAIN OFF</code> <code>:POW:GAIN?</code> |
| Preset | <code>OFF</code> |

LNA

Lets you turn the Low Noise Amplifier (**LNA**) on or off.

LNA is an additional preamplifier that provides superior DANL and frequency range compared to "[Internal Preamp](#)" on page 1775. LNA provides lower system noise figure, especially at frequencies above 100 MHz, and can be operated up to the full range of 50 GHz instruments.

For best possible sensitivity, **LNA** can be turned on *together* with "[Internal Preamp](#)" on page 1775, although if you operate both preamps together, note that the TOI (distortion) specifications are impacted. The sensitivity improvement of this combination is substantial when operating in high band (frequencies above 3.6 GHz).

For more details about annotation, see "[More Information](#)" on page 1576

| | |
|----------------|--|
| Remote Command | <code>[:SENSe]:POWer[:RF]:GAIN:LNA[:STATe] OFF ON 0 1</code> <code>[:SENSe]:POWer[:RF]:GAIN:LNA[:STATe]?</code> |
| Example | <code>:POW:GAIN:LNA ON</code> |
| Dependencies | Requires Option LNA, except for VXT models M9415A/16A Does not appear in VXT models M9420A/10A/11A M9410E/11E/15E/16E support LNA May not appear in some measurements LNA is not available when the electronic/soft attenuator is enabled |
| Preset | <code>OFF</code> |
| State Saved | Saved in State |

More Information

When **LNA** is installed, the preamp annotation changes to show the state of both **LNA** and **Internal Preamp**. Below is an example:

```
Atten: 8 dB
Pre: Int on, LNA on
μW Path: LNP, On
Source: Off
```

Note that when operating entirely in the low band (below about 3.6 GHz), if **LNA** is on, **Internal Preamp** is switched off (even if you have its switch set to **ON**). This is because the noise performance is actually degraded in low band if both preamps are on. In this case, the annotation reflects the actual state of the two preamps, but the **Internal Preamp** annotation displays in amber, to warn you that the actual state of **Internal Preamp** does not match its switch control display:

```
Atten: 8 dB
Pre: Int off, LNA on
μW Path: LNP, On
Source: Off
```

μW Path Control

Options for this control include **μW Preselector Bypass** (Option MPB), **Low Noise Path** (Option LNP) and **Full Bypass Enable** in the High Band path circuits.

When the μW Preselector is bypassed, flatness is improved, but will be subject to spurs from out of band interfering signals. When **Low Noise Path Enable** is selected, the instrument automatically bypasses certain circuitry in the high frequency bands that can contribute to noise, when it is appropriate based on other instrument settings.

For most applications, the preset state is **Standard Path**, which provides the best remote-control throughput, minimizes acoustic noise from switching and minimizes the risk of wear in the hardware switches, particularly in remote test scenarios where both low band and high band setups will follow in rapid succession. In this path, the bypass of the low band/high band switch and microwave preamp is never activated, which can cause some noise degradation but preserves the life of the bypass switch.

For applications that utilize the wideband IF paths, the preset state is **μW Preselector Bypass**, if option MPB is present. This is because, when using a wideband IF such as the 140 MHz IF, the μW Preselector's bandwidth can be narrower than the available IF bandwidth, causing degraded amplitude flatness and phase linearity, so it is desirable to bypass the preselector in the default case.

You may choose **Low Noise Path Enable** for a lower noise floor, especially in the 21-26.5 GHz region, though without improving many measures of dynamic range, and

3 WLAN Mode
3.10 Power Stat CCDF Measurement

without giving the best possible noise floor. The preamp, if purchased and used, gives better noise floor than does **Low Noise Path Enable**, but the preamp's compression threshold and third-order intercept are much poorer than that of **Low Noise Path Enable**.

A fourth choice is **Full Bypass Enable**, which combines **μW Preselector Bypass** and **Low Noise Path Enable**. Because this can bypass most of the circuitry between the input and the first mixer, care should be taken when using this setting to avoid damaging the mixer. **Full Bypass Enable** is only available if both options LNP and MPB are present, as well as option FBP.

| Path | Example | Note |
|-----------------------|-------------------|--|
| Standard Path | :POW:MW:PATH STD | Normal setting for most measurements. μW Preselector in circuit, Low Noise Path disabled |
| Low Noise Path Enable | :POW:MW:PATH LNP | See " Low Noise Path Enable " on page 1581 |
| μW Preselector Bypass | :POW:MW:PATH MPB | See " μW Preselector Bypass " on page 1583 |
| Full Bypass Enable | :POW:MW:PATH FULL | See " Full Bypass Enable " on page 1583 |

| | |
|----------------|--|
| Remote Command | <code>[:SENSe] :POWer [:RF] :MW :PATH STD LNPath MPBypass FULL</code> <code>[:SENSe] :POWer [:RF] :MW :PATH?</code> |
| Example | <code>:POW:MW:PATH LNP</code> Enables the Low Noise path <code>:POW:MW:PATH?</code> |
| Notes | When " Presel Center " on page 1773 is performed, the instrument momentarily switches to the Standard Path, regardless of the setting of μW Path Control The DC Block will always be switched in when the low noise path is switched in, to protect succeeding circuitry from DC. Note that this does not mean "when the low noise path is enabled" but when, based on the Low Noise Path rules, the path is actually switched in. This can happen when the selection is Low Noise Path Enable or Full Bypass Enable . In the case where the DC Block is switched in, the instrument is now AC-coupled. However, if you selected DC coupling, the UI would still behave as though it were DC-coupled, including all annunciation, warnings, status bits, and responses to SCPI queries. This is because, based on other settings, the instrument could switch out the low noise path at any time and hence go back to being DC-coupled Alignment switching ignores the settings in this menu, and restores them when finished |
| Dependencies | Does not appear in CXA-m, VXT Models M9410A/11A/15A/16A, nor in M9410E/11E/15E/16E, BBIQ and External Mixing <ul style="list-style-type: none"> - The Low Noise Path Enable selection does not appear unless Option LNP is present and licensed - The μW Preselector Bypass selection does not appear unless Option MPB is present and licensed - The Full Bypass Enable selection does not appear unless options LNP and MPB are both present as well as option FBP |

In any of these cases, if the required options are not present and the SCPI command is sent, error - 241, "Hardware missing; Option not installed" is generated

Low Noise Path Enable and **Full Bypass Enable** are grayed-out if the current measurement does not support them

Low Noise Path Enable and **Full Bypass Enable** are not supported in Avionics and MMR Modes (non-modulation measurements). In any of these cases (that is, the feature is not supported in either measurement or Mode), if the SCPI command is sent, the following error is generated: -221, "Setting Conflict; Feature not supported for this measurement"

| Preset | Mode | Value |
|--------|-----------------|---|
| | IQ Analyzer | MPB option present and licensed: MPB |
| | Pulse | MPB option not present and licensed: STD |
| | RTSA | |
| | Avionics | |
| | All other Modes | STD |
| | - | |

Low Noise Path Enable

Low Noise Path Enable provides a lower noise floor under some circumstances, particularly when operating in the 21–26.5 GHz region. With the Low Noise Path enabled, the low band/high band switch and microwave preamp are bypassed whenever *all* the following are true:

- The instrument is not in the Low Band, meaning:
- the start frequency is above 3.5 GHz and
- the stop frequency is above 3.6 GHz
- The internal preamp is not installed, or if installed, is set to **Off** or **Low Band**

Note that this means that, when any part of a sweep is done in Low Band, the Low Noise Path is not used, whether or not the **Low Noise Path Enable** is selected in the user interface. Also, if the preamp is turned on, the Low Noise Path is not used, whether or not the **Low Noise Path Enable** is selected in the user interface. The only time the Low Noise Path is used is when **Low Noise Path Enable** is selected, the sweep is completely in High Band (> 3.6 GHz) and no preamp is in use.

For measurements that use IQ acquisition, the low noise path is used when **Center Frequency** is in High Band (> 3.6 GHz) and no preamp is in use. In other words, the rules above are modified to use only the center frequency to qualify which path to switch in. This is not the case for FFTs in the Swept SA measurement; they use the same rules as swept measurements.

Note that the Low Noise Path, while giving improved DANL, has the disadvantage of decreased TOI performance and decreased gain compression performance relative to the standard path.

Note also that the bypass switch is a mechanical switch and has finite life, so if the **Low Noise Path Enable** is selected, it is possible to cause frequent cycling of this switch by frequently changing instrument settings such that the above conditions hold true only some of the time. A user making tests of this nature should consider opting for the **Standard Path**, which will never throw the bypass switch, at the expense of some degraded noise performance.

The low noise path is useful for situations where the signal level is so low that the instrument performance is dominated by noise even with 0 dB attenuation, but still high enough that the preamp option would have excessive third-order intermodulation or compression. The preamp, if purchased and used, gives better noise floor than does the “Low Noise Path.” However, its compression threshold and third-order intercept are much poorer than that of the non-preamp path.

There are some applications, typically for signals around –30 dBm, for which the third-order dynamic range of the standard path is good enough, but the noise floor is not low enough even with 0 dB input attenuation. When the third-order dynamic

range of the preamp path is too little and the noise floor of the standard path is too high, the Low Noise Path can provide the best dynamic range

The graph below illustrates the concept. It shows, in red, the performance of an instrument at different attenuation settings, both with the preamp on and off, in a measurement that is affected by both instrument noise and instrument TOI. The green shows the best available dynamic range, offset by 0.5 dB for clarity. The blue shows how the best available dynamic range improves for moderate signal levels with the low noise path switched in. In this illustration, the preamp improves the noise floor by 15 dB while degrading the third-order intercept by 30 dB, and the low noise path reduces loss by 8 dB. The attenuator step size is 2 dB.

There are other times where selecting the low noise path improves performance, too. Compression-limited measurements such as finding the nulls in a pulsed-RF spectrum can profit from the low noise path in a way similar to the TOI-limited measurement illustrated. Accuracy can be improved when the low noise path allows the optimum attenuation to increase from a small amount like 0, 2 or 4 dB to a larger amount, giving better return loss at the instrument input. Harmonic measurements, such as second and third harmonic levels, are much improved using the low noise path because of the superiority of that path for harmonic (though not intermodulation) distortion performance.

μW Preselector Bypass

Toggles the preselector bypass switch for band 1 and higher. When the microwave preselector is on, the signal path is preselected. When the microwave preselector is off, the signal path is not preselected. The preselected path is the normal path for the instrument.

The preselector is a tunable bandpass filter which prevents signals away from the frequency of interest from combining in the mixer to generate in-band spurious signals (images). The consequences of using a preselector filter are its limited bandwidth, the amplitude and phase ripple in its passband, and any amplitude and phase instability due to center frequency drift.

Option MPB or pre-selector bypass provides an unpreselected input mixer path for certain X-Series signal analyzers with frequency ranges above 3.6 GHz. This signal path allows a wider bandwidth and less amplitude variability, which is an advantage when doing modulation analysis and broadband signal analysis. The disadvantage is that, without the preselector, image signals will be displayed. Another disadvantage of bypassing the preselector is increased LO emission levels at the front panel input port.

Image responses are separated from the real signal by twice the 1st IF. For IF Paths of 10 MHz and 25 MHz, the 1st IF is 322.5 MHz, so the image response and the real signal will be separated by 645 MHz. The 1st IF will be different for other IF Path settings. When viewing a real signal and its corresponding image response in internal mixing, the image response will be to the left of the real signal.

Also, the image response and the real signal typically have the same amplitude and exhibit the same shape factor.

However, if Option FS1 (Fast Sweep Capability) is enabled, the image response in the Swept SA measurement appears lower in amplitude and has a much wider shape factor compared to the real signal.

Full Bypass Enable

With **Full Bypass Enable** selected, the microwave preselector is bypassed. In addition, the low band/high band switch and microwave preamp are bypassed whenever *all* the following are true:

- The instrument is not in the Low Band, meaning:
- the start frequency is above 3.5 GHz and
- the stop frequency is above 3.6 GHz.
- the internal preamp is not installed or if installed, is set to **Off** or **Low Band**

Note that this means that, when any part of a sweep is done in Low Band, the Low Noise Path is not used, whether or not the **Full Bypass Enable** is selected in the user

interface. Also, if the preamp is turned on, the Low Noise Path is not used, whether or not the **Full Bypass Enable** is selected in the user interface. The only time the Low Noise Path is used is when **Full Bypass Enable** is selected, the sweep is completely in High Band (> 3.6 GHz) and no preamp is in use.

CAUTION

When **Full Bypass Enable** is selected, and "**Y Scale**" on page 1745 is set to 0 dB, there will be a direct AC connection between the input and the first converter when the Low Noise Path switches in (when Start Freq >3.6 GHz and the Preamp is either not licensed, set to Low Band, or Off). This puts the first converter at considerable risk to be damaged by high AC power. Consequently, whenever **Full Bypass Enable** is selected, a warning message appears in the status bar:

"Full Bypass Enabled, maximum safe input power reduced"

Microwave Preselector Bypass Backwards Compatibility

| | |
|------------------------------|--|
| Example | Bypass the microwave preselector: <code>:POW:MW:PRES OFF</code> |
| Notes | Included for Microwave Preselector Bypass backwards compatibility The ON parameter sets the STD path (<code>:POW:MW:PATH STD</code>) The OFF parameter sets path MPB (<code>:POW:MW:PATH MPB</code>) |
| Preset | ON |
| Backwards Compatibility SCPI | <code>[:SENSe]:POWer[:RF]:MW:PRESelector[:STATe] ON OFF 0 1</code> <code>[:SENSe]:POWer[:RF]:MW:PRESelector[:STATe]?</code> |

Frequency Extender Preselection Bypass

Only applies to the high frequency path of the Frequency Extender, and only if the Frequency Extender allows it. For example, the V3050A high frequency path is 50 – 110 GHz and *does* allow control of the preselector bypass.

When the Frequency Extender's preselection is bypassed, flatness is improved, but will be subject to spurs from out-of-band interfering signals. For bandwidths greater than 2.5 [GHz], it is recommended that the signal bypass the Frequency Extender Preselector since the max bandwidth of the Preselector can be as narrow as 2.5 [GHz].

For most applications, the preset state is **OFF**, which gives the best remote-control throughput, minimizes acoustic noise from switching, minimizes out of band spurs, and minimizes the risk of wear in the hardware switches.

Preselector and Bandwidth Conflict

When the Frequency Extender Preselector is applied and the signal bandwidth is greater than 2.5 [GHz], then a settings alert message will show to warn the user that the signal may be distorted due to the limitation of the Frequency Extender Preselector bandwidth.

An example of the settings alert message is shown below.

Settings Alert message in the Status Bar at the bottom of the display.

Settings Alert message in the error queue

| Type | ID | |
|---|-----|--|
|  | 159 | Settings Alert - DETECTED; Presel/Meas BW conflict |

Allow Full Bypass in Auto

Enable or disable Full Bypass in μ W Path Auto rule. See " [\$\mu\$ W Path Control](#)" on page 1778.

When this function is **ON**, and " [\$\mu\$ W Path Control](#)" on page 1778 is in **AUTO**, it is possible for the auto rules to select the **FULL** Bypass state, which bypasses both the Preamp and the Microwave Preselector. Otherwise, the auto rules never select the **FULL** Bypass state. This is convenient when making wideband measurements, but it also adds some risk of damage to the first converter.

CAUTION

When **Full Bypass Enable** is selected, and "[Y Scale](#)" on page 1745 is set to 0 dB, there will be a direct AC connection between the input and the first converter when the Low Noise Path switches in (when Start Freq > 3.6 GHz and the Preamp is either not licensed, set to **Low Band** or **Off**). This puts the first converter at considerable risk to be damaged by high AC power. Consequently, whenever **Full Bypass Enable** is selected, a warning message appears in the status bar:

"Full Bypass Enabled, maximum safe input power reduced"

Remote Command `[:SENSe]:POWer[:RF]:MW:PATH:AUTO:FULL ON | OFF | 1 | 0`

| Preset | <code>OFF</code> |
| State Saved | Saved in instrument state |

Software Preselection

Provided in some instruments, either to compensate for issues with provided hardware preselection or to provide the preselection function when there is no hardware preselector.

N9041B

Software Preselection compensates for the frequency range limit of the microwave preselector. Since the microwave preselector only goes up to 50 GHz, software preselection must be used to suppress and separate images above 50 GHz. The specific algorithm used for software preselection is specified by the SW Preselection Type selection – Normal or Advanced.

In N9041B, **Software Preselection** only applies for frequencies above 50 GHz, therefore it is only used for RF Input 2. Even if turned on, it is not used for other inputs, and never for frequencies below 50 GHz. This is why the label of this control contains the parenthetical note “(>~50 GHz)”.

Note that in N9041B, in Swept SA measurement, **Software Preselection** works even if the measurement is using an FFT Sweep Type. In measurements other than Swept SA, Software Preselection is not used if the measurement is using an FFT sweep type.

N9042B+V3050A

Software Preselection compensates for the frequency range limit of the microwave preselector. Since the microwave preselector only goes up to 50 GHz, software preselection must be used to suppress and separate images above 50 GHz. The specific algorithm used for software preselection is specified by the SW Preselection Type selection – Normal or Advanced.

For N9042B+V3050A, Software Preselection only applies for frequencies above 50 GHz, therefore it is only used for External RF. Even if it is turned on, it will not be

used for other inputs and never for frequencies below 50 GHz. This is why the label of this control contains the parenthetical note “(>~50 GHz)”.

Note that for N9042B+V3050A, in the Swept SA measurement, Software Preselection works even if the measurement is using an FFT Sweep Type. In measurements other than Swept SA, Software Preselection is not used if the measurement is using an FFT Sweep Type.

VXT models M9410A/11A/15A/16A

Software Preselection is used to provide the preselection function, as there is no hardware preselector in these models. Two background traces are taken and compared point by point, and the point with the lowest amplitude from the two traces is used. This provides a method to reduce spurs that are internally generated within the VXT, but you should note the following when using Software Preselection:

- There is some speed cost due to the need to take multiple captures
- Taking the point with the lowest amplitude in each trace will make the average noise level lower at all points that do not have a spur. This can reduce the accuracy of the measurement of noise and noise-like signals

Because of the difficulty in identifying spurs manually, you are recommended to leave Software Preselection **ON** at all times in VXT models M9410A/11A. If you turn it off in order to speed up your measurement or improve noise accuracy, be aware of unwanted onscreen spurs.

| | |
|----------------|--|
| Remote Command | <code>[:SENSe]:POWer[:RF]:SWPResel:STATe 0 1 ON OFF</code> <code>[:SENSe]:POWer[:RF]:SWPResel:STAT?</code> |
| Example | <code>:POW:SWPR:STAT 1</code> <code>:POW:SWPR:STAT?</code> |
| Dependencies | Only appears in N9041B, N9042B+V2050A, VXT models M9410A/11A and M9410E/11E. Does not appear in all measurements |
| Couplings | Affects Sweep Time Auto Tune supports Software Preselection , so Auto Tune should be performed after setting the Software Preselection state |
| Preset | N9041B OFF N9042B+V3050A ON M9410A/11A ON |
| State Saved | Saved in instrument state |

SW Preselection Type

Specifies the algorithm used for software preselection.

Two hidden sweeps occur in succession. The second sweep is offset in LO frequency by $2 * IF / N$. For each point in each trace, the smaller amplitude from the two traces is taken and placed in that point in the selected trace. The Peak detector is auto-selected to improve the image suppression effectiveness. Responses of each trace that lie on top of one another will remain and are valid signals. Other signals are images, which are suppressed. The action of taking the smaller of the two traces will make the average noise level lower in all points that do not have an image, thus reducing the accuracy of the measurement of noise and noise-like signals.

- **NORMa1** - mathematically removes all image and multiple responses of signals present at the input
- **ADVanced** - any trace processing (such as “max hold” or trace averaging) is performed on the points of both candidate traces before the “select minimum” operation occurs. This form of processing works better for non-stationary signals, such as pulsed-RF signals

| | |
|----------------|--|
| Remote Command | <code>[:SENSe]:POWer[:RF]:SWPreSel NORMa1 ADVanced</code> <code>[:SENSe]:POWer[:RF]:SWPreSel?</code> |
| Example | <code>:POW:SWPR NORM</code> <code>:POW:SWPR?</code> |
| Dependencies | Only appears in N9041B and N9042B+V3050A. Only appears in measurements that use the Swept method Grayed-out when "Software Preselection" on page 1788 is OFF. The grayout message is “Unavailable unless SW Presel enabled” |
| Preset | N9041B ADVanced N9042B+V3050A NORMa1 |
| State Saved | Saved in instrument state |

SW Preselection BW

Specifies the effective bandwidth to be used for Software Preselection.

The options are:

- **NORMa1** – when making Swept measurements, a software preselection algorithm is used which takes up to 4 background acquisitions, then post-processes the result. This algorithm can remove images from signals with an occupied

3 WLAN Mode
 3.10 Power Stat CCDF Measurement

bandwidth up to around 3 GHz. (Default/Preset setting). When making FFT measurements, this algorithm is not used, instead the same algorithm is used as for **NARRow** (below)

- **NARRow**– a software preselection algorithm is used which takes two background acquisitions, then post-processes the result to detect and remove images from wideband signals with occupied bandwidths up to 2 GHz. This increases the risk of images failing to be rejected, but improves the measurement speed

| | |
|----------------|--|
| Remote Command | <code>[:SENSe]:POWer[:RF]:SWPreSel:BW NORMa1 NARRow</code> <code>[:SENSe]:POWer[:RF]:SWPreSel:BW?</code> |
| Example | <code>:POW:SWPR:BW NARR</code> |
| Dependencies | Only appears in N9041B and N9042B+V3050A. Only appears in measurements that use the Swept method Grayed-out when " Software Preselection " on page 1788 is OFF . The grayout message is "Unavailable unless SW Presel enabled" For N9042B+V3050A, the parameter is SCPI-only, and always set to NARRow when Software Preselection is enabled |
| Preset | N9041B NORMa1 N9042B+V3050A NARRow |
| State Saved | Saved in instrument state |

High Freq Prefilter

Lets you set the state of Prefilter for center frequencies above 1310 MHz.

In VXT Models M9410A/11A and M9410E/11E in bypass frequency range (1310MHz~5GHz), the Receiver RF path has a bank of filters that come after the RF Attenuator in the signal path. Since this bank of filters precedes the mixer they are known as the "Prefilter" bank. Their purpose is to eliminate unwanted in-band mixing products by filtering out all but the desired frequencies before the signals get to the mixer. There are 13 prefilter bands to cover the frequencies between 9 kHz and 6000 MHz. The Prefilter provides the necessary rejection of the unwanted signal.

| | |
|----------------|--|
| Remote Command | <code>[:SENSe]:<measurement>:PFILter[:STATe] ON OFF 1 0</code> <code>[:SENSe]:<measurement>:PFILter[:STATe]?</code> |
| Example | Enable High Freq Prefilter for the Complex Spectrum Measurement in BASIC Mode: <code>:SPEC:PFIL ON</code> Enable High Freq Prefilter for the IQ Waveform Measurement, in multiple Modes: <code>:WAV:PFIL ON</code> |

| | |
|--------------|--|
| | Enable High Freq Prefilter for the Swept SA Measurement in SA Mode: :SAN:PFIL ON |
| Dependencies | Only appears in VXT models M9410A/11A with center frequency above 1310 MHz, and M9410E/11E in frequency range 1310MHz~5GHz |
| Preset | See " Prefilter Presets " on page 1590 below |
| State Saved | Saved in instrument state |

3.10.5 Display

Lets you configure display items for the current Mode, Measurement View or Window.

3.10.5.1 View

Contains controls for selecting the current **View**, and for editing User Views.

View

See "[Views](#)" on page 1543.

User View

Lets you choose a View from the saved User Views for the current measurement. This panel only appears if a User View exists for the current measurement.

3 WLAN Mode
3.10 Power Stat CCDF Measurement

| | |
|------------------------------|---|
| Remote Command | <code>:DISPlay:VIEW:ADVanced:SElect <alphanumeric></code> <code>:DISPlay:VIEW:ADVanced:SElect?</code> |
| Example | Select Baseband as the current View <code>:DISP:VIEW:ADV:SEL "Baseband"</code> |
| Notes | <p>You must be in the measurement whose View you are trying to set to send the command. You can only set Views for the current measurement using this command</p> <p>For predefined views, the parameter is derived from the view name that is shown in the View list in the user interface. For example, if you are trying to select the Trace Zoom view in the Swept SA measurement, you send:</p> <code>:DISP:VIEW:ADV:SEL "Trace Zoom"</code> <p>because "Trace Zoom" is the name of the View as seen in the Mode/Meas dialog or in the Display, View menu</p> <p>You <i>cannot</i> use the legacy View parameter (which in this case would be <code>TZOom</code>) with <code>:DISP:VIEW:ADV:SEL</code></p> <p><code><alphanumeric></code> is case insensitive; you can specify mixed case, however the name will be evaluated on a single case. Thus, both of the following forms work:</p> <code>:DISP:VIEW:ADV:SEL "Trace Zoom"</code> <code>:DISP:VIEW:ADV:SEL "TRACE ZOOM"</code> <p>If the specified view is not a valid View, the query returns the error message "-224, Illegal parameter value; View with the name <alphanumeric> does not exist"</p> <p>If the display is disabled (via <code>:DISP:ENAB OFF</code>) then the error message "-221, Settings conflict; View SCPI cannot be used while Display is disabled" is generated</p> |
| Backwards Compatibility SCPI | The legacy node <code>:DISPlay:VIEW[:SElect]</code> is retained for backwards compatibility, but it only supports predefined views |

Restore Layout to Default

Restores the Layout to the default for Basic.

Modified Views are very temporary; if you exit the current measurement they are discarded, and they are not saved in State. To retain this View for later use, and to be able to return easily to your original Basic View, you can save your edited View as a "User View".

Save Layout as New View

Saves your new View as a User View. An alpha keyboard appears, which lets you name your new View; the default is the old View name plus a number.

| | |
|----------------|---|
| Remote Command | <code>:DISPlay:VIEW:ADVanced:NAME <alphanumeric></code> |
|----------------|---|

| | |
|---------|--|
| Example | <code>:DISP:VIEW:ADV:NAME "Baseband"</code> Creates a new View named Baseband from the current View, and selects it as the current View |
| Notes | <p><code><alphanumeric></code> is case insensitive; you can specify mixed case, however the name will be evaluated on a single case</p> <p>If <code><alphanumeric></code> name already exists as a View, the error message “-224, Illegal parameter value; View <alphanumeric> already exists” is generated</p> <p>If the display is disabled (via <code>:DISP:ENAB OFF</code>) then the error message “-221, Settings conflict; User View SCPI cannot be used while Display is disabled” is generated</p> |

Re-Save User View

You can re-edit a User View; if you make changes, then an asterisk will appear next to the User View’s name. You can then tap **Re-Save User View** to save it back to its existing name, or **Save Layout as New View** to add another, new User View.

This is a front panel function only, there is no remote command available to perform this function. To do this remotely, you must first perform **Save Layout as New View**, then delete the old User View and rename the new one with the name of the View you just deleted.

Rename User View

You can rename the current View by giving it a new unique name. Only User Views can be renamed, if the current View is a Predefined View, an error occurs.

| | |
|----------------|---|
| Remote Command | <code>:DISPlay:VIEW:ADVanced:REName <alphanumeric></code> |
| Example | <code>:DISP:VIEW:ADV:REN "Baseband"</code> |
| Notes | <p><code><alphanumeric></code> is case insensitive; you can specify mixed case, however the name will be evaluated on a single case</p> <p>If the <code><alphanumeric></code> specifying the new name is already present in the list of View names, the error message “-224, Illegal parameter value; View <alphanumeric> already exists” is generated</p> <p>If the current View is a Predefined View, the error message “-224, Illegal parameter value; Cannot rename a Predefined View” is generated</p> <p>If the display is disabled (via <code>:DISP:ENAB OFF</code>) then the error message “-221, Settings conflict; View SCPI cannot be used while Display is disabled” is generated</p> |

Delete User View

You can delete the current View if it is a User View. The default view becomes the current view for the Measurement.

| | |
|----------------|--|
| Remote Command | <code>:DISPlay:VIEW:ADVanced:DELeTe</code> |
| Example | <code>:DISP:VIEW:ADV:DEL</code> |
| Notes | <p><code><alphanumeric></code> is case insensitive; you can specify mixed case, however the name will be evaluated on a single case</p> <p>If the <code><alphanumeric></code> is not present in the list of View names, the error message “-224, Illegal parameter value; View <code><alphanumeric></code> does not exist” is generated</p> <p>If the current View is a Predefined View, the error message “-224, Illegal parameter value; Cannot delete a Predefined View” is generated</p> <p>If the display is disabled (via <code>:DISP:ENAB OFF</code>) then the error message “-221, Settings conflict; View SCPI cannot be used while Display is disabled” is generated</p> |

Delete All User Views

Deletes all previously saved User Views. The default view becomes the current view for the Measurement if a User View was the current view when this command was executed.

| | |
|----------------|--|
| Remote Command | <code>:DISPlay:VIEW:ADVanced:DELeTe:ALL</code> |
| Example | <code>:DISP:VIEW:ADV:DEL:ALL</code> |
| Notes | Disabled if there are no User Views |

View Editor Remote Commands

The following remote commands help you manage Views and User Views. Note that the SCPI node for User Views handles both Predefined and User Views. The legacy nodes, `:DISPlay:VIEW[:SElect]` and `:DISPlay:VIEW:NSEL`, are retained for backwards compatibility, but they only support predefined views.

View Listing Query

Returns a string containing a comma-separated list of names for *all* the Views, including User Views, available for the current Measurement.

| | |
|----------------|--|
| Remote Command | <code>:DISPlay:VIEW:ADVanced:CATalog?</code> |
| Example | <code>:DISP:VIEW:ADV:CAT?</code> |
| Notes | <p>Returns a quoted string of the available Views for the current measurement, separated by commas. The list includes names for <i>all</i> the Views, including User Views, available for the current Measurement</p> <p>Example:</p> <p><code>"Normal,Trace Zoom,Spectrogram,Baseband,myView1,yourView1"</code></p> |

No distinction is made between Predefined and User Views
If you switch measurements with the display disabled (via `:DISP:ENAB OFF`), then query the list of available Views, the result is undefined

User View Listing Query

Returns a string containing a comma-separated list of names for *only* the User Views available for the current Measurement.

| | |
|----------------|--|
| Remote Command | <code>:DISPlay:VIEW:ADVanced:USER:CATalog?</code> |
| Example | <code>:DISP:VIEW:ADV:USER:CAT?</code> |
| Notes | Returns a quoted string of the available User Views for the current measurement, separated by commas. Example: <code>"Baseband,myView1,yourView1"</code> If you switch measurements with the display disabled (see "Display Enable (Remote Command Only)" on page 1804), then query the list of available Views, the result is undefined |

3.10.5.2 Annotation

Contains controls for setting up the annotation for the current Mode or Measurement.

Graticule

Turns the display graticule On or Off for all windows with graticules in all measurements in the current Mode. Also turns the graticule Y-Axis annotation on and off.

| | |
|------------------------------|--|
| Remote Command | <code>:DISPlay:GRATicule[:STATe] OFF ON 0 1</code> <code>:DISPlay:GRATicule[:STATe]?</code> |
| Example | <code>:DISP:GRAT OFF</code> |
| Notes | The graticule is the set of horizontal and vertical lines that make up the grid/divisions for the X-Axis and Y-Axis |
| Preset | <code>ON</code> |
| State Saved | Saved in instrument state |
| Backwards Compatibility SCPI | <code>:DISPlay:WINDow[1]:TRACe:GRATicule:GRID[:STATe] OFF ON 0 1</code> <code>:DISPlay:WINDow[1]:TRACe:GRATicule:GRID[:STATe]?</code> This command is accepted for backwards compatibility with older instruments, but the <code>WINDow</code> , <code>TRACe</code> and <code>GRID</code> parameters are ignored |

Screen Annotation

Controls the display of the annunciation and annotation around the graticule, including any annotation on lines (such as the display line, the threshold line, etc.) and the Y-Axis annotation, for all windows with screen annotation in all measurements in the current Mode.

This does *not* include marker annotation (or the N dB result). When **OFF**, the graticule expands to fill the entire graticule area, leaving only the 1.5% gap above the graticule, as described in the **Trace** section.

| | |
|----------------|--|
| Remote Command | <code>:DISPlay:ANNotation:SCReen[:STATe] OFF ON 0 1</code> <code>:DISPlay:ANNotation:SCReen[:STATe]?</code> |
| Example | <code>:DISP:ANN:SCR OFF</code> |
| Dependencies | Grayed-out and forced to OFF when System Display Settings, Annotation is OFF |
| Preset | ON This remains OFF through a Preset when System Display Settings, Annotation is set to OFF |
| State Saved | Saved in instrument state |

Trace Annotation

Turns on and off the labels on the traces, showing their detector (or their Math Mode) as described in the **Trace** section, for all windows in all measurements in the current Mode for which Trace Annotation on/off is supported.

If Trace Math is being performed on a trace, then the Trace Math annotation replaces the detector annotation.

For measurements that support limit lines, this key also turns on and off the labels on the Limit Lines. The label is the Limit number annotation and Limit Comment displayed on the graph. If the length of the comment is greater than 20 characters, the first 8 characters and the last 8 characters are displayed, joined with

| | |
|----------------|--|
| Remote Command | <code>:DISPlay:ANNotation:TRACe[:STATe] ON OFF 1 0</code> <code>:DISPlay:ANNotation:TRACe[:STATe]?</code> |
| Example | <code>:DISP:ANN:TRAC OFF</code> |
| Preset | OFF |
| State Saved | Saved in instrument state |

Control Annotation

Turns on and off the display of values on the Active Function controls for all measurements in the current Mode. This is a security feature.

| | |
|----------------|--|
| Remote Command | <code>:DISPlay:ACTivefunc[:STATe] ON OFF 1 0</code> <code>:DISPlay:ACTivefunc[:STATe]?</code> |
| Example | <code>:DISP:ACT OFF</code> |
| Dependencies | Grayed out and forced to OFF when System Display Settings, Annotation is OFF |
| Preset | ON This remains OFF through a Preset when System Display Settings, Annotation is set to OFF |
| State Saved | Saved in instrument state |

Meas Bar

Turns the Measurement Bar at the top of the screen on and off for all measurements in the current Mode. When **OFF**, the graticule area expands to fill the area formerly occupied by the Measurement Bar.

| | |
|----------------|--|
| Remote Command | <code>:DISPlay:ANNotation:MBAR[:STATe] OFF ON 0 1</code> <code>:DISPlay:ANNotation:MBAR[:STATe]?</code> |
| Example | <code>:DISP:ANN:MBAR OFF</code> |
| Dependencies | Grayed out and forced to OFF when System Display Settings, Annotation is OFF |
| Preset | ON This remains OFF through a Preset when System Display Settings, Annotation is set to OFF |
| State Saved | Saved in instrument state |

Display Enable (Remote Command Only)

Turns the display on/off, including the display drive circuitry. The backlight stays lit to confirm that the instrument is on. The display enable setting is mode global. There are three reasons for turning the display off:

1. To increase speed as much as possible by freeing the instrument from having to update the display
2. To reduce emissions from the display, drive circuitry
3. For security purposes

If you have turned off the display:

3 WLAN Mode
3.10 Power Stat CCDF Measurement

- and you are in local operation, the display can be turned back on by pressing any key or by sending `:SYSTem:DEFaults MISC` or `:DISPlay:ENABle ON` (neither `*RST` nor `:SYSTem:PRESet` enable the display)
- and you are in remote operation, the display can be turned back on by pressing the **Local** or **Esc** keys, or by sending `:SYSTem:DEFaults MISC` or `:DISPlay:ENABle ON` (neither `*RST` nor `:SYSTem:PRESet` enable the display)
- and you are using either the `:SYSTem:KLOCK` command or GPIB local lockout, then *no* front-panel key press will turn the display back on. You must turn it back on remotely.

If the display is **OFF**, many SCPI commands related to User Views and Multiscreen functionality do not work, and return the error messages “-221, Settings conflict; Screen SCPI cannot be used when Display is disabled” or “221, Settings conflict; View SCPI cannot be used while Display is disabled”. These commands include:

| Name | Command |
|----------------------------|--|
| Select User View | <code>:DISPlay:VIEW:ADVanced:SElect</code> |
| Rename User View | <code>:DISPlay:VIEW:ADVanced:REName</code> |
| Delete User View | <code>:DISPlay:VIEW:ADVanced:DElete</code> |
| Create User View | <code>:DISPlay:VIEW:ADVanced:NAME</code> |
| Select Screen | <code>:INSTrument:SCReen:SElect</code> |
| Delete Screen | <code>:INSTrument:SCReen:DElete</code> |
| Delete All But This Screen | <code>:INSTrument:SCReen:DElete:ALL</code> |
| Add Screen | <code>:INSTrument:SCReen:CREate</code> |
| Rename Screen | <code>:INSTrument:SCReen:REName</code> |
| Sequencer On/Off | <code>:SYSTem:SEQuencer</code> |

| | |
|-------------------------------|---|
| Remote Command | <code>:DISPlay:ENABle OFF ON 0 1</code> |
| Example | <code>:DISP:ENAB OFF</code> |
| Couplings | <code>:DISP:ENAB OFF</code> turns Backlight OFF and <code>:DISP:ENAB ON</code> turns Backlight ON , but changing Backlight settings does <i>not</i> change the state of <code>:DISP:ENAB</code> |
| Preset | ON Set by <code>:SYST:DEF MISC</code> , but not affected by <code>*RST</code> or <code>:SYSTem:PRESet</code> |
| State Saved | Not saved in instrument state |
| Backwards Compatibility Notes | <code>:SYST:PRES</code> no longer turns on <code>:DISPlay:ENABle</code> as it did in legacy analyzers |

3.10.6 Frequency

Opens the **Frequency** menu, which contains controls that allow you to control the frequency and channel parameters of the instrument.

Some features in this menu are the same for all measurements in the current Mode – they do not change as you change measurements. Settings like these are called “Meas Global” and are unaffected by Meas Preset. For example, **Center Frequency** is the same for all measurements – it does not change as you change measurements.

3.10.6.1 Settings

Contains controls that pertain to the X-Axis parameters of the measurement. These parameters control how data on the vertical (X) axis is displayed and control instrument settings that affect the horizontal axis.

Center Frequency

Sets the frequency that corresponds to the horizontal center of the graticule. While adjusting **Center Frequency**, **Span** is held constant.

The **Center Frequency** setting is the same for all measurements within a mode, that is, it is Meas Global. Some Modes are also able to share a Mode Global center frequency value. If this is the case, the Mode will have a **Global** tab in its **Meas Setup** menu.

Center Frequency sets (and queries) the center frequency for the currently selected input. If your instrument has multiple inputs, and you select another input, **Center Frequency** changes to the value for that input. SCPI commands are available to directly set the center frequency for a specific input.

Center Frequency is remembered as you go from input to input. Thus, you can set a **Center Frequency** of 10 GHz with the RF Input selected, change to BBIQ and set a **Center Frequency** of 20 MHz, then switch to External Mixing and set a Center Freq of 60 GHz, and when you go back to the RF Input, **Center Frequency** will go back to 10 GHz; back to BBIQ and it is 20 MHz; back to External Mixing and it is 60 GHz.

See:

- ["VXT Models with Radio Heads/CIU Frequency Range" on page 1604](#)
- ["RF Center Freq" on page 1604](#)

3 WLAN Mode
3.10 Power Stat CCDF Measurement

- ["Ext Mix Center Freq" on page 1605](#)
- ["I/Q Center Freq" on page 1605](#)

| | |
|------------------------------|--|
| Remote Command | <code>[:SENSE] :FREQuency:CENTer <freq></code> <code>[:SENSE] :FREQuency:CENTer?</code> |
| Example | Set Center Frequency to 50 MHz: <code>:FREQ:CENT 50 MHz</code> Increment Center Frequency by the value of CF Step : <code>:FREQ:CENT UP</code> Return the current value of Center Frequency: <code>:FREQ:CENT?</code> |
| Notes | Sets the RF, External Mixing or I/Q Center Frequency depending on the selected input: <ul style="list-style-type: none"> – For RF input it is equivalent to <code>:FREQ:RF:CENT</code> – For I/Q input it is equivalent to <code>:FREQ:IQ:CENT</code> – For External Mixer it is equivalent to <code>:FREQ:EMIX:CENT</code> Preset and Max values are dependent on Hardware Options If no terminator (for example, MHz) is sent, the terminator Hz is used. If a terminator with unit other than Frequency is used, an invalid suffix error message is generated |
| Preset | Depends on instrument maximum frequency, mode, measurement, and selected input See "Center Frequency Presets" on page 1602 , "RF Center Freq" on page 1604 , "Ext Mix Center Freq" on page 1605 , "I/Q Center Freq" on page 1605 , and "VXT Models with Radio Heads/CIU Frequency Range" on page 1604 |
| State Saved | Saved in instrument state |
| Min/Max | Depends on instrument maximum frequency, mode, measurement, and selected input See "Center Frequency Presets" on page 1602 , "RF Center Freq" on page 1604 , "I/Q Center Freq" on page 1605 , and "VXT Models with Radio Heads/CIU Frequency Range" on page 1604 |
| Status Bits/OPC dependencies | Non-overlapped The following command and parameters apply only to MSR, LTE-Advanced FDD/TDD and 5G NR Modes. |
| Remote Command | <code>[:SENSe] :FREQuency:CENTer:AUTO ON OFF 1 0</code> <code>[:SENSe] :FREQuency:CENTer:AUTO?</code> |
| Example | <code>:FREQ:CENT:AUTO OFF</code> <code>:FREQ:CENT:AUTO?</code> |
| Dependencies | Only available for the Monitor Spectrum, Power Stat CCDF and IQ waveform measurements in MSR, LTE-Advanced FDD/TDD and 5G NR Modes |
| Couplings | When Center Frequency changes, state automatically changes to Manual (OFF) |

Center Frequency, Center Frequency Offset and Carrier Reference Frequency are coupled. When Carrier Reference Frequency changes:

| Center Frequency | Relationship |
|------------------|--|
| Auto | Center Frequency = Carrier Reference Frequency + Center Frequency Offset (fixed) |
| Man | Center Frequency (fixed) = Carrier Reference Frequency + Center Frequency Offset |

| | |
|-------------|---------------------------|
| Preset | ON |
| State Saved | Saved in instrument state |
| Range | Auto Man |

Center Frequency Presets

The following table provides the Center Frequency Presets for the Spectrum Analyzer mode, and the Max Freq, for the various frequency options:

| Freq Option | CF after Mode Preset | Stop Freq after Mode Preset | Max Freq (can't tune above) |
|--------------------------|----------------------|-----------------------------|-----------------------------|
| 503 (all but CXA) | 1.805 GHz | 3.6 GHz | 3.7 GHz |
| 503 (CXA) | 1.505 GHz | 3.0 GHz | 3.08 GHz |
| 507 (all but CXA) | 3.505 GHz | 7.0 GHz | 7.1 GHz |
| 507 (CXA) | 3.755 GHz | 7.5 GHz | 7.58 GHz |
| 508 (all but MXE) | 1.805 GHz | 3.6 GHz | 8.5 GHz |
| 508 (MXE) | 4.205 GHz | 8.4 GHz | 8.5 GHz |
| 513 | 6.805 GHz | 13.6 GHz | 13.8 GHz |
| 526 (except CXA and MXE) | 13.255 GHz | 26.5 GHz | 27.0 GHz* |
| 526 (CXA) | 13.255 GHz | 26.5 GHz | 26.55 GHz |
| 526 (MXE) | 1.805 GHz | 3.6 GHz | 27.0 GHz |
| 532 | 16.005 GHz | 32.0 GHz | 32.5 GHz |
| 540 | 20.005 GHz | 40.0 GHz | 40.5 GHz |
| 543 | 21.505 GHz | 43.0 GHz | 43.0 GHz |
| 544 | 22.005 GHz | 44.0 GHz | 45.0 GHz |
| 550 | 25.005 GHz | 50.0 GHz | 52 GHz |
| F03 (CXA-m) | 1.505 GHz | 3.0 GHz | 3.08 GHz |
| F07 (CXA-m) | 3.755 GHz | 7.5 GHz | 7.575 GHz |
| F13 (CXA-m) | 6.805 GHz | 13.6 GHz | 13.8 GHz |

3 WLAN Mode
 3.10 Power Stat CCDF Measurement

| Freq Option | CF after Mode Preset | Stop Freq after Mode Preset | Max Freq (can't tune above) |
|----------------------|----------------------|-----------------------------|-----------------------------|
| F26 (CXA-m) | 13.255 GHz | 26.5 GHz | 26.55 GHz |
| 504 (M9421A, M8920A) | 2.145 GHz | 3.88GHz | 3.88 GHz |
| 506 (M9421A, M8920A) | 3.245 GHz | 6.08GHz | 6.08 GHz |
| F06 (M9410A/11A) | 1.0 GHz | 6.08 GHz | 6.08 GHz |
| F06 (M9415A) | 1 GHz | 1.08 GHz | 6.6 GHz |
| F08 (M9415A) | 1 GHz | 1.08 GHz | 8.6 GHz |
| F12 (M9415A) | 1 GHz | 1.08 GHz | 12.9 GHz |

*For option 526, the Max CF in RTSA is 26.999999995 GHz.

N9041B Center Freq Presets

| Input | CF after Mode Preset | Stop Freq after Mode Preset | Max Freq (can't tune above) |
|---------------------|----------------------|-----------------------------|-----------------------------|
| Input 1, all models | 25.005 GHz | 50.0 GHz | 52 GHz |
| Input 2, opt 585 | 42.505 GHz | 85.0 GHz | 86 GHz |
| Input 2, opt 590 | 45.005 GHz | 90.0 GHz | 92 GHz |
| Input 2, opt 5CX | 55.005 GHz | 110.0 GHz | 110 GHz |

Input 2, CXA and MXE

| Model | CF after Mode Preset | Stop Freq after Mode Preset | Max Freq (can't tune above) |
|-------------|----------------------|-----------------------------|-----------------------------|
| CXA opt C75 | 0.7505 GHz | 1.5 GHz | 1.58 GHz |
| MXE | 505 MHz | 1 GHz | 1.000025 GHz |

Tracking Generator Frequency Limits (CXA only)

| Tracking Generator Option | Min Freq (clips to this freq when turn TG on and can't tune below while TG on) | If above this Freq, Stop Freq clipped to this Freq when TG turned on | Max Freq (can't tune above) while TG on |
|---------------------------|--|--|---|
| T03 | 9 kHz | 3.0 GHz | 3.08 GHz |
| T06 | 9 kHz | 6.0 GHz | 6.05 GHz |

Tracking Generator Frequency Limits(CXA-m only)

| Tracking Generator Option | Min Freq (clips to this freq when turn TG on and can't tune below while TG on) | If above this Freq, Stop Freq clipped to this Freq when TG turned on | Max Freq (can't tune above) while TG on |
|---------------------------|--|--|---|
| T03 | 2 MHz | 3.08 GHz | 3.08 GHz |
| T07 | 2 MHz | 7.575 GHz | 7.575 GHz |
| T13 | 2 MHz | 13.8 GHz | 13.8 GHz |
| T26 | 2 MHz | 26.55 GHz | 26.55 GHz |

VXT Models with Radio Heads/CIU Frequency Range

The following table shows the Center Frequency Presets and Range for VXT modes with Radio Heads/CIU.

| Products with Radio Heads/CIU | Preset | Start frequency | Stop frequency |
|-------------------------------|--------|-----------------|----------------|
| M9421A + CIU | 6 GHz | 5.9 GHz | 12 GHz |
| M9410A + CIU | 6 GHz | 5.9 GHz | 12 GHz |
| M9410A + CIU + RRH | 25 GHz | 24.25 GHz | 43.5 GHz |

RF Center Freq

Lets you specify the RF Center Frequency. Sets the Center Frequency to use when the RF input is selected, even if the RF input is not selected at the time the command is sent. Note that **Center Frequency** in the **Frequency** menu on the front panel always applies to the currently selected input.

| | |
|----------------|--|
| Remote Command | <code>[:SENSe] :FREQuency:RF:CENTer <freq></code> <code>[:SENSe] :FREQuency:RF:CENTer?</code> |
| Example | <code>:FREQ:RF:CENT 30 MHz</code> <code>:FREQ:RF:CENT?</code> |
| Notes | This command is the same in all Modes, but the parameter is Measurement Global, so the value is independent in each mode and common across all the measurements in the mode |
| Dependencies | If the electronic/soft attenuator is enabled, any attempt to set Center Frequency such that the Stop Frequency would be > 3.6 GHz fails and results in an advisory message If the equivalent SCPI command is sent, this same message is generated as part of a "-221, Settings conflict" warning |
| Preset | See " Center Frequency Presets " on page 1602 |
| State Saved | Saved in instrument state |
| Min | -79.999995 MHz |
| Max | See " Center Frequency Presets " on page 1602. Basically, instrument maximum frequency - 5 Hz |

Ext Mix Center Freq

Specifies the External Mixer Center Frequency. Sets the Center Frequency to use when the External Mixer is selected, even if the External Mixer input is not the input that is selected at the time the command is sent. Note that **Center Frequency** in the **Frequency** menu on the front panel always applies to the currently selected input.

| | |
|----------------|---|
| Remote Command | <code>[:SENSe] :FREQuency:EMIXer:CENTer <freq></code> <code>[:SENSe] :FREQuency:EMIXer:CENTer?</code> |
| Example | <code>:FREQ:EMIX:CENT 60 GHz</code> <code>:FREQ:EMIX:CENT?</code> |
| Notes | This command is the same in all Modes, but the parameter is Measurement Global, so the value is independent in each Mode and common across all the measurements in the Mode |
| Couplings | When returning to External Mixing after having switched to one of the other inputs (for example, RF), you will come back into the settings that you had when you left External Mixing. So, you will come back to the band you were in with the Center Frequency that you had. However, Span is not an input-dependent parameter, therefore you will bring the span over from the other input. Therefore, the instrument comes back with the span from the previous input, limited as necessary by the current mixer setup |
| Preset | When a Mode Preset is performed while in External Mixing, the Start frequency of the current Mode is set to the nominal Min Freq of the lowest harmonic range in the Harmonic Table for the current mixer setup. Similarly, the Stop frequency of the current Mode is set to the nominal Max Freq of the highest harmonic range in the Harmonic Table. The Center Freq thus presets to the point arithmetically equidistant from these two frequencies Note that, if the current measurement has a limited Span available to it, and cannot achieve the Span shown in the table (Span=Stop Freq – Start Freq), the instrument uses the maximum Span the measurement allows, and still sets the Center Freq to the midpoint of the Start and Stop Freq values in the Harmonic Table When Restore Input/Output Defaults is performed, the mixer presets to the 11970A, whose Start and Stop frequencies are 26.5 and 40 GHz respectively. The center of these two frequencies is 33.25 GHz Therefore, after Restore Input/Output Defaults , if you go to External Mixing and do a Mode Preset while in Spectrum Analyzer Mode, the resulting Center Freq is 33.25 GHz |
| State Saved | Yes |
| Min | The minimum frequency in the currently selected mixer band + 5 Hz |
| Max | The maximum frequency in the currently selected mixer band - 5 Hz |

I/Q Center Freq

Specifies the I/Q Center Frequency. Sets the Center Frequency to be used when the I/Q input is selected, even if the I/Q input is not the input that is selected at the time the command is sent. Note that **Center Frequency** in the **Frequency** menu on the front panel always applies to the currently selected input.

| | |
|----------------|---|
| Remote Command | <code>[:SENSe] :FREQuency:IQ:CENTer <freq></code> |
|----------------|---|

| | |
|-------------|---|
| | <code>[:SENSe] :FREQuency :IQ :CENTer ?</code> |
| Example | <code>:FREQ:IQ:CENT 30 MHz</code> |
| Notes | This command is the same in all Modes, but the parameter is Measurement Global, so the value is independent in each Mode and common across all the measurements in the Mode |
| Preset | 0 Hz |
| State Saved | Saved in instrument state |
| Min/Max | -/+40.049995 MHz |

CF Step

Changes the step size for the "Center Frequency" on page 1600 and start and stop frequency functions. Once a step size has been selected and the center frequency function is active, the step keys (and the UP | DOWN parameters for Center Frequency from remote commands) change the center frequency by the step-size value. The step size function is useful for finding harmonics and sidebands beyond the current frequency span of the instrument.

Note that the start and stop frequencies also step by the CF Step value.

| | |
|------------------------------|---|
| Remote Command | <code>[:SENSe] :FREQuency :CENTer :STEP [:INCRement] <freq></code> <code>[:SENSe] :FREQuency :CENTer :STEP [:INCRement] ?</code> |
| Example | Increase the current center frequency value by 500 MHz: <code>:FREQ:CENT:STEP 500 MHz</code> <code>:FREQ:CENT UP</code> <code>:FREQ:CENT:STEP?</code> |
| Notes | Preset and Max values are depending on Hardware Options |
| Dependencies | <i>Not</i> available in the MSR, LTEAFDD, LTEATDD, 5GNR, and Channel Quality Modes If the electronic/soft attenuator is enabled, any attempt to change the value of the center frequency >3.6 GHz by pressing the Up-Arrow key, fails and results in an advisory message. If the equivalent SCPI command is sent, this same message is generated as part of a "-221, Settings conflict" warning |
| Couplings | When auto-coupled, the center frequency step size is set to 10% of the span |
| Preset | Auto |
| State Saved | Saved in instrument state |
| Min/Max | -/+ (the maximum frequency of the instrument). That is, 27 GHz max freq instrument has a CF step range of +/- 27 GHz. Note that this is the maximum frequency given the current settings of the instrument, so in External Mixing, for example, it is the maximum frequency of the current mixer band |
| Status Bits/OPC dependencies | non-overlapped |

Auto Function

| | |
|----------------|--|
| Remote Command | <code>[:SENSe]:FREQuency:CENTer:STEP:AUTO OFF ON 0 1</code> |
| Example | <code>:FREQ:CENT:STEP:AUTO ON</code> <code>:FREQ:CENT:STEP:AUTO?</code> |
| Preset | ON |

3.10.7 Marker

Accesses a menu that enables you to select, set up and control the markers for the current measurement. If there are no active markers, **Marker** selects marker 1, sets it to **Normal** and places it at the center of the display. If the selected marker is **Off**, it is set to **Normal** and placed at the center of the screen on the trace determined by the Marker Trace rules.

3.10.7.1 Select Marker

Specifies the selected marker. The term “selected marker” is used throughout this document to specify which marker will be affected when you change marker settings, perform a Peak Search, etc.

The **Select Marker** control appears above the menu panel, indicating that it applies to all controls in the **Marker** menu panels. **Select Marker** is blanked if you select a tab whose controls do *not* depend on the selected marker (for example, Counter).

For any menu that includes **Select Marker**, the first control is always **Marker Frequency | Time**.

| | |
|--------------|---|
| Notes | The selected marker is remembered even when not in the Marker menu, and is used if a search is done, or a Band Function is turned on, or for Signal Track or Continuous Peak |
| Preset | Marker 1 |
| State Saved | The number of the selected marker is saved in instrument state |
| Annunciation | Appears in the marker results block label for Normal and Delta markers |

3.10.7.2 Settings

The controls on this tab include the Marker active function and a radio button selection of the marker control mode (**Position/Normal**, **Delta** or **Off**) for the selected marker, as well as additional functions that help you use markers.

Marker X-Axis Value

Sets the marker X-Axis value in the current marker X-Axis Scale unit. This function has no effect if the control mode is **Off**, but is the remote command equivalent of entering an X value if the control mode is **Normal** or **Delta**.

| | |
|----------------|---|
| Remote Command | <code>:CALCulate:PStatistic:MARKer[1] 2 ... 12:X <rel_amp1></code> <code>:CALCulate:PStatistic:MARKer[1] 2 ... 12:X?</code> |
| Example | <code>:CALC:PST:MARK3:X 0</code> <code>:CALC:PST:MARK3:X?</code> |
| Notes | If no suffix is sent, uses the fundamental units for the current marker X-Axis Scale. If a suffix is sent that does not match the current marker X-Axis Scale unit, an error "Invalid suffix" is generated The query returns the marker's absolute X Axis value if the control mode is Normal , or the offset from the marker's reference marker if the control mode is Delta . The query is returned in the fundamental units for the current marker X-Axis scale: Hz for Frequency and Inverse Time , seconds for Period and Time . If the marker is Off the response is Not A Number |
| Preset | After a preset, all Markers are turned OFF , so Marker X-Axis Value query returns Not a Number (NAN) |
| State Saved | No |
| Min/Max | -/+9.9E+37 |
| Annotation | Mkr # <X value> and <Marker value> upper right on graph |

Marker Y Axis Value (Remote Command Only)

Queries the marker Y-Axis value in the current marker Y-Axis unit.

| | |
|---------------------------------|--|
| Remote Command | <code>:CALCulate:PStatistic:MARKer[1] 2 ... 12:Y?</code> |
| Example | <code>:CALC:PST:MARK11:Y?</code> |
| Notes | Returns the marker Y-Axis result, if the control mode is Normal , or Delta . If the marker is Off , the response is <i>Not a Number</i> |
| Preset | 0 |
| State Saved | No |
| Backwards Compatibility SCPI | <code>:CALCulate:PStatistic:MARKer[1] 2 ... 12:FUNctIon:RESult?</code> |

Marker Mode

Sets the marker control mode to **Normal (POsition)**, **Delta**, or **Off**. All interactions and dependencies detailed under the control description are enforced when the remote command is sent. If the selected marker is **Off**, pressing **Marker** sets it to

Normal and places it at the center of the screen on the trace determined by the **Marker Trace** rules. At the same time, **Marker X Axis Value** appears on the Active Function area.

The default active function is the active function for the currently selected marker control mode. If the current control mode is **OFF**, there is no active function, and the active function is turned off.

| | |
|----------------|---|
| Remote Command | <code>:CALCulate:PStatistic:MARKer[1] 2 ... 12:MODE POSition DELTa OFF</code> <code>:CALCulate:PStatistic:MARKer[1] 2 ... 12:MODE?</code> |
| Example | <code>:CALC:PST:MARK:MODE POS</code> <code>:CALC:PST:MARK:MODE?</code> |
| Preset | OFF |
| State Saved | Saved in instrument state |
| Range | POSITION DELTA OFF |
| Annotation | Mkr # <X value> and <Marker value> upper right on graph When Marker Trace is Polar in WCDMA mode: Mkr # <Chip Value (RHO & QPSKEVM)/Symbol Value (CDP)>, <X value> and <Y value> upper right on graph |

Backwards Compatibility SCPI Commands

Sets or queries the state of a marker. Setting a marker that is **OFF** to **ON** (1) puts it into **Normal** mode and places it at the center of the screen.

| | |
|------------------------------|--|
| Example | <code>:CALC:PST:MARK3:STAT 1</code> <code>:CALC:PST:MARK3:STAT?</code> |
| Preset | OFF |
| State Saved | Saved in instrument state |
| Range | OFF ON |
| Backwards Compatibility SCPI | <code>:CALCulate:PStatistic:MARKer[1] 2 ... 12:STATe OFF ON 0 1</code> <code>:CALCulate:PStatistic:MARKer[1] 2 ... 12:STATe?</code> |

Delta Marker (Reset Delta)

Pressing this button has exactly the same effect as pressing **Delta** in "**Marker Mode**" [on page 1608](#). The selected marker becomes a **Delta** marker. If the selected marker is already a **Delta** marker, the reference marker is moved to the current position of the selected marker, thus resetting the Delta to zero.

Marker Settings Diagram

Lets you configure the Marker system using a visual utility.

All Markers Off

Turns off all markers.

| | |
|----------------|--|
| Remote Command | <code>:CALCulate:PSTatistic:MARKer:AOff</code> |
| Example | <code>:CALC:PST:MARK:AOff</code> |

Couple Markers

When this function is **ON**, moving any marker causes an equal X-Axis movement of every other marker that is not **Off**. By “equal X-Axis movement” we mean that we preserve the difference between each marker’s X-Axis value (in the fundamental x-axis units of the trace that marker is on), and the X-Axis value of the marker being moved (in the same fundamental x-axis units).

This may result in markers going off screen.

| | |
|----------------|--|
| Remote Command | <code>:CALCulate:PSTatistic:MARKer:COUple[:STATe] ON OFF 1 0</code> <code>:CALCulate:PSTatistic:MARKer:COUple[:STATe]?</code> |
| Example | <code>:CALC:PST:MARK:COUP ON</code> <code>:CALC:PST:MARK:COUP?</code> |
| Preset | OFF Presets on Mode Preset and All Markers Off |
| State Saved | Saved in instrument state |

3.10.7.3 Properties

The controls on this tab are used to set certain properties of the selected marker.

Marker X-Axis Value

This is the fundamental control that you use to move a marker around on the trace. This is the same as "[Marker X-Axis Value](#)" on [page 1608](#) in **Settings**.

Relative To

Selects the marker to which the selected marker is relative (its reference marker).

Every marker has another marker to which it is relative. This marker is referred to as the “reference marker” for that marker. This attribute is set by the **Marker, Properties, Relative To** key. The marker must be a **Delta** marker to make this attribute relevant. If it is a **Delta** marker, the reference marker determines how the marker is controlled and how its value is displayed. A marker cannot be relative to itself.

| | |
|----------------|---|
| Remote Command | <code>:CALCulate:PSTatistic:MARKer[1] 2 ... 12:REFerence <integer></code> |
| Example | <code>:CALC:PST:MARK:REF 3</code> <code>:CALC:PST:MARK:REF?</code> |
| Notes | Causes the marker specified with the subopcode to become selected Range (for SCPI command): 1 to 12. If the range is exceeded the value is clipped A marker cannot be relative to itself so that choice is not available, and if sent from SCPI generates error -221: “Settings conflict; marker cannot be relative to itself” When queried, a single value is returned (the specified marker numbers relative marker) |
| Couplings | The act of specifying the selected marker’s reference marker makes the selected marker a Delta marker If the reference marker is off it is turned on in Fixed or Normal mode at the delta marker location |
| Preset | The preset default “Relative To” marker (reference marker) is the next higher numbered marker (current marker +1). For example, if marker 2 is selected, then it’s default reference marker is marker 3. The exception is marker 12, which has a default reference of marker 1 Set to the defaults by using Restore Mode Defaults . This is not reset by Marker Off, All Markers Off , or Preset |
| State Saved | Saved in instrument state. Not affected by Marker Off and hence not affected by Preset or power cycle |
| Min | 1 |
| Max | 12 |
| Annunciation | Appears in the marker label of a Delta marker |

Marker Trace

Assigns the specified marker to the designated trace. The trace choices are:

- MEASured
- GAUSSian
- REFerence

| | |
|----------------|---|
| Remote Command | <code>:CALCulate:PStatistic:MARKer[1] 2 ... 12:TRACe MEASured GAUSSian REFerence</code> <code>:CALCulate:PStatistic:MARKer[1] 2 ... 12:TRACe?</code> |
| Example | <code>:CALC:PST:MARK3:TRAC MEAS</code> <code>:CALC:PST:MARK:TRACE?</code> |
| Preset | MEASured |
| State Saved | Yes |
| Range | MEASured GAUSSian REFerence |

Marker Settings Diagram

Lets you configure the Marker system using a visual utility. This is the same as "[Marker Settings Diagram](#)" on page 1610 in **Settings**.

3.10.8 Meas Setup

Contains functions for setting up the measurement parameters and also contains functions for setting up parameters global to all measurements in the mode.

3.10.8.1 Settings

Contains frequently used functions to which you will want the fastest access.

Counts

Sets the accumulated number of sampling points for data acquisition. The range is 1.000 kpt (k point) to 2.00000 Gpt (G point) with 1 kpt resolution.

| | |
|----------------|--|
| Remote Command | <code>[:SENSe]:PStatistic:COUNTs <integer></code> <code>[:SENSe]:PStatistic:COUNTs?</code> |
| Example | <code>:PST:COUN 5001</code> <code>:PST:COUN?</code> |
| Couplings | Coupled to " Meas Cycles " on page 1613, by: Counts = Meas Cycles * SamplingFrequency * "Meas Interval" on page 1613 |
| Preset | 10000000 |
| State Saved | Saved in instrument state |
| Min/Max | 1000/2000000000 |

Meas Cycles

Set the number of measurement cycles to calculate power statistic data. This number is coupled to "Counts" on page 1612, by:

$$\text{Meas Cycles} = \text{Counts} / (\text{Sampling Frequency} * \text{Meas Interval})$$

When the **Counts** value cannot be divided by (**Sampling Frequency** * "**Meas Interval**" on page 1613), this value is displayed as a decimal fraction.

| | |
|----------------|--|
| Remote Command | <code>[:SENSe]:PStatistic:SWEp:CYCLes <real></code> <code>[:SENSe]:PStatistic:SWEp:CYCLes?</code> |
| Example | <code>:PST:SWE:CYCL 1001</code> <code>:PST:SWE:CYCL?</code> |
| Preset | Depends on the sampling frequency |
| Min | 0.001 |
| Max | Depends on the sampling frequency |

Meas Interval

Sets the number of data points to be used as the measurement interval. This value couples to "Counts" on page 1612, as:

$$\text{Meas Interval} = \text{Counts} / (\text{"Meas Cycles" on page 1613} * \text{Sampling Frequency})$$

| | |
|----------------|--|
| Remote Command | <code>[:SENSe]:PStatistic:SWEp:TIME <time></code> <code>[:SENSe]:PStatistic:SWEp:TIME?</code> |
| Example | <code>:PST:SWE:TIME 2 ms</code> <code>:PST:SWE:TIME?</code> |
| Preset | 1.0 ms !unless noted below LTEATDD, 5G NR: 500 us |
| Min/Max | 50.0 us/10.0 ms !unless noted below LTEATDD, 5G NR: 1 us/10.0 ms |

Meas Setup Summary Table

Lets you view and access many of the parameters in the **Meas Setup** menus on one screen.

Auto Couple

Immediately puts all **Auto/Man** functions into **Auto**. **Auto Couple** is confined to the current measurement only. It does not affect other measurements in the Mode.

In the **Auto** state, **Auto/Man** functions are said to be “coupled”, meaning their values change as you make changes to other values in the measurement. This helps ensure accurate measurements and optimum dynamic range. **Auto Couple** is an immediate action function, and when it is executed, all the **Auto/Man** controls for the current measurement are set to **Auto**, and all measurement settings coupled to the **Auto/Man** parameters are automatically set to their optimal values.

For further details of measurement-specific settings (if any), see "[Measurement-Specific Details](#)" on page 1615 below.

| | |
|-------------------------------|---|
| Remote Command | :COUPle ALL |
| Example | :COUP ALL |
| Backwards Compatibility SCPI | :COUPLE ALL NONE |
| Backwards Compatibility Notes | :COUP:NONE puts all Auto/Man parameters in manual mode, decoupling all the coupled instrument parameters. It is retained for backwards compatibility and is <i>not</i> recommended for making measurements or new designs |

All **Auto/Man** parameter couplings in the measurement are set to **Auto**. This includes couplings that may be unavailable or grayed-out due to the current state. For example, in the Swept SA measurement, there is no **Auto/Man** coupling for **RBW** while in Zero Span. Nonetheless, if **Auto Couple** were executed while in Zero Span, it would set **RBW** to Auto "behind the scenes" so that, on exit from Zero Span, it would be in **Auto**.

Any **Auto/Man** selection specific (local) to the other measurements in the current Mode are not affected by **Auto Couple**. Any functions that are *not* coupled with other instrument parameters, such as ranging or leveling variables, such as **AutoRange** or **AutoScale**, are not affected.

Executing **Auto Couple** generates the informational message, "All Auto/Man functions have been set to Auto".

Each parameter, upon being set to **Auto**, selects and sets the appropriate auto-coupled value based on that parameter's coupling rules. The Dependency Resolver orchestrates the couplings for parameters that depend on one or more other parameters. The coupling and dependency rules for each parameter are defined in the section describing that parameter.

Executing **Auto Couple** does not affect markers, marker functions, trace or display attributes, or any other instrument setting other than those specifically mentioned above.

Measurement-Specific Details

TOI (SA Mode only)

Parameters affected by **Auto Couple** are:

- Center Frequency Step
- Resolution Bandwidth
- Span/RBW Ratio
- Sweep Time
- Video BANDwidth VBW/RBW ratio
- Upper and Lower Tone (set to Sense)
- Zero span measurement Resolution Bandwidth
- Zero span measurement Dwell Time

Harmonics (SA Mode only)

Parameters affected by **Auto Couple** are:

- Resolution Bandwidth
- Fundamental Frequency
- Dwell Time
- Range Table Resolution Bandwidths
- Range Table Dwell Times

Meas Preset

Restores all the measurement parameters to their default values.

Remote Command [:CONFigure:PStatistic](#)

| | |
|-----------|--|
| Example | <code>:CONF:PST</code> |
| Couplings | Selecting Meas Preset restores all measurement parameters to their default values |

3.10.8.2 Radio

Contains controls to select Radio Standard and settings.

Radio Std

In this menu, 7 groups of WLAN standards can be selected:

1. 802.11a/b/g/j/p includes 802.11a/g/j/p, 802.11b/g, 802.11g DSSS-OFDM, 802.11j/p 10M, 802.11p 5M
2. 802.11n includes 802.11n 20MHz and 802.11n 40MHz
3. 802.11ac includes 802.11ac 20MHz, 802.11ac 40MHz, 802.11ac 80MHz, 802.11ac 80+80MHz and 802.11ac 160MHz
4. 802.11ah includes 802.11ah1MHz, 802.11ah2MHz, 802.11ah4MHz, 802.11ah 8MHz, and 802.11ah16MHz
5. 802.11af includes 802.11af 6MHz, 802.11af 7MHz and 802.11af 8MHz
6. 802.11ax includes 802.11ax 20MHz, 802.11ax 40MHz, 802.11ax 80MHz, 802.11ax 80+80MHz and 802.11ax 160MHz
7. 802.11be includes 802.11be 20MHz, 802.11be 40MHz, 802.11be 80MHz, 802.11be 160MHz and 802.11be 320MHz

Below each standard, parameters related to demodulation can be set, such as Modulation Format, Guard Interval, and so on.

| | |
|----------------|--|
| Remote Command | <code>[:SENSe]:RADio:STANdard[:WLAN] AG BG GDO N20 N40 AC20 AC40 AC80 ACT80 AC160 AH1 AH2 AH4 AH8 AH16 JP10 P5 AF6 AF7 AF8 AX20 AX40 AX80 AXT80 AX160 BE20 BE40 BE80 BE160 BE320</code> <code>[:SENSe]:RADio:STANdard[:WLAN]?</code> |
| Example | <code>:RAD:STAN AG</code> <code>:RAD:STAN?</code> |
| Notes | If the command is sent with unsupported parameters, an error is generated "Settings conflict; option not installed" For IQ measurements (CCDF, Power vs Time, Spectral Flatness, IQ Waveform or Modulation Accuracy), they are also limited by BW Option installed. when any radio standard is selected in an IQ measurement which maximum BW could not meet this radio standard request, the "Invalid result; Wider BW required" message will be displayed, and the measurement should return invalid data: Enum value ACT80 means "AC Two 80MHz" (802.11ac 80+80 MHz) |

3 WLAN Mode
3.10 Power Stat CCDF Measurement

| | |
|-------------|--|
| | Enum value AXT80 means “AX Two 80MHz” (802.11ax 80+80 MHz) |
| Preset | AG |
| State Saved | Saved in instrument state |
| Range | 802.11a/g/j/p (OFDM 20M) 802.11b/g (DSSS/CCK/PBCC) 802.11g (DSSS-OFDM) 802.11n (20 MHz) 802.11n (40 MHz) 802.11ac (20 MHz) 802.11ac (40 MHz) 802.11ac (80 MHz) 802.11ac (80 + 80MHz) 802.11ac (160MHz) 802.11ah(1MHz) 802.11ah(2MHz) 802.11ah(4MHz) 802.11ah (8MHz) 802.11ah(16MHz) 802.11j/p (OFDM 10M) 802.11p (OFDM 5M) 802.11af (6MHz) 802.11af (7MHz) 802.11af (8MHz) 802.11ax (20 MHz) 802.11ax (40 MHz) 802.11ax (80 MHz) 802.11ax (80 + 80MHz) 802.11ax (160MHz) 802.11be (20 MHz) 802.11be (40 MHz) 802.11be (80 MHz) 802.11be (160MHz) 802.11be (320MHz) |

3.10.8.3 Advanced

Contains controls for setting advanced functions of the instrument.

IF Gain

Used to set the IF Gain function to: Auto, Low Gain or High Gain. These settings affect sensitivity and IF overloads.

Only applies to the RF input. Does not apply to baseband I/Q input.

| | |
|----------------|---|
| Remote Command | <code>[:SENSe]:PStatistic:IF:GAIN[:STATe] ON OFF 1 0</code> <code>[:SENSe]:PStatistic:IF:GAIN[:STATe]?</code> |
| Example | <code>:PST:IF:GAIN ON</code> <code>:PST:IF:GAIN?</code> |
| Notes | ON = high gain OFF = low gain |
| Dependencies | Not available when IQ Input is selected Has no effect when the U7227A USB Preamplifier is connected. This is not annotated or reflected on any control; there are no controls grayed out nor any SCPI locked out. The instrument simply behaves as though both IF Gain is set to Low regardless of the setting on the control Not available in VXT, EXM, or UXM |
| Couplings | Sending this command forces IF Gain Auto to OFF (Man) |
| Preset | OFF |
| State Saved | Saved in instrument state |
| Range | Low Gain High Gain Auto Function |
| Remote Command | <code>[:SENSe]:PStatistic:IF:GAIN:AUTO[:STATe] ON OFF 1 0</code> <code>[:SENSe]:PStatistic:IF:GAIN:AUTO[:STATe]?</code> |

| | |
|-----------|--|
| Example | <code>:PST:IF:GAIN:AUTO ON</code> <code>:PST:IF:GAIN:AUTO?</code> |
| Couplings | Auto sets IF Gain to High Gain if the input attenuator is set to 0 dB, or the preamp is turned on, or the Max Mixer Level is -20 dBm or lower For other conditions, Auto sets IF Gain to Low Gain |
| Preset | <code>OFF</code> |

IF Upsampling Ratio

Allows you to select the upsampling ratio after data is captured for a measurement. Using this method, mitigation of peak detection error can be expected when upsampling ratio is set to > x1.

| | |
|----------------|---|
| Remote Command | <code>[:SENSe]:PSTatistic:URATio X1 X2 X4 X8 X16 X32</code> <code>[:SENSe]:PSTatistic:URATio?</code> |
| Example | <code>:PST:URAT X8</code> <code>:PST:URAT?</code> |
| Notes | X1 is for backwards compatibility |
| Preset | <code>X1</code> |
| State Saved | Yes, Saved in instrument state |
| Range | <code>X1 X2 X4 X8 X16 X32</code> |

3.10.8.4 Global

The controls in this menu apply to all Modes in the instrument.

Some controls (for example, "[Global Center Freq](#)" on page 1850) allow you to switch certain Meas Global parameters to a Mode Global state. These switches apply to all Modes that support global settings. For example, no matter what Mode you are in when you set **Global Center Freq** to **ON**, it applies to all Modes that support Global settings.

Other controls (for example, **Extend Low Band**) are actually set in this menu, but apply to all Modes.

Global Center Freq

The software maintains a Mode Global value called **Global Center Freq**.

When **Global Center Freq** is switched **ON**, the current Mode's center frequency is copied into the **Global Center Frequency**, and from then on all Modes that support

global settings use the **Global Center Frequency**, so you can switch between any of these Modes and the **Center Frequency** remains unchanged.

Adjusting the **Center Frequency** of any Mode that supports Global Settings, while **Global Center Freq** is **ON**, modifies the **Global Center Freq**.

When **Global Center Freq** is switched **OFF**, the **Center Frequency** of the current Mode is unchanged, but now the **Center Frequency** of each Mode is once again independent.

When **Mode Preset** is pressed while **Global Center Freq** is **ON**, the **Global Center Freq** is preset to the preset **Center Frequency** of the current Mode.

This function resets to **OFF** when "**Restore Defaults**" on page 1852 is pressed, or when **System, Restore Defaults, All Modes** is pressed.

| | |
|------------------------------|--|
| Remote Command | <code>:INSTrument:COUPle:FREQuency:CENTer ALL NONE</code> <code>:INSTrument:COUPle:FREQuency:CENTer?</code> |
| Example | <code>:INST:COUP:FREQ:CENT ALL</code> <code>:INST:COUP:FREQ:CENT?</code> |
| Preset | Set to OFF on Global Settings, Restore Defaults and System, Restore Defaults, All Modes |
| Range | ALL NONE |
| Preset | OFF |
| Backwards Compatibility SCPI | <code>:GLOBal:FREQuency:CENTer[:STATe] 1 0 ON OFF</code> <code>:GLOBal:FREQuency:CENTer[:STATe]?</code> |

Global EMC Std

When this control is switched **ON**, the current Mode's EMC Std is copied into the **Global EMC Std**, and from then on all Modes that support global settings use the **Global EMC Std**, so you can switch between any of these Modes and the EMC Std remains unchanged.

Adjusting the EMC Std of any Mode that supports Global settings, while **Global EMC Std** is **ON** modifies the **Global EMC Std**.

When **Global EMC Std** is switched **OFF**, the EMC Std of the current Mode remains unchanged, but now the EMC Std of each Mode is once again independent. When **Mode Preset** is pressed while **Global EMC Std** is **ON**, **Global EMC Std** is preset to the preset EMC Std of the current Mode.

This function resets to **OFF** when "**Restore Defaults**" on page 1852 is pressed, or when **System, Restore Defaults, All Modes** is pressed.

| | |
|----------------|--|
| Remote Command | <code>:INSTrument:COUPle:EMC:STANdard ALL NONE</code> <code>:INSTrument:COUPle:EMC:STANdard?</code> |
|----------------|--|

| | |
|--------------|--|
| Example | <code>:INST:COUP:EMC:STAN ALL</code> <code>:INST:COUP:EMC:STAN?</code> |
| Dependencies | Only available if Option EMC is installed |
| Preset | Set to OFF on Global Settings, Restore Defaults and System, Restore Defaults, All Modes |
| Range | ALL NONE |

Restore Defaults

Resets all functions in the **Global** settings menu to **OFF**. Pressing **System, Restore Defaults, All Modes** has the same effect.

| | |
|---------------------------------|---|
| Remote Command | <code>:INSTrument:COUPle:DEFault</code> |
| Example | <code>:INST:COUP:DEF</code> |
| Backwards Compatibility SCPI | <code>:GLOBal:DEFault</code> |

3.10.9 Sweep

Accesses controls to configure and control the acquisition of data, and the X-axis parameters of the instrument.

Depending on the selected mode and measurement, these controls might include: **Sweep Time, Continuous/Single, Pause/Resume, X Scale** and **Number of Points**.

3.10.9.1 Sweep/Control

Accesses controls that let you operate the sweep and control functions of the instrument, such as **Sweep Time** and **Continuous/Single**.

Sweep/Measure

Lets you toggle between **Continuous** and **Single** sweep or measurement operation. The single/continuous state is Meas Global, so the setting affects all measurements.

The front-panel key **Single/Cont** performs exactly the same function

See "[More Information](#)" on page 1621

| | |
|----------------|--|
| Remote Command | <code>:INITiate:CONTInuous OFF ON 0 1</code> <code>:INITiate:CONTInuous?</code> |
| Example | Put instrument into Single measurement operation: <code>:INIT:CONT 0</code> |

| | |
|-------------------------------|---|
| | <code>:INIT:CONT OFF</code> |
| | Put instrument into Continuous measurement operation: |
| | <code>:INIT:CONT 1</code> |
| | <code>:INIT:CONT ON</code> |
| Preset | ON |
| | Note that <code>:SYST:PRES</code> sets <code>:INIT:CONT</code> to ON , but <code>*RST</code> sets <code>:INIT:CONT</code> to OFF |
| State Saved | Saved in instrument state |
| Annunciation | The Single/Continuous icon in the Meas Bar changes depending on the setting: <ul style="list-style-type: none"> - A line with an arrow is Single - A loop with an arrow is Continuous |
| Backwards Compatibility Notes | X-Series A-models had Single and Cont hardkeys in place of the SweepSingleCont softkey. In the X-Series A-models, if in single measurement, the Cont hardkey (and <code>INIT:CONT ON</code>) switched to continuous measurement, but never restarted a measurement and never reset a sweep X-Series B-models have a Cont/Single toggle control instead of Single and Cont hardkeys, but it is still true that, if in single measurement, the Cont/Single toggle control never restarts a measurement and never resets a sweep |

More Information

| | |
|-----------------|---|
| Continuous Mode | <p>The instrument takes repetitive sweeps, averages, measurements, etc., when in continuous mode. If in average or Max/Min Hold, and the average/hold count reaches the Average/Hold Num, the count stops incrementing, but the instrument keeps sweeping</p> <p>See the Trace key description under Trace Average for the averaging formula used both before and after the Average/Hold Num is reached. The trigger condition must be met prior to each sweep</p> <p>The type of trace processing for multiple sweeps is set under the Trace key, with choices of Trace Average, Max Hold, or Min Hold</p> |
| Single Mode | <p>The instrument takes a single sweep when in Single mode, or if in average or Max/Min Hold, or if there is a Waterfall window displayed, it takes multiple sweeps until the average/hold count reaches the Average/Hold Num, then the count stops incrementing, and the instrument stops sweeping</p> <p>See the Trace key description under Trace Average for the averaging formula used. The trigger condition must be met prior to the sweep</p> <p>The type of trace processing for multiple sweeps is set under the Trace key, with choices of Trace Average, Max Hold, or Min Hold</p> |

If the instrument is in **Single** measurement mode, pressing the **Cont/Single** toggle control does not zero the count and does not cause the sweep to be reset; the only action is to put the instrument into Continuous measurement operation.

If the instrument is already in **Continuous** sweep:

- `:INIT:CONT 1` has no effect
- `:INIT:CONT 0` places the instrument in Single Sweep but has no effect on the current sequence until $k = N$, at which point the current sequence will stop and the instrument will go to the idle state

See ["Restart" on page 1853](#) for details of `:INIT:IMMEDIATE`.

If the instrument is already in **Single** sweep, `:INIT:CONT OFF` has no effect.

If the instrument is already in **Single** sweep, then pressing **Cont/Single** in the middle of a sweep does not restart the sweep or sequence. Similarly, pressing **Cont/Single** does not restart the sweep or sequence if the sweep is not in the idle state (for example, if you are taking a very slow sweep, or the instrument is waiting for a trigger). Even though pressing **Cont/Single** in the middle of a sweep does not restart the sweep, sending `:INIT:IMM` does reset it.

If the instrument is in **Single** sweep, and *not* Averaging/Holding, and you want to take one more sweep, press **Restart**.

If the instrument is in **Single** sweep, *and* Averaging/Holding, and you want to take one more sweep without resetting the Average trace or count, go to **Meas Setup** and increment the average count by 1 by pressing the **Step-Up** key while **Average/Hold Num** is the active function. You can also do this by sending `:CALC:AVER:TCON UP`.

Restart

Restarts the current sweep, or measurement, or set of averaged/held sweeps or measurements. If you are Paused, pressing **Restart** performs a Resume.

The front-panel key **Restart** performs exactly the same function.

The **Restart** function is accessed in several ways:

- Pressing the **Restart** key
- Sending `:INIT:IMM`
- Sending `:INIT:REST`

See ["More Information" on page 1623](#)

| | |
|----------------|--|
| Remote Command | <code>:INITiate[:IMMEDIATE]</code> <code>:INITiate:REStart</code> |
| Example | <code>:INIT:IMM</code> <code>:INIT:REST</code> |
| Notes | <code>:INIT:REST</code> and <code>:INIT:IMM</code> perform exactly the same function |

| | |
|-------------------------------|---|
| Couplings | Resets average/hold count k. For the first sweep overwrites all active (update = on) traces with new current data. For application modes, it resets other parameters as required by the measurement |
| Status Bits/OPC dependencies | This is an Overlapped command The STATUS:OPERation register bits 0 through 8 are cleared , <i>except</i> bit 6 (Waiting for Periodic Sync). Initiating a measurement and Waiting for Periodic Sync could be asynchronous The STATUS:QUESTionable register bit 9 (INTEGRity sum) is cleared The SWEEPING bit is set The MEASURING bit is set |
| Backwards Compatibility Notes | For Spectrum Analysis Mode in ESA and PSA, the Restart hardkey and the :INIT:REST command restarted trace averages (displayed average count reset to 1) for a trace in Clear Write , but did not restart Max Hold and Min Hold In X-Series, the Restart hardkey and the :INIT:REST command restart not only Trace Average , but MaxHold and MinHold traces as well |

More Information

The **Restart** function first aborts the current sweep or measurement as quickly as possible. It then resets the sweep and trigger systems, sets up the measurement and initiates a new data measurement sequence with a new data acquisition (sweep) taken once the trigger condition is met.

If the instrument is in the process of aligning when a **Restart** is executed, the alignment finishes before the restart function is performed.

Even when set for **Single** operation, multiple sweeps may be taken when **Restart** is pressed (for example, when averaging/holding is on). Thus, when we say that **Restart** "restarts a measurement", depending on the current settings, we may mean that it:

- Restarts the current sweep
- Restarts the current measurement
- Restarts the current set of sweeps if any trace is in Trace Average, Max Hold or Min Hold
- Restarts the current set of measurements if Averaging, or Max Hold, or Min Hold is on for the measurement

If there is no Average or Max/Min Hold function (no trace in Trace Average or Hold, or **Average/Hold Num** set to 1), and no **Waterfall** window is being displayed, a single sweep is equivalent to a single measurement. A single sweep is taken after the trigger condition is met; and the instrument stops sweeping once that sweep has completed. However, with **Average/Hold Num** >1, and at least one trace set to Trace Average, Max Hold, or Min Hold, or a **Waterfall** window being displayed, multiple sweeps/data acquisitions are taken for a single measurement. The trigger condition

must be met prior to each sweep. The sweep is stopped when the average count k equals the number N set for **Average/Hold Num**.

Once the full set of sweeps has been taken, the instrument goes to the idle state. To take one more sweep without resetting the average count, increment the average count by 1, by pressing the **Step-Up** key while **Average/Hold Number** is the active function, or by sending the remote command **:CALC:AVER:TCON UP**.

Trace Update

The numeric results are not blanked at any time during the restart cycle.

For slow sweeps (see **Trace Update** section in **Trace/Detector**), the traces are updated real-time during the sweep. There may be a special circumstance in application mode measurements where an exception is made and the traces and/or results need to be blanked before displaying the new results.

To summarize, the following list shows what happens to the trace data on various events:

| Event | Trace Effect |
|---|--|
| Clear/Write pressed (even if already in Clear/Write) | Set to mintracevalue |
| Max Hold pressed (even if already in Max Hold) | Set to mintracevalue |
| Min Hold pressed (even if already in Min Hold) | Set to maxtracevalue |
| Trace Average pressed (even if already in Trace Average) | Trace data unaffected but start new sweep/avg/hold |
| Restart pressed | Trace data unaffected but start new sweep/avg/hold |
| Parameter requiring restart changed (e.g., RBW) | Trace data unaffected but start new sweep/avg/hold |

Sweep and Trigger Reset

Resetting the sweep system resets the average/hold count k to 0. It also resets the set point counter to 0. Resetting the trigger system resets the internal auto trig timer to the value set by the **Auto Trig** control.

Averaging

The weighting factor used for averaging is k . This k is also the average/hold count for how many valid sweeps (data acquisitions) have been done. This k is used for comparisons with N , as those comparisons always needs to be based on valid completed sweeps.

The displayed average/hold, **K**, shows the count for the sweep (data acquisition) in progress. $K = k + 1$, with a limit of N. The displayed value **K** changes from its previous value to 1 as soon as the trigger condition for the first data acquisition (sweep) is met.

Pause/Resume

Pauses a measurement after the current data acquisition is complete.

When paused, the label on the control changes to **Resume**. Pressing **Resume** unpauses the measurement. When paused, pressing **Restart** performs a Resume.

| | |
|----------------|--|
| Remote Command | :INITiate:PAUSE :INITiate:RESume |
| Example | :INIT:PAUS :INIT:RES |
| Dependencies | Not displayed in Modes that do not support pausing |
| Annotation | Only on control |

Abort (Remote Command Only)

Stops the current measurement. Aborts the current measurement as quickly as possible, resets the sweep and trigger systems, and puts the measurement into an "idle" state. If the instrument is in the process of aligning when **:ABORT** is sent, the alignment finishes *before* the abort function is performed, so **:ABORT** does not abort an alignment.

If the instrument is set for **Continuous** measurement, it sets up the measurement and initiates a new data measurement sequence with a new data acquisition (sweep) taken once the trigger condition is met.

If the instrument is set for **Single** measurement, it remains in the "idle" state until an **:INIT:IMM** command is received.

| | |
|------------------------------|--|
| Remote Command | :ABORT |
| Example | :ABOR |
| Notes | If :INIT:CONT is ON , then a new continuous measurement will start immediately, with sweep (data acquisition) occurring once the trigger condition has been met If :INIT:CONT is OFF , then :INIT:IMM is used to start a single measurement, with sweep (data acquisition) occurring once the trigger condition has been met |
| Dependencies | For continuous measurement, :ABORT is equivalent to the Restart key Not all measurements support this command |
| Status Bits/OPC dependencies | The STATus:OPERation register bits 0 through 8 are cleared, <i>except</i> bit 6 (Waiting for Periodic Sync). Initiating a measurement and Waiting for Periodic Sync could be asynchronous |

The `STATUS:QUESTIONABLE` register bit 9 (`INTEGRITY` sum) is cleared
 Since all the bits that feed into OPC are cleared by `:ABORT`, the Abort command will cause the `*OPC` query to return true

3.10.9.2 X Scale

Accesses controls that enable you to set the horizontal scale parameters.

Scale/Div

Enables you to enter a time value to change the horizontal scale.

| | |
|---------------------------------|--|
| Remote Command | <code>:DISPLAY:PSTatistic:VIEW[1]:WINDow2:TRACe:X[:SCALE]:PDIVision <rel_ampl></code> <code>:DISPLAY:PSTatistic:VIEW[1]:WINDow2:TRACe:X[:SCALE]:PDIVision?</code> |
| Example | <code>:DISP:PST:VIEW:WIND2:TRAC:X:PDIV 10</code> <code>:DISP:PST:VIEW:WIND2:TRAC:X:PDIV?</code> |
| Notes | The CCDF measurement has the trace display only in Window 2, because values other than "2" are <i>not</i> available as the sub-op code |
| Preset | 2.00 |
| State Saved | Saved in instrument state |
| Min | 0.1 |
| Max | 20 |
| Backwards Compatibility SCPI | <code>:DISPLAY:PSTatistic:XScale</code> |

3.10.10 Trace

Lets you control the display and storage of trace data for the available traces.

3.10.10.1 Trace Control

The controls on this tab allow you to select display of the Reference Trace and the Gaussian Line, and store the Reference Trace.

Store Ref Trace

Copies the currently measured curve as the user-definable reference trace. The captured data remains until the other mode is chosen. Pressing this key also refreshes the reference trace.

3 WLAN Mode
3.10 Power Stat CCDF Measurement

No query is available.

| | |
|---------------------------------|---------------------------------------|
| Remote Command | :CALCulate:PSTatistic:STORe:REFerence |
| Example | :CALC:PST:STOR:REF |
| Backwards Compatibility SCPI | [:SENSe]:PSTatistic:SRTRace |

Ref Trace

Toggles the reference trace display On or Off.

| | |
|---------------------------------|--|
| Remote Command | :DISPlay:PSTatistic:RTRace[:STATE] OFF ON 0 1 :DISPlay:PSTatistic:RTRace[:STATE]? |
| Example | :DISP:PST:RTR OFF :DISP:PST:RTR? |
| Preset | OFF |
| State Saved | Saved in instrument state |
| Range | OFF ON |
| Backwards Compatibility SCPI | [:SENSe]:PSTatistic:RTRace[:STATE] |

Gaussian Line

Toggles the Gaussian trace display On or Off.

| | |
|---------------------------------|--|
| Remote Command | :DISPlay:PSTatistic:GAUSSian[:STATE] OFF ON 0 1 :DISPlay:PSTatistic:GAUSSian[:STATE]? |
| Example | :DISP:PST:GAUS OFF :DISP:PST:GAUS? |
| Preset | ON |
| State Saved | Saved in instrument state |
| Range | OFF ON |
| Backwards Compatibility SCPI | [:SENSe]:PSTatistic:GAUSSian[:STATE] |

3.11 Monitor Spectrum Measurement

The Monitor Spectrum measurement provides a quick, convenient means of looking at the entire spectrum. While the look and feel are similar to Spectrum Analyzer Mode, the functionality is greatly reduced for easy operation. The main purpose of this measurement is to show the spectrum. The default span should cover an appropriate frequency range of the application.

Measurement Commands

The following commands can be used to configure the measurement and retrieve results:

```
:CONFigure:MONitor
:CONFigure:MONitor:NDEFault
:INITiate:MONitor
:FETCh:MONitor[n]?
:READ:MONitor[n]?
:MEASure:MONitor[n]?
```

Remote Command Results

The following table describes the results returned by the queries listed above, according to the index value *n*.

| n | Results Returned |
|----------------------|---|
| 1 (or not specified) | Returns trace1 data with comma separated floating numbers |
| 2 | Returns trace2 data with comma separated floating numbers |
| 3 | Returns trace3 data with comma separated floating numbers |

3.11.1 Views

For modes other than MSR, LTEAFDD/LTEATDD and 5GNR, there is a single view, **Normal**.

"Normal" on page 1628

This is a single window view of the spectrum

3.11.1.1 Normal

Windows: "Spectrum" on page 1629

3 WLAN Mode
3.11 Monitor Spectrum Measurement

Single window view of the graph.

| | |
|--------------|--|
| Example | <code>:DISP:MON:VIEW RTR</code> |
| Dependencies | This command is only available in the MSR, LTE-A FDD/TDD and 5G NR modes. In other Modes this is the only View |

3.11.2 Windows

This section describes the windows used in the Monitor Spectrum measurement.

3.11.2.1 Spectrum

In all modes except **MSR, LTEAFDD/LTEATDD, and 5GNR**, this is a single trace window showing the spectrum.

In **LTEAFDD/LTEATDD, MSR and 5GNR Modes**, multi-carriers are supported. The Carrier Attribute on/off and Sub-block Attribute on/off settings (under Display, Meas Display) are defined to allow the carrier and sub-block legends to display.

When the Carrier Attribute is on, the carrier identification and name are shown on the spectrum trace:

When Carrier and Sub-block attributes are both on, the sub-block scope and name are also shown on the spectrum trace:

3.11.3 Amplitude

Activates the **Amplitude** menu and selects **Reference Level** or **Reference Value** as the active function, depending on the measurement.

Some features in this menu apply to multiple measurements. Some other features apply only to specific measurements and their controls are blanked or grayed-out in measurements that do not support the feature.

3.11.3.1 Y Scale

Contains controls that pertain to the Y axis parameters of the measurement. These parameters control how data on the vertical (Y) axis is displayed and control instrument settings that affect the vertical axis.

Ref Value

Sets the value for the absolute power reference. The reference line is at the top, center, or bottom of the graticule, depending on the value of "[Ref Position](#)" on page 1633.

| | |
|------------------------------|---|
| Remote Command | <code>:DISPlay:MONitor:WINDow[1]:TRACe:Y[:SCALe]:RLEVel <real></code> <code>:DISPlay:MONitor:WINDow[1]:TRACe:Y[:SCALe]:RLEVel?</code> |
| Example | <code>:DISP:MON:WIND:TRAC:Y:RLEV 2.0</code> <code>:DISP:MON:WIND:TRAC:Y:RLEV?</code> |
| Couplings | When " Auto Scaling " on page 1633 is ON (default), this value is automatically determined by the measurement result. When you set a value manually, Auto Scaling changes to OFF Attenuation is not coupled to " Ref Value " on page 1631 |
| Preset | 10.00 dBm |
| State Saved | Saved in instrument state |
| Min/Max | -250.00 dBm / 250.00 dBm |
| Annotation | Ref <value> top left of graph |
| Backwards Compatibility SCPI | <code>:DISPlay:MONitor:VIEW[1]:WINDow[1]:TRACe:Y[:SCALe]:RLEVel</code> |

Scale/Div

For measurements that support a logarithmic Y-Axis, **Scale/Div** sets the height of one division of the graticule in the current Y-Axis unit.

Scale/Div also determines the displayed amplitude range in the log plot graph. Since there are usually 10 vertical graticule division on the display, the total amplitude range of the graph is typically 10x this amount. For example, if **Scale/Div** is 10 dB, then the total range of the graph is 100 dB.

| | |
|---------------------------------|--|
| Remote Command | <code>:DISPlay:MONitor:WINDow[1]:TRACe:Y[:SCALe]:PDIVision <rel_amp1></code> <code>:DISPlay:MONitor:WINDow[1]:TRACe:Y[:SCALe]:PDIVision?</code> |
| Example | <code>:DISP:MON:WIND:TRAC:Y:PDIV 5.0 dB</code> <code>:DISP:MON:WIND:TRAC:Y:PDIV?</code> |
| Couplings | Coupled to Scale Range as follows Scale/Div = Scale Range/10 (number of divisions) When "Auto Scaling" on page 1633 is ON, this value is automatically determined by the measurement result When you change a value, Auto Scaling automatically changes to OFF |
| Preset | 10.00 dB / Div |
| State Saved | Saved in instrument state |
| Min | 0.10 dB |
| Max | 20 dB |
| Annotation | <value> dB/ left upper of graph |
| Backwards Compatibility SCPI | <code>:DISPlay:MONitor:VIEW[1]:WINDow[1]:TRACe:Y[:SCALe]:PDIVision</code> |

Scale Range

Sets the Y Axis scale range.

| | |
|----------------|---|
| Remote Command | <code>:DISPlay:MONitor:WINDow[1]:TRACe:Y[:SCALe]:RANGe <rel_amp1></code> <code>:DISPlay:MONitor:WINDow[1]:TRACe:Y[:SCALe]:RANGe?</code> |
| Example | <code>:DISP:MON:WIND:TRAC:Y:RANG 100</code> <code>:DISP:MON:WIND:TRAC:Y:RANG?</code> |
| Couplings | Coupled to Scale/Div as follows Scale Range = Scale/Div * 10 (number of divisions) When you change a value, Auto Scaling automatically changes to OFF |
| Preset | 100 dB |
| State Saved | Saved in instrument state |
| Min | 1 |
| Max | 200 |

Ref Position

Positions the reference level at the top, center, or bottom of the Y Scale display. Changing the reference position does not change the reference level value.

| | |
|---------------------------------|---|
| Remote Command | <code>:DISPlay:MONitor:WINDow[1]:TRACe:Y[:SCALe]:RPOSition TOP CENTer BOTTom</code> <code>:DISPlay:MONitor:WINDow[1]:TRACe:Y[:SCALe]:RPOSition?</code> |
| Example | <code>:DISP:MON:WIND:TRAC:Y:RPOS CENT</code> <code>:DISP:MON:WIND:TRAC:Y:RPOS?</code> |
| Preset | TOP |
| State Saved | Saved in instrument state |
| Range | TOP CENTer BOTTom |
| Annotation | The greater than (>) and less than (<) symbols are displayed on both sides of the graph to indicate the Reference Position |
| Backwards Compatibility SCPI | <code>:DISPlay:MONitor:VIEW[1]:WINDow[1]:TRACe:Y[:SCALe]:RPOSition</code> |

Auto Scaling

Toggles the **Auto Scaling** function On or Off.

| | |
|---------------------------------|--|
| Remote Command | <code>:DISPlay:MONitor:WINDow[1]:TRACe:Y[:SCALe]:COUPle 0 1 OFF ON</code> <code>:DISPlay:MONitor:WINDow[1]:TRACe:Y[:SCALe]:COUPle?</code> |
| Example | <code>:DISP:MON:WIND:TRAC:Y:COUP OFF</code> <code>:DISP:MON:WIND:TRAC:Y:COUP?</code> |
| Couplings | When Auto Scaling is ON , and the Restart front-panel key is pressed, this function automatically sets the scale per division to 10 dB and determines the reference values based on the measurement results When you change a value of Scale/Div , Ref Value , or Scale Range , Auto Scaling automatically changes to OFF |
| Preset | 1 |
| State Saved | Saved in instrument state |
| Range | OFF ON |
| Backwards Compatibility SCPI | <code>:DISPlay:MONitor:VIEW[1]:WINDow[1]:TRACe:Y[:SCALe]:COUPle</code> |

3.11.3.2 Attenuation

Controls the attenuator functions and interactions between the attenuation system components.

There are two attenuator configurations in the X-Series. One is a Dual-Attenuator configuration consisting of a mechanical attenuator and an optional electronic attenuator. The other configuration uses a single attenuator with combined mechanical and electronic sections that controls all the attenuation functions. Different models in the X-Series come with different configurations.

- See ["Dual-Attenuator Configurations"](#) on page 1634
- See ["Single-Attenuator Configuration"](#) on page 1635

Most attenuation settings are the same for all measurements – they do not change as you change measurements. Settings like these are called “Meas Global” and are unaffected by **Meas Preset**.

Only available when the hardware set includes an input attenuator, which is typically only the case for Keysight’s benchtop instruments. For example, this tab does *not* appear in VXT models M9420A/10A/11A/15A/16A, M9410E/11E/15E/16E, nor in UXM. In UXM, all **Attenuation** and **Range** settings are disabled, as the expected input power level is handled by the Call Processing App that drives the DUT power control.

Dependencies In measurements that support the I/Q inputs, unavailable when I/Q is the selected input. Replaced by the **Range** tab in that case

Dual-Attenuator Configurations

Configuration 1: Mechanical attenuator + optional electronic attenuator

Configuration 2: Mechanical attenuator, no optional electronic attenuator

3 WLAN Mode
 3.11 Monitor Spectrum Measurement

Note that Configuration 2 is not strictly speaking a dual-section attenuator, since there is no electronic section available. However, it behaves exactly like Configuration 1 without the Electronic Attenuator Option EA3, therefore for the sake of this document it is grouped into the “Dual-Attenuator” configuration.

Single-Attenuator Configuration

You can tell which attenuator configuration you have by pressing the Attenuation tab, which (in most Modes) opens the Attenuation menu. If the first control in the Attenuation menu says **Mech Atten** you have the Dual-Attenuator configuration. If the first control says **Atten** you have the Single-Attenuator configuration.

Dual Attenuator

Single Attenuator

(Note that depending on the measurement, there may be no Auto/Man functionality on the Mech Atten control.)

In the Single-Attenuator configuration, you control the attenuation with a single control, as the fixed stage has only two states. In the Dual-Attenuator configuration, both stages have significant range, so you are given separate control of the mechanical and electronic attenuator stages.

When you have the Dual-Attenuator configuration, you may still have only a Single-Attenuator, because unless Option EA3 (the Electronic Attenuator option) is available, and you purchase it, you will have only the mechanical attenuator.

Full Range Atten

This control and **Attenuator Summary** only appear in N9041B, when the RF input is selected, the RF Input Port is set to RF Input 2, and the Full Range Attenuator is installed. The Full Range Attenuator adds a second input attenuator in front of RF Input 2, which enhances the protection and optimizes the performance of the extra internal mixers used by RF Input 2.

| | |
|----------------|--|
| Remote Command | <code>[:SENSe]:POWer[:RF]:FRATten <rel_ampl></code> <code>[:SENSe]:POWer[:RF]:FRATten?</code> |
| Example | <code>:POW:FRAT 14</code> <code>:POW:FRAT?</code> |
| Notes | When you enter an amplitude value that falls between valid values, the value will be incremented to the next smallest valid value |
| Dependencies | Only appears if input RF is selected, RF Input Port 2 is selected, and the Full Range Attenuator exists |
| Couplings | This value is never changed by any coupling, but other couplings use this value. See Reference Level and " Mech Atten " on page 1753 command descriptions |
| Preset | 20 dB |
| State Saved | Saved in instrument state |
| Min | 0 dB |
| Max | Only valid values are 0, 6, 14, 20 dB |
| Annotation | <p>When the Input is RF, and the Input Port is RF Input 2, and the Full Range Attenuator is installed: On the Meas Bar, the field "Atten" displays as follows:</p> <ul style="list-style-type: none"> - If the sweep is entirely < 50 GHz, the value shown after "Atten:" is equal to Mech Atten + Elec Atten + Full Range Atten - If the sweep is entirely > 50 GHz, the value shown after "Atten:" is equal to Full Range Atten - If the sweep straddles 50 GHz, the value shown after "Atten:" is preceded by the symbol ">=" and is equal to Full Range Atten <p>In the Amplitude, "Y Scale" on page 1745 menu, and the Atten Meas Bar dropdown menu panel, a summary is displayed as follows:</p> <p>"Total Atten below 50 GHz" followed by the value of Full Range Atten + Mech Atten + Elec Atten "Total Atten above 50 GHz" followed by the value of Full Range Atten</p> <p>For example, if Mech Atten = 6 dB, Elec Atten = 4 dB, and Full Range Atten = 20 dB, the summary below is shown:</p> <ul style="list-style-type: none"> - Attenuator summary: - Total Atten below 50 GHz: 30 dB - Total Atten above 50 GHz: 20 dB |

Mech Atten

Labeled **Mech Atten** in Dual-Attenuator models, and **Atten** in Single-Attenuator models. In the Dual-Attenuator configuration, this control only affects the mechanical attenuator.

Lets you modify the attenuation applied to the RF input signal path. This value is normally auto-coupled to **Ref Level**, "[Internal Preamp](#)" on page 1775 Gain, any External Gain that is entered, and **Max Mixer Level** (if available), as described in the table below.

See "[Attenuator Configurations and Auto/Man](#)" on page 1639

| | |
|----------------|---|
| Remote Command | <code>[:SENSe]:POWer[:RF]:ATTenuation <rel_amp1></code> <code>[:SENSe]:POWer[:RF]:ATTenuation?</code> |
| Example | <code>:POW:ATT 20</code> Dual-Attenuator configuration: sets the mechanical attenuator to 20 dB Single-Attenuator mode: sets the main attenuation to 20 dB (see below for definition of "main" attenuation) In either case, if the attenuator was in Auto, it is set to Manual |
| Dependencies | Some measurements do not support Auto setting of Mech Atten . In these measurements, the Auto/Man selection is not available, and the Auto/Man toggle function is not available In Dual-Attenuator configurations, when the electronic attenuator is enabled, the mechanical attenuator has no auto setting, and the Auto/Man toggle function is not available. The state of Auto/Man is remembered and restored when the electronic attenuator is once again disabled. This is described in more detail in " Elec Atten " on page 1756 See " Attenuator Configurations and Auto/Man " on page 1639 for more information on the Auto/Man functionality |
| Couplings | If the RF Input Port is the RF Input: <ul style="list-style-type: none"> - If the USB Preamp is connected to USB, use 0 dB for Mech Atten - Otherwise compute the auto-selected value of Mech Atten based on Reference Level, Int Preamp, External Gain, Ref Level Offset, Max Mixer Level, μW Path Control and IF Gain settings. Limit this value to be no less than 6 dB (total attenuation below 6 dB can never be chosen by Auto) - In N9041B, if the RF Input Port is RF Input 2, use the formula above and subtract the value of "Full Range Atten" on page 1752 from the result to determine the Mech Atten. Limit the value so that it is never lower than 0 dB and so that total attenuation, including Full Range Atten, is never less than 6 dB (total attenuation, including Full Range Atten below 6 dB, can never be chosen by Auto) In External Mixing and BBIQ, where the attenuator is not in the signal path, the attenuator setting changes as described above when Mech Atten is in Auto , but no changes are made to the actual attenuator hardware setting until the input is changed back to the RF Input For CXA-m with Option FSA (Fine-Step Attenuator or 2 dB steps), the FSA-like behavior is only available when the frequency setting is ≤ 7.5 GHz. So, when the frequency is changed from below |

| | | |
|----------------|--|-------|
| | 7.5 GHz to above 7.5 GHz, the attenuation setting changes to a multiple of 10 dB that is no smaller than the previous setting. For example, 4 dB attenuation changes to 10 dB | |
| Preset | Auto The Auto value is 10 dB | |
| State Saved | Saved in instrument state | |
| Min | 0 dB The attenuation set by this control cannot be decreased below 6 dB with the knob or step keys. Values below 6 dB must be directly entered from the keypad or via SCPI. This protects against setting a dangerously small attenuation value, which can put the instrument at risk of damage to input circuitry. If the current mechanical attenuation is below 6 dB, it can be increased with the knob and step keys, but not decreased | |
| Max | CXA Option 503 or 507 | 50 dB |
| | EXA | 60 dB |
| | All other models | 70 dB |
| | Note that in the Single-Attenuator configuration, the total of ATT and EATT cannot exceed 50 dB. So, if the EATT is set to 24 dB first, the main attenuation cannot be greater than 26 dB and will be reduced accordingly; if the main attenuator is set to 40 dB first, EATT cannot be greater than 10 dB | |
| Annotation | <p>The current value for Total Atten is displayed in the Measurement Bar at the top of the display. A value appears for Electronic Attenuation only if the Electronic Attenuator is enabled. The annotation appears as:</p> <p><i>Atten: <total> dB (e<elec>)</i></p> <p>The e letter is in amber in Single-Attenuator configurations</p> <p>For example:</p> <p>Dual-Attenuator configuration:</p> <p><i>Atten: 24 dB (e14)</i></p> <p>Indicating the total attenuation is at 24 dB and the electronic attenuation is at 14 dB</p> <p>Single-Attenuator configuration:</p> <p><i>A: 24 dB (e14)</i></p> <p>Indicating the total attenuation is at 24 dB and the “soft” attenuation is at 14 dB (see below for definition of “soft” attenuation)</p> <p>When in Manual, a # sign appears in front of Atten in the annotation</p> | |
| | Auto Function | |
| Remote Command | [:SENSe]:POWer[:RF]:ATTenuation:AUTO OFF ON 0 1 [:SENSe]:POWer[:RF]:ATTenuation:AUTO? | |
| Example | Turn Auto Mech Atten ON: :POW:ATT:AUTO ON | |
| Dependencies | :POW:ATT:AUTO is only available in measurements that support Auto , such as Swept SA | |
| Preset | ON | |

Attenuator Configurations and Auto/Man

As described under "Attenuation" on page 1750, there are two distinct attenuator configurations available in the X-Series, the Single Attenuator and Dual-Attenuator configurations.

In Dual-Attenuator configurations, we have mechanical attenuation and electronic attenuation, and current total attenuation is the sum of electronic + mechanical attenuation.

In Single-Attenuator configurations, we refer to the attenuation set using "Mech Atten" on page 1637 (or `:POW:ATT`) as the "main" attenuation; and the attenuation that is set by `:POW:EATT` as the "soft" attenuation (`:POW:EATT` is honored even in the Single-Attenuator configuration, for compatibility purposes). Then current total attenuation is the sum of main + soft attenuation.

See "Elec Atten" on page 1756 for more about "soft" attenuation.

NOTE

In some measurements, the **Mech Atten** control has an **Auto/Man** function. In these measurements, an **Auto/Man** switch is shown on the **Mech Atten** control:

Note that in configurations that include an Electronic Attenuator, this switch is only shown when the Electronic Attenuator is disabled.

In other measurements, **Mech Atten** has no **Auto/Man** function. In these measurements, no switch is shown on the **Mech Atten** control:

Mech Atten also appears with no switch, as above, in configurations that include an Electronic Attenuator but when the Electronic Attenuator is enabled.

Elec Atten

Controls the Electronic Attenuator in Dual-Attenuator configurations. Does not appear in Single-Attenuator configurations, because the control of both the mechanical and electronic stages of the Single-Attenuator is integrated into the single **Atten** control.

This control includes an **Enable/Disable** toggle switch; it is only possible to enter a value for the Electronic Attenuator when this switch is in the **Enable** position.

For more details of the Electronic Attenuator, see ["More Information" on page 1641](#)

| | |
|----------------|--|
| Remote Command | <code>[:SENSe]:POWer[:RF]:EATTenuation <rel_amp1></code> <code>[:SENSe]:POWer[:RF]:EATTenuation?</code> |
| Example | <code>:POW:EATT 10</code> <code>:POW:EATT?</code> |
| Notes | Electronic Attenuation's specification is defined only when Mech Atten is 6 dB |
| Dependencies | <p>Only appears in Dual-Attenuator models with an Electronic Attenuator installed and licensed. Does not appear in models with the Single-Attenuator configuration, because in the Single-Attenuator configuration there is no "electronic attenuator"; there is only a single integrated attenuator (which has both a mechanical and electronic stage). However, in the Single-Attenuator configuration, EATT SCPI commands are accepted for compatibility with other X-series instruments, and set a "soft" attenuation. The "soft" attenuation is treated as an addition to the "main" attenuation value set by the Attenuation control or <code>:POW:ATT</code>, and affects the total attenuation displayed on the Attenuation control and the Meas Bar</p> <p>The electronic attenuator, and the "soft" attenuation function provided in Single-Attenuator configurations, are unavailable above the low band (0-3.6 GHz, 0-3.4 GHz, 0-3 GHz, depending on the model). If the low band range is from 0-3.6 GHz, and Stop Frequency of the instrument is > 3.6 GHz, then the Enabled/Disabled section of the Elec Atten control will be OFF and grayed-out</p> <p>If "Internal Preamp" on page 1775 is ON (that is, set to Low Band or Full), the electronic attenuator (and the "soft" attenuation function provided in Single-Attenuator configurations) is unavailable. In this case the Enabled/Disabled section of the Elec Atten control will be OFF and grayed-out</p> <p>If either of the above is true, and the SCPI command is sent, an error indicating that the electronic attenuator is unavailable is returned</p> <p>If both the above are true, pressing the control generates error message -221, in other words, the frequency range lockout takes precedence</p> <p>If the electronic/soft Attenuator is enabled, then the Stop Freq of the instrument is limited to 3.6 GHz and Internal Preamp is unavailable</p> <p>If "LNA" on page 1777 is ON, the electronic attenuator (and the "soft" attenuation function provided in Single-Attenuator configurations) is unavailable. In this case the Enabled/Disabled section of the Elec Atten control will be OFF and grayed-out. This coupling works in the following modes/measurements:</p> <ul style="list-style-type: none"> - Channel Power, Occupied BW, ACP, SEM, Spurious Emissions, Power Stat CCDF measurements in all Modes - Transmit On Off Power measurement in 5G NR Mode - Power vs. Time and Transmit Power measurement in GSM/EDGE Mode - Burst Power measurement in Spectrum Analyzer Mode <p>The SCPI-only "soft" electronic attenuation for the single-attenuator configuration is not available in all measurements; in particular, it is not available in the Swept SA measurement</p> |
| Couplings | Enabling and disabling the Electronic Attenuator affects the setting of the Mechanical Attenuator (in Dual-Attenuator configurations). This is described in more detail below and in "Mechanical Attenuator" |

[Transition Rules" on page 1642](#)

| | |
|-------------|---|
| Preset | 0 dB |
| State Saved | Saved in instrument state |
| Min | 0 dB |
| Max | Dual-Attenuator configuration: 24 dB Single-Attenuator configuration: the total of ATT and EATT cannot exceed 50 dB. So, if the EATT is set to 24 dB first, the main attenuation cannot be greater than 26 dB and will be reduced accordingly; if the main attenuator is set to 40 dB first, EATT cannot be greater than 10 dB |
| Annotation | See Annotation under the Mech Atten control description |

Auto Function

| | |
|----------------|---|
| Remote Command | <code>[:SENSe]:POWer[:RF]:EATTenuation:STATe OFF ON 0 1</code> <code>[:SENSe]:POWer[:RF]:EATTenuation:STATe?</code> |
| Example | <code>:POW:EATT:STAT ON</code> <code>:POW:EATT:STAT?</code> |
| Preset | OFF (Disabled) for Swept SA measurement ON (Enabled) for all other measurements that support the electronic attenuator |

NOTE

The maximum **Center Frequency** for Low Band can change based on the selected IFBW for measurements that support IFBW (for example, Waveform measurement across all Modes that support it). In certain models (such as N9042B & N9032B), IFBW values ≤ 40 MHz have a maximum Low Band frequency of 3.6 GHz, while $40 \text{ MHz} < \text{IFBW} \leq 1 \text{ GHz}$ have a maximum of 3.3 GHz, and $1 \text{ GHz} < \text{IFBW} \leq 1.5 \text{ GHz}$ have a maximum of 3.5 GHz. This frequency is reflected in the disabled message displayed for Electrical Attenuator. For N9032B and N9042B IFBW values $> 1.5 \text{ GHz}$ do not support a **Center Frequency** that can reach the Low Band maximum frequency. In these cases, the Electrical Attenuator will remain disabled no matter the Center Frequency.

More Information

The electronic attenuator offers finer steps than the mechanical attenuator, has no acoustical noise, is faster, and is less subject to wear. These advantages primarily aid in remote operation and are negligible for front panel use. See ["Using the Electronic Attenuator: Pros and Cons" on page 1643](#) for a detailed discussion of the pros and cons of using the electronic attenuator.

For the Single-Attenuator configuration, for SCPI backwards compatibility, the "soft" attenuation feature replaces the Dual-Attenuator configuration's electronic attenuator. All the same couplings and limitations apply. See ["Attenuator Configurations and Auto/Man" on page 1755](#)

Mechanical Attenuator Transition Rules

When the Electronic Attenuator is enabled, the Mechanical Attenuator transitions to a state that has no Auto function. Below are the rules for transitioning the Mechanical Attenuator. Note that the information below *only* applies to the Dual-Attenuator configurations, and *only* when the Electronic Attenuator is installed:

When the Electronic Attenuation is enabled from a disabled state:

- The Mechanical Attenuator is initialized to 10 dB (this is its optimal performance setting). You can then set it as desired with SCPI, numeric keypad, step keys, or knob, and it behaves as it normally would in manual mode
- The Auto/Man state of (Mech) Atten is saved
- The Auto/Man toggle on the (Mech) Atten control disappears, and the auto rules are disabled
- The Electronic Attenuator is set to 10 dB less than the previous value of the Mechanical Attenuator, within the limitation that it must stay within the range of 0 to 24 dB of attenuation

Examples in the Dual-Attenuator configuration:

- Mech Atten at 20 dB. Elec Atten enabled, Mech Atten set to 10 dB, and Elec Atten set to 10 dB. New total attenuation equals the value before Elec Atten enabled
- Mech Atten at 0 dB. Elec Atten enabled, Mech Atten set to 10 dB, and Elec Atten set to 0 dB. New total attenuation does not equal the value before Elec Atten enabled
- Mech Atten at 40 dB. Elec Atten enabled, Mech Atten set to 10 dB, and Elec Atten set to 24 dB. New total attenuation does not equal the value before Elec Atten enabled

When the Electronic Attenuation is disabled from an enabled state:

- The Elec Atten control is grayed out
- The Auto/Man state of (Mech) Atten is restored
- If now in Auto, (Mech) Atten recouples
- If now in Man, (Mech) Atten is set to the value of total attenuation that existed before the Elec Atten was disabled. The resulting value is rounded up to the smallest value possible given the (Mech) Atten Step setting - (That is, 57 dB changes to 58 dB when (Mech) Atten Step is 2 dB)

Using the Electronic Attenuator: Pros and Cons

The electronic attenuator offers finer steps than the mechanical attenuator, has no acoustical noise, is faster, and is less subject to wear.

The “finer steps” advantage of the electronic attenuator is beneficial in optimizing the alignment of the instrument dynamic range to the signal power in the front panel as well as remote use. Thus, you can achieve improved relative signal measurement accuracy. Compared to a mechanical attenuator with 2 dB steps, the 1 dB resolution of the electronic attenuator only gives better resolution when the odd-decibel steps are used. Those odd-decibel steps are less accurately calibrated than the even-decibel steps, so one tradeoff for this superior relative accuracy is reduced absolute amplitude accuracy.

Another disadvantage of the electronic attenuator is that the spectrum analyzer loses its “Auto” setting, making operation less convenient.

Also, the relationship between the dynamic range specifications (TOI, SHI, compression, and noise) and instrument performance are less well-known with the electrical attenuator. With the mechanical attenuator, TOI, SHI, and compression threshold levels increase dB-for-dB with increasing attenuation, and the noise floor does as well. With the electronic attenuator, there is an excess attenuation of about 1 to 3 dB between 0 and 3.6 GHz, making the effective TOI, SHI, and so forth, less well known. Excess attenuation is the actual attenuation relative to stated attenuation. Excess attenuation is accounted for in the instrument calibration.

Adjust Atten for Min Clipping

Sets the combination of mechanical and electronic attenuation and gain based on the current measured signal level so that clipping will be at a minimum.

This is an immediate action function, that is, it executes once, when the control is pressed.

The algorithms that are used for the adjustment are documented under "[Pre-Adjust for Min Clipping](#)" on page 1760.

| | |
|----------------|---|
| Remote Command | <code>[:SENSe]:POWer[:RF]:RANGe:OPTimize IMMEDIATE</code> |
| Example | <code>:POW:RANG:OPT IMM</code> |
| Notes | Executing Adjust Atten for Min Clipping initiates the measurement |
| Dependencies | Does not appear in the Swept SA, RTSA, Monitor Spectrum and Complex Spectrum measurements Appears in the Waveform measurement in BASIC and 5G NR Modes |

Adjust Atten

Allows you to select;

- Electric attenuator only
- Combination of Electric attenuator and Mechanical attenuator

when `[:SENSe]:POWer[:RF]:RANGe:OPTimize IMMEDIATE` is executed.

| | |
|----------------|---|
| Remote Command | <code>[:SENSe]:POWer[:RF]:RANGe:OPTimize:TYPE EONLY COMBined</code> <code>[:SENSe]:POWer[:RF]:RANGe:OPTimize:TYPE?</code> |
| Example | <code>:POW:RANG:OPT:TYPE EONL</code> <code>:POW:RANG:OPT:TYPE?</code> |
| Dependencies | Does not appear in the Swept SA, RTSA, Monitor Spectrum and Complex Spectrum measurements Appears in the Waveform measurement in BASIC and 5G NR Modes |
| Preset | <code>COMBined</code> |
| State Saved | Saved in instrument state |

Pre-Adjust for Min Clipping

If this function is `ON`, it applies the adjustment described under "[Adjust Atten for Min Clipping](#)" on page 1759 each time a measurement restarts. Therefore, in Continuous measurement mode, it only executes before the first measurement.

In Dual-Attenuator models, you can set `Elec+Mech Atten`, in which case both attenuators participate in the autoranging, or `Elec Atten Only`, in which case the mechanical attenuator does not participate in the autoranging. This latter case results in less wear on the mechanical attenuator and is usually faster.

See "[Adjustment Algorithm](#)" on page 1645

| Selection | SCPI | Note |
|-----------------|-------------------------|--|
| Off | <code>OFF</code> | This is the default setting |
| On | <code>ON</code> | Available in Single-Attenuator instruments. For compatibility with models that do not have an input attenuator, the <code>ON</code> parameter is supported and mapped to <code>COMBined</code> |
| Elec Atten Only | <code>ELECTrical</code> | Selects only the electric attenuator to participate in auto ranging. This offers less wear on the mechanical attenuator and is usually faster |
| Elec+Mech Atten | <code>COMBined</code> | In Dual-Attenuator models, this selects both attenuators to participate in the autoranging |

| | |
|----------------|--|
| Remote Command | <code>[:SENSe]:POWer[:RF]:RANGe:OPTimize:ATTenuation OFF ON ELECTrical COMBined</code> <code>[:SENSe]:POWer[:RF]:RANGe:OPTimize:ATTenuation?</code> |
| Example | <code>:POW:RANG:OPT:ATT OFF</code> |

3 WLAN Mode
3.11 Monitor Spectrum Measurement

| :POW:RANG:OPT:ATT? | | | | | |
|---------------------------|--|-------------------------|---|---------------------------|----------|
| Notes | <p>The parameter option ELECTrical sets this function to ON in Single-Attenuator models</p> <p>The parameter option COMBined is mapped to ELECTrical in Single-Attenuator models. If you send COMBined, it sets the function to ON and returns ELEC to a query</p> <p>For SCPI compatibility with models that do not have an input attenuator, the ON parameter is honored and mapped to COMBined</p> | | | | |
| Dependencies | <p>Only appears in Dual-Attenuator models with an Electronic Attenuator installed</p> <p>In instruments with Dual-Attenuator model, when "Elec Atten" on page 1756 is OFF or grayed-out, "Pre-Adjust for Min Clipping" on page 1644 is grayed-out</p> <p>Does not appear in the Swept SA, RTSA, Monitor Spectrum and Complex Spectrum measurements</p> <p>Appears in the Waveform measurement in BASIC and 5G NR Modes</p> | | | | |
| Preset | OFF when Elec Atten is Disabled at preset, otherwise ELEC | | | | |
| State Saved | Saved in instrument state | | | | |
| Range | <table border="1"> <tr> <td>Dual-Attenuator models:</td> <td>Off Elec Atten Only Mech + Elec Atten</td> </tr> <tr> <td>Single-Attenuator models:</td> <td>Off On</td> </tr> </table> | Dual-Attenuator models: | Off Elec Atten Only Mech + Elec Atten | Single-Attenuator models: | Off On |
| Dual-Attenuator models: | Off Elec Atten Only Mech + Elec Atten | | | | |
| Single-Attenuator models: | Off On | | | | |

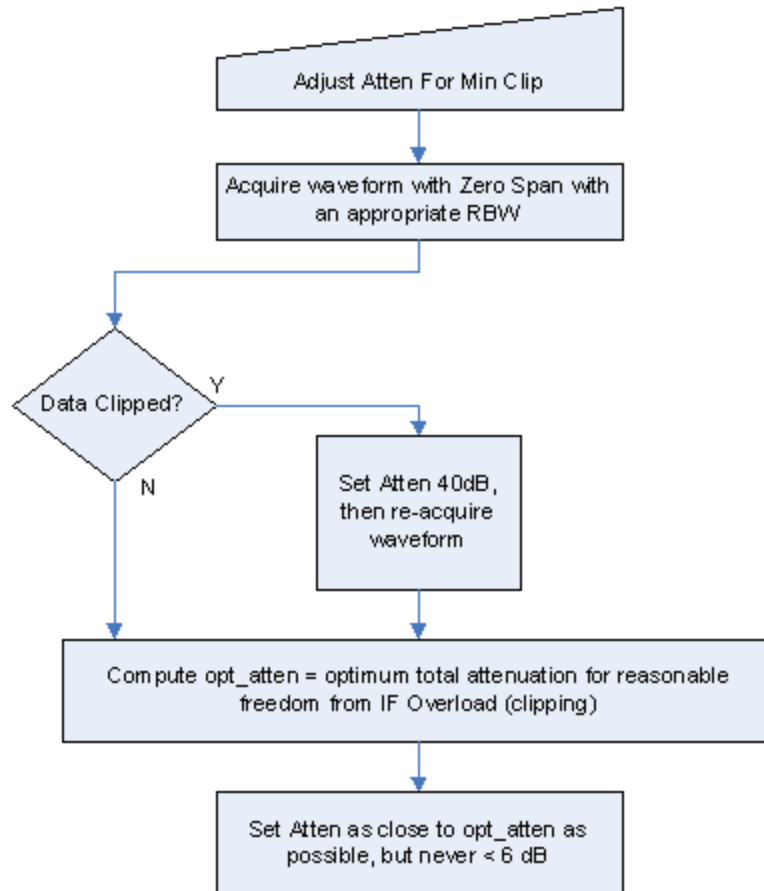

Backwards Compatibility Command

| | |
|------------------------------|--|
| Notes | <p>ON aliases to "Elec Atten Only" (:POW:RANG:OPT:ATT ELEC)</p> <p>OFF aliases to "Off" (:POW:RANG:OPT:ATT OFF)</p> <p>:POW:RANG:AUTO? returns true if :POW:RANG:OPT:ATT is not OFF</p> |
| Backwards Compatibility SCPI | <p>[:SENSe] :POWer [:RF] :RANGe:AUTO ON OFF 1 0</p> <p>[:SENSe] :POWer [:RF] :RANGe:AUTO?</p> |

Adjustment Algorithm

The algorithms for the adjustment are documented below:

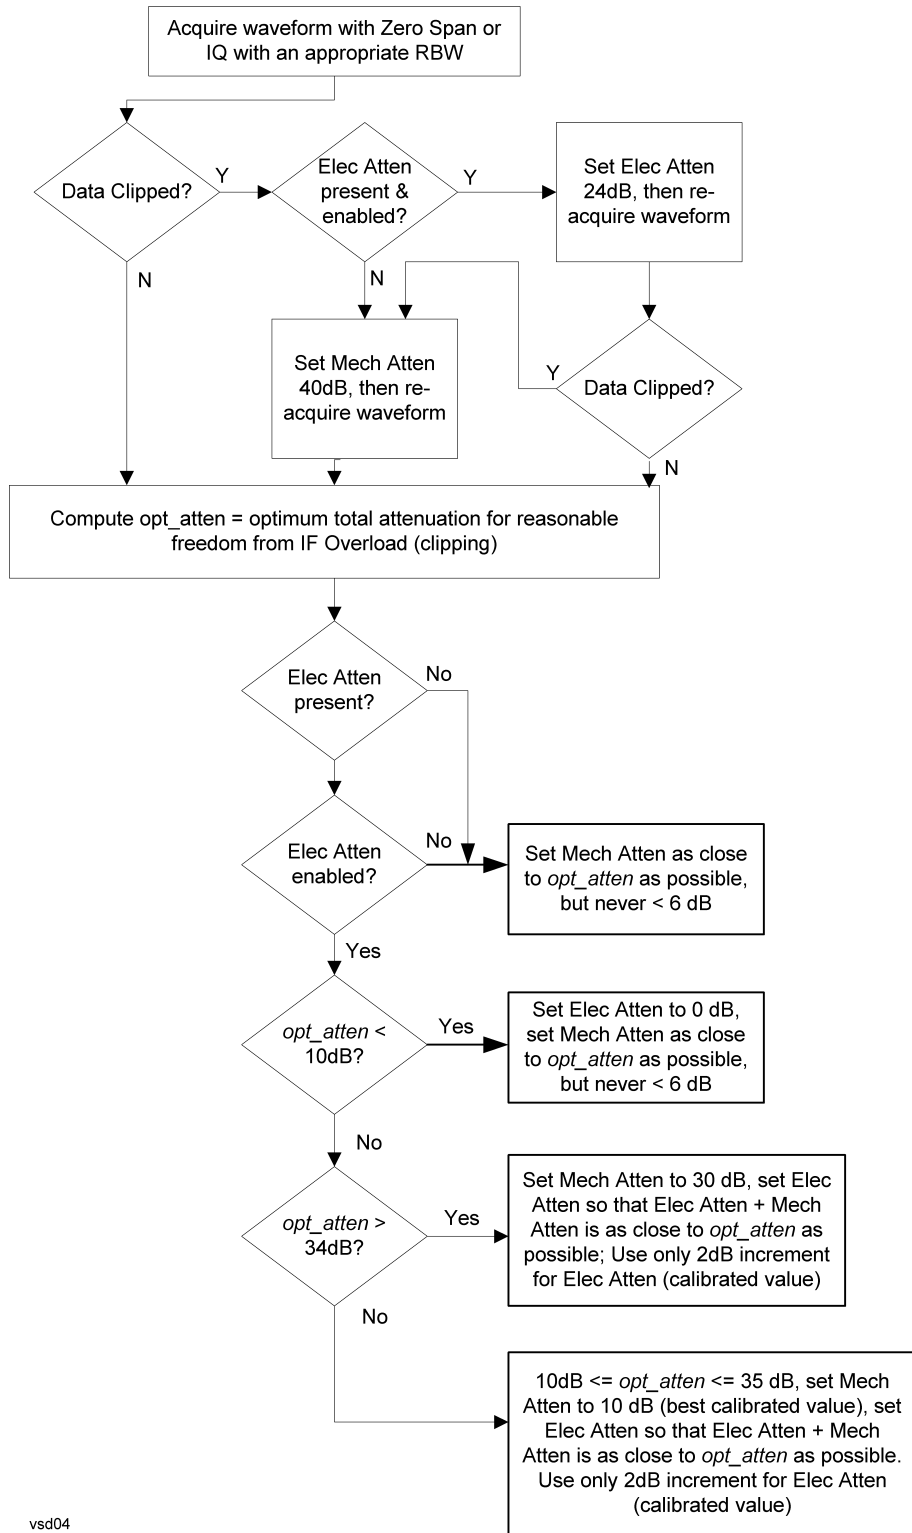

Single-Attenuator Models

Dual-Attenuator models

"Adjust Atten for Min Clipping" on page 1759 or "Pre-Adjust for Min Clipping" on page 1644 selection is Mech + Elec Atten:

3 WLAN Mode
 3.11 Monitor Spectrum Measurement

vsd04

"Pre-Adjust for Min Clipping" on page 1644 selection is Elec Only.

Note that the **Mech Atten** value is not adjusted, and the value previously set is used. Therefore, there is a case that IF Overload is still observed depending on the input signal level and the Mech Atten setting.

Mech Atten Step

Controls the step size used when making adjustments to the input attenuation.

Labeled **Mech Atten Step** in Dual-Attenuator models and **Atten Step** in Single-Attenuator models. In the Dual-Attenuator configuration, only affects the step size of the mechanical attenuator.

Remote Command `[:SENSe]:POWer[:RF]:ATTenuation:STEP[:INCRement] 10 dB | 2 dB`

3 WLAN Mode
3.11 Monitor Spectrum Measurement

| | |
|--------------|---|
| | <code>[:SENSe]:POWer[:RF]:ATTenuation:STEP[:INCRement]?</code> |
| Example | <code>:POW:ATT:STEP 2</code> <code>:POW:ATT:STEP?</code> |
| Notes | Has a toggle control on the front panel, but takes a specific value (in dB) when used remotely. The only valid values are 2 and 10 |
| Dependencies | Blanked in EXA, CXA and CXA-m if option FSA (2 dB steps) is not present. If blanked, attempts to set it via SCPI yield an error |
| Couplings | When the attenuation step size changes, the current mechanical attenuation value is adjusted (if necessary) to be quantized to the new step size. That is, if step is set to 10 dB, mech atten is increased if necessary so it is a multiple of 10 dB |
| Preset | EXA, CXA and CXA-m: 10 dB (2 dB with option FSA) All other models: 2 dB |
| State Saved | Saved in instrument state |

3.11.3.3 Range (Non-attenuator models)

Only available for Keysight's modular signal analyzers and certain other Keysight products, such as VXT and M941xE.

| | |
|-------------|----|
| State Saved | No |
|-------------|----|

Range

Represents the amplitude of the largest sinusoidal signal that could be present within the IF without being clipped by the ADC. For signals with high peak-to-average ratios, the range may need to exceed the rms signal power by a significant amount to avoid clipping.

This is a measurement global setting.

| | |
|----------------|---|
| Remote Command | <code>[:SENSe]:POWer[:RF]:RANGe <real></code> <code>[:SENSe]:POWer[:RF]:RANGe?</code> |
| Example | <code>:POW:RANG 10 dBm</code> <code>:POW:RANG?</code> |
| Notes | The MIN and MAX values are affected by the External Gain parameters, and by the Center Frequency The hardware compensates for frequency response and alters the Range setting |
| Preset | 0 dBm |
| State Saved | Yes |
| Min/Max | -/+100 |
| Annotation | Meas Bar |

Adjust Range for Min Clipping

Sets the combination of attenuation and gain based on the current measured signal level so that clipping will be at a minimum.

This is an "immediate action" function, that is, it executes once, when the key is pressed.

This key does not appear in measurements that do not support this functionality.

| | |
|----------------|---|
| Remote Command | <code>[:SENSe]:POWer[:RF]:RANGe:OPTimize IMMEDIATE</code> |
| Notes | Executing Adjust Range for Min Clipping initiates the measurement |
| Dependencies | Does not appear in the Swept SA and Monitor Spectrum measurements |

Pre-Adjust for Min Clipping

If this function is **ON**, it applies the adjustment described under Adjust Range For Min Clipping each time a measurement restarts. Therefore, in Continuous measurement mode, it only executes before the first measurement.

| | |
|----------------|--|
| Remote Command | <code>[:SENSe]:POWer[:RF]:RANGe:OPTimize:ATTenuation OFF ON ELECTrical COMBined</code> <code>[:SENSe]:POWer[:RF]:RANGe:OPTimize:ATTenuation?</code> |
| Notes | Because there is no attenuator control available in these models, the control displays only ON and OFF choices. However, for SCPI compatibility with other platforms, all three parameters (ELECTrical , COMBined , and ON) are honored and all are mapped to ELECTrical , so if any of these three parameters is sent, a subsequent query will return ELEC |
| Dependencies | Does not appear in the Swept SA and Monitor Spectrum measurements |
| Preset | OFF for Swept SA measurement; ON for all other measurements that support Pre-Adjust for Min Clipping |
| State Saved | Saved in instrument state |

Adjustment Algorithm

The algorithm for the adjustment is documented below:

3 WLAN Mode
3.11 Monitor Spectrum Measurement

Peak-to-Average Ratio

Used with "[Range \(Non-attenuator models\)](#)" on page 1769 to optimize the level control in the instrument. The value is the ratio, in dB, of the peak power to the average power of the signal to be measured. A ratio of 0 should be used for sinusoidal signals; for 802.11g OFDM signals use 9 dB.

All Modes show the current value of Peak-to-Average ratio on the control. However, some Modes do not permit changing the value. In these situations, the control is grayed-out.

| | | |
|----------------|--|-------|
| Remote Command | [:SENSe]:POWer[:RF]:RANGe:PARatio <real> [:SENSe]:POWer[:RF]:RANGe:PARatio? | |
| Example | :POW:RANG:PAR 12 dB | |
| Notes | In some Modes, this parameter is read-only; meaning the value will appear on the control and query via SCPI, but is not changeable. In such applications the control is grayed-out. Attempts to change the value via SCPI are ignored, but no error message is generated | |
| Dependencies | Does not appear in Spectrum Analyzer Mode | |
| Preset | VXT Models M9410A/11A | 0 dB |
| | All Others | 10 dB |
| State Saved | Saved in instrument state | |
| Min | 0 dB | |
| Max | VXT Models M9410A/11A | 50 dB |
| | All Others | 20 dB |

Mixer Lvl Offset

This is an advanced setting to adjust target Range at the input mixer, which in turn affects the signal level in the instrument's IF. This setting can be used when additional optimization is needed after setting "[Peak-to-Average Ratio](#)" on page 1771. Positive values of offset optimize noise performance over distortion, negative values optimize distortion performance over noise.

| | | |
|----------------|--|--------|
| Remote Command | <code>[:SENSe]:POWer[:RF]:RANGe:MIXer:OFFSet <real></code> <code>[:SENSe]:POWer[:RF]:RANGe:MIXer:OFFSet?</code> | |
| Example | <code>:POW:RANG:MIX:OFFS -5 dB</code> | |
| Preset | 0 dB | |
| State Saved | Saved in instrument state | |
| Min | VXT Models M9410A/11A | -34 dB |
| | All Others | -35 dB |
| Max | 30 dB | |

3.11.3.4 Signal Path

Contains controls that pertain to the routing of the signal through the frontend of the instrument.

In general, only appears in instruments whose hardware supports this signal routing. For example, this tab does not appear in many of the modular instrument products, including VXT Model M9420A, or UXM.

This tab *does* appear in VXT Models M9410A/11A/15A/16A and M9410E/11E/15E/16E, because "[Software Preselection](#)" on page 1788 is under this tab, and VXT Models M9410A/11A/15A/16A and M9410E/11E/15E/16E implement a version of Software Preselection.

Presel Center

Adjusts the centering of the preselector filter to optimize the amplitude accuracy at the frequency of the selected marker. If the selected marker is not on when **Presel Center** is pressed, the instrument turns on the selected marker, performs a peak search, and then performs centering on the marker's center frequency. If the selected marker is already on and between the start and stop frequencies of the instrument, the instrument performs the preselector calibration on that marker's frequency. If the selected marker is already on, but outside the frequency range

3 WLAN Mode
3.11 Monitor Spectrum Measurement

between **Start Freq** and **Stop Freq**, the instrument first performs a peak search, and then performs centering on the marker's center frequency.

The value displayed on "**Preselector Adjust**" on page 1774 changes to reflect the new preselector tuning.

Certain considerations should be observed to ensure proper operation, as detailed in "**Proper Preselector Operation**" on page 1653.

| | |
|------------------------------|---|
| Remote Command | <code>[:SENSe] :POWer [:RF] :PCENter</code> |
| Example | <code>:POW:PCEN</code> |
| Notes | The rules outlined above under the control description apply for the remote command as well as the key. The result of the command depends on marker position, etc. Any message generated by the control press is also generated in response to the remote command |
| Dependencies | Does not appear in CXA-m, nor in VXT Models M9410A/11A/15A/16A, M9410E/11E/15E/16E Grayed-out if the microwave preselector is off <ul style="list-style-type: none"> - If the selected marker's frequency is below Band 1, an advisory message is generated "Preselector not used in this frequency range" and no action is taken - Grayed-out if entirely in Band 0, that is, if Stop Freq is below about 3.6 GHz Grayed-out if entirely above 50 GHz, that is, if Start Freq is above 50 GHz - Blanked in models that do not include a preselector, such as Option 503. If the remote command is sent in these instruments, accepted without error, and the query always returns 0 - Grayed-out in the Spectrogram View |
| Couplings | The active marker position determines where the centering will be attempted If the instrument is in a measurement such as averaging when centering is initiated, the act of centering the preselector restarts averaging, but the first average trace will not be taken until the centering is completed The offset applied to do the centering appears in " Preselector Adjust " on page 1774 |
| Status Bits/OPC dependencies | When centering the preselector, *OPC does not return true until the process is complete and a subsequent measurement has completed, nor are results returned in response to <code>:READ</code> or <code>:MEASure</code> queries The Measuring bit remains set (true) while this command is operating, and does not go false until the subsequent sweep/measurement has completed |

Proper Preselector Operation

Certain considerations should be observed to ensure proper operation:

1. If the selected marker is **Off**, the instrument turns on a marker, performs a peak search, and adjusts the preselector using the selected marker's frequency. It uses the "highest peak" peak search method unqualified by threshold or excursion, so that there is no chance of a 'no peak found' error. It continues with that peak, even if it is the peak of just noise. Therefore, for this operation to work properly, there should be a signal on-screen in a preselected range for the peak

search to find

2. If the selected marker is already **On**, the instrument attempts the centering at that marker's frequency. There is no preselector for signals below about 3.6 GHz, so if the marker is on a signal below 3.6 GHz, no centering is attempted, and an advisory message is generated
3. In some models, the preselector can be bypassed. If it is bypassed, no centering is attempted in that range and a message is generated

Preselector Adjust

Lets you manually adjust the preselector filter frequency to optimize its response to the signal of interest. Only available when "**Presel Center**" on page 1773 is available.

For general purpose signal analysis, using **Presel Center** is recommended. Centering the filter minimizes the impact of long-term preselector drift. **Preselector Adjust** can be used instead to manually optimize the preselector. One application of manual optimization would be to peak the preselector response, which both optimizes the signal-to-noise ratio and minimizes amplitude variations due to small (short-term) preselector drifting.

When **Presel Center** is performed, the offset applied to do the centering becomes the new value of **Preselector Adjust**.

| | |
|----------------|--|
| Remote Command | <code>[:SENSe]:POWer[:RF]:PADJust <freq></code> <code>[:SENSe]:POWer[:RF]:PADJust?</code> |
| Example | <code>:POW:PADJ 100KHz</code> <code>:POW:PADJ?</code> |
| Notes | The value on the control is displayed to 0.1 MHz resolution |
| Dependencies | <ul style="list-style-type: none"> - Does not appear in CXA-m - Does not appear in VXT Models M9410A/11A/15A/16A - Does not appear in M9410E/11E/15E/16E - Grayed-out if microwave preselector is off - Grayed-out if entirely in Band 0, that is, if Stop Freq is lower than about 3.6 GHz - Grayed-out if entirely above 50 GHz, that is, if Start Freq is higher than 50 GHz - Blank in models that do not include a preselector, such as Option 503. If the command is sent in these instruments, it is accepted without error, and the query always returns 0 - Grayed-out in the Spectrogram View |
| Preset | 0 MHz |

| | |
|------------------------------|---|
| State Saved | The Preselector Adjust value set by " Presel Center " on page 1773, or by manually adjusting Preselector Adjust Not saved in instrument state, and does not survive a Preset or power cycle |
| Min/Max | -/+500 MHz |
| Backwards Compatibility SCPI | <code>[:SENSe]:POWer[:RF]:MW:PADJust</code> <code>[:SENSe]:POWer[:RF]:MMW:PADJust</code> Backwards Compatibility Command |
| Notes | The command has no effect, and the query always returns MWAVE |
| Backwards Compatibility SCPI | <code>[:SENSe]:POWer[:RF]:PADJust:PRESelector MWAVE MMWave EXternal</code> <code>[:SENSe]:POWer[:RF]:PADJust:PRESelector?</code> |

Internal Preamp

Accesses a menu of controls for the internal preamps. Turning on the preamp gives a better noise figure, but a poorer inter-modulation distortion (TOI) to noise floor dynamic range. You can optimize this setting for your measurement.

The instrument takes the preamp gain into account as it sweeps. If you sweep outside of the range of the preamp, the instrument will also account for that. The displayed result always reflects the correct gain.

For some measurements, when the preamp is on and any part of the displayed frequency range is below the lowest frequency for which the preamp has specifications, a warning condition message appears in the status line. For example, for a preamp with a 9 kHz lowest specified frequency: "Preamp: Accy unspec'd below 9 kHz".

| Selection | Example | Note |
|------------|---|---|
| Off | <code>:POW:GAIN OFF</code> | |
| Low Band | <code>:POW:GAIN ON</code> <code>:POW:GAIN:BAND LOW</code> | Sets the internal preamp to use only the low band. The frequency range of the installed (optional) low-band preamp is displayed in square brackets on the Low Band selection in the dropdown |
| Full Range | <code>:POW:GAIN ON</code> <code>:POW:GAIN:BAND FULL</code> | Sets the internal preamp to use its full range. The low band (0-3.6 GHz, 0-3.4 GHz, 0-3 GHz, depending on the model) is supplied by the low band preamp and the frequencies above low band are supplied by the high band preamp The frequency range of the installed (optional) low-band preamp is displayed in square brackets on the Full Range selection in the dropdown. If the high band option is not installed the Full Range selection does not appear |

NOTE

The maximum **Center Frequency for Low Band**, displayed in square brackets, can change based on the selected IFBW for measurements that support IFBW (for example, Waveform measurement across all Modes that support it). In certain models (such as N9042B & N9032B), IFBW values ≤ 40 MHz have a maximum **Low Band** frequency of 3.6 GHz, while $40 \text{ MHz} < \text{IFBW} \leq 1 \text{ GHz}$ have a maximum of 3.3 GHz, and $1 \text{ GHz} < \text{IFBW} \leq 1.5 \text{ GHz}$ have a maximum of 3.5 GHz. IFBW values $> 1.5 \text{ GHz}$ do not support a **Center Frequency** that can reach the **Low Band** maximum frequency. In these cases, **N/A** is displayed in the square brackets for **Low Band**.

| | |
|----------------|---|
| Remote Command | <code>[:SENSe]:POWer[:RF]:GAIN:BAND LOW FULL</code> <code>[:SENSe]:POWer[:RF]:GAIN:BAND?</code> |
| Example | <code>:POW:GAIN:BAND LOW</code> <code>:POW:GAIN:BAND?</code> |
| Dependencies | Not available on all hardware platforms. If the preamp is not present or is unlicensed, this control is not shown Does not appear in VXT Models M9410A/11A/15A/16A nor in M9410E/11E/15E/16E If <code>:POW:GAIN:BAND FULL</code> is sent when a low band preamp is available, the preamp band parameter is set to <code>LOW</code> instead of <code>FULL</code> , and an "Option not installed" message is generated Not available when the electronic/soft attenuator is enabled |
| Preset | <code>LOW</code> |
| State Saved | Saved in instrument state |
| Annotation | When the USB Preamp is not connected to USB, the Preamp annotation in the Meas Bar says "Off" if the preamp is off and displays the frequency range of the low band or full range preamp depending on the setting. For example, if the Preamp is set to Low Band and the Low Band is 3.6 GHz the annotation says "3.6 GHz". If it is a 13.6 GHz preamp and it is set to Full Range the annotation says "13.6 GHz" When the USB Preamp is connected to USB, the Preamp annotation says "Preamp: USB" if the internal preamp is off or "Preamp: USB, Int" if the internal preamp is on (only for measurements that support the USB preamp) |

LNA

Lets you turn the Low Noise Amplifier (LNA) on or off.

3 WLAN Mode

3.11 Monitor Spectrum Measurement

LNA is an additional preamplifier that provides superior DANL and frequency range compared to "Internal Preamp" on page 1775. LNA provides lower system noise figure, especially at frequencies above 100 MHz, and can be operated up to the full range of 50 GHz instruments.

For best possible sensitivity, LNA can be turned on *together* with "Internal Preamp" on page 1775, although if you operate both preamps together, note that the TOI (distortion) specifications are impacted. The sensitivity improvement of this combination is substantial when operating in high band (frequencies above 3.6 GHz).

For more details about annotation, see "More Information" on page 1657

| Preset | OFF |
| State Saved | Saved in State |

More Information

When LNA is installed, the preamp annotation changes to show the state of both LNA and Internal Preamp. Below is an example:

```
Atten: 8 dB
Pre: Int on, LNA on
µW Path: LNP, On
Source: Off
```

Note that when operating entirely in the low band (below about 3.6 GHz), if LNA is on, **Internal Preamp** is switched off (even if you have its switch set to ON). This is because the noise performance is actually degraded in low band if both preamps are on. In this case, the annotation reflects the actual state of the two preamps, but the **Internal Preamp** annotation displays in amber, to warn you that the actual state of **Internal Preamp** does not match its switch control display:

```
Atten: 8 dB
Pre: Int off, LNA on
µW Path: LNP, On
Source: Off
```

μW Path Control

Options for this control include **μW Preselector Bypass** (Option MPB), **Low Noise Path** (Option LNP) and **Full Bypass Enable** in the High Band path circuits.

When the μW Preselector is bypassed, flatness is improved, but will be subject to spurs from out of band interfering signals. When **Low Noise Path Enable** is selected, the instrument automatically bypasses certain circuitry in the high frequency bands that can contribute to noise, when it is appropriate based on other instrument settings.

For most applications, the preset state is **Standard Path**, which provides the best remote-control throughput, minimizes acoustic noise from switching and minimizes the risk of wear in the hardware switches, particularly in remote test scenarios where both low band and high band setups will follow in rapid succession. In this path, the bypass of the low band/high band switch and microwave preamp is never activated, which can cause some noise degradation but preserves the life of the bypass switch.

For applications that utilize the wideband IF paths, the preset state is **μW Preselector Bypass**, if option MPB is present. This is because, when using a wideband IF such as the 140 MHz IF, the μW Preselector's bandwidth can be narrower than the available IF bandwidth, causing degraded amplitude flatness and phase linearity, so it is desirable to bypass the preselector in the default case.

You may choose **Low Noise Path Enable** for a lower noise floor, especially in the 21–26.5 GHz region, though without improving many measures of dynamic range, and without giving the best possible noise floor. The preamp, if purchased and used, gives better noise floor than does **Low Noise Path Enable**, but the preamp's compression threshold and third-order intercept are much poorer than that of **Low Noise Path Enable**.

A fourth choice is **Full Bypass Enable**, which combines **μW Preselector Bypass** and **Low Noise Path Enable**. Because this can bypass most of the circuitry between the input and the first mixer, care should be taken when using this setting to avoid damaging the mixer. **Full Bypass Enable** is only available if both options LNP and MPB are present, as well as option FBP.

| Path | Example | Note |

Low Noise Path Enable

Low Noise Path Enable provides a lower noise floor under some circumstances, particularly when operating in the 21–26.5 GHz region. With the Low Noise Path enabled, the low band/high band switch and microwave preamp are bypassed whenever *all* the following are true:

- The instrument is not in the Low Band, meaning:
- the start frequency is above 3.5 GHz and
- the stop frequency is above 3.6 GHz
- The internal preamp is not installed, or if installed, is set to **Off** or **Low Band**

Note that this means that, when any part of a sweep is done in Low Band, the Low Noise Path is not used, whether or not the **Low Noise Path Enable** is selected in the user interface. Also, if the preamp is turned on, the Low Noise Path is not used,

3 WLAN Mode

3.11 Monitor Spectrum Measurement

whether or not the **Low Noise Path Enable** is selected in the user interface. The only time the Low Noise Path is used is when **Low Noise Path Enable** is selected, the sweep is completely in High Band (> 3.6 GHz) and no preamp is in use.

For measurements that use IQ acquisition, the low noise path is used when **Center Frequency** is in High Band (> 3.6 GHz) and no preamp is in use. In other words, the rules above are modified to use only the center frequency to qualify which path to switch in. This is not the case for FFTs in the Swept SA measurement; they use the same rules as swept measurements.

Note that the Low Noise Path, while giving improved DANL, has the disadvantage of decreased TOI performance and decreased gain compression performance relative to the standard path.

Note also that the bypass switch is a mechanical switch and has finite life, so if the **Low Noise Path Enable** is selected, it is possible to cause frequent cycling of this switch by frequently changing instrument settings such that the above conditions hold true only some of the time. A user making tests of this nature should consider opting for the **Standard Path**, which will never throw the bypass switch, at the expense of some degraded noise performance.

The low noise path is useful for situations where the signal level is so low that the instrument performance is dominated by noise even with 0 dB attenuation, but still high enough that the preamp option would have excessive third-order intermodulation or compression. The preamp, if purchased and used, gives better noise floor than does the “Low Noise Path.” However, its compression threshold and third-order intercept are much poorer than that of the non-preamp path.

There are some applications, typically for signals around –30 dBm, for which the third-order dynamic range of the standard path is good enough, but the noise floor is not low enough even with 0 dB input attenuation. When the third-order dynamic range of the preamp path is too little and the noise floor of the standard path is too high, the Low Noise Path can provide the best dynamic range

The graph below illustrates the concept. It shows, in red, the performance of an instrument at different attenuation settings, both with the preamp on and off, in a measurement that is affected by both instrument noise and instrument TOI. The green shows the best available dynamic range, offset by 0.5 dB for clarity. The blue shows how the best available dynamic range improves for moderate signal levels with the low noise path switched in. In this illustration, the preamp improves the noise floor by 15 dB while degrading the third-order intercept by 30 dB, and the low noise path reduces loss by 8 dB. The attenuator step size is 2 dB.

There are other times where selecting the low noise path improves performance, too. Compression-limited measurements such as finding the nulls in a pulsed-RF spectrum can profit from the low noise path in a way similar to the TOI-limited measurement illustrated. Accuracy can be improved when the low noise path allows the optimum attenuation to increase from a small amount like 0, 2 or 4 dB to a larger amount, giving better return loss at the instrument input. Harmonic measurements, such as second and third harmonic levels, are much improved using the low noise path because of the superiority of that path for harmonic (though not intermodulation) distortion performance.

µW Preselector Bypass

Toggles the preselector bypass switch for band 1 and higher. When the microwave preselector is on, the signal path is preselected. When the microwave preselector is off, the signal path is not preselected. The preselected path is the normal path for the instrument.

The preselector is a tunable bandpass filter which prevents signals away from the frequency of interest from combining in the mixer to generate in-band spurious signals (images). The consequences of using a preselector filter are its limited bandwidth, the amplitude and phase ripple in its passband, and any amplitude and phase instability due to center frequency drift.

Option MPB or pre-selector bypass provides an unpreselected input mixer path for certain X-Series signal analyzers with frequency ranges above 3.6 GHz. This signal path allows a wider bandwidth and less amplitude variability, which is an advantage when doing modulation analysis and broadband signal analysis. The disadvantage is that, without the preselector, image signals will be displayed. Another disadvantage of bypassing the preselector is increased LO emission levels at the front panel input port.

Image responses are separated from the real signal by twice the 1st IF. For IF Paths of 10 MHz and 25 MHz, the 1st IF is 322.5 MHz, so the image response and the real signal will be separated by 645 MHz. The 1st IF will be different for other IF Path settings. When viewing a real signal and its corresponding image response in internal mixing, the image response will be to the left of the real signal.

Also, the image response and the real signal typically have the same amplitude and exhibit the same shape factor.

However, if Option FS1 (Fast Sweep Capability) is enabled, the image response in the Swept SA measurement appears lower in amplitude and has a much wider shape factor compared to the real signal.

Full Bypass Enable

With **Full Bypass Enable** selected, the microwave preselector is bypassed. In addition, the low band/high band switch and microwave preamp are bypassed whenever *all* the following are true:

- The instrument is not in the Low Band, meaning:
- the start frequency is above 3.5 GHz and
- the stop frequency is above 3.6 GHz.
- the internal preamp is not installed or if installed, is set to **Off** or **Low Band**

Note that this means that, when any part of a sweep is done in Low Band, the Low Noise Path is not used, whether or not the **Full Bypass Enable** is selected in the user interface. Also, if the preamp is turned on, the Low Noise Path is not used, whether or not the **Full Bypass Enable** is selected in the user interface. The only time the Low Noise Path is used is when **Full Bypass Enable** is selected, the sweep is completely in High Band (> 3.6 GHz) and no preamp is in use.

CAUTION

When **Full Bypass Enable** is selected, and "**Y Scale**" on page 1745 is set to 0 dB, there will be a direct AC connection between the input and the first converter when the Low Noise Path switches in (when Start Freq >3.6 GHz and the Preamp is either not licensed, set to Low Band, or Off). This puts the first converter at considerable risk to be damaged by high AC power. Consequently,

whenever **Full Bypass Enable** is selected, a warning message appears in the status bar:

“Full Bypass Enabled, maximum safe input power reduced”

Microwave Preselector Bypass Backwards Compatibility

| | |
|------------------------------|--|
| Example | Bypass the microwave preselector: <code>:POW:MW:PRES OFF</code> |
| Notes | Included for Microwave Preselector Bypass backwards compatibility The ON parameter sets the STD path (<code>:POW:MW:PATH STD</code>) The OFF parameter sets path MPB (<code>:POW:MW:PATH MPB</code>) |
| Preset | ON |
| Backwards Compatibility SCPI | <code>[:SENSe]:POWer[:RF]:MW:PRESelector[:STATe] ON OFF 0 1</code> <code>[:SENSe]:POWer[:RF]:MW:PRESelector[:STATe]?</code> |

Frequency Extender Preselection Bypass

Only applies to the high frequency path of the Frequency Extender, and only if the Frequency Extender allows it. For example, the V3050A high frequency path is 50 – 110 GHz and *does* allow control of the preselector bypass.

When the Frequency Extender’s preselection is bypassed, flatness is improved, but will be subject to spurs from out-of-band interfering signals. For bandwidths greater than 2.5 [GHz], it is recommended that the signal bypass the Frequency Extender Preselector since the max bandwidth of the Preselector can be as narrow as 2.5 [GHz].

For most applications, the preset state is **OFF**, which gives the best remote-control throughput, minimizes acoustic noise from switching, minimizes out of band spurs, and minimizes the risk of wear in the hardware switches.

Preselector and Bandwidth Conflict

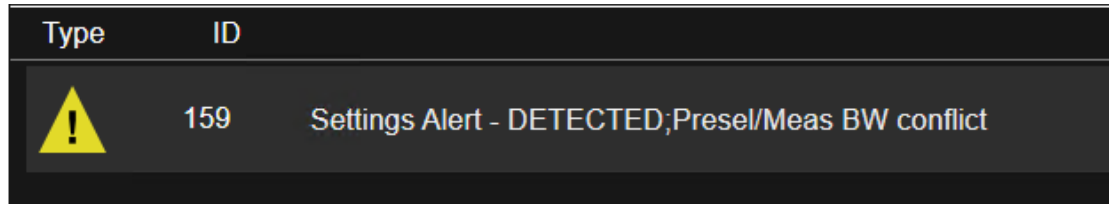

When the Frequency Extender Preselector is applied and the signal bandwidth is greater than 2.5 [GHz], then a settings alert message will show to warn the user that the signal may be distorted due to the limitation of the Frequency Extender Preselector bandwidth.

An example of the settings alert message is shown below.

Settings Alert message in the Status Bar at the bottom of the display.

Settings Alert message in the error queue

Allow Full Bypass in Auto

Enable or disable Full Bypass in μ W Path Auto rule. See " [\$\mu\$ W Path Control](#)" on page 1778.

When this function is **ON**, and " [\$\mu\$ W Path Control](#)" on page 1778 is in **AUTO**, it is possible for the auto rules to select the **FULL** Bypass state, which bypasses both the Preamp and the Microwave Preselector. Otherwise, the auto rules never select the **FULL** Bypass state. This is convenient when making wideband measurements, but it also adds some risk of damage to the first converter.

CAUTION

When **Full Bypass Enable** is selected, and "[Y Scale](#)" on page 1745 is set to 0 dB, there will be a direct AC connection between the input and the first converter when the Low Noise Path switches in (when Start Freq > 3.6 GHz and the Preamp is either not licensed, set to **Low Band** or **Off**). This puts the first converter at considerable risk to be damaged by high AC power. Consequently, whenever **Full Bypass Enable** is selected, a warning message appears in the status bar:

"Full Bypass Enabled, maximum safe input power reduced"

Software Preselection

Provided in some instruments, either to compensate for issues with provided hardware preselection or to provide the preselection function when there is no hardware preselector.

N9041B

Software Preselection compensates for the frequency range limit of the microwave preselector. Since the microwave preselector only goes up to 50 GHz, software preselection must be used to suppress and separate images above 50 GHz. The specific algorithm used for software preselection is specified by the SW Preselection Type selection – Normal or Advanced.

In N9041B, **Software Preselection** only applies for frequencies above 50 GHz, therefore it is only used for RF Input 2. Even if turned on, it is not used for other inputs, and never for frequencies below 50 GHz. This is why the label of this control contains the parenthetical note “(>~50 GHz)”.

Note that in N9041B, in Swept SA measurement, **Software Preselection** works even if the measurement is using an FFT Sweep Type. In measurements other than Swept SA, Software Preselection is not used if the measurement is using an FFT sweep type.

N9042B+V3050A

Software Preselection compensates for the frequency range limit of the microwave preselector. Since the microwave preselector only goes up to 50 GHz, software preselection must be used to suppress and separate images above 50 GHz. The specific algorithm used for software preselection is specified by the SW Preselection Type selection – Normal or Advanced.

For N9042B+V3050A, Software Preselection only applies for frequencies above 50 GHz, therefore it is only used for External RF. Even if it is turned on, it will not be used for other inputs and never for frequencies below 50 GHz. This is why the label of this control contains the parenthetical note “(>~50 GHz)”.

Note that for N9042B+V3050A, in the Swept SA measurement, Software Preselection works even if the measurement is using an FFT Sweep Type. In measurements other than Swept SA, Software Preselection is not used if the measurement is using an FFT Sweep Type.

VXT models M9410A/11A/15A/16A

Software Preselection is used to provide the preselection function, as there is no hardware preselector in these models. Two background traces are taken and compared point by point, and the point with the lowest amplitude from the two

traces is used. This provides a method to reduce spurs that are internally generated within the VXT, but you should note the following when using Software Preselection:

- There is some speed cost due to the need to take multiple captures
- Taking the point with the lowest amplitude in each trace will make the average noise level lower at all points that do not have a spur. This can reduce the accuracy of the measurement of noise and noise-like signals

Because of the difficulty in identifying spurs manually, you are recommended to leave Software Preselection **ON** at all times in VXT models M9410A/11A. If you turn it off in order to speed up your measurement or improve noise accuracy, be aware of unwanted onscreen spurs.

| | |
|----------------|--|
| Remote Command | <code>[:SENSe]:POWer[:RF]:SWPrese1:STATe 0 1 ON OFF</code> <code>[:SENSe]:POWer[:RF]:SWPrese1:STAT?</code> |
| Example | <code>:POW:SWPR:STAT 1</code> <code>:POW:SWPR:STAT?</code> |

| Couplings | Affects Sweep Time Auto Tune supports Software Preselection , so Auto Tune should be performed after setting the Software Preselection state |
| Preset | N9041B OFF N9042B+V3050A ON M9410A/11A ON |
| State Saved | Saved in instrument state |

SW Preselection Type

Specifies the algorithm used for software preselection.

Two hidden sweeps occur in succession. The second sweep is offset in LO frequency by $2 * IF / N$. For each point in each trace, the smaller amplitude from the two traces is taken and placed in that point in the selected trace. The Peak detector is auto-selected to improve the image suppression effectiveness. Responses of each trace that lie on top of one another will remain and are valid signals. Other signals are images, which are suppressed. The action of taking the smaller of the two traces will make the average noise level lower in all points that do not have an image, thus reducing the accuracy of the measurement of noise and noise-like signals.

- **NORMa1** - mathematically removes all image and multiple responses of signals present at the input
- **ADVanced** - any trace processing (such as “max hold” or trace averaging) is performed on the points of both candidate traces before the “select minimum” operation occurs. This form of processing works better for non-stationary signals, such as pulsed-RF signals

| | |

| Example | <code>:POW:SWPR NORM</code> <code>:POW:SWPR?</code> |
| Dependencies | Only appears in N9041B and N9042B+V3050A. Only appears in measurements that use the Swept method Grayed-out when "Software Preselection" on page 1788 is OFF. The grayout message is “Unavailable unless SW Presel enabled” |
| Preset | N9041B ADVanced N9042B+V3050A NORMa1 |
| State Saved | Saved in instrument state |

SW Preselection BW

Specifies the effective bandwidth to be used for Software Preselection.

The options are:

- **NORMa1** – when making Swept measurements, a software preselection algorithm is used which takes up to 4 background acquisitions, then post-processes the result. This algorithm can remove images from signals with an occupied bandwidth up to around 3 GHz. (Default/Preset setting). When making FFT measurements, this algorithm is not used, instead the same algorithm is used as for **NARRow** (below)
- **NARRow**– a software preselection algorithm is used which takes two background acquisitions, then post-processes the result to detect and remove images from wideband signals with occupied bandwidths up to 2 GHz. This increases the risk of images failing to be rejected, but improves the measurement speed

| | |
|----------------|---|
| Remote Command | <code>[:SENSe]:POWer[:RF]:SWPResel:BW NORMa1 NARRow</code> <code>[:SENSe]:POWer[:RF]:SWPResel:BW?</code> |
| Example | <code>:POW:SWPR:BW NARR</code> |
| Dependencies | Only appears in N9041B and N9042B+V3050A. Only appears in measurements that use the Swept |

High Freq Prefilter

Lets you set the state of Prefilter for center frequencies above 1310 MHz.

In VXT Models M9410A/11A and M9410E/11E in bypass frequency range (1310MHz~5GHz), the Receiver RF path has a bank of filters that come after the RF Attenuator in the signal path. Since this bank of filters precedes the mixer they are known as the "Prefilter" bank. Their purpose is to eliminate unwanted in-band mixing products by filtering out all but the desired frequencies before the signals get to the mixer. There are 13 prefilter bands to cover the frequencies between 9 kHz and 6000 MHz. The Prefilter provides the necessary rejection of the unwanted signal.

| | |
|----------------|--|
| Remote Command | <pre>[:SENSe]:<measurement>:PFILter[:STATe] ON OFF 1 0 [:SENSe]:<measurement>:PFILter[:STATe]?</pre> |
| Example | <p>Enable High Freq Prefilter for the Complex Spectrum Measurement in BASIC Mode: :SPEC:PFIL ON</p> <p>Enable High Freq Prefilter for the IQ Waveform Measurement, in multiple Modes: :WAV:PFIL ON</p> <p>Enable High Freq Prefilter for the Swept SA Measurement in SA Mode: :SAN:PFIL ON</p> |
| Dependencies | Only appears in VXT models M9410A/11A with center frequency above 1310 MHz, and M9410E/11E in frequency range 1310MHz~5GHz |
| Preset | See " Prefilter Presets " on page 1671 below |
| State Saved | Saved in instrument state |

Prefilter Presets

| Meas | Mode | Preset |
|------|-------|--------|
| SPEC | BASIC | OFF |

| Meas | Mode | Preset |
|------|---|--------|
| WAV | BASIC, WCDMA, WLAN, LTEAFDD, LTEATDD, 5GNR, VMA | OFF |

| DDEM | VMA | OFF |
| OFDM | VMA | OFF |
| SAN | SA | ON |
| HARM | SA | ON |

3.11.4 BW

Opens the Bandwidth (**BW**) menu, which contains controls for the Resolution Bandwidth and Video Bandwidth functions of the instrument.

3.11.4.1 Settings

Contains the basic bandwidth functions. It is the only tab under **BW**.

Res BW

Activates the resolution bandwidth active function, which allows you to manually set the Resolution Bandwidth (RBW) of the instrument.

Normally, **Res BW** (Auto) selects automatic coupling of the Res BW to Span using the ratio set by the Span:3 dB RBW control (some measurements do not have a Span:3 dB RBW control, in which case the measurement chooses the optimal ratio).

3 WLAN Mode
 3.11 Monitor Spectrum Measurement

To decouple the resolution bandwidth, press the **Auto/Man** toggle on the **Res BW** control, or simply enter a different value for **Res BW**.

When the **Res BW** is manually selected, it may be returned to the coupled state by pressing the **Auto/Man** toggle on the **Res BW** control. This may also be done by pressing Auto Couple or by performing a **Preset**.

Only certain discrete resolution bandwidths are available. The available bandwidths are dependent on the **EMC Standard**. If an unavailable bandwidth is entered with the numeric keypad, the closest available bandwidth is selected.

See "[RBW Presets](#)" on page 1674

| | |
|-------------------------------|--|
| Remote Command | <pre>[:SENSe]:MONitor:BANDwidth[:RESolution] <bandwidth> [:SENSe]:MONitor:BANDwidth[:RESolution]? [:SENSe]:MONitor:BANDwidth[:RESolution]:AUTO ON OFF 1 0 [:SENSe]:MONitor:BANDwidth[:RESolution]:AUTO?</pre> |
| Example | <pre>:MON:BAND 5 MHz :MON:BAND? :MON:BAND:AUTO ON :MON:BAND:AUTO?</pre> |
| Notes | <p>For numeric entries, all RBW Types choose the nearest (arithmetically, on a linear scale, rounding up) available RBW to the value entered</p> <p>The setting and querying of values depends on the current bandwidth type</p> |
| Couplings | <p>Sweep time is coupled to the RBW. As the RBW changes, the sweep time (if set to Auto) is changed to maintain amplitude calibration</p> <p>Video bandwidth (VBW) is coupled to the RBW. As the resolution bandwidth changes, the video bandwidth (if set to Auto) changes to maintain the ratio of VBW/RBW (10:1)</p> <p>When the Res BW is set to Auto, the resolution bandwidth is auto-coupled to the span. The ratio of Span/RBW is approximately 106:1 when auto coupled. When Res BW is set to Man, and the bandwidths are entered manually, these bandwidths are used regardless of other instrument settings</p> |
| Preset | <p>Auto (unless noted in the table below)</p> <p>See "RBW Presets" on page 1674 below</p> |
| State Saved | Saved in instrument state |
| Min | 1 Hz |
| Max | 8 MHz is the max equivalent -3 dB RBW, which means that the named RBW (the one shown on the control etc.) can actually exceed 8 MHz if using a filter other than -3 dB Gaussian |
| Annotation | A “#” mark appears before “RBW” in the annotation when it is switched from Auto to Manual coupling |
| Backwards Compatibility Notes | <p>For backwards compatibility this command obeys both the BANDwidth and BwIDth forms</p> <p>For ESA, the maximum Res BW was 5 MHz; on X-Series it is 8 MHz</p> |

RBW Presets

Unless noted in the table below, the Preset value of RBW is **Auto**.

| Mode | Preset RBW |
|-------------------------------|------------|
| WLAN | 100 kHz |
| LTE, LTETDD, LTEAFDD, LTEATDD | 100 kHz |
| 5GNR | 100 kHz |

Video BW

Lets you change the instrument post-detection filter (VBW or “video bandwidth”) from 1 Hz to 8 MHz in approximately 10% steps. In addition, a wide-open video filter bandwidth may be chosen by selecting 50 MHz. The VBW is annotated at the bottom of the display, in the center.

Normally, **Video BW (Auto)** selects automatic coupling of the Video BW to RBW using the ratio set by the VBW:3 dB RBW control. To decouple the resolution bandwidth, press the **Auto/Man** toggle on the **Video BW** control, or simply enter a different value for **Video BW**.

When the **Video BW** is manually selected, it may be returned to the coupled state by pressing the **Auto/Man** toggle on the **Video BW** control. This may also be done by pressing Auto Couple or by performing a **Preset**.

| | |
|----------------|---|
| Remote Command | <pre>[:SENSe]:MONitor:BANDwidth:VIDeo <bandwidth> [:SENSe]:MONitor:BANDwidth:VIDeo? [:SENSe]:MONitor:BANDwidth:VIDeo:AUTO ON OFF 1 0 [:SENSe]:MONitor:BANDwidth:VIDeo:AUTO?</pre> |
| Example | <pre>:MON:BAND:VID 2.4 MHz :MON:BAND:VID? :MON:BAND:VID:AUTO ON :MON:BAND:VID:AUTO?</pre> |
| Notes | <p>For numeric entries, the instrument chooses the nearest (arithmetically, on a linear scale, rounding up) available VBW to the value entered. The 50 MHz VBW is defined to mean “wide open”</p> <p>The values shown in this table reflect the conditions after a Mode Preset</p> |
| Dependencies | <p>Sometimes the displayed Video BW is not actually used to process the trace data:</p> <ul style="list-style-type: none"> – When the Average Detector is selected and Sweep Type is set to Swept, the video bandwidth filter cannot be used, because it uses the same hardware as the Average Detector – When the Quasi-Peak, EMI Average or RMS Average detector is selected the VBW is implemented by the digital IF as part of the detector |

3 WLAN Mode
3.11 Monitor Spectrum Measurement

| | |
|-------------------------------|---|
| | When this is the case, the VBW still acts to change the Sweep Time, if Sweep Time is in Auto, and still affects the data on other traces for which this is not the case |
| Couplings | Video bandwidth (VBW) is normally coupled to RBW. If VBW is set to Auto, then the VBW is changed as the RBW changes, to maintain the ratio set by the VBW:3 dB RBW control (usually 10:1 for measurements that do not have a VBW:3 dB RBW control) |
| Preset | Auto (unless noted in table below) ON |
| State Saved | Saved in instrument state |
| Min | 1 Hz |
| Max | 50 MHz |
| Annunciation | A “#” mark appears before “VBW” in the annotation when it is not coupled |
| Annotation | In the bottom center of the screen, “VBW <value> <units>” indicates the current video bandwidth value. Note that for some detectors this is not the value actually used for VBW (see above) |
| Backwards Compatibility Notes | For backwards compatibility this command obeys both the BANDwidth and BWIDth forms |

VBW Presets

Unless noted in the table below, the Preset value of VBW is **Auto**.

| Mode | Preset VBW |
|--------------------------------------|------------|
| WLAN | 1 MHz |
| LTE, LTETDD, LTEAFDD, LTEATDD | 1 MHz |
| 5GNR | 1 MHz |

VBW:3dB RBW

Selects the ratio between the video bandwidth and the equivalent 3 dB resolution bandwidth to be used for setting VBW when VBW is in Auto.

VBW:3dB RBW (Auto) selects automatic coupling of the VBW:3 dB RBW ratio to Detector using the rules described below in "[Coupling Auto Rules](#)" on page 1676. To decouple the ratio, press the **Auto/Man** toggle on the VBW:3 dB RBW control, or simply enter a different value for VBW:3 dB RBW.

When the VBW:3dB RBW is manually selected, it may be returned to the coupled state by setting the toggle on the VBW:3 dB RBW control back to **Auto**. This may also be done by pressing Auto Couple or by performing a **Preset**.

| | |
|----------------|--|
| Remote Command | <code>[:SENSe]:MONitor:BANdwidth:VIDeo:RATio <real></code> <code>[:SENSe]:MONitor:BANdwidth:VIDeo:RATio?</code> |
|----------------|--|

| | |
|-------------------------------------|--|
| | <code>[:SENSe]:MONitor:BANDwidth:VIDeo:RATio:AUTO OFF ON 0 1</code> |
| | <code>[:SENSe]:MONitor:BANDwidth:VIDeo:RATio:AUTO?</code> |
| Example | <code>:MON:BAND:VID:RAT 2</code> <code>:MON:BAND:VID:RAT?</code> <code>:MON:BAND:VID:RAT:AUTO 0</code> <code>:MON:BAND:VID:RAT:AUTO?</code> |
| Notes | The values shown in this table reflect the conditions after a Mode Preset |
| Couplings | See " Coupling Auto Rules " on page 1676 |
| Preset | 1 ON |
| State Saved | Saved in instrument state |
| Min | 0.00001 |
| Max | 3000000 |
| Backwards Compatibility Notes | For backwards compatibility this command accepts both the <code>BANDwidth</code> and <code>BWIDth</code> forms |

Coupling Auto Rules

The Auto Rules for the **VBW:3dB RBW** function are as follows.

First, if Source Mode is set to "Tracking": Use 1.0

Otherwise, we go through the following list of detector numbers and find the lowest numbered detector being used on any active traces (traces for which Update is On):

1. Peak
2. Normal
3. Average
4. Sample
5. Negative Peak
6. EMI Average
7. Quasi Peak
8. RMS Average

Use that detector to pick the ratio based on the following criteria:

3 WLAN Mode

3.11 Monitor Spectrum Measurement

1. If the measurement supports EMC Standard, and the detector is Peak and the EMC Standard is set to either CISPR or MIL, use 10.0 (we use wide VBWs to capture peak levels accurately).
2. Otherwise, if the detector is **Negative Peak**, use 1.0 (in the Negative Peak case, there are no known significant use models so we use a medium ratio).
3. Otherwise, if the detector is **Normal**, use 1.0.
4. Otherwise, if the detector is **Average**, and the span is nonzero, use 0.1. The use of a small ratio in Average detection is desirable because of its effect on the sweep time equations. The VBW filter is not actually in-circuit when the average detector is on. If the detector is Average, and the span is zero, use 10.0, which gives optimal behavior for Interval Markers in zero span. Note that only the Swept SA measurement supports Zero Span.
5. Otherwise, if the detector is EMI Average, Quasi Peak or RMS Average, use 10.0. In fact, this is a “don’t care” since no VBW is used for these detectors, as noted under “Dependencies” for the VBW control
6. Otherwise, the detector is simply **Peak** or **Sample**. These two detectors can use the same rules. In these cases, if any active trace is in max hold or min hold, use 10.0, because Max and Min Hold operations will usually be intended to capture peaks and pits without smoothing from the VBW filter; otherwise, use 1.0 as a compromise, because you have not set the instrument in a way that implies that you are measuring noise, pulsed-RF or CW signals, and for backward compatibility with earlier instruments.

Note that because the above couplings depend on which traces are active, they are re-examined whenever any trace goes active or inactive, except when this leaves no traces active. Transitioning to the state where no traces are active should not affect the couplings; in that way, the annotation will always reflect the state of the last trace which was active.

Note also that some detectors are not available in some measurements, but because of the way the above rules that does not change the logic of the rules.

Span:3dB RBW

Selects the ratio between span and resolution bandwidth.

Normally, Span:3dB RBW (Auto) selects a Span:3 dB RBW ratio of 106:1. If you manually enter the ratio, the toggle on the Span:3dB RBW control will change to **Man**. This enables you to manually select ratios more suitable for certain measurements.

When the Span:3dB RBW is manually selected, it may be returned to the coupled state by setting the toggle on the RBW:3 dB RBW control back to **Auto**. This may also be done by pressing Auto Couple or by performing a **Preset**.

| | |
|---------------------------------|--|
| Remote Command | <pre>[:SENSe]:MONitor:FREQuency:SPAN:BANDwidth[:RESolution]:RATio <integer> [:SENSe]:MONitor:FREQuency:SPAN:BANDwidth[:RESolution]:RATio? [:SENSe]:MONitor:FREQuency:SPAN:BANDwidth[:RESolution]:RATio:AUTO OFF ON 0 1 [:SENSe]:MONitor:FREQuency:SPAN:BANDwidth[:RESolution]:RATio:AUTO?</pre> |
| Example | <pre>:MON:FREQ:SPAN:BAND:RAT 200 :MON:FREQ:SPAN:BAND:RAT? :MON:FREQ:SPAN:BAND:RAT:AUTO ON :MON:FREQ:SPAN:BAND:RAT:AUTO?</pre> |
| Notes | The values shown in this table reflect the conditions after a Mode Preset |
| Preset | 106 ON |
| State Saved | Saved in instrument state |
| Min | 2 |
| Max | 10000 |
| Backwards Compatibility SCPI | <pre>[:SENSe]:MONitor:FREQuency:SPAN:BWIDth[:RESolution]:RATio</pre> |

3.11.5 Display

Opens the **Display** menu, which lets you configure display items for the current Mode, Measurement View or Window.

3.11.5.1 Meas Display

Contains controls for setting up the display for the current Measurement, View or Window.

3.11.5.2 View

Contains controls for selecting the current **View**, and for editing User Views.

View

See "[Views](#)" on page 1628

User View

Lets you choose a View from the saved User Views for the current measurement. This panel only appears if a User View exists for the current measurement.

| | |
|------------------------------|--|
| Remote Command | <code>:DISPlay:VIEW:ADVanced:SElect <alphanumeric></code> <code>:DISPlay:VIEW:ADVanced:SElect?</code> |
| Example | Select Baseband as the current View <code>:DISP:VIEW:ADV:SEL "Baseband"</code> |
| Notes | <p>You must be in the measurement whose View you are trying to set to send the command. You can only set Views for the current measurement using this command</p> <p>For predefined views, the parameter is derived from the view name that is shown in the View list in the user interface. For example, if you are trying to select the Trace Zoom view in the Swept SA measurement, you send:</p> <pre>:DISP:VIEW:ADV:SEL "Trace Zoom"</pre> <p>because "Trace Zoom" is the name of the View as seen in the Mode/Meas dialog or in the Display, View menu</p> <p>You <i>cannot</i> use the legacy View parameter (which in this case would be <code>TZOOM</code>) with</p> <pre>:DISP:VIEW:ADV:SEL</pre> <p><code><alphanumeric></code> is case insensitive; you can specify mixed case, however the name will be evaluated on a single case. Thus, both of the following forms work:</p> <pre>:DISP:VIEW:ADV:SEL "Trace Zoom"</pre> <pre>:DISP:VIEW:ADV:SEL "TRACE ZOOM"</pre> <p>If the specified view is not a valid View, the query returns the error message "-224, Illegal parameter value; View with the name <alphanumeric> does not exist"</p> <p>If the display is disabled (via <code>:DISP:ENAB OFF</code>) then the error message "-221, Settings conflict; View SCPI cannot be used while Display is disabled" is generated</p> |
| Backwards Compatibility SCPI | <p>The legacy node</p> <pre>:DISPlay:VIEW[:SElect]</pre> <p>is retained for backwards compatibility, but it only supports predefined views</p> |

Restore Layout to Default

Restores the Layout to the default for Basic.

Modified Views are very temporary; if you exit the current measurement they are discarded, and they are not saved in State. To retain this View for later use, and to be able to return easily to your original Basic View, you can save your edited View as a "User View".

Save Layout as New View

Saves your new View as a User View. An alpha keyboard appears, which lets you name your new View; the default is the old View name plus a number.

| | |
|----------------|--|
| Remote Command | <code>:DISPlay:VIEW:ADVanced:NAME <alphanumeric></code> |
| Example | <code>:DISP:VIEW:ADV:NAME "Baseband"</code> Creates a new View named Baseband from the current View, and selects it as the current View |
| Notes | <code><alphanumeric></code> is case insensitive; you can specify mixed case, however the name will be evaluated on a single case If <code><alphanumeric></code> name already exists as a View, the error message "-224, Illegal parameter value; View <alphanumeric> already exists" is generated If the display is disabled (via <code>:DISP:ENAB OFF</code>) then the error message "-221, Settings conflict; User View SCPI cannot be used while Display is disabled" is generated |

Re-Save User View

You can re-edit a User View; if you make changes, then an asterisk will appear next to the User View's name. You can then tap **Re-Save User View** to save it back to its existing name, or **Save Layout as New View** to add another, new User View.

This is a front panel function only, there is no remote command available to perform this function. To do this remotely, you must first perform **Save Layout as New View**, then delete the old User View and rename the new one with the name of the View you just deleted.

Rename User View

You can rename the current View by giving it a new unique name. Only User Views can be renamed, if the current View is a Predefined View, an error occurs.

| | |
|----------------|---|
| Remote Command | <code>:DISPlay:VIEW:ADVanced:REName <alphanumeric></code> |
| Example | <code>:DISP:VIEW:ADV:REN "Baseband"</code> |
| Notes | <code><alphanumeric></code> is case insensitive; you can specify mixed case, however the name will be evaluated on a single case If the <code><alphanumeric></code> specifying the new name is already present in the list of View names, the error message "-224, Illegal parameter value; View <alphanumeric> already exists" is generated If the current View is a Predefined View, the error message "-224, Illegal parameter value; Cannot rename a Predefined View" is generated If the display is disabled (via <code>:DISP:ENAB OFF</code>) then the error message "-221, Settings conflict; View SCPI cannot be used while Display is disabled" is generated |

Delete User View

You can delete the current View if it is a User View. The default view becomes the current view for the Measurement.

| | |
|----------------|---|
| Remote Command | <code>:DISPlay:VIEW:ADVanced:DELeTe</code> |
| Example | <code>:DISP:VIEW:ADV:DEL</code> |
| Notes | <p><code><alphanumeric></code> is case insensitive; you can specify mixed case, however the name will be evaluated on a single case</p> <p>If the <code><alphanumeric></code> is not present in the list of View names, the error message “-224, Illegal parameter value; View <alphanumeric> does not exist” is generated</p> <p>If the current View is a Predefined View, the error message “-224, Illegal parameter value; Cannot delete a Predefined View” is generated</p> <p>If the display is disabled (via <code>:DISP:ENAB OFF</code>) then the error message “-221, Settings conflict; View SCPI cannot be used while Display is disabled” is generated</p> |

Delete All User Views

Deletes all previously saved User Views. The default view becomes the current view for the Measurement if a User View was the current view when this command was executed.

| | |
|----------------|--|
| Remote Command | <code>:DISPlay:VIEW:ADVanced:DELeTe:ALL</code> |
| Example | <code>:DISP:VIEW:ADV:DEL:ALL</code> |
| Notes | Disabled if there are no User Views |

View Editor Remote Commands

The following remote commands help you manage Views and User Views. Note that the SCPI node for User Views handles both Predefined and User Views. The legacy nodes, `:DISPlay:VIEW[:SElect]` and `:DISPlay:VIEW:NSEL`, are retained for backwards compatibility, but they only support predefined views.

View Listing Query

Returns a string containing a comma-separated list of names for *all* the Views, including User Views, available for the current Measurement.

| | |
|----------------|--|
| Remote Command | <code>:DISPlay:VIEW:ADVanced:CATalog?</code> |
|----------------|--|

| | |
|---------|---|
| Example | <code>:DISP:VIEW:ADV:CAT?</code> |
| Notes | <p>Returns a quoted string of the available Views for the current measurement, separated by commas. The list includes names for <i>all</i> the Views, including User Views, available for the current Measurement</p> <p>Example: <code>"Normal,Trace Zoom,Spectrogram,Baseband,myView1,yourView1"</code></p> <p>No distinction is made between Predefined and User Views</p> <p>If you switch measurements with the display disabled (via <code>:DISP:ENAB OFF</code>), then query the list of available Views, the result is undefined</p> |

User View Listing Query

Returns a string containing a comma-separated list of names for *only* the User Views available for the current Measurement.

| | |
|----------------|--|
| Remote Command | <code>:DISPlay:VIEW:ADVanced:USER:CATalog?</code> |
| Example | <code>:DISP:VIEW:ADV:USER:CAT?</code> |
| Notes | <p>Returns a quoted string of the available User Views for the current measurement, separated by commas.</p> <p>Example: <code>"Baseband,myView1,yourView1"</code></p> <p>If you switch measurements with the display disabled (see "Display Enable (Remote Command Only)" on page 1804), then query the list of available Views, the result is undefined</p> |

3.11.5.3 Annotation

Contains controls for setting up the annotation for the current Mode or Measurement.

Graticule

Turns the display graticule On or Off for all windows with graticules in all measurements in the current Mode. Also turns the graticule Y-Axis annotation on and off.

| | |
|----------------|---|
| Remote Command | <code>:DISPlay:GRATicule[:STATe] OFF ON 0 1</code> |
| Example | <code>:DISP:GRAT OFF</code> |
| Notes | The graticule is the set of horizontal and vertical lines that make up the grid/divisions for the X-Axis and Y-Axis |

| | |
|------------------------------|--|
| Preset | ON |
| State Saved | Saved in instrument state |
| Backwards Compatibility SCPI | :DISPlay:WINDow[1]:TRACe:GRATicule:GRID[:STATe] OFF ON 0 1 :DISPlay:WINDow[1]:TRACe:GRATicule:GRID[:STATe]? This command is accepted for backwards compatibility with older instruments, but the WINDow , TRACe and GRID parameters are ignored |

Screen Annotation

Controls the display of the annunciation and annotation around the graticule, including any annotation on lines (such as the display line, the threshold line, etc.) and the Y-Axis annotation, for all windows with screen annotation in all measurements in the current Mode.

This does *not* include marker annotation (or the N dB result). When **OFF**, the graticule expands to fill the entire graticule area, leaving only the 1.5% gap above the graticule, as described in the **Trace** section.

| | |
|----------------|---|
| Remote Command | :DISPlay:ANNotation:SCReem[:STATe] OFF ON 0 1 :DISPlay:ANNotation:SCReem[:STATe]? |
| Example | :DISP:ANN:SCR OFF |
| Dependencies | Grayed-out and forced to OFF when System Display Settings, Annotation is OFF |
| Preset | ON This remains OFF through a Preset when System Display Settings, Annotation is set to OFF |
| State Saved | Saved in instrument state |

Trace Annotation

Turns on and off the labels on the traces, showing their detector (or their Math Mode) as described in the **Trace** section, for all windows in all measurements in the current Mode for which Trace Annotation on/off is supported.

If Trace Math is being performed on a trace, then the Trace Math annotation replaces the detector annotation.

For measurements that support limit lines, this key also turns on and off the labels on the Limit Lines. The label is the Limit number annotation and Limit Comment displayed on the graph. If the length of the comment is greater than 20 characters, the first 8 characters and the last 8 characters are displayed, joined with

| | |
|----------------|--|
| Remote Command | :DISPlay:ANNotation:TRACe[:STATe] ON OFF 1 0 :DISPlay:ANNotation:TRACe[:STATe]? |
|----------------|--|

| | |
|-------------|---------------------------------|
| Example | <code>:DISP:ANN:TRAC OFF</code> |
| Preset | <code>OFF</code> |
| State Saved | Saved in instrument state |

Control Annotation

Turns on and off the display of values on the Active Function controls for all measurements in the current Mode. This is a security feature.

| | |
|----------------|--|
| Remote Command | <code>:DISPlay:ACTivefunc[:STATe] ON OFF 1 0</code> <code>:DISPlay:ACTivefunc[:STATe]?</code> |
| Example | <code>:DISP:ACT OFF</code> |
| Dependencies | Grayed out and forced to <code>OFF</code> when System Display Settings, Annotation is <code>OFF</code> |
| Preset | <code>ON</code> This remains <code>OFF</code> through a Preset when System Display Settings, Annotation is set to <code>OFF</code> |
| State Saved | Saved in instrument state |

Meas Bar

Turns the Measurement Bar at the top of the screen on and off for all measurements in the current Mode. When `OFF`, the graticule area expands to fill the area formerly occupied by the Measurement Bar.

| | |
|----------------|--|
| Remote Command | <code>:DISPlay:ANNotation:MBAR[:STATe] OFF ON 0 1</code> <code>:DISPlay:ANNotation:MBAR[:STATe]?</code> |
| Example | <code>:DISP:ANN:MBAR OFF</code> |
| Dependencies | Grayed out and forced to <code>OFF</code> when System Display Settings, Annotation is <code>OFF</code> |
| Preset | <code>ON</code> This remains <code>OFF</code> through a Preset when System Display Settings, Annotation is set to <code>OFF</code> |
| State Saved | Saved in instrument state |

Display Enable (Remote Command Only)

Turns the display on/off, including the display drive circuitry. The backlight stays lit to confirm that the instrument is on. The display enable setting is mode global. There are three reasons for turning the display off:

1. To increase speed as much as possible by freeing the instrument from having to update the display

3 WLAN Mode
 3.11 Monitor Spectrum Measurement

2. To reduce emissions from the display, drive circuitry
3. For security purposes

If you have turned off the display:

- and you are in local operation, the display can be turned back on by pressing any key or by sending `:SYSTem:DEFaults MISC` or `:DISPlay:ENABle ON` (neither `*RST` nor `:SYSTem:PRESet` enable the display)
- and you are in remote operation, the display can be turned back on by pressing the **Local** or **Esc** keys, or by sending `:SYSTem:DEFaults MISC` or `:DISPlay:ENABle ON` (neither `*RST` nor `:SYSTem:PRESet` enable the display)
- and you are using either the `:SYSTem:KLOCK` command or GPIB local lockout, then *no* front-panel key press will turn the display back on. You must turn it back on remotely.

If the display is **OFF**, many SCPI commands related to User Views and Multiscreen functionality do not work, and return the error messages “-221, Settings conflict; Screen SCPI cannot be used when Display is disabled” or “221, Settings conflict; View SCPI cannot be used while Display is disabled”. These commands include:

| Name | Command |
|----------------------------|--|
| Select User View | <code>:DISPlay:VIEW:ADVanced:SElect</code> |
| Rename User View | <code>:DISPlay:VIEW:ADVanced:REName</code> |
| Delete User View | <code>:DISPlay:VIEW:ADVanced:DELeTe</code> |
| Create User View | <code>:DISPlay:VIEW:ADVanced:NAME</code> |
| Select Screen | <code>:INSTrument:SCReen:SElect</code> |
| Delete Screen | <code>:INSTrument:SCReen:DELeTe</code> |
| Delete All But This Screen | <code>:INSTrument:SCReen:DELeTe:ALL</code> |
| Add Screen | <code>:INSTrument:SCReen:CREate</code> |
| Rename Screen | <code>:INSTrument:SCReen:REName</code> |
| Sequencer On/Off | <code>:SYSTem:SEQuencer</code> |

| | |
|----------------|---|
| Remote Command | <code>:DISPlay:ENABle OFF ON 0 1</code> <code>:DISPlay:ENABle?</code> |
| Example | <code>:DISP:ENAB OFF</code> |
| Couplings | <code>:DISP:ENAB OFF</code> turns Backlight OFF and <code>:DISP:ENAB ON</code> turns Backlight ON , but changing Backlight settings does <i>not</i> change the state of <code>:DISP:ENAB</code> |
| Preset | ON Set by <code>:SYST:DEF MISC</code> , but not affected by <code>*RST</code> or <code>:SYSTem:PRESet</code> |
| State Saved | Not saved in instrument state |

Backwards Compatibility Notes :SYST:PRES no longer turns on :DISPlay:ENABLe as it did in legacy analyzers

3.11.6 Frequency

Opens the **Frequency** menu, which contains controls that allow you to control the Frequency and Channel parameters of the instrument.

Some features in this menu are the same for all measurements in the current Mode – they do not change as you change measurements. Settings like these are called “Meas Global” and are unaffected by Meas Preset. For example, the Center Freq setting is the same for all measurements - it does not change as you change measurements.

3.11.6.1 Settings

The Settings tab contains the basic Bandwidth functions. In most measurements it is the only tab under Bandwidth.

Center Frequency

Sets the frequency that corresponds to the horizontal center of the graticule. While adjusting the Center Frequency the Span is held constant.

The center frequency setting is the same for all measurements within a mode, that is, it is Meas Global. Some modes are also able to share a Mode Global center frequency value. If this is the case, the Mode will have a **Global** tab in its **Meas Setup** menu.

The **Center Freq** function sets (and queries) the Center Frequency for the currently selected input. If your instrument has multiple inputs, and you select another input, the Center Freq changes to the value for that input. SCPI commands are available to directly set the Center Freq for a specific input.

Center Freq is remembered as you go from input to input. Thus, you can set a Center Freq of 10 GHz with the RF Input selected, change to BBIQ, and set a Center Freq of 20 MHz, then switch to External Mixing and set a Center Freq of 60 GHz, and when you go back to the RF Input the Center Freq will go back to 10 GHz; back to BBIQ and it is 20 MHz; back to External Mixing and it is 60 GHz.

See:

3 WLAN Mode
 3.11 Monitor Spectrum Measurement

- "Center Frequency Presets" on page 1689
- "VXT Models with Radio Heads/CIU Frequency Range" on page 1691
- "RF Center Freq" on page 1691
- "Ext Mix Center Freq" on page 1692
- "I/Q Center Freq" on page 1692

| | |
|----------------|---|
| Remote Command | <code>[:SENSe] :FREQuency :CENTer <freq></code> <code>[:SENSe] :FREQuency :CENTer?</code> |
| Example | <code>:FREQ:CENT 50 MHz</code> Sets Center Frequency to 50 MHz <code>:FREQ:CENT UP</code> Increments the Center Frequency by the value of CF Step <code>:FREQ:CENT?</code> Returns the current value of Center Frequency |
| Notes | Sets the RF, External Mixing or I/Q Center Frequency depending on the selected input: <ul style="list-style-type: none"> - For RF input it is equivalent to <code>:FREQ:RF:CENT</code> - For I/Q input it is equivalent to <code>:FREQ:IQ:CENT</code> - For External Mixer it is equivalent to <code>:FREQ:EMIX:CENT</code> Preset and Max values are dependent on Hardware Options (5xx) If no terminator (for example, MHz) is sent, the terminator Hz is used. If a terminator with unit other than Frequency is used, an invalid suffix error message is generated |
| Couplings | In LTEAFDD/LTEATDD and 5GNR Modes: Center Frequency, Center Frequency Offset and Carrier Reference Frequency are coupled with the following equation: $\text{Center Frequency} = \text{Carrier Reference Frequency} + \text{Center Frequency Offset}$ If the following conditions are satisfied at the same time: <ul style="list-style-type: none"> - the Num Component Carrier equals to 1 - the Center Frequency Offset equals to 0 Hz - the mode of the Center Frequency is Auto The Center Frequency is equivalent to Carrier Reference Frequency The major purpose of this coupling is to keep BWCC with legacy LTE, in which <code>:SENSe:FREQuency:CENTer</code> is used to set up the Frequency of the measurement Otherwise, the Center Frequency Offset is changed following the Center Frequency and the Carrier Reference Frequency keeps intact |

In MSR, Center Freq, Center Freq Offset and Carrier Ref Freq are coupled with the equation, Center Freq = Carrier Ref Freq + Center Freq Offset. When Center Freq is changed, Center Freq Offset is updated and Carrier Ref Freq is not changed

When auto, Center Freq Offset remains the same value. Thus, Center Freq changes the same amount of Carrier Ref Freq change when Carrier Ref Freq is changed. The auto state changes to manual when either Center Freq is changed

In Bluetooth Mode:

Center Frequency is coupled to Channel and Geography

- If Geography is France: Center Frequency 2454 MHz + (channel number* channel space) MHz
- If Geography is Others: Center Frequency 2402 MHz + (channel number* channel space) MHz
- If Radio Stand is Basic or EDR, channel space is 1 MHz
- If Radio Stand is Low Energy, channel space is 2 MHz

In other modes:

Any value of the Center Frequency or Span that keeps start frequency and stop frequency within the frequency range of the instrument is allowed when the value is being set through the front panel numeric keypad or the SCPI command. Other frequency parameters are forced to different values if needed, to keep the start and stop frequencies within the instrument's frequency range

| | |
|------------------------------|---|
| Preset | Depends on instrument maximum frequency, mode, measurement, and selected input See "Center Frequency Presets" on page 1689, "RF Center Freq" on page 1691, "Ext Mix Center Freq" on page 1692, "I/Q Center Freq" on page 1692 and "VXT Models with Radio Heads/CIU Frequency Range" on page 1691 |
| State Saved | Saved in instrument state |
| Min/Max | Depends on instrument maximum frequency, mode, measurement, and selected input See "Center Frequency Presets" on page 1689, "RF Center Freq" on page 1691, "Ext Mix Center Freq" on page 1692, "I/Q Center Freq" on page 1692 and "VXT Models with Radio Heads/CIU Frequency Range" on page 1691 |
| Annotation | Center <value> appears in the lower left corner of the display |
| Status Bits/OPC dependencies | Non-overlapped |

Center Frequency Auto State

| | |
|----------------|--|
| Remote Command | <code>[:SENSe] :FREQuency :CENTer :AUTO ON OFF 1 0</code> <code>[:SENSe] :FREQuency :CENTer :AUTO?</code> |
| Example | <code>:FREQ:CENT:AUTO OFF</code> <code>:FREQ:CENT:AUTO?</code> |
| Dependencies | This is only available in MSR, LTEAFDD/LTEATDD and 5GNR Modes |
| Couplings | When the Center Frequency is changed, the state is automatically changed to Manual |

3 WLAN Mode
3.11 Monitor Spectrum Measurement

Center Frequency, Center Frequency Offset and **Carrier Reference Frequency** are coupled. When Carrier Reference Frequency changes:

- Center Frequency : Auto Center Frequency = Carrier Reference Frequency + Center Frequency Offset (fixed)
- Center Frequency : Man Center Frequency (fixed) = Carrier Reference Frequency + Center Frequency Offset

| | |
|-------------|---------------------------|
| Preset | ON |
| State Saved | Saved in instrument state |
| Range | Auto Man |

Center Frequency Presets

The following table provides the Center Frequency Presets for the Spectrum Analyzer mode, and the Max Freq, for the various frequency options:

| Freq Option | CF after Mode Preset | Stop Freq after Mode Preset | Max Freq (can't tune above) |
|--------------------------|----------------------|-----------------------------|-----------------------------|
| 503 (all but CXA) | 1.805 GHz | 3.6 GHz | 3.7 GHz |
| 503 (CXA) | 1.505 GHz | 3.0 GHz | 3.08 GHz |
| 507 (all but CXA) | 3.505 GHz | 7.0 GHz | 7.1 GHz |
| 507 (CXA) | 3.755 GHz | 7.5 GHz | 7.58 GHz |
| 508 (all but MXE) | 1.805 GHz | 3.6 GHz | 8.5 GHz |
| 508 (MXE) | 4.205 GHz | 8.4 GHz | 8.5 GHz |
| 513 | 6.805 GHz | 13.6 GHz | 13.8 GHz |
| 526 (except CXA and MXE) | 13.255 GHz | 26.5 GHz | 27.0 GHz* |
| 526 (CXA) | 13.255 GHz | 26.5 GHz | 26.55 GHz |
| 526 (MXE) | 1.805 GHz | 3.6 GHz | 27.0 GHz |
| 532 | 16.005 GHz | 32.0 GHz | 32.5 GHz |
| 540 | 20.005 GHz | 40.0 GHz | 40.5 GHz |
| 543 | 21.505 GHz | 43.0 GHz | 43.0 GHz |
| 544 | 22.005 GHz | 44.0 GHz | 45.0 GHz |
| 550 | 25.005 GHz | 50.0 GHz | 52 GHz |
| F03 (CXA-m) | 1.505 GHz | 3.0 GHz | 3.08 GHz |
| F07 (CXA-m) | 3.755 GHz | 7.5 GHz | 7.575 GHz |
| F13 (CXA-m) | 6.805 GHz | 13.6 GHz | 13.8 GHz |
| F26 (CXA-m) | 13.255 GHz | 26.5 GHz | 26.55 GHz |
| 504 (M9421A, M8920A) | 2.145 GHz | 3.88GHz | 3.88 GHz |

| Freq Option | CF after Mode Preset | Stop Freq after Mode Preset | Max Freq (can't tune above) |
|----------------------|----------------------|-----------------------------|-----------------------------|
| 506 (M9421A, M8920A) | 3.245 GHz | 6.08GHz | 6.08 GHz |
| F06 (M9410A/11A) | 1.0 GHz | 6.08 GHz | 6.08 GHz |
| F06 (M9415A) | 1 GHz | 1.08 GHz | 6.6 GHz |
| F08 (M9415A) | 1 GHz | 1.08 GHz | 8.6 GHz |
| F12 (M9415A) | 1 GHz | 1.08 GHz | 12.9 GHz |

*For option 526, the Max CF in RTSA is 26.999999995 GHz.

N9041B Center Freq Presets

| Input | CF after Mode Preset | Stop Freq after Mode Preset | Max Freq (can't tune above) |
|---------------------|----------------------|-----------------------------|-----------------------------|
| Input 1, all models | 25.005 GHz | 50.0 GHz | 52 GHz |
| Input 2, opt 585 | 42.505 GHz | 85.0 GHz | 86 GHz |
| Input 2, opt 590 | 45.005 GHz | 90.0 GHz | 92 GHz |
| Input 2, opt 5CX | 55.005 GHz | 110.0 GHz | 110 GHz |

Input 2, CXA and MXE

| Model | CF after Mode Preset | Stop Freq after Mode Preset | Max Freq (can't tune above) |
|-------------|----------------------|-----------------------------|-----------------------------|
| CXA opt C75 | 0.7505 GHz | 1.5 GHz | 1.58 GHz |
| MXE | 505 MHz | 1 GHz | 1.000025 GHz |

Tracking Generator Frequency Limits (CXA only)

| Tracking Generator Option | Min Freq (clips to this freq when turn TG on and can't tune below while TG on) | If above this Freq, Stop Freq clipped to this Freq when TG turned on | Max Freq (can't tune above) while TG on |
|---------------------------|--|--|---|
| T03 | 9 kHz | 3.0 GHz | 3.08 GHz |
| T06 | 9 kHz | 6.0 GHz | 6.05 GHz |

Tracking Generator Frequency Limits(CXA-m only)

| Tracking Generator Option | Min Freq (clips to this freq when turn TG on and can't tune below while TG on) | If above this Freq, Stop Freq clipped to this Freq when TG turned on | Max Freq (can't tune above) while TG on |
|---------------------------|--|--|---|
| T03 | 2 MHz | 3.08 GHz | 3.08 GHz |
| T07 | 2 MHz | 7.575 GHz | 7.575 GHz |

3 WLAN Mode
3.11 Monitor Spectrum Measurement

| Tracking Generator Option | Min Freq (clips to this freq when turn TG on and can't tune below while TG on) | If above this Freq, Stop Freq clipped to this Freq when TG turned on | Max Freq (can't tune above) while TG on |
|---------------------------|--|--|---|
| T13 | 2 MHz | 13.8 GHz | 13.8 GHz |
| T26 | 2 MHz | 26.55 GHz | 26.55 GHz |

VXT Models with Radio Heads/CIU Frequency Range

The following table shows the Center Frequency Presets and Range for VXT modes with Radio Heads/CIU.

| Products with Radio Heads/CIU | Preset | Start frequency | Stop frequency |
|-------------------------------|--------|-----------------|----------------|
| M9421A + CIU | 6 GHz | 5.9 GHz | 12 GHz |
| M9410A + CIU | 6 GHz | 5.9 GHz | 12 GHz |
| M9410A + CIU + RRH | 25 GHz | 24.25 GHz | 43.5 GHz |

RF Center Freq

Specifies the RF Center Frequency. This command sets the Center Frequency to be used when the RF input is selected, even if the RF input is not the input that is selected at the time the command is sent. Note that **"Center Frequency" on page 1686** in the **Frequency** menu on the front panel always applies to the currently selected input.

| | |
|----------------|--|
| Remote Command | <code>[:SENSe] :FREQuency:RF:CENTer <freq></code> <code>[:SENSe] :FREQuency:RF:CENTer?</code> |
| Example | <code>:FREQ:RF:CENT 30 MHz</code> <code>:FREQ:RF:CENT?</code> |
| Notes | This command is the same in all Modes, but the parameter is Measurement Global, so the value is independent in each Mode and common across all the measurements in the Mode |
| Dependencies | If the electronic/soft attenuator is enabled, any attempt to set Center Frequency such that the Stop Frequency would be >3.6 GHz fails and results in an advisory message. If the equivalent SCPI command is sent, this same message is generated as part of a "-221, Settings conflict" warning |
| Preset | See "Center Frequency Presets" on page 1689 above |
| State Saved | Saved in instrument state |
| Min | -79.999995 MHz |
| Max | See table above. Basically, instrument maximum frequency - 5 Hz If the knob or step keys are being used, also depends on the value of Span |

Ext Mix Center Freq

Specifies the External Mixer Center Frequency. This command sets the Center Frequency to be used when the External Mixer is selected, even if the External Mixer input is not the input that is selected at the time the command is sent. Note that **"Center Frequency" on page 1686** in the **Frequency** menu on the front panel always applies to the currently selected input.

| | |
|----------------|--|
| Remote Command | <code>[:SENSe] :FREQuency :EMIXer :CENTer <freq></code> <code>[:SENSe] :FREQuency :EMIXer :CENTer?</code> |
| Example | <code>:FREQ:EMIX:CENT 60 GHz</code> <code>:FREQ:EMIX:CENT?</code> |
| Notes | This command is the same in all Modes, but the parameter is Measurement Global, so the value is independent in each Mode and common across all the measurements in the Mode |
| Couplings | When returning to External Mixing after having been switched to one of the other inputs (e.g., RF), you will come back into the settings that you had when you left External Mixing. So, you will come back to the band you were in with the Center Frequency that you had. However, Span is not an input-dependent parameter, therefore you will bring the span over from the other input. Therefore, the instrument comes back with the span from the previous input, limited as necessary by the current mixer setup |
| Preset | <p>When a Mode Preset is performed while in External Mixing, the Start frequency of the current Mode is set to the nominal Min Freq of the lowest harmonic range in the Harmonic Table for the current mixer setup. Similarly, the Stop frequency of the current Mode is set to the nominal Max Freq of the highest harmonic range in the Harmonic Table. The Center Freq thus presets to the point arithmetically equidistant from these two frequencies</p> <p>Note that, if the current measurement has a limited Span available to it, and cannot achieve the Span shown in the table (Span=Stop Freq – Start Freq), the instrument uses the maximum Span the measurement allows, and still sets the Center Freq to the midpoint of the Start and Stop Freq values in the Harmonic Table</p> <p>When Restore Input/Output Defaults is performed, the mixer presets to the 11970A, whose Start and Stop frequencies are 26.5 and 40 GHz respectively. The center of these two frequencies is 33.25 GHz. Therefore, after a Restore Input/Output Defaults, if you go into External Mixing and do a Mode Preset while in the Spectrum Analyzer Mode, the resulting Center Freq is 33.25 GHz</p> |
| State Saved | Yes |
| Min | The minimum frequency in the currently selected mixer band + 5 Hz If the knob or step keys are being used, also depends on Span |
| Max | The maximum frequency in the currently selected mixer band - 5 Hz If the knob or step keys are being used, also depends on Span |

I/Q Center Freq

Specifies the I/Q Center Frequency. This command sets the Center Frequency to be used when the I/Q input is selected, even if the I/Q input is not the input that is selected at the time the command is sent. Note that **"Center Frequency" on page**

1686 in the **Frequency** menu on the front panel always applies to the currently selected input.

| | |
|----------------|---|
| Remote Command | <code>[:SENSe] :FREQuency:IQ:CENTer <freq></code> <code>[:SENSe] :FREQuency:IQ:CENTer?</code> |
| Example | <code>:FREQ:IQ:CENT 30 MHz</code> |
| Notes | This command is the same in all Modes, but the parameter is Measurement Global, so the value is independent in each Mode and common across all the measurements in the Mode |
| Preset | 0 Hz |
| State Saved | Saved in instrument state |
| Min | -40.049995 MHz |
| Max | 40.049995 MHz |

Span

Changes the displayed frequency range symmetrically about the center frequency. While adjusting the Span, the Center Frequency is held constant, this means that both Start Frequency and Stop Frequency will change.

If the Span is set to a value greater than the maximum allowable span of the instrument, an error message is generated indicating the data is out of range and was clipped to upper limit.

See "[Span Presets](#)" on page 1694

| | |
|----------------|--|
| Remote Command | <code>[:SENSe] :MONitor:FREQuency:SPAN <freq></code> <code>[:SENSe] :MONitor:FREQuency:SPAN?</code> |
| Example | <code>:MON:FREQ:SPAN 10 MHz</code> <code>:MON:FREQ:SPAN?</code> |
| Dependencies | If the electrical attenuator is enabled, any attempt to set Span such that the Stop Frequency would be >3.6 GHz results in an error In instruments with an RF Preselector, such as MXE, you cannot sweep across the band break at 3.6 GHz while the RF Preselector is on in Continuous sweep, as there is a mechanical switch which bypasses the RF Preselector above 3.6 GHz |
| Couplings | Span affects RBW, sweeptime, FFT & Sweep choice (including FFT Width, Phase Noise Optimization and ADC Dither auto couplings) <ul style="list-style-type: none"> - Any value of the Center Frequency or Span that is within the frequency range of the instrument is allowed when the value is being set through the front panel numeric keypad or the SCPI command. The other parameter is forced to a different value if needed, to keep the Start and the Stop Frequencies within the instrument's frequency range - When using the knob or the step up/down keys or the UP DOWN keywords in SCPI, the value that is being changed i.e., the Center Frequency or Span, is limited so that the other parameter is not |

| | |
|--------------|---|
| | forced to a new value |
| Preset | Depends on instrument maximum frequency, mode, measurement, and selected input See "Span Presets" on page 1694 |
| State Saved | Saved in instrument state |
| Min | 10 Hz |
| Max | Depends on instrument maximum frequency, mode, measurement, and selected input; see "Span Presets" on page 1694 If the knob or step keys are being used, depends on the value of the other three interdependent parameters Center Frequency, Start Frequency, Stop Frequency |
| Annunciation | Data out of range, value clipped to upper limit |
| Annotation | Span <value> appears on the first line of the annotation in the lower right corner of display |

Span Presets

The following table provides the Max Span, for the various frequency options:

| Freq Option | Max Span (can't set higher than this) |
|---------------------------|--|
| 503 (all but CXA) | 3.7 GHz |
| 503, F03 (CXA, CXA-m) | 3.08 GHz |
| 507 (all but CXA) | 7.1 GHz |
| 507 (CXA, CXA-m) | 7.575 GHz |
| 508 (all but MXE) | 8.5 GHz |
| 508 (MXE) | 8.5 GHz |
| 513, F13 | 13.8 GHz |
| 526 (all but CXA and MXE) | 27.0 GHz |
| 526 (MXE) | 27.0 GHz |
| 526, F26 (CXA, CXA-m) | 26.55 GHz |
| 544 | 44.5 GHz |
| 550 | 52 GHz |
| M9415A-F06 | 6.27 GHz |
| M9415A-F08 | 8.27 GHz |
| M9415A-F12 | 12.57 GHz |

Input 2:

| Model | Max Span (can't set higher than this) |
|-------------|--|
| CXA opt C75 | 1.58 GHz |
| MXE | 1.000025 GHz |

3 WLAN Mode
 3.11 Monitor Spectrum Measurement

Note that if you are in External Mixing, the maximum Span will be equal to the Maximum Stop Frequency – Minimum Start Frequency for the currently selected mixer.

Span Presets by Mode

| Mode | Radio Std | Preset Value |
|------------------|---------------------------------|--------------|
| WCDMA | | 10.0 MHz |
| PN | | 1.0 MHz |
| GSM/EDGE | | 1.0 MHz |
| WLAN | 802.11a/b/g/n/ac/ax/be (20 MHz) | 25 MHz |
| | 802.11n/ac/ax/be (40MHz) | 50 MHz |
| | 802.11ac/ax/be (80MHz) | 100 MHz |
| | 802.11ac /ax/be (160MHz) | 200 MHz |
| | 802.11be (320MHz) | 400 MHz |
| MSR | | 20 MHz |
| LTEAFDD, LTEATDD | | 20 MHz |
| 5GNR | | 150 MHz |
| RTS | | 40 kHz |
| CQM | | 10 MHz |

CF Step

Changes the step size for the center frequency and start and stop frequency functions. Once a step size has been selected and the center frequency function is active, the step keys (and the UP|DOWN parameters for Center Frequency from remote commands) change the center frequency by the step-size value. The step size function is useful for finding harmonics and sidebands beyond the current frequency span of the instrument.

Note that the start and stop frequencies also step by the CF Step value.

```
Remote Command  [:SENSe]:FREQuency:CENTer:STEP[:INCRement] <freq>
                 [:SENSe]:FREQuency:CENTer:STEP[:INCRement]?
                 [:SENSe]:FREQuency:CENTer:STEP:AUTO OFF | ON | 0 | 1
                 [:SENSe]:FREQuency:CENTer:STEP:AUTO?
```

```
Example         :FREQ:CENT:STEP 500 MHz
                 :FREQ:CENT UP
                 Increases the current center frequency value by 500 MHz
                 :FREQ:CENT:STEP?
                 :FREQ:CENT:STEP:AUTO ON
```

| :FREQ:CENT:STEP:AUTO? | |
|------------------------------|---|
| Notes | Preset and Max values are dependent on Hardware Options |
| Dependencies | Not available in MSR, LTEAFDD/LTEATDD, 5GNR and Channel Quality Modes If the electronic/soft attenuator is enabled, any attempt to change the value of the center frequency >3.6 GHz by pressing the Up-arrow key, fails and results in an advisory message. If the equivalent SCPI command is sent, this same message is generated as part of a "-221, Settings conflict" warning |
| Couplings | When auto-coupled, the center frequency step size is set to 10% of the span |
| Preset | Auto ON |
| State Saved | Saved in instrument state |
| Min | – (the maximum frequency of the instrument). That is, 27 GHz max freq instrument has a CF step range of +/- 27 GHz. Note that this is the maximum frequency given the current settings of the instrument, so in External Mixing, for example, it is the maximum frequency of the current mixer band |
| Max | The maximum frequency of the instrument. That is, 27 GHz max freq instrument has a CF step range of +/- 27 GHz. Note that this is the maximum frequency given the current settings of the instrument, so in External Mixing, for example, it is the maximum frequency of the current mixer band |
| Status Bits/OPC dependencies | non-overlapped |

3.11.7 Marker

Accesses a menu that enables you to select, set up and control the markers for the current measurement. If there are no active markers, **Marker** selects marker 1, sets it to Normal and places it at the center of the display. If the selected marker is Off, it is set to Normal and placed it at the center of the screen on the trace determined by the **Marker Trace** rules.

For more detailed information on the types of Markers and the interaction between Markers, see the Marker section of the Swept SA measurement.

3.11.7.1 Select Marker

Specifies the *selected marker*. The term "selected marker" is used throughout this document to specify which marker will be affected when you change marker settings, perform a Peak Search, etc.

This control appears above the menu panel, indicating that it applies to all controls in the Marker menu panels. Select Marker is blanked if you select a tab whose controls do *not* depend on the selected marker (for example, Counter).

On any menu tab for which Select Marker displays, the first control is always **Marker Frequency|Time**.

| | |
|--------------|---|
| Notes | The selected marker is remembered even when not in the Marker menu and is used if a Search is done or a Band Function is turned on or for Signal Track or Continuous Peak |
| Preset | Marker 1 |
| State Saved | The number of the selected marker is saved in instrument state |
| Annunciation | Appears in the marker results block label for Normal and Delta markers |

3.11.7.2 Settings

The controls on this tab include the Marker active function and a radio button selection of the marker control mode (Normal, Delta, or Off) for the selected marker, as well as additional functions that help you use markers.

Marker Frequency

Sets the marker X Axis value in the current marker X Axis Scale unit. It has no effect if the control mode is **Off**, but is the SCPI equivalent of entering an X value if the control mode is **Normal** or **Delta**.

| | |
|----------------|--|
| Remote Command | <code>:CALCulate:MONitor:MARKer[1] 2 ... 12:X <freq></code> <code>:CALCulate:MONitor:MARKer[1] 2 ... 12:X?</code> |
| Example | <code>:CALC:MON:MARK3:X 0</code> <code>:CALC:MON:MARK3:X?</code> |
| Notes | If no suffix is sent, uses the fundamental units for the current marker X Axis Scale. If a suffix is sent that does not match the current marker X Axis Scale unit, an error "Invalid suffix" is generated The query returns the marker's absolute X Axis value if the control mode is Normal , or the offset from the marker's reference marker if the control mode is Delta . The query is returned in the fundamental units for the current marker X Axis scale: Hz for Frequency and Inverse Time, seconds for Period and Time |
| Preset | After a preset, all markers are turned OFF, so Marker X Axis Value query returns a not a number (NAN) |
| State Saved | Saved in instrument state |
| Min | -9.9E+37 |
| Max | 9.9E+37 |
| Annotation | Mkr # <X value> and <Marker value> upper right on graph |

Marker X Axis Position (Remote Command Only)

Sets the marker X Axis Scale position in trace points. This setting has no effect if the control mode is Off, but is the SCPI equivalent of entering a value if the control mode is Normal or Delta - except in trace points rather than X Axis Scale units. The entered value is immediately translated into the current X Axis Scale units for setting the value of the marker.

| | |
|----------------|--|
| Remote Command | <code>:CALCulate:MONitor:MARKer[1] 2 ... 12:X:POSition <real></code> <code>:CALCulate:MONitor:MARKer[1] 2 ... 12:X:POSition?</code> |
| Example | <code>:CALC:MON:MARK:X:POS 0</code> <code>:CALC:MON:MARK:X:POS?</code> |
| Notes | The query returns the marker's absolute X Axis value in trace points if the control mode is Normal , or the offset from the marker's reference marker in trace points if the control mode is Delta . The value is returned as a real number, not an integer, corresponding to the translation from X Axis Scale units to trace points. When a Marker is turned on, it is placed center of the screen on the trace. Therefore, the default value depends on instrument condition. If the marker is Off the response is not a number |
| Preset | After a preset, all markers are turned OFF , so Marker X Axis Value query returns a not a number (NAN) |
| State Saved | Saved in instrument state |
| Min | -9.9E+37 |
| Max | 9.9E+37 |

Marker Y Axis Value (Remote Command only)

Returns the marker Y Axis value in the current marker Y Axis unit.

| | |
|------------------------------|--|
| Remote Command | <code>:CALCulate:MONitor:MARKer[1] 2 ... 12:Y?</code> |
| Example | <code>:CALC:MON:MARK11:Y?</code> |
| Notes | Returns the marker Y-axis result if the control mode is Normal or Delta . If the marker is Off , the response is Not A Number |
| Preset | Result dependent on Markers setup and signal source |
| State Saved | No |
| Backwards Compatibility SCPI | <code>:CALCulate:MONitor:MARKer[1] 2 ... 12:FUNCTION:RESult?</code> |

Marker Mode

Sets the marker control mode to **Normal (POSITION)**, **Delta**, or **Off**. All interactions and dependencies detailed under the control description are enforced when the remote command is sent. If the selected marker is Off, pressing Marker sets it to Normal and places it at the center of the screen on the trace determined by the **Marker Trace** rules. At the same time, **Marker X Axis Value** appears on the Active Function area.

The default active function is the active function for the currently selected marker control mode. If the current control mode is **Off**, there is no active function and the active function is turned off.

3 WLAN Mode
3.11 Monitor Spectrum Measurement

| | |
|----------------|--|
| Remote Command | <code>:CALCulate:MONitor:MARKer[1] 2 ... 12:MODE POSition DELTa OFF</code> |
| Example | <code>:CALC:MON:MARK:MODE POS</code> <code>:CALC:MON:MARK:MODE?</code> |
| Preset | OFF |
| State Saved | Saved in instrument state |
| Range | POSITION DELTA OFF |
| Annotation | Mkr # <X value> and <Marker value> upper right on graph |

Backward Compatibility SCPI Commands

Sets or queries the state of a marker. Setting a marker that is **OFF** to **ON** (1) puts it in **Normal** mode and places it at the center of the screen.

| | |
|----------------|--|
| Remote Command | <code>:CALCulate:MONitor:MARKer[1] 2 ... 12:STATe OFF ON 0 1</code> |
| Example | <code>:CALC:MON:MARK3:STAT ON</code> <code>:CALC:MON:MARK3:STAT?</code> |
| Preset | OFF |
| State Saved | Saved in instrument state |
| Range | OFF ON |

Delta Marker (Reset Delta)

Pressing this button has exactly the same effect as selecting the **Delta** selection in **"Marker Mode" on page 1698**. The selected marker becomes a Delta Marker. If the selected marker is already a Delta marker, the reference marker is moved to the current position of the selected marker, thus resetting the Delta to zero.

Marker Settings Diagram

Lets you configure the Marker system using a visual utility.

All Markers Off

Turns off all markers.

| | |
|----------------|---|
| Remote Command | <code>:CALCulate:MONitor:MARKer:AOFF</code> |
| Example | <code>:CALC:MON:MARK:AOFF</code> |

Couple Markers

When this function is **ON**, moving any marker causes an equal X Axis movement of every other marker that is not Off. By “equal X Axis movement” we mean that we preserve the difference between each marker’s X Axis value (in the fundamental x-axis units of the trace that marker is on) and the X Axis value of the marker being moved (in the same fundamental x-axis units).

This may result in markers going off screen.

| | |
|----------------|--|
| Remote Command | :CALCulate:MONitor:MARKer:COUPle[:STATe] ON OFF 1 0 :CALCulate:MONitor:MARKer:COUPle[:STATe]? |
| Example | :CALC:MON:MARK:COUP ON :CALC:MON:MARK:COUP? |
| Preset | OFF Presets on Mode Preset and All Markers Off |
| State Saved | Saved in instrument state |

3.11.7.3 Peak Search

The controls on this tab allow you to move the marker to selected peaks of the signal, giving you enormous analysis capabilities, particularly when combined with the Delta Marker function.

NOTE

Pressing the **Peak Search** hardkey automatically moves you to the **Peak Search** page of the **Marker** menu and performs a Peak Search.

Pressing the **Peak Search** tab once you are already *in* the **Marker** menu does *not* perform a Peak Search.

Marker Frequency

This is the fundamental control that you use to move a marker around on the trace. This is the same as "[Marker Frequency](#)" on page 1697 on the **Settings** tab.

Peak Search

Moves the selected marker to the trace point which has the maximum y-axis value for that marker’s trace.

NOTE

Pressing the **Peak Search** hardkey automatically moves you to the **Peak Search** page of the **Marker** menu and performs a Peak Search.

If the selected marker was off, then it is turned on as a normal marker, and a Peak Search is performed.

| | |
|----------------|--|
| Remote Command | <code>:CALCulate:MONitor:MARKer[1] 2 ... 12:MAXimum</code> |
| Example | <code>:CALC:MON:MARK2:MAX</code> <code>:SYST:ERR?</code> can be used to query the errors to determine if a peak is found. If a search is unsuccessful, then the message "Execution error; No peak found" (-200) will be returned |
| Notes | Sending this command selects the subopcoded marker |

Next Peak

Moves the selected marker to the peak that is next lower in amplitude than the current marker value. If there is no valid peak lower than the current marker value, an "Execution error; No peak found" message is generated and the marker is not moved.

If the selected marker was off, then it is turned on as a normal marker and a peak search is performed.

| | |
|----------------|--|
| Remote Command | <code>:CALCulate:MONitor:MARKer[1] 2 ... 12:MAXimum:NEXT</code> |
| Example | <code>:CALC:MON:MARK2:MAX:NEXT</code> selects marker 2 and moves it to the peak that is next lower in amplitude than the current marker value |
| Notes | Sending this command selects the subopcoded marker |
| State Saved | Not part of saved state |

Marker Delta

Pressing this control has exactly the same effect as selecting the **Delta** selection in "**Marker Mode**" on page 1698 on the **Settings** tab. The selected marker becomes a Delta Marker. If the selected marker is already a Delta marker, the reference marker is moved to the current position of the selected marker, thus resetting the Delta to zero.

The control is duplicated here to allow you to conveniently perform a peak search and change the marker's control mode to Delta without having to access two separate menus.

3.11.7.4 Properties

The controls on this tab are used to set certain properties of the selected marker.

Marker Frequency

This is the fundamental control that you use to move a marker around on the trace. This is the same as "[Marker Frequency](#)" on page 1697 on the **Settings** tab.

Relative To

Selects the marker to which the selected marker is relative (its reference marker).

Every marker has another marker to which it is relative. This marker is referred to as the "reference marker" for that marker. This attribute is set by the **Marker, Properties, Relative To** key. The marker must be a **Delta** marker to make this attribute relevant. If it is a **Delta** marker, the reference marker determines how the marker is controlled and how its value is displayed. A marker cannot be relative to itself.

| | |
|----------------|---|
| Remote Command | <code>:CALCulate:MONitor:MARKer[1] 2 ... 12:REference <integer></code> <code>:CALCulate:MONitor:MARKer[1] 2 ... 12:REference?</code> |
| Example | <code>:CALC:MON:MARK2:REF 1</code> <code>:CALC:MON:MARK2:REF?</code> |
| Notes | This command causes the marker specified with the subopcode to become selected Range (for SCPI command): 1 to 12. If the range is exceeded the value is clipped A marker cannot be relative to itself so that choice is not available, and if sent from SCPI generates error -221: "Settings conflict; marker cannot be relative to itself" When queried a single value is returned (the specified marker numbers relative marker) |
| Couplings | The act of specifying the selected marker's reference marker makes the selected marker a Delta marker If the reference marker is off it is turned on in Normal mode at the delta marker location |
| Preset | The preset default "Relative To" marker (reference marker) is the next higher numbered marker (current marker +1). For example, if marker 2 is selected, then it's default reference marker is marker 3. The exception is marker 12, which has a default reference of marker 1 Set to the defaults by using Restore Mode Defaults . This is not reset by Marker Off , All Markers Off , or Preset |
| State Saved | Saved in instrument state. Not affected by Marker Off and hence not affected by Preset or power cycle |
| Min | 1 |
| Max | 12 |
| Annunciation | Appears in the marker label of a Delta marker |

Marker Trace

Selects the trace on which you want your marker placed. A marker is associated with one and only one trace. This trace is used to determine the placement, result, and X-Axis Scale of the marker. All markers have an associated trace; it is from that trace that they determine their attributes and behaviors, and it is to that trace that they go when they become Normal markers.

Specifying a Marker Trace manually or with this command associates the marker with the specified trace. If the marker is not **OFF**, it moves the marker from the trace it was on to the new trace. If the marker is **OFF**, it stays off but is now associated with the specified trace.

The query returns the number of the trace on which the marker is currently placed.

| | |
|----------------|--|
| Remote Command | <code>:CALCulate:MONitor:MARKer[1] 2 ... 12:TRACe 1 2 3</code> <code>:CALCulate:MONitor:MARKer[1] 2 ... 12:TRACe?</code> |
| Example | <code>:CALC:MON:MARK:TRAC 1</code> <code>:CALC:MON:MARK:TRAC?</code> |
| Notes | A marker may be placed on a blanked and/or inactive trace, even though the trace is not visible and/or updating An application may register a trace name to be displayed on the control instead of a trace number |
| Couplings | The state of Marker Trace is not affected by the "Auto Couple" on page 1833 key Sending the remote command causes the addressed marker to become selected |
| Preset | 1 |
| State Saved | Saved in instrument state |
| Min | 1 |
| Max | 3 |

Marker Settings Diagram

Lets you configure the Marker system using a visual utility. This is the same as the **"Marker Settings Diagram" on page 1699** control on the **Settings** tab.

3.11.7.5 Marker Function

The controls on this tab allow you to control the Marker Functions of the instrument. Marker Functions perform post-processing operations on marker data.

The **Marker Function** menu controls which marker functions are turned on and allows you to adjust the setup parameters for each function. These parameters include the following, but only one parameter can be assigned to a given marker:

- Marker Noise
- Band Power
- Band Density
- Off

Marker Frequency

This is the fundamental control that you use to move a marker around on the trace. This is the same as ["Marker Frequency" on page 1697](#) on the **Settings** tab.

Marker Function

Sets the marker control function type to one of the following:

| | |
|-----------------------|---------------------|
| <code>NOISe</code> | Marker Noise |
| <code>BPOWer</code> | Band Power |
| <code>BDENsity</code> | Band Density |
| <code>OFF</code> | Marker Function Off |

| | |
|----------------|---|
| Remote Command | <code>:CALCulate:MONitor:MARKer[1] 2 ... 12:FUNction NOISe BPOWer BDENsity OFF</code> <code>:CALCulate:MONitor:MARKer[1] 2 ... 12:FUNction?</code> |
| Example | <code>:CALC:MON:MARK:FUNC NOIS</code> <code>:CALC:MON:MARK:FUNC?</code> |
| Preset | <code>OFF</code> |
| State Saved | Yes |
| Range | <code>NOISe BPOWer BDENsity OFF</code> |
| Annotation | Mkr # <X value> and <Marker value> upper right on graph |

Band Span

Sets the width of the frequency span for the selected marker.

| | |
|----------------|--|
| Remote Command | <code>:CALCulate:MONitor:MARKer[1] 2 ... 12:FUNction:BAND:SPAN <freq></code> <code>:CALCulate:MONitor:MARKer[1] 2 ... 12:FUNction:BAND:SPAN?</code> |
| Example | <code>:CALC:MON:MARK12:FUNC:BAND:SPAN 20 MHz</code> <code>:CALC:MON:MARK12:FUNC:BAND:SPAN?</code> |
| Couplings | Changing the Band Span necessarily changes the Band Left and Band Right values |

3 WLAN Mode
3.11 Monitor Spectrum Measurement

| | |
|-------------|--|
| Preset | Depends on X axis range of selected Trace 10% of Span |
| State Saved | Yes |
| Min | -9.9E+37 0 |
| Max | 9.9E+37 26.5GHz |

Band Left

Sets the left edge frequency or time value for the band of the selected marker.

| | |
|----------------|--|
| Remote Command | <code>:CALCulate:MONitor:MARKer[1] 2 ... 12:FUNCTION:BAND:LEFT <freq></code> <code>:CALCulate:MONitor:MARKer[1] 2 ... 12:FUNCTION:BAND:LEFT?</code> |
| Example | <code>:CALC:MON:MARK12:FUNC:BAND:LEFT 20 GHz</code> <code>:CALC:MON:MARK12:FUNC:BAND:LEFT?</code> |
| Couplings | Changing the Band Left necessarily changes the Band Span value |
| Preset | Depends on X axis range of selected Trace |
| State Saved | Yes |
| Min | -9.9E+37 |
| Max | 9.9E+37 |

Band Right

Sets the right edge frequency or time value for the band of the selected marker.

| | |
|----------------|--|
| Remote Command | <code>:CALCulate:MONitor:MARKer[1] 2 ... 12:FUNCTION:BAND:RIGHT <freq></code> <code>:CALCulate:MONitor:MARKer[1] 2 ... 12:FUNCTION:BAND:RIGHT?</code> |
| Example | <code>:CALC:MON:MARK12:FUNC:BAND:RIGH 20 GHz</code> <code>:CALC:MON:MARK12:FUNC:BAND:RIGH?</code> |
| Couplings | Changing the Band Right necessarily changes the Band Span value |
| Preset | Depends on X axis range of selected Trace |
| State Saved | Yes |
| Min | -9.9E+37 |
| Max | 9.9E+37 |

3.11.8 Meas Setup

This menu panel contains functions for setting up the measurement parameters and also contains functions for setting up parameters global to all measurements in the Mode.

3.11.8.1 Settings

Contains frequently used Meas Setup functions to which you will want the fastest access.

Avg|Hold Num

Specifies the number of measurement averages used when calculating the measurement result. The average is displayed at the end of each sweep.

After the specified number of average counts, the averaging mode (terminal control) setting determines the averaging action.

| | |
|----------------|--|
| Remote Command | <code>[:SENSe]:MONitor:AVERage:COUNT <integer></code> <code>[:SENSe]:MONitor:AVERage:COUNT?</code> |
| Example | <code>:MON:AVER:COUN 25</code> <code>:MON:AVER:COUN?</code> |
| Preset | 10 |
| State Saved | Yes |
| Min/Max | 1/1000 |
| Annotation | The average count is displayed in the measurement bar on the front panel display. The annotation appears in the format n/N where n is the current average and N is the average count |

Averaging On/Off

Turns averaging on or off.

| | |
|----------------|--|
| Remote Command | <code>[:SENSe]:MONitor:AVERage[:STATe] OFF ON 0 1</code> <code>[:SENSe]:MONitor:AVERage[:STATe]?</code> |
| Example | <code>:MON:AVER ON</code> <code>:MON:AVER?</code> |
| Preset | OFF |
| State Saved | Yes |
| Range | OFF ON |

Average Mode

Toggles the Average Mode:

- **EXponential**- continues measurement averaging, using the specified number of averages to compute each averaged value. The average is displayed at the end of each sweep
- **REPeat**- causes the measurement to reset the average counter each time the specified number of averages is reached

| | |
|----------------|--|
| Remote Command | <code>[:SENSe]:MONitor:AVERage:TCONtrol EXPonential REPeat</code> <code>[:SENSe]:MONitor:AVERage:TCONtrol?</code> |
| Example | <code>:MON:AVER:TCON EXP</code> <code>:MON:AVER:TCON?</code> |
| Preset | <code>EXPonential</code> |
| State Saved | Yes |
| Range | <code>EXPonential REPeat</code> |

Spur Avoidance

Because the VXT models M9410A/11A/15A are direct-conversion (zero-IF) receivers, feedthrough leakage from the local oscillator appears as a spurious signal (spur) at the center frequency. The **Spur Avoidance** function is provided to eliminate this spur, at the expense of some measurement speed. For Spur Avoidance, the instrument uses a software algorithm to remove this spur from the displayed measurement data.

Some measurements allow you to turn off **Spur Avoidance**, but in this measurement it is always enabled. Therefore, in this measurement the Spur Avoidance switch is unavailable (grayed out) and set to Enabled.

Furthermore, if you press the grayed-out switch, this popup message appears:

`Always enabled in this measurement. See manual for details`

| | |
|----------------|--|
| Remote Command | <code>[:SENSe]:MONitor:SAVoid[:STATe]?</code> |
| Example | <code>:MON:SAV?</code> Always returns <code>ON</code> |
| Dependencies | This control only appears in VXT models M9410A/11A/15A |
| Preset | <code>ON</code> |
| State Saved | Saved in instrument state |
| Range | <code>ON</code> |

Meas Setup Summary Table

Lets you view and access many of the parameters in the Meas Setup menus on one screen.

Auto Couple

Immediately puts all **Auto/Man** functions into **Auto**. **Auto Couple** is confined to the current measurement only. It does not affect other measurements in the Mode.

In the **Auto** state, **Auto/Man** functions are said to be “coupled”, meaning their values change as you make changes to other values in the measurement. This helps ensure accurate measurements and optimum dynamic range. **Auto Couple** is an immediate action function, and when it is executed, all the **Auto/Man** controls for the current measurement are set to **Auto**, and all measurement settings coupled to the **Auto/Man** parameters are automatically set to their optimal values.

For further details of measurement-specific settings (if any), see "[Measurement-Specific Details](#)" on page 1709 below.

| | |
|-------------------------------|---|
| Remote Command | :COUPle ALL |
| Example | :COUP ALL |
| Backwards Compatibility SCPI | :COUPLE ALL NONE |
| Backwards Compatibility Notes | :COUP:NONE puts all Auto/Man parameters in manual mode, decoupling all the coupled instrument parameters. It is retained for backwards compatibility and is <i>not</i> recommended for making measurements or new designs |

All **Auto/Man** parameter couplings in the measurement are set to **Auto**. This includes couplings that may be unavailable or grayed-out due to the current state. For example, in the Swept SA measurement, there is no **Auto/Man** coupling for **RBW** while in Zero Span. Nonetheless, if **Auto Couple** were executed while in Zero Span, it would set **RBW** to Auto "behind the scenes" so that, on exit from Zero Span, it would be in **Auto**.

Any **Auto/Man** selection specific (local) to the other measurements in the current Mode are not affected by **Auto Couple**. Any functions that are *not* coupled with other instrument parameters, such as ranging or leveling variables, such as **AutoRange** or **AutoScale**, are not affected.

Executing **Auto Couple** generates the informational message, "All Auto/Man functions have been set to Auto".

Each parameter, upon being set to **Auto**, selects and sets the appropriate auto-coupled value based on that parameter's coupling rules. The Dependency Resolver orchestrates the couplings for parameters that depend on one or more other parameters. The coupling and dependency rules for each parameter are defined in the section describing that parameter.

Executing **Auto Couple** does *not* affect markers, marker functions, trace or display attributes, or any other instrument setting other than those specifically mentioned above.

Measurement-Specific Details

TOI (SA Mode only)

Parameters affected by **Auto Couple** are:

- Center Frequency Step
- Resolution Bandwidth
- Span/RBW Ratio
- Sweep Time
- Video BANDwidth VBW/RBW ratio
- Upper and Lower Tone (set to Sense)
- Zero span measurement Resolution Bandwidth
- Zero span measurement Dwell Time

Harmonics (SA Mode only)

Parameters affected by **Auto Couple** are:

- Resolution Bandwidth
- Fundamental Frequency
- Dwell Time
- Range Table Resolution Bandwidths
- Range Table Dwell Times

Meas Preset

Restores all the measurement parameters to their default values.

Remote Command :CONFigure:MONitor

Example :CONF:MON

3.11.8.2 Radio

Contains controls to select Radio Standard and settings.

Radio Std

In this menu, 7 groups of WLAN standards can be selected:

1. 802.11a/b/g/j/p includes 802.11a/g/j/p,802.11b/g,802.11g DSSS-OFDM, 802.11j/p 10M, 802.11p 5M
2. 802.11n includes 802.11n 20MHz and 802.11n 40MHz
3. 802.11ac includes 802.11ac 20MHz, 802.11ac 40MHz, 802.11ac 80MHz, 802.11ac 80+80MHz and 802.11ac 160MHz
4. 802.11ah includes 802.11ah1MHz, 802.11ah2MHz, 802.11ah4MHz, 802.11ah 8MHz, and 802.11ah16MHz
5. 802.11af includes 802.11af 6MHz, 802.11af 7MHz and 802.11af 8MHz
6. 802.11ax includes 802.11ax 20MHz, 802.11ax 40MHz, 802.11ax 80MHz, 802.11ax 80+80MHz and 802.11ax 160MHz
7. 802.11be includes 802.11be 20MHz, 802.11be 40MHz, 802.11be 80MHz, 802.11be 160MHz and 802.11be 320MHz

Below each standard, parameters related to demodulation can be set, such as Modulation Format, Guard Interval, and so on.

Remote Command [:SENSe]:RADio:STANdard[:WLAN] AG | BG | GDO | N20 | N40 AC20 | AC40 | AC80 | ACT80 | AC160 | AH1 | AH2 | AH4 | AH8 | AH16 | JP10 | P5 | AF6 | AF7 | AF8 | AX20 | AX40 | AX80 | AXT80 | AX160 | BE20 | BE40 | BE80 | BE160 | BE320

 [:SENSe]:RADio:STANdard[:WLAN]?

Example :RAD:STAN AG

 :RAD:STAN?

Notes If the command is sent with unsupported parameters, an error is generated "Settings conflict; option not installed"

For IQ measurements (CCDF, Power vs Time, Spectral Flatness, IQ Waveform or Modulation Accuracy), they are also limited by BW Option installed. when any radio standard is selected in an IQ measurement which maximum BW could not meet this radio standard request, the “Invalid result; Wider BW required” message will be displayed, and the measurement should return invalid data:
Enum value **ACT80** means “AC Two 80MHz” (802.11ac 80+80 MHz)
Enum value **AXT80** means “AX Two 80MHz” (802.11ax 80+80 MHz)

| | |
|-------------|--|
| Preset | AG |
| State Saved | Saved in instrument state |
| Range | 802.11a/g/j/p (OFDM 20M) 802.11b/g (DSSS/CCK/PBCC) 802.11g (DSSS-OFDM) 802.11n (20 MHz) 802.11n (40 MHz) 802.11ac (20 MHz) 802.11ac (40 MHz) 802.11ac (80 MHz) 802.11ac (80 + 80MHz) 802.11ac (160MHz) 802.11ah(1MHz) 802.11ah(2MHz) 802.11ah(4MHz) 802.11ah (8MHz) 802.11ah(16MHz) 802.11j/p (OFDM 10M) 802.11p (OFDM 5M) 802.11af (6MHz) 802.11af (7MHz) 802.11af (8MHz) 802.11ax (20 MHz) 802.11ax (40 MHz) 802.11ax (80 MHz) 802.11ax (80 + 80MHz) 802.11ax (160MHz) 802.11be (20 MHz) 802.11be (40 MHz) 802.11be (80 MHz) 802.11be (160MHz) 802.11be (320MHz) |

3.11.8.3 Advanced

Contains controls for setting advanced function s of the instrument.

This tab does not appear in EXM or VXT.

Noise Floor Extension

When this function is **ON**, the expected noise power of the instrument (derived from a factory calibration) is subtracted from the trace data. This will usually reduce the apparent noise level by about 10 dB in low band, and 8 dB in high band (>~3.6 GHz).

Noise Floor Extension works with any RBW, VBW, detector, any setting of Average Type, any amount of trace averaging, and any signal type. It is ineffective when the trace is not smoothed (smoothing processes include narrow VBWs, trace averaging, and long sweep times with the detector set to Average or Peak). It works best with extreme amounts of smoothing, and with the average detector, with the Average Type set to Power.

NOTE

Noise Floor Extensions has no effect unless the RF Input is selected, therefore it does nothing when External Mixing is selected.

In those cases where the cancellation is ineffective, it nonetheless has no undesirable side-effects. There is no significant speed impact to having **Noise Floor Extension** on.

The best accuracy is achieved when substantial smoothing occurs in each point before trace averaging. Thus, when using the average detector, results are better

with long sweep times and fewer trace averages. When using the sample detector, the VBW filter should be set narrow with less trace averaging, instead of a wide VBW filter with more trace averaging.

See ["More Information" on page 1712](#).

| | |
|----------------|---|
| Remote Command | <code>[:SENSe]:CORRection:NOISe:FLOor ON OFF 1 0</code> <code>[:SENSe]:CORRection:NOISe:FLOor?</code> |
| Example | <code>:CORR:NOIS:FLO ON</code> |
| Dependencies | This control only appears in instruments with the NFE or NF2 license installed. In all others, the control does not appear, however the SCPI command will be accepted without error (but will have no effect) |
| Couplings | When NFE is enabled in any mode manually, a prompt will be displayed reminding you to perform the Characterize Noise Floor operation if it is needed. If NFE is enabled through SCPI and a Characterize Noise Floor operation is needed, an error will be entered in the system error queue |
| Preset | Unaffected by Mode Preset. Turned off by Restore Mode Defaults |
| State Saved | No |

More Information

The instrument is characterized in the factory (or during a field calibration) with a model of the noise, referred to the input mixer, versus frequency in each band and path combination. Bands are 0 (low band) and 1 through 4 (high band) in a 26.5 GHz instrument, for example. Paths include normal paths, preamp paths, the electronic attenuator, etc.

In most band/path combinations, the noise can be well characterized based on just two parameters and the instrument frequency response before compensation for frequency-dependent losses.

After the noise density at the input mixer is estimated, the effects of the input attenuator, RBW, detector, etc. are computed to get the estimated input-port-referred noise level.

In the simplest case, the measured power (signal plus analyzer noise) in each display point (bucket) is compensated by subtracting the estimated noise power, leaving just the signal power. This is the operation when the detector is Average and the Average Type is set to Power.

In other cases, operation is often not quite as good but still highly effective. With peak detection, the noise floor is estimated based on the RBW and the duration of the bucket using the same equations used in the noise marker function. The voltage of the noise is subtracted from the voltage of the observed signal-plus-noise measurement to compute the estimated signal voltage. The peak detector is one example of processing that varies with detector to give good estimates of the signal level without the analyzer noise.

3 WLAN Mode

3.11 Monitor Spectrum Measurement

For best operation, the average detector and the power scale are recommended, as already stated. Peak detection for pulsed-RF can still give excellent effectiveness. FFT analysis does not work well, and does not do NFE well, with pulsed-RF signals, so this combination is not recommended. Negative peak detection is not very useful, either. Sample detection works well, but is never better than the average detector because it doesn't smooth as well. The Normal detector is a combination of peak and negative peak behaviors, and works about as well as these.

For best operation, extreme smoothing is desirable, as already stated. Using narrow VBWs works well, but using very long bucket durations and the average detector works best. Reducing the number of trace points will make the buckets longer.

For best operation, the power scale (Average Type = Power) is optimum. When making CW measurements in the presence of noise without NFE, averaging on the decibel scale has the advantage of reducing the effect of noise. When using NFE, the NFE does an even better job than using the log scale ever could. Using NFE with the log scale is not synergistic, though; NFE with the power scale works a little better than NFE with log averaging type.

The results from NFE with internal preamp can often be lower than the theoretical noise in a signal source at room temperature, a noise density of -174 dBm/Hz. This is expected and useful behavior, because NFE is designed to report the amount of input signal that is in excess of the thermal noise, not the amount that includes the thermal noise. This can be a useful behavior because thermal noise often interferes with what you want to measure, instead of being part of what you want to measure. Note that NFE is not adequately accurate to always be able to read below kTB.

On instruments with the NF2 license installed, the calibrated Noise Floor used by Noise Floor Extensions should be refreshed periodically. Keysight recommends that the **Characterize Noise Floor** operation be performed after the first 500 hours of operation, and once every calendar year. The key to perform this is located in the **System, Alignments, Advanced** menu. If you have not done this yourself at the recommended interval, then when you turn on Noise Floor Extensions, the instrument will prompt you to do so with a dialog that says:

This action will take several minutes to perform. Please disconnect all cables from the RF input and press Enter to proceed. Press ESC to cancel, or Postpone to postpone for a week

If you Cancel, you will be prompted again the next time you turn NFE on. If you postpone, you will be prompted again after a week passes and you then turn NFE on.

Conversion

Access a menu of functions that enable you to control the frequency conversion type for the current measurement. The following choices are available:

Auto **AUTO** Auto optimizes demodulation quality by selecting single conversion

| | | |
|-------------------------|-----------------|--|
| | | when available. Default value |
| Single High Side | SHSide | Single downconversion with the LO frequency above the receiver frequency. Not image protected, and available only above 400 MHz or at all frequencies under specific condition |
| Single Low Side | SLSide | Single downconversion with the LO frequency below the receiver frequency. Not image protected, and available only above 1.1 GHz |
| Image Protect | IPRotect | Double downconversion with pre-selection filtering. Available at all frequencies |

| | |
|----------------|--|
| Remote Command | <code>[:SENSE]:MONitor:CONversion:TYPE AUTO SHSide SLSide IPRotect</code> <code>[:SENSE]:MONitor:CONversion:TYPE?</code> |
| Example | <code>:MON:CON:TYPE AUTO</code> <code>:MON:CON:TYPE?</code> |
| Dependencies | This control only appears in the M9391A |
| Couplings | The availabilities of SingleHighSide and SingleLowSide depend on the current Sweep Parameters such as Center Freq, Span, Res BW and Points |
| Preset | <code>AUTO</code> |
| State Saved | Yes |
| Range | <code>AUTO SHSide SLSide IPRotect</code> |

Phase Noise Optimization

Access a menu of functions that enable you to control the phase noise optimization for the current measurement. The following choices are available:

| | | |
|-------------------------|-----------------|--|
| Normal | NORmal | Sets the Synthesizer's Phase Lock Loop to the Normal setting (Best Close-In) |
| Best Wide Offset | BWOffset | Sets the Synthesizer's Phase Lock Loop for narrow bandwidth to improve ORFS and EVM measurements for wide modulation |

| | |
|----------------|---|
| Remote Command | <code>[:SENSE]:MONitor:PNOise:OPTion NORmal BWOffset</code> <code>[:SENSE]:MONitor:PNOise:OPTion?</code> |
| Example | <code>:MON:PNO:OPT NOR</code> <code>:MON:PNO:OPT?</code> |
| Dependencies | This control only appears in the M9391A |
| Preset | <code>NORmal</code> |
| State Saved | Yes |
| Range | <code>NORmal BWOffset</code> |

3.11.8.4 Global

The controls in this menu apply to all Modes in the instrument.

Some controls (for example, "[Global Center Freq on page 1850](#)") allow you to switch certain Meas Global parameters to a Mode Global state. These switches apply to all Modes that support global settings. For example, no matter what Mode you are in when you set **Global Center Freq** to **ON**, it applies to all Modes that support Global settings.

Other controls (for example, **Extend Low Band**) are actually set in this menu, but apply to all Modes.

Global Center Freq

The software maintains a Mode Global value called **Global Center Freq**.

When **Global Center Freq** is switched **ON**, the current Mode's center frequency is copied into the **Global Center Frequency**, and from then on all Modes that support global settings use the **Global Center Frequency**, so you can switch between any of these Modes and the **Center Frequency** remains unchanged.

Adjusting the **Center Frequency** of any Mode that supports Global Settings, while **Global Center Freq** is **ON**, modifies the **Global Center Freq**.

When **Global Center Freq** is switched **OFF**, the **Center Frequency** of the current Mode is unchanged, but now the **Center Frequency** of each Mode is once again independent.

When **Mode Preset** is pressed while **Global Center Freq** is **ON**, the **Global Center Freq** is preset to the preset **Center Frequency** of the current Mode.

This function resets to **OFF** when "[Restore Defaults on page 1852](#)" is pressed, or when **System, Restore Defaults, All Modes** is pressed.

| | |
|------------------------------|--|
| Remote Command | <code>:INSTRument:COUPlE:FREQuency:CENTer ALL NONE</code> <code>:INSTRument:COUPlE:FREQuency:CENTer?</code> |
| Example | <code>:INST:COUP:FREQ:CENT ALL</code> <code>:INST:COUP:FREQ:CENT?</code> |
| Preset | Set to OFF on Global Settings, Restore Defaults and System, Restore Defaults, All Modes |
| Range | ALL NONE |
| Preset | OFF |
| Backwards Compatibility SCPI | <code>:GLOBa1:FREQuency:CENTer[:STATe] 1 0 ON OFF</code> <code>:GLOBa1:FREQuency:CENTer[:STATe]?</code> |

Global EMC Std

When this control is switched **ON**, the current Mode's EMC Std is copied into the **Global EMC Std**, and from then on all Modes that support global settings use the **Global EMC Std**, so you can switch between any of these Modes and the EMC Std remains unchanged.

Adjusting the EMC Std of any Mode that supports Global settings, while **Global EMC Std** is **ON** modifies the **Global EMC Std**.

When **Global EMC Std** is switched **OFF**, the EMC Std of the current Mode remains unchanged, but now the EMC Std of each Mode is once again independent. When **Mode Preset** is pressed while **Global EMC Std** is **ON**, **Global EMC Std** is preset to the preset EMC Std of the current Mode.

This function resets to **OFF** when "**Restore Defaults**" on page 1852 is pressed, or when **System, Restore Defaults, All Modes** is pressed.

| | |
|----------------|--|
| Remote Command | <code>:INSTRument:COUPle:EMC:STANdard ALL NONE</code> <code>:INSTRument:COUPle:EMC:STANdard?</code> |
| Example | <code>:INST:COUP:EMC:STAN ALL</code> <code>:INST:COUP:EMC:STAN?</code> |
| Dependencies | Only available if Option EMC is installed |
| Preset | Set to OFF on Global Settings, Restore Defaults and System, Restore Defaults, All Modes |
| Range | ALL NONE |

Restore Defaults

Resets all functions in the **Global** settings menu to **OFF**. Pressing **System, Restore Defaults, All Modes** has the same effect.

| | |
|---------------------------------|---|
| Remote Command | <code>:INSTRument:COUPle:DEFault</code> |
| Example | <code>:INST:COUP:DEF</code> |
| Backwards Compatibility SCPI | <code>:GLOBal:DEFault</code> |

3.11.9 Sweep

Accesses controls that enable you configure and control the acquisition of data and the X-axis parameters of the instrument. These controls might include Sweep Time, Continuous/Single, Pause/Resume, X Scale, and number of Points.

3.11.9.1 Sweep/Control

Accesses controls that let you operate the sweep and control functions of the instrument, such as **Sweep Time** and **Continuous/Single**.

Sweep Time

Controls the time the instrument takes to sweep the current frequency span in swept measurements, displays the sweep time in swept measurements, and displays the equivalent Sweep Time in FFT measurements.

When **Sweep Time** is in Auto, the instrument computes a time that will give accurate measurements based on other settings, such as RBW and VBW.

You can select a shorter sweep time to improve the measurement throughput (with some potential unspecified accuracy reduction), but the **Meas Uncal** indicator will appear if the sweep time you set is less than the calculated Auto Sweep time.

You can also select a longer sweep time, which can be useful (for example) for obtaining accurate insertion loss measurements on very narrowband filters.

NOTE

Significantly faster sweep times are available with Option FS1.

NOTE

The **Meas Uncal** (measurement uncalibrated) warning is displayed in the Status Bar at the bottom of the screen when the manual Sweep time entered is faster than the time computed by the instrument's Sweep time equations, that is, the Auto Sweep Time. The instrument's computed Sweep time will provide accurate measurements; if you sweep faster than this your measurements may be inaccurate. A **Meas Uncal** condition may be corrected by returning the Sweep Time to Auto; by entering a longer Sweep Time; or by choosing a wider RBW and/or VBW.

NOTE

On non-sweeping hardware, this control is grayed-out. The value shown on this control is an estimate. It is the measurement's turnaround time, which is the sum of signal acquisition time, FFT time, and other overhead time, to complete the entire span of the measurement. If you need to specify the same "Sweep Time" as you would for sweeping hardware, send `[:SENSe] :<meas> :SWEEp:TIME <time>`. The measurement emulates the "Sweep Time" effect, but this emulation is not straightforward, and therefore the behavior is not specified. Instead, we recommend using Minimum Acquisition Time, which provides better control.

Remote Command `[:SENSe] :<meas> :SWEEp:TIME <time>`
`[:SENSe] :<meas> :SWEEp:TIME?`

| | |
|------------------------------|---|
| Example | Channel Power measurement: :CHP:SWE:TIME 25ms :CHP:SWE:TIME? |
| Notes | In the ACP measurement in WCDMA Mode, this parameter is preset by Meas Method selection. Preset values are as follows: <ul style="list-style-type: none"> - IBW: 29 ms - IBWR: 108 ms - FAST 7.5 ms |
| Dependencies | On non-sweeping hardware, this control is grayed out, and the Auto/Man toggle disappears. The read-only control shows estimated sweep time In those instruments, " Minimum Acquisition Time " on page 1719 is available |
| Couplings | Coupled to Span , RBW , VBW , and Sweep Time Rules when Sweep Time is set to Auto; Sweep Time changes when these parameters are changed When you manually set a value when in the Auto state, the state automatically changes to Man |
| Preset | Automatically Calculated unless noted below WCDMA Mode <ul style="list-style-type: none"> - Channel Power: 1.0 msOBW: 32.6 ms - ACP: 29 ms |
| State Saved | Saved in instrument state |
| Min | Other than non-sweeping hardware: Typically, 1 ms Non-sweeping hardware: N/A In the ACP measurement, when Meas Method is Fast Power , the minimum sweep time is span-dependent and automatically calculated |
| Max | Other than non-sweeping hardware: 4000 s Non-sweeping hardware: N/A |
| Annotation | The sweep time is displayed in the lower-right corner of the screen. The number of points is displayed parenthetically, as: Sweep 13.3 ms (1001 points) A “#” mark appears before “Sweep” in the annotation when it is switched from Auto to Manual coupling |
| Status Bits/OPC dependencies | Meas Uncal is Bit 0 in the register: :STATus:QUESTionable:INTEgrity:UNCalibrated Auto Function |
| Remote Command | :SENSe]:<meas>:SWEep:TIME:AUTO OFF ON 0 1 :SENSe]:<meas>:SWEep:TIME:AUTO? |
| Example | Channel Power measurement: |

| | |
|--------|---|
| | <code>:CHP:SWE:TIME:AUTO OFF</code> |
| | <code>:CHP:SWE:TIME:AUTO?</code> |
| Preset | WCDMA Mode OFF |
| | All others ON |

Minimum Acquisition Time

Available on non-sweeping hardware.

Specifies the minimum acquisition time for each “chunk” of the measurement result. The instrument automatically divides Span into multiple chunks if needed. Therefore, the total signal acquisition time for the entire Span is:

$$\sim(\sim\text{Minimum Acquisition Time}) * (\text{The number of chunks})$$

When in Auto, this parameter’s value is determined by other parameters, such as **Span**, **RBW** and **VBW**.

You can manually increase this parameter value from this Auto value.

If increased, the instrument acquires signal for the specified time duration for each chunk. It performs additional FFTs, and averages or peak-holds the FFT results for a chunk, depending on **Detector** settings.

Note that the actual acquisition time for each chunk may exceed the **Minimum Acquisition Time** value, in order to satisfy FFT time required by other parameters, and to perform an integer number of FFTs.

| | |
|----------------|--|
| Remote Command | <code>[:SENSe] : < meas > : SWEep : ACQuisition : TIME < time ></code> <code>[:SENSe] : < meas > : SWEep : ACQuisition : TIME ?</code> <code>< meas ></code> is the identifier for the current measurement; any one of CHPower - ACPower OBwidth MONitor |
| Example | Channel Power measurement <code>:CHP:SWE:ACQ:TIME 500 ms</code> <code>:CHP:SWE:ACQ:TIME?</code> |
| Dependencies | Available only on non-sweeping hardware |
| Couplings | Coupled to Span , RBW , and VBW when in the Auto state When you manually set a value when in the Auto state, the state automatically changes to Man |
| Preset | Automatically calculated |
| State Saved | Saved in instrument state |
| Min | 100 ns |
| Max | 4.00 ks |

Auto Function

| | |
|----------------|--|
| Remote Command | <code>[:SENSe]:<meas>:SWEep:ACQuisition:TIME:AUTO OFF ON 0 1</code> <code>[:SENSe]:<meas>:SWEep:ACQuisition:TIME:AUTO?</code> <code><meas></code> is the identifier for the current measurement; any one of <code>CHPower-ACPower OBWidth MONitor</code> |
| Example | Channel Power measurement: <code>:CHP:SWE:ACQ:TIME:AUTO OFF</code> |
| Preset | <code>ON</code> |

Sweep/Measure

Lets you toggle between **Continuous** and **Single** sweep or measurement operation. The single/continuous state is Meas Global, so the setting affects all measurements.

The front-panel key **Single/Cont** performs exactly the same function

See "[More Information](#)" on page 1721

| | |
|-------------------------------|---|
| Remote Command | <code>:INITiate:CONTinuous OFF ON 0 1</code> <code>:INITiate:CONTinuous?</code> |
| Example | Put instrument into Single measurement operation: <code>:INIT:CONT 0</code> <code>:INIT:CONT OFF</code> Put instrument into Continuous measurement operation: <code>:INIT:CONT 1</code> <code>:INIT:CONT ON</code> |
| Preset | <code>ON</code> Note that <code>:SYST:PRES</code> sets <code>:INIT:CONT</code> to <code>ON</code> , but <code>*RST</code> sets <code>:INIT:CONT</code> to <code>OFF</code> |
| State Saved | Saved in instrument state |
| Annunciation | The Single/Continuous icon in the Meas Bar changes depending on the setting: <ul style="list-style-type: none"> - A line with an arrow is Single - A loop with an arrow is Continuous |
| Backwards Compatibility Notes | X-Series A-models had Single and Cont hardkeys in place of the SweepSingleCont softkey. In the X-Series A-models, if in single measurement, the Cont hardkey (and <code>INIT:CONT ON</code>) switched to continuous measurement, but never restarted a measurement and never reset a sweep X-Series B-models have a Cont/Single toggle control instead of Single and Cont hardkeys, but it is still true that, if in single measurement, the Cont/Single toggle control never restarts a measurement and never resets a sweep |

More Information

| | |
|-----------------|---|
| Continuous Mode | <p>The instrument takes repetitive sweeps, averages, measurements, etc., when in continuous mode. If in average or Max/Min Hold, and the average/hold count reaches the Average/Hold Num, the count stops incrementing, but the instrument keeps sweeping</p> <p>See the Trace key description under Trace Average for the averaging formula used both before and after the Average/Hold Num is reached. The trigger condition must be met prior to each sweep</p> <p>The type of trace processing for multiple sweeps is set under the Trace key, with choices of Trace Average, Max Hold, or Min Hold</p> |
| Single Mode | <p>The instrument takes a single sweep when in Single mode, or if in average or Max/Min Hold, or if there is a Waterfall window displayed, it takes multiple sweeps until the average/hold count reaches the Average/Hold Num, then the count stops incrementing, and the instrument stops sweeping</p> <p>See the Trace key description under Trace Average for the averaging formula used. The trigger condition must be met prior to the sweep</p> <p>The type of trace processing for multiple sweeps is set under the Trace key, with choices of Trace Average, Max Hold, or Min Hold</p> |

If the instrument is in **Single** measurement mode, pressing the **Cont/Single** toggle control does not zero the count and does not cause the sweep to be reset; the only action is to put the instrument into Continuous measurement operation.

If the instrument is already in **Continuous** sweep:

- **:INIT:CONT 1** has no effect
- **:INIT:CONT 0** places the instrument in Single Sweep but has no effect on the current sequence until $k = N$, at which point the current sequence will stop and the instrument will go to the idle state

See "**Restart**" on page 1853 for details of **:INIT:IMMEDIATE**.

If the instrument is already in **Single** sweep, **:INIT:CONT OFF** has no effect.

If the instrument is already in **Single** sweep, then pressing **Cont/Single** in the middle of a sweep does not restart the sweep or sequence. Similarly, pressing **Cont/Single** does not restart the sweep or sequence if the sweep is not in the idle state (for example, if you are taking a very slow sweep, or the instrument is waiting for a trigger). Even though pressing **Cont/Single** in the middle of a sweep does not restart the sweep, sending **:INIT:IMM** does reset it.

If the instrument is in **Single** sweep, and *not* Averaging/Holding, and you want to take one more sweep, press **Restart**.

If the instrument is in **Single** sweep, *and* Averaging/Holding, and you want to take one more sweep without resetting the Average trace or count, go to **Meas Setup** and

increment the average count by 1 by pressing the **Step-Up** key while **Average/Hold Num** is the active function. You can also do this by sending **:CALC:AVER:TCON UP**.

Restart

Restarts the current sweep, or measurement, or set of averaged/held sweeps or measurements. If you are Paused, pressing **Restart** performs a Resume.

The front-panel key **Restart** performs exactly the same function.

The **Restart** function is accessed in several ways:

- Pressing the **Restart** key
- Sending **:INIT:IMM**
- Sending **:INIT:REST**

See "[More Information](#)" on page 1722

| | |
|-------------------------------|---|
| Remote Command | :INITiate[:IMMEDIATE] :INITiate:REStart |
| Example | :INIT:IMM :INIT:REST |
| Notes | :INIT:REST and :INIT:IMM perform exactly the same function |
| Couplings | Resets average/hold count k. For the first sweep overwrites all active (update = on) traces with new current data. For application modes, it resets other parameters as required by the measurement |
| Status Bits/OPC dependencies | This is an Overlapped command The STATUS:OPERation register bits 0 through 8 are cleared , <i>except</i> bit 6 (Waiting for Periodic Sync). Initiating a measurement and Waiting for Periodic Sync could be asynchronous The STATUS:QUESTionable register bit 9 (INTegrity sum) is cleared The SWEEPING bit is set The MEASURING bit is set |
| Backwards Compatibility Notes | For Spectrum Analysis Mode in ESA and PSA, the Restart hardkey and the :INIT:REST command restarted trace averages (displayed average count reset to 1) for a trace in Clear Write , but did not restart Max Hold and Min Hold In X-Series, the Restart hardkey and the :INIT:REST command restart not only Trace Average , but MaxHold and MinHold traces as well |

More Information

The **Restart** function first aborts the current sweep or measurement as quickly as possible. It then resets the sweep and trigger systems, sets up the measurement

and initiates a new data measurement sequence with a new data acquisition (sweep) taken once the trigger condition is met.

If the instrument is in the process of aligning when a **Restart** is executed, the alignment finishes before the restart function is performed.

Even when set for **Single** operation, multiple sweeps may be taken when **Restart** is pressed (for example, when averaging/holding is on). Thus, when we say that **Restart** "restarts a measurement", depending on the current settings, we may mean that it:

- Restarts the current sweep
- Restarts the current measurement
- Restarts the current set of sweeps if any trace is in Trace Average, Max Hold or Min Hold
- Restarts the current set of measurements if Averaging, or Max Hold, or Min Hold is on for the measurement

If there is no Average or Max/Min Hold function (no trace in Trace Average or Hold, or **Average/Hold Num** set to 1), and no **Waterfall** window is being displayed, a single sweep is equivalent to a single measurement. A single sweep is taken after the trigger condition is met; and the instrument stops sweeping once that sweep has completed. However, with **Average/Hold Num** >1, and at least one trace set to Trace Average, Max Hold, or Min Hold, or a **Waterfall** window being displayed, multiple sweeps/data acquisitions are taken for a single measurement. The trigger condition must be met prior to each sweep. The sweep is stopped when the average count k equals the number N set for **Average/Hold Num**.

Once the full set of sweeps has been taken, the instrument goes to the idle state. To take one more sweep without resetting the average count, increment the average count by 1, by pressing the **Step-Up** key while **Average/Hold Number** is the active function, or by sending the remote command `:CALC:AVER:TCON UP`.

Trace Update

The numeric results are not blanked at any time during the restart cycle.

For slow sweeps (see **Trace Update** section in **Trace/Detector**), the traces are updated real-time during the sweep. There may be a special circumstance in application mode measurements where an exception is made and the traces and/or results need to be blanked before displaying the new results.

To summarize, the following list shows what happens to the trace data on various events:

| Event | Trace Effect |
|---|--|
| Clear/Write pressed (even if already in Clear/Write) | Set to mintracevalue |
| Max Hold pressed (even if already in Max Hold) | Set to mintracevalue |
| Min Hold pressed (even if already in Min Hold) | Set to maxtracevalue |
| Trace Average pressed (even if already in Trace Average) | Trace data unaffected but start new sweep/avg/hold |
| Restart pressed | Trace data unaffected but start new sweep/avg/hold |
| Parameter requiring restart changed (e.g., RBW) | Trace data unaffected but start new sweep/avg/hold |

Sweep and Trigger Reset

Resetting the sweep system resets the average/hold count k to 0. It also resets the set point counter to 0. Resetting the trigger system resets the internal auto trig timer to the value set by the **Auto Trig** control.

Averaging

The weighting factor used for averaging is k . This k is also the average/hold count for how many valid sweeps (data acquisitions) have been done. This k is used for comparisons with N , as those comparisons always needs to be based on valid completed sweeps.

The displayed average/hold, K , shows the count for the sweep (data acquisition) in progress. $K = k + 1$, with a limit of N . The displayed value K changes from its previous value to 1 as soon as the trigger condition for the first data acquisition (sweep) is met.

Pause/Resume

Pauses a measurement after the current data acquisition is complete.

When paused, the label on the control changes to **Resume**. Pressing **Resume** unpauses the measurement. When paused, pressing **Restart** performs a Resume.

| | |
|----------------|---|
| Remote Command | <code>:INITiate:PAUse</code> <code>:INITiate:RESume</code> |
| Example | <code>:INIT:PAUS</code> <code>:INIT:RES</code> |

| | |
|--------------|--|
| Dependencies | Not displayed in Modes that do not support pausing |
| Annotation | Only on control |

Abort (Remote Command Only)

Stops the current measurement. Aborts the current measurement as quickly as possible, resets the sweep and trigger systems, and puts the measurement into an "idle" state. If the instrument is in the process of aligning when **:ABORT** is sent, the alignment finishes *before* the abort function is performed, so **:ABORT** does not abort an alignment.

If the instrument is set for **Continuous** measurement, it sets up the measurement and initiates a new data measurement sequence with a new data acquisition (sweep) taken once the trigger condition is met.

If the instrument is set for **Single** measurement, it remains in the "idle" state until an **:INIT:IMM** command is received.

| | |
|------------------------------|--|
| Remote Command | :ABORT |
| Example | :ABOR |
| Notes | <p>If :INIT:CONT is ON, then a new continuous measurement will start immediately, with sweep (data acquisition) occurring once the trigger condition has been met</p> <p>If :INIT:CONT is OFF, then :INIT:IMM is used to start a single measurement, with sweep (data acquisition) occurring once the trigger condition has been met</p> |
| Dependencies | <p>For continuous measurement, :ABORT is equivalent to the Restart key</p> <p>Not all measurements support this command</p> |
| Status Bits/OPC dependencies | <p>The STATUS:OPERation register bits 0 through 8 are cleared , <i>except</i> bit 6 (Waiting for Periodic Sync). Initiating a measurement and Waiting for Periodic Sync could be asynchronous</p> <p>The STATUS:QUESTionable register bit 9 (INTEGRity sum) is cleared</p> <p>Since all the bits that feed into OPC are cleared by :ABORT, the Abort command will cause the *OPC query to return true</p> |

Sweep Time Annotation (Remote Query Only)

Returns the **Sweep Time Annotation** value. Available only on non-sweeping hardware.

This value is also displayed in the result trace window.

The value returned is the estimated turnaround time of each measurement cycle, in seconds. The turnaround time is the sum of the signal acquisition time, FFT time, and other overhead time, to complete the entire span of each measurement cycle.

| | |
|----------------|--|
| Remote Command | [:SENSe] : <meas> : SWEep : ETIME ? |
|----------------|--|

| | |
|--------------|---|
| | <code><meas></code> is the identifier for the current measurement; any one of <code>CHPower- ACPower OBWidth MONitor</code> |
| Example | Channel Power measurement <code>:CHP:SWE:ETIME?</code> |
| Dependencies | Available only on non-sweeping hardware |
| Preset | Automatically calculated |

3.11.9.2 Sweep Config

Accesses controls that enable you to configure the Sweep and Control functions of the instrument, such as Sweep Rules.

Points

Sets the number of points taken per sweep, and displayed in the traces. The current value of points is displayed parenthetically, next to the sweep time in the lower-right corner of the display. Using more points provides greater resolution. Using fewer points compacts the data and decreases the time required to access a trace over the remote interface.

Increasing the number of points does not increase the sweep time. However, it can slightly impact the trace processing time and therefore the overall measurement speed. Decreasing the number of points does not decrease the sweep time, but it may speed up the measurement, depending on the other sweep settings (for example, in FFT sweeps). Fewer points will always speed up the I/O.

Due to minimum sweep rate limitations of the hardware, the minimum sweep time available to the user will increase above its normal value of 1 ms as the number of sweep points increases above 15001.

Changing the number of sweep points has several effects on the instrument. Since markers are read at the point location, the marker reading may change. The sweep time resolution will change. Trace data for all the traces will be cleared and, if Sweep is in Cont, a new trace taken. If any trace is in average or hold, the averaging starts over.

Because of sweep time quantization issues, the knob and up/down keys cannot be used to adjust the number of points.

When in a split screen display each window may have its own value for points.

When sweep points is changed, an informational message "Sweep points changed, all traces cleared" is displayed and in the 5G NR mode, Auto Sweep Points is set to OFF(0).

Remote Command `[:SENSe] :MONitor :SWEep :POINTs <integer>`

3 WLAN Mode
 3.11 Monitor Spectrum Measurement

| | |
|--------------|---|
| | <code>[:SENSe] :MONitor :SWEep :POINTs ?</code> |
| Example | <code>:MON:SWE:POIN 1000</code> <code>:MON:SWE:POIN?</code> |
| Dependencies | This function is not available when Signal ID is set to On in External Mixing Neither the knob nor the step keys can be used to change this value. If it is tried, a warning is given Not displayed in modes that do not support Swept |
| Couplings | Whenever the number of sweep points change: <ul style="list-style-type: none"> - All trace data is erased - Any traces with Update Off will also go to Display Off (like going from View to Blank in the older instruments) - Sweep time is re-quantized - Any limit lines that are on will be updated - If averaging/hold is on, averaging/hold starts over - Auto Sweep Points is OFF (Only 5GNR) The resolution of setting the sweep time depends on the number of points selected |
| Preset | 1001 unless noted below 2001: 5GNR |
| State Saved | Saved in instrument state |
| Min | 1 |
| Max | 20001 |
| Annotation | On second line of annotations, in lower right corner in parenthesis behind the sweep annotation |

3.11.10 Trace

Lets you control the acquisition, display, storage, detection, and manipulation of trace data for the available traces.

The "**Trace Control**" on page 1728 tab in this menu contains radio-button selections for the trace type (**Clear/Write**, **Trace Average**, **Max Hold**, **Min Hold**) and **View/Blank** setting for the selected trace.

3.11.10.1 Select Trace

Specifies the *selected trace*, which is the trace that will be affected when you change trace settings.

Select Trace appears above the menu panel, indicating that it applies to *all* controls in the menu panel. **Select Trace** is blanked if you select a tab whose controls do *not* depend on the selected trace (for example, **Trace Function**).

| | |
|--------------|---|
| Notes | The selected trace is remembered even when not in the Trace menu |
| Dependencies | For the Swept SA measurement: <ul style="list-style-type: none"> - In Image Suppress mode, when you select a trace it becomes the active trace, and the formerly active trace goes into View - When you turn on Image Suppress, Update turns off for all traces except the selected trace For the ACP measurement, when Meas Method is RBW , FAST or FPOwer , Select Trace is disabled |
| Preset | Trace 1 |
| State Saved | Yes |

3.11.10.2 Trace Control

The controls on this tab allow you to set the "Trace Type" on page 1728 and its update mode.

There are four Trace Types:

- Clear/Write
- Trace Average
- Max Hold
- Min Hold

Each type handles data in a different way.

Each trace also has two values that determine whether it is being written or not, and whether it is being displayed or not. These values, **Update** and **Display**, are described fully in the "View/Blank" on page 1734 control description. Essentially, when **Update** is **ON**, a trace is updating, and when **Update** is **OFF** it is not. When **Display** is **ON**, it is visible and when **Display** is **OFF** it is not. These terms are used throughout the descriptions in this section.

Trace Type

There are four trace Types:

| Option | Parameter | SCPI Example | Details |
|---------------|----------------|-------------------------|-----------------------------------|
| Clear/Write | WRITE | :TRAC2:TYPE WRIT | See: "Clear/Write" on page 1731 |
| Trace Average | AVERage | :TRAC2:TYPE AVER | See: "Trace Average" on page 1732 |

| Option | Parameter | SCPI Example | Details |
|--------------|-----------|------------------|------------------------------|
| Maximum Hold | MAXHold | :TRAC3:TYPE MAXH | See: "Max Hold" on page 1733 |
| Minimum Hold | MINHold | :TRAC5:TYPE MINH | See: "Min Hold" on page 1733 |

Full descriptions of each type are provided below. You may select one of these types for each trace. Re-selecting the current **Trace Type** initiates the same action that selecting it the first time did, even though it is already selected. For example, selecting **Clear/Write** while **Clear/Write** is already selected will nonetheless clear the trace and begin rewriting it.

Besides the **Trace Type**, the "**View/Blank**" on page 1734 state must be set to **Active** (**Update: ON, Display: ON**) for a trace to be updating and visible. Selecting any **Trace Type** automatically makes the trace **Active**.

See also: "**Trace Mode Backwards Compatibility Commands**" on page 1729

| | |

| Annunciation | The type for each trace is indicated in the Trace annunciator panel on the Measurement Bar |

Trace Mode Backwards Compatibility Commands

In earlier instruments, the "Trace Modes" were: Clear/Write, Max Hold, Min Hold, View and Blank. Averaging was global to all traces and was controlled under the **BW/Avg** menu.

In X-Series, trace averaging can be done on a per-trace basis. The Trace Modes (now called Trace Types) are Clear/Write, Trace Average, Max Hold and Min Hold. View and Blank are set separately under "[View/Blank](#)" on page 1734.

While this provides more flexibility, it also gives rise to potential backwards compatibility problems. To mitigate these, the old Trace Mode command has been retained and a new Trace Type command has been added. The `:TRACe:MODE` command is retained for backwards compatibility, and the `:TRACe:TYPE`, `:TRACe:UPDate` and `:TRACe:DISPlay` commands introduced for ongoing use. The old Trace Modes are selected using `:TRAC:MODE`, whose parameters are mapped into calls to `:TRACe:TYPE`, `:TRACe:UPDate` and `:TRACe:DISPlay`, and the old global Averaging command `[:SENSe]:AVERage[:STATe]` is provided for backwards compatibility. See the individual command descriptions for details.

When **Average/Hold** in the **Meas Setup, Legacy Compatibility** menu is **ON**, the following is true for traces in Max Hold and Min Hold:

- They ignore the **Average/Hold** number; **Single** for Max Hold causes one sweep only, so switching to **Single** stops after the current sweep, and switching to **Cont** starts again without clearing the accumulated result
- Max Hold is not cleared on a **Restart**, **Single** or `:INIT:IMM`, but changing a measurement parameter, like frequency or bandwidth etc., still restarts the Max Hold

| | |
|-------------------------------|---|
| Preset | <code>WRITE</code> |
| State Saved | The trace mode is an alias only |
| Backwards Compatibility SCPI | <code>:TRACe[1] 2 ... 6:MODE WRITE MAXHold MINHold VIEW BLANK</code> <code>:TRACe[1] 2 ... 6:MODE?</code> |
| Backwards Compatibility Notes | <p>The legacy <code>:TRACe:MODE</code> command is retained for backwards compatibility. In conjunction with the legacy <code>:AVERage</code> command, it works as follows:</p> <ul style="list-style-type: none"> - <code>:AVERage ON OFF</code> sets/clears a variable that we will call average for the sake of this discussion. This variable is maintained by the instrument solely for backwards compatibility. See the <code>[:SENSe]:AVERage[:STATe]</code> command description below - <code>:TRACe:MODE WRITE</code> sets <code>:TRACe:TYPE WRITE</code> (Clear/Write) unless average is true, in which case it sets it to <code>:TRACe:TYPE AVERage</code>. It also sets <code>:TRACe:UPDate ON</code>, <code>:TRACe:DISPlay ON</code>, for the selected trace - <code>:TRACe:MODE MAXHold</code> sets <code>:TRACe:TYPE MAXHold</code> (Max Hold). It also sets <code>:TRACe:UPDate ON</code>, <code>:TRACe:DISPlay ON</code>, for the selected trace - <code>:TRACe:MODE MINHold</code> sets <code>:TRACe:TYPE MINHold</code> (Min Hold). It also sets <code>:TRACe:UPDate ON</code>, <code>:TRACe:DISPlay ON</code>, for the selected trace - <code>:TRACe:MODE VIEW</code> sets <code>:TRACe:UPDate OFF</code>, <code>:TRACe:DISPlay ON</code>, for the selected trace |

3 WLAN Mode
3.11 Monitor Spectrum Measurement

- `:TRACe:MODE BLANK` sets `:TRACe:UPDate OFF`, `:TRACe:DISPlay OFF`, for the selected trace

The query returns the same value as `:TRACe:TYPE?`, meaning that if you set `:TRACe:MODE:VIEW` or `:TRACe:MODE:BLANK`, the query response will not be what you sent

`:TRACe[n]:MODE` was formerly used to set the type or “writing mode” of the trace. At that time, View and Blank were writing modes. The new `:TRACe:TYPE` command should be used in the future, but `:TRACe:MODE` is retained to provide backwards compatibility

In X-Series, unlike earlier instruments, Max Hold and Min Hold now obey the Average Number and counts up to a terminal value as Average always has

As the **Average/Hold Number** now affects **Min Hold** and **Max Hold**, the operations that restart Averaging (for example, the **Restart** key) now also restart **Min Hold** and **Max Hold**

As a result of these changes, legacy code that restarts averaging while retaining a running Max Hold will need to be rewritten, because the Max Hold will now restart when the Average does

Also, previous to X-Series:

- Pressing **Max Hold** while already in **Max Hold** (or doing so remotely) had no effect. Now it will clear the trace and restart the sweep and the Max Hold sequence
- Changing the vertical scale (Log/Lin or dB/div) of the display restarted **Max Hold** and **Min Hold**. This is no longer the case

| | |
|-------------------------------|--|
| Preset | <code>OFF</code> |
| State Saved | The state of Average is saved in Instrument State for ghosting purposes |
| Backwards Compatibility SCPI | <code>[:SENSe]:AVERage[:STATe] ON OFF 1 0</code> <code>[:SENSe]:AVERage[:STATe]?</code> |
| Backwards Compatibility Notes | <p>Previous to X-Series, Averaging (also sometimes known as trace averaging) was global to all traces, that is, it was either on or off for all active traces. The legacy command <code>[:SENSe]:AVERage[:STATe] ON OFF 1 0</code> was used to turn Averaging on or off</p> <p>In X-Series, Averaging is turned on or off on a per-trace basis, so it can be on for one trace and off for another</p> <p>For backwards compatibility, the old global Average State variable is retained solely as a legacy variable, turned on and off and queried by the legacy command <code>[:SENSe]:AVERage[:STATe] OFF ON 0 1</code>. When Average is turned on, any trace in Clear/Write will get put into Average. While Average is on, any trace put into Clear/Write by the old <code>:TRAC:MODE</code> command will instead get put into Average. When Average is turned off, any trace in Average will get put into Clear/Write</p> |

Trace Type Details

Clear/Write

Each trace update replaces the old data in the trace with new data.

Pressing **Clear/Write** for the selected trace, or sending `:TRAC:TYPE WRIT` for the specified trace, sets the trace type to **Clear/Write** and clears the trace, even if you are already in **Clear/Write**. Then a new sweep is initiated. Trigger conditions must be met before the sweep actually starts, and if in **Single** the sweep won't start until **Restart** is pressed.

Pressing **Clear/Write** stops the current sweep and initiates a new one, so **Trace Average**, **Max Hold** and **Min Hold** data may be interrupted in mid-sweep when **Clear/Write** is pressed, and therefore may not accurately reflect the displayed count. Therefore, when **Clear/Write** is pressed for one trace, **Trace Average**, **Max Hold** and **Min Hold** must restart for all traces.

When in **Clear/Write**, if a measurement-related instrument setting is changed (that is, one which requires new data to be taken, like **Center Frequency** or **Attenuation**), a new sweep is initiated but the trace is not cleared.

Trace Average

The instrument maintains and displays an average trace, which represents the cumulative average on a point-by-point basis of the new trace data and previous averaged trace data.

Pressing **Trace Average** (for the selected trace), or sending `:TRAC:TYPE AVER` (for the specified trace), sets the trace type to **Trace Average**, clears the trace, initiates a new sweep, and restarts the Average sequence.

Details of the count limiting behavior and the averaging calculations may be found under **Avg|Hold Number** and **Average Type** under **Meas Setup**.

When in **Trace Average**, if a measurement-related instrument setting is changed (that is, one which requires new data to be taken, like **Center Frequency** or **Attenuation**), the average restarts and a new sweep is initiated but the trace is not cleared.

Restarting the average means:

- The average/hold count k is set to 1, so that the next time the average trace is displayed it simply represents one trace of new data
- A new sweep is initiated
- Once the new sweep starts, the trace is overwritten with current trace data as the first trace of the new average

Remember that restarting averaging also restarts **Max Hold** and **Min Hold**, as there is only one count for Trace Average and Hold.

Max Hold

The instrument maintains and displays a max hold trace, which represents the maximum data value on a point-by-point basis of the new trace data and previous trace data. Details of the count limiting behavior may be found under **Avg|Hold Number** under **Meas Setup**.

Pressing **Max Hold** for the selected trace, or sending `:TRAC:TYPE MAXH` for the specified trace, sets the Trace Type to **Max Hold**, clears the trace, initiates a new sweep, and restarts the hold sequence, even if you are already in **Max Hold**.

When in **Max Hold**, if a measurement-related instrument setting is changed (that is, one which requires new data to be taken, like **Center Frequency** or **Attenuation**), the **Max Hold** sequence restarts and a new sweep is initiated but the trace is not cleared.

Restarting the **Max Hold** sequence means:

- The average/hold count k is set to 1, so that the next time the max hold trace is displayed it simply represents one trace of new data
- A new sweep is initiated.

Remember that restarting **Max Hold** also restarts averaging and **Min Hold**, as there is only one count for Trace Average and Hold.

Min Hold

The instrument maintains and displays a min hold trace, which represents the minimum data value on a point-by-point basis of the new trace data and previous trace data. Details of the count limiting behavior may be found under **Avg|Hold Number** under the **Meas Setup** functions.

Pressing **Min Hold** for the selected trace, or sending `:TRAC:TYPE MINH` for the specified trace, sets the Trace Type to **Min Hold**, clears the trace, initiates a new sweep, and restarts the hold sequence, even if you are already in **Min Hold**.

When in **Min Hold**, if a measurement-related instrument setting is changed (that is, one which requires new data to be taken, like **Center Frequency** or **Attenuation**), the **Min Hold** sequence restarts and a new sweep is initiated but the trace is not cleared.

Restarting the **Min Hold** sequence means:

- The average/hold count k is set to 1, so that the next time the min hold trace is displayed it simply represents one trace of new data
- A new sweep is initiated

Remember that restarting **Min Hold** also restarts **Max Hold** and averaging, because there is only one count for Trace Average and Hold.

Clear and Write | Restart Averaging | Restart Max/Min Hold

Starts the trace writing, as though the "Trace Type" on page 1728 had just been selected. The effect is exactly the same as reselecting the current **Trace Type** again – the control is provided because it may not be obvious that reselecting the same selection from a radio button menu will take any action.

This control displays different labels, depending on the selected Trace Type:

- **Clear/Write:** Clear and Write
- **Trace Average:** Restart Averaging
- **Max Hold:** Restart Max Hold
- **Min Hold:** Restart Min Hold

View/Blank

Lets you set the state of the two trace variables: **Update** and **Display**. The choices available in this dropdown menu are:

| | |
|-------------------|---|
| Active | Update and Display both ON |
| View | Update OFF ; Display ON |
| Blank | Update OFF ; Display OFF |
| Background | Update ON , Display OFF Allows a trace to be blanked <i>and</i> continue to update "in the background", which was not possible in the past |

In the Swept SA measurement, a trace with **DisplayOFF** is indicated by a strikethrough of the type letter in the trace annotation panel in the Measurement Bar. A trace with **UpdateOFF** is indicated by dimming the type letter in the trace annotation panel in the Measurement Bar. In the example below, Traces 3, 4, 5 and 6 have **UpdateOFF**, and Traces 4 and 6 have **DisplayOFF**.

See: "[More Information](#)" on page 1736

| | |
|--------------|---|
| Notes | For the commands to control the two variables, Update and Display, see " Trace Update State On/Off " on page 1735 and " Trace Display State On/Off " on page 1735 below |
| Dependencies | When Signal ID is on, this key is grayed-out |

Couplings

Selecting a Trace Type for a trace (pressing the key or sending the equivalent command) puts the trace in **Active** (Update **ON** and Display **ON**), even if that trace type was already selected

Selecting a detector for a trace (pressing the key or sending [:SENS] :DET :TRAC) puts the trace in **Active** (Update **ON** and Display **ON**), even if that detector was already selected

Selecting a "Math Function" on page 815 other than **OFF** for a trace (pressing the key or sending the equivalent command) puts the trace in **Active** (Update **ON** and Display **ON**), even if that Math Mode was already selected

Loading a trace from a file puts that trace in **View** regardless of the state it was in when it was saved; as does being the target of a **Copy** or a participant in an **Exchange**

Trace Update State On/Off

Remote Command

For Swept SA Measurement (in SA Mode):
`:TRACe[1]|2|...|6:UPDate[:STATe] ON | OFF | 1 | 0`
`:TRACe[1]|2|...|6:UPDate[:STATe]?`

For all other measurements:
`:TRACe[1]|2|3:<meas>:UPDate[:STATe] ON | OFF | 1 | 0`
`:TRACe[1]|2|3:<meas>:UPDate[:STATe]?`

where <meas> is the identifier for the current measurement

Example

Make trace 2 inactive (stop updating):
`:TRAC2:UPD 0`

Couplings

Whenever you set **Update** to **ON** for any trace, the **Display** is set to **ON** for that trace

Preset

For Swept SA Measurement (in SA Mode):
`1|0|0|0|0|0`

ON for Trace 1; **OFF** for 2–6

For all other measurements:
`1|0|0`

ON for Trace 1; **OFF** for 2 & 3

State Saved

Saved in instrument state

Trace Display State On/Off

Remote Command

For Swept SA Measurement (in SA Mode):
`:TRACe[1]|2|...|6:DISPlay[:STATe] ON | OFF | 1 | 0`
`:TRACe[1]|2|...|6:DISPlay[:STATe]?`

For all other measurements:
`:TRACe[1]|2|3:<meas>:DISPlay[:STATe] ON | OFF | 1 | 0`
`:TRACe[1]|2|3:<meas>:DISPlay[:STATe]?`

where <meas> is the identifier for the current measurement

| | |
|-------------|--|
| Example | <p>Make trace 1 visible: :TRAC2:DISP 1</p> <p>Blank trace 3: :TRAC3:DISP 3</p> |
| Couplings | Whenever you set Update to ON for any trace, the Display is set to ON for that trace |
| Preset | <p>For Swept SA Measurement (in SA Mode): 1 0 0 0 0 0</p> <p>ON for Trace 1; OFF for 2–6</p> <p>For all other measurements: 1 0 0</p> <p>ON for Trace 1; OFF for 2 & 3</p> |
| State Saved | Saved in instrument state |

More Information

When a trace becomes inactive, any update from the **:SENSe** system (detectors) immediately stops, without waiting for the end of the sweep. The trace data remains unchanged, but stops updating. If the trace is blanked, this still does not affect the data in the trace. Traces that are blanked (**Display=OFF**) do not display nor appear on printouts, but their data stays intact, they may be queried, and markers may be placed on them

In most cases, inactive traces are static and unchanging; however, there are cases when an inactive trace will update, specifically:

- if data is written to that trace from remote
- if trace data is loaded from mass storage
- if the trace is the target of a **Copy** or participant in an **Exchange**
- if the trace is cleared using **Clear Trace**

Inactive traces that are also being displayed (traces in **View**) are displayed at half intensity. Traces in **View** display across the entire X-Axis of the instrument. Their horizontal placement does not change, even if X-Axis settings subsequently are changed, although Y-Axis settings do affect the vertical placement of data.

When a trace becomes active (**Update=ON**), the trace is cleared, the average count is reset, and a new sweep is initiated.

Note that putting a trace into **Display=OFF** and/or **Update=OFF** does *not* restart the sweep and does *not* restart Averaging or Hold functions for any traces.

Trace Settings Table

Lets you configure the Trace system using a visual utility.

Clear All Traces

Clears all traces from the display.

| | |
|---------------------------------|--|
| Remote Command | :TRACe:MONitor:CLEAr:ALL |
| Example | :TRAC:MON:CLE:ALL |
| Backwards Compatibility SCPI | :DISPLay:MONitor:VIEW:WINDow:TRACe:CLEAr:ALL |

3.11.10.3 Detector

Lets you choose and configure detectors for the selected trace.

Detector

Allows you to select a specific detector for the current measurement. When the detector choice is Auto, the instrument selects the detector. The selected detector depends on marker functions, trace functions, and trace averaging functions for the current measurement.

The following options are available:

| | |
|-------------------------|--|
| AUTO | The detector selected depends on marker functions, trace functions, average type, and the trace averaging function In the ACP measurement, when in AUTO, the detector selected is set to AVERage, unless the Radio Standard defaults state otherwise e.g., it is set to Peak for Radio Standard = PDC when Device = both MS and BTS, and when Radio Standard = NADC and Device = MS |
| NORMal | The detector determines the peak of the CW-like signals, and it yields alternating maximums and minimums of noise-like signals. This is also referred to as Rosenfell detection |
| AVERage | The detector determines the average of the signal within the sweep points, using RMS averaging |
| POSitive Peak | The detector determines the maximum of the signal within the sweep points |
| SAMPLE | The detector indicates the instantaneous level of the signal at the center of the sweep points represented by each display point |
| NEGative | The detector determines the minimum of the signal within the sweep points |

Peak

Because they may not find a spectral component's true peak, neither **AVERage** nor **SAMPle** detectors measure amplitudes of CW signals as accurately as Peak or **NORMal**, but they do measure noise without the biases of Peak detection.

| Remote Command | <code>[:SENSe]:MONitor:DETEctor:TRACe[1]2 3 AVERage NEGative NORMal POSitive SAMPle RMS</code> <code>[:SENSe]:MONitor:DETEctor:TRACe?</code> | | | | | | | | | | | | |
|------------------------------|--|-----------------|------------|-------------|--------|-------------|---------------|------------|------|-------------|--------|------------|---------------|
| Example | <code>:MON:DET:TRAC NORM</code> <code>:MON:DET:TRAC?</code> <code>:MON:DET RMS</code> Sets the detector to AVERage . AVERage uses RMS averaging, so this is equivalent to selecting RMS | | | | | | | | | | | | |
| Notes | The query returns a string corresponding to the detector type as shown below <table border="1" data-bbox="393 814 1406 1071"> <thead> <tr> <th>String Returned</th> <th>Definition</th> </tr> </thead> <tbody> <tr> <td>NORM</td> <td>Normal</td> </tr> <tr> <td>AVER</td> <td>Average (RMS)</td> </tr> <tr> <td>POS</td> <td>Peak</td> </tr> <tr> <td>SAMP</td> <td>Sample</td> </tr> <tr> <td>NEG</td> <td>Negative Peak</td> </tr> </tbody> </table> <p>The RMS selection sets the detector type to AVERage with RMS averaging. Therefore, if RMS has been selected, the query returns “AVER”</p> | String Returned | Definition | NORM | Normal | AVER | Average (RMS) | POS | Peak | SAMP | Sample | NEG | Negative Peak |
| String Returned | Definition | | | | | | | | | | | | |
| NORM | Normal | | | | | | | | | | | | |
| AVER | Average (RMS) | | | | | | | | | | | | |
| POS | Peak | | | | | | | | | | | | |
| SAMP | Sample | | | | | | | | | | | | |
| NEG | Negative Peak | | | | | | | | | | | | |
| Couplings | When " Detector Select Auto/Man " on page 1738 is ON , the detector selected depends on the Trace (Average) type | | | | | | | | | | | | |
| Preset | NORMal | | | | | | | | | | | | |
| State Saved | Yes | | | | | | | | | | | | |
| Range | AVERage NEGative NORMal POSitive SAMPle RMS | | | | | | | | | | | | |
| Annotation | The four letter mnemonic for the detector appears in the trace window next to the trace it applies to | | | | | | | | | | | | |
| Backwards Compatibility SCPI | <code>[:SENSe]:MONitor:DETEctor[:FUNCTION]</code> Applied to Trace 1 only | | | | | | | | | | | | |

Detector Select Auto/Man

Sets the Detector mode to Auto or Manual. In Auto, the proper detector is chosen based on rules that take into account the measurement settings and other instrument settings.

When any detector is selected by the user, this toggles automatically set to Man (manual).

3 WLAN Mode
 3.11 Monitor Spectrum Measurement

| | |
|------------------------------|--|
| Remote Command | <code>[:SENSe]:MONitor:DETEctor:TRACe[1] 2 3:AUTO ON OFF 1 0</code> <code>[:SENSe]:MONitor:DETEctor:TRACe[1] 2 3:AUTO?</code> |
| Example | <code>:MON:DET:TRAC2:AUTO ON</code> <code>:MON:DET:TRAC2:AUTO?</code> |
| Couplings | When this function is ON , the "Detector" on page 1737 and "Trace Type" on page 1728 settings automatically align as follows: <ul style="list-style-type: none"> - "NORMa1" with Clear Write - "AVERAge" with AVERAge - "POSitive (Peak)" with MAXHold - "NEGative (Peak)" with MINHold |
| Preset | ON |
| State Saved | Yes |
| Backwards Compatibility SCPI | <code>[:SENSe]:MONitor:DETEctor:AUTO</code> Applied to Trace 1 only |

3.12 IQ Waveform Measurement

The IQ Waveform measurement is a time-domain measurement that lets you view the envelope, real and imaginary components of an RF or baseband signal. It is similar in many respects to the zero-span measurement in traditional spectrum analysis but gives you direct access to the I/Q pairs of the signal, such as those that make up modern communications signals. The IQ Waveform measurement can also be used to perform general purpose power measurements to a high degree of accuracy.

You can examine the RF envelope (magnitude) of the signal, or open an I/Q Waveform window, which shows the I and Q signal waveform voltage versus time, to disclose the voltages that comprise the complex modulated waveform of a digital signal.

Measurement Commands

The general functionality of ["CONFigure" on page 2568](#), ["INITiate" on page 2569](#), ["FETCh" on page 2569](#), ["MEASure" on page 2571](#), and ["READ" on page 2570](#) are described in the section **SCPI Operation and Results Query** in the topic **Programming the Instrument**.

The following measurement commands and queries are used to configure the measurement:

| | |
|---|---|
| <code>:INITiate:WAVeform</code> | Initiates a trigger cycle for the WAV measurement, but does not return any data. You must then use <code>:FETC:WAV[n]?</code> to retrieve data Does not change any measurement settings |
| <code>:CONFigure?</code> | Returns the long form name of current measurement, in this case, WAVeform |
| <code>:CONFigure:WAVeform</code> | Selects WAV measurement with Meas Setup settings in preset state – same as "Meas Preset" on page 1835 |
| <code>:CONFigure:WAVeform:NDEFault</code> | Selects WAV measurement <i>without</i> affecting settings |

The following queries are used to retrieve the results:

| | |
|-------------------------------------|--|
| <code>:FETCh:WAVeform?</code> | Retrieves the data defined by n |
| <code>:MEASure:WAVeform [n]?</code> | Switches to WAV measurement, restores default values, starts the measurement, then retrieves the data defined by n |
| <code>:READ:WAVeform[n]?</code> | Starts the measurement, then retrieves the data defined by n |

Remote Command Results

For the **:FETCH**, **:MEASure** and **:READ** queries above, the results returned depend on the **n** parameter value as follows:

| n | Results Returned | | | | | | | | | | | | | | | | | | | | | | | | |
|----------|--|---------------------|-------------|---------------------|---|---|--|---|---|-----|---|--|-----|---|--|--|---|--|----|---|--|-----|---|--|-----|
| 0 | Returns unprocessed I/Q trace data, as a series of trace point pairs, in Volts Each pair consists of an I value (even-indexed, starting at 0), followed by a Q value (odd-indexed) | | | | | | | | | | | | | | | | | | | | | | | | |
| 1 | Returns the following scalar results: <table border="1"> <thead> <tr> <th>#</th> <th>Item</th> <th>Unit, if any</th> </tr> </thead> <tbody> <tr> <td>1</td> <td>Sample Time A floating-point number representing the time between samples. This value is important when analyzing signal results (that is, when you send a query using n = 0, 2, etc.)</td> <td></td> </tr> <tr> <td>2</td> <td>Mean Power The power across the entire trace. If Averaging State is ON, as set by "Avg/Hold Number (Averaging On/Off)" on page 1825, the power is for the latest acquisition</td> <td>dBm</td> </tr> <tr> <td>3</td> <td>Mean Power Averaged The power across the entire trace If Averaging State is ON, the power for N averages (the latest acquisition), as set by "Avg/Hold Number (Averaging On/Off)" on page 1825 If Averaging State is OFF, the value of the mean power averaged is the same as the value of the mean power</td> <td>dBm</td> </tr> <tr> <td>4</td> <td>Number of samples The number of data points in the captured signal. If Averaging State is ON , the peak-to-mean ratio is calculated using the highest peak value, rather than the displayed average peak value | dB | 6 | Maximum value The maximum of the most recently acquired data | dBm | 7 | Minimum value The minimum of the most recently acquired data | dBm |
| # | Item | Unit, if any | | | | | | | | | | | | | | | | | | | | | | | |
| 1 | Sample Time A floating-point number representing the time between samples. This value is important when analyzing signal results (that is, when you send a query using n = 0, 2, etc.) | | | | | | | | | | | | | | | | | | | | | | | | |
| 2 | Mean Power The power across the entire trace. If Averaging State is ON , as set by " Avg/Hold Number (Averaging On/Off) " on page 1825, the power is for the latest acquisition | dBm | | | | | | | | | | | | | | | | | | | | | | | |
| 3 | Mean Power Averaged The power across the entire trace If Averaging State is ON , the power for N averages (the latest acquisition), as set by " Avg/Hold Number (Averaging On/Off) " on page 1825 If Averaging State is OFF , the value of the mean power averaged is the same as the value of the mean power | dBm | | | | | | | | | | | | | | | | | | | | | | | |
| 4 | Number of samples The number of data points in the captured signal. This value is important when analyzing signal results (that is, when you send a query using n = 0, 2, etc.) | | | | | | | | | | | | | | | | | | | | | | | | |
| 5 | Peak-to-mean ratio The ratio of the maximum signal level to the mean power. Valid values are only obtained with Averaging State OFF . If Averaging State is ON , the peak-to-mean ratio is calculated using the highest peak value, rather than the displayed average peak value | dB | | | | | | | | | | | | | | | | | | | | | | | |
| 6 | Maximum value The maximum of the most recently acquired data | dBm | | | | | | | | | | | | | | | | | | | | | | | |
| 7 | Minimum value The minimum of the most recently acquired data | dBm | | | | | | | | | | | | | | | | | | | | | | | |
| 2 | Returns trace point values of the entire captured signal envelope trace data Floating-point numbers, representing the power of the signal (in dBm). There are N data points, where N is the number of samples. The period between the samples is defined by the Sample Time (see n = 1 above) | | | | | | | | | | | | | | | | | | | | | | | | |
| 3 | Returns unprocessed I/Q trace data, as a series of trace point values, in volts The I values are listed first in each pair, as the even-indexed values (starting at 0). The Q values are odd-indexed. The number of points returned is defined by " Meas Time " on page 1828 * " Sample Rate " on page 1828, and is one point less than index 0 | | | | | | | | | | | | | | | | | | | | | | | | |

n Results Returned

4 Returns conjugated I/Q trace data, in Volts, if "Invert Spectrum" on page 1848 is set to **INVert**. Otherwise, returns the same unprocessed I/Q trace data as n = 0 above

3.12.1 Views

You can select the measurement view you want to use from the **Mode/Measurement/View** selector screen. You can also specify the view programmatically, using one of these commands:

View Selection by name

Specify the desired View by its name:

| | |
|----------------|---|
| Remote Command | <code>:DISPlay:WAVeform:VIEW[:SElect] RFENvelope IQ</code> <code>:DISPlay:WAVeform:VIEW[:SElect]?</code> |
| Example | <code>:DISP:WAV:VIEW RFEN</code> <code>:DISP:WAV:VIEW?</code> |
| Preset | <code>RFENvelope</code> |
| State Saved | Saved in instrument state |
| Range | RF Envelope I/Q Waveform |

View Selection by number

Specify the desired View by its number:

| | |
|----------------|---|
| Remote Command | <code>:DISPlay:WAVeform:VIEW:NSElect <integer></code> <code>:DISPlay:WAVeform:VIEW:NSElect?</code> |
| Example | <code>:DISP:WAV:VIEW:NSEL 1</code> <code>:DISP:WAV:VIEW:NSEL?</code> |
| Notes | View 1 is the RF Envelope View View 2 is the I/Q Waveform View |
| Preset | 1 |
| State Saved | Saved in instrument state |
| Min/Max | 1/2 |

3.12.1.1 RF Envelope

Windows: "RF Envelope" on page 1743, "Metrics" on page 1744

Shows an RF envelope (magnitude) window and a metrics table showing the measured values for the mean power and peak-to-mean power.

3.12.1.2 I/Q Waveform

Windows: ["I/Q Waveform" on page 1744](#)

Shows a window with I and Q voltages vs time. SCPI commands can also be used to query the I/Q pairs while in this View.

3.12.2 Windows

The following windows are available in this measurement.

- ["RF Envelope" on page 1743](#)
- ["Metrics" on page 1744](#)
- ["I/Q Waveform" on page 1744](#)

3.12.2.1 RF Envelope

Displays an amplitude-vs time (time domain) graph of the envelope (magnitude) of the RF waveform:

3.12.2.2 Metrics

Shows the measured values for the mean power and peak-to-mean power of the RF Envelope result of the waveform (time domain) measurements.

Numeric Results

| Name | Type | Description | Unit | Format |
|------------|---------|---|------|-----------|
| Mean Pwr | Float64 | The mean power (dBm). This is either the power across the entire trace, or the power between markers if the markers are enabled | dBm | XX.XX dBm |
| Pk-to-Mean | Float64 | This is the ratio of the maximum signal level to the mean power | dB | XX.XX dB |
| Max Pt | Float64 | The maximum of the most recently acquired data | dBm | XX.XX dBm |
| Min Pt | Float64 | The minimum of the most recently acquired data | dBm | XX.XX dBm |

3.12.2.3 I/Q Waveform

Shows an amplitude-vs time (time domain) graph of the quadrature (I and Q) components of the RF waveform. This allows you to measure the phase of the waveform as well as its magnitude. The yellow trace is the I (real) component and the blue trace is the Q (imaginary) component.

3 WLAN Mode

3.12 IQ Waveform Measurement

3.12.3 Amplitude

Activates the **Amplitude** menu and selects **Reference Level** or **Reference Value** as the active function, depending on the measurement.

Some features in this menu apply to multiple measurements. Some other features apply only to specific measurements and their controls are blanked or grayed-out in measurements that do not support the feature.

3.12.3.1 Y Scale

Contains controls that pertain to the Y axis parameters of the measurement. These parameters control how data on the vertical (Y) axis is displayed and control instrument settings that affect the vertical axis.

Ref Value

Sets the value for the absolute power reference. The functionality depends on the selected window. The reference line is at the top, center, or bottom of the graticule, depending on the value of "[Ref Position](#)" on page 1748.

RF Envelope

| | |
|----------------|--|
| Remote Command | <code>:DISPlay:WAVeform:VIEW[1]:WINDow[1]:TRACe:Y[:SCALE]:RLEVel <amptd></code> |
| Example | <code>:DISP:WAV:VIEW:WIND:TRAC:Y:RLEV -50 dBm</code> |
| Couplings | When " Auto Scaling " on page 1749 is ON (default), this value is automatically determined by the measurement result. When you set a value manually, Auto Scaling changes to OFF |
| Preset | 10.00 dBm |
| State Saved | Saved in instrument state |
| Min/Max | -/+250.00 dBm |
| Annotation | Ref <value> top of graph |

IQ Waveform

| | |
|----------------|--|
| Remote Command | <code>:DISPlay:WAVeform:VIEW2:WINDow[1]:TRACe:Y[:SCALE]:RLEVel <voltage></code> |
| Example | <code>:DISP:WAV:VIEW2:WIND:TRAC:Y:RLEV 25 V</code> |
| Couplings | When " Auto Scaling " on page 1749 is On (default), this value is automatically determined by the measurement result. When you set a value manually, Auto Scaling changes to Off |
| Preset | 0 V |
| State Saved | Saved in instrument state |
| Min/Max | -/+250.00 V |
| Annotation | Ref <value> top of graph |

Scale/Div

Enables you to set the units per division of vertical scale in the logarithmic display. However, since "**Auto Scaling**" on page 1749 defaults to **ON**, this value is automatically determined by the measurement result. When you set a value manually, **Auto Scaling** automatically changes to **OFF**.

The SCPI command and default parameters are dependent on whether the View is "**RF Envelope**" on page 1742 or "**I/Q Waveform**" on page 1743.

RF Envelope

| | |
|----------------|---|
| Remote Command | <code>:DISPlay:WAVeform:VIEW[1]:WINDow[1]:TRACe:Y[:SCALE]:PDIVision <rel_ampl></code> |
|----------------|---|

3 WLAN Mode
3.12 IQ Waveform Measurement

| | |
|-------------|---|
| Command | <code>:DISPlay:WAVeForm:VIEW[1]:WINDow[1]:TRACe:Y[:SCALe]:PDIVision?</code> |
| Example | <code>:DISP:WAV:VIEW:WIND:TRAC:Y:PDIV 5</code> <code>:DISP:WAV:VIEW:WIND:TRAC:Y:PDIV?</code> |
| Couplings | Coupled to "Scale Range" on page 1747 as follows Scale/Div = Scale Range/10 (number of divisions) When "Auto Scaling" on page 1749 is On, this value is automatically determined by the measurement result When you change a value, Auto Scaling automatically changes to Off |
| Preset | 10.00 dB |
| State Saved | Saved in instrument state |
| Min | 0.10 dB |
| Max | 20.00 dB |
| Annotation | <value> dB/ left upper of graph |

IQ Waveform

| | |
|----------------|---|
| Remote Command | <code>:DISPlay:WAVeForm:VIEW2:WINDow[1]:TRACe:Y[:SCALe]:PDIVision <voltage></code> <code>:DISPlay:WAVeForm:VIEW2:WINDow[1]:TRACe:Y[:SCALe]:PDIVision?</code> |
| Example | <code>:DISP:WAV:VIEW2:WIND:TRAC:Y:PDIV 25mV</code> <code>:DISP:WAV:VIEW2:WIND:TRAC:Y:PDIV?</code> |
| Couplings | Coupled to "Scale Range" on page 1747 as follows Scale/Div = Scale Range/10 (number of divisions) When "Auto Scaling" on page 1749 is On, this value is automatically determined by the measurement result When you change a value, Auto Scaling automatically changes to Off |
| Preset | 100.0 mV |
| State Saved | Saved in instrument state |
| Min | 1.0 nV |
| Max | 20 V |
| Annotation | <value> dB/ left upper of graph |

Scale Range

Sets the Y-Axis scale range.

The SCPI command and default parameters depend on whether the View is ["RF Envelope" on page 1742](#) or ["I/Q Waveform" on page 1743](#).

RF Envelope

| | |
|----------------|---|
| Remote Command | <code>:DISPlay:WAVeform:VIEW[1]:WINDow[1]:TRACe:Y[:SCALe]:RANGe <rel_amp1></code> <code>:DISPlay:WAVeform:VIEW[1]:WINDow[1]:TRACe:Y[:SCALe]:RANGe?</code> |
| Example | <code>:DISP:WAV:VIEW:WIND:TRAC:Y:RANG 100</code> <code>:DISP:WAV:VIEW:WIND:TRAC:Y:RANG?</code> |
| Couplings | Coupled to "Scale/Div" on page 1746 as follows Scale Range = Scale/Div * 10 (number of divisions) When you change a value, "Auto Scaling" on page 1749 automatically changes to OFF |
| Preset | 100 dB |
| State Saved | Saved in instrument state |
| Min | 1 |
| Max | 200 |

IQ Waveform

| | |
|----------------|---|
| Remote Command | <code>:DISPlay:WAVeform:VIEW2:WINDow[1]:TRACe:Y[:SCALe]:RANGe <voltage></code> <code>:DISPlay:WAVeform:VIEW2:WINDow[1]:TRACe:Y[:SCALe]:RANGe?</code> |
| Example | <code>:DISP:WAV:VIEW:WIND:TRAC:Y:RANG 1000</code> <code>:DISP:WAV:VIEW:WIND:TRAC:Y:RANG?</code> |
| Couplings | Coupled to "Scale/Div" on page 1746 as follows Scale Range = Scale/Div * 10 (number of divisions) When you change a value, "Auto Scaling" on page 1749 automatically changes to OFF |
| Preset | 1 V |
| State Saved | Saved in instrument state |
| Min | 10 nV |
| Max | 200 V |

Ref Position

Enables you to position the reference level at the top, center, or bottom of the Y Scale display. Changing the reference position does not change the reference level value.

The SCPI command and default parameters depend on whether the View is "RF Envelope" on page 1742 or "I/Q Waveform" on page 1743.

RF Envelope

| | |
|----------------|---|
| Remote Command | <code>:DISPlay:WAVeform:VIEW[1]:WINDow[1]:TRACe:Y[:SCALe]:RPOSition TOP CENTER BOTTOm</code> <code>:DISPlay:WAVeform:VIEW[1]:WINDow[1]:TRACe:Y[:SCALe]:RPOSition?</code> |
| Example | <code>:DISP:WAV:VIEW:WIND:TRAC:Y:RPOS CENT</code> <code>:DISP:WAV:VIEW:WIND:TRAC:Y:RPOS?</code> |
| Preset | <code>TOP</code> |
| State Saved | Saved in instrument state |
| Range | <code>Top Center Bottom</code> |
| Annotation | > and < are displayed both side of graph to indicate Reference Position |

IQ Waveform

| | |
|----------------|---|
| Remote Command | <code>:DISPlay:WAVeform:VIEW2:WINDow[1]:TRACe:Y[:SCALe]:RPOSition TOP CENTer BOTTOm</code> <code>:DISPlay:WAVeform:VIEW2:WINDow[1]:TRACe:Y[:SCALe]:RPOSition?</code> |
| Example | <code>:DISP:WAV:VIEW2:WIND:TRAC:Y:RPOS CENT</code> <code>:DISP:WAV:VIEW2:WIND:TRAC:Y:RPOS?</code> |
| Preset | <code>CENT</code> |
| State Saved | Saved in instrument state |
| Range | <code>Top Center Bottom</code> |
| Annotation | > and < are displayed both side of graph to indicate Reference Position |

Auto Scaling

Enables you to toggle Auto Scaling On or Off. When the **Restart** front-panel key is pressed, this function automatically determines the scale per division and reference values based on the measurement results.

| | |
|----------------|---|
| Remote Command | <code>:DISPlay:WAVeform:VIEW[1] 2:WINDow[1]:TRACe:Y[:SCALe]:COUPle 0 1 OFF ON</code> <code>:DISPlay:WAVeform:VIEW[1] 2:WINDow[1]:TRACe:Y[:SCALe]:COUPle?</code> |
| Example | <code>:DISP:WAV:VIEW:WIND:TRAC:Y:COUP OFF</code> <code>:DISP:WAV:VIEW:WIND:TRAC:Y:COUP?</code> |
| Couplings | When " Auto Scaling " on page 1749 is On, and the Restart front-panel key is pressed, this function automatically sets the scale per division to 10 dB and determines the reference values based on the measurement results When you change a value of Scale/Div , Ref Value , or Scale Range , Auto Scaling automatically changes |

| | |
|-------------|---------------------------|
| | to OFF |
| Preset | OFF |
| State Saved | Saved in instrument state |
| Range | OFF ON |

3.12.3.2 Attenuation

Controls the attenuator functions and interactions between the attenuation system components.

There are two attenuator configurations in the X-Series. One is a Dual-Attenuator configuration consisting of a mechanical attenuator and an optional electronic attenuator. The other configuration uses a single attenuator with combined mechanical and electronic sections that controls all the attenuation functions. Different models in the X-Series come with different configurations.

- See ["Dual-Attenuator Configurations" on page 1750](#)
- See ["Single-Attenuator Configuration" on page 1751](#)

Most attenuation settings are the same for all measurements – they do not change as you change measurements. Settings like these are called “Meas Global” and are unaffected by **Meas Preset**.

Only available when the hardware set includes an input attenuator, which is typically only the case for Keysight’s benchtop instruments. For example, this tab does *not* appear in VXT models M9420A/10A/11A/15A/16A, M9410E/11E/15E/16E, nor in UXM. In UXM, all **Attenuation** and **Range** settings are disabled, as the expected input power level is handled by the Call Processing App that drives the DUT power control.

| | |
|--------------|--|
| Dependencies | In measurements that support the I/Q inputs, unavailable when I/Q is the selected input. Replaced by the Range tab in that case |
|--------------|--|

Dual-Attenuator Configurations

Configuration 1: Mechanical attenuator + optional electronic attenuator

Configuration 2: Mechanical attenuator, no optional electronic attenuator

Note that Configuration 2 is not strictly speaking a dual-section attenuator, since there is no electronic section available. However, it behaves exactly like Configuration 1 without the Electronic Attenuator Option EA3, therefore for the sake of this document it is grouped into the “Dual-Attenuator” configuration.

Single-Attenuator Configuration

You can tell which attenuator configuration you have by pressing the Attenuation tab, which (in most Modes) opens the Attenuation menu. If the first control in the Attenuation menu says **Mech Atten** you have the Dual-Attenuator configuration. If the first control says **Atten** you have the Single-Attenuator configuration.

Dual Attenuator

Single Attenuator

(Note that depending on the measurement, there may be no Auto/Man functionality on the Mech Atten control.)

In the Single-Attenuator configuration, you control the attenuation with a single control, as the fixed stage has only two states. In the Dual-Attenuator configuration, both stages have significant range, so you are given separate control of the mechanical and electronic attenuator stages.

When you have the Dual-Attenuator configuration, you may still have only a Single-Attenuator, because unless Option EA3 (the Electronic Attenuator option) is available, and you purchase it, you will have only the mechanical attenuator.

Full Range Atten

This control and **Attenuator Summary** only appear in N9041B, when the RF input is selected, the RF Input Port is set to RF Input 2, and the Full Range Attenuator is installed. The Full Range Attenuator adds a second input attenuator in front of RF Input 2, which enhances the protection and optimizes the performance of the extra internal mixers used by RF Input 2.

| | |
|----------------|---|
| Remote Command | <code>[:SENSe]:POWer[:RF]:FRATten <rel_amp1></code> <code>[:SENSe]:POWer[:RF]:FRATten?</code> |
| Example | <code>:POW:FRAT 14</code> <code>:POW:FRAT?</code> |
| Notes | When you enter an amplitude value that falls between valid values, the value will be incremented to the next smallest valid value |
| Dependencies | Only appears if input RF is selected, RF Input Port 2 is selected, and the Full Range Attenuator exists |
| Couplings | This value is never changed by any coupling, but other couplings use this value. See Reference Level and " Mech Atten " on page 1753 command descriptions |
| Preset | 20 dB |
| State Saved | Saved in instrument state |
| Min | 0 dB |
| Max | Only valid values are 0, 6, 14, 20 dB |
| Annotation | <p>When the Input is RF, and the Input Port is RF Input 2, and the Full Range Attenuator is installed: On the Meas Bar, the field "Atten" displays as follows:</p> <ul style="list-style-type: none"> - If the sweep is entirely < 50 GHz, the value shown after "Atten:" is equal to Mech Atten + Elec Atten + Full Range Atten - If the sweep is entirely > 50 GHz, the value shown after "Atten:" is equal to Full Range Atten - If the sweep straddles 50 GHz, the value shown after "Atten:" is preceded by the symbol ">=" and is equal to Full Range Atten <p>In the Amplitude, "Y Scale" on page 1745 menu, and the Atten Meas Bar dropdown menu panel, a summary is displayed as follows: "Total Atten below 50 GHz" followed by the value of Full Range Atten + Mech Atten + Elec Atten "Total Atten above 50 GHz" followed by the value of Full Range Atten For example, if Mech Atten = 6 dB, Elec Atten = 4 dB, and Full Range Atten = 20 dB, the summary below is shown:</p> <ul style="list-style-type: none"> - Attenuator summary: |

-
- Total Atten below 50 GHz: 30 dB
 - Total Atten above 50 GHz: 20 dB

Mech Atten

Labeled **Mech Atten** in Dual-Attenuator models, and **Atten** in Single-Attenuator models. In the Dual-Attenuator configuration, this control only affects the mechanical attenuator.

Lets you modify the attenuation applied to the RF input signal path. This value is normally auto-coupled to **Ref Level**, "[Internal Preamp](#)" on page 1775 Gain, any External Gain that is entered, and **Max Mixer Level** (if available), as described in the table below.

See "[Attenuator Configurations and Auto/Man](#)" on page 1755

| | |
|----------------|---|
| Remote Command | <code>[:SENSe]:POWer[:RF]:ATTenuation <rel_amp1></code> <code>[:SENSe]:POWer[:RF]:ATTenuation?</code> |
| Example | <code>:POW:ATT 20</code> Dual-Attenuator configuration: sets the mechanical attenuator to 20 dB Single-Attenuator mode: sets the main attenuation to 20 dB (see below for definition of "main" attenuation) In either case, if the attenuator was in Auto, it is set to Manual |
| Dependencies | Some measurements do not support Auto setting of Mech Atten . In these measurements, the Auto/Man selection is not available, and the Auto/Man toggle function is not available In Dual-Attenuator configurations, when the electronic attenuator is enabled, the mechanical attenuator has no auto setting, and the Auto/Man toggle function is not available. The state of Auto/Man is remembered and restored when the electronic attenuator is once again disabled. This is described in more detail in " Elec Atten " on page 1756 See " Attenuator Configurations and Auto/Man " on page 1755 for more information on the Auto/Man functionality |
| Couplings | If the RF Input Port is the RF Input: <ul style="list-style-type: none"> - If the USB Preamp is connected to USB, use 0 dB for Mech Atten - Otherwise compute the auto-selected value of Mech Atten based on Reference Level, Int Preamp, External Gain, Ref Level Offset, Max Mixer Level, μW Path Control and IF Gain settings. Limit this value to be no less than 6 dB (total attenuation below 6 dB can never be chosen by Auto) - In N9041B, if the RF Input Port is RF Input 2, use the formula above and subtract the value of "Full Range Atten" on page 1752 from the result to determine the Mech Atten. Limit the value so that it is never lower than 0 dB and so that total attenuation, including Full Range Atten, is never less than 6 dB (total attenuation, including Full Range Atten below 6 dB, can never be chosen by Auto) In External Mixing and BBIQ, where the attenuator is not in the signal path, the attenuator setting changes as described above when Mech Atten is in Auto , but no changes are made to the actual |

| | | | | | | | | |
|-----------------------|---|--|-----------------------|-------|-----|-------|------------------|-------|
| | <p>attenuator hardware setting until the input is changed back to the RF Input</p> <p>For CXA-m with Option FSA (Fine-Step Attenuator or 2 dB steps), the FSA-like behavior is only available when the frequency setting is ≤ 7.5 GHz. So, when the frequency is changed from below 7.5 GHz to above 7.5 GHz, the attenuation setting changes to a multiple of 10 dB that is no smaller than the previous setting. For example, 4 dB attenuation changes to 10 dB</p> | | | | | | | |
| Preset | <p>Auto</p> <p>The Auto value is 10 dB</p> | | | | | | | |
| State Saved | <p>Saved in instrument state</p> | | | | | | | |
| Min | <p>0 dB</p> <p>The attenuation set by this control cannot be decreased below 6 dB with the knob or step keys. Values below 6 dB must be directly entered from the keypad or via SCPI. This protects against setting a dangerously small attenuation value, which can put the instrument at risk of damage to input circuitry. If the current mechanical attenuation is below 6 dB, it can be increased with the knob and step keys, but not decreased</p> | | | | | | | |
| Max | <table border="1"> <tr> <td>CXA Option 503 or 507</td> <td>50 dB</td> </tr> <tr> <td>EXA</td> <td>60 dB</td> </tr> <tr> <td>All other models</td> <td>70 dB</td> </tr> </table> <p>Note that in the Single-Attenuator configuration, the total of ATT and EATT cannot exceed 50 dB. So, if the EATT is set to 24 dB first, the main attenuation cannot be greater than 26 dB and will be reduced accordingly; if the main attenuator is set to 40 dB first, EATT cannot be greater than 10 dB</p> | | CXA Option 503 or 507 | 50 dB | EXA | 60 dB | All other models | 70 dB |
| CXA Option 503 or 507 | 50 dB | | | | | | | |
| EXA | 60 dB | | | | | | | |
| All other models | 70 dB | | | | | | | |
| Annotation | <p>The current value for Total Atten is displayed in the Measurement Bar at the top of the display. A value appears for Electronic Attenuation only if the Electronic Attenuator is enabled. The annotation appears as:</p> <p><i>Atten: <total> dB (e<elec>)</i></p> <p>The e letter is in amber in Single-Attenuator configurations</p> <p>For example:</p> <p>Dual-Attenuator configuration:</p> <p><i>Atten: 24 dB (e14)</i></p> <p>Indicating the total attenuation is at 24 dB and the electronic attenuation is at 14 dB</p> <p>Single-Attenuator configuration:</p> <p><i>A: 24 dB (e14)</i></p> <p>Indicating the total attenuation is at 24 dB and the “soft” attenuation is at 14 dB (see below for definition of “soft” attenuation)</p> <p>When in Manual, a # sign appears in front of Atten in the annotation</p> <p>Auto Function</p> | | | | | | | |
| Remote Command | <pre>[:SENSe]:POWer[:RF]:ATTenuation:AUTO OFF ON 0 1 [:SENSe]:POWer[:RF]:ATTenuation:AUTO?</pre> | | | | | | | |
| Example | <p>Turn Auto Mech AttenON:</p> <pre>:POW:ATT:AUTO ON</pre> | | | | | | | |

| | |
|--------------|---|
| Dependencies | :POW:ATT:AUTO is only available in measurements that support Auto , such as Swept SA |
| Preset | ON |

Attenuator Configurations and Auto/Man

As described under "[Attenuation](#)" on page 1750, there are two distinct attenuator configurations available in the X-Series, the Single Attenuator and Dual-Attenuator configurations.

In Dual-Attenuator configurations, we have mechanical attenuation and electronic attenuation, and current total attenuation is the sum of electronic + mechanical attenuation.

In Single-Attenuator configurations, we refer to the attenuation set using "[Mech Atten](#)" on page 1753 (or :POW:ATT) as the "main" attenuation; and the attenuation that is set by :POW:EATT as the "soft" attenuation (:POW:EATT is honored even in the Single-Attenuator configuration, for compatibility purposes). Then current total attenuation is the sum of main + soft attenuation.

See "[Elec Atten](#)" on page 1756 for more about "soft" attenuation.

NOTE

In some measurements, the **Mech Atten** control has an **Auto/Man** function. In these measurements, an **Auto/Man** switch is shown on the **Mech Atten** control:

Note that in configurations that include an Electronic Attenuator, this switch is only shown when the Electronic Attenuator is disabled.

In other measurements, **Mech Atten** has no **Auto/Man** function. In these measurements, no switch is shown on the **Mech Atten** control:

Mech Atten also appears with no switch, as above, in configurations that include an Electronic Attenuator but when the Electronic Attenuator is enabled.

Elec Atten

Controls the Electronic Attenuator in Dual-Attenuator configurations. Does not appear in Single-Attenuator configurations, because the control of both the mechanical and electronic stages of the Single-Attenuator is integrated into the single **Atten** control.

This control includes an **Enable/Disable** toggle switch; it is only possible to enter a value for the Electronic Attenuator when this switch is in the **Enable** position.

For more details of the Electronic Attenuator, see ["More Information" on page 1757](#)

| | |
|----------------|---|
| Remote Command | <code>[:SENSe]:POWer[:RF]:EATTenuation <rel_amp1></code> <code>[:SENSe]:POWer[:RF]:EATTenuation?</code> |
| Example | <code>:POW:EATT 10</code> <code>:POW:EATT?</code> |
| Notes | Electronic Attenuation's specification is defined only when Mech Atten is 6 dB |
| Dependencies | <p>Only appears in Dual-Attenuator models with an Electronic Attenuator installed and licensed. Does not appear in models with the Single-Attenuator configuration, because in the Single-Attenuator configuration there is no "electronic attenuator"; there is only a single integrated attenuator (which has both a mechanical and electronic stage). However, in the Single-Attenuator configuration, EATT SCPI commands are accepted for compatibility with other X-series instruments, and set a "soft" attenuation. The "soft" attenuation is treated as an addition to the "main" attenuation value set by the Attenuation control or <code>:POW:ATT</code>, and affects the total attenuation displayed on the Attenuation control and the Meas Bar</p> <p>The electronic attenuator, and the "soft" attenuation function provided in Single-Attenuator configurations, are unavailable above the low band (0-3.6 GHz, 0-3.4 GHz, 0-3 GHz, depending on the model). If the low band range is from 0-3.6 GHz, and Stop Frequency of the instrument is > 3.6 GHz, then the Enabled/Disabled section of the Elec Atten control will be OFF and grayed-out</p> <p>If "Internal Preamp" on page 1775 is ON (that is, set to Low Band or Full), the electronic attenuator (and the "soft" attenuation function provided in Single-Attenuator configurations) is unavailable. In this case the Enabled/Disabled section of the Elec Atten control will be OFF and grayed-out</p> <p>If either of the above is true, and the SCPI command is sent, an error indicating that the electronic attenuator is unavailable is returned</p> <p>If both the above are true, pressing the control generates error message -221, in other words, the frequency range lockout takes precedence</p> <p>If the electronic/soft Attenuator is enabled, then the Stop Freq of the instrument is limited to 3.6 GHz and Internal Preamp is unavailable</p> <p>If "LNA" on page 1777 is ON, the electronic attenuator (and the "soft" attenuation function provided in Single-Attenuator configurations) is unavailable. In this case the Enabled/Disabled section of the Elec Atten control will be OFF and grayed-out. This coupling works in the following modes/measurements:</p> <ul style="list-style-type: none"> - Channel Power, Occupied BW, ACP, SEM, Spurious Emissions, Power Stat CCDF measurements in all Modes - Transmit On Off Power measurement in 5G NR Mode |

3 WLAN Mode
3.12 IQ Waveform Measurement

- Power vs. Time and Transmit Power measurement in GSM/EDGE Mode
- Burst Power measurement in Spectrum Analyzer Mode

The SCPI-only “soft” electronic attenuation for the single-attenuator configuration is not available in all measurements; in particular, it is not available in the Swept SA measurement

| | |
|----------------|---|
| Couplings | Enabling and disabling the Electronic Attenuator affects the setting of the Mechanical Attenuator (in Dual-Attenuator configurations). This is described in more detail below and in " Mechanical Attenuator Transition Rules " on page 1758 |
| Preset | 0 dB |
| State Saved | Saved in instrument state |
| Min | 0 dB |
| Max | Dual-Attenuator configuration: 24 dB Single-Attenuator configuration: the total of ATT and EATT cannot exceed 50 dB. So, if the EATT is set to 24 dB first, the main attenuation cannot be greater than 26 dB and will be reduced accordingly; if the main attenuator is set to 40 dB first, EATT cannot be greater than 10 dB |
| Annotation | See Annotation under the Mech Atten control description Auto Function |
| Remote Command | <code>[:SENSe]:POWer[:RF]:EATTenuation:STATe OFF ON 0 1</code> <code>[:SENSe]:POWer[:RF]:EATTenuation:STATe?</code> |
| Example | <code>:POW:EATT:STAT ON</code> <code>:POW:EATT:STAT?</code> |
| Preset | OFF (Disabled) for Swept SA measurement ON (Enabled) for all other measurements that support the electronic attenuator |

NOTE

The maximum **Center Frequency** for Low Band can change based on the selected IFBW for measurements that support IFBW (for example, Waveform measurement across all Modes that support it). In certain models (such as N9042B & N9032B), IFBW values ≤ 40 MHz have a maximum Low Band frequency of 3.6 GHz, while $40 \text{ MHz} < \text{IFBW} \leq 1 \text{ GHz}$ have a maximum of 3.3 GHz, and $1 \text{ GHz} < \text{IFBW} \leq 1.5 \text{ GHz}$ have a maximum of 3.5 GHz. This frequency is reflected in the disabled message displayed for Electrical Attenuator. For N9032B and N9042B IFBW values $> 1.5 \text{ GHz}$ do not support a **Center Frequency** that can reach the Low Band maximum frequency. In these cases, the Electrical Attenuator will remain disabled no matter the Center Frequency.

More Information

The electronic attenuator offers finer steps than the mechanical attenuator, has no acoustical noise, is faster, and is less subject to wear. These advantages primarily

aid in remote operation and are negligible for front panel use. See ["Using the Electronic Attenuator: Pros and Cons" on page 1759](#) for a detailed discussion of the pros and cons of using the electronic attenuator.

For the Single-Attenuator configuration, for SCPI backwards compatibility, the "soft" attenuation feature replaces the Dual-Attenuator configuration's electronic attenuator. All the same couplings and limitations apply. See ["Attenuator Configurations and Auto/Man" on page 1755](#)

Mechanical Attenuator Transition Rules

When the Electronic Attenuator is enabled, the Mechanical Attenuator transitions to a state that has no Auto function. Below are the rules for transitioning the Mechanical Attenuator. Note that the information below *only* applies to the Dual-Attenuator configurations, and *only* when the Electronic Attenuator is installed:

When the Electronic Attenuation is enabled from a disabled state:

- The Mechanical Attenuator is initialized to 10 dB (this is its optimal performance setting). You can then set it as desired with SCPI, numeric keypad, step keys, or knob, and it behaves as it normally would in manual mode
- The Auto/Man state of (Mech) Atten is saved
- The Auto/Man toggle on the (Mech) Atten control disappears, and the auto rules are disabled
- The Electronic Attenuator is set to 10 dB less than the previous value of the Mechanical Attenuator, within the limitation that it must stay within the range of 0 to 24 dB of attenuation

Examples in the Dual-Attenuator configuration:

- Mech Atten at 20 dB. Elec Atten enabled, Mech Atten set to 10 dB, and Elec Atten set to 10 dB. New total attenuation equals the value before Elec Atten enabled
- Mech Atten at 0 dB. Elec Atten enabled, Mech Atten set to 10 dB, and Elec Atten set to 0 dB. New total attenuation does not equal the value before Elec Atten enabled
- Mech Atten at 40 dB. Elec Atten enabled, Mech Atten set to 10 dB, and Elec Atten set to 24 dB. New total attenuation does not equal the value before Elec Atten enabled

When the Electronic Attenuation is disabled from an enabled state:

- The Elec Atten control is grayed out
- The Auto/Man state of (Mech) Atten is restored
- If now in Auto, (Mech) Atten recouples
- If now in Man, (Mech) Atten is set to the value of total attenuation that existed before the Elec Atten was disabled. The resulting value is rounded up to the smallest value possible given the (Mech) Atten Step setting - (That is, 57 dB changes to 58 dB when (Mech) Atten Step is 2 dB)

Using the Electronic Attenuator: Pros and Cons

The electronic attenuator offers finer steps than the mechanical attenuator, has no acoustical noise, is faster, and is less subject to wear.

The “finer steps” advantage of the electronic attenuator is beneficial in optimizing the alignment of the instrument dynamic range to the signal power in the front panel as well as remote use. Thus, you can achieve improved relative signal measurement accuracy. Compared to a mechanical attenuator with 2 dB steps, the 1 dB resolution of the electronic attenuator only gives better resolution when the odd-decibel steps are used. Those odd-decibel steps are less accurately calibrated than the even-decibel steps, so one tradeoff for this superior relative accuracy is reduced absolute amplitude accuracy.

Another disadvantage of the electronic attenuator is that the spectrum analyzer loses its “Auto” setting, making operation less convenient.

Also, the relationship between the dynamic range specifications (TOI, SHI, compression, and noise) and instrument performance are less well-known with the electrical attenuator. With the mechanical attenuator, TOI, SHI, and compression threshold levels increase dB-for-dB with increasing attenuation, and the noise floor does as well. With the electronic attenuator, there is an excess attenuation of about 1 to 3 dB between 0 and 3.6 GHz, making the effective TOI, SHI, and so forth, less well known. Excess attenuation is the actual attenuation relative to stated attenuation. Excess attenuation is accounted for in the instrument calibration.

Adjust Atten for Min Clipping

Sets the combination of mechanical and electronic attenuation and gain based on the current measured signal level so that clipping will be at a minimum.

This is an immediate action function, that is, it executes once, when the control is pressed.

The algorithms that are used for the adjustment are documented under ["Pre-Adjust for Min Clipping" on page 1760](#).

| | |
|----------------|---|
| Remote Command | <code>[:SENSe]:POWer[:RF]:RANGe:OPTimize IMMEDIATE</code> |
| Example | <code>:POW:RANG:OPT IMM</code> |
| Notes | Executing Adjust Atten for Min Clipping initiates the measurement |
| Dependencies | Does not appear in the Swept SA, RTSA, Monitor Spectrum and Complex Spectrum measurements Appears in the Waveform measurement in BASIC and 5G NR Modes |

Adjust Atten

Allows you to select;

- Electric attenuator only
- Combination of Electric attenuator and Mechanical attenuator

when `[:SENSe]:POWer[:RF]:RANGe:OPTimize IMMEDIATE` is executed.

| | |
|----------------|---|
| Remote Command | <code>[:SENSe]:POWer[:RF]:RANGe:OPTimize:TYPE EONLY COMBined</code> <code>[:SENSe]:POWer[:RF]:RANGe:OPTimize:TYPE?</code> |
| Example | <code>:POW:RANG:OPT:TYPE EONL</code> <code>:POW:RANG:OPT:TYPE?</code> |
| Dependencies | Does not appear in the Swept SA, RTSA, Monitor Spectrum and Complex Spectrum measurements Appears in the Waveform measurement in BASIC and 5G NR Modes |
| Preset | <code>COMBined</code> |
| State Saved | Saved in instrument state |

Pre-Adjust for Min Clipping

If this function is **ON**, it applies the adjustment described under "**Adjust Atten for Min Clipping**" on page 1759 each time a measurement restarts. Therefore, in Continuous measurement mode, it only executes before the first measurement.

In Dual-Attenuator models, you can set **Elec+Mech Atten**, in which case both attenuators participate in the autoranging, or **Elec Atten Only**, in which case the mechanical attenuator does not participate in the autoranging. This latter case results in less wear on the mechanical attenuator and is usually faster.

See "**Adjustment Algorithm**" on page 1761

| Selection | SCPI | Note |
|-----------|------------------|--|
| Off | <code>OFF</code> | This is the default setting |
| On | <code>ON</code> | Available in Single-Attenuator instruments. For compatibility with models that do not have an input attenuator, the ON parameter is supported and mapped to |

3 WLAN Mode
3.12 IQ Waveform Measurement

| Selection | SCPI | Note |
|-----------------|--|--|
| Elec Atten Only | ELECTrical | COMBined Selects only the electric attenuator to participate in auto ranging. This offers less wear on the mechanical attenuator and is usually faster |
| Elec+Mech Atten | COMBined | In Dual-Attenuator models, this selects both attenuators to participate in the autoranging |
| Remote Command | [:SENSe]:POWer[:RF]:RANGe:OPTimize:ATTenuation OFF ON ELECTrical COMBined [:SENSe]:POWer[:RF]:RANGe:OPTimize:ATTenuation? | |
| Example | :POW:RANG:OPT:ATT OFF :POW:RANG:OPT:ATT? | |
| Notes | The parameter option ELECTrical sets this function to ON in Single-Attenuator models The parameter option COMBined is mapped to ELECTrical in Single-Attenuator models. If you send COMBined , it sets the function to ON and returns ELEC to a query For SCPI compatibility with models that do not have an input attenuator, the ON parameter is honored and mapped to COMBined | |
| Dependencies | Only appears in Dual-Attenuator models with an Electronic Attenuator installed In instruments with Dual-Attenuator model, when "Elec Atten" on page 1756 is OFF or grayed-out, "Pre-Adjust for Min Clipping" on page 1760 is grayed-out Does not appear in the Swept SA, RTSA, Monitor Spectrum and Complex Spectrum measurements Appears in the Waveform measurement in BASIC and 5G NR Modes | |
| Preset | OFF when Elec Atten is Disabled at preset, otherwise ELEC | |
| State Saved | Saved in instrument state | |
| Range | Dual-Attenuator models: Off Elec Atten Only Mech + Elec Atten Single-Attenuator models: Off On | |

Backwards Compatibility Command

| | |
|------------------------------|---|
| Notes | ON aliases to "Elec Atten Only" (:POW:RANG:OPT:ATT ELEC) OFF aliases to "Off" (:POW:RANG:OPT:ATT OFF) :POW:RANG:AUTO? returns true if :POW:RANG:OPT:ATT is not OFF |
| Backwards Compatibility SCPI | [:SENSe]:POWer[:RF]:RANGe:AUTO ON OFF 1 0 [:SENSe]:POWer[:RF]:RANGe:AUTO? |

Adjustment Algorithm

The algorithms for the adjustment are documented below:

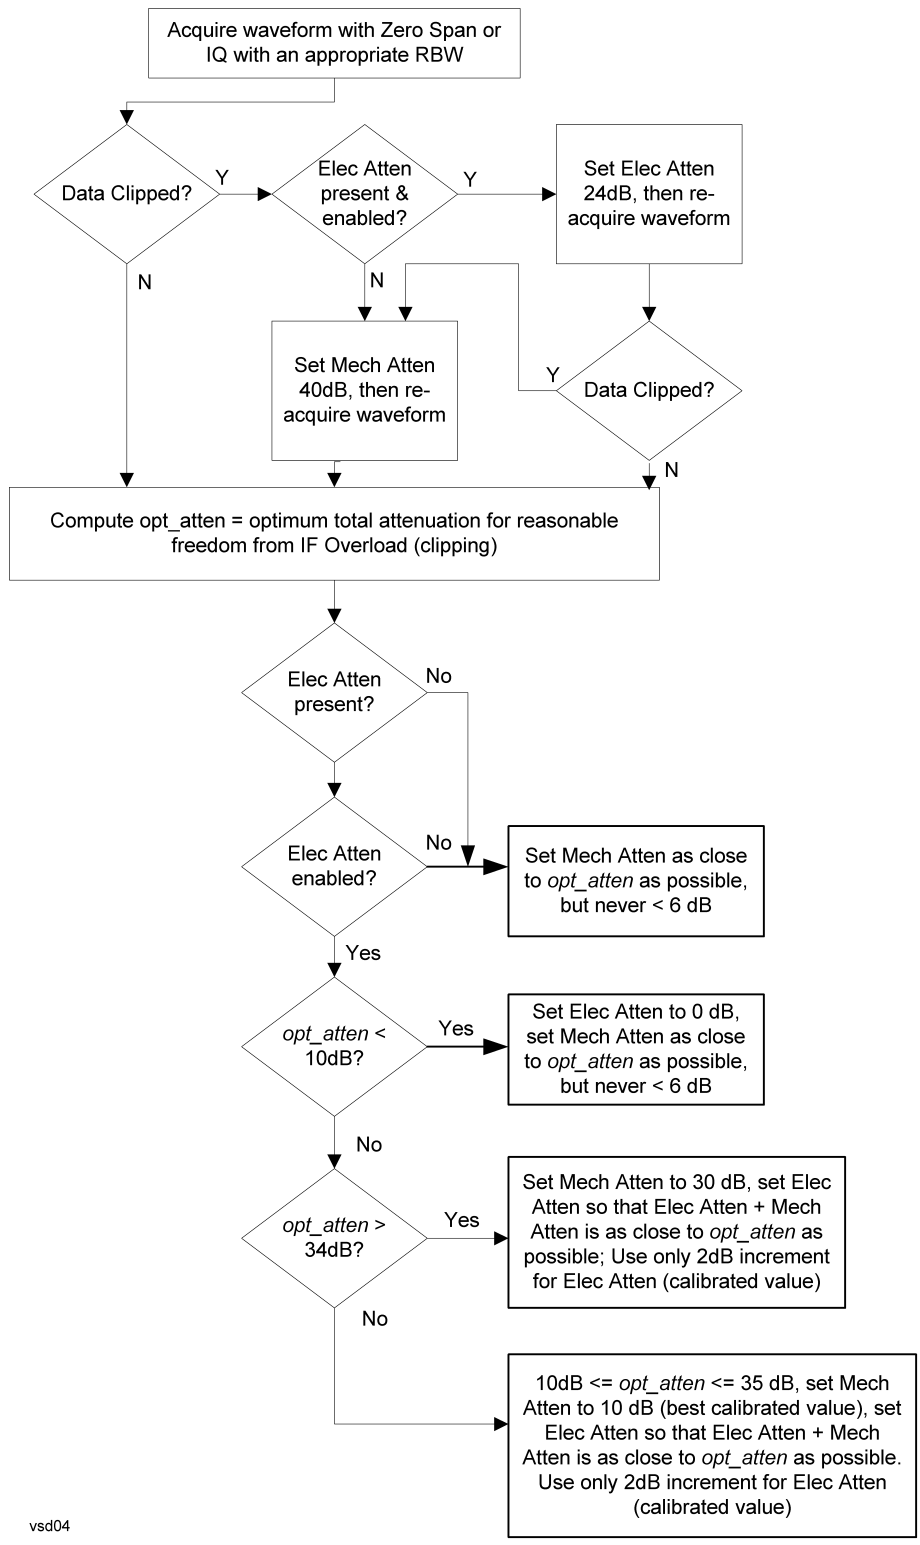

Single-Attenuator Models

Dual-Attenuator models

"Adjust Atten for Min Clipping" on page 1759 or "Pre-Adjust for Min Clipping" on page 1760 selection is Mech + Elec Atten:

3 WLAN Mode
3.12 IQ Waveform Measurement

vsd04

"Pre-Adjust for Min Clipping" on page 1760 selection is Elec Only.

Note that the **Mech Atten** value is not adjusted, and the value previously set is used. Therefore, there is a case that IF Overload is still observed depending on the input signal level and the Mech Atten setting.

Mech Atten Step

Controls the step size used when making adjustments to the input attenuation.

Labeled **Mech Atten Step** in Dual-Attenuator models and **Atten Step** in Single-Attenuator models. In the Dual-Attenuator configuration, only affects the step size of the mechanical attenuator.

Remote Command `[:SENSe]:POWer[:RF]:ATTenuation:STEP[:INCRement] 10 dB | 2 dB`

| | |
|--------------|---|
| | <code>[:SENSe]:POWer[:RF]:ATTenuation:STEP[:INCRement]?</code> |
| Example | <code>:POW:ATT:STEP 2</code> <code>:POW:ATT:STEP?</code> |
| Notes | Has a toggle control on the front panel, but takes a specific value (in dB) when used remotely. The only valid values are 2 and 10 |
| Dependencies | Blanked in EXA, CXA and CXA-m if option FSA (2 dB steps) is not present. If blanked, attempts to set it via SCPI yield an error |
| Couplings | When the attenuation step size changes, the current mechanical attenuation value is adjusted (if necessary) to be quantized to the new step size. That is, if step is set to 10 dB, mech atten is increased if necessary so it is a multiple of 10 dB |
| Preset | EXA, CXA and CXA-m: 10 dB (2 dB with option FSA) All other models: 2 dB |
| State Saved | Saved in instrument state |

3.12.3.3 Range (Baseband Input models)

Only available when Option BBA is present (I/Q Baseband Inputs), the current measurement supports option BBA, and I/Q is the selected input. In these cases, replaces the **Attenuation** tab.

Each input channel (I and Q) has four internal gain ranges. The maximum allowed voltage in each gain range is slightly more than the nominal value, so the break point between ranges is a few millivolts higher than the nominal (setting a peak voltage of 0.502 mV will still map to the 0.5 V Peak range).

| Gain Setting | Volts RMS | Volts Peak | Volts Peak - Peak | dBm (50Ω) | Break Point |
|--------------|-----------|------------|-------------------|-----------|--------------|
| 0 dB | 0.7071 | 1.0 | 2.0 | 10 | n/a |
| 6 dB | 0.3536 | 0.5 | 1.0 | 4 | 0.502 V Peak |
| 12 dB | 0.1768 | 0.25 | 0.5 | -2 | 0.252 V Peak |
| 18 dB | 0.0884 | 0.125 | 0.25 | -8 | 0.127 V Peak |

| | |
|--------------|---|
| Dependencies | Available only when the selected input is I/Q. If the current measurement does not support baseband inputs, an error will be displayed: "No result; Meas invalid with I/Q inputs" |
| State Saved | No |

Range Auto/Man

The **Auto** setting for **Range** causes the range to be set based on the Y Scale settings. When **Range** is **Auto**, the I & Q Range are set based on the top of the Y Scale when the Y scale is in dB units (for example, power), or to the max(abs(top), abs(bottom)) when the Y scale reference is not at the top of the screen.

Not all measurements support **Range Auto/Man**. If **Auto** is not supported in the current measurement, this control is grayed-out, displaying **Man**, and **MAN** is returned to a SCPI query, but this does *not* change the Auto/Man setting for **Range**. When you switch to a measurement that supports **Auto**, it goes back to **Auto** if it was previously in **Auto** mode.

| | |
|----------------|--|
| Remote Command | <code>[:SENSe]:VOLTage:IQ:RANGe:AUTO OFF ON 0 1</code> <code>[:SENSe]:VOLTage:IQ:RANGe:AUTO?</code> |
| Example | Put the I Range and Q Range in manual <code>:VOLT:IQ:RANG:AUTO OFF</code> <code>:VOLT:IQ:RANG:AUTO?</code> |
| Dependencies | If Auto is not supported, sending the SCPI command generates an error |
| Couplings | When in Auto , both I Range and Q Range are set to the same value, computed as follows: Maximum absolute value is computed for the Y Scale. The top and bottom of the graph are computed based on Ref Value, Scale/Div, and Ref Position. Formula: $Y_{Max} = \max(\text{abs}(\text{top}), \text{abs}(\text{bottom}))$ The I Range and Q Range are then set to YMax |
| Preset | ON |
| State Saved | Saved in instrument state |
| Annotation | When in Man, the Range annotation is preceded by "#" This is an alternate form of the command to match the POWer form of the I Range and Q Range SCPI. |
| Remote Command | <code>[:SENSe]:POWer:IQ:RANGe:AUTO OFF ON 0 1</code> <code>[:SENSe]:POWer:IQ:RANGe:AUTO?</code> |
| Example | Put the I Range and Q Range in manual <code>:POW:IQ:RANG:AUTO OFF</code> <code>:POW:IQ:RANG:AUTO?</code> |
| Notes | <code>:POW:IQ:RANG:AUTO</code> is an alternate form of <code>:VOLT:IQ:RANG:AUTO</code> , to maintain consistency with I Range and Q Range, which support both the POWer and VOLTage forms of the command |
| Preset | ON |
| Range | Auto Man |

I Range

The internal gain range for the I channel when the Input Path is I Only or I and I/Q. Used for both the I and Q channels when the Input Path is I+jQ.

| | |
|----------------|---|
| Remote Command | <code>[:SENSe]:VOLTage:IQ[:I]:RANGe[:UPPer] <voltage></code> <code>[:SENSe]:VOLTage:IQ[:I]:RANGe[:UPPer]?</code> |
| Example | Set the I Range to 0.5 V Peak <code>:VOLT:IQ:RANG 0.5 V</code> |

3 WLAN Mode
3.12 IQ Waveform Measurement

| | |
|----------------|---|
| | <code>:VOLT:IQ:RANG?</code> |
| Notes | The numeric entries are mapped to the smallest gain range whose break point is greater than or equal to the value, or 1 V Peak if the value is greater than 1 V |
| Couplings | When " Q Same as I " on page 1769 is On, the I Range value will be copied to " Q Range " on page 1768 Changing the value also sets Range = Man |
| Preset | Complex SPECTrum Measurement: 0.5 V Peak All others: 1 V Peak |
| State Saved | Saved in instrument state |
| Range | 1 V Peak (10 dBm @ 50 Ω) 0.5 V Peak (4 dBm @ 50Ω) 0.25 V Peak (-2 dBm @ 50Ω) 0.125 V Peak (-8 dBm @ 50Ω) |
| Min | 0.125 V |
| Max | 1 V |
| Annotation | The Range annotation replaces the RF Input context's "Atten" annotation "Rng: <I Range>". When Range = Man the annotation is preceded by "#" The I Range is not annotated in Input Path Q Only. When I Range and Q Range are the same, the annotation is "Rng: <Range>". When I Range and Q Range are different and the Input Path is Ind I/Q, the annotation is "Rng: <I Range>, <Q Range>" and "Peak" is removed from the text. Examples: "Rng: 1 V Peak" the I Range is 1 V Peak "Rng: 1 V, 0.5 V " the I Range is 1 V Peak and the Q Range is 0.5 V Peak This is an alternate form of the command to allow entry as a power. |
| Remote Command | <code>[:SENSe]:POWer:IQ[:I]:RANGe[:UPPer] <amp;1></code> <code>[:SENSe]:POWer:IQ[:I]:RANGe[:UPPer]?</code> |
| Example | Set the I Range to 0.5 V Peak when Reference Z is 50 Ω, and to 1.0 V Peak when Reference Z is 75 Ω <code>:POW:IQ:RANG 4 dBm</code> <code>:POW:IQ:RANG?</code> |
| Notes | The POWer form of the command is provided for convenience. It maps to the same underlying gain range parameter as the VOLTage form The Reference Z (not the I channel Input Z) is used to convert the power to peak voltage, which is then used to set the I Range as with the VOLTage form of the command. The power values of the 4 range states (1V Peak, 0.5V Peak, 0.25V Peak, and 0.125V Peak) will vary with Reference Z. Here are some examples: 50 Ω: 10, 4, -2, -8 75 Ω: 8.2, 2.2, -3.8, -9.8 600 Ω: -0.8, -6.8, -12.8, -18.9 |
| Preset | 10.0 dBm |
| Range | -20 dBm to 10 dBm |
| Min | -20 dBm |
| Max | 10 dBm |

Q Range

The internal gain range for the Q channel. **Q Range** only applies to Input Path Q Only and Ind I/Q. For input I+jQ "[I Range](#)" on page 1766 determines both I and Q channel range settings.

| | |
|----------------|---|
| Remote Command | <code>[:SENSe]:VOLTage:IQ:Q:RANGe[:UPPer] <voltage></code> <code>[:SENSe]:VOLTage:IQ:Q:RANGe[:UPPer]?</code> |
| Example | Set the Q Range to 0.5 V Peak: <code>:VOLT:IQ:Q:RANG 0.5 V</code> <code>:VOLT:IQ:Q:RANG?</code> |
| Notes | The numeric entries are mapped to the smallest gain range whose break point is greater than or equal to the value, or 1 V Peak if the value is greater than 1 V Q Range is only used for Input Path Q Only and Ind I/Q. For input I+jQ, " I Range " on page 1766 determines both I and Q channel range settings |
| Couplings | When " Q Same as I " on page 1769 is On, the " I Range " on page 1766 value is copied to Q Range and the range value keys are disabled Changing the value also sets Range = Man |
| Preset | 1 V Peak |
| State Saved | Saved in instrument state |
| Range | 1 V Peak (10 dBm @ 50Ω) 0.5 V Peak (4 dBm @ 50Ω) 0.25 V Peak (-2 dBm @ 50Ω) 0.125 V Peak (-8 dBm @ 50Ω) |
| Min | 0.125 V |
| Max | 1 V |
| Annotation | The Range annotation replaces the RF Input context's "Atten" annotation "Rng: <Q Range>". When Range = Man the annotation is preceded by "#" The Q Range is not annotated in Input Path I Only or I+jQ. When I Range and Q Range are the same, the annotation is "Rng: <Range>". When I Range and Q Range are different and the Input Path is Ind I/Q, the annotation is "Rng: <I Range>, <Q Range>" and "Peak" is removed from the text. Examples: "Rng: 1 V Peak" the Q Range is 1 V Peak "Rng: 1 V, 0.5 V" the I Range is 1 V Peak and the Q Range is 0.5 V Peak This is an alternate form of the command to allow entry as a power. |
| Remote Command | <code>[:SENSe]:POWer:IQ:Q:RANGe[:UPPer] <amp;gt;</code> <code>[:SENSe]:POWer:IQ:Q:RANGe[:UPPer]?</code> |
| Example | Sets the Q Range to 0.5 V Peak when Reference Z is 50 Ω, and to 1.0 V Peak when Reference Z is 75 Ω: <code>:POW:IQ:Q:RANG 4 dBm</code> <code>:POW:IQ:Q:RANG?</code> |
| Notes | The POWer form of the command is provided for convenience. It maps to the same underlying gain |

range parameter as the **VOLTage** form of the command

The Reference Z (not the Q channel Input Z) is used to convert the power to peak voltage, which is then used to set the Q Range as with the **VOLTage** form of the command. The power values of the 4 range states (1V Peak, 0.5V Peak, 0.25V Peak, and 0.125V Peak) will vary with Reference Z. Here are some examples:

50 Ω: 10, 4, -2, -8

75 Ω: 8.2, 2.2, -3.8, -9.8

600 Ω: -0.8, -6.8, -12.8, -18.9

| | |
|--------|-------------------|
| Preset | 10.0 dBm |
| Range | -20 dBm to 10 dBm |
| Min | -20 dBm |
| Max | 10 dBm |

Q Same as I

Many, but not all, usages require the I and Q channels to have an identical setup. To simplify channel setup, **Q Same as I** causes the Q channel range to be mirrored from the I channel. That way, you only need to set up one channel (the I channel). The I channel values are copied to the Q channel, so at the time **Q Same as I** is Off, the I and Q channel setups will be identical.

| | |
|----------------|--|
| Remote Command | <code>[:SENSe] :VOLTage POWer : IQ : MIRRored OFF ON 0 1</code> <code>[:SENSe] :VOLTage POWer : IQ : MIRRored?</code> |
| Example | Turn off the mirroring of I Range to Q Range <code>:VOLT : IQ : MIRR OFF</code> <code>:POW : IQ : MIRR OFF</code> |
| Couplings | When ON , the " I Range " on page 1766 value is mirrored (copied) to the " Q Range " on page 1768 |
| Preset | ON |
| State Saved | Saved in instrument state |
| Range | OFF ON |

3.12.3.4 Range (Non-attenuator models)

Only available for Keysight's modular signal analyzers and certain other Keysight products, such as VXT and M941xE.

| | |
|-------------|----|
| State Saved | No |
|-------------|----|

Range

Represents the amplitude of the largest sinusoidal signal that could be present within the IF without being clipped by the ADC. For signals with high peak-to-average ratios, the range may need to exceed the rms signal power by a significant amount to avoid clipping.

This is a measurement global setting.

| | |
|----------------|---|
| Remote Command | <code>[:SENSe]:POWer[:RF]:RANGe <real></code> <code>[:SENSe]:POWer[:RF]:RANGe?</code> |
| Example | <code>:POW:RANG 10 dBm</code> <code>:POW:RANG?</code> |
| Notes | The MIN and MAX values are affected by the External Gain parameters, and by the Center Frequency . The hardware compensates for frequency response and alters the Range setting. |
| Preset | 0 dBm |
| State Saved | Yes |
| Min/Max | -/+100 |
| Annotation | Meas Bar |

Adjust Range for Min Clipping

Sets the combination of attenuation and gain based on the current measured signal level so that clipping will be at a minimum.

This is an "immediate action" function, that is, it executes once, when the key is pressed.

This key does not appear in measurements that do not support this functionality.

| | |
|----------------|--|
| Remote Command | <code>[:SENSe]:POWer[:RF]:RANGe:OPTimize IMMEDIATE</code> |
| Notes | Executing Adjust Range for Min Clipping initiates the measurement. |
| Dependencies | Does not appear in the Swept SA and Monitor Spectrum measurements. |

Pre-Adjust for Min Clipping

If this function is **ON**, it applies the adjustment described under Adjust Range For Min Clipping each time a measurement restarts. Therefore, in Continuous measurement mode, it only executes before the first measurement.

| | |
|----------------|---|
| Remote Command | <code>[:SENSe]:POWer[:RF]:RANGe:OPTimize:ATTenuation OFF ON ELECTRICAL COMBined</code> |
|----------------|---|

| | |
|--------------|--|
| | <code>[:SENSe]:POWer[:RF]:RANGe:OPTimize:ATTenuation?</code> |
| Notes | Because there is no attenuator control available in these models, the control displays only ON and OFF choices. However, for SCPI compatibility with other platforms, all three parameters (ELEctrical , COMBined , and ON) are honored and all are mapped to ELEctrical , so if any of these three parameters is sent, a subsequent query will return ELEC |
| Dependencies | Does not appear in the Swept SA and Monitor Spectrum measurements |
| Preset | OFF for Swept SA measurement; ON for all other measurements that support Pre-Adjust for Min Clipping |
| State Saved | Saved in instrument state |

Adjustment Algorithm

The algorithm for the adjustment is documented below:

Peak-to-Average Ratio

Used with "[Range \(Non-attenuator models\)](#)" on page 1769 to optimize the level control in the instrument. The value is the ratio, in dB, of the peak power to the average power of the signal to be measured. A ratio of 0 should be used for sinusoidal signals; for 802.11g OFDM signals use 9 dB.

All Modes show the current value of Peak-to-Average ratio on the control. However, some Modes do not permit changing the value. In these situations, the control is grayed-out.

| | |
|----------------|--|
| Remote Command | <code>[:SENSe]:POWer[:RF]:RANGe:PARatio <real></code> <code>[:SENSe]:POWer[:RF]:RANGe:PARatio?</code> |
| Example | <code>:POW:RANG:PAR 12 dB</code> |
| Notes | In some Modes, this parameter is read-only; meaning the value will appear on the control and query |

| | | |
|--------------|---|-------|
| | via SCPI, but is not changeable. In such applications the control is grayed-out. Attempts to change the value via SCPI are ignored, but no error message is generated | |
| Dependencies | Does not appear in Spectrum Analyzer Mode | |
| Preset | VXT Models M9410A/11A | 0 dB |
| | All Others | 10 dB |
| State Saved | Saved in instrument state | |
| Min | 0 dB | |
| Max | VXT Models M9410A/11A | 50 dB |
| | All Others | 20 dB |

Mixer Lvl Offset

This is an advanced setting to adjust target Range at the input mixer, which in turn affects the signal level in the instrument's IF. This setting can be used when additional optimization is needed after setting "[Peak-to-Average Ratio](#)" on page 1771. Positive values of offset optimize noise performance over distortion, negative values optimize distortion performance over noise.

| | | |
|----------------|--|--------|
| Remote Command | <code>[:SENSe]:POWer[:RF]:RANGe:MIXer:OFFSet <real></code> <code>[:SENSe]:POWer[:RF]:RANGe:MIXer:OFFSet?</code> | |
| Example | <code>:POW:RANG:MIX:OFFS -5 dB</code> | |
| Preset | 0 dB | |

| Min | VXT Models M9410A/11A | -34 dB |
| | All Others | -35 dB |
| Max | 30 dB | |

3.12.3.5 Signal Path

Contains controls that pertain to the routing of the signal through the frontend of the instrument.

In general, only appears in instruments whose hardware supports this signal routing. For example, this tab does not appear in many of the modular instrument products, including VXT Model M9420A, or UXM.

This tab *does* appear in VXT Models M9410A/11A/15A/16A and M9410E/11E/15E/16E, because ["Software Preselection" on page 1788](#) is under this tab, and VXT Models M9410A/11A/15A/16A and M9410E/11E/15E/16E implement a version of Software Preselection.

Presel Center

Adjusts the centering of the preselector filter to optimize the amplitude accuracy at the frequency of the selected marker. If the selected marker is not on when **Presel Center** is pressed, the instrument turns on the selected marker, performs a peak search, and then performs centering on the marker's center frequency. If the selected marker is already on and between the start and stop frequencies of the instrument, the instrument performs the preselector calibration on that marker's frequency. If the selected marker is already on, but outside the frequency range between **Start Freq** and **Stop Freq**, the instrument first performs a peak search, and then performs centering on the marker's center frequency.

The value displayed on ["Preselector Adjust" on page 1774](#) changes to reflect the new preselector tuning.

Certain considerations should be observed to ensure proper operation, as detailed in ["Proper Preselector Operation" on page 1774](#).

| | |
|-----------------|---|
| Remote Command | <code>[:SENSe] :POWer [:RF] :PCENter</code> |
| Example | <code>:POW:PCEN</code> |
| Notes | The rules outlined above under the control description apply for the remote command as well as the key. The result of the command depends on marker position, etc. Any message generated by the control press is also generated in response to the remote command |
| Dependencies | Does not appear in CXA-m, nor in VXT Models M9410A/11A/15A/16A, M9410E/11E/15E/16E Grayed-out if the microwave preselector is off <ul style="list-style-type: none"> - If the selected marker's frequency is below Band 1, an advisory message is generated "Preselector not used in this frequency range" and no action is taken - Grayed-out if entirely in Band 0, that is, if Stop Freq is below about 3.6 GHz Grayed-out if entirely above 50 GHz, that is, if Start Freq is above 50 GHz - Blanked in models that do not include a preselector, such as Option 503. If the remote command is sent in these instruments, accepted without error, and the query always returns 0 - Grayed-out in the Spectrogram View |
| Couplings | The active marker position determines where the centering will be attempted If the instrument is in a measurement such as averaging when centering is initiated, the act of centering the preselector restarts averaging, but the first average trace will not be taken until the centering is completed The offset applied to do the centering appears in "Preselector Adjust" on page 1774 |
| Status Bits/OPC | When centering the preselector, *OPC does not return true until the process is complete and a |

dependencies subsequent measurement has completed, nor are results returned in response to `:READ` or `:MEASure` queries
The **Measuring** bit remains set (true) while this command is operating, and does not go false until the subsequent sweep/measurement has completed

Proper Preselector Operation

Certain considerations should be observed to ensure proper operation:

1. If the selected marker is **Off**, the instrument turns on a marker, performs a peak search, and adjusts the preselector using the selected marker's frequency. It uses the "highest peak" peak search method unqualified by threshold or excursion, so that there is no chance of a 'no peak found' error. It continues with that peak, even if it is the peak of just noise. Therefore, for this operation to work properly, there should be a signal on-screen in a preselected range for the peak search to find
2. If the selected marker is already **On**, the instrument attempts the centering at that marker's frequency. There is no preselector for signals below about 3.6 GHz, so if the marker is on a signal below 3.6 GHz, no centering is attempted, and an advisory message is generated
3. In some models, the preselector can be bypassed. If it is bypassed, no centering is attempted in that range and a message is generated

Preselector Adjust

Lets you manually adjust the preselector filter frequency to optimize its response to the signal of interest. Only available when **"Presel Center"** on page 1773 is available.

For general purpose signal analysis, using **Presel Center** is recommended. Centering the filter minimizes the impact of long-term preselector drift. **Preselector Adjust** can be used instead to manually optimize the preselector. One application of manual optimization would be to peak the preselector response, which both optimizes the signal-to-noise ratio and minimizes amplitude variations due to small (short-term) preselector drifting.

When **Presel Center** is performed, the offset applied to do the centering becomes the new value of **Preselector Adjust**.

Internal Preamp

Accesses a menu of controls for the internal preamps. Turning on the preamp gives a better noise figure, but a poorer inter-modulation distortion (TOI) to noise floor dynamic range. You can optimize this setting for your measurement.

The instrument takes the preamp gain into account as it sweeps. If you sweep outside of the range of the preamp, the instrument will also account for that. The displayed result always reflects the correct gain.

For some measurements, when the preamp is on and any part of the displayed frequency range is below the lowest frequency for which the preamp has specifications, a warning condition message appears in the status line. For example, for a preamp with a 9 kHz lowest specified frequency: "Preamp: Accy unspec'd below 9 kHz".

| Selection | Example | Note |
|------------|--|---|
| Off | :POW:GAIN OFF | |
| Low Band | :POW:GAIN ON :POW:GAIN:BAND LOW | Sets the internal preamp to use only the low band. The frequency range of the installed (optional) low-band preamp is displayed in square brackets on the Low Band selection in the dropdown |
| Full Range | :POW:GAIN ON :POW:GAIN:BAND FULL | Sets the internal preamp to use its full range. The low band (0-3.6 GHz, 0-3.4 GHz, 0-3 GHz, depending on the model) is supplied by the low band preamp and the frequencies above low band are supplied by the high band preamp The frequency range of the installed (optional) low-band preamp is displayed in square brackets on the Full Range selection in the dropdown. If the high band option is not installed the Full Range selection does not appear |

NOTE

The maximum **Center Frequency for Low Band**, displayed in square brackets, can change based on the selected IFBW for measurements that support IFBW (for example, Waveform measurement across all Modes that support it). In certain models (such as N9042B & N9032B), IFBW values ≤ 40 MHz have a maximum **Low Band** frequency of 3.6 GHz, while $40 \text{ MHz} < \text{IFBW} \leq 1 \text{ GHz}$ have a maximum of 3.3 GHz, and $1 \text{ GHz} < \text{IFBW} \leq 1.5 \text{ GHz}$ have a maximum of 3.5 GHz. IFBW values $> 1.5 \text{ GHz}$ do not support a **Center Frequency** that can reach the **Low Band** maximum frequency. In these cases, **N/A** is displayed in the square brackets for **Low Band**.

| | |
|----------------|--|
| Remote Command | <code>[:SENSe]:POWer[:RF]:GAIN:BAND LOW FULL</code> <code>[:SENSe]:POWer[:RF]:GAIN:BAND?</code> |
| Example | <code>:POW:GAIN:BAND LOW</code> <code>:POW:GAIN:BAND?</code> |
| Dependencies | Not available on all hardware platforms. If the preamp is not present or is unlicensed, this control is not shown Does not appear in VXT Models M9410A/11A/15A/16A nor in M9410E/11E/15E/16E If <code>:POW:GAIN:BAND FULL</code> is sent when a low band preamp is available, the preamp band parameter is set to <code>LOW</code> instead of <code>FULL</code> , and an "Option not installed" message is generated Not available when the electronic/soft attenuator is enabled |
| Preset | <code>LOW</code> |
| State Saved | Saved in instrument state |
| Annotation | When the USB Preamp is not connected to USB, the Preamp annotation in the Meas Bar says "Off" if the preamp is off and displays the frequency range of the low band or full range preamp depending on the setting. For example, if the Preamp is set to Low Band and the Low Band is 3.6 GHz the annotation says "3.6 GHz". If it is a 13.6 GHz preamp and it is set to Full Range the annotation says "13.6 GHz" |

3 WLAN Mode
3.12 IQ Waveform Measurement

When the USB Preamp is connected to USB, the Preamp annotation says "Preamp: USB" if the internal preamp is off or "Preamp: USB, Int" if the internal preamp is on (only for measurements that support the USB preamp)

Auto Function

| | |
|----------------|--|
| Remote Command | <code>[:SENSe]:POWer[:RF]:GAIN[:STATe] OFF ON 0 1</code> <code>[:SENSe]:POWer[:RF]:GAIN[:STATe]?</code> |
| Example | <code>:POW:GAIN OFF</code> <code>:POW:GAIN?</code> |
| Preset | <code>OFF</code> |

LNA

Lets you turn the Low Noise Amplifier (**LNA**) on or off.

LNA is an additional preamplifier that provides superior DANL and frequency range compared to "[Internal Preamp](#)" on page 1775. LNA provides lower system noise figure, especially at frequencies above 100 MHz, and can be operated up to the full range of 50 GHz instruments.

For best possible sensitivity, **LNA** can be turned on *together* with "[Internal Preamp](#)" on page 1775, although if you operate both preamps together, note that the TOI (distortion) specifications are impacted. The sensitivity improvement of this combination is substantial when operating in high band (frequencies above 3.6 GHz).

For more details about annotation, see "[More Information](#)" on page 1778

| | |
|----------------|--|
| Remote Command | <code>[:SENSe]:POWer[:RF]:GAIN:LNA[:STATe] OFF ON 0 1</code> <code>[:SENSe]:POWer[:RF]:GAIN:LNA[:STATe]?</code> |
| Example | <code>:POW:GAIN:LNA ON</code> |
| Dependencies | Requires Option LNA, except for VXT models M9415A/16A Does not appear in VXT models M9420A/10A/11A M9410E/11E/15E/16E support LNA May not appear in some measurements LNA is not available when the electronic/soft attenuator is enabled |
| Preset | <code>OFF</code> |
| State Saved | Saved in State |

More Information

When **LNA** is installed, the preamp annotation changes to show the state of both **LNA** and **Internal Preamp**. Below is an example:

```
Atten: 8 dB
Pre: Int on, LNA on
μW Path: LNP, On
Source: Off
```

Note that when operating entirely in the low band (below about 3.6 GHz), if **LNA** is on, **Internal Preamp** is switched off (even if you have its switch set to **ON**). This is because the noise performance is actually degraded in low band if both preamps are on. In this case, the annotation reflects the actual state of the two preamps, but the **Internal Preamp** annotation displays in amber, to warn you that the actual state of **Internal Preamp** does not match its switch control display:

```
Atten: 8 dB
Pre: Int off, LNA on
μW Path: LNP, On
Source: Off
```

μW Path Control

Options for this control include **μW Preselector Bypass** (Option MPB), **Low Noise Path** (Option LNP) and **Full Bypass Enable** in the High Band path circuits.

When the μW Preselector is bypassed, flatness is improved, but will be subject to spurs from out of band interfering signals. When **Low Noise Path Enable** is selected, the instrument automatically bypasses certain circuitry in the high frequency bands that can contribute to noise, when it is appropriate based on other instrument settings.

For most applications, the preset state is **Standard Path**, which provides the best remote-control throughput, minimizes acoustic noise from switching and minimizes the risk of wear in the hardware switches, particularly in remote test scenarios where both low band and high band setups will follow in rapid succession. In this path, the bypass of the low band/high band switch and microwave preamp is never activated, which can cause some noise degradation but preserves the life of the bypass switch.

For applications that utilize the wideband IF paths, the preset state is **μW Preselector Bypass**, if option MPB is present. This is because, when using a wideband IF such as the 140 MHz IF, the μW Preselector's bandwidth can be narrower than the available IF bandwidth, causing degraded amplitude flatness and phase linearity, so it is desirable to bypass the preselector in the default case.

You may choose **Low Noise Path Enable** for a lower noise floor, especially in the 21-26.5 GHz region, though without improving many measures of dynamic range, and

3 WLAN Mode
3.12 IQ Waveform Measurement

without giving the best possible noise floor. The preamp, if purchased and used, gives better noise floor than does **Low Noise Path Enable**, but the preamp's compression threshold and third-order intercept are much poorer than that of **Low Noise Path Enable**.

A fourth choice is **Full Bypass Enable**, which combines **μW Preselector Bypass** and **Low Noise Path Enable**. Because this can bypass most of the circuitry between the input and the first mixer, care should be taken when using this setting to avoid damaging the mixer. **Full Bypass Enable** is only available if both options LNP and MPB are present, as well as option FBP.

| Path | Example | Note |
|-----------------------|-------------------|--|
| Standard Path | :POW:MW:PATH STD | Normal setting for most measurements. μW Preselector in circuit, Low Noise Path disabled |
| Low Noise Path Enable | :POW:MW:PATH LNP | See " Low Noise Path Enable " on page 1783 |
| μW Preselector Bypass | :POW:MW:PATH MPB | See " μW Preselector Bypass " on page 1785 |
| Full Bypass Enable | :POW:MW:PATH FULL | See " Full Bypass Enable " on page 1785 |

| | |
|----------------|--|
| Remote Command | <code>[:SENSe]:POWer[:RF]:MW:PATH STD LNPath MPBypass FULL</code> <code>[:SENSe]:POWer[:RF]:MW:PATH?</code> |
| Example | <code>:POW:MW:PATH LNP</code> Enables the Low Noise path <code>:POW:MW:PATH?</code> |
| Notes | When " Presel Center " on page 1773 is performed, the instrument momentarily switches to the Standard Path, regardless of the setting of μW Path Control The DC Block will always be switched in when the low noise path is switched in, to protect succeeding circuitry from DC. Note that this does not mean "when the low noise path is enabled" but when, based on the Low Noise Path rules, the path is actually switched in. This can happen when the selection is Low Noise Path Enable or Full Bypass Enable . In the case where the DC Block is switched in, the instrument is now AC-coupled. However, if you selected DC coupling, the UI would still behave as though it were DC-coupled, including all annunciation, warnings, status bits, and responses to SCPI queries. This is because, based on other settings, the instrument could switch out the low noise path at any time and hence go back to being DC-coupled Alignment switching ignores the settings in this menu, and restores them when finished |
| Dependencies | Does not appear in CXA-m, VXT Models M9410A/11A/15A/16A, nor in M9410E/11E/15E/16E, BBIQ and External Mixing <ul style="list-style-type: none"> - The Low Noise Path Enable selection does not appear unless Option LNP is present and licensed - The μW Preselector Bypass selection does not appear unless Option MPB is present and licensed - The Full Bypass Enable selection does not appear unless options LNP and MPB are both present as well as option FBP |

In any of these cases, if the required options are not present and the SCPI command is sent, error - 241, "Hardware missing; Option not installed" is generated

Low Noise Path Enable and **Full Bypass Enable** are grayed-out if the current measurement does not support them

Low Noise Path Enable and **Full Bypass Enable** are not supported in Avionics and MMR Modes (non-modulation measurements). In any of these cases (that is, the feature is not supported in either measurement or Mode), if the SCPI command is sent, the following error is generated: -221, "Setting Conflict; Feature not supported for this measurement"

| Preset | Mode | Value |
|--------|-----------------|---|
| | IQ Analyzer | MPB option present and licensed: MPB |
| | Pulse | MPB option not present and licensed: STD |
| | RTSA | |
| | Avionics | |
| | All other Modes | STD |
| | - | |

| Preset | ON |
| Range | ON OFF |

Low Noise Path Enable

Low Noise Path Enable provides a lower noise floor under some circumstances, particularly when operating in the 21–26.5 GHz region. With the Low Noise Path enabled, the low band/high band switch and microwave preamp are bypassed whenever *all* the following are true:

- The instrument is not in the Low Band, meaning:
- the start frequency is above 3.5 GHz and
- the stop frequency is above 3.6 GHz
- The internal preamp is not installed, or if installed, is set to **Off** or **Low Band**

Note that this means that, when any part of a sweep is done in Low Band, the Low Noise Path is not used, whether or not the **Low Noise Path Enable** is selected in the user interface. Also, if the preamp is turned on, the Low Noise Path is not used, whether or not the **Low Noise Path Enable** is selected in the user interface. The only time the Low Noise Path is used is when **Low Noise Path Enable** is selected, the sweep is completely in High Band (> 3.6 GHz) and no preamp is in use.

For measurements that use IQ acquisition, the low noise path is used when **Center Frequency** is in High Band (> 3.6 GHz) and no preamp is in use. In other words, the rules above are modified to use only the center frequency to qualify which path to switch in. This is not the case for FFTs in the Swept SA measurement; they use the same rules as swept measurements.

Note that the Low Noise Path, while giving improved DANL, has the disadvantage of decreased TOI performance and decreased gain compression performance relative to the standard path.

Note also that the bypass switch is a mechanical switch and has finite life, so if the **Low Noise Path Enable** is selected, it is possible to cause frequent cycling of this switch by frequently changing instrument settings such that the above conditions hold true only some of the time. A user making tests of this nature should consider opting for the **Standard Path**, which will never throw the bypass switch, at the expense of some degraded noise performance.

The low noise path is useful for situations where the signal level is so low that the instrument performance is dominated by noise even with 0 dB attenuation, but still high enough that the preamp option would have excessive third-order intermodulation or compression. The preamp, if purchased and used, gives better noise floor than does the “Low Noise Path.” However, its compression threshold and third-order intercept are much poorer than that of the non-preamp path.

There are some applications, typically for signals around –30 dBm, for which the third-order dynamic range of the standard path is good enough, but the noise floor is not low enough even with 0 dB input attenuation. When the third-order dynamic

range of the preamp path is too little and the noise floor of the standard path is too high, the Low Noise Path can provide the best dynamic range

The graph below illustrates the concept. It shows, in red, the performance of an instrument at different attenuation settings, both with the preamp on and off, in a measurement that is affected by both instrument noise and instrument TOI. The green shows the best available dynamic range, offset by 0.5 dB for clarity. The blue shows how the best available dynamic range improves for moderate signal levels with the low noise path switched in. In this illustration, the preamp improves the noise floor by 15 dB while degrading the third-order intercept by 30 dB, and the low noise path reduces loss by 8 dB. The attenuator step size is 2 dB.

There are other times where selecting the low noise path improves performance, too. Compression-limited measurements such as finding the nulls in a pulsed-RF spectrum can profit from the low noise path in a way similar to the TOI-limited measurement illustrated. Accuracy can be improved when the low noise path allows the optimum attenuation to increase from a small amount like 0, 2 or 4 dB to a larger amount, giving better return loss at the instrument input. Harmonic measurements, such as second and third harmonic levels, are much improved using the low noise path because of the superiority of that path for harmonic (though not intermodulation) distortion performance.

μW Preselector Bypass

Toggles the preselector bypass switch for band 1 and higher. When the microwave preselector is on, the signal path is preselected. When the microwave preselector is off, the signal path is not preselected. The preselected path is the normal path for the instrument.

The preselector is a tunable bandpass filter which prevents signals away from the frequency of interest from combining in the mixer to generate in-band spurious signals (images). The consequences of using a preselector filter are its limited bandwidth, the amplitude and phase ripple in its passband, and any amplitude and phase instability due to center frequency drift.

Option MPB or pre-selector bypass provides an unpreselected input mixer path for certain X-Series signal analyzers with frequency ranges above 3.6 GHz. This signal path allows a wider bandwidth and less amplitude variability, which is an advantage when doing modulation analysis and broadband signal analysis. The disadvantage is that, without the preselector, image signals will be displayed. Another disadvantage of bypassing the preselector is increased LO emission levels at the front panel input port.

Image responses are separated from the real signal by twice the 1st IF. For IF Paths of 10 MHz and 25 MHz, the 1st IF is 322.5 MHz, so the image response and the real signal will be separated by 645 MHz. The 1st IF will be different for other IF Path settings. When viewing a real signal and its corresponding image response in internal mixing, the image response will be to the left of the real signal.

Also, the image response and the real signal typically have the same amplitude and exhibit the same shape factor.

However, if Option FS1 (Fast Sweep Capability) is enabled, the image response in the Swept SA measurement appears lower in amplitude and has a much wider shape factor compared to the real signal.

Full Bypass Enable

With **Full Bypass Enable** selected, the microwave preselector is bypassed. In addition, the low band/high band switch and microwave preamp are bypassed whenever *all* the following are true:

- The instrument is not in the Low Band, meaning:
- the start frequency is above 3.5 GHz and
- the stop frequency is above 3.6 GHz.
- the internal preamp is not installed or if installed, is set to **Off** or **Low Band**

Note that this means that, when any part of a sweep is done in Low Band, the Low Noise Path is not used, whether or not the **Full Bypass Enable** is selected in the user

interface. Also, if the preamp is turned on, the Low Noise Path is not used, whether or not the **Full Bypass Enable** is selected in the user interface. The only time the Low Noise Path is used is when **Full Bypass Enable** is selected, the sweep is completely in High Band (> 3.6 GHz) and no preamp is in use.

CAUTION

When **Full Bypass Enable** is selected, and "**Y Scale**" on page 1745 is set to 0 dB, there will be a direct AC connection between the input and the first converter when the Low Noise Path switches in (when Start Freq >3.6 GHz and the Preamp is either not licensed, set to Low Band, or Off). This puts the first converter at considerable risk to be damaged by high AC power. Consequently, whenever **Full Bypass Enable** is selected, a warning message appears in the status bar:

"Full Bypass Enabled, maximum safe input power reduced"

Microwave Preselector Bypass Backwards Compatibility

| | |
|------------------------------|--|
| Example | Bypass the microwave preselector: <code>:POW:MW:PRES OFF</code> |
| Notes | Included for Microwave Preselector Bypass backwards compatibility The ON parameter sets the STD path (<code>:POW:MW:PATH STD</code>) The OFF parameter sets path MPB (<code>:POW:MW:PATH MPB</code>) |
| Preset | ON |
| Backwards Compatibility SCPI | <code>[:SENSe]:POWer[:RF]:MW:PRESelector[:STATe] ON OFF 0 1</code> <code>[:SENSe]:POWer[:RF]:MW:PRESelector[:STATe]?</code> |

Frequency Extender Preselection Bypass

Only applies to the high frequency path of the Frequency Extender, and only if the Frequency Extender allows it. For example, the V3050A high frequency path is 50 – 110 GHz and *does* allow control of the preselector bypass.

When the Frequency Extender's preselection is bypassed, flatness is improved, but will be subject to spurs from out-of-band interfering signals. For bandwidths greater than 2.5 [GHz], it is recommended that the signal bypass the Frequency Extender Preselector since the max bandwidth of the Preselector can be as narrow as 2.5 [GHz].

For most applications, the preset state is **OFF**, which gives the best remote-control throughput, minimizes acoustic noise from switching, minimizes out of band spurs, and minimizes the risk of wear in the hardware switches.

Preselector and Bandwidth Conflict

When the Frequency Extender Preselector is applied and the signal bandwidth is greater than 2.5 [GHz], then a settings alert message will show to warn the user that the signal may be distorted due to the limitation of the Frequency Extender Preselector bandwidth.

An example of the settings alert message is shown below.

Settings Alert message in the Status Bar at the bottom of the display.

Settings Alert message in the error queue

| Type | ID | |
|---|-----|--|
|  | 159 | Settings Alert - DETECTED; Presel/Meas BW conflict |

Allow Full Bypass in Auto

Enable or disable Full Bypass in μ W Path Auto rule. See " [\$\mu\$ W Path Control](#)" on page 1778.

When this function is **ON**, and " [\$\mu\$ W Path Control](#)" on page 1778 is in **AUTO**, it is possible for the auto rules to select the **FULL** Bypass state, which bypasses both the Preamp and the Microwave Preselector. Otherwise, the auto rules never select the **FULL** Bypass state. This is convenient when making wideband measurements, but it also adds some risk of damage to the first converter.

CAUTION

When **Full Bypass Enable** is selected, and "[Y Scale](#)" on page 1745 is set to 0 dB, there will be a direct AC connection between the input and the first converter when the Low Noise Path switches in (when Start Freq > 3.6 GHz and the Preamp is either not licensed, set to **Low Band** or **Off**). This puts the first converter at considerable risk to be damaged by high AC power. Consequently, whenever **Full Bypass Enable** is selected, a warning message appears in the status bar:

"Full Bypass Enabled, maximum safe input power reduced"

Remote Command `[:SENSe] :POWer [:RF] :MW :PATH :AUTO :FULL ON | OFF | 1 | 0`

| State Saved | Saved in instrument state |

Software Preselection

Provided in some instruments, either to compensate for issues with provided hardware preselection or to provide the preselection function when there is no hardware preselector.

N9041B

Software Preselection compensates for the frequency range limit of the microwave preselector. Since the microwave preselector only goes up to 50 GHz, software preselection must be used to suppress and separate images above 50 GHz. The specific algorithm used for software preselection is specified by the SW Preselection Type selection – Normal or Advanced.

In N9041B, **Software Preselection** only applies for frequencies above 50 GHz, therefore it is only used for RF Input 2. Even if turned on, it is not used for other inputs, and never for frequencies below 50 GHz. This is why the label of this control contains the parenthetical note “(>~50 GHz)”.

Note that in N9041B, in Swept SA measurement, **Software Preselection** works even if the measurement is using an FFT Sweep Type. In measurements other than Swept SA, Software Preselection is not used if the measurement is using an FFT sweep type.

N9042B+V3050A

Software Preselection compensates for the frequency range limit of the microwave preselector. Since the microwave preselector only goes up to 50 GHz, software preselection must be used to suppress and separate images above 50 GHz. The specific algorithm used for software preselection is specified by the SW Preselection Type selection – Normal or Advanced.

For N9042B+V3050A, Software Preselection only applies for frequencies above 50 GHz, therefore it is only used for External RF. Even if it is turned on, it will not be

used for other inputs and never for frequencies below 50 GHz. This is why the label of this control contains the parenthetical note “(>~50 GHz)”.

Note that for N9042B+V3050A, in the Swept SA measurement, Software Preselection works even if the measurement is using an FFT Sweep Type. In measurements other than Swept SA, Software Preselection is not used if the measurement is using an FFT Sweep Type.

VXT models M9410A/11A/15A/16A

Software Preselection is used to provide the preselection function, as there is no hardware preselector in these models. Two background traces are taken and compared point by point, and the point with the lowest amplitude from the two traces is used. This provides a method to reduce spurs that are internally generated within the VXT, but you should note the following when using Software Preselection:

- There is some speed cost due to the need to take multiple captures
- Taking the point with the lowest amplitude in each trace will make the average noise level lower at all points that do not have a spur. This can reduce the accuracy of the measurement of noise and noise-like signals

Because of the difficulty in identifying spurs manually, you are recommended to leave Software Preselection **ON** at all times in VXT models M9410A/11A. If you turn it off in order to speed up your measurement or improve noise accuracy, be aware of unwanted onscreen spurs.

| | |
|----------------|--|
| Remote Command | <code>[:SENSe]:POWer[:RF]:SWPrese1:STATe 0 1 ON OFF</code> <code>[:SENSe]:POWer[:RF]:SWPrese1:STAT?</code> |
| Example | <code>:POW:SWPR:STAT 1</code> <code>:POW:SWPR:STAT?</code> |
| Dependencies | Only appears in N9041B, N9042B+V2050A, VXT models M9410A/11A and M9410E/11E. Does not appear in all measurements |
| Couplings | Affects Sweep Time Auto Tune supports Software Preselection , so Auto Tune should be performed after setting the Software Preselection state |
| Preset | N9041B OFF N9042B+V3050A ON M9410A/11A ON |
| State Saved | Saved in instrument state |

SW Preselection Type

Specifies the algorithm used for software preselection.

Two hidden sweeps occur in succession. The second sweep is offset in LO frequency by $2 * IF / N$. For each point in each trace, the smaller amplitude from the two traces is taken and placed in that point in the selected trace. The Peak detector is auto-selected to improve the image suppression effectiveness. Responses of each trace that lie on top of one another will remain and are valid signals. Other signals are images, which are suppressed. The action of taking the smaller of the two traces will make the average noise level lower in all points that do not have an image, thus reducing the accuracy of the measurement of noise and noise-like signals.

- **NORMa1** - mathematically removes all image and multiple responses of signals present at the input
- **ADVanced** - any trace processing (such as “max hold” or trace averaging) is performed on the points of both candidate traces before the “select minimum” operation occurs. This form of processing works better for non-stationary signals, such as pulsed-RF signals

| | |
|----------------|--|
| Remote Command | <code>[:SENSe]:POWer[:RF]:SWPreSel NORMa1 ADVanced</code> <code>[:SENSe]:POWer[:RF]:SWPreSel?</code> |
| Example | <code>:POW:SWPR NORM</code> <code>:POW:SWPR?</code> |
| Dependencies | Only appears in N9041B and N9042B+V3050A. Only appears in measurements that use the Swept method Grayed-out when "Software Preselection" on page 1788 is OFF. The grayout message is “Unavailable unless SW Presel enabled” |
| Preset | N9041B ADVanced N9042B+V3050A NORMa1 |
| State Saved | Saved in instrument state |

SW Preselection BW

Specifies the effective bandwidth to be used for Software Preselection.

The options are:

- **NORMa1** – when making Swept measurements, a software preselection algorithm is used which takes up to 4 background acquisitions, then post-processes the result. This algorithm can remove images from signals with an occupied

3 WLAN Mode
3.12 IQ Waveform Measurement

bandwidth up to around 3 GHz. (Default/Preset setting). When making FFT measurements, this algorithm is not used, instead the same algorithm is used as for **NARRow** (below)

- **NARRow**– a software preselection algorithm is used which takes two background acquisitions, then post-processes the result to detect and remove images from wideband signals with occupied bandwidths up to 2 GHz. This increases the risk of images failing to be rejected, but improves the measurement speed

| | |
|----------------|--|
| Remote Command | <code>[:SENSe]:POWer[:RF]:SWPreSel:BW NORMa1 NARRow</code> <code>[:SENSe]:POWer[:RF]:SWPreSel:BW?</code> |
| Example | <code>:POW:SWPR:BW NARR</code> |
| Dependencies | Only appears in N9041B and N9042B+V3050A. Only appears in measurements that use the Swept method Grayed-out when " Software Preselection " on page 1788 is OFF . The grayout message is "Unavailable unless SW Presel enabled" For N9042B+V3050A, the parameter is SCPI-only, and always set to NARRow when Software Preselection is enabled |
| Preset | N9041B NORMa1 N9042B+V3050A NARRow |
| State Saved | Saved in instrument state |

High Freq Prefilter

Lets you set the state of Prefilter for center frequencies above 1310 MHz.

In VXT Models M9410A/11A and M9410E/11E in bypass frequency range (1310MHz~5GHz), the Receiver RF path has a bank of filters that come after the RF Attenuator in the signal path. Since this bank of filters precedes the mixer they are known as the "Prefilter" bank. Their purpose is to eliminate unwanted in-band mixing products by filtering out all but the desired frequencies before the signals get to the mixer. There are 13 prefilter bands to cover the frequencies between 9 kHz and 6000 MHz. The Prefilter provides the necessary rejection of the unwanted signal.

| | |
|----------------|--|
| Remote Command | <code>[:SENSe]:<measurement>:PFILter[:STATe] ON OFF 1 0</code> <code>[:SENSe]:<measurement>:PFILter[:STATe]?</code> |
| Example | Enable High Freq Prefilter for the Complex Spectrum Measurement in BASIC Mode: <code>:SPEC:PFIL ON</code> Enable High Freq Prefilter for the IQ Waveform Measurement, in multiple Modes: <code>:WAV:PFIL ON</code> |

| | |
|--------------|--|

3.12.4 BW

Opens the **BW** (Bandwidth) menu. The Digital IF BW functions control filter bandwidth and filter type. There are two filter types: Gaussian and Flattop. The Gaussian filters have a response curve that is parabolic on a log scale. The Flattop filter shape is a close approximation of a rectangular filter.

3.12.4.1 Settings

Contains the basic bandwidth functions. It is the only tab under **Bandwidth**.

Digital IF BW

Sets the Digital IF (formerly Info BW) bandwidth of the instrument. When in Auto, it is set to the value that covers carriers set by carrier configuration.

Gaussian

When Option DP2, B40, or wider IF Bandwidth option is installed, the capability for arbitrary Digital IF bandwidths is available. However, for instruments without DP2, B40, or wider IF Bandwidth option, the selectable Gaussian filter bandwidths are predetermined. There are 160 Info BWs (RBWs) arranged in a 24-per-decade sequence from 1 Hz through 3 MHz, plus 4, 5, 6 and 8 MHz settings.

Flattop

When Option DP2, B40, or wider IF Bandwidth option is installed, the capability for arbitrary Digital IF bandwidths is available. However, for instruments without Option

DP2, B40 or wider IF Bandwidth option, , the selectable Flattop filter bandwidths are predefined. There are 134 Digital IF BWs (RBWs) arranged in a 6-per-decade sequence from 3 Hz through 3 MHz, plus 4, 5, 6 and 8 MHz settings.

Filter BW

This feature is only available when Option DP2, B40, or wider IF Bandwidth option is installed.

| | |

| Example | <code>:WAV:DIF:FILT:BAND 1MHz</code> <code>:WAV:DIF:FILT:BAND?</code> |
| Dependencies | Only available when Option DP2, B40, or wider IF Bandwidth option is installed. Disabled when the Filter Type is FLATtop |
| Couplings | Sets the same value as the current Digital IF BW value on Preset, or when Channel Filter Bandwidth Auto is ON |
| Preset | Same value as Digital IF BW |
| State Saved | Saved in instrument state |
| Min | 10 Hz |
| Max | Clipped to the current Digital IF BW value |

Auto Function

| | |
|----------------|--|
| Remote Command | <code>[:SENSe]:WAVeform:DIF:FILTer:BANDwidth:AUTO ON OFF 1 0</code> <code>[:SENSe]:WAVeform:DIF:FILTer:BANDwidth:AUTO?</code> |
| Example | <code>:WAV:DIF:FILT:BAND:AUTO 0</code> <code>:WAV:DIF:FILT:BAND:AUTO?</code> |
| Preset | ON |
| Range | Auto Man |

Filter Alpha

Sets the filter alpha for the DIF filter. This feature is only available when Option DP2, B40, or wider IF Bandwidth option is installed.

| | |
|----------------|--|
| Remote Command | <code>[:SENSe]:WAVeform:DIF:FILTer:ALPHa <real></code> <code>[:SENSe]:WAVeform:DIF:FILTer:ALPHa?</code> |
| Example | <code>:WAV:DIF:FILT:ALPH 0.5</code> <code>:WAV:DIF:FILT:ALPH?</code> |

| | |
|------------------------------|---|
| Preset | 0.2 |
| State Saved | Saved in instrument state |
| Min | 0.01 |
| Max | 1.00 |
| Backwards Compatibility SCPI | <code>[:SENSe] :WAVeform:WBIF:FILTer:ALPHa</code> |

Channel Filter Bandwidth (Backwards Compatibility Remote Command Only)

| | |
|------------------------------|--|
| Dependencies | Only available when Option DP2, B40, or wider IF Bandwidth option is installed |
| Couplings | The value is determined by the following equation $\text{ChannelFilterBwBwcc} = (\text{ChannelFilterBw} / (\text{DigitalIFBw} * \text{OverSampleRatio}))$ |
| Preset | 0.8 |
| State Saved | Saved in instrument state |
| Min | 0.01 |
| Max | 1.0 |
| Backwards Compatibility SCPI | <code>[:SENSe] :WAVeform:WBIF:FILTer:BA NDwidth <real></code> <code>[:SENSe] :WAVeform:WBIF:FILTer:BA NDwidth?</code> |

3.12.5 Display

Lets you configure display items for the current Mode, Measurement, View, or Window.

3.12.5.1 View

Contains controls for selecting the current **View**, and for editing User Views.

View

See "[Views](#)" on page 1742.

User View

Lets you choose a View from the saved User Views for the current measurement. This panel only appears if a User View exists for the current measurement.

| | |
|--------|---|
| Remote | <code>:DISPlay:VIEW:ADVanced:SElect <alphanumeric></code> |
|--------|---|

| | |
|---------------------------------|--|
| Command | <code>:DISPlay:VIEW:ADVanced:SElect?</code> |
| Example | Select Baseband as the current View <code>:DISP:VIEW:ADV:SEL "Baseband"</code> |
| Notes | <p>You must be in the measurement whose View you are trying to set to send the command. You can only set Views for the current measurement using this command</p> <p>For predefined views, the parameter is derived from the view name that is shown in the View list in the user interface. For example, if you are trying to select the Trace Zoom view in the Swept SA measurement, you send:</p> <pre>:DISP:VIEW:ADV:SEL "Trace Zoom"</pre> <p>because "Trace Zoom" is the name of the View as seen in the Mode/Meas dialog or in the Display, View menu</p> <p>You <i>cannot</i> use the legacy View parameter (which in this case would be <code>TZOOM</code>) with</p> <pre>:DISP:VIEW:ADV:SEL</pre> <p><code><alphanumeric></code> is case insensitive; you can specify mixed case, however the name will be evaluated on a single case. Thus, both of the following forms work:</p> <pre>:DISP:VIEW:ADV:SEL "Trace Zoom"</pre> <pre>:DISP:VIEW:ADV:SEL "TRACE ZOOM"</pre> <p>If the specified view is not a valid View, the query returns the error message "-224, Illegal parameter value; View with the name <alphanumeric> does not exist"</p> <p>If the display is disabled (via <code>:DISP:ENAB OFF</code>) then the error message "-221, Settings conflict; View SCPI cannot be used while Display is disabled" is generated</p> |
| Backwards Compatibility SCPI | <p>The legacy node</p> <pre>:DISPlay:VIEW[:SElect]</pre> <p>is retained for backwards compatibility, but it only supports predefined views</p> |

Restore Layout to Default

Restores the Layout to the default for Basic.

Modified Views are very temporary; if you exit the current measurement they are discarded, and they are not saved in State. To retain this View for later use, and to be able to return easily to your original Basic View, you can save your edited View as a "User View".

Save Layout as New View

Saves your new View as a User View. An alpha keyboard appears, which lets you name your new View; the default is the old View name plus a number.

| | |
|----------------|---|
| Remote Command | <code>:DISPlay:VIEW:ADVanced:NAME <alphanumeric></code> |
| Example | <code>:DISP:VIEW:ADV:NAME "Baseband"</code> |

| | |
|-------|--|
| Notes | <p>Creates a new View named Baseband from the current View, and selects it as the current View</p> <hr/> <p><code><alphanumeric></code> is case insensitive; you can specify mixed case, however the name will be evaluated on a single case</p> <p>If <code><alphanumeric></code> name already exists as a View, the error message “-224, Illegal parameter value; View <alphanumeric> already exists” is generated</p> <p>If the display is disabled (via <code>:DISP:ENAB OFF</code>) then the error message “-221, Settings conflict; User View SCPI cannot be used while Display is disabled” is generated</p> |
|-------|--|

Re-Save User View

You can re-edit a User View; if you make changes, then an asterisk will appear next to the User View’s name. You can then tap **Re-Save User View** to save it back to its existing name, or **Save Layout as New View** to add another, new User View.

This is a front panel function only, there is no remote command available to perform this function. To do this remotely, you must first perform **Save Layout as New View**, then delete the old User View and rename the new one with the name of the View you just deleted.

Rename User View

You can rename the current View by giving it a new unique name. Only User Views can be renamed, if the current View is a Predefined View, an error occurs.

| | |
|----------------|---|
| Remote Command | <code>:DISPlay:VIEW:ADVanced:REName <alphanumeric></code> |
| Example | <code>:DISP:VIEW:ADV:REN “Baseband”</code> |
| Notes | <p><code><alphanumeric></code> is case insensitive; you can specify mixed case, however the name will be evaluated on a single case</p> <p>If the <code><alphanumeric></code> specifying the new name is already present in the list of View names, the error message “-224, Illegal parameter value; View <alphanumeric> already exists” is generated</p> <p>If the current View is a Predefined View, the error message “-224, Illegal parameter value; Cannot rename a Predefined View” is generated</p> <p>If the display is disabled (via <code>:DISP:ENAB OFF</code>) then the error message “-221, Settings conflict; View SCPI cannot be used while Display is disabled” is generated</p> |

Delete User View

You can delete the current View if it is a User View. The default view becomes the current view for the Measurement.

| | |
|----------------|--|
| Remote Command | <code>:DISPlay:VIEW:ADVanced:DElete</code> |
|----------------|--|

| | |
|---------|---|
| Example | <code>:DISP:VIEW:ADV:DEL</code> |
| Notes | <p><code><alphanumeric></code> is case insensitive; you can specify mixed case, however the name will be evaluated on a single case</p> <p>If the <code><alphanumeric></code> is not present in the list of View names, the error message “-224, Illegal parameter value; View <alphanumeric> does not exist” is generated</p> <p>If the current View is a Predefined View, the error message “-224, Illegal parameter value; Cannot delete a Predefined View” is generated</p> <p>If the display is disabled (via <code>:DISP:ENAB OFF</code>) then the error message “-221, Settings conflict; View SCPI cannot be used while Display is disabled” is generated</p> |

Delete All User Views

Deletes all previously saved User Views. The default view becomes the current view for the Measurement if a User View was the current view when this command was executed.

| | |
|----------------|--|
| Remote Command | <code>:DISPlay:VIEW:ADVanced:DElete:ALL</code> |
| Example | <code>:DISP:VIEW:ADV:DEL:ALL</code> |
| Notes | Disabled if there are no User Views |

View Editor Remote Commands

The following remote commands help you manage Views and User Views. Note that the SCPI node for User Views handles both Predefined and User Views. The legacy nodes, `:DISPlay:VIEW[:SElect]` and `:DISPlay:VIEW:NSEL`, are retained for backwards compatibility, but they only support predefined views.

View Listing Query

Returns a string containing a comma-separated list of names for *all* the Views, including User Views, available for the current Measurement.

| | |
|----------------|--|
| Remote Command | <code>:DISPlay:VIEW:ADVanced:CATalog?</code> |
| Example | <code>:DISP:VIEW:ADV:CAT?</code> |
| Notes | <p>Returns a quoted string of the available Views for the current measurement, separated by commas. The list includes names for <i>all</i> the Views, including User Views, available for the current Measurement</p> <p>Example:</p> <p><code>"Normal,Trace Zoom,Spectrogram,Baseband,myView1,yourView1"</code></p> <p>No distinction is made between Predefined and User Views</p> |

If you switch measurements with the display disabled (via `:DISP:ENAB OFF`), then query the list of available Views, the result is undefined

User View Listing Query

Returns a string containing a comma-separated list of names for *only* the User Views available for the current Measurement.

| | |
|----------------|---|
| Remote Command | <code>:DISPlay:VIEW:ADVanced:USER:CATalog?</code> |
| Example | <code>:DISP:VIEW:ADV:USER:CAT?</code> |
| Notes | <p>Returns a quoted string of the available User Views for the current measurement, separated by commas.</p> <p>Example: <code>"Baseband,myView1,yourView1"</code></p> <p>If you switch measurements with the display disabled (see "Display Enable (Remote Command Only)" on page 1804), then query the list of available Views, the result is undefined</p> |

3.12.5.2 Annotation

Contains controls for setting up the annotation for the current Mode or Measurement.

Graticule

Turns the display graticule On or Off for all windows with graticules in all measurements in the current Mode. Also turns the graticule Y-Axis annotation on and off.

| | |
|------------------------------|---|
| Remote Command | <code>:DISPlay:GRATicule[:STATe] OFF ON 0 1</code> <code>:DISPlay:GRATicule[:STATe]?</code> |
| Example | <code>:DISP:GRAT OFF</code> |
| Notes | The graticule is the set of horizontal and vertical lines that make up the grid/divisions for the X-Axis and Y-Axis |
| Preset | <code>ON</code> |
| State Saved | Saved in instrument state |
| Backwards Compatibility SCPI | <p><code>:DISPlay:WINDow[1]:TRACe:GRATicule:GRID[:STATe] OFF ON 0 1</code> <code>:DISPlay:WINDow[1]:TRACe:GRATicule:GRID[:STATe]?</code></p> <p>This command is accepted for backwards compatibility with older instruments, but the <code>WINDow</code>, <code>TRACe</code> and <code>GRID</code> parameters are ignored</p> |

Screen Annotation

Controls the display of the annunciation and annotation around the graticule, including any annotation on lines (such as the display line, the threshold line, etc.) and the Y-Axis annotation, for all windows with screen annotation in all measurements in the current Mode.

This does *not* include marker annotation (or the N dB result). When **OFF**, the graticule expands to fill the entire graticule area, leaving only the 1.5% gap above the graticule, as described in the **Trace** section.

| | |
|----------------|--|
| Remote Command | <code>:DISPlay:ANNotation:SCReen[:STATe] OFF ON 0 1</code> <code>:DISPlay:ANNotation:SCReen[:STATe]?</code> |
| Example | <code>:DISP:ANN:SCR OFF</code> |
| Dependencies | Grayed-out and forced to OFF when System Display Settings, Annotation is OFF |
| Preset | ON This remains OFF through a Preset when System Display Settings, Annotation is set to OFF |
| State Saved | Saved in instrument state |

Trace Annotation

Turns on and off the labels on the traces, showing their detector (or their Math Mode) as described in the **Trace** section, for all windows in all measurements in the current Mode for which Trace Annotation on/off is supported.

If Trace Math is being performed on a trace, then the Trace Math annotation replaces the detector annotation.

For measurements that support limit lines, this key also turns on and off the labels on the Limit Lines. The label is the Limit number annotation and Limit Comment displayed on the graph. If the length of the comment is greater than 20 characters, the first 8 characters and the last 8 characters are displayed, joined with

| | |
|----------------|--|
| Remote Command | <code>:DISPlay:ANNotation:TRACe[:STATe] ON OFF 1 0</code> <code>:DISPlay:ANNotation:TRACe[:STATe]?</code> |
| Example | <code>:DISP:ANN:TRAC OFF</code> |
| Preset | OFF |
| State Saved | Saved in instrument state |

Control Annotation

Turns on and off the display of values on the Active Function controls for all measurements in the current Mode. This is a security feature.

| | |
|----------------|--|
| Remote Command | <code>:DISPlay:ACTivefunc[:STATe] ON OFF 1 0</code> <code>:DISPlay:ACTivefunc[:STATe]?</code> |
| Example | <code>:DISP:ACT OFF</code> |
| Dependencies | Grayed out and forced to OFF when System Display Settings, Annotation is OFF |
| Preset | ON This remains OFF through a Preset when System Display Settings, Annotation is set to OFF |
| State Saved | Saved in instrument state |

Meas Bar

Turns the Measurement Bar at the top of the screen on and off for all measurements in the current Mode. When **OFF**, the graticule area expands to fill the area formerly occupied by the Measurement Bar.

| | |
|----------------|--|
| Remote Command | <code>:DISPlay:ANNotation:MBAR[:STATe] OFF ON 0 1</code> <code>:DISPlay:ANNotation:MBAR[:STATe]?</code> |
| Example | <code>:DISP:ANN:MBAR OFF</code> |
| Dependencies | Grayed out and forced to OFF when System Display Settings, Annotation is OFF |
| Preset | ON This remains OFF through a Preset when System Display Settings, Annotation is set to OFF |
| State Saved | Saved in instrument state |

Display Enable (Remote Command Only)

Turns the display on/off, including the display drive circuitry. The backlight stays lit to confirm that the instrument is on. The display enable setting is mode global. There are three reasons for turning the display off:

1. To increase speed as much as possible by freeing the instrument from having to update the display
2. To reduce emissions from the display, drive circuitry
3. For security purposes

If you have turned off the display:

3 WLAN Mode
3.12 IQ Waveform Measurement

- and you are in local operation, the display can be turned back on by pressing any key or by sending `:SYSTem:DEFaults MISC` or `:DISPlay:ENABle ON` (neither `*RST` nor `:SYSTem:PRESet` enable the display)
- and you are in remote operation, the display can be turned back on by pressing the **Local** or **Esc** keys, or by sending `:SYSTem:DEFaults MISC` or `:DISPlay:ENABle ON` (neither `*RST` nor `:SYSTem:PRESet` enable the display)
- and you are using either the `:SYSTem:KLOCK` command or GPIB local lockout, then *no* front-panel key press will turn the display back on. You must turn it back on remotely.

If the display is **OFF**, many SCPI commands related to User Views and Multiscreen functionality do not work, and return the error messages “-221, Settings conflict; Screen SCPI cannot be used when Display is disabled” or “221, Settings conflict; View SCPI cannot be used while Display is disabled”. These commands include:

| Name | Command |
|----------------------------|--|
| Select User View | <code>:DISPlay:VIEW:ADVanced:SElect</code> |
| Rename User View | <code>:DISPlay:VIEW:ADVanced:REName</code> |
| Delete User View | <code>:DISPlay:VIEW:ADVanced:DElete</code> |
| Create User View | <code>:DISPlay:VIEW:ADVanced:NAME</code> |
| Select Screen | <code>:INSTrument:SCReen:SElect</code> |
| Delete Screen | <code>:INSTrument:SCReen:DElete</code> |
| Delete All But This Screen | <code>:INSTrument:SCReen:DElete:ALL</code> |
| Add Screen | <code>:INSTrument:SCReen:CREate</code> |
| Rename Screen | <code>:INSTrument:SCReen:REName</code> |
| Sequencer On/Off | <code>:SYSTem:SEQuencer</code> |

| | |
|-------------------------------|---|
| Remote Command | <code>:DISPlay:ENABle OFF ON 0 1</code> <code>:DISPlay:ENABle?</code> |
| Example | <code>:DISP:ENAB OFF</code> |
| Couplings | <code>:DISP:ENAB OFF</code> turns Backlight OFF and <code>:DISP:ENAB ON</code> turns Backlight ON , but changing Backlight settings does <i>not</i> change the state of <code>:DISP:ENAB</code> |
| Preset | ON Set by <code>:SYST:DEF MISC</code> , but not affected by <code>*RST</code> or <code>:SYSTem:PRESet</code> |
| State Saved | Not saved in instrument state |
| Backwards Compatibility Notes | <code>:SYST:PRES</code> no longer turns on <code>:DISPlay:ENABle</code> as it did in legacy analyzers |

3.12.6 Frequency

Opens the **Frequency** menu, which contains controls that allow you to control the Frequency and Channel parameters of the instrument.

Some features in the **Frequency** menu are the same for all measurements in the current Mode – they do not change as you change measurements. Settings like these are called “Meas Global” and are unaffected by Meas Preset. For example, the Center Freq setting is the same for all measurements – it does not change as you change measurements.

3.12.6.1 Settings

Contains controls that pertain to the X axis parameters of the measurement. These parameters control how data on the vertical (X) axis is displayed and control instrument settings that affect the horizontal axis.

Center Frequency

Sets the frequency that corresponds to the horizontal center of the graticule. While adjusting **Center Frequency**, **Span** is held constant.

The center frequency setting is the same for all measurements within a mode, that is, it is Meas Global. Some modes are also able to share a Mode Global center frequency value. If this is the case, the Mode will have a Global tab in its Meas Setup menu.

The Center Freq function sets (and queries) the Center Frequency for the currently selected input. If your instrument has multiple inputs, and you select another input, the Center Freq changes to the value for that input. SCPI commands are available to directly set the Center Freq for a specific input.

Center Freq is remembered as you go from input to input. Thus, you can set a Center Freq of 10 GHz with the RF Input selected, change to BBIQ, and set a Center Freq of 20 MHz, then switch to External Mixing and set a Center Freq of 60 GHz, and when you go back to the RF Input the Center Freq will go back to 10 GHz; back to BBIQ and it is 20 MHz; back to External Mixing and it is 60 GHz.

For more details, see the following:

- ["RF Center Freq \(Remote Command Only\)" on page 1810](#)
- ["Ext Mix Center Freq \(Remote Command Only\)" on page 1810](#)
- ["I/Q Center Freq \(Remote Command Only\)" on page 1811](#)

3 WLAN Mode
 3.12 IQ Waveform Measurement

- "Center Frequency Presets" on page 1808
- "VXT Models with Radio Heads/CIU Frequency Range" on page 1810

| | |
|------------------------------|---|
| Remote Command | <code>[:SENSe]:FREQuency:CENTer <freq></code> <code>[:SENSe]:FREQuency:CENTer?</code> |
| Example | Set Center Frequency to 50 MHz: <code>:FREQ:CENT 50 MHz</code> Increment Center Frequency by the value of CF Step : <code>:FREQ:CENT UP</code> Return the current value of Center Frequency : <code>:FREQ:CENT?</code> |
| Notes | Sets the RF, External Mixing or I/Q Center Frequency depending on the selected input <ul style="list-style-type: none"> - For RF input it is equivalent to <code>FREQ:RF:CENT</code> - For I/Q input it is equivalent to <code>FREQ:IQ:CENT</code> - For External Mixer it is equivalent to <code>FREQ:EMIX:CENT</code> Preset and Max values depend on Hardware Options If no terminator (for example, MHz) is sent the terminator Hz is used. If a terminator with unit other than Frequency is used, an invalid suffix error message is generated |
| Preset | Depends on instrument maximum frequency, mode, measurement, and selected input See "Center Frequency Presets" on page 1808, "RF Center Freq (Remote Command Only)" on page 1810, "Ext Mix Center Freq (Remote Command Only)" on page 1810, "I/Q Center Freq (Remote Command Only)" on page 1811 and "VXT Models with Radio Heads/CIU Frequency Range" on page 1810 |
| State Saved | Saved in instrument state |
| Min/Max | Depends on instrument minimum/maximum frequency, mode, measurement, and selected input See "Center Frequency Presets" on page 1808, "RF Center Freq (Remote Command Only)" on page 1810, "Ext Mix Center Freq (Remote Command Only)" on page 1810, "I/Q Center Freq (Remote Command Only)" on page 1811 and "VXT Models with Radio Heads/CIU Frequency Range" on page 1810 |
| Status Bits/OPC dependencies | Non-overlapped Auto Function (MSR, LTE-Advanced FDD/TDD and 5G NR Modes Only) |
| Remote Command | <code>[:SENSe]:FREQuency:CENTer:AUTO ON OFF 1 0</code> <code>[:SENSe]:FREQuency:CENTer:AUTO?</code> |
| Example | <code>:FREQ:CENT:AUTO OFF</code> <code>:FREQ:CENT:AUTO?</code> |
| Dependencies | Only available for Monitor Spectrum, Power Stat CCDF and IQ waveform measurements in the MSR, |

| LTE-Advanced FDD/TDD and 5G NR Modes | |
|--------------------------------------|--|
| Couplings | When Center Frequency is changed, state is automatically changed to Manual Center Frequency, Center Frequency Offset and Carrier Reference Frequency are coupled. When Carrier Reference Frequency changes: Center Frequency : Auto Center Frequency = Carrier Reference Frequency + Center Frequency Offset (fixed) Center Frequency : Man Center Frequency (fixed) = Carrier Reference Frequency + Center Frequency Offset |
| Preset | ON |
| State Saved | Saved in instrument state |
| Range | Auto Man |

Center Frequency Presets

The following table provides the Center Frequency Presets for the Spectrum Analyzer mode, and the Max Freq, for the various frequency options:

| Freq Option | CF after Mode Preset | Stop Freq after Mode Preset | Max Freq (can't tune above) |
|--------------------------|----------------------|-----------------------------|-----------------------------|
| 503 (all but CXA) | 1.805 GHz | 3.6 GHz | 3.7 GHz |
| 503 (CXA) | 1.505 GHz | 3.0 GHz | 3.08 GHz |
| 507 (all but CXA) | 3.505 GHz | 7.0 GHz | 7.1 GHz |
| 507 (CXA) | 3.755 GHz | 7.5 GHz | 7.58 GHz |
| 508 (all but MXE) | 1.805 GHz | 3.6 GHz | 8.5 GHz |
| 508 (MXE) | 4.205 GHz | 8.4 GHz | 8.5 GHz |
| 513 | 6.805 GHz | 13.6 GHz | 13.8 GHz |
| 526 (except CXA and MXE) | 13.255 GHz | 26.5 GHz | 27.0 GHz* |
| 526 (CXA) | 13.255 GHz | 26.5 GHz | 26.55 GHz |
| 526 (MXE) | 1.805 GHz | 3.6 GHz | 27.0 GHz |
| 532 | 16.005 GHz | 32.0 GHz | 32.5 GHz |
| 540 | 20.005 GHz | 40.0 GHz | 40.5 GHz |
| 543 | 21.505 GHz | 43.0 GHz | 43.0 GHz |
| 544 | 22.005 GHz | 44.0 GHz | 45.0 GHz |
| 550 | 25.005 GHz | 50.0 GHz | 52 GHz |
| F03 (CXA-m) | 1.505 GHz | 3.0 GHz | 3.08 GHz |
| F07 (CXA-m) | 3.755 GHz | 7.5 GHz | 7.575 GHz |
| F13 (CXA-m) | 6.805 GHz | 13.6 GHz | 13.8 GHz |
| F26 (CXA-m) | 13.255 GHz | 26.5 GHz | 26.55 GHz |

3 WLAN Mode
3.12 IQ Waveform Measurement

| Freq Option | CF after Mode Preset | Stop Freq after Mode Preset | Max Freq (can't tune above) |
|----------------------|----------------------|-----------------------------|-----------------------------|
| 504 (M9421A, M8920A) | 2.145 GHz | 3.88GHz | 3.88 GHz |
| 506 (M9421A, M8920A) | 3.245 GHz | 6.08GHz | 6.08 GHz |
| F06 (M9410A/11A) | 1.0 GHz | 6.08 GHz | 6.08 GHz |
| F06 (M9415A) | 1 GHz | 1.08 GHz | 6.6 GHz |
| F08 (M9415A) | 1 GHz | 1.08 GHz | 8.6 GHz |
| F12 (M9415A) | 1 GHz | 1.08 GHz | 12.9 GHz |

*For option 526, the Max CF in RTSA is 26.999999995 GHz.

N9041B Center Freq Presets

| Input | CF after Mode Preset | Stop Freq after Mode Preset | Max Freq (can't tune above) |
|---------------------|----------------------|-----------------------------|-----------------------------|
| Input 1, all models | 25.005 GHz | 50.0 GHz | 52 GHz |
| Input 2, opt 585 | 42.505 GHz | 85.0 GHz | 86 GHz |
| Input 2, opt 590 | 45.005 GHz | 90.0 GHz | 92 GHz |
| Input 2, opt 5CX | 55.005 GHz | 110.0 GHz | 110 GHz |

Input 2, CXA and MXE

| Model | CF after Mode Preset | Stop Freq after Mode Preset | Max Freq (can't tune above) |
|-------------|----------------------|-----------------------------|-----------------------------|
| CXA opt C75 | 0.7505 GHz | 1.5 GHz | 1.58 GHz |
| MXE | 505 MHz | 1 GHz | 1.000025 GHz |

Tracking Generator Frequency Limits (CXA only)

| Tracking Generator Option | Min Freq (clips to this freq when turn TG on and can't tune below while TG on) | If above this Freq, Stop Freq clipped to this Freq when TG turned on | Max Freq (can't tune above) while TG on |
|---------------------------|--|--|---|
| T03 | 9 kHz | 3.0 GHz | 3.08 GHz |
| T06 | 9 kHz | 6.0 GHz | 6.05 GHz |

Tracking Generator Frequency Limits(CXA-m only)

| Tracking Generator Option | Min Freq (clips to this freq when turn TG on and can't tune below while TG on) | If above this Freq, Stop Freq clipped to this Freq when TG turned on | Max Freq (can't tune above) while TG on |
|---------------------------|--|--|---|
| T03 | 2 MHz | 3.08 GHz | 3.08 GHz |

| Tracking Generator Option | Min Freq (clips to this freq when turn TG on and can't tune below while TG on) | If above this Freq, Stop Freq clipped to this Freq when TG turned on | Max Freq (can't tune above) while TG on |
|---------------------------|--|--|---|
| T07 | 2 MHz | 7.575 GHz | 7.575 GHz |
| T13 | 2 MHz | 13.8 GHz | 13.8 GHz |
| T26 | 2 MHz | 26.55 GHz | 26.55 GHz |

VXT Models with Radio Heads/CIU Frequency Range

The following table shows the Center Frequency Presets and Range for VXT modes with Radio Heads/CIU.

| Products with Radio Heads/CIU | Preset | Start frequency | Stop frequency |
|-------------------------------|--------|-----------------|----------------|
| M9421A + CIU | 6 GHz | 5.9 GHz | 12 GHz |
| M9410A + CIU | 6 GHz | 5.9 GHz | 12 GHz |
| M9410A + CIU + RRH | 25 GHz | 24.25 GHz | 43.5 GHz |

RF Center Freq (Remote Command Only)

Specifies the RF Center Frequency. Sets the **Center Frequency** to use when the RF input is selected, even if the RF input is not the input that is selected at the time the command is sent. Note that the **Center Frequency** function in the **Frequency** menu on the front panel always applies to the currently selected input.

| | |
|----------------|---|
| Remote Command | <code>[:SENSe] :FREQuency :RF :CENTer <freq></code> <code>[:SENSe] :FREQuency :RF :CENTer?</code> |
| Example | <code>:FREQ:RF:CENT 30 MHz</code> <code>:FREQ:RF:CENT?</code> |
| Notes | This command is the same in all Modes, but the parameter is Measurement Global. So, the value is independent in each Mode and common across all the measurements in the Mode |
| Dependencies | If the electronic/soft attenuator is enabled, any attempt to set Center Frequency such that the Stop Frequency would be >3.6 GHz fails and results in an advisory message. If the equivalent SCPI command is sent, this same message is generated as part of a “-221, Settings conflict” warning |
| Preset | See table above |
| State Saved | Saved in instrument state |
| Min | -79.999995 MHz |
| Max | See table above. Basically, instrument maximum frequency - 5 Hz |

Ext Mix Center Freq (Remote Command Only)

Specifies the External Mixer Center Frequency. Sets the **Center Frequency** to use when the External Mixer is selected, even if the External Mixer input is not the input

that is selected at the time the command is sent. Note that the **Center Frequency** function in the **Frequency** menu on the front panel always applies to the currently selected input.

| | |
|----------------|--|
| Remote Command | <code>[:SENSe] :FREQuency:EMIXer:CENTer <freq></code> <code>[:SENSe] :FREQuency:EMIXer:CENTer?</code> |
| Example | <code>:FREQ:EMIX:CENT 60 GHz</code> <code>:FREQ:EMIX:CENT?</code> |
| Notes | This command is the same in all Modes, but the parameter is Measurement Global. So, the value is independent in each Mode and common across all the measurements in the Mode |
| Couplings | When returning to External Mixing after having been switched to one of the other inputs (for example, RF), you return to the settings that existed when you left External Mixing. So, you return to the band you were in, with the Center Frequency that you had. However, Span is not an input-dependent parameter, therefore the Span setting from the other input is retained. Thus, the instrument returns to the Span setting from the previous input, limited as necessary by the current mixer setup |
| Preset | When a Mode Preset is performed while in External Mixing, the Start frequency of the current Mode is set to the nominal Min Freq of the lowest harmonic range in the Harmonic Table for the current mixer setup. Similarly, the Stop frequency of the current Mode is set to the nominal Max Freq of the highest harmonic range in the Harmonic Table. Center Frequency thus presets to the point arithmetically equidistant from these two frequencies Note that, if the current measurement has a limited Span available to it, and cannot achieve the span shown in the table (Span = Stop Freq – Start Freq), the instrument uses the maximum Span the measurement allows, and still sets Center Frequency to the midpoint of the Start and Stop Freq values in the Harmonic Table When Restore Input/Output Defaults is performed, the mixer presets to the 11970A, whose Start and Stop frequencies are 26.5 and 40 GHz respectively. The center of these two frequencies is 33.25 GHz Therefore, after Restore Input/Output Defaults , if you go into External Mixing and do a <i>Mode Preset</i> while in the Spectrum Analyzer Mode, the resulting Center Frequency is 33.25 GHz |
| State Saved | Yes |
| Min | The minimum frequency in the currently selected mixer band +5 Hz |
| Max | The maximum frequency in the currently selected mixer band –5 Hz |

I/Q Center Freq (Remote Command Only)

Specifies the I/Q Center Frequency. Sets the **Center Frequency** to be used when the I/Q input is selected, even if the I/Q input is not the input that is selected at the time the command is sent. Note that the **Center Frequency** function in the **Frequency** menu on the front panel always applies to the currently selected input.

| | |
|----------------|--|
| Remote Command | <code>[:SENSe] :FREQuency:IQ:CENTer <freq></code> <code>[:SENSe] :FREQuency:IQ:CENTer?</code> |
| Example | <code>:FREQ:IQ:CENT: 30 MHz</code> |
| Notes | This command is the same in all Modes, but the parameter is Measurement Global. So, the value is |

| | |
|-------------|---|
| | independent in each Mode and common across all the measurements in the Mode |
| Preset | 0 Hz |
| State Saved | Saved in instrument state |
| Min/Max | -/+40.049995 MHz |

CF Step

Lets you change the step size for "**Center Frequency**" on page 1806, and Start/Stop frequency. Once a step size has been selected and the **Center Frequency** function is active, the step keys (and the **UP | DOWN** parameters for **Center Frequency** from remote commands) change the center frequency by the step-size value. The step size function is useful for finding harmonics and sidebands beyond the current frequency span of the instrument.

Note that the Start and Stop frequencies also step by the **CF Step** value.

| | |
|------------------------------|--|
| Remote Command | <code>[:SENSe]:FREQuency:CENTer:STEP[:INCRement] <freq></code> <code>[:SENSe]:FREQuency:CENTer:STEP[:INCRement]?</code> |
| Example | Increase the current Center Frequency value by 500 MHz: <code>:FREQ:CENT:STEP 500 MHz</code> <code>:FREQ:CENT UP</code> |
| Notes | Preset and Max values depend on Hardware Options |
| Dependencies | Only available in VMA, W-CDMA, and WLAN Modes If the electronic/soft attenuator is enabled, any attempt to change the value of the center frequency >3.6 GHz by pressing the Up-arrow key fails, and results in an advisory message. If the equivalent SCPI command is sent, this same message is generated as part of a "-221, Settings conflict" warning |
| Preset | Auto |
| State Saved | Saved in instrument state |
| Min/Max | -/+ (the maximum frequency of the instrument). That is, 27 GHz max freq instrument has a CF step range of +/- 27 GHz. Note that this is the maximum frequency given the current settings of the instrument, so in External Mixing, for example, it is the maximum frequency of the current mixer band |
| Status Bits/OPC dependencies | non-overlapped |

Auto Function

| | |
|----------------|--|
| Remote Command | <code>[:SENSe]:FREQuency:CENTer:STEP:AUTO OFF ON 0 1</code> <code>[:SENSe]:FREQuency:CENTer:STEP:AUTO?</code> |
| Example | <code>:FREQ:CENT:STEP:AUTO ON</code> <code>:FREQ:CENT:STEP:AUTO?</code> |
| Preset | ON |

3.12.7 Marker

Displays a menu that enables you to select, set up and control the markers for the current measurement.

If there are no active markers, **Marker** selects **Marker 1**, sets it to **POSition** (Normal) mode, and places it at the center of the display. If the selected marker is **OFF**, it is set to **POSition** mode and placed at the center of the screen, on the trace determined by the Marker Trace rules.

For details of the **POSition**, **DELTA**, and **OFF** mode options, see "**Marker Mode**" on page 1816.

3.12.7.1 Select Marker

Sets the selected marker. The term “selected marker” is used throughout this document to specify which marker will be affected when you change marker settings, perform a **Peak Search**, etc.

The **Select Marker** control appears above the menu panel, indicating that it applies to all controls in the **Marker** menu panels. **Select Marker** is blanked if you select a tab whose controls do *not* depend on the selected marker (for example, **Counter**).

For any menu that includes **Select Marker**, the first control is always "**Marker Time**" on page 1813.

| | |
|--------------|--|
| Notes | The selected marker is remembered even when not in the Marker menu and is used if a Search is done or a Band Function is turned on or for Signal Track or Continuous Peak |
| Preset | Marker 1 |
| State Saved | The number of the selected marker is saved in instrument state |
| Annunciation | Appears in the marker results block label for POSition and Delta markers |

3.12.7.2 Settings

The controls on this tab include the Marker active function and a radio button selection for "**Marker Mode**" on page 1816 (**POSition**, **DELTA**, or **OFF**) for the selected marker, as well as additional functions that help you use markers.

Marker Time

This is the fundamental control that you use to move a marker around on the trace. Because it is the default active function in the **Marker** menu, all you need to do is press **Marker** and turn the knob to move the marker left and right on the display.

This is always the first control on any **Marker** menu page that follows the Selected Marker.

The SCPI command sets the marker X-Axis value in the current marker X-Axis Scale unit. The marker that is addressed becomes the selected marker. It has no effect (other than to cause the marker to become selected) if the control mode is **OFF**, but it is the SCPI equivalent of entering an X value if the control mode is **POSiTion** or **DELTA**.

| | |
|------------------------------|--|
| Remote Command | <code>:CALCulate:WAVeform:MARKer[1] 2 ... 12:X <time></code> <code>:CALCulate:WAVeform:MARKer[1] 2 ... 12:X?</code> |
| Example | <code>:CALC:WAV:MARK1:X 1</code> <code>:CALC:WAV:MARK1:X?</code> |
| Notes | If no suffix is sent it will use the fundamental units for the current marker X Axis Scale. If a suffix is sent that does not match the current marker X Axis Scale unit, an invalid suffix message will be generated The query returns the marker's absolute X-Axis value if the control mode is POSiTion . It returns the offset from the marker's reference marker if the control mode is DELTA . The query is returned in the fundamental units for the current marker X-Axis scale: seconds for Time . If the marker is OFF the response is Not A Number |
| Dependencies | Grayed-out, and displays three dashes, for the value when the selected Marker is OFF |
| Preset | LTE, LTE-A, 5G NR Modes: 5ms All other Modes: 1.0 ms |
| Min/Max | -/+infinity Unlike legacy instruments, where the markers were forced to be on screen, X-Series marker values are not limited and do not clip |
| Backwards Compatibility SCPI | <code>:CALCulate:MARKer[1] 2 ... 4:X:CENTer</code> This alias is provided for compatibility with the Band Power function in PSA and ESA |

Marker X Axis Position (Remote Command Only)

Sets the marker X position in trace points. It has no effect if the control mode is **OFF**, but is the SCPI equivalent of entering a value if the control mode is Normal or Delta. The entered value is immediately translated into the current X Axis Scale units for setting the value of the marker.

| | |
|----------------|---|
| Remote Command | <code>:CALCulate:WAVeform:MARKer[1] 2 ... 12:X:POSiTion <real></code> <code>:CALCulate:WAVeform:MARKer[1] 2 ... 12:X:POSiTion?</code> |
| Example | <code>:CALC:WAV:MARK:X:POS 500</code> <code>:CALC:WAV:MARK:X:POS?</code> |
| Notes | The query returns the marker's absolute X-Axis value in trace points if the control mode is POSiTion , or the offset from the marker's reference marker in trace points if the control mode is DELTA . The value is returned as a real number, not an integer, corresponding to the translation from X-Axis Scale units to trace points |
| Preset | After a preset, all markers are turned OFF , so the query returns a <i>Not A Number (NAN)</i> |

| | |
|-------------|------------|
| State Saved | No |
| Min/Max | -/+9.9E+37 |

Marker Y Axis Value (Remote Query Only)

Queries the marker Y-Axis result value in the current marker Y-Axis unit. The “result” of a marker is the value that is displayed on the second line of the Marker Result block. To properly interpret the returned value, you must also know how the instrument’s Y-Axis Unit is set, as described below.

A marker can have up to two results, only one of which is displayed or returned in a query, as follows:

- **Absolute** Result: every marker has an Absolute Result. For **POSition** and **DELTA** markers, the Y-axis value of the trace point the marker is currently on. The Absolute Result is displayed in the result block or returned as a query, unless the marker control mode is **DELTA**
- **Relative** Result: if a marker’s control mode is **DELTA**, the *relative* result is displayed in the result block or returned in a query. This is the ratio of the Absolute Result of a delta marker to the Absolute Result of its reference marker. The ratio is expressed in dB

| | |
|------------------------------|---|
| Remote Command | <code>:CALCulate:WAVeform:MARKer[1] 2 ... 12:Y?</code> |
| Example | <code>:CALC:WAV:MARK11:Y?</code> |
| Notes | <p>When the marker is on, IQ waveform returns I and Q values</p> <p>Case #1 - Trace RF, I or Q: returns a single double value</p> <pre>>:CALC:WAV:MARK1:Y? -2.402406506109E+001</pre> <p>Case #2 - Trace IQ: returns a double array of two values, the first is I, and the second is Q</p> <pre>>:CALC:WAV:MARK1:Y? -3.006944493834E-003,+9.9870666467354E-004</pre> <p>The IQ selection is for backwards compatibility purposes. For new designs, use the I and/or Q selection instead</p> <p>You must be in a Mode that includes the Waveform measurement to use this command. Use <code>:INSTru-ment:SElect</code> to set the Mode</p> |
| Preset | Result depends on the marker setup and signal source |
| State Saved | No |
| Backwards Compatibility SCPI | <code>:CALCulate:WAVeform:MARKer[1] 2 ... 12:FUNction:RESult?</code> |

Marker Mode

Sets the marker control mode to **POSition**, **DELTA**, or **OFF**. All interactions and dependencies detailed under the control description are enforced when the remote command is sent. If the selected marker is **OFF**, pressing **Marker** sets it to **POSition (Normal)** and places it at the center of the screen on the trace determined by the Marker Trace rules. At the same time, Marker X-Axis Value appears on the Active Function area.

The default active function is the active function for the currently selected marker control mode. If the current control mode is **OFF**, there is no active function, and the active function is turned off.

| | |
|----------------|---|
| Remote Command | <code>:CALCulate:WAVeform:MARKer[1] 2 ... 12:MODE POSition DELTA OFF</code> <code>:CALCulate:WAVeform:MARKer[1] 2 ... 12:MODE?</code> |
| Example | <code>:CALC:WAV:MARK:MODE OFF</code> <code>:CALC:WAV:MARK:MODE?</code> |
| Preset | OFF |
| State Saved | Saved in instrument state |
| Range | POSition DELTA OFF |
| Annotation | Mkr # <X value> and <Marker value> upper right on graph When Marker Trace is Polar in WCDMA mode: Mkr # <Chip Value (RHO & QPSKEVM)/Symbol Value (CDP)>, <X value> and <Y value> upper right on graph |

Backwards Compatibility SCPI Command

Sets or queries the state of a marker. Setting a marker that is **OFF** to state **ON** or **1** puts it in **POSition** mode and places it at the center of the screen.

| | |
|------------------------------|--|
| Preset | OFF |
| State Saved | Saved in instrument state |
| Range | OFF ON |
| Backwards Compatibility SCPI | <code>:CALCulate:WAVeform:MARKer[1] 2 ... 12:STATE OFF ON 0 1</code> <code>:CALCulate:WAVeform:MARKer[1] 2 ... 12:STATE?</code> |

Delta Marker (Reset Delta)

Pressing this control has the same effect as pressing the **DELTA** selection in "**Marker Mode**" on page 1816. The selected marker becomes a **Delta** marker. If the selected

marker is already a **Delta** marker, the reference marker is moved to the current position of the selected marker, thus resetting the delta to zero.

Marker Settings Diagram

Lets you configure the **Marker** system using a visual utility.

All Markers Off

Turns off all markers.

| | |
|----------------|---------------------------------|
| Remote Command | :CALCulate:WAVeform:MARKer:AOff |
| Example | :CALC:WAV:MARK:AOff |

Couple Markers

When this function is **ON**, moving any marker causes an equal X-Axis movement of every other marker that is not **OFF**. By “equal X-Axis movement” we mean that we preserve the difference between each marker’s X-Axis value (in the fundamental x-axis units of the trace that marker is on), and the X-Axis value of the marker being moved (in the same fundamental x-axis units).

This may result in markers going off-screen.

| | |
|----------------|--|
| Remote Command | :CALCulate:WAVeform:MARKer:COUple[:STATe] ON OFF 1 0 :CALCulate:WAVeform:MARKer:COUple[:STATe]? |
| Example | :CALC:WAV:MARK:COUP ON :CALC:WAV:MARK:COUP? |
| Preset | OFF Presets on Mode Preset and "All Markers Off" on page 1817 |
| State Saved | Saved in instrument state |

3.12.7.3 Peak Search

The controls on this tab allow you to move the marker to selected peaks of the signal, giving you enormous analysis capabilities, particularly when combined with the **Delta** marker function.

NOTE Pressing the **Peak Search** hardkey automatically moves you to the **Peak Search** page of the **Marker** menu *and* performs a peak search.

Pressing the **Peak Search** tab once you are already *in* the **Marker** menu does *not* perform a peak search.

Marker Time

This is the fundamental control that you use to move a marker around on the trace. It is the same as "**Marker Time**" on page 1813 in **Settings**.

Peak Search

Moves the selected marker to the trace point that has the maximum Y-Axis value for that marker's trace.

NOTE

Pressing the **Peak Search** hardkey automatically moves you to the **Peak Search** page of the **Marker** menu *and* performs a peak search.

| | |
|----------------|--|
| Remote Command | <code>:CALCulate:WAVEform:MARKer[1] 2 ... 12:MAXimum</code> |
| Example | <code>:CALC:WAV:MARK2:MAX</code> <code>:SYST:ERR?</code> can be used to query the errors to determine if a peak is found. The message "No peak found" (-200) will be returned after an unsuccessful search |
| Notes | Sending this command selects the subopcoded marker In W-CDMA Mode, this command does <i>not</i> work when the selected marker is located on the Polar trace. In this case, the command is ignored |

Next Peak

Moves the selected marker to the peak that is next lower in amplitude than the current marker value.

If the selected marker was **OFF**, then it is turned **ON** as a **POSITION** marker, and a peak search is performed.

| | |
|----------------|--|
| Remote Command | <code>:CALCulate:WAVEform:MARKer[1] 2 ... 12:MAXimum:NEXT</code> |
| Example | <code>:CALC:WAV:MARK:MAX:NEXT</code> |
| Notes | Sending this command selects the subopcoded marker |
| State Saved | Not part of saved state |

Minimum Peak

Moves the selected marker to the minimum Y-Axis value on the current trace.

If the selected marker is **OFF**, it is turned **ON** before the minimum search is performed.

| | |
|----------------|--|
| Remote Command | :CALCulate:WAVeform:MARKer[1] 2 ... 12:MINimum |
| Example | :CALC:WAV:MARK:MIN |
| Notes | Sending this command selects the subopcoded marker |
| State Saved | Not part of saved state |

Marker Delta

Pressing this control has the same effect as pressing **Delta** in "**Marker Mode**" on [page 1816](#) on the **Settings** tab. The selected marker becomes a **Delta** marker. If the selected marker is already a **Delta** marker, the reference marker is moved to the current position of the selected marker, thus resetting the delta to zero.

The control is duplicated here to allow you to conveniently perform a **Peak Search** and change the marker's control mode to **Delta**, without having to access two separate menus.

3.12.7.4 Pk Search Config

Contains controls that let you set up the **Peak Search** functions.

Since the **Pk Search Config** functions are independent of the selected **Marker**, the **Select Marker** control does not appear while in **Pk Search Config**.

Peak Search Range

Lets you specify the range of trace to perform peak search actions specified in the **Peak Search** menu.

| Option | SCPI | Behavior |
|--------|--------|---|
| Full | FULL | Peak Search actions will be performed on the entire trace |
| Manual | MANual | Specifies the range of the trace to which Peak Search actions will apply |

| | |
|----------------|--|
| Remote Command | :CALCulate:WAVeform:MARKer:PEAK:SEARch:RANGe FULL MANual |
| | :CALCulate:WAVeform:MARKer:PEAK:SEARch:RANGe FULL MANual |

| | |
|-------------|---|
| Example | <code>:CALC:WAV:MARK:PEAK:SEAR:RANG FULL</code> |
| Preset | <code>FULL</code> |
| State Saved | Saved in instrument state |
| Range | <code>FULL</code> <code>MANua1</code> |

Peak Search Range Start

Specifies the start of the range, in seconds, to which **Peak Search** actions are applied. Displays as a green vertical line, with the label **Pk Search Start** on the left, as shown below.

| | |
|----------------|--|
| Remote Command | <code>:CALCulate:WAVeform:MARKer:PEAK:SEARch:RANGe:STARt <time></code> <code>:CALCulate:WAVeform:MARKer:PEAK:SEARch:RANGe:STARt?</code> |
| Example | <code>:CALC:WAV:MARK:PEAK:SEAR:RANG:STAR 0.001</code> |
| Dependencies | Disabled when Peak Search Range is set to Full. |
| Preset | 0.0 ms |
| Min/Max | 0.0/+Meas Time |

Peak Search Range Stop

Specifies the end of the range, in seconds, to which **Peak Search** actions are applied. Displays as a green vertical line, with the label **Pk Search Stop** on the left, as shown below.

| | |
|----------------|--|
| Remote Command | <code>:CALCulate:WAVeform:MARKer:PEAK:SEARch:RANGe:STOP <time></code> <code>:CALCulate:WAVeform:MARKer:PEAK:SEARch:RANGe:STOP?</code> |
| Example | <code>:CALC:WAV:MARK:PEAK:SEAR:RANG:STOP 0.001</code> |
| Dependencies | Disabled when Peak Search Range is set to Full. |

| | |
|---------|----------------|
| Preset | 0.0 ms |
| Min/Max | 0.0/+Meas Time |

3.12.7.5 Marker Function

The controls in this tab perform post-processing operations on marker data.

The **Marker Function** menu controls which marker functions are turned on, and allows you to adjust the setup parameters for each function. These parameters include the following, but only one parameter can be assigned to a given marker:

- Marker Noise
- Interval Power
- Interval Density
- Off

More Information

In the Waveform measurement, post-processing operations on markers are based on the measurement specifications. **Marker Functions** are distinct from measurement functions, which automatically perform complex sequences of setup, data acquisition, and display operations, to measure specified signal characteristics. **Marker Functions** are specified for each individual marker, and may be turned on individually for each marker.

Marker Time

This is the fundamental control that you use to move a marker around on the trace. It is the same as "[Marker Time](#)" on page 1813 in **Settings**.

Interval Function

Sets the marker control function type to one of:

| Option | Parameter |
|---------------------|-----------|
| Marker Noise | NOISe |
| Interval Power | BPOWer |
| Interval Density | BDENsity |
| Marker Function Off | OFF |

All interactions and dependencies detailed under the control description are enforced when the remote command is sent.

| | |
|----------------|---|
| Remote Command | <code>:CALCulate:WAVeform:MARKer[1] 2 ... 12:FUNction NOISe BPOwer BDENsity OFF</code> <code>:CALCulate:WAVeform:MARKer[1] 2 ... 12:FUNction?</code> |
| Example | <code>:CALC:WAV:MARK:FUNC BPOW</code> <code>:CALC:WAV:MARK:FUNC?</code> |
| Preset | OFF |
| State Saved | Saved in instrument state |
| Range | Marker Noise Interval Power Interval Density Off |
| Annotation | Mkr # <X value> and <Marker value> upper right on graph |

Interval Span

Sets the width of the Span for the selected marker.

| | |
|----------------|--|
| Remote Command | <code>:CALCulate:WAVeform:MARKer[1] 2 ... 12:FUNction:BAND:SPAN <time></code> <code>:CALCulate:WAVeform:MARKer[1] 2 ... 12:FUNction:BAND:SPAN?</code> |
| Example | <code>:CALC:WAV:MARK:FUNC:BAND:SPAN 20 ms</code> <code>:CALC:WAV:MARK:FUNC:BAND:SPAN?</code> |
| Couplings | Changing Interval Span necessarily changes " Interval Left " on page 1822 and " Interval Right " on page 1823 |
| Preset | 10% of Meas Time |
| State Saved | Saved in instrument state |
| Min | 0 |
| Max | 100 s |

Interval Left

Sets the left edge time for the band of the selected marker.

| | |
|----------------|--|
| Remote Command | <code>:CALCulate:WAVeform:MARKer[1] 2 ... 12:FUNction:BAND:LEFT <time></code> <code>:CALCulate:WAVeform:MARKer[1] 2 ... 12:FUNction:BAND:LEFT?</code> |
| Example | <code>:CALC:WAV:MARK12:FUNC:BAND:LEFT 1 s</code> <code>:CALC:WAV:MARK12:FUNC:BAND:LEFT?</code> |
| Couplings | Changing Interval Left necessarily changes " Interval Span " on page 1822 and " Interval Right " on page 1823 |
| Preset | 5% of Meas Time |
| State Saved | Yes |

| | |
|-----|-------|
| Min | 0 |
| Max | 100 s |

Interval Right

Sets the right edge time for the band of the selected marker.

| | |
|----------------|--|
| Remote Command | <code>:CALCulate:WAVeform:MARKer[1] 2 ... 12:FUNCtion:BAND:RIGHT <time></code> <code>:CALCulate:WAVeform:MARKer[1] 2 ... 12:FUNCtion:BAND:RIGHT?</code> |
| Example | <code>:CALC:WAV:MARK12:FUNC:BAND:RIGH 1 s</code> <code>:CALC:WAV:MARK12:FUNC:BAND:RIGH?</code> |
| Notes | You must be in the IQ Waveform measurement to use this command |
| Couplings | Changing Interval Right necessarily changes " Interval Left " on page 1822 and " Interval Span " on page 1822 |
| Preset | 5% of Meas Time |
| State Saved | Yes |
| Min | 0 |
| Max | 100 s |

3.12.7.6 Properties

The controls on this tab are used to set certain properties of the selected marker.

Marker Time

This is the fundamental control that you use to move a marker around on the trace. It is the same as "**Marker Time**" on page 1813 in **Settings**.

Relative To

Selects the marker to which the selected marker is relative (its reference marker).

Every marker has another marker to which it is relative. This marker is referred to as the "*reference marker*" for that marker. This attribute is set by the **Marker, Properties, Relative To** key. The marker must be a **Delta** marker to make this attribute relevant. If it is a **Delta** marker, the reference marker determines how the marker is controlled and how its value is displayed. A marker cannot be relative to itself.

| | |
|----------------|---|
| Remote Command | <code>:CALCulate:WAVeform:MARKer[1] 2 ... 12:REFerence <integer></code> <code>:CALCulate:WAVeform:MARKer[1] 2 ... 12:REFerence?</code> |
|----------------|---|

| | |
|--------------|--|
| Example | <code>:CALC:WAV:MARK:REF 8</code> <code>:CALC:WAV:MARK:REF?</code> |
| Notes | This command causes the marker specified with the subopcode to become selected A marker cannot be relative to itself so that choice is not available, and if sent from SCPI generates error -221: "Settings conflict; marker cannot be relative to itself" When queried, a single value is returned (the specified marker number's relative marker) |
| Couplings | The act of specifying the selected marker's reference marker makes the selected marker a Delta marker If the reference marker is OFF , it is turned on in POStion mode at the Delta marker location |
| Preset | The preset default "Relative To" marker (reference marker) is the next higher numbered marker (current marker +1). For example, if Marker 2 is selected, then its default reference marker is Marker 3. The exception is Marker 12, which has a default reference of Marker 1 Set to default by Restore Mode Defaults . Not reset by Marker Off , All Markers Off , or Preset |
| State Saved | Saved in instrument state. Not affected by Marker Off and hence not affected by Preset or power cycle |
| Range | 1 to 12 Remote Command only: if the range is exceeded, then the value is clipped |
| Min | 1 |
| Max | 12 |
| Annunciation | Appears in the marker label of a Delta marker |

Marker Trace

Assigns the specified marker to the designated trace.

| | |
|----------------|---|
| Remote Command | <code>:CALCulate:WAVeform:MARKer[1] 2 ... 12:TRACe RFENvelope I Q IQ</code> <code>:CALCulate:WAVeform:MARKer[1] 2 ... 12:TRACe?</code> |
| Example | <code>:CALC:WAV:MARK:TRAC RFEN</code> <code>:CALC:WAV:MARK:TRAC?</code> |
| Notes | The IQ selection is for backwards compatibility. For new designs, use the I and/or Q selection instead |
| Preset | RFEN |
| State Saved | Yes |
| Range | RFENvelope I Q IQ |

Marker Settings Diagram

Lets you configure the Marker system using a visual utility. It is the same as "**Marker Settings Diagram**" on page 1817 in **Settings**.

3.12.8 Meas Setup

Contains functions for setting up the measurement parameters, and for setting up parameters global to all measurements in the Mode.

3.12.8.1 Settings

Contains frequently used **Meas Setup** functions to which you will want the fastest access.

Avg/Hold Number (Averaging On/Off)

Sets the number of sweeps (average counts) that are averaged. After the specified number of sweeps, the "Average Mode" on page 1825 (terminal control) setting determines the averaging action.

Also lets you turn Averaging on or off.

| | |
|----------------|---|
| Remote Command | <code>[:SENSe] :WAVeform :AVERage :COUNT <integer></code> <code>[:SENSe] :WAVeform :AVERage :COUNT?</code> |
| Example | <code>:WAV :AVER :COUN 1001</code> <code>:WAV :AVER :COUN?</code> |
| Preset | 10 |
| State Saved | Saved in instrument state |
| Min/Max | 1/20001 |
| Annotation | The average count is displayed in the measurement bar on the front panel display. The annotation appears in the format n/N, where n is the current average and N is the average count |

Auto Function

| | |
|----------------|--|
| Remote Command | <code>[:SENSe] :WAVeform :AVERage [:STATe] OFF ON 0 1</code> <code>[:SENSe] :WAVeform :AVERage [:STATe]?</code> |
| Example | <code>:WAV :AVER ON</code> <code>:WAV :AVER?</code> |
| Preset | OFF |
| State Saved | Saved in instrument state |
| Range | OFF ON |

Average Mode

Sets the Average Mode:

- **EXponential**, The measurement averaging continues using the specified number of averages to compute each averaged value. The average is displayed at the end of each sweep
- **REPeat**: The measurement resets the average counter each time the specified number of averages is reached

| | |
|----------------|--|
| Remote Command | <code>[:SENSe]:WAVeform:AVERage:TCONtrol EXPonential REPeat</code> <code>[:SENSe]:WAVeform:AVERage:TCONtrol?</code> |
| Example | <code>:WAV:AVER:TCON REP</code> <code>:WAV:AVER:TCON?</code> |
| Preset | <code>EXPonential</code> |
| State Saved | Saved in instrument state |
| Range | <code>EXPonential REPeat</code> |

Average Type

Sets the type of averaging. When **AUTO** is selected, the instrument chooses the type of averaging. Available Average Types are:

| Option | Parameter |
|-------------|---------------------|
| Log-Pwr Avg | <code>LOG</code> |
| Power (RMS) | <code>RMS</code> |
| Voltage | <code>SCALar</code> |

When one of the average types is selected manually, the instrument uses that type regardless of other instrument settings, and shows **Man** on the **Average Type** control.

| | |
|----------------|--|
| Remote Command | <code>[:SENSe]:WAVeform:AVERage:TYPE LOG MAXimum MINimum RMS SCALar</code> <code>[:SENSe]:WAVeform:AVERage:TYPE?</code> For EXT-C, E6630A, E6640A, M90XA, use the following command <code>[:SENSe]:WAVeform:AVERage:TYPE LOG RMS SCALar</code> |
| Example | <code>:WAV:AVER:TYPE RMS</code> <code>:WAV:AVER:TYPE?</code> |
| Notes | The selections MAX and MIN are retained for backwards compatibility, but they are removed from the front panel access because they are not an Average function |
| Couplings | AUTO selects Power (RMS) averaging if a Marker Function (Marker Noise, Band/Intvl Power) is on |
| Preset | <code>RMS</code> |
| State Saved | Saved in instrument state |
| Range | Log-Pwr Avg Power (RMS) Voltage Auto Function |

| | |
|----------------|---|
| Remote Command | <code>[:SENSe] :WAVeform:AVERage:TYPE:AUTO ON OFF 1 0</code> |
| Example | <code>:WAV:AVER:TYPE:AUTO 0</code> <code>:WAV:AVER:TYPE:AUTO?</code> |
| Preset | ON |

Time Avg Num

Sets the number of HW averages to be executed per each data acquisition.

HW Averaging

Changes the number of time averages to be made using hardware. This averaging is much faster than the standard averaging done in software. The hardware averaging is done on the complex voltage time trace data before any measurement application averaging is done. Both types of averaging (HW and SW) can be done on the same measurement data.

When time averaging is being done in HW, each trace update represents N fresh data acquisitions averaged together, where N is the number of time averages. You cannot access the individual time data. Note that this averaging is done prior to the SW averaging done within the application. Thus, if time averaging is turned on, the trace in this measurement shows the result of HW averaging even if the normal (SW) averaging is turned off. Subsequent normal (SW) averaging is orthogonal to this hardware-based time averaging.

Thus, it is possible to turn off normal (SW) averaging within the application but still have the HW averaging set to a certain number greater than 1. In other words, turning averaging off within the measurement will not affect HW averaging. If HW averaging needs to be turned off, simply set the HW Averaging parameter to 1.

The **Auto/Man** feature of **Time Avg Num** works differently than other parameters. Since it is time averaging, a trigger source something other than **Free Run** should be used to synchronize successive data acquisitions to avoid cancelling out the signal to be measured. It is most useful for a periodic signal with known periods used in conjunction with the Periodic trigger. Thus, when in **Auto**, the Trigger Source automatically changes to **Periodic** trigger when **Time Avg Num** is turned **ON**. The trigger period is set to the current Meas Time value. Any changes to Meas Time change the **Periodic** trigger period to the same value and vice versa. If a trigger source other than **Periodic** trigger is manually selected, the **Time Avg Num Auto/Man** toggle is set to **Man**.

| | |
|----------------|---|
| Remote Command | <code>[:SENSe] :WAVeform:AVERage:TACount <integer></code> |
| | <code>[:SENSe] :WAVeform:AVERage:TACount?</code> |

| | |
|----------------|--|
| Example | <code>:WAV:AVER:TAC 10</code> <code>:WAV:AVER:TAC?</code> |
| Notes | Only available when Option DP2, B40, or wider IF Bandwidth option is installed |
| Preset | 1 |
| State Saved | Saved in instrument state |
| Min/Max | 1/65535 |
| Auto Function | |
| Remote Command | <code>[:SENSe]:WAVeform:AVERage:TACount:AUTO OFF ON 0 1</code> <code>[:SENSe]:WAVeform:AVERage:TACount:AUTO?</code> |
| Example | <code>:WAV:AVER:TAC:AUTO ON</code> <code>:WAV:AVER:TAC:AUTO?</code> |
| Preset | ON |
| Range | Auto Man |

Meas Time

Lets you set how long the measurement is performed. X Scale *only* changes the scale of the display.

| | |
|----------------|---|
| Remote Command | <code>[:SENSe]:WAVeform:SWEep:TIME <time></code> <code>[:SENSe]:WAVeform:SWEep:TIME?</code> |
| Example | <code>:WAV:SWE:TIME 50 ms</code> <code>:WAV:SWE:TIME?</code> |
| Notes | Specifies and returns how long the measurement is performed. It is the time record length of the measurement waveform. The Max time may be reduced when the sample frequency is high due to the memory limitation |
| Preset | LTE, LTETDD, LTEAFDD, LTEATDD, 5G NR Modes: 10 ms All other Modes: 2.000000 ms |
| State Saved | Saved in instrument state |
| Range | 1.000 us to 100.00 s |
| Min/Max | 1.000 us/100.0 s 1.000 us/3200 s |

Sample Rate

Sets an arbitrary sample rate for the acquired data to be processed.

| | |
|----------------|--|
| Remote Command | <code>[:SENSe]:WAVeform:SRATe <freq></code> |
|----------------|--|

3 WLAN Mode
3.12 IQ Waveform Measurement

| | [:SENSe]:WAVeform:SRATe? | | | | | | | | | | | | | | | | | | | | | | | | | | | |

Meas Setup Summary Table

Lets you view and access many of the parameters in the **Meas Setup** menus on one screen.

Spur Avoidance

Because VXT models M9410A/11A/15A/16A are direct-conversion (zero-IF) receivers, feedthrough leakage from the local oscillator appears as a spurious signal (spur) at the center frequency. The **Spur Avoidance** function is provided to eliminate this spur, at the expense of some measurement speed.

When **Spur Avoidance** is enabled (the default), the instrument uses a software algorithm to remove this spur from the displayed measurement data, but the algorithm only operates under certain conditions. Specifically, it only operates when the Digital IF BW \leq maxBW/2.5. See "[More Information](#)" on page 1831.

You can disable this function to speed up your measurement, by setting **Spur Avoidance** to **Disabled**.

Note that when **Spur Avoidance** is not in effect, either because you have disabled it or because the Digital IF BW $>$ maxBW/2.5, the following warning message appears in the status bar: "Settings Alert; Spur Avoidance Off". This is to alert you that measurement accuracy might be impacted by the fact that **Spur Avoidance** is not in effect.

The spur avoidance function is not available for:

- M9410A/11A with EP6 option at frequency above 6 GHz
- M9415A/16A at frequency below 380 MHz and above 12.3 GHz
- M9410E/11E/15E/16E at frequency below 380 MHz and above 25.9 GHz

More Information

The Maximum Digital IF BW depends on the installed options, and selected **Center Frequency**.

VXT models M9410A/11A

Option limitation:

| Option | Max Digital IF BW |
|--------|-------------------|
| B40 | 40 MHz |
| B3X | 300 MHz |
| B6X | 600 MHz |
| B12 | 1200 MHz |

Center frequency limitation:

| Center Frequency | Max Digital IF BW |
|--|---------------------|
| 330 MHz ~ 380 MHz | (CF – 330 MHz) * 2 |
| 380 MHz ~ 550 MHz | 100 MHz |
| 550 MHz ~ 1310 MHz | 200 MHz |
| 1310 MHz ~ 2000 MHz (without Option EP6) | 600 MHz |
| 2000 MHz ~ 5480 MHz (without Option EP6) | 1200 MHz |
| 5480 MHz ~ 6080 MHz (without Option EP6) | (6080 MHz – CF) * 2 |
| 1310 MHz ~ 1900 MHz (Option EP6) | 600 MHz |
| 1900 MHz ~ 6000 MHz (Option EP6) | 1200 MHz |
| 6000 MHz ~ 6600 MHz (Option EP6) | (6600 MHz – CF) * 2 |

VXT models M9415A/16A

Option limitation:

| Option | Max Digital IF BW |
|--------|-------------------|
| B4X | 400 MHz |
| B8X | 800 MHz |
| B12 | 1200 MHz |

Center frequency limitation:

| Center Frequency | Max Digital IF BW |
|-------------------|--------------------|
| 330 MHz ~ 380 MHz | (CF – 330 MHz) * 2 |

| Center Frequency | Max Digital IF BW |
|-----------------------|----------------------|
| 380 MHz ~ 550 MHz | 100 MHz |
| 550 MHz ~ 1310 MHz | 200 MHz |
| 1310 MHz ~ 2000 MHz | 600 MHz |
| 2000 MHz ~ 12300 MHz | 1200 MHz |
| 12300 MHz ~ 12900 MHz | (12900 MHz – CF) * 2 |

M9410E/11E

Option Limitation:

| Option | Maximum IF BW |
|--------|---------------|
| B40 | 40 MHz |
| B3X | 300 MHz |
| B6X | 600 MHz |
| B12 | 1200 MHz |

Center Frequency Limitation:

| Center Frequency | Maximum IF BW |
|--|---|
| 1 MHz ~ 10 MHz (Option LFE) | 500 kHz |
| 10 MHz ~ 20 MHz (Option LFE) | 5 MHz |
| 20 MHz ~ 60 MHz (Option LFE) | 10 MHz |
| 60 MHz ~ 80 MHz (Option LFE) | 20 MHz |
| 80 MHz ~ 380 MHz (Option LFE) | 40 MHz |
| 330 MHz ~ 380 MHz (without Option LFE) | (CF – 330 MHz) * 2 |
| 380 MHz ~ 550 MHz | 100 MHz |
| 550 MHz ~ 1310 MHz | 200 MHz |
| 1310 MHz ~ 2000 MHz (without Option EP6) | 600 MHz |
| 2000 MHz ~ 25.9 GHz (without Option EP6) | 1200 MHz |
| 1310 MHz ~ 1900 MHz (Option EP6) | 600 MHz |
| 1900 MHz ~ 25.9 GHz (Option EP6) | 1200 MHz |
| 25.9 GHz ~ 26.5 GHz | Min(Max BW by option, 2*(26.5 GHz-Center Freq)) |

M9415E/16E

Option Limitation:

3 WLAN Mode
3.12 IQ Waveform Measurement

| Option | Maximum IF BW |
|--------|---------------|
| B4X | 400 MHz |
| B8X | 800 MHz |
| B12 | 1200 MHz |

Center Frequency Limitation:

| Center Frequency | Maximum IF BW |
|--|---|
| 1 MHz ~ 10 MHz (Option LFE) | 500 kHz |
| 10 MHz ~ 20 MHz (Option LFE) | 5 MHz |
| 20 MHz ~ 60 MHz (Option LFE) | 10 MHz |
| 60 MHz ~ 80 MHz (Option LFE) | 20 MHz |
| 80 MHz ~ 380 MHz (Option LFE) | 40 MHz |
| 330 MHz ~ 380 MHz (without Option LFE) | (CF - 330 MHz) * 2 |
| 380 MHz ~ 550 MHz | 100 MHz |
| 550 MHz ~ 1310 MHz | 200 MHz |
| 1310 MHz ~ 2000 MHz | 600 MHz |
| 2000 MHz ~ 25.9 GHz | 1200 MHz |
| 25.9 GHz ~ 26.5 GHz | Min(Max BW by option, 2*(26.5 GHz-Center Freq)) |

Auto Couple

Immediately puts all **Auto/Man** functions into **Auto**. **Auto Couple** is confined to the current measurement only. It does not affect other measurements in the Mode.

In the **Auto** state, **Auto/Man** functions are said to be “coupled”, meaning their values change as you make changes to other values in the measurement. This helps ensure accurate measurements and optimum dynamic range. **Auto Couple** is an immediate action function, and when it is executed, all the **Auto/Man** controls for the current measurement are set to **Auto**, and all measurement settings coupled to the **Auto/Man** parameters are automatically set to their optimal values.

For further details of measurement-specific settings (if any), see ["Measurement-Specific Details" on page 1834](#) below.

| | |
|------------------------------|---|
| Remote Command | :COUPle ALL |
| Example | :COUP ALL |
| Backwards Compatibility SCPI | :COUPLE ALL NONE |
| Backwards Compatibility | :COUP:NONE puts all Auto/Man parameters in manual mode, decoupling all the coupled instrument parameters. It is retained for backwards compatibility and is <i>not</i> recommended for making |

Notes measurements or new designs

All **Auto/Man** parameter couplings in the measurement are set to **Auto**. This includes couplings that may be unavailable or grayed-out due to the current state. For example, in the Swept SA measurement, there is no **Auto/Man** coupling for **RBW** while in Zero Span. Nonetheless, if **Auto Couple** were executed while in Zero Span, it would set **RBW** to Auto "behind the scenes" so that, on exit from Zero Span, it would be in **Auto**.

Any **Auto/Man** selection specific (local) to the other measurements in the current Mode are not affected by **Auto Couple**. Any functions that are *not* coupled with other instrument parameters, such as ranging or leveling variables, such as **AutoRange** or **AutoScale**, are not affected.

Executing **Auto Couple** generates the informational message, "All Auto/Man functions have been set to Auto".

Each parameter, upon being set to **Auto**, selects and sets the appropriate auto-coupled value based on that parameter's coupling rules. The Dependency Resolver orchestrates the couplings for parameters that depend on one or more other parameters. The coupling and dependency rules for each parameter are defined in the section describing that parameter.

Executing **Auto Couple** *does not* affect markers, marker functions, trace or display attributes, or any other instrument setting other than those specifically mentioned above.

Measurement-Specific Details

TOI (SA Mode only)

Parameters affected by **Auto Couple** are:

- Center Frequency Step
- Resolution Bandwidth
- Span/RBW Ratio
- Sweep Time
- Video BANDwidth VBW/RBW ratio
- Upper and Lower Tone (set to Sense)
- Zero span measurement Resolution Bandwidth
- Zero span measurement Dwell Time

Harmonics (SA Mode only)

Parameters affected by **Auto Couple** are:

- Resolution Bandwidth
- Fundamental Frequency
- Dwell Time
- Range Table Resolution Bandwidths
- Range Table Dwell Times

Meas Preset

Restores all measurement parameters to their default values.

3.12.8.2 Radio

Contains controls to select Radio Standard and settings.

Radio Std

In this menu, 7 groups of WLAN standards can be selected:

1. 802.11a/b/g/j/p includes 802.11a/g/j/p, 802.11b/g, 802.11g DSSS-OFDM, 802.11j/p 10M, 802.11p 5M
2. 802.11n includes 802.11n 20MHz and 802.11n 40MHz
3. 802.11ac includes 802.11ac 20MHz, 802.11ac 40MHz, 802.11ac 80MHz, 802.11ac 80+80MHz and 802.11ac 160MHz
4. 802.11ah includes 802.11ah1MHz, 802.11ah2MHz, 802.11ah4MHz, 802.11ah 8MHz, and 802.11ah16MHz
5. 802.11af includes 802.11af 6MHz, 802.11af 7MHz and 802.11af 8MHz
6. 802.11ax includes 802.11ax 20MHz, 802.11ax 40MHz, 802.11ax 80MHz, 802.11ax 80+80MHz and 802.11ax 160MHz

7. 802.11be includes 802.11be 20MHz, 802.11be 40MHz, 802.11be 80MHz, 802.11be 160MHz and 802.11be 320MHz

Below each standard, parameters related to demodulation can be set, such as Modulation Format, Guard Interval, and so on.

| Preset | ON |

Parameter Options & Installed Options

The Phase Noise Optimization control lets you optimize the setup and behavior of the Local Oscillator (LO) depending on your specific measurement conditions. You may wish to trade off noise and speed, for example, to make a measurement faster without regard to noise or with optimum noise characteristics without regard to speed.

Parameter Values Summary

| Option | # | Description |
|---------------------------------|---------|---|
| "Balanced" on page 1838 | 1 | <ul style="list-style-type: none"> - In instruments with EPO, balances close-in phase noise with spur avoidance - In instruments without EPO optimizes phase noise for small frequency offsets from the carrier |
| "Best Wide-offset" on page 1839 | 2 | Optimizes phase noise for wide frequency offsets from the carrier |
| "Fast Tuning" on page 1839 | 3 | Optimizes LO for tuning speed |
| "Best Close-in" on page 1838 | 4 or 1* | <ul style="list-style-type: none"> - In instruments with EPO, emphasizes close-in phase noise performance without regard to spur avoidance |

| Option | # | Description |
|------------------------------|---|--|
| | | - In instruments without EPO, this setting is accepted but no action is taken |
| "Best Spurs" on page 1839 | 5 | - In instruments with EPO, emphasizes spur avoidance over close-in phase noise performance |
| | | - In instruments without EPO, this setting is accepted but no action taken |
| Auto | - | Automatically selects LO (local oscillator) phase noise behavior to optimize dynamic range and speed for various instrument operating conditions |

*Dependent on Option EPO installation. See "Best Close-in" on page 1838 below.

The actual behavior varies somewhat depending on model number and option; for example, you always get Fast Tuning by choosing Option #3, but in some models, "Fast Tuning" on page 1839 is identical in effect to "Best Close-in" on page 1838.

Best Close-in

Without option EPO

`:FREQ:SYNT 1`

The LO phase noise is optimized for smaller offsets from the carrier, at the expense of phase noise farther out.

The actual frequency offset within which noise is optimized is shown with in square brackets, as this can vary depending on the hardware set in use. For example, in some instruments this annotation appears as [offset <20 kHz]

With option EPO

`:FREQ:SYNT 4`

In instruments with Option EPO, the LO is configured for the best possible close-in phase noise (offsets up to 600 kHz from the carrier), regardless of spurious products that occur with some center frequencies. Because this is generally less desirable for close-in measurements than the "Balanced" on page 1838 setting, parameter 1 selects "Balanced" on page 1838 in EPO instruments, in the interests of optimizing code compatibility across the family. Parameter 4 selects "Best Close-in" on page 1838, which is usually not as good a choice as "Balanced" on page 1838.

Balanced

`:FREQ:SYNT 1`

In instruments with EPO, the LO is configured for the best possible phase noise at offsets up to 600 kHz from the carrier whenever there are no significant spurs within the span observed with an on-screen carrier. When there will be such a spur, the LO

is reconfigured in a way that allows the phase noise to increase by 7 dB mostly within ± 1 octave around 400 kHz offset. The spurs will always be below -70 dBc.

Best Spurs

`:FREQ:SYNT 5`

In instruments with EP0, the LO is configured for better phase noise than the "[Best Wide-offset](#)" on page 1839 case close to the carrier, but the configuration has 11 dB worse phase noise than the "[Best Close-in](#)" on page 1838 case mostly within ± 1 octave around 300 kHz offset. Spurs are even lower than in the "[Balanced](#)" on page 1838 case at better than -90 dBc, whether or not the carrier is on-screen.

This setting is never selected when Phase Noise Optimization is in Auto, you must select it manually.

Best Wide-offset

`:FREQ:SYNT 2`

The LO phase noise is optimized for wider offsets from the carrier. Optimization is especially improved for offsets from 70 kHz to 300 kHz. Closer offsets are compromised and the throughput of measurements (especially remote measurements where the center frequency is changing rapidly), is reduced.

The actual frequency offset beyond which noise is optimized is shown with in square brackets, as this can vary depending on the hardware set in use. For example, in some instruments this annotation appears as [offset >30 kHz]

In instruments with Option EP0, the LO is configured for the best possible phase noise at offsets up to 600 kHz from the carrier whenever there are no significant spurs within the span observed with an on-screen carrier. When there will be such a spur, the LO is reconfigured in a way that allows the phase noise to increase by 7 dB mostly within ± 1 octave around 400 kHz offset. The spurs will always be below -70 dBc.

Fast Tuning

`:FREQ:SYNT 3`

In this mode, the LO behavior compromises phase noise at many offsets from the carrier in order to allow rapid measurement throughput when changing the center frequency or span. The term "[Fast Tuning](#)" on page 1839 refers to the time it takes to move the local oscillator to the start frequency and begin a sweep; this setting does not impact the actual sweep time in any way.

In instruments with EP1, the LO behavior compromises phase noise at offsets below 4 MHz in order to improve measurement throughput. The throughput is especially affected when moving the LO more than 2.5 MHz and up to 10 MHz from the stop frequency to the next start frequency.

In instruments with Option EP0, this is the same configuration as "Best Spurs" on page 1839. It is available with the "Fast Tuning" on page 1839 label for convenience, and to make the user interface more consistent with other X-Series instrument family members.

(In models whose hardware does not provide for a "Fast Tuning" on page 1839 option, the settings for "Best Close-in" on page 1838 are used if "Fast Tuning" on page 1839 is selected. This gives the fastest possible tuning for that hardware set.)

Auto

`:FREQ:SYNT:AUTO ON`

Selects the LO (local oscillator) phase noise behavior to optimize dynamic range and speed for various instrument operating conditions. The selection rules are as follows.

Auto Optimization Rules

X-Series instruments have several grades of LO, offering different configurations when in the Auto Mode. The rules for Auto selection are as follows:

| Models with Option | Conditions | Selection |
|---|--|---|
| EPO Models with option EPO have a two stage local oscillator, which switches to a single loop for fast tuning (available in UXA) | Center frequency is < 699.9 kHz Span > 114.1 MHz, <i>or</i> RBW > 800 kHz RBW > 290 kHz, <i>or</i> Span > 4.2 MHz Other conditions | "Balanced" on page 1838 "Fast Tuning" on page 1839 "Best Wide-offset" on page 1839 "Balanced" on page 1838 |
| EP1 Models with option EP1 have a two-loop local oscillator, which switches to a single loop for fast tuning (available in PXA) | Span > 44.44 MHz, <i>or</i> RBW > 1.9 MHz, <i>or</i> Source Mode is set to "Tracking" Center frequency is < 195 kHz, <i>or</i> CF >= 1 MHz <i>and</i> Span <= 1.3 MHz <i>and</i> RBW <= 75 kHz All other conditions | "Fast Tuning" on page 1839 "Best Close-in" on page 1838 "Best Wide-offset" on page 1839 |
| EP2 Models with option EP2 use a different | CF < 130 kHz, <i>or</i> CF > 12 MHz <i>and</i> Span < 495 kHz <i>and</i> RBW < 40 kHz | "Best Close-in" on page 1838 |

3 WLAN Mode
3.12 IQ Waveform Measurement

| Models with Option | Conditions | Selection |
|--|--|--|
| <p>loop bandwidth for the fast-tuning choice, which is a compromise between tuning speed and phase noise, giving good tuning speed at all offsets. Although not as good as for "Best Close-in" on page 1838; this is useful when you have to look across a wide range of spans (available, for example, in MXA for excellent phase noise)</p> | <p>Span > 22 MHz, <i>or</i> RBW > 400 kHz, <i>or</i> CF ≤ 12 MHz <i>and</i> Span < 495 kHz <i>and</i> RBW < 23 kHz All other conditions</p> | <p>"Fast Tuning" on page 1839 "Best Wide-offset" on page 1839</p> |
| <p>EP4 (available in CXA for improved phase noise)</p> | <p>Span > 101 MHz <i>or</i> RBW > 1.15 MHz <i>or</i> Source Mode is set to "Tracking" CF is < 109 kHz <i>or</i> CF ≥ 4.95 MHz <i>and</i> Span ≤ 666 kHz <i>and</i> RBW < 28 kHz All other conditions</p> | <p>"Fast Tuning" on page 1839 "Best Close-in" on page 1838 "Best Wide-offset" on page 1839</p> |
| <p>All Other Models Note that in these models, the hardware does not actually provide for an extra-fast tuning option, so the settings for "Fast Tuning" on page 1839 are actually the same as "Best Close-in" on page 1838, but the rules are implemented this way so that the user who doesn't care about phase noise but does care about tuning speed doesn't have to remember which of the other two settings gives faster tuning</p> | <p>Span > 12.34 MHz, <i>or</i> RBW > 250 kHz, <i>or</i> Source Mode is set to "Tracking" Center frequency is < 25 kHz, <i>or</i> CF ≥ 1 MHz <i>and</i> Span ≤ 141.4 kHz <i>and</i> RBW ≤ 5 kHz All other conditions</p> | <p>"Fast Tuning" on page 1839 "Best Close-in" on page 1838 "Best Wide-offset" on page 1839</p> |

In all the above cases:

- The RBW to be used in the calculations is the equivalent –3 dB bandwidth of the current RBW filter
- The rules apply whether in swept spans, zero span, or FFT spans

Ranges

| Option | Option # | Phase Noise Option | Range |
|---------------|----------|--------------------|-------------------------|
| No EPx Option | 1 | Best Close-in | [offset < 20 kHz] |
| | 2 | Best Wide-offset | [offset > 30 kHz] |
| | 3 | Fast Tuning | [same as Best Close-In] |
| EP0 | 4 | Best Close-in | [offset < 600 kHz] |
| | 1 | Balanced | [offset < 600 kHz] |
| | 5 | Best Spurs | [offset < 600 kHz] |
| | 2 | Best Wide-offset | [offset > 800 kHz] |
| EP1 | 3 | Fast Tuning | [same as Best Close-In] |
| | 1 | Best Close-in | [offset < 140 kHz] |
| | 2 | Best Wide-offset | [offset > 160 kHz] |
| EP2, EP3, EP5 | 3 | Fast Tuning | [single loop] |
| | 1 | Best Close-in | [offset < 70 kHz] |
| | 2 | Best Wide-offset | [offset > 100 kHz] |
| EP4 | 3 | Fast Tuning | [medium loop bw] |
| | 1 | Best Close-in | [offset < 90 kHz] |
| | 2 | Best Wide-offset | [offset > 130 kHz] |
| | 3 | Fast Tuning | [same as Best Close-In] |

ADC Dither

Toggles the dither function On and Off. The dither function improves linearity for low level signals, at the expense of a higher noise floor.

The reduced clipping-to-noise ratio results in higher noise because the clipping level of the ADC relative to the front terminals remains unchanged with the introduction of dither. The enhanced linearity is mostly improved scale fidelity.

With dither on, the third-order distortions are usually invisible for mixer levels below -35 dBm. With dither off, these distortions can be visible, with typical power levels of -110 dBm referred to the mixer. Detection nonlinearity can reach 1 dB for dither off at mixer levels around -70 dBm and lower, while the specified nonlinearity is many times smaller with dither on.

| Range | Auto Man |

LO Dither

When **LO Dither** is turned on, the local oscillator frequency is rapidly changed by small, random amounts. This helps spread the power of spurious signals within the passband, which lowers their level, thus increasing dynamic range. This is only required in very wide passbands, so this feature only appears with Option H1G.

| | |
|----------------|--|
| Remote Command | [:SENSe] :WAVeform:LO:DITHer[:STATe] ON OFF 1 0 [:SENSe] :WAVeform:LO:DITHer[:STATe] ? |
| Example | :WAV:LO:DITH 1 :WAV:LO:DITH? |
| Dependencies | Only available when the instrument has the Option H1G installed. If you try to turn ON LO Dither in any other case, an error message is generated, -241, "Hardware missing; Option H1G required" Only appears in some Modes (for example, VMA and IQ Analyzer) The LO Dither function is turned OFF and grayed-out when the IF Path is set to a path other than 1 GHz. If you press the grayed-out control, a warning message "LO Dither only available with IF Path 1 GHz" is shown. If you try to set LO Dither to ON remotely while it is grayed-out, a message "-221,Settings conflict; LO Dither only available with IF Path 1 GHz" is returned When LO Dither is turned ON , the Phase Noise Optimization control is grayed-out. If you try to change the PNO value via front panel or SCPI in that case, an error is generated, "LO Dither must be turned off to change this value" |

| | |
|-------------|---|
| Couplings | As with most parameters with an AUTO state, " Auto Couple " on page 1833 sets it to Auto, which then selects AUTOorange . Setting any specific value (AUTOorange , LOW or HIGH) sets the AUTO state to false When LO Dither is turned ON , Phase Noise Optimization is set to "Best Close-In". If the Phase Noise Optimization value changes due to turning on LO Dither , a warning message "Phase Noise Optimization changed due to LO Dither activation" is displayed |
| Preset | OFF |
| State Saved | Saved in instrument state |

IF Gain

Selects the range of IF gain.

When in **AUTOorange** mode, the IF checks its range once for data acquisition, to provide the best signal to noise ratio. You can specify the range for the best speed, and optimize for noise or for large signals.

When **IF Gain** is set to **AUTOorange**, the IF Gain is set to **HIGH** initially for each chunk of data. The data is then acquired. If the IF overloads, then the IF Gain is set to **LOW**, and the data is re-acquired. Because of this operation, the **AUTOorange** setting requires more measurement time, as the instrument checks/resets its range. You can get faster measurement speed by forcing the range to either the **HIGH** or **LOW** gain setting, *but* you must ensure that your measurement conditions will not overload the IF (in the **HIGH** gain range), that your signals are well above the noise floor (for the **LOW** gain range), and that the signals are not changing.

When **Digital Bus Out** (under the **Input/Output** menu) is **ON**, the IF Gain State **AUTOorange** selection is not allowed. Thus, in this case IF Gain State will be set to **LOW**.

This only applies to the RF input. It does not apply to baseband I/Q input.

| | |
|----------------|--|
| Remote Command | <code>[:SENSe]:WAVeform:IF:GAIN[:STATe] AUTOorange LOW HIGH OTHER</code> <code>[:SENSe]:WAVeform:IF:GAIN[:STATe]?</code> |
| Example | <code>:WAV:IF:GAIN HIGH</code> <code>:WAV:IF:GAIN?</code> |
| Notes | Only applies to the RF input. Does not apply to baseband I/Q input |
| Dependencies | If you try to select AUTOorange via SCPI while Digital Bus Out is ON , an error message -224, "Illegal parameter value; "IF Gain Autorange not allowed when Digital Bus Out is on" is displayed If you try to select AUTOorange via the front panel while Digital Bus Out is ON , an error message -221 "Settings conflict; "IF Gain Autorange not allowed when Digital Bus Out is ON" is displayed Other IF Gain is available only in models with DIF40 |
| Couplings | As for most parameters that have an AUTO state, " Auto Couple " on page 1833 sets it to AUTOorange , which then selects LOW or HIGH depending on the IF Path. Setting any specific value (AUTOorange , LOW , HIGH , or OTHER) sets the AUTO state to OFF |

| | |
|----------------|--|
| Preset | LOW |
| State Saved | Saved in instrument state |
| Range | Autorange (Slower Follows Signals) Low (Best for Large Signals) High (Best Noise Level) Other (Explicit) |
| | Auto Function |
| Remote Command | <code>[:SENSe]:WAVeform:IF:GAIN:AUTO[:STATe] ON OFF 1 0</code> <code>[:SENSe]:WAVeform:IF:GAIN:AUTO[:STATe]?</code> |
| Example | <code>:WAV:IF:GAIN:AUTO ON</code> <code>:WAV:IF:GAIN:AUTO?</code> |
| Notes | Activates the auto rules for IF Gain |
| Preset | ON |
| Range | OFF ON |

IF Gain Offset

Sets **IF Gain Offset** for the 40 MHz, 140 MHz, 160 MHz IF Paths in 1 dB steps from the minimum gain available to the maximum. Increasing the gain can increase the amplitude of small signals, as long as you do not overdrive the hardware. Wideband gain should usually be adjusted after setting the input attenuation.

Internally, the **IF Gain** value will change based on the current configuration of the Hardware. You can choose to offset this value with this parameter. Hence the value specified is not an absolute value but relative to the current internal **IF Gain** setting.

For example:

- IF Gain Low + IF Gain Offset +4 dB = Total IF Gain of +4 dB ($0 + 4 = 4$)
- IF Gain High + IF Gain Offset +4 dB = Total IF Gain of +14 dB ($10 + 4 = 14$)
- IF Gain Low + IF Gain Offset -6 dB = Total IF Gain of -6 dB ($0 - 6 = -6$)
- IF Gain High + IF Gain Offset -6 dB = Total IF Gain of +6dB ($10 - 6 = 4$)

The available **IF Gain** depends on the **IF Path** and center frequency. The maximum **IF Gain** may not be achievable at all times, depending on the configuration.

| | |
|----------------|--|
| Remote Command | <code>[:SENSe]:WAVeform:IF:GAIN:OFFSet <rel_amp1></code> <code>[:SENSe]:WAVeform:IF:GAIN:OFFSet?</code> |
| Example | Set IF Gain Offset to 2: <code>:WAV:IF:GAIN:OFFS 2</code> |
| Couplings | Not available in EXM, or UXM |

| | |
|-------------|--|
| | When "IF Gain" on page 1844 State is set to OTHer , the "Other IF Gain" on page 1846 value is used and IF Gain Offset is ignored |
| Preset | 0 |
| State Saved | Saved in instrument state |
| Min/Max | Depends on hardware present |

Other IF Gain

Explicitly specifies the IF gain value.

Only applies when "IF Gain" on page 1844 is set to **OTHer**. When **IF Gain** is set to **AUTOrange**, **LOW**, or **HIGH**, this value is ignored.

Available only in models with DIF40.

| | |
|----------------|--|
| Remote Command | <code>[:SENSe]:WAVeform:IF:GAIN:LEVe1 <rel_amp1></code> <code>[:SENSe]:WAVeform:IF:GAIN:LEVe1?</code> |
| Example | <code>:WAV:IF:GAIN:LEV -10</code> <code>:WAV:IF:GAIN:LEV?</code> |
| Preset | 0 |
| State Saved | Saved in instrument state |
| Min/Max | Depends upon hardware present |

Mixing Mode

Lets you alternate between mixing modes for the Local Oscillator (LO). The default setting is **NORMa1** LO mixing mode, which is determined by the instrument configuration to be either "high side" or "low side". Typically, "high side" mixing mode is used for the **NORMa1** LO mixing mode. Selecting the **ALTeRnate** mixing mode selects "low side" mixing when the **NORMa1** mixing mode is "high side" mixing, and selects "high side" mixing mode when the **NORMa1** mixing mode is "low side" mixing.

This function can be useful in eliminating images that may be seen from adjacent channels. Whenever you have signals that are twice the IF above your signal of interest, they will alias on top of your signal. To eliminate this issue, switch to **ALTeRnate** side mixing and your measurement will be image free.

Example

When testing a 5G signal with all 8 channels **ON**, where each channel is 100 MHz wide, there may be cases where you see images from adjacent channels. To measure the highest frequency carrier, you will need to switch to alternate side mixing, to avoid the 8th carrier from aliasing on top of other carriers.

3 WLAN Mode
3.12 IQ Waveform Measurement

Remote Command `[:SENSe]:WAVeform:LO:MIXMode NORMal | ALTernate`
`[:SENSe]:WAVeform:LO:MIXMode?`

Example `:WAV:LO:MIXM NORM`
`:WAV:LO:MIXM?`

Dependencies Not available in N9000B
 Grayed-out when the RF Input is set to something other than RF (such as External Mixer). If you press

the grayed-out control, a warning message "Feature only available with Signal Input RF" appears
If you try to set **Mixing Mode** via SCPI when disabled, a message -221, "Settings conflict; Feature only available with signal input RF" is returned

| | |
|-------------|----------------------------------|
| Preset | NORMa1 |
| State Saved | Yes |
| Range | NORMa1 ALTErnate |

Invert Spectrum

When set to **NORMa1**, the Spectrum toggle has no effect on the measurement. When set to **INVErt**, the I/Q data is conjugated, which inverts the spectrum. This parameter also affects the results of the **:MEASure**, **:READ**, and **:FETCh** queries for **WAVEform4** data. If set to **INVErt**, the I/Q data returned is conjugated, otherwise the data is raw I/Q.

| | |
|----------------|--|
| Remote Command | [:SENSe] :WAVEform :SPECTrum NORMa1 INVErt [:SENSe] :WAVEform :SPECTrum ? |
| Example | :WAV :SPEC INVErt |
| Preset | NORMAL |
| State Saved | Saved in instrument state |

Power Reference Plane

Allows you to increase the power by 3 dB for Baseband I+jQ measurements. Options are:

| Menu | SCPI |
|----------|-----------------|
| Baseband | BASEband |
| RF | RF |

| | |
|----------------|---|
| Remote Command | For valid <meas> values, see " Valid Measurement Keywords " on page 1849 [:SENSe] :<meas> :POWer :IQ :REFerence :PLANE RF BASEband [:SENSe] :<meas> :POWer :IQ :REFerence :PLANE ? |
| Example | (Complex Spectrum measurement) SPEC :POW :IQ :REF :PLAN BAS SPEC :POW :IQ :REF :PLAN ? |
| Dependencies | Only available if the I/Q input exists Enabled only when the input is I/Q and I/Q Path is I+jQ Disabled for all other conditions |
| Preset | RF |
| State Saved | Saved in instrument state |

Valid Measurement Keywords

This function is available *only* in certain Modes and measurements. Only the following listed values of `<meas>` are valid.

| Mode(s) | Meas | <meas> |
|----------|--------------------------|----------|
| BASIC | Complex Spectrum | SPECTrum |
| BASIC | IQ Waveform | WAVeform |
| CQM | | |
| EDGE GSM | | |
| LTEAFDD | | |
| LTEATDD | | |
| MSR | | |
| NR5G | | |
| PNOISE | | |
| SRCOMMS | | |
| VMA | | |
| WCDMA | | |
| WLAN | | |
| WLAN | Modulation Analysis | EVM |
| WLAN | MIMO Modulation Analysis | EVMMimo |

Optimize EVM

This is an "immediate action" function to optimize IQ data capture settings for best EVM. It is used to set the combination of preamp, mechanical and electronic attenuation and IF gain value based on measured signal peak level. Its purpose is to get better EVM results by improving SNR and avoid ADC overload at the same time.

After this control is pressed, **Pre-Adjust for Min Clipping** changes to **OFF** and **IF Gain Auto** changes to **Manual**.

Remote Command `[:SENSe] :WAVeform :OPTimize :EVM`

Example `:WAV :OPT :EVM`

Mixing Mode State (Remote Command Only)

Available *only* in the Complex Spectrum, Streaming, and Waveform measurements.

Lets you alternate between mixing modes for the Local Oscillator (LO). The default setting is **NORMa1** LO mixing mode, which is determined by the instrument configuration to be either “high side” or “low side”. The query returns “High” or “Low” to determine whether the mixing is “high side” or “low side”. If **Mixing Mode** is toggled between **NORMa1** and **ALternate**, then **Mixing Mode State** also toggles between “High” and “Low”.

| | |
|----------------|--|
| Remote Command | <code>[:SENSe] :SPEcTrum:LO:MIXMode:SIDE?</code> <code>[:SENSe] :WAVeForm:LO:MIXMode:SIDE?</code> |
| Example | <code>:SPEc:LO:MIXM:SIDE?</code> <code>:WAV:LO:MIXM:SIDE?</code> |
| Dependencies | Not available in N9000B |
| Couplings | When Mixing Mode is toggled between NORMa1 and ALternate , Mixing Mode State also toggles between High and Low |
| Range | High Low |

IF Frequency (Remote Command Only)

Available *only* in the Complex Spectrum, Streaming, and Waveform measurements.

Returns the current IF Frequency used in the IF Path.

| | |
|----------------|---|
| Remote Command | <code>[:SENSe] :SPEcTrum:IF:FREQUency?</code> <code>[:SENSe] :WAVeForm:IF:FREQUency?</code> |
| Example | <code>:SPEc:IF:FREQ?</code> <code>:WAV:IF:FREQ?</code> |
| Couplings | A change in Span , Digital IF BW or IF Path parameters can result in a change of the IF Frequency value |

3.12.8.4 Global

The controls in this menu apply to all Modes in the instrument.

Some controls (for example, "**Global Center Freq**" on page 1850) allow you to switch certain Meas Global parameters to a Mode Global state. These switches apply to all Modes that support global settings. For example, no matter what Mode you are in when you set **Global Center Freq** to **ON**, it applies to all Modes that support Global settings.

Other controls (for example, **Extend Low Band**) are actually set in this menu, but apply to all Modes.

Global Center Freq

The software maintains a Mode Global value called **Global Center Freq**.

When **Global Center Freq** is switched **ON**, the current Mode's center frequency is copied into the **Global Center Frequency**, and from then on all Modes that support global settings use the **Global Center Frequency**, so you can switch between any of these Modes and the **Center Frequency** remains unchanged.

Adjusting the **Center Frequency** of any Mode that supports Global Settings, while **Global Center Freq** is **ON**, modifies the **Global Center Freq**.

When **Global Center Freq** is switched **OFF**, the **Center Frequency** of the current Mode is unchanged, but now the **Center Frequency** of each Mode is once again independent.

When **Mode Preset** is pressed while **Global Center Freq** is **ON**, the **Global Center Freq** is preset to the preset **Center Frequency** of the current Mode.

This function resets to **OFF** when "**Restore Defaults**" on page 1852 is pressed, or when **System, Restore Defaults, All Modes** is pressed.

| | |
|------------------------------|--|
| Remote Command | <code>:INSTrument:COUPle:FREQuency:CENter ALL NONE</code> <code>:INSTrument:COUPle:FREQuency:CENter?</code> |
| Example | <code>:INST:COUP:FREQ:CENT ALL</code> <code>:INST:COUP:FREQ:CENT?</code> |
| Preset | Set to OFF on Global Settings, Restore Defaults and System, Restore Defaults, All Modes |
| Range | ALL NONE |
| Preset | OFF |
| Backwards Compatibility SCPI | <code>:GLOBal:FREQuency:CENter[:STATe] 1 0 ON OFF</code> <code>:GLOBal:FREQuency:CENter[:STATe]?</code> |

Global EMC Std

When this control is switched **ON**, the current Mode's EMC Std is copied into the **Global EMC Std**, and from then on all Modes that support global settings use the **Global EMC Std**, so you can switch between any of these Modes and the EMC Std remains unchanged.

Adjusting the EMC Std of any Mode that supports Global settings, while **Global EMC Std** is **ON** modifies the **Global EMC Std**.

When **Global EMC Std** is switched **OFF**, the EMC Std of the current Mode remains unchanged, but now the EMC Std of each Mode is once again independent. When **Mode Preset** is pressed while **Global EMC Std** is **ON**, **Global EMC Std** is preset to the preset EMC Std of the current Mode.

This function resets to **OFF** when "**Restore Defaults**" on page 1852 is pressed, or when **System, Restore Defaults, All Modes** is pressed.

| | |
|----------------|--|
| Remote Command | <code>:INSTRument:COUPle:EMC:STANdard ALL NONE</code> <code>:INSTRument:COUPle:EMC:STANdard?</code> |
| Example | <code>:INST:COUP:EMC:STAN ALL</code> <code>:INST:COUP:EMC:STAN?</code> |
| Dependencies | Only available if Option EMC is installed |
| Preset | Set to OFF on Global Settings , Restore Defaults and System, Restore Defaults, All Modes |
| Range | ALL NONE |

Restore Defaults

Resets all functions in the **Global** settings menu to **OFF**. Pressing **System, Restore Defaults, All Modes** has the same effect.

| | |
|---------------------------------|---|
| Remote Command | <code>:INSTRument:COUPle:DEFault</code> |
| Example | <code>:INST:COUP:DEF</code> |
| Backwards Compatibility SCPI | <code>:GLOBal:DEFault</code> |

3.12.8.5 Sample Period (Aperture) Setting (Remote Query Only)

Returns the time between samples (sample period or aperture).

| | |
|----------------|---|
| Remote Command | <code>[:SENSe]:WAVeform:APERture?</code> |
| Example | <code>:WAV:APER?</code> |
| Couplings | Coupled to Sample Rate by the following equation Sample Period = 1/(Sample Rate) |
| Preset | 1/(Sample Rate Default) |
| Min/Max | 1/(Max Sample Rate)/1/(Min Sample Rate) |

3.12.9 Sweep

Accesses controls to configure and control the acquisition of data, and the X-axis parameters of the instrument.

Depending on the selected mode and measurement, these controls might include: **Sweep Time**, **Continuous/Single**, **Pause/Resume**, **X Scale** and **Number of Points**.

3.12.9.1 Sweep/Control

Accesses controls that let you operate the sweep and control functions of the instrument, such as **Sweep Time** and **Continuous/Single**.

Restart

Restarts the current sweep, or measurement, or set of averaged/held sweeps or measurements. If you are Paused, pressing **Restart** performs a Resume.

The front-panel key **Restart** performs exactly the same function.

The **Restart** function is accessed in several ways:

- Pressing the **Restart** key
- Sending `:INIT:IMM`
- Sending `:INIT:REST`

See "[More Information](#)" on page 1854

| | |
|-------------------------------|---|
| Remote Command | <code>:INITiate[:IMMEDIATE]</code> <code>:INITiate:REStart</code> |
| Example | <code>:INIT:IMM</code> <code>:INIT:REST</code> |
| Notes | <code>:INIT:REST</code> and <code>:INIT:IMM</code> perform exactly the same function |
| Couplings | Resets average/hold count k. For the first sweep overwrites all active (update = on) traces with new current data. For application modes, it resets other parameters as required by the measurement |
| Status Bits/OPC dependencies | This is an Overlapped command The <code>STATus:OPERation</code> register bits 0 through 8 are cleared , <i>except</i> bit 6 (Waiting for Periodic Sync). Initiating a measurement and Waiting for Periodic Sync could be asynchronous The <code>STATus:QUESTionable</code> register bit 9 (<code>INTEgrity</code> sum) is cleared The <code>SWEEPING</code> bit is set The <code>MEASURING</code> bit is set |
| Backwards Compatibility Notes | For Spectrum Analysis Mode in ESA and PSA, the Restart hardkey and the <code>:INIT:REST</code> command restarted trace averages (displayed average count reset to 1) for a trace in Clear Write , but did not restart Max Hold and Min Hold In X-Series, the Restart hardkey and the <code>:INIT:REST</code> command restart not only Trace Average , but MaxHold and MinHold traces as well |

More Information

The **Restart** function first aborts the current sweep or measurement as quickly as possible. It then resets the sweep and trigger systems, sets up the measurement and initiates a new data measurement sequence with a new data acquisition (sweep) taken once the trigger condition is met.

If the instrument is in the process of aligning when a **Restart** is executed, the alignment finishes before the restart function is performed.

Even when set for **Single** operation, multiple sweeps may be taken when **Restart** is pressed (for example, when averaging/holding is on). Thus, when we say that **Restart** "restarts a measurement", depending on the current settings, we may mean that it:

- Restarts the current sweep
- Restarts the current measurement
- Restarts the current set of sweeps if any trace is in Trace Average, Max Hold or Min Hold
- Restarts the current set of measurements if Averaging, or Max Hold, or Min Hold is on for the measurement

If there is no Average or Max/Min Hold function (no trace in Trace Average or Hold, or **Average/Hold Num** set to 1), and no **Waterfall** window is being displayed, a single sweep is equivalent to a single measurement. A single sweep is taken after the trigger condition is met; and the instrument stops sweeping once that sweep has completed. However, with **Average/Hold Num** >1, and at least one trace set to Trace Average, Max Hold, or Min Hold, or a **Waterfall** window being displayed, multiple sweeps/data acquisitions are taken for a single measurement. The trigger condition must be met prior to each sweep. The sweep is stopped when the average count k equals the number N set for **Average/Hold Num**.

Once the full set of sweeps has been taken, the instrument goes to the idle state. To take one more sweep without resetting the average count, increment the average count by 1, by pressing the **Step-Up** key while **Average/Hold Number** is the active function, or by sending the remote command `:CALC:AVER:TCON UP`.

Trace Update

The numeric results are not blanked at any time during the restart cycle.

For slow sweeps (see **Trace Update** section in **Trace/Detector**), the traces are updated real-time during the sweep. There may be a special circumstance in

application mode measurements where an exception is made and the traces and/or results need to be blanked before displaying the new results.

To summarize, the following list shows what happens to the trace data on various events:

| Event | Trace Effect |
|---|--|
| Clear/Write pressed (even if already in Clear/Write) | Set to mintracevalue |
| Max Hold pressed (even if already in Max Hold) | Set to mintracevalue |
| Min Hold pressed (even if already in Min Hold) | Set to maxtracevalue |
| Trace Average pressed (even if already in Trace Average) | Trace data unaffected but start new sweep/avg/hold |
| Restart pressed | Trace data unaffected but start new sweep/avg/hold |
| Parameter requiring restart changed (e.g., RBW) | Trace data unaffected but start new sweep/avg/hold |

Sweep and Trigger Reset

Resetting the sweep system resets the average/hold count k to 0. It also resets the set point counter to 0. Resetting the trigger system resets the internal auto trig timer to the value set by the **Auto Trig** control.

Averaging

The weighting factor used for averaging is k . This k is also the average/hold count for how many valid sweeps (data acquisitions) have been done. This k is used for comparisons with N , as those comparisons always needs to be based on valid completed sweeps.

The displayed average/hold, K , shows the count for the sweep (data acquisition) in progress. $K = k + 1$, with a limit of N . The displayed value K changes from its previous value to 1 as soon as the trigger condition for the first data acquisition (sweep) is met.

Pause/Resume

Pauses a measurement after the current data acquisition is complete.

When paused, the label on the control changes to **Resume**. Pressing **Resume** unpauses the measurement. When paused, pressing **Restart** performs a Resume.

Remote Command **:INITiate:PAUSE**
 :INITiate:RESume

| | |
|--------------|--|
| Example | <code>:INIT:PAUS</code> <code>:INIT:RES</code> |
| Dependencies | Not displayed in Modes that do not support pausing |
| Annotation | Only on control |

Sweep/Measure

Lets you toggle between **Continuous** and **Single** sweep or measurement operation. The single/continuous state is Meas Global, so the setting affects all measurements.

The front-panel key **Single/Cont** performs exactly the same function

See "[More Information](#)" on page 1856

| | |
|-------------------------------|---|
| Remote Command | <code>:INITiate:CONTinuous OFF ON 0 1</code> <code>:INITiate:CONTinuous?</code> |
| Example | Put instrument into Single measurement operation: <code>:INIT:CONT 0</code> <code>:INIT:CONT OFF</code> Put instrument into Continuous measurement operation: <code>:INIT:CONT 1</code> <code>:INIT:CONT ON</code> |
| Preset | ON Note that <code>:SYST:PRES</code> sets <code>:INIT:CONT</code> to ON , but <code>*RST</code> sets <code>:INIT:CONT</code> to OFF |
| State Saved | Saved in instrument state |
| Annunciation | The Single/Continuous icon in the Meas Bar changes depending on the setting: <ul style="list-style-type: none"> - A line with an arrow is Single - A loop with an arrow is Continuous |
| Backwards Compatibility Notes | X-Series A-models had Single and Cont hardkeys in place of the SweepSingleCont softkey. In the X-Series A-models, if in single measurement, the Cont hardkey (and <code>INIT:CONT ON</code>) switched to continuous measurement, but never restarted a measurement and never reset a sweep X-Series B-models have a Cont/Single toggle control instead of Single and Cont hardkeys, but it is still true that, if in single measurement, the Cont/Single toggle control never restarts a measurement and never resets a sweep |

More Information

| | |
|-----------------|--|
| Continuous Mode | The instrument takes repetitive sweeps, averages, measurements, etc., when in continuous mode. If in average or Max/Min Hold, and the average/hold count reaches the Average/Hold Num , the count stops incrementing, but the instrument keeps sweeping |
|-----------------|--|

3 WLAN Mode

3.12 IQ Waveform Measurement

| | |
|-------------|---|
| | <p>See the Trace key description under Trace Average for the averaging formula used both before and after the Average/Hold Num is reached. The trigger condition must be met prior to each sweep</p> <p>The type of trace processing for multiple sweeps is set under the Trace key, with choices of Trace Average, Max Hold, or Min Hold</p> |
| Single Mode | <p>The instrument takes a single sweep when in Single mode, or if in average or Max/Min Hold, or if there is a Waterfall window displayed, it takes multiple sweeps until the average/hold count reaches the Average/Hold Num, then the count stops incrementing, and the instrument stops sweeping</p> <p>See the Trace key description under Trace Average for the averaging formula used. The trigger condition must be met prior to the sweep</p> <p>The type of trace processing for multiple sweeps is set under the Trace key, with choices of Trace Average, Max Hold, or Min Hold</p> |

If the instrument is in **Single** measurement mode, pressing the **Cont/Single** toggle control does not zero the count and does not cause the sweep to be reset; the only action is to put the instrument into Continuous measurement operation.

If the instrument is already in **Continuous** sweep:

- **:INIT:CONT 1** has no effect
- **:INIT:CONT 0** places the instrument in Single Sweep but has no effect on the current sequence until $k = N$, at which point the current sequence will stop and the instrument will go to the idle state

See "**Restart**" on page 1853 for details of **:INIT:IMMEDIATE**.

If the instrument is already in **Single** sweep, **:INIT:CONT OFF** has no effect.

If the instrument is already in **Single** sweep, then pressing **Cont/Single** in the middle of a sweep does not restart the sweep or sequence. Similarly, pressing **Cont/Single** does not restart the sweep or sequence if the sweep is not in the idle state (for example, if you are taking a very slow sweep, or the instrument is waiting for a trigger). Even though pressing **Cont/Single** in the middle of a sweep does not restart the sweep, sending **:INIT:IMM** does reset it.

If the instrument is in **Single** sweep, and *not* Averaging/Holding, and you want to take one more sweep, press **Restart**.

If the instrument is in **Single** sweep, *and* Averaging/Holding, and you want to take one more sweep without resetting the Average trace or count, go to **Meas Setup** and increment the average count by 1 by pressing the **Step-Up** key while **Average/Hold Num** is the active function. You can also do this by sending **:CALC:AVER:TCON UP**.

Abort (Remote Command Only)

Stops the current measurement. Aborts the current measurement as quickly as possible, resets the sweep and trigger systems, and puts the measurement into an "idle" state. If the instrument is in the process of aligning when **:ABORT** is sent, the alignment finishes *before* the abort function is performed, so **:ABORT** does not abort an alignment.

If the instrument is set for **Continuous** measurement, it sets up the measurement and initiates a new data measurement sequence with a new data acquisition (sweep) taken once the trigger condition is met.

If the instrument is set for **Single** measurement, it remains in the "idle" state until an **:INIT:IMM** command is received.

| | |
|------------------------------|--|
| Remote Command | :ABORT |
| Example | :ABOR |
| Notes | <p>If :INIT:CONT is ON, then a new continuous measurement will start immediately, with sweep (data acquisition) occurring once the trigger condition has been met</p> <p>If :INIT:CONT is OFF, then :INIT:IMM is used to start a single measurement, with sweep (data acquisition) occurring once the trigger condition has been met</p> |
| Dependencies | <p>For continuous measurement, :ABORT is equivalent to the Restart key</p> <p>Not all measurements support this command</p> |
| Status Bits/OPC dependencies | <p>The STATUS:OPERation register bits 0 through 8 are cleared , <i>except</i> bit 6 (Waiting for Periodic Sync). Initiating a measurement and Waiting for Periodic Sync could be asynchronous</p> <p>The STATUS:QUEStionable register bit 9 (INTEgrity sum) is cleared</p> <p>Since all the bits that feed into OPC are cleared by :ABORT, the Abort command will cause the *OPC query to return true</p> |

3.12.9.2 X Scale

Accesses controls that enable you to set the horizontal scale parameters.

Ref Value

Sets the display X reference value.

| | |
|----------------|--|
| Remote Command | :DISPlay:WAVeform:VIEW[1] 2:WINDow[1]:TRACe:X[:SCALe]:RLEVel <time> |
| Example | <p>:DISP:WAV:VIEW:WIND:TRAC:X:RLEV 10 ms</p> <p>:DISP:WAV:VIEW:WIND:TRAC:X:RLEV?</p> |
| Notes | View 1 is the RF Envelope View |

| | |
|-------------|---|
| | View 2 is the I/Q Waveform View |
| Couplings | If X "Auto Scaling" on page 1860 is ON, this value is automatically determined by the measurement result. When you set a value manually, X Auto Scaling automatically changes to OFF |
| Preset | 0.000 s |
| State Saved | Saved in instrument state |
| Min/Max | -1 s /10.0 s |
| Annotation | <value> s bottom left of graph |

Scale/Div

Sets the display X scale/division value.

| | |
|----------------|---|
| Remote Command | <code>:DISPlay:WAVeForm:VIEW[1] 2:WINDow[1]:TRACe:X[:SCALe]:PDIVision <time></code> <code>:DISPlay:WAVeForm:VIEW[1] 2:WINDow[1]:TRACe:X[:SCALe]:PDIVision?</code> |
| Example | <code>:DISP:WAV:VIEW:WIND:TRAC:X:PDIV 500 us</code> <code>:DISP:WAV:VIEW:WIND:TRAC:X:PDIV?</code> |
| Notes | View 1 is the RF Envelope View View 2 is the I/Q Waveform View |
| Couplings | If X "Auto Scaling" on page 1860 is ON, this value is automatically determined by the measurement result. When you set a value manually, X Auto Scaling automatically changes to OFF |
| Preset | 200.0 us |
| State Saved | Saved in instrument state |
| Min | 1.00 ns |
| Max | 320 s |

Ref Position

Sets the reference position for the X axis to **LEFT**, **CENTER** or **RIGHT**.

| | |
|----------------|---|
| Remote Command | <code>:DISPlay:WAVeForm:VIEW[1] 2:WINDow[1]:TRACe:X[:SCALe]:RPOSition LEFT CENTER RIGHT</code> <code>:DISPlay:WAVeForm:VIEW[1] 2:WINDow[1]:TRACe:X[:SCALe]:RPOSition?</code> |
| Example | <code>:DISP:WAV:VIEW:WIND:TRAC:X:RPOS LEFT</code> <code>:DISP:WAV:VIEW:WIND:TRAC:X:RPOS?</code> |
| Preset | LEFT |
| State Saved | Saved in instrument state |
| Range | LEFT CENTER RIGHT |

Auto Scaling

Toggles the scale coupling function **ON** or **OFF**.

| | |
|----------------|---|
| Remote Command | <code>:DISPlay:WAVeform:VIEW[1] 2:WINDow[1]:TRACe:X[:SCALe]:COUPle 0 1 OFF ON</code> <code>:DISPlay:WAVeform:VIEW[1] 2:WINDow[1]:TRACe:X[:SCALe]:COUPle?</code> |
| Example | <code>:DISP:WAV:VIEW:WIND:TRAC:X:COUP ON</code> <code>:DISP:WAV:VIEW:WIND:TRAC:X:COUP?</code> |
| Couplings | When Auto Scaling is ON and the Restart front-panel key is pressed, this function automatically determines the scale per division and reference values based on the measurement results When you set the value of either " Scale/Div " on page 1859 or " Ref Value " on page 1858 manually, Auto Scaling automatically changes to OFF |
| Preset | ON |
| State Saved | Saved in instrument state |
| Range | OFF ON |

3.12.10 Trace

There are no **Trace** controls in this measurement.

4 System

The **System** hardkey and the “gear” icon both open the **System Settings** dialog, which allows you to access various configuration menus and dialogs. The line of tabs down the left side let you choose various pages for configuring your instrument.

Notes No remote command for this key specifically

4.1 System

Allows access to several general system functions, including three **Show** screens for viewing system parameters. Several such **Show** screens are available on this and other **System** menu pages. They can also be accessed with the SCPI command described here.

| | |
|----------------|--|
| Remote Command | :SYSTem:SHOW OFF ERRor SYSTem HARDware LXI HWSTatistics ALIGNment SOFTware CAPPligation :SYSTem:SHOW? |
| Example | :SYST:SHOW SYST |
| Notes | Displays (or exits) the System information screens |
| Preset | OFF |
| State Saved | No |
| Range | OFF ERRor SYSTem HARDware LXI HWSTatistics ALIGNment SOFTware CAPPligation |

4.1.1 Show System

This screen is divided into three groups: product descriptive information, options tied to the hardware, and software products. Swipe up and down on this screen to scroll the display.

| System Settings | < System | Show System | ? X |
|------------------|-------------------------|--|------------------------------|

Example `:SYST:SHOW SYST`

4.1.1.1 Show System contents (Remote Query Only)

Returns the contents of the **Show System** screen (the entire contents, not just the currently displayed page).

Remote Command `:SYSTem:CONFiGure[:SYSTem]?`

Example `:SYST:CONF?`

Notes The output is an IEEE Block format of the **Show System** contents. Each line is separated by a new-line character

4.1.1.2 Computer System description (Remote Query Only)

Returns the **Computer System** description, which consists of the operating system and patch level, as reported by operating system.

Remote Command `:SYSTem:CSYStem?`

Example `:SYST:CSYS?`

Notes Returns the Computer System name and service pack level

4.1.2 Show Hardware

Displays details of the installed hardware. This information can be used to determine versions of hardware assemblies and field-programmable devices, in the advent of future upgrades or potential repair needs.

The screen is divided into two groups: product descriptive information and hardware information. The hardware information is listed in a table format.

Example `:SYST:SHOW HARD`

4.1.3 Show LXI

Displays the product number, serial number, firmware revision, computer name, IP address, Host ID, LXI Class, LXI Version, MAC Address, and the Auto-MDIX Capability.

Example `:SYST:SHOW LXI`

4.1.4 Show Support Subscriptions

Displays the software support subscription information for the licenses available on the instrument.

Shows the software license, description, software support expiration date (format is **YYYY.MMDD**), and the software support status. The **Software Version Date** (format is **YYYY.MMDD**) shown in the header indicates the date required to access the latest software enhancements included in this version of the software. If any license has a **Software Support Expiration Date** earlier than the **Software Version Date**, then enhancements may be available that the license does *not* enable.

Example `:SYST:SHOW SSINformation`

4.1.5 Show Support ID

Displays the Support ID for each license available in the instrument. Shows the **Software License**, **Description**, software support expiration date, and **Support ID** for that license.

Each license has a copy icon, which copies just the **Support ID** for that license to the Windows clipboard. This is useful to avoid typing mistakes when entering this value into another program or web site.

The **Copy all to clipboard ...** control copies all the data to the Windows clipboard, in comma-separated value (CSV) format.

| Software License | Description | Version | Support ID |
|------------------|---|-----------|-------------------|
| N6141EM0E-1FP | EMC Software for X-Series | 2018.0430 | N9030A,US00071133 |

Example `:SYST:SHOW SID`

4.1.6 Control Panel...

Opens the Windows Control Panel. **Control Panel** is used to configure certain elements of Windows that are not configured via the Multitouch UI System menus.

NOTE This feature is *not* available if Option SF1 is installed.

Control Panel is a separate Windows application, so to return to the Instrument Application, either:

- Exit by tapping on the red **X** in the upper right-hand corner
- Use **Alt+Tab**. Press and hold the **Alt** key and press and release the **Tab** key until the Instrument logo is showing in the window in the center of the screen, then release the **Alt** key

Notes No remote command for this key

4.1.7 Web Browser

Launches the instrument's default **Web Browser**. Usually, the default is Microsoft Edge. A mouse and external keyboard are highly desirable for using the browser. To return focus to the Instrument Application, close the browser (or use **Alt-Tab**).

NOTE

This feature is *not* available if Option SF1 is installed.

4.1.8 Application Controls

Lets you Minimize or Exit the application.

Pressing **Exit Program** displays a prompt asking if you are sure you want to close the program. If you select **OK**, the entire analyzer application will shut down, and you will lose any unsaved trace or measurement data.

Notes

No equivalent remote command for this key

4.1.9 Sounds

Lets you adjust the speaker volume using the slider, or mute/unmute the speaker, by tapping the **Speaker** icon.

Moving the slider up and down changes the speaker volume, and *also* unmutes the speaker if muted.

4.2 I/O Config

Allows you to specify and change the I/O configuration for remote control. Controls in this menu allow configuration of the I/O ports used for SCPI remote control over GPIB and LAN.

The SCPI LAN parameters are set using controls in this menu, but configuration of LAN settings themselves is performed using the Windows Control Panel (DHCP, Gateway, Subnet Mask, etc.).

The USB port is also available for remote control, but requires no configuration.

4.2.1 GPIB

Allows you to configure the GPIB I/O port.

| | |
|--------------|----------------------|
| Dependencies | Not available in UXM |
|--------------|----------------------|

4.2.1.1 GPIB Address

Select the GPIB remote address.

| | |
|----------------|---|
| Remote Command | <code>:SYSTem:COMMunicate:GPIB[1][:SELF]:ADDRess <integer></code> |
| Example | <code>:SYST:COMM:GPIB:ADDR 17</code> |
| Notes | If the GPIB port address is changed, all further communication must use the <i>new</i> address |
| Preset | Unaffected by Preset , but set to 18 by Restore Defaults > "Misc" on page 1917 |
| State Saved | No |
| Min | 0 |
| Max | 30 |

4.2.1.2 GPIB Controller

Sets the GPIB port into Controller (**ON**) or Device (**OFF**) mode. In the normal state, **GPIB Controller** is disabled (**OFF**), which allows the instrument to be controlled by a remote computer. When **GPIB Controller** is enabled (**ON**), the instrument can run software applications that use the instrument's computer as a GPIB controller for devices connected to the GPIB port.

NOTE

When **GPIB Controller** is enabled, the analyzer application itself cannot be controlled over GPIB. In this case, it can be controlled via LAN or USB. The GPIB port cannot be a Controller and Device at the same time. Only one Controller can be active on the GPIB bus at any given time. If the instrument is the Controller, an external PC cannot also be a Controller.

To control the instrument from the software that is performing GPIB Controller operation, you can use an internal TCP/IP connection to the analyzer application. Use the following IP Address to send commands to the analyzer application:

`TCPIP0:localhost:inst0:INSTR`

| | |
|----------------|--|
| Remote Command | <code>:SYSTem:COMMunicate:GPIB[1][:SELF]:CONTroller[:ENABLE] ON OFF 0 1</code> <code>:SYSTem:COMMunicate:GPIB[1][:SELF]:CONTroller[:ENABLE]?</code> |
| Example | Set GPIB port to Controller: <code>:SYST:COMM:GPIB:CONT ON</code> Set GPIB port to Device: <code>:SYST:COMM:GPIB:CONT OFF</code> |
| Notes | When the instrument becomes the Controller, Bit 0 in the Standard Event Status Register is set. When the instrument relinquishes Controller capability, bit 0 is cleared |
| Preset | Unaffected by Preset, but set to OFF (Disabled) by Restore Defaults > "Misc" on page 1917 |
| State Saved | No |
| Range | Disabled Enabled |

4.2.2 SCPI LAN

Displays a menu for identifying and changing SCPI over a LAN configuration. There are several ways to send SCPI remote commands to the instrument over LAN.

Having multiple users simultaneously accessing the instrument over the LAN may lead to communication problems. These controls can help to prevent that, by disabling the telnet, socket, and/or SICL capability.

NOTE

When multiple instances of the application are running, Telnet port 5023, socket port 5025, SICL server inst0 and HiSLIP server Device 0 will be assigned to the first instance; Telnet port 5123, socket port 5125, SICL server inst1 and HiSLIP server Device 1 will be assigned to the second instance; Telnet port 5223, socket port 5225, SICL server inst2 and HiSLIP server Device 2 will be assigned to the third instance; Telnet port 5323, socket port 5325, SICL server inst3 and HiSLIP server Device 3 will be assigned to the fourth instance.

- "SCPI Telnet" on page 1870
- "SCPI Socket" on page 1870
- "SICL Server" on page 1871
- "HiSLIP Server" on page 1872
- "Verbose SCPI On/Off" on page 1872
- "SCPI Socket Control Port (Remote Query Only)" on page 1874

4.2.2.1 SCPI Telnet

Turns SCPI LAN telnet capability On or Off, allowing you to limit SCPI access over LAN through telnet.

| | |
|----------------|---|
| Remote Command | <code>:SYSTem:COMMunicate:LAN:SCPI:TELNet:ENABle OFF ON 0 1</code> <code>:SYSTem:COMMunicate:LAN:SCPI:TELNet:ENABle?</code> |
| Example | <code>:SYST:COMM:LAN:SCPI:TELN:ENAB OFF</code> |
| Preset | Unaffected by Preset , but set to ON by Restore Defaults > "Misc" on page 1917 If not set up or specified, the Secure Instrument Communications configuration setting: is ON |
| State Saved | No |
| Range | OFF ON |

4.2.2.2 SCPI Socket

Turns the capability to establish Socket LAN sessions **ON** or **OFF**, to limit SCPI access over LAN through socket sessions.

Connection String & Copy Button

In "SCPI LAN" on page 1869, the full SCPI connection string is displayed to the right of the **SCPI Socket ON/OFF** control. Pressing **Copy**, to the right of the string, copies the connection string to the Windows clipboard.

| | |
|----------------|--|
| Remote Command | <code>:SYSTem:COMMunicate:LAN:SCPI:SOCKet:ENABle OFF ON 0 1</code> <code>:SYSTem:COMMunicate:LAN:SCPI:SOCKet:ENABle?</code> |
| Example | <code>:SYST:COMM:LAN:SCPI:SOCK:ENAB OFF</code> |
| Dependencies | If the Secure Instrument Communications configuration has disabled this connection, local changes are not allowed, and an attempt to do so results in error -221, "Disabled by Secure Instrument Communications configuration" |

| | |
|-------------|--|
| Preset | Unaffected by Preset , but set to ON by Restore Defaults > " Misc " on page 1917 If not set up or specified, the Secure Instrument Communications configuration setting: is ON |
| State Saved | No |
| Range | OFF ON |

4.2.2.3 SICL Server

Turns the **SICL Server** capability **ON** or **OFF**, to limit SCPI access over LAN through the SICL server. (SICL IEEE 488.2 protocol.)

| Parameter | Description | Setting |
|----------------------------|--|---------|
| Maximum Connections | The maximum number of connections that can be accessed simultaneously | 5 |
| Instrument Name | The name (same as the remote SICL address) of your instrument | inst0 |
| Instrument Logical Unit | The unique integer assigned to your instrument when using SICL LAN | 8 |
| Emulated GPIB Name | The name (same as the remote SICL address) of the device used when communicating with your instrument | gpib7 |
| Emulated GPIB Logical Unit | The unique integer assigned to your device when it is being controlled using SICL LAN | 8 |
| Emulated GPIB Address | The emulated GPIB address assigned to your transmitter tester when it is a SICL server (the same as your GPIB address) | 18 |

Connection String & Copy Button

In "**SCPI LAN**" on page 1869, the full connection string is displayed to the right of the **SICL Server ON/OFF** control. Pressing **Copy**, to the right of the string copies the connection string to the Windows clipboard.

| | |
|----------------|--|
| Remote Command | :SYSTem:COMMunicate:LAN:SCPI:SICL:ENABle OFF ON 0 1 :SYSTem:COMMunicate:LAN:SCPI:SICL:ENABle? |
| Example | :SYST:COMM:LAN:SCPI:SICL:ENAB OFF |
| Dependencies | Not available in UXM If the Secure Instrument Communications configuration has disabled this connection, local changes are not allowed, and an attempt to do so results in error -221, "Disabled by Secure Instrument Communications configuration" |
| Preset | Unaffected by Preset , but set to ON by Restore Defaults > " Misc " on page 1917 If not set up or specified, the Secure Instrument Communications configuration setting: is ON |
| State Saved | No |
| Range | OFF ON |

4.2.2.4 HiSLIP Server

Turns the **HiSLIP Server** capability **ON** or **OFF**, to limit SCPI access over LAN through the HiSLIP server.

HiSLIP stands for High-Speed LAN Instrument Protocol, and is part of the IVI-6.1 specification.

Example of a VISA connection string used to connect to the HiSLIP Server on an X-Series Spectrum Analyzer:

`TCPIP0::a-n9030a-93016::hislip0::INSTR`

In the example above, **hislip0** is the HiSLIP device name that VISA users must include in HiSLIP VISA Address strings. Your HiSLIP device name may differ, depending on your VISA settings.

Connection String & Copy Button

In "**SCPI LAN**" on page 1869, the full connection string is displayed to the right of the **HiSLIP Server ON/OFF** control. Pressing **Copy**, to the right of the string copies the connection string to the Windows clipboard.

| | |
|----------------|--|
| Remote Command | <code>:SYSTem:COMMunicate:LAN:SCPI:HISLip:ENABle OFF ON 0 1</code> |
| Example | <code>:SYST:COMM:LAN:SCPI:HISL:ENAB OFF</code> |
| Preset | Unaffected by Preset , but set to ON by Restore Defaults > "Misc" on page 1917 If not set up or specified, the Secure Instrument Communications configuration setting: is ON |
| State Saved | No |
| Range | OFF ON |

4.2.2.5 Verbose SCPI On/Off

When you turn **Verbose SCPI ON**, additional information is returned by `:SYSTem:ERRor?`. The additional information consists of the characters that stimulated the error. This can aid you in debugging your test programs, by indicating where in the parsing of a SCPI command the instrument encountered an invalid command or query.

Specifically, with **Verbose SCPI ON**, `:SYSTem:ERRor?` is expanded to show the SCPI data received, with the indicator `<Err>` at the point in the stream that the error occurred.

Verbose SCPI has no effect on the **Show Errors** screen or front-panel Message Line; and only changes the response to `:SYST:ERR?`.

See the example below, where the invalid command `:SENS:BOGUS` is sent:

Normal response to `:SYST:ERR?` (using the Telnet window):

```
SCPI> SENS:BOGUS
SCPI> SYST:ERR?
-113,"Undefined header"
```

After turning on **Verbose SCPI**:

```
SCPI> SYST:BOGUS
SCPI> SYST:ERR?
-113,"Undefined header;SYST:BOGUS<Err>"
```

| | |
|----------------|--|
| Remote Command | <code>:SYSTem:ERRor:VERBose OFF ON 0 1</code> <code>:SYSTem:ERRor:VERBose?</code> |
| Example | <code>:SYST:ERR:VERB ON</code> |
| Preset | Unaffected by Preset , but set to OFF by Restore Defaults > "Misc" on page 1917 |
| State Saved | No |
| Range | OFF ON |

4.2.2.6 Device Clear on Disconnect

When using HiSLIP (High Speed LAN Instrument Protocol), Telnet, or Sockets, a communication session with the instrument is opened when you connect, and closed when you disconnect. This differs from other connections such as GPIB, USB and VXI-11 connections, which are never actually closed but stay open as long as the instrument is running.

When a session is closed, a Device Clear function is generated, which affects the entire instrument, not just the current connection. Thus, when using HiSLIP, Telnet, or Sockets, unexpected Device Clears may occur, which can disrupt measurements in ways that GPIB and VXI-11 "sessions" do not.

Device Clear on Disconnect enables these auto-generated Device Clears for Telnet, Socket, and HiSLIP sessions. For backwards compatibility, they are *not* generated unless you explicitly enable them.

There is no change in VXI-11, USB, or GPIB session behavior. These sessions do not close when you disconnect, have never generated Device Clear events, and still do not generate Device Clear events, regardless of the setting of this switch.

| | |
|----------------|--|
| Remote Command | <code>:SYSTem:COMMunicate:LAN:SCPI:EOSession:DCLear:ENABle 0 1 ON OFF</code> <code>:SYSTem:COMMunicate:LAN:SCPI:EOSession:DCLear:ENABle?</code> |
| Example | <code>:SYST:COMM:LAN:SCPI:EOS:DCL:ENAB ON</code> |
| Preset | Unaffected by Preset , but set to OFF by Restore Defaults > "Misc" on page 1917 |

| | |
|-------------|----------|
| State Saved | No |
| Range | OFF ON |

4.2.2.7 SCPI Socket Control Port (Remote Query Only)

Returns the TCP/IP port number of the control socket associated with the SCPI socket session. This query lets you obtain the unique port number to open when a device clear is to be sent to the instrument. Every time a connection is made to the SCPI socket, the instrument creates a peer control socket. The port number for this socket is random. You must use this command to obtain the port number of the control socket. To force a device clear on this socket, open the port and send the string `DCL\n` to the instrument.

If this query is sent to a non-SCPI Socket interface, then 0 is returned.

| | |
|---------------------------------|--|
| Remote Command | <code>:SYSTem:COMMunicate:LAN:SCPI:SOCKet:CONTRol?</code> |
| Example | <code>:SYST:COMM:LAN:SCPI:SOCK:CONT?</code> |
| Preset | Unaffected by Preset or Restore Defaults > "Misc" on page 1917 |
| State Saved | No |
| Range | 0 to 65534 |
| Min | 0 |
| Max | 65534 |
| Backwards Compatibility SCPI | <code>:SYSTem:COMMunicate:TCPIp:CONTRol?</code> |

4.2.2.8 SCPI Instrument Port (Remote Query Only)

Some MIMO applications need to be able to determine the port to use to communicate with the instrument. This query returns the port number to use for communications.

| | |
|-------------------|---|
| Remote Command | <code>:SYSTem:COMMunicate:LAN:INSTrument:PORT?</code> |
|-------------------|---|

4.2.3 Web Password Reset

The embedded web server contains certain capabilities that are password-protected; modifying the LAN configuration of the instrument, and access to web pages that can change the settings of the instrument. The default password from the factory is:

`measure4u`

This control lets you set the web password as desired, or to reset the password to the factory default.

Selecting **Web Password Reset** displays a control for resetting the password as desired, or to the factory default. The built-in alpha keyboard appears. You may change the password from the factory default of “**measure4u**”.

You can cancel this entry by pressing the **Cancel (ESC)** front-panel key.

Dependencies Not available in UXM

4.2.4 System IDN Response

Allows you to specify a response to ***IDN?**, return the instrument to the **FACTory** response if you have changed it, or, if your test software is expecting the ***IDN** response to indicate Agilent Technologies, configure the instrument to respond with Agilent as the manufacturer.

The current ***IDN** response is displayed at the top of the panel, followed by the **System IDN Response** and **User IDN** controls.

4.2.4.1 System IDN Response

To select the factory-set response, select **FACTory**. To specify your own response, select **USER**. You can enter your desired response using "**User IDN**" on page 1876.

If your test software expects the response to indicate Agilent Technologies as the Manufacturer, you can configure this response by selecting **AGILent**.

| | |
|----------------|---|
| Remote Command | :SYSTem:IDN:CONFigure FACTory AGILent USER For option details, see " More Information " on page 1875 :SYSTem:IDN:CONFigure? |
| Example | :SYST:IDN:CONF FACT |
| Notes | Affects the response returned by all Modes of the instrument, unless the current Mode has <i>also</i> specified a custom response, in which case the current Mode's custom IDN response takes precedence over the System's, but only while that Mode is current Survives shutdown and restart of the software and therefore survives a power cycle |
| Preset | The *IDN response is reset to FACTory by Restore Defaults >"Misc" on page 1917 or Restore Defaults >"All" on page 1918 and survives subsequent running of the software |

More Information

Here are details of the options available for the System ***IDN** response:

Factory

SCPI example: `:SYST:IDN:CONF FACT`

Selects the factory default configuration of `*IDN?`, which indicates the Manufacturer as Keysight Technologies. For example,

`"Keysight Technologies,N9040B,MY00012345,A.15.00"`

where the fields are Manufacturer, Model Number, Serial Number, Firmware Revision.

NOTE

In products that run multiple instances of the X-Series Application, all instances use the *same* factory System IDN response.

Agilent

SCPI example: `:SYST:IDN:CONF AGIL`

Starting with software version x.14.50, the `*IDN?` response in the Factory configuration indicates the Manufacturer as Keysight Technologies. If your test software is expecting the response to indicate Agilent Technologies, you can configure the response with this menu selection or SCPI command.

For example:

`"Agilent Technologies,N9020A,MY00012345,A.05.01"`

NOTE

In products that run multiple instances of the X-Series Application, all instances use the *same* Agilent System IDN response.

User

SCPI example: `:SYST:IDN:CONF USER`

Selects your customized configuration of `*IDN?`

Enter your desired response using ["User IDN" on page 1876](#).

4.2.4.2 User IDN

Allows you to specify your own response to `*IDN?`. You may enter your desired response with the Alpha Editor or a plugin PC keyboard. Once the value is entered, select **USER** under **System IDN Response**.

When you select this control, the active function becomes the current User string and is highlighted, so typing replaces it. If instead you wish to edit the existing string, press the left or right arrow to go to the beginning or the end.

If you enter a null string (for example, by clearing the User String while editing and then pressing **Done**), the instrument automatically reverts to the **FACTory** setting.

NOTE

In products that run multiple instances of the X-Series Application, all instances use the *same* User System IDN response.

| | |
|----------------|--|
| Remote Command | <code>:SYSTem:IDN <string></code> <code>:SYSTem:IDN?</code> |
| Notes | <p>The <code><string></code> must consist of four fields, each separated by a comma, example: <code>:SYST:IDN "XYZ Corp,Model 12,012345,A.01.01"</code></p> <p>The four fields are <code><manufacturer></code>, <code><model number></code>, <code><serial number></code>, <code><firmware revision></code>. The fields are comma-delimited, so text within a field cannot contain a comma</p> <p>This affects the response given in all Modes of the instrument, unless the current Mode has also specified a custom response, in which case the current Mode's custom IDN response takes precedence over the System's, but only while that Mode is current</p> <p>Survives shutdown and restart of the software and therefore survives a power cycle</p> <p>Null string as parameter restores the FACTory setting, example: <code>:SYST:IDN ""</code></p> |
| Preset | Unaffected by Preset , but set to the original FACTory setting by Restore Defaults > "Misc" on page 1917 |

4.2.4.3 SYSTem:PERSONa (Remote Commands Only)

The `:SYSTem:PERSONa` command set permits setting of individual fields of the `*IDN?` response.

- `"SYSTem:PERSONa:DEFault"` on page 1877
- `"SYSTem:PERSONa:MANUFACTurer"` on page 1878
- `"SYSTem:PERSONa:MANUFACTurer:DEFault"` on page 1878
- `"SYSTem:PERSONa:MODel"` on page 1878
- `"SYSTem:PERSONa:MODel:DEFault"` on page 1879

SYSTem:PERSONa:DEFault

Resets the `*IDN` response to the instrument default.

| | |
|----------------|---|
| Remote Command | <code>:SYSTem:PERSONa:DEFault</code> <code>:SYSTem:PERSONa:DEFault?</code> |
| Notes | <code>:SYST:PERSON:DEF?</code> returns the default value of <code>*IDN?</code> even if the current setting of <code>*IDN?</code> is the |

non-default value. The query return type is a `<string>`

`:SYST:PERS:DEF`

is equivalent to:

`:SYSTem:IDN ""`

`:SYSTem:IDN:CONF DEF`

SYSTem:PERSONa:MANufacturer

Sets the **MANufacturer** field of the `*IDN?` response. This is the first field of the `*IDN?` response.

Remote Command `:SYSTem:PERSONa:MANufacturer <string>`

`:SYSTem:PERSONa:MANufacturer?`

Notes When setting the **MANufacturer** field, the current IDN response string is modified to replace the manufacturer field with the string specified by the command. If the resulting IDN response matches one of the predefined responses (`:SYST:IDN:CONF FACT | AGIL`), then the `:SYST:IDN:CONF` is set to the corresponding value. If the IDN response with the new manufacturer field is not one of the predefined values, then `:SYST:IDN:CONF` will be set to **USER** and `:SYST:IDN` will be set to the new IDN response string

The query returns the current value of the `*IDN?` Manufacturer field

SYSTem:PERSONa:MANufacturer:DEFAULT

Resets the **MANufacturer** field of the `*IDN?` response to the default value.

Remote Command `:SYSTem:PERSONa:MANufacturer:DEFAULT`

`:SYSTem:PERSONa:MANufacturer:DEFAULT?`

Notes The query returns the default **MANufacturer** field value of `*IDN?` even if the current setting of `*IDN?` is the non-default value. The return type is a `<string>`

SYSTem:PERSONa:MODEL

Sets the **MODEL** field of the `*IDN?` response. This is the second field of the `*IDN?` response.

Remote Command `:SYSTem:PERSONa:MODEL <string>`

`:SYSTem:PERSONa:MODEL?`

Notes When setting the **MODEL** field, the current IDN response string is modified to replace the model field with the string specified by the command. If the resulting IDN response matches one of the predefined responses (`:SYST:IDN:CONF FACT | AGIL`), then `:SYST:IDN:CONF` is set to the corresponding value. If the IDN response with the new model field is not one of the predefined values, then `:SYST:IDN:CONF` will be set to **USER** and `:SYST:IDN` will be set to the new IDN response string

The query returns the current value of the `*IDN?MODE1` field

SYSTem:PERSONa:MODEl:DEFault

Resets the `MODE1` field of the `*IDN?` response to the default value.

| | |
|----------------|---|
| Remote Command | <code>:SYSTem:PERSONa:MODEl:DEFault</code> <code>:SYSTem:PERSONa:MODEl:DEFault?</code> |
| Notes | The query returns the default <code>MODE1</code> field value of <code>*IDN?</code> even if the current setting of <code>*IDN?</code> is the non-default value. The return type is a <code><string></code> |

4.2.5 LXI

Accesses various `LXI` configuration properties.

| | |
|--------------|----------------------|
| Dependencies | Not available in UXM |
|--------------|----------------------|

4.2.5.1 LAN Reset

Resets the LAN connection. This sets parameters as follows, and restarts the LAN operation:

| | |
|-------------------------------|-----------------------|
| DHCP | Enabled |
| Automatic IP Address | Enabled |
| ICMP Ping Responder | Enabled |
| Web Password | <code>keysight</code> |
| Dynamic DNS | Enabled |
| mDNS and DNS-SD | Enabled |
| Dynamic Link Local Addressing | Enabled |
| Auto Negotiation | Enabled |

There is no SCPI command for this function.

4.2.5.2 Device Identification (Remote Command Only)

Enabling LXI device identification places the LXI Status Indicator in the **Identify** state. Disabling LXI device identification places the LXI Status Indicator in the **No Fault** state. The LXI Status indicator is in the upper left region of the instrument's graphical user interface.

| | |
|----------------|---|
| Remote Command | <code>:LXI:IDENTify[:STATe] OFF ON 0 1</code> |
|----------------|---|

| | |
|-------------|---|
| | <code>:LXI:IDENTify[:STATE]?</code> |
| Example | <code>:LXI:IDEN ON</code> |
| Preset | Not part of Preset , but reset to OFF by Restore Defaults > "All" on page 1918 |
| State Saved | No |
| Range | OFF ON |

4.2.6 Restore I/O Config Defaults

Causes the group of settings associated with the **I/O Config** menu to be reset to their default values. This also happens on **Restore Misc Defaults**, which has a SCPI command.

When **Restore I/O Config Defaults** is selected, a message appears saying:

`This will reset all of the I/O Config variables to their default state, including the GPIB address and SCPI LAN settings`

`It will not affect Alignment data or settings`

`This action cannot be undone. Do you want to proceed?`

The message provides **OK** and **Cancel** buttons so you can affirm or cancel the operation.

4.2.7 Query USB Connection (Remote Query Only)

Enables you to determine the speed of the USB connection.

| | | |
|----------------|---|---|
| Remote Command | <code>:SYSTem:COMMunicate:USB:CONNectioN?</code> | |
| Example | <code>:SYST:COMM:USB:CONN?</code> | |
| Notes | NONE | Indicates no USB connection has been made |
| | LSpeed | Indicates a USB low speed connection (1.5 Mbps) Note that this is reserved for future use, the T+M488 protocol is not supported on low-speed connections |
| | HSPeed | Indicates that a USB high speed connection (480 Mbps) has been negotiated |
| | FSPeed | Indicates that a USB full speed connection (12 Mbps) has been negotiated |
| State Saved | No | |
| Range | NONE LSpeed HSPeed FSPeed | |

4.2.8 USB Connection Status (Remote Query Only)

Lets you determine the current status of the USB connection.

| | |
|----------------|--|
| Remote Command | <code>:SYSTem:COMMunicate:USB:STATus?</code> |
| Example | <code>:SYST:COMM:USB:STAT?</code> |
| Notes | <p>SUSPended – Indicates that the USB bus is currently in its suspended state. The bus is in the suspended state when:</p> <ul style="list-style-type: none"> – The bus is not connected to any controller – The controller is currently powered off – The controller has explicitly placed the USB device into the suspended state <p>When in the suspended state, no USB activity, including start of frame packets are received</p> <p>ACTive – Indicates that the USB device is in the active state. When the device is in the active state, it receives periodic frame starts, but is not necessarily receiving or transmitting data</p> |
| State Saved | No |
| Range | <code>SUSPended ACTive</code> |

4.2.9 USB Packet Count (Remote Query Only)

Lets you determine the number of packets received and transmitted on the USB bus.

| | |
|----------------|--|
| Remote Command | <code>:SYSTem:COMMunicate:USB:PACKets?</code> |
| Example | <code>:SYST:COMM:USB:PACK?</code> |
| Notes | <p>Two integers are returned:</p> <ol style="list-style-type: none"> 1. The number of packets received since application invocation 2. The number of packets transmitted since application invocation <p>If no packets have been received or transmitted, the response is <code>0,0</code></p> <p>The packet count is initialized to <code>0,0</code> when the instrument application is started</p> |
| State Saved | No |

4.2.10 Lock Remote I/O Session (Remote Command only)

An instrument can support multiple remote I/O sessions at the same time. However, you cannot *simultaneously* send remote commands from multiple sessions to the same instrument. The results in such a case are undefined.

Ensure that only *one* session actively controls the instrument at a time. Other sessions must wait until the active session finishes the instrument control.

To help achieve this cooperative instrument sharing, the following remote commands are provided:

- "Lock Remote I/O Request (Remote Query only)" on page 1883
- "Unlock Remote I/O Session (Remote Command only)" on page 1884
- "Remote I/O Session Lock Name (Remote Query only)" on page 1885
- "Remote I/O Session Lock Owner (Remote Query only)" on page 1885

Example Procedure for Lock Usage

| Step | Action |
|------|--|
| 1 | Each session tries to obtain a lock by sending <code>:SYSTem:LOCK:REQuest?</code> This query can be sent simultaneously from multiple sessions |
| 2 | Only one session will be granted. The granted session receives <code>1</code> in response to its query |
| 3 | The granted session actively controls the instrument Meanwhile, other sessions must wait, and must periodically send <code>:SYSTem:LOCK:REQuest?</code> , requesting the lock |
| 4 | When the active session finishes its task, it releases the lock by sending <code>:SYSTem:LOCK:RELease</code> |
| 5 | Now the lock has become available, so when one of the waiting sessions sends <code>:SYSTem:LOCK:REQuest?</code> , it receives <code>1</code> in response, granting the lock to that session |

By repeating steps 3, 4, and 5 above, multiple sessions can share the same instrument in a cooperative fashion.

NOTE

A session can query its own unique session name by sending `:SYSTem:LOCK:NAME?`. This session name is determined by the instrument.

A session also can query the name of the currently granted session by sending `:SYSTem:LOCK:OWNer?`.

NOTE

Remote I/O interfaces are grouped in two types: single-session interface and multi-session interface. Both types of interfaces can be used for cooperative instrument sharing.

The recommended interface is LAN HiSLIP.

| Interface | Single-session | Multi-Session |
|-------------------|----------------|---------------|
| GPIB | ü | |
| USB-488 | ü | |
| LAN VXI-11 (SICL) | ü | |
| LAN Socket | | ü |
| LAN HiSLIP | | ü |
| LAN Telnet | | ü |

If using a single-session interface, care must be taken to ensure only one client uses the single-session interface.

In particular, LAN VXI-11 (SICL) interface is a single-session interface, even though multiple clients could simultaneously connect to this interface. Such multiple VXI-11 clients share the same session context; the same status registers and the same error queue. Even a SCPI query response can be received by another client. Furthermore, the lock obtained by `:SYSTem:LOCK:REQuest?` is shared among all VXI-11 clients, allowing all of them to actively control the instrument.

If a LAN VXI-11 (SICL) interface must be used by multiple clients for a cooperative instrument sharing, then VISA locking *must* be used, *in addition to* Remote I/O Session Lock.

4.2.10.1 Lock Remote I/O Request (Remote Query only)

You can lock the SCPI control of the instrument to the I/O Interface and Session by sending `:SYSTem:LOCK:REQuest?`. This permits cooperative sharing of the instrument between multiple computers, or multiple sessions from the same computer.

| | |
|----------------|---|
| Remote Command | <code>:SYSTem:LOCK:REQuest?</code> |
| Example | <code>:SYST:LOCK:REQ?</code> |
| Notes | <p>Returns 1 if the lock request is granted, or 0 if the request is denied</p> <p>Lock requests on an individual interface and session can be nested and each request will increase an internal lock count by 1. For every granted request, send <code>:SYST:LOCK:REL</code> to decrement the internal lock count to fully relinquish the lock</p> <p>When the instrument is locked, Bit 0 is set in the Operation Instrument status register</p> |

Disconnecting the individual interface and session releases the lock if the lock is granted to the interface and session

A Device Clear over any interface and session releases the lock, regardless of the interface and session which obtained the lock

The following queries are permitted over any interface and session, even if an interface has the instrument locked:

- *IDN?
- *OPT?
- *STB?
- *ESR?
- :SYSTem:DATE?
- :SYSTem:TIME?
- :SYSTem:PON:TIME?
- Queries in the :STATus subsystem
- Queries in the :SYSTem:ERRor subsystem
- Queries in the :SYSTem:LKEY subsystem
- Queries in the :SYSTem:LOCK subsystem
- Queries in the :SYSTem:METRics subsystem
- Queries in the :SYSTem:MODuLe subsystem

All other commands and queries result in error: -203, "Command protected; Instrument locked by another I/O session"

| | |
|-------------|-------------------------|
| State Saved | Not part of Save/Recall |
|-------------|-------------------------|

4.2.10.2 Unlock Remote I/O Session (Remote Command only)

You can unlock the SCPI control of the current I/O Interface and Session by sending **:SYSTem:LOCK:RELease**. Lock requests on an individual interface and session can be nested, and each request increases an internal lock count by 1. For every granted request, you will need to perform a release. The lock is not relinquished until the internal lock count reaches 0.

| | |
|----------------|-----------------------------|
| Remote Command | :SYSTem:LOCK:RELease |
|----------------|-----------------------------|

| | |
|---------|-----------------------|
| Example | :SYST:LOCK:REL |
|---------|-----------------------|

| | |
|-------|---|
| Notes | When the instrument is unlocked, Bit 0 is cleared in the Operation Instrument status register |
|-------|---|

4.2.10.3 Remote I/O Session Lock Name (Remote Query only)

Use this query to obtain the name of the current I/O Interface and Session.

| | |
|----------------|---|
| Remote Command | <code>:SYSTem:LOCK:NAME?</code> |
| Example | <code>:SYST:LOCK:NAME?</code> |
| Notes | <p>The information returned is a string of the format: <code><I/O Interface>[/<IP address>/<Session ID>]</code></p> <p>Where IP address and Session ID are only provided for interfaces that provide multiple sessions</p> <p>Single Session interfaces (GPIB, USB-488, and LAN VXI-11) only list interface name</p> <p>Session ID is an internally generated identifier. It is not guaranteed to be consistent across instrument software versions (the identifier is subject to change when the software of the instrument is updated). The absolute value of Session ID is not significant, but the identifier will be consistent for a given software version, and can be relied upon for lock owner logic comparisons</p> |

4.2.10.4 Remote I/O Session Lock Owner (Remote Query only)

Use this query to determine which I/O Interface and Session has the SCPI locked.

If no interface and session has the SCPI locked, then the return value is **NONE**.

| | |
|----------------|--|
| Remote Command | <code>:SYSTem:LOCK:OWNer?</code> |
| Example | <code>:SYST:LOCK:OWN?</code> |
| Notes | <p>The information returned is a string of the format: <code><I/O Interface>[/<IP address>/<Session ID>]</code></p> <p>Where IP address and Session ID are only provided for interfaces that provide multiple sessions</p> <p>Single Session interfaces (GPIB, USB-488, and LAN VXI-11) only list interface name</p> <p>Session ID is an internally generated identifier. It is not guaranteed to be consistent across instrument software versions (the identifier is subject to change when the software of the instrument is updated). The absolute value of Session ID is not significant, but the identifier will be consistent for a given software version, and can be relied upon for lock owner logic comparisons</p> <p>If no interface and session has the SCPI locked, then the return value is NONE</p> |

4.2.11 Multiple Network Interface Card Configuration (Remote Commands Only)

Systems that have multiple Network Interface Cards (NICs) require additional configuration information. The following keys can be added to the XApps configuration file:

- **PrimaryNICIPv4** – IP address value is a string with the exact IP V4 format. Required field in IP v4 networks.
- **PrimaryNICIPv6** – IP address value is a string with the exact IP V6 format. Required field in IP v6 networks.

These commands do not apply to instruments that have only one NIC. The commands apply to all modular deployments that have a controller with multiple NICs.

To configure and query these configuration options, the following remote commands are provided:

- ["Multiple Network Adapters Enabled \(Remote Query Only\)" on page 1886](#)
- ["Config IPV4 Address \(Remote Command Only\)" on page 1887](#)
- ["Config IPV6 Address \(Remote Command Only\)" on page 1887](#)
- ["List All Physical Network Adapter IP Addresses \(Remote Query Only\)" on page 1887](#)

4.2.11.1 Multiple Network Adapters Enabled (Remote Query Only)

| | |
|----------------|---|
| Remote Command | <code>:SYSTem:COMMunicate:LAN:MULTiple:NIC:ENABled?</code> |
| Example | <code>:SYSTem:COMMunicate:LAN:MULTiple:NIC:ENABled?</code> |
| Notes | <p>Applies to Instruments that have multiple Network Adapters. When more than one network adapter is present in the system, and they are Enabled (that is, they have a valid IP Address), this query returns:</p> <ul style="list-style-type: none"> - 1, if more than one NIC enabled - 0, if only one or No NICs are enabled |
| State Saved | No |

4.2.11.2 Config IPV4 Address (Remote Command Only)

| | |
|----------------|--|
| Remote Command | <code>:SYSTem:COMMunicate:LAN:IPV4:CONFig <ipaddress></code> <code>:SYSTem:COMMunicate:LAN:IPV4:CONFig?</code> |
| Example | <code>:SYSTem:COMMunicate:LAN:IPV4:CONFig "192.168.1.146"</code> <code>:SYSTem:COMMunicate:LAN:IPV4:CONFig?</code> |
| Notes | <p>Applies to instruments that have multiple Network Adapters. When more than one network adapter is present in the system, you must specify in the instrument config file the IP address to use to enable Remoting channel bindings. If this is not provided, Remoting connections are likely to fail on systems where multiple NICs are enabled</p> <p>Sets the valid IPV4 address, passed in as string in the config file</p> <p>The query returns IPV4 address, as a string</p> <p>If config file is missing, "" (empty string) is returned</p> <p>Changing the IPV4 value requires a restart of the instrument software, to ensure that servers use the configured IP address</p> |
| State Saved | No |

4.2.11.3 Config IPV6 Address (Remote Command Only)

| | |
|----------------|---|
| Remote Command | <code>:SYSTem:COMMunicate:LAN:IPV6:CONFig <ipaddress></code> <code>:SYSTem:COMMunicate:LAN:IPV6:CONFig?</code> |
| Example | <code>:SYSTem:COMMunicate:LAN:IPV6:CONFig "2001:0db8:85a3:0000:0000:8a2e:0370:7334"</code> <code>:SYSTem:COMMunicate:LAN:IPV6:CONFig?</code> |
| Notes | <p>Applies to instruments that have multiple Network Adapters. When more than one network adapter is present in the system, you must specify in the instrument config file the IP address to use to enable Remoting channel bindings. If this is not provided, Remoting connections are likely to fail on systems where multiple NICs are enabled</p> <p>Sets the valid IPV6 address, passed in as string in the config file</p> <p>The query returns IPV6 address, as a string</p> <p>If config file is missing, "" (empty string) is returned</p> <p>Changing the IPV6 value requires a restart of the instrument software, to ensure servers use the configured IP address</p> |
| State Saved | No |

4.2.11.4 List All Physical Network Adapter IP Addresses (Remote Query Only)

| | |
|----------------|---|
| Remote Command | <code>:SYSTem:COMMunicate:LAN:PHYSical:IPADdress:LIST?</code> |
| Example | <code>:SYSTem:COMMunicate:LAN:PHYSical:IPADdress:LIST?</code> |

4 System
4.2 I/O Config

: "192.168.1.146, 2001:0db8:85a3:0000:0000:8a2e:0370:7334"

Notes Returns the IP Addresses of the physical network adapters found in the PC/Instrument

State Saved No

4.3 Preload / Unload Modes

The X-Series platform supports many Modes. Each Mode that is loaded uses a portion of the total available memory. At some point, this may result in insufficient free memory. This can occur during a measurement, or when loading a new Mode. A limited number of Modes can be loaded without impacting performance.

Preload / Unload Modes allows you to select and enable Modes to be preloaded at startup, and to specify the default **Power-On Mode**.

The dialog includes the following controls:

- "Power-On Mode" on page 1889
- "Table of Modes" on page 1890
- "Preload: Select All, Preload: Deselect All" on page 1890
- "Move Up, Move Down" on page 1890
- "Unload" on page 1890

Modes that are not preloaded may be loaded at runtime as needed, resources permitting. However, note that loading more Modes increases memory consumption and may adversely impact performance.

When a memory-full situation occurs, the instrument notifies you with the following message:

Out of memory; Insufficient resources. Please save state if needed. You have following options:

1. Open System Settings > Configure Preload Modes to unload unused Modes
2. Reconfigure preloaded Modes on the above dialog, close and restart the analyzer SW
3. Close and restart the analyzer SW

Option 1 allows you to unload unused Modes and continue running the software, without having to restart it.

The command `:INSTRument:UNLoad <mode>` provides equivalent functionality; see "Unload" on page 1890.

4.3.1 Power-On Mode

Displays a list of licensed Modes. Use this control to change the factory default Power-On Mode. The instrument will execute the selected Mode after power up. Selecting the Power-On Mode here automatically enables that Mode for preloading.

4.3.2 Table of Modes

The table of Modes becomes scrollable when the number of Modes exceeds the dialog's displayable size.

Use the check boxes in the **Preload** column to enable or disable the preloading of the Modes that you want.

Use the check boxes in the **Unload** column to select the Modes that you want to unload.

The Unload check boxes are grayed-out when the Modes are used by other Modes.

Example:

5G NR & V2X Mode cannot be loaded when either Sequence Analyzer Mode or Power Amplifier Mode are already loaded, because these Modes use 5G NR & V2X Mode. To unload 5G NR & V2X Mode, both Sequence Analyzer Mode and Power Amplifier Mode must be unloaded first.

When the active Mode is unloaded, the screen becomes blank except for the message; **"No Mode is active"**. You can then select another desired Mode.

When multiple screens are open, and a Mode is unloaded, inactive screens that have that Mode as their active Modes are closed.

The active screen is never closed.

4.3.3 Preload: Select All, Preload: Deselect All

Toggles the **Preload** checkbox state for all Applications listed, except for the Power-On Application, which is always selected.

4.3.4 Move Up, Move Down

The default order in which Applications are listed in the table is the order in which they are displayed in the **Mode/Measurement/View** Selector dialog. To change the order in this list, select the desired Application row from the table, then click **Move Up** or **Move Down** to move it to the desired position.

4.3.5 Unload

Unloads the specified Mode.

Remote `:INSTRument:UNLoad <mode>`

| | |
|---------|---|
| Command | |
| Example | <code>:INST:UNL NR5G</code> |
| Notes | <p>Error message if the specified Mode is not available, -224,"Illegal parameter value;<mode> is not a valid choice"</p> <p>Error message if the specified Mode is not loaded and therefore cannot be unloaded, -221,"Settings conflict;<mode> is not loaded"</p> <p>Error message if the specified Mode is used by other Modes and therefore cannot be unloaded, -221,"Settings conflict;<mode> is used by <other modes>"</p> <p>Error message if the specified Mode does not support Unload Mode feature and therefore cannot be unloaded, -221,"Settings conflict;Feature not supported for this Mode"</p> |

4.3.6 Loaded Modes (Remote Query Only)

Returns a list of loaded Modes.

| | |
|----------------|--|
| Remote Command | <code>:SYSTem:APPLication:LOADed?</code> |
| Example | <code>:SYST:APPL:LOAD?</code> |
| Preset | Not affected by Preset |

4.3.7 User Interface

Configures functions specific to the User Interface, such as the menu panel orientation and the display color theme.

4.3.7.1 Menu Panel Position

Allows the Menu Panel to be positioned on the **RIGHT** or **LEFT** side of the display.

| | |
|----------------|---|
| Remote Command | <code>:SYSTem:DISPlay:MPPosition RIGHT LEFT</code> <code>:SYSTem:DISPlay:MPPosition?</code> |
| Example | <code>:SYST:DISP:MPP LEFT</code> |
| Preset | This is unaffected by Preset but is set to RIGHT by Restore Defaults > "User Interface" on page 1916 or Restore Defaults > "All" on page 1918 |
| State Saved | Power On Persistent (survives shutdown and restart) |

4.3.7.2 Menu Panel Tabs

Allows the **Menu Panel Tabs** to be positioned on the **RIGHT** or **LEFT** side of the menu panel.

| | |
|----------------|---|
| Remote Command | <code>:SYSTem:DISPlay:MPTab RIGHT LEFT</code> <code>:SYSTem:DISPlay:MPTab?</code> |
| Example | <code>:SYST:DISP:MPT LEFT</code> |
| Preset | This is unaffected by Preset but is set to RIGHT by Restore Defaults > "User Interface" on page 1916 or Restore Defaults > "All" on page 1918 |
| State Saved | Power On Persistent (survives shutdown and restart) |

4.3.7.3 Annotations Local Settings/All Off

Overrides the annotation settings for all measurement in all modes and turns them all off. This provides the security based "annotation off" function of previous instruments; hence it uses the legacy SCPI command.

When this control is set to **All Off**, the **Screen Annotation**, **Meas Bar**, **Trace Annotation**, and **Control Annotation** controls under the **Display, Annotation** menu are grayed-out and forced to **OFF** for all measurements in all modes. When **Local Settings** is selected, you can set the local annotation settings on a measurement-by-measurement basis.

| | |
|-------------------------------|---|
| Remote Command | <code>:DISPlay:WINDow[1]:ANNotation[:ALL] OFF ON 0 1</code> <code>:DISPlay:WINDow[1]:ANNotation[:ALL]?</code> |
| Example | <code>:DISP:WIND:ANN OFF</code> |
| Preset | This is unaffected by Preset but is set to ON by Restore Defaults > "User Interface" on page 1916, Restore Defaults > "Misc" on page 1917 or Restore Defaults > "All" on page 1918 |
| State Saved | Power On Persistent (survives shutdown and restart) |
| Backwards Compatibility Notes | The WINDow parameter and optional subopcode is included for backwards compatibility but ignored – all windows are equally affected |

4.3.7.4 Display Theme

Allows you to change the **Display Theme**. This is similar to the Themes selection under Page Setup and Save Screen Image.

The two available themes are:

- **FILLED**: this is the normal theme using filled objects
- **OUTLine**: this theme uses color, but does not use fill for most areas on the display. It is ideal for images that need to be printed on inkjet printers. Although setting **Display Theme** to **OUTLine** does not affect screen image saves or prints, it does show you exactly how screen images will look when using the **OUTLine** theme under **Save Screen Image**, and how prints will look when using the **OUTLine** theme under **Page Setup**.

NOTE

Although the **OUTLine** theme eliminates most of the filled area, some objects remain filled. In particular, the selected marker remains filled with the green marker color, to distinguish it from the other markers. This is important, as it is the selected marker whose readout appears in the upper right corner of the display.

| | |
|----------------|---|
| Remote Command | <code>:DISPlay:THEMe TDColor TDMonochrome FCOLor FMONochrome FILLED OUTLine</code> <code>:DISPlay:THEMe?</code> |
| Example | <code>:SYST:DISP:THEM OUTL</code> sets the display style to OUTLine |
| Notes | To permit code compatibility with A-model X-Series Signal Analyzer instruments, the command parameters from the A-models are mapped as follows: <ul style="list-style-type: none"> – TDColor and TDMonochrome are both mapped to FILLED (exact full color representation of what is on the screen) – FCOLor and FMONochrome are both mapped to OUTLine (uses color for traces and other items, but most filled areas are white) <p>There is no Monochrome theme in the B-model instruments, so the monochrome commands for the A-model instruments yield color themes</p> <p>The query of <code>:DISPlay:THEMe?</code> always returns FILLED or OUTLine. It never returns FCOLor, FMONochrome, TDColor, or TDMonochrome</p> |
| Preset | This is unaffected by Preset but is set to FILLED by Restore Defaults > "User Interface" on page 1916 , Restore Defaults > "Misc" on page 1917 or Restore Defaults > "All" on page 1918 |
| State Saved | Power On Persistent (survives shutdown and restart) |

4.3.7.5 Backlight

Turns the display **Backlight** on and off. This setting may interact with settings under the Windows **Power** menu.

When the backlight is **OFF**, pressing ESC, TAB, SPACE, ENTER, UP, DOWN, LEFT, RIGHT, DEL, BKSP, CTRL, or ALT turns the backlight **ON** without affecting the

4 System

4.3 Preload / Unload Modes

application. Pressing any other key turns backlight **ON**, and could potentially perform the action as well.

| | |
|----------------|--|
| Remote Command | <code>:DISPlay:BACKlight ON OFF</code> <code>:DISPlay:BACKlight?</code> |
| Example | Turn backlight ON : <code>:DISP:BACK ON</code> Turn backlight OFF : <code>:DISP:BACK OFF</code> |
| Preset | Pressing any key turns the backlight back ON , as does Restore Defaults > "User Interface" on page 1916, Restore Defaults > "Misc" on page 1917 or Restore Defaults > "All" on page 1918 |
| State Saved | Not saved in State |

4.3.7.6 Backlight Intensity

Allows the **Backlight Intensity** to be controlled from the UI settings panel.

| | |
|----------------|---|
| Remote Command | <code>:SYSTem:DISPlay:BACKlight:INTensity <integer></code> <code>:SYSTem:DISPlay:BACKlight:INTensity?</code> |
| Example | <code>:SYST:DISP:BACK:INT 67</code> |
| Preset | 100 |
| State Saved | Power On Persistent (survives shutdown and restart) |
| Range | 0-100 |

4.3.7.7 Hints

Hints are descriptions that provide additional information for a control. You can set **Hints** to be enabled or disabled.

| | |
|----------------|--|
| Remote Command | <code>:SYSTem:DISPlay:HINTs[:STATe] OFF ON 0 1</code> <code>:SYSTem:DISPlay:HINTs?</code> |
| Example | <code>:SYST:DISP:HINT OFF</code> |
| Preset | This is unaffected by Preset but is set to ON by Restore Defaults > "User Interface" on page 1916 or Restore Defaults > "All" on page 1918 |
| State Saved | Power On Persistent (survives shutdown and restart) |

4.3.7.8 Numeric Entry Auto Open

Configures whether the **Numeric Entry** Panel will appear immediately when an active function control is activated (Auto Open **ON**), or be deferred until you touch it again or begin to enter a value (Auto Open **OFF**). When configured for Auto Open

OFF (the default), adjusting the value with the front panel Up/Down keys or the RPG hides the **Numeric Entry** Panel.

| | |
|----------------|--|
| Remote Command | :SYSTem:DISPlay:NEPimmediate ON OFF 1 0 |
| Command | :SYSTem:DISPlay:NEPimmediate? |
| Example | :SYST:DISP:NEP OFF |
| Preset | This is unaffected by Preset but is set to ON by Restore Defaults > "User Interface" on page 1916 or Restore Defaults > "All" on page 1918 |
| State Saved | Power On Persistent (survives shutdown and restart) |

4.3.7.9 Touch On/Off

Turns the touch functionality on and off on the display. If **OFF**, you can turn it back on using the front panel **Touch On/Off** key, or by using a mouse to toggle this control.

| | |
|-------------|--|
| Preset | Always starts up ON Unaffected by Preset but is turned ON by Restore Defaults > "User Interface" on page 1916 or Restore Defaults > "All" on page 1918 |
| State Saved | Not saved in state, not affected by Preset , not Power On Persistent (does not survive shutdown and restart) |

4.3.7.10 Control Size

Configures the size of the controls in the user interface. This can be used to make screen dumps from a large screen instrument match those from a smaller screen instrument, to make the controls more readable on a large-screen instrument, or to display more information on a smaller screen instrument.

| | |
|----------------|---|
| Remote Command | :DISPlay:UINTErface:CSIZE SMALL LARGE |
| Command | :DISPlay:UINTErface:CSIZE? |
| Example | :DISP:UINT:CSIZ LARG |
| Preset | This is unaffected by Preset but is set to SMALL by Restore Defaults > "User Interface" on page 1916 or Restore Defaults > "All" on page 1918 |
| State Saved | Power On Persistent (survives shutdown and restart) |

4.3.7.11 Quick Save Mode

When **Quick Save Mode** is **NORMa1** (the default setting), the instrument does an immediate save of a new file of the same type and to the same directory as the previous **Save** action. When **Quick Save Mode** is in the **PROMpt** state, instead of immediately performing a **Save**, the Alpha Keyboard appears with the proposed

4 System
4.3 Preload / Unload Modes

auto-filename in the entry area. You can then press **Enter** to accept the auto filename, or edit the name then press **Enter**. This allows you to easily save a file with a custom file name.

| | |
|----------------|--|
| Remote Command | :MME ^M ory:STORe:QSAVe NORMa1 PROMpt |
| Example | :MME ^M :STOR:QSAV PROM |
| Preset | This is unaffected by Preset but is set to NORMa1 by Restore Defaults > "User Interface" on page 1916 or Restore Defaults > "All" on page 1918 |
| State Saved | Power On Persistent (survives shutdown and restart) |

4.3.7.12 Screen Tabs Left/Right

This switch, when in the **RIGHT** position, makes the screen tabs start on the right and build across to the left, thus minimizing the finger travel over to the screen tab when there is only one screen. When tabs are added from right to left, they appear as below:

The default is **LEFT**.

| | |
|----------------|---------------------------------------|
| Remote Command | :DISPlay:UINTERface:STAB RIGHT LEFT |
| | :INSTrument:SCREen:STAB? |

| | |
|-------------|--|
| Example | :DISP:UINt:STAB RIGH |
| Preset | This is unaffected by Preset but is set to LEFT by Restore Defaults > "User Interface" on page 1916 or Restore Defaults > "All" on page 1918 |
| State Saved | Power On Persistent (survives shutdown and restart) |

4.3.7.13 Hide Screen Tabs in Full Screen

This switch, when in the **ON** position, causes the Screen Tabs to be hidden when in Full Screen view, thus maximizing the display area available for results. By also turning off the Meas Bar (in the **Display, Annotation** menu), you can maximize the available area for results, as shown below:

| | |
|----------------|--|
| Remote Command | :DISP:UINt:HTABs ON OFF 1 0 :DISP:UINt:HTABs? :DISP:UINt:STFScreen ON OFF 1 0 Implemented but with wrong sense; ON turns them off and OFF turns them on; so, don't document to customer |
|----------------|--|

| | |
|-------------|---|
| Example | :DISP:UINt:HTAB ON Hide the tabs in full screen |
| Preset | This is unaffected by Preset but is set to OFF by Restore Defaults > "User Interface" on page 1916 or Restore Defaults > "All" on page 1918 |
| State Saved | Power On Persistent (survives shutdown and restart) |

4.3.7.14 2-Screen Orientation

When you add a second Screen using the “+” control on the Screen Tabs bar, normally the screen is added to the right of the first screen. However, sometimes it is better to add the new screen below the first screen rather than to the right, as shown below.

New screen added to the right (horizontal orientation)

New screen added below (vertical orientation)

The **2-Screen Orientation** switch allows you to choose between these two orientations for 2-Screen configurations. The default is the **HORizontal** configuration, two Screens side-by-side.

| | |
|----------------|--|
| Remote Command | <code>:INSTrument:SCReen:ORientation VERTical HORizontal</code> |
| Example | <code>:INST:SCR:ORI VERT</code> Set the 2 screens to be above/below each other |
| Preset | HOR This is unaffected by Preset but is set to HORizontal by Restore Defaults > "User Interface" on page 1916 or Restore Defaults > "All" on page 1918 |

4.3.7.15 Clock Format

Allows the **Clock Format** to be switched between 12-Hour Format (**HR12**) and 24-Hour Format (**HR24**).

| | |
|----------------|---|
| Remote Command | <code>:SYSTem:DISPlay:CFORmat HR12 HR24</code> <code>:SYSTem:DISPlay:CFORmat?</code> |
| Example | <code>:SYST:DISP:CFOR HR12</code> |
| Preset | HR12 |
| State Saved | Power On Persistent (survives shutdown and restart) |
| Range | 12-Hour 24-Hour |

4.3.7.16 Language

Accesses the selection of **Language** displayed on the menus and controls. **ENGLISH** is the default.

All Measurement Applications that share common controls will display the localized controls.

The description on the control labels is bounded by the control size. Any given language will have labels in that language that are shorter or longer than the equivalent label in English. Any localized text on the controls that does not fit the label size remains in English. Thus, for any given menu, controls may be displayed in English *and* the selected language.

- Labels that are acronyms, engineering, or technology specific terms may remain in English.
- All Application and Measurement names remain in English.
- All data in exported files remain in English.
- The Diagnostic and Service menus in the System Subsystem remain in English.
- The Windows operating system must remain in English. Changing the **Region and Language** settings in the Windows Control Panel is not supported.

External keyboards in English are supported. Localized external keyboards are not supported. When the language selected is not English, a message is displayed to explain that any external keyboard must remain in English.

Other aspects of the Graphical User Interface remain in English. The Remote User Interface (SCPI) remains in English.

| | |
|----------------|--|
| Remote Command | <code>:SYSTem:DISPlay:LANGuage ENGLISH RUSSian</code> |
| Example | <code>:SYST:DISP:LANG ENGL</code> <code>:SYST:DISP:LANG RUSS</code> Requires Option AKT |
| Preset | This is unaffected by Preset but is set to ENGLISH by Restore Defaults > "User Interface" on page 1916, Restore Defaults > "Misc" on page 1917 or Restore Defaults > "All" on page 1918 |

4.3.7.17 Restore User Interface Defaults

Causes the group of settings associated with the **User Interface** menu to be reset to their default values. This also happens on **Restore Misc Defaults**.

When **User Interface** is selected, a message appears saying:

This will reset all of the User Interface variables to their default state, including the menu panel location, display theme, and language.

It will not affect Alignment data or settings.

This action cannot be undone. Do you want to proceed?

The message provides **OK** and **Cancel** buttons for you to affirm or cancel the operation.

Example :SYST:DEF UINT

4.3.7.18 User Interface Type (Remote Query Only)

Use this query to determine if the instrument is running the Multi-Touch user interface or Softkey user interface. This is an easy way to distinguish between A-models (Softkey) instruments and Touch UI (Multi-Touch) instruments.

Remote Command :DISP:UINterface:TYPE?

Example :DISP:UINT:TYPE?

Notes The query returns **MULTITOUCH** for instruments with the Multi-Touch UI or **SOFTKEY** for instruments with the Softkey UI

4.4 Power On

Lets you select how the instrument should power on.

NOTE

In products that run multiple instances of the X-Series Application, the same Power On type is shared between all the instances.

4.4.1 Power On State

Lets you select whether the instrument powers up in a default state, or some other state. The options are:

- **MODE** and Input/Output Defaults
- **USER** Preset
- **LAST** State

| | |
|------------------------------|---|
| Remote Command | :SYSTem:PON:TYPE MODE USER LAST :SYSTem:PON:TYPE? |
| Example | :SYST:PON:TYPE MODE :SYST:PON:TYPE USER :SYST:PON:TYPE LAST |
| Preset | This is unaffected by Preset but is set to MODE by Restore Defaults > "All" on page 1918 |
| State Saved | No |
| Backwards Compatibility SCPI | :SYSTem:PON:TYPE PRESet The PRESet parameter is supported for backward compatibility only, and behaves the same as MODE |

Mode and Input/Output Defaults

When the instrument is powered-on in **MODE** and Input/Output Defaults, it performs "**Restore Mode Defaults**" on page 2026 for all Modes in the instrument, and performs **Restore Input/Output Defaults**.

Persistent parameters (such as Amplitude Correction tables or Limit tables) are not affected at power-on, even though they are normally cleared by **Restore Input/Output Defaults** and/or **Restore Mode Defaults**.

User Preset

Sets **Power On State** to **USER** Preset. When the instrument is powered on in User Preset, it will **User Preset** each mode and switch to the "**Power On Application**" on page 1904. **Power On User Preset** does not affect any settings other than those set by a normal **User Preset**.

Backwards Compatibility Note: Power On: **User Preset** causes the instrument to power up in the "**Power On Application**" on page 1904, *not* the last Mode the instrument was in prior to shutdown. Also, **Power On: User Preset** will **User Preset** all Modes. This does *not* exactly match legacy behavior.

NOTE

In products that run multiple instances of the X-Series Application, the same **User Preset** is shared between all the instances.

NOTE

An instrument can never power up for the first time in **USER** preset.

Last State

Sets **Power On State** to **LAST**. When the instrument is powered on, it will put all modes in the last state they were in prior to when the instrument was put into Power Standby, and it will start up in the mode it was last in prior to powering off the instrument. The saving of the active mode prior to shutdown happens behind the scenes when a controlled shutdown is requested, either via the front panel **Standby** key, or the remote command **:SYSTem:PDOWn**. The non-active modes are saved as they are deactivated and recalled by Power On: Last State.

Power On: Last State only works if you completed a controlled shutdown prior to powering on in **LAST**. If a controlled shutdown is not completed when in **Power On: Last State**, the instrument powers up in the last active Mode, but it may not power up in the active Mode's last state. If an invalid Mode state is detected, a **Mode Preset** occurs. To control the shutdown under remote control, use **:SYSTem:PDOWn**.

Backwards Compatibility Note: It is no longer possible to power-up the instrument in the last Mode the instrument was running with that Mode in the preset state. (ESA/PSA **SYST:PRESET:TYPE MODE** with **SYST:PON:PRESET**) You can power-on the instrument in the last Mode the instrument was running in its last state (**:SYST:PON:TYPE LAST**), or you can specify the Mode to power-up in its preset state (**:SYST:PON:MODE <mode>**).

NOTE

In products that run multiple instances of the X-Series Application, each instance has a unique **Last State**.

NOTE

An instrument can never power up for the first time in **LAST**.

If line power to the instrument is interrupted, for example by pulling the line cord plug or by switching off power to a test rack, **Power On Last State** may not work properly. For proper operation, **Power On Last State** depends on your shutting down the instrument using the **Standby** key or the `:SYSTem:PDOWn` command. This ensures the last state of each Mode is saved and can be recalled during a power-up.

4.4.2 Power On Application

Accesses a menu that lists the available Modes, and lets you select which Mode is to be the **Power On Application**. Whichever application is selected runs at power-on when the Power On Type is set to “**MODE** and Input/Output Defaults”.

NOTE

In products that run multiple instances of the X-Series Application, the same Power On Application is shared between all the instances.

| | | | | | | | |
|--------------------------------|---|--------------------------------|-------------|-------------------|--------------|---------------------------|--------------|
| Remote Command | <code>:SYSTem:PON:MODE <mode></code> where <code><mode></code> is an item from the same set that can be sent using the <code>:INSTrument[:SElect]</code> command <code>:SYSTem:PON:MODE?</code> | | | | | | |
| Example | <code>:SYST:PON:MODE SA</code> | | | | | | |
| Notes | The displayed list of possible Modes (and remote parameters) depends on which Modes are installed in the instrument | | | | | | |
| Preset | Unaffected by Preset but is set by Restore Defaults > "All" on page 1918 to SA , except in the cases noted below: | | | | | | |
| | <table border="1"> <tr> <td>N8973B, N8974B, N8975B, N8976B</td> <td>NFIG</td> </tr> <tr> <td>VXT models</td> <td>BASIC</td> </tr> <tr> <td>M9410E/11E/15E/16E</td> <td>BASIC</td> </tr> </table> | N8973B, N8974B, N8975B, N8976B | NFIG | VXT models | BASIC | M9410E/11E/15E/16E | BASIC |
| N8973B, N8974B, N8975B, N8976B | NFIG | | | | | | |
| VXT models | BASIC | | | | | | |
| M9410E/11E/15E/16E | BASIC | | | | | | |
| State Saved | No | | | | | | |

4.4.3 FPGA Configuration

Lets you choose which FPGA image you want loaded into the instrument.

Depending on your hardware configuration, your instrument may contain a Field Programmable Gate Array (FPGA) which handles much of the processing for some of the mathematically intensive features, such as Time Domain Scan (Option TDS) and Enhanced Sweep Speed (Option FS2). The FPGA is not big enough to hold the

functionality for both options, so you must decide which FPGA program you want loaded.

When licenses allow for both FPGA image versions to be available, and you have not explicitly chosen an FPGA image version, then, when the firmware is updated, the Time Domain Scan version will be loaded. In the absence of all licenses, the Enhanced Sweep Speed version will be loaded. Once you have explicitly chosen an FPGA image version, using the FPGA Configuration dialog, any future firmware updates will continue to load the chosen version as long as it is licensed.

Example: loading the Time Domain Scan FPGA image, removing the TDS license, and then updating the firmware will result in the Enhanced Sweep Speed version being loaded.

When multiple capabilities are licensed, the FPGA Configuration presents a dialog that tells you that there is insufficient space to fit all the licensed capabilities, and asks you to choose one of the FPGA programs (images).

If you remove licenses, it is possible to end up with an unlicensed capability loaded in the FPGA while a licensed capability is not loaded. In this case, the dialog does not present the **Preference** group and shows a message about unlicensed/licensed capabilities. You can dismiss the dialog if the licensed capability is not currently needed, and you do not want to take the time to load the licensed FPGA image. However, this dialog will continue to appear each time the instrument is restarted.

Behavior when the Enhanced Sweep Speed FPGA Image is Loaded

When the Enhanced Sweep Speed version of the FPGA image is loaded, sweep behavior still depends on the licenses:

- Option FS2 gives full FPGA enhanced sweep speed
- Option FS1 gives software implemented enhanced sweep speed
- Neither Option FS1 nor FS2 – no enhanced sweep speed
- Both Options FS1 and FS2 – same as Option FS2, the full FPGA enhanced sweep speed

If EMI Receiver Mode and TDS option are licensed, and the Enhanced Sweep Speed FPGA image is loaded, then you will not have the proper FPGA image loaded to fully support EMI Receiver Mode. In particular, the Frequency Scan measurement cannot use Scan Type “Time Domain Scan” (this is the normally the default Scan Type for instruments with the TDS option). Instead, EMI Receiver Mode behaves as if the TDS option is not licensed.

Behavior when the Time Domain Scan FPGA Image is loaded

When the Time Domain Scan version of the FPGA image is loaded, EMI Receiver Mode works as expected with the TDS option licensed, but the Option FS2 capability

silently reverts to FS1 behavior.

Switching Between Enhanced Sweep Speed and Time Domain Scan FPGA Images

You cannot have both full TDS and FS2 images at the same time, so to switch to the other image, you must go through the process of reloading the FPGA by choosing the desired image with the Selected FPGA control, and pressing "**Load FPGA**" on [page 1908](#), or issuing the "Load FPGA" SCPI command below with the proper parameter.

Incorrect FPGA Configuration

If EMI Receiver Mode, Option TDS, or Option FS2 license is removed while the FPGA image for that license is loaded, the instrument ends up in an incorrect configuration, since the loaded FPGA image version has support for unlicensed functionality that is not accessible and does not support the currently licensed functionality. It will still function, but when the instrument recognizes this situation at startup, it automatically displays the **FPGA Configuration** dialog. The only selections available will be the licensed ones, but you can choose to dismiss the dialog and continue with the current FPGA image version if you do not want to take the time to load the correct FPGA image. The dialog will continue to be presented at each startup until the correct FPGA image is loaded.

FPGA Updates When Firmware Installs

The FPGA image and X-Series firmware are tightly coupled, so whenever the firmware is updated, the FPGA image is also checked and updated if needed. The rules for choosing between Time Domain Scan and Enhanced Sweep Speed versions of the FPGA image are:

1. Always use Time Domain Scan FPGA image for MXE
2. If neither EMC Mode nor Option TDS nor Option FS2 are licensed, the Enhanced Sweep Speed FPGA image is loaded
3. If EMC Mode and Option TDS are licensed and Option FS2 is not licensed, the Time Domain Scan FPGA image is loaded
4. If EMC Mode and Option TDS are not licensed, and Option FS2 is licensed, the Enhanced Sweep Speed FPGA image is loaded
5. If all are licensed
 - a. If "**FPGA Load Preference**" on [page 1907](#) is **Time Domain Scan**, the Time Domain Scan FPGA image is loaded

- b. If **FPGA Load Preference** is **Enhanced Sweep Speed**, the Enhanced Sweep Speed FPGA image is loaded
- c. If **FPGA Load Preference** is **Prompt at Startup**:
 - a. If the last FPGA Configuration Load was Time Domain Scan, the Time Domain Scan FPGA image is loaded
 - b. If the last FPGA Configuration Load was Enhanced Sweep Speed, the Enhanced Sweep Speed FPGA image is loaded
 - c. If no FPGA has been explicitly loaded, the Time Domain Scan FPGA image is loaded

4.4.3.1 FPGA Load Preference

Select either image from the radio buttons at the top of the dialog:

| Option | SCPI | Description |
|----------------------|--------|---|
| Time Domain Scan | TDS | Load the Time Domain Scan version of the FPGA image |
| Enhanced Sweep Speed | FS2 | Load the Enhanced Sweep Speed version of the FPGA image |
| Prompt at Startup | PROMpt | Prompt at each startup, displaying the FPGA Configuration dialog. You can choose to continue with the currently loaded FPGA image version, or load a different version |

If you select the image that is already loaded, you will not be prompted again. If you select a different one, the Selected FPGA control changes to that one and you must then press "**Load FPGA**" on page 1908 to load the other image.

When installing new firmware, the **FPGA Load Preference** setting is used to load the preferred FPGA image version if more than one version is available. Selecting **Prompt at Startup** causes you to be prompted at each startup to select the desired version of the FPGA image.

| | |
|----------------|--|
| Remote Command | <code>:SYSTem:PON:FPGA:PREfERENCE TDS FS2 PROMpt</code> |
| Example | <code>:SYST:PON:FPGA:PREF TDS</code> <code>:SYST:PON:FPGA:PREF?</code> |
| Notes | This SCPI is always available, but if the hardware does not support multiple FPGA image choices, the returned value is always: NA = Not available for this hardware Also, when not supported, any attempt to change away from NA generates error -224, "Illegal parameter value" |
| Dependencies | Dialogs and menus available only when EMC Mode, Option TDS and Option FS2 are all licensed |

| | |
|--------|---|
| Preset | <p>PROMpt</p> <p>Not affected by Mode Preset but set to PROMpt by Restore Defaults > "All" on page 1918 or Power On</p> |
|--------|---|

4.4.3.2 Load FPGA

Depending on the "**FPGA Load Preference**" on page 1907 selection, there may be a mismatch between the desired FPGA image, and the one that is currently loaded. In that case the **Load FPGA** control at the bottom of the dialog is not grayed-out, and you must press it to actually load the desired FPGA image. The image that is currently loaded is shown on the right:

If you have a mismatch, but do not actually load the other image, the **FPGA Load Preference** is remembered, but the image you had before remains until you return to this dialog and press **Load FPGA**, or until the next time the instrument firmware is updated.

If you press **Load FPGA**, the X-series software exits, the FPGA update program runs, and the instrument reboots. After rebooting, the new image will be loaded in the FPGA.

NOTE This can take 15 minutes or more.

CAUTION If power is lost during the FPGA load process, the FPGA can become corrupted, in which case the only solution is to return it to Keysight for servicing.

| | |
|----------------|--|
| Remote Command | <code>:SYSTem:PON:FPGA:LOAD TDS FS2</code> |
| Example | <p><code>:SYST:PON:FPGA:LOAD TDS</code></p> <p>For options, see Dependencies row below</p> <p><code>:SYST:PON:FPGA:LOAD?</code></p> |
| Notes | <p>If the specified FPGA image version is the one already loaded, then the command does nothing. If the FPGA image needs to change, the analyzer software exits (terminating the SCPI session), and the FPGA update utility is launched. Once the FPGA has updated, the instrument will reboot</p> <p>This SCPI is always available, but if the hardware does not support multiple FPGA image choices, the value returned is always:</p> <p>NA = Not available for this hardware</p> <p>Also, when not supported, any attempt to change away from NA generates error -224, "Illegal parameter value"</p> |
| Dependencies | Available only when there are multiple versions of the FPGA image that could be loaded |

| | |
|---|--|
| Selection limited to licensed features: | <ul style="list-style-type: none"> - TDS selection requires EMC Mode and Option TDS - FS2 requires Option FS2 <p>The UI is blanked when there is only one licensed selection, and that selection is already loaded. Sending the SCPI for an unlicensed selection results in error: -224, "Illegal parameter value; <option> is not licensed"</p> |
| Preset | None. Not affected by Mode Preset nor any "Restore Defaults" on page 1915 |

4.4.4 Restore Power On Defaults

This selection causes the **Power On** settings to be reset to their default values.

When this button is pressed, a message appears saying:

This will reset Power On State and Power On Application to their default state.

It will not affect Alignment data or settings.

This action cannot be undone. Do you want to proceed?

The message provides **OK** and **Cancel** buttons for you to confirm or cancel the operation.

Example `:SYST:DEF PON`

4.4.5 Configure Applications – Desktop application

The **Configure Applications** utility runs from the instrument's desktop. You must close the Instrument Application before running **Configure Applications**.

This utility can be used to:

- select applications (Modes) for preload
- determine how many Modes can fit in memory at one time
- specify the order of the Modes in the Mode menu.

The utility consists of a window with instructions, a set of **Select Application** checkboxes, a "fuel bar" style memory gauge, and keys that help you set up your configuration.

NOTE

In products that run multiple instances of the X-Series Application, the same **Configure Applications utility is shared between all the instances.**

For more details, see the following topics:

- "Preloading Applications" on page 1910
- "Access to Configure Applications utility" on page 1910
- "Virtual memory usage" on page 1911

Example

Display the Config Applications screen:

```
:SYST:SHOW CAPP
```

Preloading Applications

During runtime, if a Mode that is not preloaded is selected using the **Mode** menu or by sending SCPI commands, there will be a pause while the Application is loaded. During this pause, a message that says "**Loading application, please wait ...**" is displayed. Once loaded, the application stays loaded, so the next time you select it during a session, there is no delay.

Preloading lets you "preload" at startup, to eliminate the runtime delay. Preloading an application causes it to be loaded into the instrument's memory when the analyzer program starts up. If you do this, the delay will increase the time it takes to start up the analyzer program, but this may be preferable to having to wait the first time you select an application. Note that, once an application is loaded into memory, it cannot be unloaded without exiting and restarting the analyzer program.

Note that there are more applications available for X-Series than can fit into Windows Virtual Memory. By allowing you to choose which licensed applications to load at startup, the **Configure Applications** utility allows you to make optimal use of the instrument memory.

Access to Configure Applications utility

A version of the utility runs the first time you power up the instrument after purchasing it from Keysight. The utility automatically configures preloads so that as many licensed applications as possible are preloaded while keeping the total estimated virtual memory usage below the limit. This auto-configuration only takes place at the very first run, and after analyzer software upgrades.

At any time, you can manually start the **Configure Applications** utility by closing the analyzer application and double-tapping the **Configure Applications** icon on the desktop.

The utility's main dialog looks like this:

Instructions are provided below and in the utility. Use the utility to find a configuration that works best for you, and then restart the analyzer program.

- Select All** Marks all applications in the selection list. This allows you to enable all applications licensed on the instrument for pre-loading, or is a convenience for selecting all applications in one operation and then letting you deselect individual applications
- Deselect All** Clears the marks from all applications in the selection list, except the Power On application. The Power On application cannot be eliminated from the pre-load list
- Move Up** The application list is the order that applications appear in the Mode Menu. These keys let you shift the selected application up or down in the list, thus moving the selected application earlier or later in the Mode Menu
- Move Down**
- Select Power On Application** This is the same as the "Power On Application" selection on the Power On page of the System Settings dialog

Virtual memory usage

There are more applications available for X-Series than can fit into memory at any one time, so the **Configure Applications** utility includes a memory tracker that serves two purposes:

1. It will not let you preload more applications than will fit into memory at once
2. You can determine how many of your favorite applications can reside in memory at one time

The utility provides a graphical representation of the amount of memory (note that the amount of memory shown here is *virtual* memory, which is a limitation imposed by the operating system, not by the amount of physical memory you have in your instrument). You select applications to preload by checking the boxes on the left. Checked applications preload at startup. The colored fuel bar indicates the total memory required when all the checked applications are loaded (either preloaded or selected during runtime).

Here is what the fuel bar colors mean:

- RED: the applications you have selected cannot all fit into the instrument's memory. You must deselect applications until the fuel bar turns yellow
- YELLOW: the applications you have selected can all fit into the instrument's memory, but there is less than 10% of the memory left, probably not enough to load any other applications, either via preload or by selecting a Mode while the instrument is running
- GREEN: The indicator is green when <90% of the memory limit is consumed. This means the applications you have selected can all fit into the instrument's memory with room to spare. You will be able to load one or more other applications without running out of memory

If Sequence Analyzer is selected to be preloaded, all apps that are part of the Sequencer Mode (GSM/EDGE, WCDMA, CDMA2K and 1xEVDO) are preloaded (if licensed).

4.4.6 Configure Applications - Instrument boot-up

When the Instrument Application starts, a dialog box similar to the one you see when you run **Configure Applications** is displayed, allowing you to choose which licensed applications are to be loaded. This dialog is only displayed if the memory required to pre-load all the licensed applications exceeds the virtual memory available.

4.4.7 Configure Applications - Remote Commands

The following topics provide details on using remote commands to configure the list of applications you want to load into the instrument memory, or query the virtual memory utilization for your applications.

- "Configuration list (Remote Command Only)" on page 1913
- "Configuration Memory Available (Remote Query Only)" on page 1913
- "Configuration Memory Total (Remote Query Only)" on page 1913
- "Configuration Memory Used (Remote Query Only)" on page 1914
- "Configuration Application Memory (Remote Query Only)" on page 1914

4.4.7.1 Configuration list (Remote Command Only)

Used to set or query the list of applications to be loaded in-memory.

| | |
|----------------|---|
| Remote Command | <code>:SYSTem:PON:APPLication:LLISt <string of INSTRument:SElect names></code> <code>:SYSTem:PON:APPLication:LLISt?</code> |
| Example | <code>:SYST:PON:APPL:LLIS "SA,BASIC,WCDMA"</code> |
| Notes | <code><string of INSTRument:SElect names></code> contains items that are valid options for the <code>:INSTRument:SElect</code> command The order of the <code><INSTRument:SElect names></code> specifies the order in which the applications are loaded into memory, and the order that they appear in the Mode menu Error message -225 "Out of Memory" is reported when more applications are listed than can reside in virtual memory. When this occurs, the existing applications load list is unchanged |
| Preset | Not affected by Preset |
| State Saved | Not saved in instrument state |

4.4.7.2 Configuration Memory Available (Remote Query Only)

Returns the amount of Virtual Memory remaining.

| | |
|----------------|---|
| Remote Command | <code>:SYSTem:PON:APPLication:VMEMory[:AVAIlable]?</code> |
| Example | <code>:SYST:PON:APPL:VMEM?</code> |
| Preset | Not affected by Preset |

4.4.7.3 Configuration Memory Total (Remote Query Only)

Returns the limit of Virtual Memory allowed for applications.

| | |
|----------------|---|
| Remote Command | <code>:SYSTem:PON:APPLication:VMEMory:TOTal?</code> |
| Example | <code>:SYST:PON:APPL:VMEM:TOT?</code> |
| Preset | Not affected by Preset |

4.4.7.4 Configuration Memory Used (Remote Query Only)

Returns the amount of Virtual Memory used by all measurement applications.

| | |
|----------------|--|
| Remote Command | <code>:SYSTem:PON:APPLication:VMEMory:USED?</code> |
| Example | <code>:SYST:PON:APPL:VMEM:USED?</code> |
| Preset | Not affected by Preset |

4.4.7.5 Configuration Application Memory (Remote Query Only)

Returns the amount of Virtual Memory a particular application consumes.

| | |
|----------------|---|
| Remote Command | <code>:SYSTem:PON:APPLication:VMEMory:USED:NAME? <INSTRument:SElect name></code> |
| Example | <code>:SYST:PON:APPL:VMEM:USED:NAME? CDMA2K</code> |
| Notes | <code><INSTRument:SElect name></code> is an item from the same set used by the <code>:INSTRument:SElect</code> command If the name provided is invalid, 0 (zero) is returned |
| Preset | Not affected by Preset |

4.5 Restore Defaults

Provides initialization of system setting groups, including the option to set the entire instrument back to a factory default state.

NOTE

In products that run multiple instances of the X-Series Application, all instances have the same factory default states for **Restore Defaults**.

| | |
|----------------|--|
| Remote Command | :SYSTem:DEFault [ALL] ALIGn INPut MISC MODes PON UINTerface SCReen |
| Example | :SYST:DEF |
| State Saved | No |

4.5.1 Input/Output

Input/Output Preset resets the group of settings and data associated with the **Input/Output** front-panel key to their default values. These settings are not affected by a **Mode Preset** because they are associated with connections to the instrument, which you will probably not want to reset every time you press **Mode Preset**.

By using **Input/Output Preset** and "[Restore Mode Defaults](#)" on page 2026, a full preset of the current mode will be performed, with the caveat that since **Input/Output Preset** is a global function, it will affect *all* modes.

This is the same as the **Input/Output Preset** button in the **Preset** dropdown and the **Input/Output** menu.

When **Input/Output** is selected, a message appears saying:

This will reset all of the Input/Output variables to their default state, including which input is selected, all Amplitude Correction settings and data, all External Mixing settings, all Frequency Reference settings and all Output settings

It will not affect Alignment data or settings

This action cannot be undone. Do you want to proceed?

The dialog includes **OK** and **Cancel** controls, for you to confirm or cancel the operation.

| | |
|---------|---------------|
| Example | :SYST:DEF INP |
|---------|---------------|

4.5.2 I/O Config

Causes the group of settings associated with the **I/O Config** menu to be reset to their default values. This also happens on **Restore Misc Defaults**, which has a SCPI command, although **I/O Config** does not.

When **I/O Config** is selected, a message appears saying:

This will reset all of the I/O Config variables to their default state, including the GPIB address and SCPI LAN settings

It will not affect Alignment data or settings

This action cannot be undone. Do you want to proceed?

The dialog includes **OK** and **Cancel** controls, for you to affirm or cancel the operation.

4.5.3 User Interface

Causes the group of settings associated with the **User Interface** menu to be reset to their default values. This also happens on a **Restore Misc Defaults**.

When **User Interface** is selected, a message appears saying:

This will reset all of the User Interface variables to their default state, including the menu panel location, display theme, and language

It will not affect Alignment data or settings

This action cannot be undone. Do you want to proceed?

The dialog includes **OK** and **Cancel** controls, for you to affirm or cancel the operation.

Example `:SYST:DEF UINT`

4.5.4 Power On

Causes the **Power On** settings to be reset to their default values.

The Power On settings are **Power On State** and **Power On Application**.

When **Power On** is selected, a message appears saying:

This will reset Power On State and Power On Application to their default state

It will not affect Alignment data or settings

This action cannot be undone. Do you want to proceed?

The dialog includes **OK** and **Cancel** controls, for you to affirm or cancel the operation.

Example `:SYST:DEF PON`

4.5.5 Alignments

Causes the **Alignments** system settings to be reset to their default values. This does not affect any Alignment data stored in the system.

After performing this function, it may impact the auto-alignment time of the instrument until a new alignment baseline has been established.

When **Alignments** is selected, a message appears saying:

`This will reset all of the settings for the Alignment system to their default values`

`No alignment data will be erased`

`This action cannot be undone. Do you want to proceed?`

The dialog includes **OK** and **Cancel** controls, for you to affirm or cancel the operation.

Example `:SYST:DEF ALIG`

4.5.6 Misc

Causes miscellaneous system settings to be reset to their default values.

CAUTION This function resets the GPIB address to 18.

When **Misc** is selected, a message appears saying:

`This will reset miscellaneous system settings to their default values. This includes settings for I/O Config (GPIB and SCPI LAN), the User Interface, the Save/Recall system, and the Preset type`

`It will not affect Alignment data or settings`

`This action cannot be undone. Do you want to proceed?`

The dialog includes **OK** and **Cancel** controls, for you to affirm or cancel the operation.

This Miscellaneous group contains settings that are *not* part of the other Restore Defaults groups. These include:

- All settings on the **I/O Config** page of the **System Settings** dialog
- All settings in the following table:

4 System
4.5 Restore Defaults

| Miscellaneous Setting | Default Value |
|-----------------------|----------------|
| The SYST:PRES:TYPE | MODE |
| Auto File Name Number | 000 |
| Save Type | State |
| State Save To | Register 1 |
| Screen Save To | SCREEN000.png |
| Save/Recall Shortcuts | Deleted |
| Display Theme | Filled |
| Backlight | ON |
| System Annotation | Local Settings |
| Language | English |
| DISP:ENABLE | ON |
| Full Screen | Off |

Example `:SYST:DEF MISC`

4.5.7 All

Comprehensively resets **All** instrument settings to their factory default values.

Resets all **System Settings** groups, performs "[Restore Mode Defaults](#)" on page 2026 for all Modes in the instrument, and switches back to the power-on mode. Does not affect the User Preset file, or any user saved files.

When **All** is selected, a message appears:

This will reset all of the settings in the instrument to their factory default values, including the state of all Modes and Screens, the GPIB settings, the Alignment settings, and the Power On Mode

It will not affect Alignment data or settings

This action cannot be undone. We recommend canceling this operation and restoring settings individually (I/O Config, User Interface, Alignments, etc.) instead

Do you want to proceed?

The dialog includes **OK** and **Cancel** controls, for you to confirm or cancel the operation.

NOTE

If you are using a Keysight USB External Mixer, then you will need to perform **Refresh USB Mixer Connection** (SCPI command `:MIX:BAND USB`) after **Restore Defaults > All**.

| | |
|------------------------------|--|
| Example | <code>:SYST:DEF ALL</code> |
| Couplings | All causes the currently running measurement to be aborted, and sets all modes to a consistent state, so it is unnecessary to couple any settings |
| | Backwards Compatibility SCPI |
| Notes | <code>:SYST:PRES:PERS</code> is the same as <code>:SYST:DEF ALL</code> |
| Backwards Compatibility SCPI | <code>:SYSTem:PRESet:PERsistent</code> |

4.6 Alignments

Accesses the alignment system of the instrument. You can control the automatic alignments, view alignment statistics and manually perform alignments.

The current setting of the alignment system is displayed in the Meas Bar along the top of the display. For conditions that may cause specifications to be impacted, this annotation will be in amber.

4.6.1 Auto Align

Lets you configure the automatic background alignments and the alerts from the automatic alignment system.

| | |
|--------------|--|
| Dependencies | Does not appear in VXT or M9410E/11E/15E/16E |
|--------------|--|

4.6.1.1 Auto Align

Configures the method the automatic background alignment will use when it runs.

Automatic background alignments are run periodically between measurement acquisitions. The instrument's software determines when alignments are to be performed to maintain warranted operation. The recommended setting for Auto Align is Normal.

Auto Align execution *cannot* be aborted with the **Cancel (ESC)** key. To interrupt **Auto Align** execution, select **Auto Align Off**.

| | |
|----------------|--|
| Remote Command | <code>:CALibration:AUTO ON LIGHT PARTial OFF</code> For details of each option, see " Auto Align Options " on page 1921 <code>:CALibration:AUTO?</code> |
| Example | <code>:CAL:AUTO ON</code> |
| Notes | While Auto Align is executing, bit 0 of Status Operation register is set |
| Couplings | Auto Align is set to Off if Restore Align Data is invoked |
| Preset | This is unaffected by Preset but is set to ON by Restore Defaults > " Alignments " on page 1917 |
| State Saved | No |
| Annotation | In the Meas Bar: <ul style="list-style-type: none"> - Normal with "All But RF" off: Auto (white) - Normal with "All But RF" on: Auto/No RF (amber) - Partial: Partial (amber) |

| | |
|------------------------------|--|
| | - Off: Off (amber) |
| Status Bits/OPC dependencies | When Auto Align is executing, Bit 0 in the Status Operational register is set An interfering signal at the RF Input may prevent automatic alignment of the RF subsystem. If this occurs, the Error Condition message “Align RF skipped” is reported, the Status Questionable Calibration bit 11 is set, and the alignment proceeds. When a subsequent alignment of the RF subsystem succeeds, either by the next cycle of automatic alignment or from an Align Now, RF, the Error Condition and Status Questionable Calibration bit 11 are cleared |
| Backwards Compatibility SCPI | :CALibration:AUTO ALERT Parameter ALERT is for backwards compatibility only, and is mapped to PARTIAL |

Auto Align Options

The available settings for Auto Align are as follows:

Normal

SCPI example **:CAL:AUTO ON**

Auto Align, Normal turns on the automatic alignment of all measurement systems. This selection maintains the instrument in warranted operation across varying temperature and over time.

If the condition “Align Now All required” is set, transitioning to **Auto Align, Normal** performs the required alignments, clears the “Align Now All required” condition, then continues with further alignments as required to maintain the instrument adequately aligned for warranted operation.

When **Auto Align, Normal** is selected, the **Auto Align Off** time is set to zero.

When **Auto Align, Normal** is selected, the Meas Bar indicates Align: Auto (in white) or Align: Auto/No RF (in amber). The amber color reminds you that you are responsible for maintaining the RF alignment of the instrument.

Alignment processing because of the transition to **Normal** is executed sequentially. Thus, ***OPC?** or ***WAI** following **:CAL:AUTO ON** will return when the alignment processing is complete.

Light

SCPI example **:CAL:AUTO LIGH**

Auto Align, Light turns on the automatic alignment of all measurement systems. The **Auto Align, Light** selection allows more drift in amplitude accuracy to allow much less frequent measurement interruptions to perform alignments. The temperature changes required to trigger each alignment are increased by a factor of three. Alignments also expire from time as well as temperature. In a stable thermal

4 System

4.6 Alignments

environment, the alignments occur one-ninth as often as in Normal. With these less frequent alignments, all accuracy specifications (those expressed with $\pm x$ dB tolerances) change by nominally a factor of 1.4.

If the condition “Align Now, All required” is set, transitioning to **Auto Align, Light** performs the required alignments, clears the “Align Now, All required” condition, and continues with further alignments as required to maintain the instrument adequately aligned for warranted operation.

Alignment processing because of the transition to **Light** is executed sequentially. Thus, ***OPC?** or ***WAI** following **:CAL:AUTO LIGHT** will return when the alignment processing is complete.

When **Auto Align, Light** is selected, the **Auto Align Off** time is set to zero.

When **Auto Align, Light** is selected, the Settings Panel indicates Align: Light.

Partial

SCPI example **:CAL:AUTO PART**

Auto Align, Partial disables the full automatic alignment and the maintenance of warranted operation for the benefit of improved measurement throughput. Accuracy is retained for the Resolution Bandwidth filters and the IF Passband, which is critical to FFT accuracy, demodulation, and many measurement applications. With Auto Align set to Partial, you are now responsible for maintaining warranted operation by updating the alignments when they expire. The Auto Align, Alert mechanism will notify you when alignments have expired. One solution to expired alignments is to perform the Align All, Now operation. Another is to return the Auto Align selection to Normal.

Auto Align, Partial is recommended for measurements where the throughput is so important that a few percent of improvement is more valued than an increase in the accuracy errors of a few tenths of a decibel. One good application of **Auto Align, Partial** would be an automated environment where the alignments can be called during overhead time when the device-under-test is exchanged.

When **Auto Align, Partial**, is selected the elapsed time counter begins for **Auto Align Off** time.

When **Auto Align, Partial** is selected, the Settings Panel indicates Align: Partial in an amber color. The amber color reminds you that you are responsible for maintaining the warranted operation of the instrument.

Off

SCPI example **:CAL:AUTO OFF**

Auto Align, Off disables automatic alignment and the maintenance of warranted operation, for the benefit of maximum measurement throughput. With **Auto Align**

set to **Off**, you are now responsible for maintaining warranted operation by updating the alignments when they expire. The Auto Align, Alert mechanism will notify you when alignments have expired. One solution to expired alignments is to perform the **Align All, Now** operation. Another is to return the **Auto Align** selection to **Normal**.

The **Auto Align Off** setting is rarely the best choice, because **Partial** gives almost the same improvement in throughput while maintaining the warranted performance for a much longer time. The choice is intended for unusual circumstances, such as the measurement of radar pulses where you might want the revisit time to be as consistent as possible.

When **Auto AlignOff** is selected, the **Auto Align Off** time is initialized and the elapsed time counter begins.

When **Auto AlignOff** is selected, the Settings Panel indicates Align: Off in an amber color. The amber color reminds you that you are responsible for maintaining the warranted operation of the instrument.

4.6.1.2 All but RF

Configures automatic alignment to include or exclude the RF subsystem. (Eliminating the automatic alignment of the RF subsystem prevents the input impedance from changing. The normal input impedance of 50 ohms can change to an open circuit when alignments are being used. Some devices under test do not behave acceptably under such circumstances, for example by showing instability.)

When **All but RF** is **ON**, the operator is responsible for performing an **Align Now RF** when RF-related alignments expire. The Auto Align, Alert mechanism will notify you to perform an **Align Now All** when the combination of time and temperature variation is exceeded.

When **All But RF** is **ON**, the Settings Panel indicates Align: Auto/No RF (in amber). The amber color reminds you that you are responsible for maintaining the RF alignment of the instrument.

| | |
|----------------|---|
| Remote Command | :CALibration:AUTO:MODE ALL NRF :CALibration:AUTO:MODE? |
| Example | :CAL:AUTO:MODE NRF |
| Preset | Unaffected by Preset but set to ALL by Restore Defaults > " Alignments " on page 1917 |
| State Saved | No |

4.6.1.3 Alert

The instrument signals an **Alert** when conditions exist such that you will need to perform a full alignment (for example, **Align Now All**). Alert can be configured in one

4 System
4.6 Alignments

of four settings:

| Setting | Option |
|--------------------------|-------------|
| Time & Temperature | TTEmperture |
| Time & Temperature Light | LIGHT |
| 7 days | WEEK |
| None | NONE |

With **Auto Align** set to **Normal**, the configuration of **Alert** is not relevant, because the instrument's software maintains the instrument in warranted operation.

A confirmation is required when a selection other than **TTEmperture** is chosen. This prevents accidental deactivation of alerts. When setting **Alert** from the front panel to any value but **TTEmperture**, confirmation is required to transition into this setting of Alert. The confirmation dialog is:

This will suppress alerts from the Alignment system, which would notify you when an Alignment is required to maintain warranted operation. Without the alerts you will be responsible for performing an Align Now All at appropriate intervals to maintain warranted operation

Do you want to proceed?

The dialog includes **OK** and **Cancel** controls, for you to affirm or cancel the operation.

No confirmation is required when **Alert** is configured through a remote command.

For more information see "[Time & Temperature](#)" on page 1924

| | |
|------------------------------|---|
| Remote Command | :CALibration:AUTO:ALERt TTEmperture LIGHT DAY WEEK NONE :CALibration:AUTO:ALERt? |
| Example | :CAL:AUTO:ALER TTEM |
| Preset | Unaffected by Preset but set to TTEmperture by Restore Alignment Defaults |
| State Saved | No |
| Status Bits/OPC dependencies | When an alert is generated, the condition message "Align Now All required" appears in the Status Bar, and bit 14 is set in the Status Questionable Calibration register |

The settings for **Alert** are detailed below.

Time & Temperature

SCPI Example

CAL:AUTO:ALER TTEM

The instrument signals an alert when alignments expire due to the combination of the passage of time and changes in temperature. The alert is the Error Condition message "Align Now All required". If this choice for Alert is selected, the absence of an alert means that the instrument alignment is sufficiently up-to-date to maintain warranted accuracy.

Time & Temperature Light

SCPI Example

`CAL:AUTO:ALER LIGH`

This is a light version of Time & Temperature which means for this setting the time/temperature changes required to trigger an alert are increased by a factor of three and the time alerts will occur one-ninth as often as for Time and Temperature.

24 hours

SCPI Example

`CAL:AUTO:ALER DAY`

The instrument signals an alert after a time span of 24 hours since the last successful full alignment (for example, **Align Now All** or completion of a full **Auto Align**). You may want to select this option in an environment where the temperature is stable on a daily basis, at a small risk of accuracy errors in excess of the warranted specifications. The alert is the Error Condition message “Align Now All required”.

7 days

SCPI Example

`CAL:AUTO:ALER WEEK`

The instrument signals an alert after a time span of 168 hours since the last successful full alignment (for example, **Align Now All** or completion of a full **Auto Align**). You may want to select this option in an environment where the temperature is stable on a weekly basis, at a modest risk of accuracy degradations in excess of warranted performance. The alert is the Error Condition message “Align Now All required”.

None

SCPI Example

`CAL:AUTO:ALER NONE`

The instrument does not signal an alert. This is provided for rare occasions where you are making a long measurement that cannot tolerate **Auto Align** interruptions, and must have the ability to capture a screen image at the end of the measurement without an alert posted to the display. Keysight does not recommend using this selection in any other circumstances, because of the risk of accuracy performance drifting well beyond expected levels without the operator being informed.

4.6.2 Align Now

Accesses alignment processes that are immediate action operations. They perform complete operations and run until they are complete.

Executing immediate alignments from SCPI can be problematic due to the length of time required for the alignments to complete. Alignment commands are by their

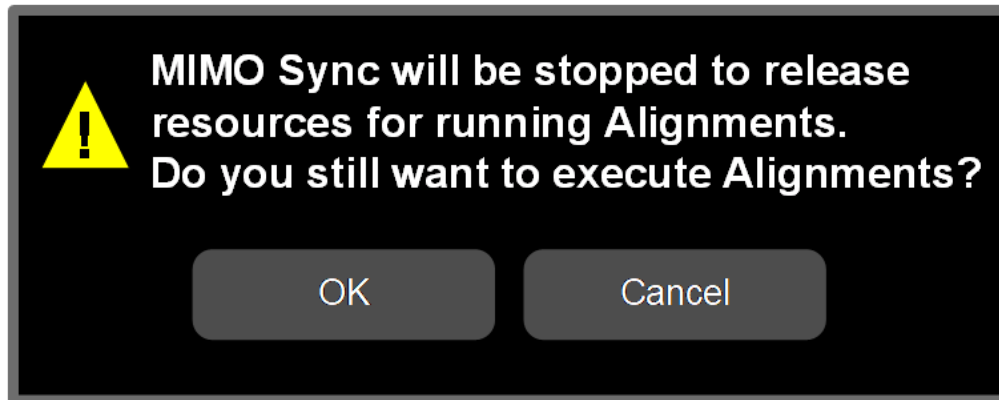

nature sequential, meaning they must complete before any other SCPI commands can be processed. In many cases the alignment itself will take longer than the typical SCPI timeout value. Furthermore, status cannot be easily queried while a sequential command is running.

For this reason, overlapped versions of the **Align Now** commands are provided. When using these No-Operation-Pending (**NPENDING**) commands, the SCPI thread will not be blocked (will be released immediately), so that you can use **:STATus:OPERation:CONDition?** to query the alignment status bit and use **:STATus:QUEStionable:CALibration:CONDition?** to check the alignment results. As an example, **:CALibration[:ALL]:NPENDING** is the overlapped replacement for **:CALibration[:ALL]**.

While the alignment is executing, the coming NOP calibration will be ignored, and error message “Setting Conflict, Alignment is in process” will be posted. Also, any other operations to the instrument will be pended and postponed until the alignment is completed. The operations include: Preset, Initiate a new measurement, Device clear and so on. Accordingly, changing parameters will not take effect although the UI is updated immediately. To avoid unexpected timeouts and results, these operations are not recommended during any such alignments.

NOTE

The Alignments are not performed if the MIMO Sync is running, because the MIMO and Alignments require the same hardware resource. If the instrument is in MIMO Sync and you press a button to execute Alignments, a pop-up window appears as below. Click **OK** to stop MIMO and execute Alignments.

If the instrument is in MIMO sync, and you send a SCPI command to run Alignments, the align process is not executed, and a warning is generated. To execute Alignments, you must first stop MIMO via SCPI (or manually).

Controls in this Dialog

The selection and order of controls displayed in this dialog depends on the instrument type and options. Select the control of interest from the following list:

- "Align Now All" on page 1927
- "Align Now All but RF" on page 1929
- "Align Now RF" on page 1931
- "Align Now Expired" on page 1932
- "Align Now Preselector" on page 1933
- "Align Now All but RF Preselector" on page 1934
- "Align Now RF Presel Only (20 Hz to 3.6 GHz)" on page 1934
- "Align Now External Mixer" on page 1935
- "Align Source" on page 1936
- "Align Receiver" on page 1937
- "Align Fast" on page 1937
- "Align LO Leakage" on page 1938
- "Align IF Cable" on page 1938
- "Align RRH Amplitude" on page 1938
- "Align LO Clock" on page 1939
- "Align VXT Transceiver" on page 1940
- "Align External Mixer Path" on page 1944
- "Align Low Band" on page 1945
- "Align High Band" on page 1945

4.6.2.1 Align Now All

In PXE, the key label is **Align Now All (plus RF Presel 20 Hz – 3.6 GHz)**

Immediately executes an alignment of all subsystems. The instrument stops any measurement currently underway, performs the alignment, then restarts the measurement from the beginning (similar to pressing the **Restart** key).

If an interfering user signal is present at the RF Input, the alignment is performed on all subsystems except the RF. After completion, the Error Condition message "Align RF skipped" is generated. In addition, the Error Condition message "Align Now, RF

4 System
4.6 Alignments

required” is generated, and bits 11 and 12 are set in the Status Questionable Calibration register.

The query form of the remote commands (`:CALibration[:ALL]?` or `*CAL?`) invokes the alignment of all subsystems and returns a success or failure value. An interfering user signal is not grounds for failure; if the alignment was able to succeed on all portions but unable to align the RF because of an interfering signal, the resultant will be the success value.

Successful completion of **Align Now All** will clear the “Align Now All required” Error Condition, and clear bit 14 in the Status Questionable Calibration register. It will also begin the elapsed time counter for Last Align Now All Time, and capture the Last Align Now All Temperature.

If the Align RF subsystem succeeded in aligning (no interfering signal present), the elapsed time counter begins for Last Align Now, RF Time, and the temperature is captured for the Last Align Now, RF Temperature. In addition, the Error Conditions “Align RF skipped” are cleared, the Error Condition “Align Now, RF required” is cleared, and bits 11 and 12 are cleared in the Status Questionable Calibration register

Align Now All can be interrupted, by pressing the **Cancel (ESC)** front-panel key, or remotely with Device Clear followed by the `:ABORt` SCPI command. When this occurs, the Error Condition message “Align Now All required” is generated, and bit 14 is set in the Status Questionable Condition register. This is because new alignment data may be employed for an individual subsystem, but not a cohesive set of data for all subsystems.

In many cases, you might find it more convenient to change alignments to **Normal**, instead of executing **Align Now All**. When the Auto Align process transitions to **Normal**, the instrument will immediately start to update only the alignments that have expired, thus efficiently restoring the alignment process.

| | |
|----------------|---|
| Remote Command | <code>:CALibration[:ALL]</code> <code>:CALibration[:ALL]?</code> |
| Example | <code>:CAL</code> |
| Notes | <p><code>:CALibration[:ALL]?</code> returns 0 if successful, or 1 if failed</p> <p><code>:CALibration[:ALL]?</code> is the same as <code>*CAL?</code></p> <p>While Align Now All is performing the alignment, the Calibrating bit (Bit 0 in the Status Operation register) is set. Completion, or termination, will clear Bit 0 in the Status Operation register</p> <p>This command is sequential; it must complete before further SCPI commands are processed. Interrupting the alignment from remote is accomplished by invoking Device Clear followed by the <code>:ABORt</code> command</p> <p>Successful completion will clear bit 14 in the Status Questionable Calibration register</p> <p>An interfering user signal is not grounds for failure of Align Now All. However, Bits 11 and 12 are set in the Status Questionable Calibration register to indicate Align Now, RF is required</p> <p>An interfering user-supplied signal will result in the instrument requiring an Align Now, RF with the</p> |

| | |
|------------------------------|--|
| | interfering signal removed |
| Couplings | Initializes the time for the Last Align Now All Time Records the temperature for the Last Align Now All Temperature If Align RF component succeeded, initializes the time for the Last Align Now, RF Time If Align RF component succeeded, records the temperature for the Last Align Now, RF Temperature |
| Status Bits/OPC dependencies | Bits 11, 12, or 14 may be set in the Status Questionable Calibration register |
| | IEEE Command |
| Remote Command | <code>*CAL</code> |
| Example | <code>*CAL?</code> |
| Notes | Returns 0 if successful, or 1 if failed <code>:CALibration[:ALL]?</code> is exactly the same as <code>*CAL?</code> , including all conditions, status register bits, and couplings See additional remarks described with <code>:CALibration[:ALL]?</code> Overlapped Command |
| Remote Command | <code>:CALibration[:ALL]:NPending</code> |
| Example | <code>:CAL:NPEN</code> |
| Notes | <code>:CALibration[:ALL]:NPending</code> is the same as <code>:CALibration[:ALL]</code> , including all conditions, status register bits, except this SCPI command <i>does not block</i> the SCPI session, so you should use status register bits to query whether the calibration is successfully completed or not Typical usage is: <ol style="list-style-type: none"> 1. <code>:CALibration:ALL:NPending</code> (Start a calibration) 2. <code>:STATus:OPERation:CONDition?</code> (Check if the calibration is completed or not, If bit 0 is set, then the system is doing calibration, you should repeat this SCPI query until the bit is cleared) 3. <code>:STATus:QUEStionable:CALibration:CONDition?</code> (Check if there are any errors/-failures in previous calibration procedure) |

4.6.2.2 Align Now All but RF

In PXE, the key label is **Align Now All but RF (not including RF Presel)**

Immediately executes an alignment of all subsystems except the RF subsystem. The instrument will stop any measurement currently underway, perform the alignment, and then restart the measurement from the beginning (similar to pressing the **Restart** key). This can be used to align portions of the instrument that are not impacted by an interfering user input signal.

4 System
4.6 Alignments

This operation might be chosen instead of **All** if you do not want the device under test to experience a large change in input impedance, such as a temporary open circuit at the instrument input.

The query form of the remote commands (`:CALibration:NRF?`) invokes the alignment and returns a success or failure value.

Successful completion of **Align Now All but RF** clears the “Align Now All required” Error Condition, and clears Bit 14 in the Status Questionable Calibration register. If “Align Now All required” was in effect prior to executing **All but RF**, the Error Condition message “Align Now RF required” is generated and Bit 12 in the Status Questionable Calibration register is set. It will also begin the elapsed time counter for Last Align Now All Time, and capture the Last Align Now All Temperature.

Align Now All but RF can be interrupted, by pressing the **Cancel (ESC)** front-panel key, or remotely with Device Clear followed by the `:ABORt` SCPI command. When this occurs, the Error Condition message “Align Now All required” is generated, and Bit 14 is set in the Status Questionable Condition register. This is because new alignment data may be used for an individual subsystem, but not a full new set of data for all subsystems.

| | |
|------------------------------|--|
| Remote Command | <code>:CALibration:NRF</code> <code>:CALibration:NRF?</code> |
| Example | <code>:CAL:NRF</code> |
| Notes | Returns 0 if successful, or 1 if failed While Align Now All but RF is performing the alignment, Bit 0 in the Status Operation register is set. Completion, or termination, will clear Bit 0 in the Status Operation register This command is sequential; it must complete before further SCPI commands are processed. Interrupting the alignment from remote is accomplished by invoking Device Clear followed by the <code>:ABORt</code> command Successful completion clears Bit 14 in the Status Questionable Calibration register and sets Bit 12 if invoked with “Align Now All required” |
| Couplings | Initializes the time for the Last Align Now All Time Records the temperature for the Last Align Now All Temperature |
| Status Bits/OPC dependencies | Bits 12 or 14 may be set in the Status Questionable Calibration register |

Overlapped Command

| | |
|----------------|---|
| Remote Command | <code>:CALibration:NRF:NPENDING</code> |
| Example | <code>:CAL:NRF:NPEN</code> |
| Notes | <code>:CALibration:NRF:NPENDING</code> is the same as <code>:CALibration:NRF</code> , including all conditions, status register bits, except that this SCPI command <i>does not block</i> the SCPI session, so you should use status register bits to query whether the calibration is successfully completed or not Typical usage is: |

-
1. `:CALibration:NRF:NPENDING` (start the All but RF calibration)
 2. `:STATus:OPERation:CONDition?` (If bit 0 is set, then the system is doing calibration, you should do re-query until this bit is cleared)
 3. `:STATus:QUESTionable:CALibration:CONDition?` (to check if there are any errors/-failures in previous calibration procedure)

4.6.2.3 Align Now RF

In PXE, the key label is **Align Now RF Only**

Immediately executes an alignment of the RF subsystem. The instrument stops any measurement currently underway, performs the alignment, then restarts the measurement from the beginning (similar to pressing the **Restart** key).

This operation might be desirable if the alignments had been set to not include RF alignments, or if previous RF alignments could not complete because of interference which has since been removed.

If an interfering user signal is present at the RF Input, the alignment will terminate and generate the Error Condition message “Align RF skipped”, and Error Condition “Align Now, RF required”. In addition, bits 11 and 12 will be set in the Status Questionable Calibration register.

The query form of the remote commands (`:CALibration:RF?`) invokes the alignment of the RF subsystem and returns a success or failure value. An interfering user signal is grounds for failure.

Successful completion of **Align Now RF** begins the elapsed time counter for Last Align Now, RF Time, and capture the Last Align Now, RF Temperature.

Align Now RF can be interrupted, by pressing the **Cancel (ESC)** front-panel key, or remotely with Device Clear followed by the `:ABORT` SCPI command. When this occurs, the Error Condition message “Align Now, RF required” is generated, and Bit 12 is set in the Status Questionable Condition register. None of the new alignment data is used.

| | |
|----------------|---|
| Remote Command | <code>:CALibration:RF</code> <code>:CALibration:RF?</code> |
|----------------|---|

| | |
|---------|----------------------|
| Example | <code>:CAL:RF</code> |
|---------|----------------------|

| | |
|-------|---|
| Notes | <p>Returns 0 if successful, or 1 if failed (including interfering user signal)</p> <p>While Align Now RF is performing the alignment, Bit 0 in the Status Operation register is set. Completion, or termination, clears Bit 0 in the Status Operation register</p> <p>This command is sequential; it must complete before further SCPI commands are processed. Interrupting the alignment from remote is accomplished by invoking Device Clear followed by the <code>:ABORT</code> command</p> |
|-------|---|

4 System
4.6 Alignments

| | |
|------------------------------|---|
| | <p>Successful completion clears the Error Conditions “Align RF skipped” and the Error Conditions “Align RF failed” and “Align Now, RF required”, and clears Bits 3, 11, and 12 in the Status Questionable Calibration register</p> <p>A failure encountered during alignment generates the Error Condition message “Align RF failed” and sets Bit 3 in the Status Questionable Calibration register</p> <p>An interfering user signal will result in Bits 11 and 12 being set in the Status Questionable Calibration register, to indicate Align Now, RF is required</p> <p>An interfering user supplied signal results in the instrument requiring Align Now RF with the interfering signal removed</p> |
| Couplings | <p>Initializes the time for the Last Align Now, RF Time</p> <p>Records the temperature for the Last Align Now, RF Temperature</p> |
| Status Bits/OPC dependencies | Bits 11, 12, or 14 may be set in the Status Questionable Calibration register |

Overlapped Command

| | |
|----------------|--|
| Remote Command | <code>:CALibration:RF:NPENding</code> |
| Example | <code>:CAL:RF:NPEN</code> |
| Notes | <p><code>:CALibration:RF:NPENding</code> is the same as <code>:CALibration:RF</code>, including all conditions, status register bits, except that this SCPI command <i>does not block</i> the SCPI session, so you should use status register bits to query whether the calibration is successfully completed or not</p> <p>Typical usage is:</p> <ol style="list-style-type: none"> 1. <code>:CALibration:RF:NPENding</code> (Start a RF calibration) 2. <code>:STATus:OPERation:CONDition?</code> (If Bit 0 is set, then the system is doing calibration, you should do re-query until this bit is cleared) 3. <code>:STATus:QUESTionable:CALibration:CONDition?</code> (to check if there are any errors/-failures in previous calibration procedure) |

4.6.2.4 Align Now Expired

Alignments can be Expired when **Auto Align** is **PARTial** or **OFF**.

This control runs the alignments that have expired. This differs from performing **Align All, Now.**, which performs an alignment of all subsystems regardless of whether they are needed or not, whereas **Execute Expired Alignments** aligns only the individual subsystems that have become due.

| | |
|----------------|--|
| Remote Command | <code>:CALibration:EXPIred</code> |
| Example | <code>:CAL:EXP?</code> |
| Notes | <code>:CALibration:EXPIred?</code> returns 0 if successful, or 1 if failed |

While **Align Now Expired** is performing the alignment, the Calibrating bit (Bit 0 in the Status Operation register) is set. Completion, or termination, clears Bit 0 in the Status Operation register

This command is sequential; that is, it must complete before further SCPI commands are processed. Interrupting the alignment from remote is accomplished by invoking Device Clear followed by **:ABORt**

Successful completion clears bit 14 in the Status Questionable Calibration register

An interfering user signal is not grounds for failure of **Align Now Expired**. However, if RF Alignment was required, Bits 11 and 12 are set in the Status Questionable Calibration register to indicate Align Now, RF is required

Status Bits/OPC dependencies Bits 11, 12, or 14 may be set in the Status Questionable Calibration register

4.6.2.5 Align Now Preselector

Normally, Preselector Alignment runs during power up, and during the twenty minutes after power up, whenever there is a 1-degree internal temperature change.

This alignment is also run when an **"Align Now All"** on page 1927 is performed. This feature is helpful during the 20-minute warm-up time to correct for preselector drift while alignments are being held off. This feature can also be used in lieu of using the Preselector Center functionality, to improve speed throughput for remote testing with minimal impact to amplitude accuracy specs. The algorithm centers the preselector at the upper and lower operating frequencies of the YTF preselector.

The **Align Now Preselector** alignment is *not* a substitute for the Characterizer Preselector Advanced Alignment, which creates the default preselector centering curves for the YTF Preselector and is typically run annually.

Remote Command **:CALibration:PRESelector?**

Example **:CAL:PRES**

Notes Returns 0 if successful, or 1 if failed (including interfering user signal)

While **Align Now Preselector** is performing the alignment, Bit 0 in the Status Operation register is set. Completion, or termination, clears Bit 0 in the Status Operation register

This command is sequential; that is, it must complete before further SCPI commands are processed. Interrupting the alignment from remote is accomplished by invoking Device Clear followed by **:ABORt**

Successful completion clears the Error Conditions "Align Preselector failed" and clears Bit 3 in the Status Questionable Calibration Failure (Extended) register

A failure encountered during alignment generates the Error Condition message "Align Preselector failed" and sets Bit 3 in the Status Questionable Calibration Failure (Extended) register

Status Bits/OPC dependencies Bit 3 may be set in the Status Questionable Calibration Failure (Extended) register

4.6.2.6 Align Now All but RF Preselector

Only available in models with the RF Preselector, such as the N9048B. It is identical to the "Align Now All" on page 1927 (plus RF Presel) function, except that the RF Preselector is only partially aligned. Only the System Gain, Mechanical attenuator and Electronic attenuator alignments on the RF Preselector path are aligned. The purpose of these alignments is to improve the RF Preselector path amplitude variation compared to the bypass path.

| | |
|------------------------------|--|
| Remote Command | <code>:CALibration:NRFPreselector</code> <code>:CALibration:NRFPreselector?</code> |
| Example | <code>:CAL:NRFPre</code> |
| Dependencies | Only appears in N9048B. Sending the SCPI command or query in other models generates an error |
| Status Bits/OPC dependencies | Bits 12 or 14 may be set in the Status Questionable Calibration register |

4.6.2.7 Align Now RF Presel Only (20 Hz to 3.6 GHz)

Only available in models with the RF Preselector, such as the N9048B. It executes an alignment of the RF Preselector section. The receiver will stop any measurement currently underway, perform the alignment, and then restart the measurement from the beginning (similar to pressing the **Restart** key). *Only* the RF Preselector is aligned; no Align Now All function is performed first.

The query (`:CALibration:RFPreselector:ONLY?`) invokes the alignment of the RF Preselector on both Conducted and Radiated Band, and returns a success or failure value. Successful completion clears the "Align 20 Hz to 3.6 GHz required" Error Condition, and clears Bit 1 and Bit 2 in the Status Questionable Calibration Extended Needed register.

The elapsed time counter will begin for Last Align Now, Conducted Time and Last Align Now Radiated Time and the temperature is captured for Last Align Now, Conducted Temperature and Last Align Now, Radiated Temperature. The alignment can be interrupted by pressing the **Cancel (ESC)** front-panel key or remotely with Device Clear followed by the `:ABORT` SCPI command. When this occurs, the Error Condition "Align 20 Hz to 3.6 GHz required" is set because new alignment data may be employed for an individual subsystem, but not a cohesive set of data for all subsystems.

The "Align 20 Hz to 3.6 GHz required" Error Condition will appear when this alignment has expired. The user is now responsible to perform the Align Now, 20 Hz to 3.6 GHz in order to keep the receiver in warranted operation. This alignment can only be performed by the user, as it is not part of the Auto Align process.

| | |
|----------------|--|
| Remote Command | <code>:CALibration:RFPreselector:ONLY</code> |
|----------------|--|

| | |
|------------------------------|--|
| | <code>:CALibration:RFPSelector:ONLY?</code> |
| Example | <code>:CAL:RFPS:ONLY</code> |
| Notes | <p>Query returns 0 if successful, or 1 if failed</p> <p>When Align 20 Hz to 3.6 GHz is performing the alignment, bit 0 in the Status Operation register is set. Completion, or termination, will clear bit 0 in the Status Operation register</p> <p>This command is sequential; it must complete before further SCPI commands are processed. Interrupting the alignment from remote is accomplished by invoking Device Clear followed by the <code>:ABORT</code> command. Successful completion clears Bits 1 and 2 in the Status Questionable Calibration Extended Needed register and Bits 0 and 1 in Status Questionable Calibration Extended Failure register</p> <p>A failure encountered during alignment sets the Error Condition “20 Hz to 3.6 GHz Alignment Failure”, sets Bits 1 and 2 in the Status Questionable Calibration Extended Needed register, and Bit 9 in Status Questionable Calibration register</p> |
| Dependencies | <p>Only appears in N9048B. Sending the SCPI command or query in other models generates an error</p> <p>This key is grayed-out if the instrument is displaying an “Align Now All required” message. If you press the key while it is grayed-out, you will see the informational message, “Align Now All required first”</p> |
| Couplings | <p>Initializes the time for the Last Align Conducted Now, Conducted Time</p> <p>Initializes the time for the Last Align Radiated Now, Radiated Time</p> <p>Records the temperature for the Last Align Conducted Now, Conducted Temperature</p> <p>Records the temperature for the Last Align Radiated Now, Radiated Temperature</p> |
| Status Bits/OPC dependencies | <p>Bit 8 or 9 may be set in the Status Questionable Calibration register</p> <p>Bit 1 and 2 may be set in the Status Questionable Calibration Extended Needed register</p> <p>Bit 0 and 1 may be set in the Status Questionable Calibration Extended Failure register</p> |

4.6.2.8 Align Now External Mixer

Immediately executes an alignment of the External Mixer that is plugged into the USB port. The instrument stops any measurement currently underway, performs the alignment, then restarts the measurement from the beginning (similar to pressing the **Restart** key). As this alignment calibrates the LO power to the mixer, this is considered an LO alignment; and failure is classified as an LO alignment failure.

The query (`:CALibration:EMIXer?`) invokes the alignment of the External Mixer and returns a success or failure value.

| | |
|----------------|---|
| Remote Command | <code>:CALibration:EMIXer</code> <code>:CALibration:EMIXer?</code> |
| Example | <code>:CAL:EMIX</code> |
| Notes | <p>Returns 0 if successful, or 1 if failed</p> <p>While Align Now External Mixer is performing the alignment, Bit 0 in the Status Operation register is set. Completion, or termination, clears Bit 0 in the Status Operation register</p> <p>This command is sequential; it must complete before further SCPI commands are processed.</p> |

| | |
|------------------------------|--|
| | <p>Interrupting the alignment from remote is accomplished by invoking Device Clear followed by the :ABORT command</p> <p>A failure encountered during alignment generate the Error Condition message “Align LO failed” and sets Bit 5 in the Status Questionable Calibration register. Successful completion clears the “Align LO failed” message and Bit 5 in the Status Questionable Calibration register</p> |
| Dependencies | This control does not appear unless option EXM is present and is grayed-out, unless a USB mixer is plugged in to the USB |
| Status Bits/OPC dependencies | Bit3 may be set in the Status Questionable Calibration Extended Failure register |

4.6.2.9 Align Source

Accesses source alignment processes that are immediate action operations. They perform complete operations and run until they are complete.

The instrument stops any sequence of the source, performs the alignment, then restarts the sequence from the beginning.

Note: This alignment corrects slow-rate drift, which does not impair specifications for time periods shorter than one week. Thus, it is required to perform this alignment on a weekly basis to maintain specifications. This alignment typically takes >2 minutes to complete.

There is no alert available for the source alignment. Operators are responsible for checking temperature shift since the last **Align Now Source** to determine whether the source alignment needs to be executed.

| | |
|----------------|--|
| Remote Command | :CALibration:INTernal:SOURce[:ALL] :CALibration:INTernal:SOURce[:ALL]? |
| Example | :CAL:INT:SOUR |
| Notes | :CAL:INT:SOUR? Initiates an Alignment and returns 0 if successful, or 1 if failed |
| Dependencies | Only appears in VXT models M9410A/11A |
| Couplings | Initializes the time for the Last Align Source Now, All Time Records the temperature for the Last Align Source Now, All Temperature |

Overlapped Command

| | |
|----------------|--|
| Remote Command | :CALibration:INTernal:SOURce[:ALL]:NPending |
| Example | :CAL:INT:SOUR:NPEN |
| Notes | :CALibration:INTernal:SOURce[:ALL]:NPending is the same as :CALibration:INTernal:SOURce[:ALL] , including all conditions and status register bits, except that this SCPI command <i>does not block</i> the SCPI session, so you should use status register bits to query whether the calibration is successfully completed or not Typical usage is: |

| | |
|--------------|--|
| | <ol style="list-style-type: none"> 1. <code>:CALibration:INTernal:SOURce:NPending</code> (start an internal source calibration) 2. <code>:STATus:OPERation:CONDition?</code> (Check if the calibration is completed or not, If Bit 0 is set, then the system is doing calibration. Repeat this query until the bit is cleared) 3. <code>:STATus:QUEStionable:CALibration:EXTended:FAILure:CONDition?</code> (Check if Bit 14 is set or not. If this bit is set, that means there are some errors in previous internal source calibration) |
| Dependencies | Only appears in VXT models M9410A/11A |

4.6.2.10 Align Receiver

Accesses receiver alignment processes that are immediate action operations. They perform complete operations and run until they are complete.

NOTE

This alignment corrects slow-rate drift, which does not impair specifications for time periods shorter than one week. Thus, it is required to perform this alignment on a weekly basis to maintain specifications. This alignment typically takes >2 minutes to complete.

There is no alert available for the receiver alignment. Operators are responsible for checking temperature shift since the last Align Now, Align Receiver, to determine whether the receiver alignment needs to be executed.

| | |
|----------------|--|
| Remote Command | <code>:CALibration:INTernal:RECeiver[:ALL]</code> <code>:CALibration:INTernal:RECeiver[:ALL]?</code> |
| Example | <code>:CAL:INT:REC</code> |
| Notes | The query initiates an Alignment and returns 0 if successful, or 1 if failed |
| Dependencies | Only appears in VXT models M9410A/11A |
| Couplings | Initializes the time for the Last Align Receiver Now, All Time Records the temperature for the Last Align Receiver Now, All Temperature |

4.6.2.11 Align Fast

Accesses fast alignment processes, which are immediate action operations and perform complete operations, running until they are complete.

This aligns the subsystem that is most sensitive to temperature and time and includes:

- compensating the DC offset, gain imbalance and quadrature phase imbalance of IQ Modulator and/or Demodulator
- compensating the gain offset of RF path

4 System

4.6 Alignments

It is suggested to perform Fast Alignment every 8 hours or when temperature has changed more than 5°C from the previous Fast Alignment.

| | |
|----------------|---|
| Remote Command | <code>:CALibration:INTernal:FAST[:ALL]</code> <code>:CALibration:INTernal:FAST[:ALL]?</code> |
| Example | <code>:CAL:INT:FAST</code> |
| Notes | The query initiates an Alignment and returns 0 if successful, or 1 if failed |
| Dependencies | Only appears in VXT models M9410A/11A /15A/16A |

4.6.2.12 Align LO Leakage

Accesses LO Leakage alignment processes, which are immediate action operations and perform complete operations, running until they are complete.

This alignment reduce the LO Leakage of the instrument.

| | |
|----------------|---|
| Remote Command | <code>:CALibration:INTernal:LOLeakage</code> <code>:CALibration:INTernal:LOLeakage?</code> |
| Example | <code>:CAL:INT:LOL</code> |
| Notes | The query initiates an Alignment and returns 0 if successful, or 1 if failed |
| Dependencies | Only appears in VXT models M9410A/11A /15A/16A |

4.6.2.13 Align IF Cable

Accesses IF Cable alignment processes, which are immediate action operations and perform complete operations, running until they are complete.

This alignment aligns the IF cabling to the remote heads.

| | |
|------------------------------|---|
| Remote Command | <code>:CALibration:INTernal:RRHead:IFCable</code> <code>:CALibration:INTernal:RRHead:IFCable?</code> |
| Example | <code>:CAL:INT:RRH:IFC</code> |
| Notes | The query initiates an Alignment and returns 0 if successful, or 1 if failed |
| Dependencies | Only appears in VXT based solutions with M1740A/41A/42A/49A/49B RRH |
| Backwards Compatibility SCPI | <code>:CALibration:INTernal:IFCable</code> <code>:CALibration:INTernal:IFCable?</code> |

4.6.2.14 Align RRH Amplitude

This is an immediate action operation, which runs until complete.

Aligns the Amplitude of Remote Radio Head. This operation could take quite a long time to run.

CAUTION

For M1741A/49A/49B RRH, make sure to connect 50-ohm terminations to Head Tx/Rx 1 and 2 ports.

| | |
|--------------------|---|
| Remote Command | <code>:CALibration:INTernal:RRHead:AMPLitude</code> <code>:CALibration:INTernal:RRHead:AMPLitude?</code> |
| Example | <code>:CAL:INT:RRH:AMPL?</code> |
| Notes | The query initiates an Alignment and returns 0 if successful, or 1 if failed |
| Dependencies | Only appears in VXT based solutions with M1741A/42A/49A/49B RRH |
| Backwards | <code>:CALibration:INTernal:RRHAmp</code> |
| Compatibility SCPI | <code>:CALibration:INTernal:RRHAmp?</code> |

4.6.2.15 Align Fast RRH Amplitude

This is an immediate action operation, which runs until complete.

Compare to Align RRH Amplitude, it aligns the amplitude of Remote Radio Head with a wider frequency interval. This operation takes about one minute.

| | |
|----------------|---|
| Remote Command | <code>:CALibration:INTernal:RRHead:AMPLitude:FAST</code> <code>:CALibration:INTernal:RRHead:AMPLitude:FAST?</code> |
| Example | <code>:CAL:INT:RRH:AMPL:FAST?</code> |
| Notes | The query initiates an alignment and returns 0 if successful, or 1 if failed |
| Dependencies | Only appears in VXT based solutions with M1742A RRH |

4.6.2.16 Align RRH LO Power

This is an immediate action operation, which runs until complete.

Aligns the LO Power of Remote Radio Head.

| | |
|----------------|---|
| Remote Command | <code>:CALibration:INTernal:RRHead:LOPower</code> <code>:CALibration:INTernal:RRHead:LOPower?</code> |
| Example | <code>:CAL:INT:RRH:LOP</code> |
| Notes | The query initiates an alignment and returns 0 if successful, or 1 if failed |
| Dependencies | Only appears in VXT based solutions with M1741A/49A/49B RRH |

4.6.2.17 Align LO Clock

This is an immediate action operation, which runs until complete.

Synchronizes RRH LO Clocks.

| | |
|--------------------|---|
| Remote Command | <code>:CALibration:INTernal:RRHead:LOSync</code> <code>:CALibration:INTernal:RRHead:LOSync?</code> |
| Example | <code>:CAL:INT:RRH:LOS?</code> |
| Notes | The query initiates an Alignment and returns 0 if successful, or 1 if failed |
| Dependencies | Only appears in VXT based solutions with M1741A/42A/49A/49B RRH |
| Backwards | <code>:CALibration:INTernal:LOSync</code> |
| Compatibility SCPI | <code>:CALibration:INTernal:LOSync?</code> |

4.6.2.18 Align VXT Transceiver

In M941xE(M941xA+M9471A) system, accesses alignment processes in VXT Transceiver(M9410A/11A/15A/16A), which are immediate action operations and perform complete operations, running until they are complete.

The instrument stops any measurement currently underway, performs the alignment, then restarts the measurement from the beginning (similar to pressing the **Restart** key).

There is no alert available for the VXT Transceiver alignment. Operators are responsible for checking temperature shift since the last **Align VXT Transceiver** to determine whether the VXT Transceiver alignment needs to be executed.

| | |
|----------------|---|
| Remote Command | <code>:CALibration:INTernal:VXT:TRANsceiver</code> <code>:CALibration:INTernal:VXT:TRANsceiver?</code> |
| Example | <code>:CAL:INT:VXT:TRAN</code> |
| Notes | The query initiates an Alignment and returns 0 if successful, or 1 if failed |
| Dependencies | Only appears on M9410E/11E/15E/16E |

4.6.2.19 Align up down converter

In M941xE(M941xA+M9471A) system, accesses alignment processes in up down converter (M9471A), which are immediate action operations and perform complete operations, running until they are complete.

The instrument stops any measurement currently underway, performs the alignment, then restarts the measurement from the beginning (similar to pressing the **Restart** key).

There is no alert available for the up down converter alignment. Operators are responsible for checking temperature shift since the last **Align up down converter** to determine whether the up down converter alignment needs to be executed.

| | |
|----------------|---|
| Remote Command | <code>:CALibration:UPDown:CONVerter</code> <code>:CALibration:UPDown:CONVerter?</code> |
| Example | <code>:CAL:UPD:CONV</code> |
| Notes | The query initiates an Alignment and returns 0 if successful, or 1 if failed |
| Dependencies | Only appears on M9410E/11E/15E/16E |

4.6.2.20 Align Selected Freq Ranges

VXT models M9410A/11A provide five alignments: **Align Now All**, **Align Source**, **Align Receiver**, **Align Fast** and **Align LO Leakage**. Every time you execute one of these alignments, the system performs a full span alignment. To save time, it is possible to limit the range of alignment frequency settings. **Align Selected Freq Ranges** allows you to set the start and stop frequency of an alignment.

The example below shows the steps for processing Align Receiver on VXT model M9410A, specifying a frequency range from 1.3 GHz to 1.8 GHz, and 2.5 GHz to 3.9 GHz.

- First row: set the Start and Stop Frequency to 1.3 GHz and 1.8 GHz. Enable the first row
- Second row: set the Start and Stop Frequency to 2.5 GHz and 3.9 GHz. Enable the second row
- Click **Align Receiver**. A message appears: “Aligning Selected Freq Ranges 1 of 7”

The equivalent SCPI command sequence is:

```
:CAL:INT:ASFR ON
:CAL:INT:ASFR:FRAN 1.3 GHz, 1.8 GHz, 2.5 GHz, 3.9 GHz
:CAL:INT:REC
```

| | |
|----------------|---|
| Remote Command | <code>:CALibration:INTernal:ASFRanges[:STATe] ON OFF 1 0</code> <code>:CALibration:INTernal:ASFRanges?</code> |
| Example | <code>:CAL:INT:ASFR ON</code> <code>:CAL:INT:ASFR?</code> |
| Notes | When Align Selected Freq Ranges is ON , the table is displayed for setting up the frequency ranges to be aligned |
| Dependencies | Only available in: <ul style="list-style-type: none"> – VXT models M9410A/11A – VXT models M9410A/11A with RRH and/or CIU – M9410E/11E |

Only functional for the following alignments:

- Align Now All of VXT models M9410A/11A and M9410E/11E
- Align Source
- Align Receiver
- Align Fast
- Align LO Leakage
- Align VXT Transceiver of M910E/11E
- Align Up Down Converter of M9410E/11E

Align Selected Freq Ranges only guarantees the hardware performance within the frequency range

Preset **OFF**

Enable Extended Freq Range

Allows you to set frequency ranges for VXT models M9410A/11A/15A with Remote Head and/or CIU. When Enable Extended Freq Range is not active, the frequency range is limited by VXT models only.

Remote Command **:CALibration:INTernal:ASFRanges:EXTend[:STATE] ON | OFF | 1 | 0**
:CALibration:INTernal:ASFRanges:EXTend[:STATE]?

Example **:CAL:INT:ASFR:EXT ON**
:CAL:INT:ASFR:EXT?

Dependencies Only available in VXT models M9410A/11A/15A/16A with Remote Head and/or CIU
Only available when **Align Specified Freq Ranges** is **ON**

Preset **OFF**

Frequency Range

Allows you to set the alignment frequency range.

Remote Command **:CALibration:INTernal:ASFRanges:FRANges <startFreq>,<stopFreq>[,<startFreq>,<stopFreq>][,<startFreq>,<stopFreq>][,<startFreq>,<stopFreq>][,<startFreq>,<stopFreq>]**

Example **:CAL:INT:ASFR:FRAN 1.3 GHz,1.8 GHz,2.5 GHz,3.9 GHz**
:CAL:INT:ASFR:FRAN?

Notes **<startFreq>**: Start frequency of an alignment
<stopFreq>: Stop frequency of an alignment
To process alignment for a single frequency point, set **<startFreq> = <stopFreq>**

| | |
|--------------|---|
| Dependencies | <p>Only appears when "Align VXT Transceiver" on page 1940 is ON</p> <p>Error message "Invalid alignment frequency range" is reported if start and stop frequencies are invalid, such as:</p> <ol style="list-style-type: none"> 1. Stop frequency - Start frequency < 0 2. the count of start and stop frequency is not even 3. the frequency is out of range. See "More Information" on page 1943 4. more than 5 pairs of start and stop frequency are listed |
| Preset | 1.0 GHz, 2.0 GHz |

More Information

When **"Enable Extended Freq Range" on page 1942** is not active, the frequency range depends on the VXT models. The table below lists the Start and Stop Frequency Ranges for VXT models M9410A/11A/15A:

| Hardware | Options | Min Frequency | Max Frequency |
|------------|-----------------|---------------|---------------|
| M9410A/11A | F06 | 330 MHz | 6.08 GHz |
| M9410A/11A | F06 & EP6 | 330 MHz | 6.6 GHz |
| M9410A/11A | F06 & LFE & EP6 | 6.5 kHz | 6.6 GHz |
| M9415A/16A | F06 | 330 MHz | 6.6 GHz |
| M9415A/16A | F08 | 330 MHz | 8.6 GHz |
| M9415A/16A | F12 | 330 MHz | 12.9 GHz |

When **Enable Extended Freq Range** is active, the frequency range depends on the extensions connected to VXT models. The table below lists the Start and Stop Frequency Range of VXT models with Radio Heads/CIU:

| Connected with Radio Heads/CIU | Min frequency | Max frequency | IF Frequency range |
|--------------------------------|---------------|---------------|--------------------|
| VXT + CIU | 5.9 GHz | 12 GHz | 1.4 GHz ~ 4.6 GHz |
| VXT + CIU + RRH | 24.25 GHz | 43.5 GHz | 2.5 GHz ~ 4.5 GHz |
| VXT + M1742A | 10 GHz | 32 GHz | 3.0 GHz ~ 5.5 GHz |

NOTE

The Min frequency and Max frequency are also the preset frequencies. It is recommended to keep the preset frequency range for VXT models with extensions. An alignment with the full IF Frequency range will be executed ignoring the specific ranges.

The table below lists the Frequency Range of M941xE(VXT Models with M9471A)

| Products with M9471A | Preset | Receiver minimum settable frequency | Source minimum settable (center)frequency | Minimum center frequency with Spec | Receiver maximum settable(center) frequency | Source maximum settable (center) frequency |
|---|--------|-------------------------------------|---|------------------------------------|---|--|
| M941xE without LFE option | 1 GHz | 330.000005 MHz | 330 MHz | 380MHz | 26.499999995 GHz | 26.5GHz |
| M941xE with LFE option (LFE option in M9411A or M9471A) | 1 GHz | 750.005 kHz | 750 kHz | 1MHz | 26.499999995 GHz | 26.5GHz |

NOTE The minimum spec frequency is 380 MHz, but the receiver minimum settable center frequency is 330.000005 MHz, the source minimum settable center frequency is 330 MHz.

With Option LFE in M9411A or in M9471A, the receiver minimum settable frequency is 750.005 kHz, the source minimum settable frequency is 750 kHz, but Spec to customer only ensure down to 1 MHz.

Enable

Enables or disables the selected frequency ranges.

Preset **Row 1: ON**
Other rows: OFF

4.6.2.21 Align External Mixer Path

Immediately executes an alignment of the External Mixer Path inside the VXT models M9415A/16A. External Mixer Path is used when the RF Port is connected to an external Remote Radio Head (RRH). It provides a better performance compared to the normal path. External Mixer Path Alignment covers frequencies from 2.4 GHz to 3.4 GHz of the external mixer path.

NOTE This alignment corrects slow-rate drift, which does not impair specifications for time periods shorter than one week. Thus, you need only perform this alignment on a weekly basis to maintain specifications. This alignment typically takes >2 minutes to complete.

There is no alert for the External Mixer Path alignment. You are responsible for checking the temperature shift since the last **Align Now, External Mixer Path**, to determine whether the external mixer path alignment needs to be executed.

| | |
|----------------|--|
| Remote Command | <code>:CALibration:INTernal:EMPath</code> <code>:CALibration:INTernal:EMPath?</code> |
| Example | <code>:CAL:INT:EMP</code> |
| Notes | The query initiates an alignment and returns 0 if successful, or 1 if failed |
| Dependencies | Only appears in VXT models M9415A/16A when Option MXP is installed |
| Couplings | Initializes the time for the Last Align External Mixer Path Now, All Time Records the temperature for the Last Align External Mixer Path Now, All Temperature |

4.6.2.22 Align Low Band

Accesses Low Band alignment processes that are immediate action operations. They perform complete operations and run until they are complete. Low Band Alignment covers frequencies from 380 MHz to 4.3 GHz of the non-external mixer path.

NOTE

This alignment corrects slow-rate drift, which does not impair specifications for time periods shorter than one week. Thus, you need only perform this alignment on a weekly basis to maintain specifications. This alignment typically takes >2 minutes to complete.

There is no alert for the Low Band alignment. You are responsible for checking the temperature shift since the last **Align Now, Align Low Band**, to determine whether the Low Band alignment needs to be executed.

| | |
|----------------|--|
| Remote Command | <code>:CALibration:INTernal:LBAND[:ALL]</code> <code>:CALibration:INTernal:LBAND[:ALL]?</code> |
| Example | <code>:CAL:INT:LBAN</code> |
| Notes | The query initiates an Alignment, and returns 0 if successful, or 1 if failed |
| Dependencies | Only appears in VXT models M9415A/16A |
| Couplings | Initializes the time for the Last Align Low Band Now, All Time Records the temperature for the Last Align Low Band Now, All Temperature |

4.6.2.23 Align High Band

Accesses High Band alignment processes that are immediate action operations. They perform complete operations and run until they are complete. High Band Alignment covers frequencies from 4.3 GHz to 12 GHz of the non-external mixer path.

NOTE

This alignment corrects slow-rate drift, which does not impair specifications for time periods shorter than one week. Thus, you need only perform this alignment on a weekly basis to maintain specifications. This alignment typically takes >2 minutes to complete.

There is no alert for the High Band alignment. You are responsible for checking the temperature shift since last **Align Now, Align High Band**, to determine whether the High Band alignment needs to be executed.

| | |
|----------------|---|
| Remote Command | <code>:CALibration:INTernal:HBAND[:ALL]</code> <code>:CALibration:INTernal:HBAND[:ALL]?</code> |
| Example | <code>:CAL:INT:HBAN</code> |
| Notes | The query initiates an Alignment, and returns 0 if successful, or 1 if failed |
| Dependencies | Only appears in VXT models M9415A/16A |
| Couplings | Initializes the external time for the Last Align High Band Now, All Time Records the temperature for the Last Align High Band Now, All Temperature |

4.6.3 Path Delay Calibration

Path Delay Calibration is used to remove the time delay differences between multiple power channels of a module.

| | |
|--------------|--|
| Dependencies | Only available in VXT modules M9410A/11A Only for modules with matched Digital board hardware version, which means the modules are in same FPGA version The matched hardware version information is in below table |
|--------------|--|

| | Digital board Hardware version | Matched module |
|--------|--------------------------------|----------------|
| M9410A | 2,3,4,6,10,11 | Yes |
| M9410A | 12, 13 | Yes |
| M9411A | 18 | Yes |
| M9411A | 20,21 | Yes |
| M9411A | 12,13 | Yes |
| M9411A | 0,1,2,3,4,6,10,11 | Yes |

4.6.3.1 Source Path Delay Calibration

Accesses the Source Path Delay Calibration processes, which are immediate-action operations and perform complete operations, running until they are complete.

NOTE Connect the RF In of the primary module to the OUT port (COMMON, PORT 1) of the combiner.

NOTE Before performing Path Delay Calibration of Sources, please confirm that:

NOTE Each of the RF Out ports is connected to the RF In port of the Primary channel, using an RF combiner.

NOTE The cables between the combiner and the Source output ports are of the same length.

NOTE A pop-up window appears (as shown below); press OK to continue calibration.

NOTE If the is in MIMO sync, and you send a SCPI command to run Calibration, the calibration process is not executed and instrument a warning is generated (“-221,Setting Conflict; Calibrations are not available while MIMO Sync is On”). To execute Calibration, you must first stop MIMO, manually or via SCPI.

Remote Command :CALibration:PDElay:SOURce
 :CALibration:PDElay:SOURce?

Example :CAL:PDEL:SOUR

Notes The query initiates an Alignment and returns 0 if successful, or 1 if failed
 If the calibration process detected a faulty state, an error will be generated: “Misc/System Alignment Failure”. Calibration will be aborted. Please see event log for more information:

1. Cables are not connected
2. Power control failure
3. Hardware failure
4. M9300A 10MHz reference open failure

Dependencies Only appears in VXT models M9410A/11A
 Only for modules with matched Digital board hardware version, which means the modules are in same FPGA version

4.6.3.2 Path Delay Correction On/Off(Remote Command only)

On/Off the path delay correction to enable the calibration data on the source of the module.

| | |
|----------------|--|
| Remote Command | <code>:CALibration:PDElay:CORRection ON OFF</code> <code>:CALibration:PDElay:CORRection?</code> |
| Example | <code>:CAL:PDEL:CORR ON</code> |
| Notes | If the Path Delay Calibration has never been performed and there is no calibration correction data in the controller, an alert is generated |
| Preset | <code>OFF</code> |
| Range | <code>ON OFF</code> |

4.6.4 Show Alignment Statistics

Shows alignment information you can use to ensure that the instrument is operating in a specific manner. The **Show Alignment Statistics** screen is where you can view time and temperature information.

Values displayed are only updated when the **Show Alignment Statistics** screen is invoked. They are not updated while the **Show Alignment Statistics** screen is being displayed. The remote commands that access this information obtain current values.

Note that some of these statistics only display if your instrument supports them; for example, Last Source Align Now All Time only shows up in instruments which contain a source which supports auto alignments.

An example of the **Show Alignment Statistics** screen would be similar to:

| | | |
|---------------------------|---|--|
| Std Header | Product Number: N9020A Serial Number: US46340924 Firmware Revision: A.01.01 | |
| Instrument Info | Time since start-up: 300 hrs Current Temperature: +28 degC | Times & Temperature delta. Shown as "... " if none since start-up. |
| Auto Align Info | Time while Auto Align off: 90 min | |
| Std Align Now | Time since last Align Now All: 12.5 hrs Temperature since last Align Now All: -1.3 degC Time since last Align Now RF: 5 min Temperature since last Align Now RF: +0.1 degC | |
| If TG Option (Not Zorro1) | Time since last Align TG: 2.5 hrs Temperature since last Align TG: +0.2 degC | |
| Opts 508,513 526 | Last Characterize Preselector: Jun 1, 2006 15:00:00 Last Characterize Preselector Temperature: +32.1 degC | Time & Temperature 'stamp' |

“Time while Auto Align off” is not available in VXT models M9410A/11A.

A successful **Align Now, RF** sets the Last Align RF temperature to the current temperature, and resets the Last Align RF time. A successful **Align Now All** or **Align Now All but RF** sets the Last Align Now All temperature to the current temperature, and resets the Last Align Now All time. A successful **Align Now All** also resets the Last Align RF items if the RF portion of the **Align Now** succeeded.

Example `:SYST:SHOW ALIGN`

Notes The values displayed on the screen are only updated upon entry to the screen, and not updated while the screen is being displayed

The following data-specific queries are available:

Query Time since Startup

Remote Command `:SYSTem:PON:TIME?`

Example `:SYST:PON:TIME?`

Notes Value is the time since the most recent start-up in seconds

State Saved No

Query Current Temperature

Remote Command `:CALibration:TEMPerature:CURRent?`

Example `:CAL:TEMP:CURR?`

Notes Value is in degrees Centigrade

State Saved No

Query Current Temperature at Remote Radio Head

| | |
|----------------|---|
| Remote Command | <code>:CALibration:TEMPerature:CURRent:RRHead?</code> |
| Example | <code>:CAL:TEMP:CURR:RRH?</code> |
| Notes | Value is in degrees Centigrade |
| Dependencies | Only appears when Align RRH Amplitude is available |
| State Saved | No |

Query Current Temperature at Remote Radio Head LO

| | |
|----------------|--|
| Remote Command | <code>:CALibration:TEMPerature:CURRent:RRHead:LO?</code> |
| Example | <code>:CAL:TEMP:CURR:RRH:LO?</code> |
| Notes | Value is in degrees Centigrade |
| Dependencies | Only appears when Align RRH LO Power is available |
| State Saved | No |

Query Time since Last Align Now All

| | |
|----------------|---|
| Remote Command | <code>:CALibration:TIME:LALL?</code> |
| Example | <code>:CAL:TIME:LALL?</code> |
| Notes | Value is the elapsed time, in seconds, since the last successful Align Now All or Align Now All but RF was executed |
| State Saved | No |

Query Temperature of Last Align Now All

| | |
|----------------|--|
| Remote Command | <code>:CALibration:TEMPerature:LALL?</code> |
| Example | <code>:CAL:TEMP:LALL?</code> |
| Notes | Value is in degrees Centigrade at which the last successful Align Now All or Align Now All but RF was executed |
| State Saved | No |

Query Time since Last Align Now Receiver

| | |
|----------------|--|
| Remote Command | <code>:CALibration:TIME:INTernal:RECeiver?</code> |
| Example | <code>:CAL:TIME:INT:REC?</code> |
| Notes | Value in hours since the last successful Align Now Receiver |
| Dependencies | Only appears in VXT models M9410A/11A |
| State Saved | No |

Query Temperature of Last Align Now Receiver

| | |
|----------------|---|
| Remote Command | <code>:CALibration:TEMPerature:INTernal:RECeiver?</code> |
| Example | <code>:CAL:TEMP:INT:REC?</code> |
| Notes | Value in degrees Centigrade when the last successful Align Now Receiver was executed |
| Dependencies | Only appears in VXT models M9410A/11A |
| State Saved | No |

Query Time since Last Align Now Source

| | |
|----------------|--|
| Remote Command | <code>:CALibration:TIME:INTernal:SOURce?</code> |
| Example | <code>:CAL:TIME:INT:SOUR?</code> |
| Notes | Value in hours since the last successful Align Now Source |
| Dependencies | Only appears in VXT models M9410A/11A |
| State Saved | No |

Query Temperature of Last Align Now Source

| | |
|----------------|---|
| Remote Command | <code>:CALibration:TEMPerature:INTernal:SOURce?</code> |
| Example | <code>:CAL:TEMP:INT:SOUR?</code> |
| Notes | Value in degrees Centigrade when the last successful Align Now Source was executed |
| Dependencies | Only appears in VXT models M9410A/11A |
| State Saved | No |

Query Time since Last Align Now Fast

| | |
|----------------|--|
| Remote Command | <code>:CALibration:TIME:INTernal:FAST?</code> |
| Example | <code>:CAL:TIME:INT:FAST?</code> |
| Notes | Value in hours since the last successful Align Now Fast |
| Dependencies | Only appears in VXT models M9410A/11A/15A/16A |
| State Saved | No |

Query Temperature of Last Align Now Fast

| | |
|----------------|---|
| Remote Command | <code>:CALibration:TEMPerature:INTernal:FAST?</code> |
| Example | <code>:CAL:TEMP:INT:FAST?</code> |
| Notes | Value in degrees Centigrade when the last successful Align Now Fast was executed |
| Dependencies | Only appears in VXT models M9410A/11A/15A/16A |
| State Saved | No |

Query Time since Last Align Now LO Leakage

| | |
|----------------|--|
| Remote Command | <code>:CALibration:TIME:INTernal:LOLeakage?</code> |
| Example | <code>:CAL:TIME:INT:LOL?</code> |
| Notes | Value in hours since the last successful Align Now LO Leakage |
| Dependencies | Only appears in VXT models M9410A/11A/15A/16A |
| State Saved | No |

Query Temperature of Last Align Now LO Leakage

| | |
|----------------|---|
| Remote Command | <code>:CALibration:TEMPerature:INTernal:LOLeakage?</code> |
| Example | <code>:CAL:TEMP:INT:LOL?</code> |
| Notes | Value in degrees Centigrade when the last successful Align Now LO Leakage was executed |
| Dependencies | Only appears in VXT models M9410A/11A/15A/16A |
| State Saved | No |

Query Time since Last Align Now IF Cable

| | |
|------------------------------|---|
| Remote Command | <code>:CALibration:TIME:INTernal:RRHead:IFCable?</code> |
| Example | <code>:CAL:TIME:INT:RRH:IFC?</code> |
| Notes | Value in hours since the last successful Align Now IF Cable |
| Dependencies | Only appears in VXT based solutions with M1740A/41A/42A/49A/49B RRH |
| State Saved | No |
| Backwards Compatibility SCPI | <code>:CALibration:TIME:INTernal:IFCable?</code> |

Query Temperature of Last Align Now IF Cable

| | |
|------------------------------|---|
| Remote Command | <code>:CALibration:TEMPerature:INTernal:RRHead:IFCable?</code> |
| Example | <code>:CAL:TEMP:INT:RRH:IFC?</code> |
| Notes | Value in degrees Centigrade when the last successful Align Now IF Cable was executed |
| Dependencies | Only appears in VXT based solutions with M1740A/41A/42A/49A/49B RRH |
| State Saved | No |
| Backwards Compatibility SCPI | <code>:CALibration:TEMPerature:INTernal:IFCable?</code> |

Query Time since Last Align LO Clock

| | |
|----------------|--|
| Remote Command | <code>:CALibration:TIME:INTernal:RRHead:LOSync?</code> |
|----------------|--|

| | |
|---------------------------------|---|
| Example | <code>:CAL:TIME:INT:RRH:LOS?</code> |
| Notes | Value in hours since the last successful Align LO Clock |
| Dependencies | Only appears in VXT based solutions with M1741A/42A/49A/49B RRH |
| State Saved | No |
| Backwards Compatibility SCPI | <code>:CALibration:TIME:INTernal:LOSync?</code> |

Query Temperature of Last Align LO Clock

| | |
|---------------------------------|--|
| Remote Command | <code>:CALibration:TEMPerature:INTernal:RRHead:LOSync?</code> |
| Example | <code>:CAL:TEMP:INT:RRH:LOS?</code> |
| Notes | Value in degrees Centigrade when the last successful Align LO Clock was executed |
| Dependencies | Only appears in VXT based solutions with M1741A/42A/49A/49B RRH |
| State Saved | No |
| Backwards Compatibility SCPI | <code>:CALibration:TEMPerature:INTernal:LOSync?</code> |

Query Time since Last Align RRH Amplitude

| | |
|---------------------------------|---|
| Remote Command | <code>:CALibration:TIME:INTernal:RRHead:AMPLitude?</code> |
| Example | <code>:CAL:TIME:INT:RRH:AMPL?</code> |
| Notes | Value in hours since the last successful Align RRH Amplitude |
| Dependencies | Only appears in VXT based solutions with M1741A/42A/49A/49B RRH |
| State Saved | No |
| Backwards Compatibility SCPI | <code>:CALibration:TIME:INTernal:RRHAmp?</code> |

Query Temperature of Last Align RRH Amplitude

| | |
|---------------------------------|---|
| Remote Command | <code>:CALibration:TEMPerature:INTernal:RRHead:AMPLitude?</code> |
| Example | <code>:CAL:TEMP:INT:RRH:AMPL?</code> |
| Notes | Value in degrees Centigrade when the last successful Align RRH Amplitude was executed |
| Dependencies | Only appears in VXT based solutions with M1741A/42A/49A/49B RRH |
| State Saved | No |
| Backwards Compatibility SCPI | <code>:CALibration:TEMPerature:INTernal:RRHAmp?</code> |

Query Time since Last Align Fast RRH Amplitude

| | |
|----------------|---|
| Remote Command | <code>:CALibration:TIME:INTernal:RRHead:AMPLitude:FAST?</code> |
| Example | <code>:CAL:TIME:INT:RRH:AMPL:FAST?</code> |
| Notes | Value in hours since the last successful Align Fast RRH Amplitude |
| Dependencies | Only appears in VXT based solutions with M1742A RRH |
| State Saved | No |

Query Temperature of Last Align Fast RRH Amplitude

| | |
|----------------|--|
| Remote Command | <code>:CALibration:TEMPerature:INTernal:RRHead:AMPLitude:FAST?</code> |
| Example | <code>:CAL:TEMP:INT:RRH:AMPL:FAST?</code> |
| Notes | Value in degrees Centigrade when the last successful Align Fast RRH Amplitude was executed |
| Dependencies | Only appears in VXT based solutions with M1742A RRH |
| State Saved | No |

Query Time since Last Align RRH LO Power

| | |
|----------------|---|
| Remote Command | <code>:CALibration:TIME:INTernal:RRHead:LOPower?</code> |
| Example | <code>:CAL:TIME:INT:RRH:LOP?</code> |
| Notes | Value in hours since the last successful Align RRH LO Power |
| Dependencies | Only appears in VXT based solutions with M1741A/49A/49B RRH |
| State Saved | No |

Query Temperature of Last Align RRH LO Power

| | |
|----------------|--|
| Remote Command | <code>:CALibration:TEMPerature:INTernal:RRHead:LOPower?</code> |
| Example | <code>:CAL:TEMP:INT:RRH:LOP?</code> |
| Notes | Value in degrees Centigrade when the last successful Align RRH LO Power was executed |
| Dependencies | Only appears in VXT based solutions with M1741A/49A/49B RRH |
| State Saved | No |

Query Time since Last Align Now RF

| | |
|----------------|---|
| Remote Command | <code>:CALibration:TIME:LRF?</code> |
| Example | <code>:CAL:TIME:LRF?</code> |
| Notes | Value is the elapsed time, in seconds, since the last successful Align Now, RF was executed, either individually or as a component of Align Now All |
| State Saved | No |

Query Temperature of Last Align Now RF

| | |
|----------------|---|
| Remote Command | <code>:CALibration:TEMPerature:LRF?</code> |
| Example | <code>:CAL:TEMP:LRF?</code> |
| Notes | Value is in degrees Centigrade at which the last successful Align Now RF was executed, either individually or as a component of Align Now All |
| State Saved | No |

Query Time since Last Align IF

| | |
|----------------|---|
| Remote Command | <code>:CALibration:TIME:LIF?</code> |
| Example | <code>:CAL:TIME:LIF?</code> |
| Notes | Value is the elapsed time, in seconds, since the last successful Align IF was executed |
| State Saved | No |

Query Temperature of Last Align IF

| | |
|----------------|--|
| Remote Command | <code>:CALibration:TEMPerature:LIF?</code> |
| Example | <code>:CAL:TEMP:LIF?</code> |
| Notes | Value is in degrees Centigrade at which the last successful Align IF was executed |
| State Saved | No |

Query Time since Last Characterize Preselector

| | |
|----------------|---|
| Remote Command | <code>:CALibration:TIME:LPreselector?</code> |
| Example | <code>:CAL:TIME:LPR?</code> |
| Notes | Value is the date and time the last successful Characterize Preselector was executed. The date is separated from the time by a space character Returns "" if no Characterize Preselector has ever been performed on the instrument |
| Dependencies | In models that do not include preselectors, this command is not enabled and any attempt to set or query yields an error |
| State Saved | No |

Query Temperature of Last Characterize Preselector

| | |
|----------------|--|
| Remote Command | <code>:CALibration:TEMPerature:LPreselector?</code> |
| Example | <code>:CAL:TEMP:LPR?</code> |
| Notes | Value is in degrees Centigrade at which the last successful Characterize Preselector was executed |

4 System
4.6 Alignments

| | |
|--------------|---|
| Dependencies | In models that do not include preselectors, this command is not enabled and any attempt to set or query yields an error |
|--------------|---|

State Saved No

Query Time since Auto Align Off

Remote Command `:CALibration:AUTO:TIME:OFF?`

Example `:CAL:AUTO:TIME:OFF?`

Notes Value is the elapsed time, in seconds, since **Auto Align** has been set to **Off** or **Off with Alert**. The value is 0 if **Auto Align** is **ALL** or **NORF**

State Saved No

Query Time since Last Align Now 20 Hz - 30 MHz

Remote Command `:CALibration:TIME:RFPSector:LCONducted?`

Example `:CAL:TIME:RFPS:LCON?`

Notes Values are the date and time the last successful **Align Now, 20 Hz - 30 MHz** was executed. The date is separated from the time by a semi-colon character

State Saved No

Query Temperature of Last Align Now 20 Hz - 30 MHz

Remote Command `:CALibration:TEMPerature:RFPSector:LCONducted?`

Example `:CAL:TEMP:RFPS:LCON?`

Notes Value is in degrees Centigrade at which the last successful **Align Now, 20 Hz - 30 MHz** was executed

State Saved No

Query Time since Last Align Now 30 MHz - 3.6 GHz

Remote Command `:CALibration:TIME:RFPSector:LRADiated?`

Example `:CAL:TIME:RFPS:LRAD?`

Notes Value is the date and time the last successful **Align Now, 30 MHz - 3.6 GHz** was executed. The date is separated from the time by a semi-colon character

State Saved No

Query Temperature of Last Align Now 30 MHz - 3.6 MHz

| | |
|----------------|---|
| Remote Command | <code>:CALibration:TEMPerature:RFPSelector:LRADiated?</code> |
| Example | <code>:CAL:TEMP:RFPS:LRAD?</code> |
| Notes | Value is in degrees Centigrade at which the last successful Align Now, 30 MHz – 3.6 GHz was executed |
| State Saved | No |

Query Next Scheduled Alignment Time

| | |
|----------------|--|
| Remote Command | <code>:CALibration:RFPSelector:SCHeduler:TIME:NEXT?</code> Returns data using the following format: YYYY/MM/DD; HH:MM:SS |
| Example | <code>:CAL:RFPS:SCH:TIME:NEXT?</code> |
| Notes | The next run time will be updated based on the start date/time and recurrence set by the user “date” is representation of the date the task will run in the form: <code>YYYY/MM/DD</code> where: <ul style="list-style-type: none"> - <code>YYYY</code> is the four-digit representation of year. (for example, 2009) - <code>MM</code> is the two-digit representation of month. (for example, 01 to 12) - <code>DD</code> is the two-digit representation of the day. (for example, 01 to 28, 29, 30 or 31 depending on the month and year) “time” is a representation of the time of day the task will run in the form: <code>HH:MM:SS</code> where: <ul style="list-style-type: none"> - <code>HH</code> is the two-digit representation of the hour in 24-hour format - <code>MM</code> is the two-digit representation of minute - <code>SS</code> is the two-digit representation of seconds |
| State Saved | No |

Query Time since Last Align Now External Mixer Path

| | |
|----------------|---|
| Remote Command | <code>:CALibration:TIME:INTernal:EMPath?</code> |
| Example | <code>:CAL:TIME:INT:EMP?</code> |
| Notes | Value in hours since the last successful Align Now External Mixer Path |
| Dependencies | Only appears option MXP is installed |
| State Saved | No |

Query Temperature of Last Align Now External Mixer Path

| | |
|----------------|--|
| Remote Command | <code>:CALibration:TEMPerature:INTernal:EMPath?</code> |
| Example | <code>:CAL:TEMP:INT:EMP?</code> |
| Notes | Value in degrees Centigrade when the last successful Align Now External Mixer Path was executed |
| Dependencies | Only appears option MXP is installed |
| State Saved | No |

Query Time since Last Align Now Low Band

| | |
|----------------|--|
| Remote Command | <code>:CALibration:TIME:INTernal:LBANd?</code> |
| Example | <code>:CAL:TIME:INT:LBAN?</code> |
| Notes | Value in hours since the last successful Align Now Low Band |
| Dependencies | Only appears in VXT models M9415A/16A |
| State Saved | No |

Query Temperature of Last Align Now Low Band

| | |
|----------------|---|
| Remote Command | <code>:CALibration:TEMPerature:INTernal:LBANd?</code> |
| Example | <code>:CAL:TEMP:INT:LBAN?</code> |
| Notes | Value in degrees Centigrade when the last successful Align Now Low Band was executed |
| Dependencies | Only appears in VXT models M9415A/16A |
| State Saved | No |

Query Time since Last Align Now High Band

| | |
|----------------|---|
| Remote Command | <code>:CALibration:TIME:INTernal:HBAN?</code> |
| Example | <code>:CAL:TIME:INT:HBAN?</code> |
| Notes | Value in hours since the last successful Align Now High Band |
| Dependencies | Only appears in VXT models M9415A/16A |
| State Saved | No |

Query Temperature of Last Align Now High Band

| | |
|----------------|--|
| Remote Command | <code>:CALibration:TEMPerature:INTernal:HBANd?</code> |
| Example | <code>:CAL:TEMP:INT:HBAN?</code> |
| Notes | Value in degrees Centigrade when the last successful Align Now High Band was executed |
| Dependencies | Only appears in VXT models M9415A/16A |
| State Saved | No |

Query Time since Last Align VXT Transceiver

| | |
|----------------|---|
| Remote Command | :CALibration:TIME:INTernal:VXT:TRANsceiver? |
| Example | :CAL:TIME:INT:VXT:TRAN? |
| Notes | Value in hours since the last successful Align VXT Transceiver Returns NaN if Align VXT Transceiver has never been performed on the instrument |
| Dependencies | Only appears in M9410E/11E/15E/16E |
| State Saved | No |

Query Temperature of Last Align VXT Transceiver

| | |
|----------------|--|
| Remote Command | :CALibration:TEMPerature:INTernal:VXT:TRANsceiver? |
| Example | :CAL:TEMP:INT:VXT:TRAN? |
| Notes | Value in degrees Centigrade when the last successful Align VXT Transceiver was executed Returns 9.91E+37(NaN) if Align VXT Transceiver has never been performed on the instrument |
| Dependencies | Only appears in M9410E/11E/15E/16E |
| State Saved | No |

Query Time since Last Align Up Down Converter

| | |
|----------------|---|
| Remote Command | :CALibration:TIME:UPDown:CONVerter? |
| Example | :CAL:TIME:UPD:CONV? |
| Notes | Value in hours since the last successful Align Up Down Converter Returns NaN if Align Up Down Converter has never been performed on the instrument |
| Dependencies | Only appears in M9410E/11E/15E/16E |
| State Saved | No |

Query Temperature of Last Align Up Down Converter

| | |
|----------------|--|
| Remote Command | :CALibration:TEMPerature:UPDown:CONVerter? |
| Example | :CAL:TEMP:UPD:CONV? |
| Notes | Value in degrees Centigrade when the last successful Align Up Down Converter was executed Returns 9.91E+37(NaN) if Align Up Down Converter has never been performed on the instrument |
| Dependencies | Only appears in VXT models M9410A/11A and M9410E/11E |
| State Saved | No |

Query Time since Last Path Delay Calibration

| | |
|----------------|----------------------------------|
| Remote Command | :CALibration:TIME:PDElay:SOURce? |
|----------------|----------------------------------|

| | |
|-------------|--|
| Example | <code>:CAL:TIME:PDEL:SOUR?</code> |
| Notes | The value is the elapsed time in hours since the last successful Path Delay Calibration has been performed Returns NaN if the Path Delay Calibration has never been performed |
| State Saved | No |

Query Temperature of Last Path Delay Calibration

| | |
|----------------|---|
| Remote Command | <code>:CALibration:TEMPerature:PDElay:SOURce?</code> |
| Example | <code>:CAL:TEMP:PDEL:SOUR?</code> |
| Notes | The value is in degrees Centigrade at which the last successful Path Delay Calibration has been performed Returns 9.91E+37(NaN) if the Path Delay Calibration has never been performed |
| State Saved | No |

4.6.5 Timebase DAC

Lets you change the setting of the **Timebase DAC** from a factory calibrated setting to your own desired setting.

The display shows the current **Timebase DAC** setting at the top, and gives you a choice of **CALibrated** or **USER** setting. There is also a field for you to enter your desired setting.

| | |
|--------------|-----------------------------------|
| Dependencies | Does not appear in VXT and M941xE |
|--------------|-----------------------------------|

4.6.5.1 Timebase DAC

Allows control of the internal 10 MHz reference oscillator timebase. This may be used to adjust for minor frequency alignment between your signal's reference and the internal frequency reference. This adjustment has no effect if the instrument is operating with an External Frequency Reference.

If the value of the **Timebase DAC** changes (by switching to **CALibrated** from **USER** with **User Value** set to a different value, or in **USER** with a new value entered) an alignment may be necessary. The alignment system will take appropriate action; which will either invoke an alignment or cause an **Alert**.

The **CALibrated** setting sets the **Timebase DAC** to the value established during factory or field calibration. In this case the value displayed at the top of the screen is the calibrated value.

The **USER** setting sets the **Timebase DAC** to the value set on the **User Value** control. In this case the value displayed at the top of the screen is the user value.

| | |
|----------------|---|
| Remote Command | <code>:CALibration:FREquency:REFerence:MODE CALibrated USER</code> <code>:CALibration:FREquency:REFerence:MODE?</code> |
| Example | <code>:CAL:FREQ:REF:MODE CAL</code> |
| Notes | If the value of the timebase is changed the alignment system automatically performs an alignment or alerts that an alignment is due |
| Dependencies | Not available in UXM |
| Preset | Unaffected by Preset , but set to CALibrated by Restore Defaults >"Alignments" on page 1917 |
| State Saved | No |

4.6.5.2 User Value

Lets you set the **Timebase DAC** to a value other than the value established during the factory or field calibration. The current value of the DAC is displayed at the top of the screen. This will be the Calibrated value if **Timebase DAC** is set to **CALibrated**.

| | |
|------------------------------|--|
| Remote Command | <code>:CALibration:FREquency:REFerence:FINE <integer></code> <code>:CALibration:FREquency:REFerence:FINE?</code> |
| Example | <code>:CAL:FREQ:REF:FINE 8191</code> |
| Notes | If the value of the timebase is changed the alignment system automatically performs an alignment or alerts that an alignment is due |
| Couplings | Setting <code>:CAL:FREQ:REF:FINE</code> sets <code>:CAL:FREQ:REF:MODE USER</code> |
| Preset | Unaffected by Preset , but set to the factory setting by Restore Defaults >"Alignments" on page 1917 |
| State Saved | No |
| Min | 0 |
| Max | 16383 |
| Backwards Compatibility SCPI | <code>:CALibration:FREquency:REFerence:COARse</code> ESA hardware contained two DAC controls for the Timebase. In X-Series the command <code>:CALibration:FREquency:REFerence:FINE</code> is the method for adjusting the timebase. The COARse option is provided as an alias to FINE |
| | Backwards Compatibility Command |
| Remote Command | <code>:CALibration:FREquency:REFerence:COARse <integer></code> <code>:CALibration:FREquency:REFerence:COARse?</code> |
| Example | <code>:CAL:FREQ:REF:COAR 8191</code> |
| Notes | This is an alias for <code>:CAL:FREQ:REF:FINE</code> . Any change to COARse is reflected in FINE and <i>vice-versa</i> . See <code>:CAL:FREQ:REF:FINE</code> for description of functionality |
| Couplings | Setting <code>:CAL:FREQ:REF:COAR</code> sets <code>:CAL:FREQ:REF:MODE USER</code> |

4.6.6 Advanced

Accesses alignment processes that are immediate action operations that perform operations that run until complete. **Advanced** alignments are performed on an irregular basis, or require additional operator interaction.

| | |
|--------------|----------------------|
| Dependencies | Not available in UXM |
|--------------|----------------------|

4.6.6.1 Characterize Preselector

The Preselector tuning curve drifts over temperature and time. Recognize that the Amplitude, Presel Center function adjusts the preselector for accurate amplitude measurements at an individual frequency. Characterize Preselector improves the amplitude accuracy by ensuring the Preselector is approximately centered at all frequencies without the use of the Amplitude, Presel Center function. Characterize Preselector can be useful in situations where absolute amplitude accuracy is not of utmost importance, and the throughput savings or convenience of not performing a Presel Center is desired. Presel Center is required prior to any measurement for best (and warranted) amplitude accuracy.

Keysight recommends that the Characterize Preselector operation be performed yearly as part of any calibration, but performing this operation every three months can be worthwhile.

Characterize Preselector immediately executes a characterization of the Preselector, which is a YIG-tuned filter (YTF). The instrument stops any measurement currently underway, performs the characterization, then restarts the measurement from the beginning (similar to pressing the **Restart** key).

The query (`:CALibration:YTF?`) invokes the alignment of the YTF subsystem, and returns a success or failure value.

A failure encountered during alignment generates the Error Condition message “Characterize Preselector failure” and sets Bit 3 in the `STATus:QUESTIONable:CALibration:EXTended:FAILure` status register. Successful completion of **Characterize Preselector** clears this Condition. It also begins the elapsed time counter for Last Characterize Preselector Time, and captures the Last Characterize Preselector Temperature.

The last Characterize Preselector Time and Temperature survives across the power cycle, as this operation is performed infrequently.

NOTE

The Characterize Preselector function can be interrupted, by pressing the Cancel (ESC) front-panel key, or remotely with Device Clear followed by the `:ABORT SCPI` command. None of the new characterization data is then used.

However, since the old characterization data is purged at the beginning of the characterization, you now have an uncharacterized preselector. You should re-execute this function and allow it to finish before making any further preselected measurements.

| | |
|----------------|--|
| Remote Command | <code>:CALibration:YTF</code> <code>:CALibration:YTF?</code> |
| Example | <code>:CAL:YTF</code> |
| Notes | <p><code>:CALibration:YTF?</code> returns 0 if successful, or 1 if failed (including interfering user signal)</p> <p>While Advanced, Characterize Preselector is performing the alignment, Bit 0 in the Status Operation register is set. Completion, or termination, clears Bit 0 in the Status Operation register</p> <p>This command is sequential; it must complete before further SCPI commands are processed. Interrupting the alignment from remote is accomplished by invoking Device Clear followed by the <code>:ABORt</code> command</p> <p>Successful completion clears Bit 9 in the Status Questionable Calibration register</p> <p>A failure encountered during alignment generates the Error Condition message “Characterize Preselector failed” and sets Bit 9 in the Status Questionable Calibration register</p> <p>For Options that support frequencies > 3.6 GHz only</p> |
| Dependencies | This control does not appear in models that do not contain preselectors. In these models the SCPI command is accepted without error, but no action is taken |
| Couplings | <p>Initializes the time for the Last Characterize Preselector Time</p> <p>Records the temperature for the Last Characterize Preselector Temperature</p> <p>Overlapped Command</p> |
| Remote Command | <code>:CALibration:YTF:NPENding</code> |
| Example | <code>:CAL:YTF:NPEN</code> |
| Notes | <p><code>:CALibration:YTF:NPENding</code> is the same as <code>:CALibration:YTF</code>, including all conditions, status register bits, except that this SCPI command <i>does not block</i> the SCPI session, so you should use status register bits to query if the calibration is successfully completed or not</p> <p>Typical usage is:</p> <ol style="list-style-type: none"> 1. <code>:CALibration:YTF:NPENding</code> (Start a YTF calibration) 2. <code>:STATus:OPERation:CONDition?</code> (Check if the calibration is completed or not, If Bit 0 is set, then the system is doing calibration, and you should repeat this query until the bit is cleared) 3. <code>:STATus:QUESTionable:CALibration:EXTended:FAILure:CONDition?</code> (Check whether Bit 2 is set. If this bit is set, that means there are some errors in previous internal source calibration) |

4.6.6.2 Characterize Reference Clock

Calibrates the Reference Input Phase with the External Reference Output. This feature is only available when either option DP2 or B40 is present. It requires connecting the 10 MHz OUT to the EXT REF IN port with a BNC cable before running the characterization.

See ["Front panel guided calibration sequence" on page 1965](#)

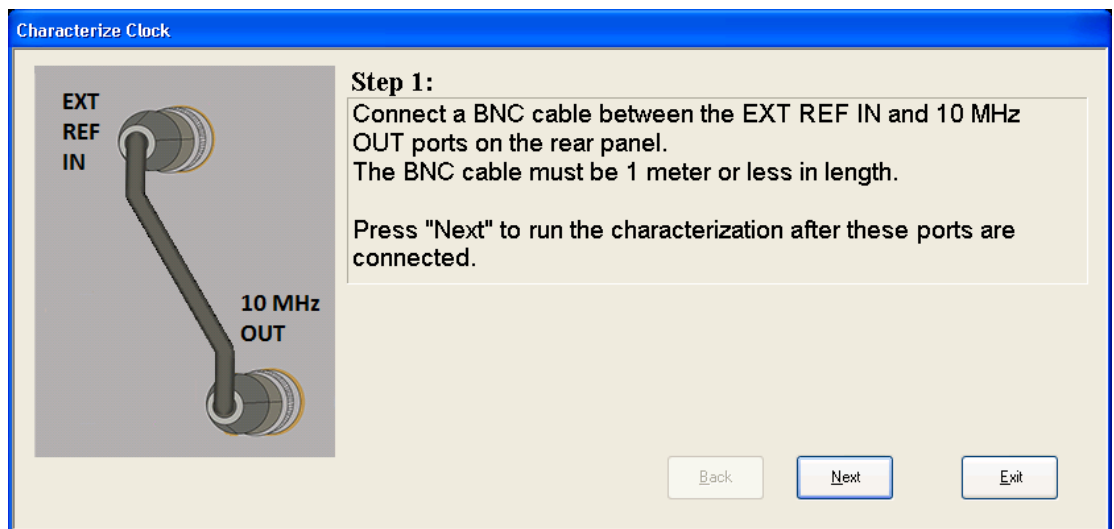

| | |
|----------------|--|
| Remote Command | <code>:CALibration:REference:CLOCK?</code> |
| Example | <code>:CAL:REF:CLOC:INIT?</code> connect cable <code>:CAL:REF:CLOC?</code> disconnect cable <code>:CAL:REF:CLOC:END?</code> |
| Notes | <code>:CALibration:REference:CLOCK?</code> returns 0 if successful, or 1 if failed |
| Dependencies | Option DP2 or B40 |
| Couplings | Initializes the time for the Last Characterize Reference Clock Time Records the temperature for the Last Characterize Reference Clock Temperature. Expected to be run after <code>:CAL:REF:CLOC:INIT</code> , and before <code>:CAL:REF:CLOC:END</code> |
| Remote Command | <code>:CALibration:REference:CLOCK:INITialize?</code> |
| Example | <code>:CAL:REF:CLOC:INIT?</code> |
| Notes | Returns 0 if successful, or 1 if failed |
| Dependencies | Option DP2 or B40 |
| Couplings | Expected to be run before sending <code>:CAL:REF:CLOC?</code> . This will stop the current measurement when it has completed (does not abort the current data acquisition), and prepare the instrument for the expected cabling |
| Remote Command | <code>:CALibration:REference:CLOCK:END?</code> |
| Example | <code>:CAL:REF:CLOC:END?</code> |
| Notes | Returns 0 if successful, or 1 if failed |
| Dependencies | Option DP2 or B40 |
| Couplings | Expected to be run after sending <code>:CAL:REF:CLOC?</code> , and after removing the cable used in that Characterize Reference Clock step. This will resume any queued measurements, and concludes the reference clock characterization |
| Remote Command | <code>:CALibration:TIME:REference:CLOCK?</code> |
| Example | <code>:CAL:TIME:REference:CLOCK?</code> |

| | |
|--------------|---|
| Notes | Value is the date and time the last successful Characterize Reference Clock was executed. The date is separated from the time by a space character. Returns "" if Characterize Reference Clock has never been performed on the instrument |
| Dependencies | Option DP2 or B40 |
| State Saved | No |

Front panel guided calibration sequence

When selecting **Characterize Reference Clock** via the front panel, the following form is displayed.

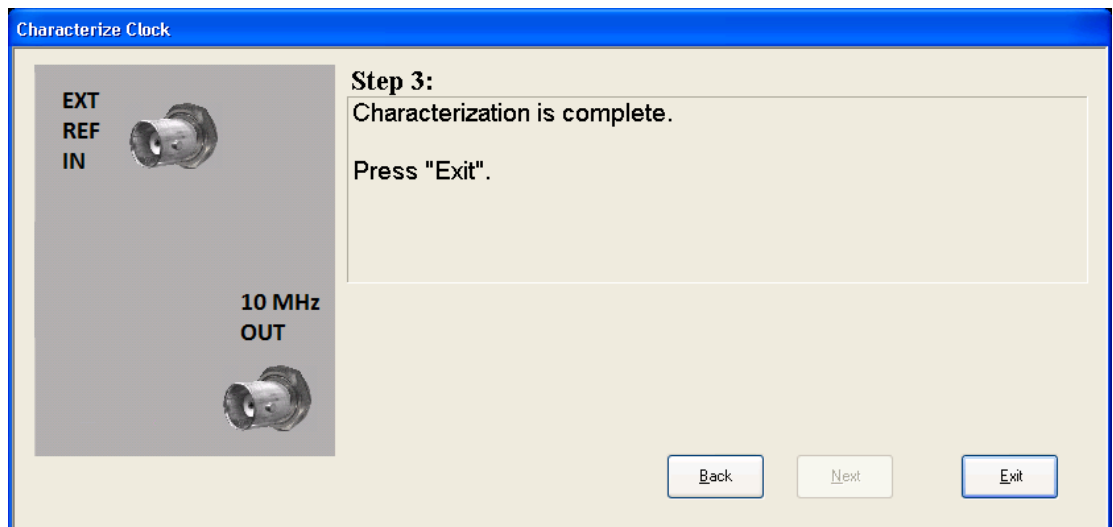

Step 1 of the guided calibration sequence:

Step 2 of the guided calibration sequence:

Step 3 of the guided calibration sequence:

4.6.6.3 Characterize Noise Floor

On instruments with the NF2 license installed, the calibrated Noise Floor used by Noise Floor Extensions should be refreshed periodically. To do this, press **Characterize Noise Floor**. When you press this control, the instrument stops any measurement currently underway, and a dialog appears with an **OK** and **Cancel** button that says:

This action will take several minutes to perform. Please disconnect all cables from the RF input and press Enter to proceed. Press ESC to cancel

When you press **Enter** or **OK**, the characterization proceeds. After the characterization, the instrument restarts the measurement from the beginning

(similar to pressing the **Restart** key). The characterization takes many minutes to run.

The noise floor model used by Noise Floor Extensions includes an estimation of the temperature behavior of the noise floor, but this is only an estimation. The noise floor changes little with the age of the components. However, even small changes in the estimated level of the noise floor can make large changes in the effective noise floor, because the effective noise floor is the error in the estimation of the noise floor. Keysight recommends that the **Characterize Noise Floor** operation be performed when the instrument is operating at an ambient temperature that is significantly different than the ambient temperature at which this alignment was last run. In addition, Keysight recommends that the **Characterize Noise Floor** operation be performed after the first 500 hours of operation, and once every calendar year.

The noise floor model from the last operation of **Characterize Noise Floor** survives across the power cycle.

NOTE

The **Characterize Noise Floor** function can be interrupted, by pressing the **Cancel (ESC)** front-panel key, or remotely with Device Clear followed by the `:ABORt SCPI` command. None of the new characterization data is then used. However, since the old characterization data is purged at the beginning of the characterization, you now have an uncharacterized noise floor. You should re-execute this function and allow it to finish before making any further measurements with NFE. Until you do, the instrument will display a “Characterize Noise Floor required” message and set bit 12 in the Status Questionable Calibration register (`STATus:QUEStionable:CALibration:EXTended:NEEDed`).

| | |
|----------------|--|
| Remote Command | <code>:CALibration:NFLoor</code> <code>:CALibration:NFLoor?</code> |
| Example | <code>:CAL:NFL</code> |
| Notes | <code>:CALibration:NFLoor?</code> returns 0 if successful, or 1 if failed (including interfering user signal) This command is sequential; it must complete before further commands are processed. Interrupting the alignment from remote is accomplished by invoking Device Clear followed by the <code>:ABORt</code> command |
| Dependencies | This control does not appear in models that do not contain NF2. In these models the command is accepted without error, but no action is taken |
| Couplings | Successful completion of Characterize Noise Floor begin the elapsed time counter or the Last Characterize Noise Floor Time |
| Remote Command | <code>:CALibration:TIME:NFLoor?</code> |
| Example | <code>:CAL:TIME:NFL?</code> |
| Notes | Value is the date and time the last successful Characterize Noise Floor was executed. The date is separated from the time by a space character Returns “” if no Characterize Noise Floor has ever been performed on the instrument |

4 System
4.6 Alignments

| | |
|----------------|--|
| Dependencies | In models that do not include NF2, this command is not enabled and any attempt to set or query yields an error |
| State Saved | No |
| Remote Command | <code>:CALibration:TEMPerature:NFLoor?</code> |
| Example | <code>:CAL:TEMP:NFL?</code> |
| Notes | Value is the temperature of the last successful Characterize Noise Floor was executed Returns "" if no Characterize Noise Floor has ever been performed on the instrument |
| Dependencies | In models that do not include NF2, this command is not enabled and any attempt to set or query yields an error |
| State Saved | No |
| Remote Command | <code>:CALibration:TIME:ELAPsed:NFLoor?</code> |
| Example | <code>:CAL:TIME:ELAP:NFL?</code> |
| Notes | Value is the elapsed time the instrument was powered-on since the last successful Characterize Noise Floor was executed Returns "" if no Characterize Noise Floor has ever been performed on the instrument |
| Dependencies | In models that do not include NF2, this command is not enabled and any attempt to set or query yields an error |
| State Saved | No |

4.6.6.4 Calibration Temperature History

The following queries let you retrieve various statistics regarding the Calibration Temperature history.

Minimum Temperature Within Last Number of Seconds

Lets you query the minimum temperature within the last number of seconds. If no data exists for the requested time, the returned value is 9.91e+37.

| | |
|----------------|--|
| Remote Command | <code>:CALibration:TEMPerature:MINimum? <seconds></code> |
| Example | <code>:CAL:TEMP:MIN? 60</code> |

Maximum Temperature Within Last Number of Seconds

Lets you query the maximum temperature within the last number of seconds. If no data exists for the requested time, the returned value is 9.91e+37.

| | |
|----------------|--|
| Remote Command | <code>:CALibration:TEMPerature:MAXimum? <seconds></code> |
| Example | <code>:CAL:TEMP:MAX? 60</code> |

Temperature Seconds Ago

Lets you query temperature X seconds ago. If no data exists for the requested time, the returned value is 9.91e+37.

| | |
|----------------|--|
| Remote Command | <code>:CALibration:TEMPerature:AGO? <seconds></code> |
|----------------|--|

| | |
|---------|--------------------------------|
| Example | <code>:CAL:TEMP:AGO? 75</code> |
|---------|--------------------------------|

Oldest Temperature Value

Lets you query the oldest recorded temperature value.

| | |
|----------------|---|
| Remote Command | <code>:CALibration:TEMPerature:OLDest[:TEMPerature]?</code> |
|----------------|---|

| | |
|---------|-----------------------------|
| Example | <code>:CAL:TEMP:OLD?</code> |
|---------|-----------------------------|

Oldest Temperature Time

Lets you query how long ago the oldest temperature value was recorded.

| | |
|----------------|---|
| Remote Command | <code>:CALibration:TEMPerature:OLDest:SECONDS?</code> |
|----------------|---|

| | |
|---------|---------------------------------|
| Example | <code>:CAL:TEMP:OLD:SEC?</code> |
|---------|---------------------------------|

4.6.6.5 TDS Alignment

Only appears in N9038B (MXE-B) when Option TDS is installed and licensed.

The TDS alignment includes [AlignNowAll](#) and [RFPrese1](#) alignment. Immediately executes an alignment of the TDS subsystem. The instrument stops any measurement currently underway, performs the alignment, and then restarts the measurement from the beginning (similar to pressing the **Restart** key).

Align TDS can be interrupted by pressing the **Cancel (ESC)** front-panel key or from remote with Device Clear followed by `:ABORT`. When this occurs, no new TDS alignment data will be employed.

| | |
|----------------|--|
| Remote Command | <code>:CALibration:TDS</code> Params missing? What does the query return? <code>:CALibration:TDS?</code> |
|----------------|--|

| | |
|---------|-----------------------|
| Example | <code>:CAL:TDS</code> |
|---------|-----------------------|

| | |
|-------|---|
| Notes | This command is sequential; it must complete before further commands are processed. Interrupting the alignment from remote is accomplished by invoking Device Clear followed by the <code>:ABORT</code> command |
|-------|---|

| | |
|--------------|--|
| Dependencies | Only appears in N9038B (MXE-B) models with Option TDS installed and licensed |
|--------------|--|

4.6.6.6 Backup or Restore Align Data...

Opens the utility for backing-up or restoring alignment data. Since this utility cannot be run while the instrument software is running, a prompt tells you to shut down the instrument first:

Press **OK** and the instrument will shut down and open the backup utility.

Alignment data for the instrument resides on the hard drive in a database. Keysight uses high quality hard drives; however, it is highly recommended the alignment data be backed-up to storage outside of the instrument. Additionally, for customers who use multiple CPU Assemblies or multiple disk drives, the alignment that pertains to the instrument must be transferred to the resident hard drive after a CPU or hard drive is replaced. This utility facilitates backing-up and restoring the alignment data.

NOTE

This utility allows you to navigate to any location of the Windows file system. If you are backing up alignment data to storage outside of the instrument, then it is assumed that you will use a USB memory device, or Mapped Network Drive.

Processor Assembly types PC6 and PC7 contain a removable SD memory card. When one of these CPUs is installed, the Backup and Restore Alignment Data wizard defaults to the SD card as the backup location. At every power-on, the software will check to determine if the calibration data on the SD memory card (the backup) is newer than the data in use on the disk. In such situations, before the application is loaded, you are given the opportunity to restore the data from the backup. If you respond **Yes**, the Backup and Restore Alignment Data wizard (see ["Alignment Data Wizard \(without Flash\)" on page 1971](#)) will be invoked to perform the restore.

Processor Assembly types PC6S and PC7S contain an internal flash EEPROM, as well as a removable SD card. When one of these CPUs is installed, the Backup and Restore Alignment Data wizard defaults to the internal flash as the backup location.

As with the PC6 and PC7, at every power-on, the software compares the timestamp of the backup on the flash and the timestamp of the alignment data in use on the disk. If the backup on the flash has newer data, you are given the opportunity to restore the data from the backup before the application is loaded. If you respond **Yes**, the Backup and Restore Alignment Data wizard (see "[Alignment Data Wizard \(with Flash\)](#)" on page 1981) will be invoked and will prompt you to restore that backup.

For purposes of these instructions, "alignment data" and "calibration data" are used interchangeably.

| | |
|----------------|---|
| Dependencies | Not available in UXM |
| Remote Command | <code>:CALibration:DATA:DEFault</code> |
| Example | <code>:CAL:DATA:DEF</code> |
| Notes | Restores the alignment data files to their default state |
| Couplings | Sets Auto Align to OFF . Sets Bit 14 in the Status Questionable Calibration register. The Error Condition message "Align Now All required" is generated |

Alignment Data Wizard (without Flash)

Guides you through the operation of backing-up or restoring the alignment data.

4 System
4.6 Alignments

The default backup location for instruments *without* internal flash will be the first drive identified as an external drive (USB or LAN) if such is available; or, if not, the internal D: partition.

The default file name is `<model number>_<serial number>_<date in YYYYMMDDHHMMSS>.bkz`.

The default file extension for legacy backup files was `.bak`. The Backup and Restore operations support both the `.bak` (legacy format) and `.bkz` formats.

If a USB drive is present, it will be selected by default. The path defaults to the `AlignmentBackups` folder, and a filename is automatically created, in the form: `<model>_<serial number>_<date><time>.bkz`

If you wish to enter a customer filename, you can do so with an external keyboard, or by opening the onscreen Alpha keyboard, by pressing the **Keyboard** hardkey on the front panel:

When the **Next >** button is pressed, you will be prompted to create a new folder if the chosen path does not yet exist.

4 System
4.6 Alignments

The restore operation checks the validity of the restore file using the database's built-in file validation. If the restore file is corrupt, the existing alignment data will remain in use.

If the serial number information in the backup file being restored is different from that of the instrument, the following message appears (the serial numbers shown are examples):

4 System
4.6 Alignments

The default restore location for instruments *without* internal flash will be the first drive identified as an external drive (USB or LAN) if such is available; or, if not, the internal D: partition. The default restore file will be the most recent file that matches the default backup file name format: `<model number>_<serial number>_<date>.bkz`

Changing the drive letter also modifies the path displayed in the box below. When this step is first loaded, the drive drop-down menu is populated with connected drives, which provide you with read access.

The path defaults to the **AlignBackups** folder. The most recent backup (*.bkz or *.bak) file in the folder will also be selected by default.

4 System
4.6 Alignments

When restoring data in the legacy `.bak` format, Administrator privileges are required. You will be prompted when you attempt a restore (indicated by the UAC Shield on the **Restore** button below).

4 System
4.6 Alignments

Perform Backup (without Flash) (Remote Command Only)

Invokes an alignment data backup operation to the provided location.

NOTE

Keysight recommends that the specified location should be external to the instrument (USB or Mapped Network Drive).

Remote Command `:CALibration:DATA:BACKup <filename>`

Example `:CAL:DATA:BACK "F:\AlignDataBackup_N9020A_US00000001_2008140100.bkz"`

Perform Restore (without Flash) (Remote Command Only)

Invokes an alignment data restore operation from the provided filename.

Remote Command `:CALibration:DATA:RESTore <filename>`

Example `:CAL:DATA:REST "F:\ AlignDataBackup_N9020A_US00000001_2008140100.bkz"`

Alignment Data Wizard (with Flash)

If your instrument has Processor Assembly type PC6S or PC7S (see ["Show System" on page 1862](#)) the instrument has an internal flash EEPROM that can store a backup of the alignment data. In this case, the interface to the Alignment Data Wizard is enhanced to accommodate this internal storage. This section details the use of this internal flash. For details on using external storage, see the previous section (["Alignment Data Wizard \(without Flash\)" on page 1971](#)).

The Alignment Data Wizard guides you through the operations of backing up or restoring alignment data.

4 System
4.6 Alignments

Having selected **Backup** or **Restore**, you then select the source or destination for the alignment data. As shown below, you can select either:

- Internal flash EEPROM, or,
- External Removable Drive (which includes the SD card described in "[Backup or Restore Align Data...](#)" on page 1970)

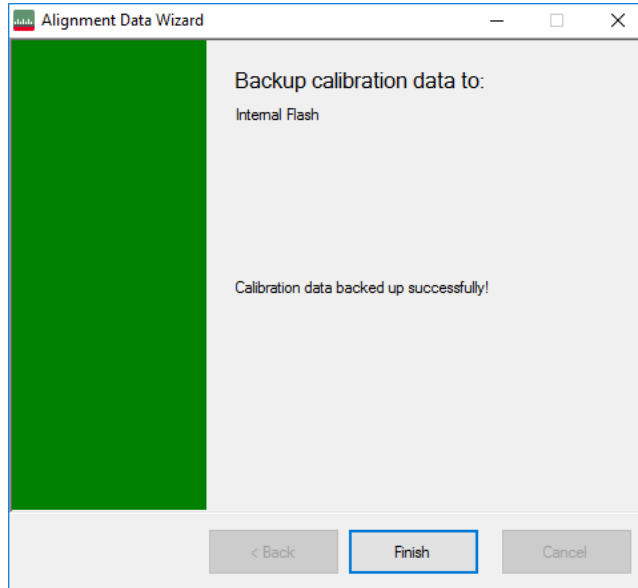

The final page of the wizard asks you to confirm the choices made in the previous pages. When the operation is complete, an indication is displayed on the same page, as below.

Backup

4 System
4.6 Alignments

Restore

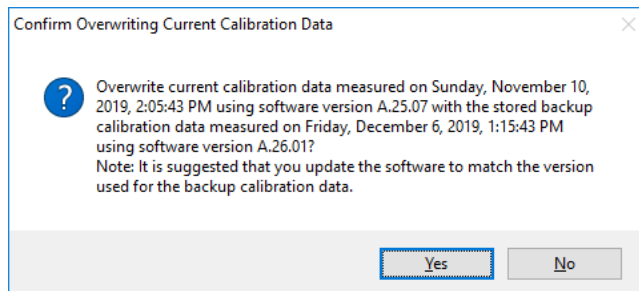

When restoring alignment data, if the serial number information in the backup file being restored is different from that of the instrument, the following message appears (the serial numbers shown are examples):

Immediately before the actual restoration, a final confirmation message is displayed detailing what is being restored and the current database that will be overwritten on the disk (the dates and versions are examples):

4 System

4.6 Alignments

When backing up alignment data to the flash, if there is already an existing backup on the flash, a final confirmation message is displayed detailing what is being backed up and what will be overwritten on the flash (again, the dates and versions are examples):

Perform Backup (with Flash) (Remote Command Only)

Invokes an alignment data backup operation to the internal flash EEPROM.

Remote Command `:CALibration:DATA:INTernal:BACKup`

Example `:CAL:DATA:INT:BACK`

Perform Restore (With Flash) (Remote Command Only)

Invokes an alignment data restore operation from the internal flash EEPROM.

Remote Command `:CALibration:DATA:INTernal:RESTore`

Example `:CAL:DATA:INT:REST`

Restore Alignment Defaults

Causes the Alignment system settings to be reset to their default values. This does not affect any Alignment data stored in the system.

After performing this function, it may impact the auto-alignment time of the instrument until a new alignment baseline has been established.

When **Alignments** is selected, a message appears saying:

`This will reset all of the settings for the Alignment system to their default values`

`No alignment data will be erased`

`This action cannot be undone. Do you want to proceed?`

The dialog includes **OK** and **Cancel** controls, for you to affirm or cancel the operation.

Align Now All must be executed if the value of the Timebase DAC results in a change.

| Example | <code>:SYST:DEF ALIG</code> | | | | | | | | | | | | |
|-----------------------|---|-----------|---------|--------------|------------|----------------------|------------------|------------------|--|-----------------------|-----|------------------|--------------------|
| Notes | <p>Alignment processing that results as the transition to Auto Align Normal will be executed sequentially; thus <code>*OPC?</code> or <code>*WAI</code> will wait until the alignment processing is complete</p> <p>The parameters affected are:</p> <table border="1"> <thead> <tr> <th>Parameter</th> <th>Setting</th> </tr> </thead> <tbody> <tr> <td>Timebase DAC</td> <td>Calibrated</td> </tr> <tr> <td>Timebase DAC setting</td> <td>Calibrated value</td> </tr> <tr> <td>Auto Align State</td> <td>Normal (if the instrument is not operating with default alignment data, Off otherwise)</td> </tr> <tr> <td>Auto Align All but RF</td> <td>Off</td> </tr> <tr> <td>Auto Align Alert</td> <td>Time & Temperature</td> </tr> </tbody> </table> | Parameter | Setting | Timebase DAC | Calibrated | Timebase DAC setting | Calibrated value | Auto Align State | Normal (if the instrument is not operating with default alignment data, Off otherwise) | Auto Align All but RF | Off | Auto Align Alert | Time & Temperature |
| Parameter | Setting | | | | | | | | | | | | |
| Timebase DAC | Calibrated | | | | | | | | | | | | |
| Timebase DAC setting | Calibrated value | | | | | | | | | | | | |
| Auto Align State | Normal (if the instrument is not operating with default alignment data, Off otherwise) | | | | | | | | | | | | |
| Auto Align All but RF | Off | | | | | | | | | | | | |
| Auto Align Alert | Time & Temperature | | | | | | | | | | | | |

4.6.6.7 oGRF Preselector

This menu and all its submenus are only available in models with the RF Preselector, such as N9038B, or N9048B.

| | |
|--------------|---|
| Dependencies | Only available in RF Preselector models |
|--------------|---|

Align Now, 20 Hz to 30 MHz

Immediately executes an alignment of the receiver subsystem. The receiver will stop any measurement currently underway, perform an Align Now All, then perform the RF Preselector alignment, and then restart the measurement from the beginning (similar to pressing the Restart key).

The query `:CALibration:RFPSelector:CONDUCTed?` invokes the alignment of the RF Preselector on Conducted Band and returns a success or failure value. Successful completion clears the “Align 20 Hz to 30 MHz required” Error Condition, and clears bit 1 in the Status Questionable Calibration Extended Needed register. The elapsed time counter will begin for Last Align Now, Conducted Time, and the temperature is captured for the Last Align Now, Conducted Temperature. The alignment can be interrupted by pressing the Cancel (ESC) front-panel key or remotely with Device Clear followed by the `:ABORt` SCPI command. When this occurs, the Error Condition “Align 20 Hz to 30 MHz required” is set because new alignment data may be employed for an individual subsystem, but not a cohesive set of data for all subsystems.

4 System
4.6 Alignments

The “Align 20 Hz to 30 MHz required” Error Condition will appear when this alignment has expired. User is now responsible to perform the Align Now, 20 Hz to 30 MHz to keep the receiver in warranted operation. This alignment can only be performed by user as it is not part of the Auto Align process.

| | |
|------------------------------|---|
| Remote Command | <code>:CALibration:RFPSelector:CONDUCTed</code> <code>:CALibration:RFPSelector:CONDUCTed?</code> |
| Example | <code>:CAL:RFPS:COND</code> |
| Notes | <p>The query returns 0 if successful, or 1 if failed</p> <p>When Align 20 Hz to 30 MHz is performing the alignment, bit 0 in the Status Operation register is set. Completion, or termination, will clear bit 0 in the Status Operation register</p> <p>This command is sequential; it must complete before further SCPI commands are processed. Interrupting the alignment from remote is accomplished by invoking Device Clear followed by the <code>:ABORt</code> command. Successful completion will clear bit 1 in the Status Questionable Calibration Extended Needed register and bit 0 in Status Questionable Calibration Extended Failure register</p> <p>A failure encountered during alignment will set the Error Condition “20 Hz to 30 MHz Alignment Failure” and set both bit 1 in the Status Questionable Calibration Extended Needed register and bit 9 in Status Questionable Calibration register</p> |
| Dependencies | Does not appear in non-RF Preselector models, setting or querying the SCPI will generate an error |
| Couplings | <p>Initializes the time for the Last Align Conducted Now, Conducted Time</p> <p>Records the temperature for the Last Align Conducted Now, Conducted Temperature</p> |
| State Saved | No |
| Status Bits/OPC dependencies | <p>Bit 8 or 9 may be set in the Status Questionable Calibration register</p> <p>Bit 1 may be set in the Status Questionable Calibration Extended Needed register</p> <p>Bit 0 may be set in the Status Questionable Calibration Extended Failure register</p> |

Align Now, 30 MHz to 3.6 GHz

Immediately executes an alignment of the receiver subsystem. The receiver will stop any measurement currently underway, perform an Align Now All, then perform the RF Preselector alignment, and then restart the measurement from the beginning (similar to pressing the **Restart** key).

The query (`:CALibration:RFPSelector:RADiated?`) invokes the alignment of the RF Preselector on Radiated Band and returns a success or failure value. Successful completion clears the “Align 30 MHz to 3.6 GHz required” Error Condition, and clears bit 2 in the Status Questionable Calibration Extended Needed register. The elapsed time counter begins for Last Align Now, Radiated Time, and the temperature is captured for the Last Align Now, Radiated Temperature. The alignment can be interrupted by pressing the **Cancel (ESC)** front-panel key, or remotely with Device Clear followed by `:ABORt`. When this occurs, the Error Condition “Align 30 MHz to 3.6 GHz required” is set, because new alignment data may be employed for an individual subsystem, but not a cohesive set of data for all subsystems.

The “Align 30 MHz to 3.6 GHz required” Error Condition appears when this alignment has expired. You must now perform **Align Now, 30 MHz to 3.6 GHz** to keep the receiver in warranted operation.

| | |
|------------------------------|---|
| Remote Command | <code>:CALibration:RFPSelector:RADiated</code> <code>:CALibration:RFPSelector:RADiated?</code> |
| Example | <code>:CAL:RFPS:RAD</code> |
| Notes | <p>The query returns 0 if successful, or 1 if failed</p> <p>When Align 30 MHz to 3.6 GHz is performed, alignment, bit 0 in the Status Operation register is set. Completion, or termination, clears bit 0 in the Status Operation register</p> <p>This command is sequential; it must complete before further SCPI commands are processed. Interrupting the alignment from remote is accomplished by invoking Device Clear followed by <code>:ABORT</code>. Successful completion clears bit 2 in the Status Questionable Calibration Extended Needed register and bit 1 in Status Questionable Calibration Extended Failure register</p> <p>A failure encountered during alignment sets the Error Condition “30 MHz to 3.6 GHz Alignment Failure” and sets both bit 2 in the Status Questionable Calibration Extended Needed register and bit 9 in Status Questionable Calibration register</p> |
| Dependencies | Does not appear in non-RF Preselector models, setting or querying the SCPI will generate an error |
| Couplings | Initializes the time for the Last Align Radiated Now, Radiated Time Records the temperature for the Last Align Radiated Now, Radiated Temperature |
| State Saved | No |
| Status Bits/OPC dependencies | <p>May set Bit 8 or 9 in the Status Questionable Calibration register</p> <p>May set Bit 2 in the Status Questionable Calibration Extended Needed register</p> <p>May set Bit 1 in the Status Questionable Calibration Extended Failure register</p> |

Align Now, 20 Hz to 3.6 GHz

Immediately executes an alignment of the receiver subsystem. The receiver will stop any measurement currently underway, perform an Align Now All, then perform the RF Preselector alignment, and then restart the measurement from the beginning (similar to pressing the **Restart** key).

The query (`:CALibration:RFPSelector:FULL?`) invokes the alignment of the RF Preselector on both Conducted and Radiated Band and return a success or failure value. Successful completion clears the “Align 20 Hz to 3.6 GHz required” Error Condition, and clears bit 1 and bit 2 in the Status Questionable Calibration Extended Needed register. The elapsed time counter begins for Last Align Now, Conducted Time and Last Align Now Radiated Time and the temperature is captured for Last Align Now, Conducted Temperature and Last Align Now, Radiated Temperature. The alignment can be interrupted by pressing the **Cancel (ESC)** front-panel key or remotely with Device Clear, followed by `:ABORT`. When this occurs, the Error Condition “Align 20 Hz to 3.6 GHz required” is set, because new alignment data may be employed for an individual subsystem, but not a cohesive set of data for all subsystems.

4 System
4.6 Alignments

The “Align 20 Hz to 3.6 GHz required” Error Condition appears when this alignment has expired. You must now perform the Align Now, 20 Hz to 3.6 GHz to keep the receiver in warranted operation.

| | |
|------------------------------|---|
| Remote Command | <code>:CALibration:RFPSelector:FULL</code> <code>:CALibration:RFPSelector:FULL?</code> |
| Example | <code>:CAL:RFPS:FULL</code> |
| Notes | The query returns 0 if successful, or 1 if failed When Align 20 Hz to 3.6 GHz is performed, alignment, bit 0 in the Status Operation register is set. Completion, or termination, clears bit 0 in the Status Operation register This command is sequential; it must complete before further SCPI commands are processed. Interrupting the alignment from remote is accomplished by invoking Device Clear, followed by <code>:ABORT</code> . Successful completion clears bit 1, bit 2 in the Status Questionable Calibration Extended Needed register and bit 0, bit 1 in Status Questionable Calibration Extended Failure register A failure encountered during alignment sets the Error Condition “20 Hz to 3.6 GHz Alignment Failure” and sets bit 1, bit 2 in the Status Questionable Calibration Extended Needed register and bit 9 in Status Questionable Calibration register |
| Dependencies | Does not appear in non-RF Preselector models, setting or querying the SCPI generates an error |
| Couplings | Initializes the time for the Last Align Conducted Now, Conducted Time Initializes the time for the Last Align Radiated Now, Radiated Time Records the temperature for the Last Align Conducted Now, Conducted Temperature Records the temperature for the Last Align Radiated Now, Radiated Temperature |
| State Saved | No |
| Status Bits/OPC dependencies | May set Bit 8 or 9 in the Status Questionable Calibration register May set Bit 1 and 2 in the Status Questionable Calibration Extended Needed register May set Bit 0 and 1 in the Status Questionable Calibration Extended Failure register |

Alert

Enables or disables the display of RF Preselector alignment required message on the status line. The instrument powers up with Alert **ON**.

| | |
|----------------|--|
| Remote Command | <code>:CALibration:RFPSelector:ALERT ON OFF 0 1</code> <code>:CALibration:RFPSelector:ALERT?</code> |
| Example | <code>:CAL:RFPS:ALER OFF</code> |
| Notes | Error Condition is generated when alert is ON and any of the RF Preselector alignments has expired |
| Preset | Unaffected by Preset, but set to ON by Restore Defaults > "Alignments" on page 1917 |
| State Saved | No |
| Range | OFF ON |

4.6.6.8 Scheduler

Setting the Scheduler to **ON** triggers execution of the scheduled task based on the recurrence and time set in the scheduler since the last successful of the specific alignment. A warning condition of “RF Preselector alignment scheduler is ON” appears when the scheduler is set to **ON**. **OFF** prevents the Scheduler from running any scheduled task.

| | |
|----------------|---|
| Remote Command | :CALibration:RFPSelector:SCHeDuler:STATe ON OFF 0 1 |
| Example | :CAL:RFPS:SCH:STAT OFF |
| Preset | Unaffected by Preset, but set to ON by Restore Defaults > "Alignments" on page 1917 |
| State Saved | No |
| Range | OFF ON |

Schedule Setup

Lets you schedule a task to run automatically at the background based on the recurrence and time set in the scheduler. Make sure that the instrument’s local time is accurate, because the Scheduler relies on this information to execute the task.

This dialog contains the following controls:

- "Task" on page 1991
- "Date/Time" on page 1992
- "Hour" on page 1993
- "Minute" on page 1993
- "Recurrence" on page 1993
- "Number of Weeks" on page 1993
- "Day" on page 1994

Task

There are 3 tasks that can be selected for the scheduler to run.

- Task 1 is the 20 Hz to 30 MHz alignment
- Task 2 is the 30 MHz to 3.6 GHz alignment

4 System
4.6 Alignments

- Task 3 is the 20 Hz to 3.6 GHz alignment

| | |
|----------------|---|
| Remote Command | <code>:CALibration:RFPSelector:SCHeduler:TASK T1 T2 T3</code> <code>:CALibration:RFPSelector:SCHeduler:TASK?</code> |
| Example | <code>:CAL:RFPS:SCH:TASK T1</code> |
| Notes | Changing the task does not reset the Scheduler time, and the alignment is based on the current scheduled configuration to occur |
| Preset | Unaffected by Preset but set to T3 by Restore Defaults > "Alignments" on page 1917 |
| State Saved | No |
| Range | Task 1 Task 2 Task 3 |

Date/Time

Lets you configure the scheduler to run a task starting from this date and time. The date and time rely on the instrument's local time to execute a scheduled task. The date format is "YYYY/MM/DD" and the time is 24-hour clock.

| | |
|----------------|--|
| Remote Command | <code>:CALibration:RFPSelector:SCHeduler:TIME:START "date", "time"</code> <code>:CALibration:RFPSelector:SCHeduler:TIME:START?</code> This query returns data using the format "YYYY/MM/DD; HH:MM:SS" |
| Example | <code>:CAL:RFPS:SCH:TIME:STAR "2009/8/20", "12:00:00"</code> |
| Notes | <p>"date" is the date the task will run, in the form YYYY/MM/DD where:</p> <ul style="list-style-type: none"> - YYYY is the four-digit representation of year (for example, 2009) - MM is the two-digit representation of month (for example, 01 to 12) - DD is the two-digit representation of the day (for example, 01 to 28, 29, 30 or 31 depending on the month and year) <p>"time" is the time of day the task will run, in the form HH:MM:SS where:</p> <ul style="list-style-type: none"> - HH is the two-digit representation of the hour in 24-hour format - MM is the two-digit representation of minute - SS is the two-digit representation of seconds |
| Preset | Unaffected by Preset but set to Current date and 00:00:00 by Restore Defaults > "Alignments" on page 1917 |
| State Saved | No |

Hour

Lets you configure the hour for the scheduled task. The command to configure the date and time parameters of the scheduler is the same; but they each have their own front panel-control.

| | |
|-------------|---|
| Notes | See "Date/Time" on page 1992 |
| Preset | Unaffected by Preset but set to Current hour and 00 by Restore Defaults > "Alignments" on page 1917 |
| State Saved | No |

Minute

Lets you configure the minute for the scheduled task. The command to configure the date and time parameters of the scheduler is the same; but they each have their own front panel-control.

| | |
|-------------|---|
| Notes | See "Date/Time" on page 1992 |
| Preset | Unaffected by Preset but set to Current minute and 00 by Restore Defaults > "Alignments" on page 1917 |
| State Saved | No |

Recurrence

Lets you configure the scheduler to run the task recurrently on a scheduled date and time. You can schedule it to run daily, weekly, or alternate weeks.

| | |
|----------------|--|
| Remote Command | <code>:CALibration:RFPSelector:Scheduler:REcurrence DAY WEEK OFF</code> |
| Example | <code>:CAL:RFPS:SCH:REC DAY</code> |
| Preset | Unaffected by Preset but set to OFF by Restore Defaults > "Alignments" on page 1917 |
| State Saved | No |
| Range | <code>DAY WEEK OFF</code> |

Number of Weeks

Lets you set the number of weeks that the scheduler will wait to trigger a task.

| | |
|----------------|---|
| Remote Command | <code>:CALibration:RFPSelector:Scheduler:REcurrence:WEEK <integer></code> |
| | <code>:CALibration:RFPSelector:Scheduler:REcurrence:WEEK?</code> |

4 System
4.6 Alignments

| | |
|-------------|--|
| Example | <code>:CAL:RFPS:SCH:REC:WEEK 2</code> |
| Notes | New scheduled date to run the alignment task is updated when this parameter is changed |
| State Saved | No |
| Range | 1-52 |
| Min | 1 |
| Max | 52 |

Day

Lets you set the Day of the Week the scheduler will run a scheduled task.

| | |
|----------------|---|
| Remote Command | <code>:CALibration:RFPSelector:SCHeduler:RECurrence:DAY SUN MON TUE WED THU FRI SAT</code> <code>:CALibration:RFPSelector:SCHeduler:RECurrence:DAY?</code> |
| Example | <code>:CAL:RFPS:SCH:REC:DAY SUN</code> |
| State Saved | No |
| Range | Sunday Monday Tuesday Wednesday Thursday Friday Saturday |

4.7 Licensing

Accesses capabilities for configuring the licenses in your instrument.

4.7.1 License Manager

Opens the License Explorer for Fixed and Transportable licenses.

NOTE

This feature is not available if Option SF1 is installed.

For help on licensing, select **Help** in the menu bar at the top of the License Explorer window.

There are also several remote commands available for licensing. See:

- ["Install License \(Remote Command Only\)" on page 2003](#)
- ["Remove License \(Remote Command Only\)" on page 2003](#)
- ["List Licenses \(Remote Query Only\)" on page 2004](#)
- ["Validate License \(Remote Query Only\)" on page 2005](#)
- ["Host ID Query \(Remote Query Only\)" on page 2005](#)
- ["List Borrowed Licenses \(Remote Query Only\)" on page 2000](#)
- ["Return a Borrowed License \(Remote Command Only\)" on page 2001](#)

Notes

No equivalent remote command for this control

4.7.2 System Software Version Date

The date of the newest features introduced in this release of the firmware. This is *not* necessarily the same as the build date of the firmware, because the version date only changes when new features are added. For example, if A.18.06 has only defect fixes and no new features compared to A.18.05, then both A.18.05 and A.18.06 would have the same software version date.

For any feature to be enabled, the SW Support Expiration Date of the enabling license must be greater than or equal to the software version date when that feature was first introduced. See the Keysight web site for features related to a specific software application and their required support date.

The SCPI response is 3 integer values: `<year>, <month>, <day>`.

Remote Command :SYSTem:SOFTware:VERSion:DATE?

Example :SYST:SOFT:VERS:DATE?

4.7.3 Software Support Expiration Date

This date is encoded in each software license's Version field in the **YYYY.MMDD** format. It specifies the end date of the support contract associated with this license. When a support contract is renewed, a new license is issued with an updated Version corresponding to the new contract's end date. The functionality available for a license is determined by the features available before the expiration date. For example, if feature X is introduced in a release with System Software Version Date of **2017.0831**, then a license with a Software Support Expiration Date of **2017.0831** or greater would enable feature X, but **2017.0830** or earlier would not enable feature X.

The SCPI response is 3 integer values: **<year>, <month>, <day>**.

Remote Command :SYSTem:LKEY:SOFTware:SUPPort:EXPIration:DATE? <feature>

Example :SYST:LKEY:SOFT:SUPP:EXP:DATE? "N9084EM0E-1FP"

Dependencies When **<feature>** is not a valid license, one of the following errors will be issued:

- -224, "IllegalParameterValue;License is not installed"
- -224, "IllegalParameterValue;Unknown license feature"
- -224, "IllegalParameterValue;Support contract not offered for this license"

4.7.4 Network Licenses

Network Licenses are available over the customer's network from a server the customer configures. The server has a count for each license and will only allow instruments to "check-out" a license up to that count. Once the count is reached for a specific license, further check-outs fail until one of the licenses is checked back in to the server. What this means is that it is possible for an instrument to have different features available to it based on what licenses are still available on the server when it tries to get licenses.

Setting up network licenses is done via the [Keysight Floating License Manager](#) (available on external Keysight web) and it has an Installation Guide that can be downloaded from that web page.

4.7.4.1 Application Licenses

Application Licenses (like N9077EM0E-1NP) are automatically checked out when entering the Mode that uses them, and they are automatically checked-in when leaving that Mode. Because the server may have already checked out the last license for the application to another instrument, there is now the possibility that a mode switch will fail because a required license could not be checked out from the server. If the server has a limited number of licenses compared to the number of users desiring to use that license, this may mean that switching from Mode A to Mode B then back to Mode A may fail when returning to Mode A because another instrument checked out the last available license while the user was in Mode B. Also, for Modes with multiple licenses for different features (like Multi-Standard Radio), the features available may also change when switching out of the Mode and back into it.

So, when using network licenses, it is necessary to check `:SYST:ERR?` after every Mode switch, to verify that it successfully switched. If the Mode's required licenses were not successfully checked out, the instrument posts the error:

```
-310,"System error; feature not licensed"
```

There is also a potential performance issue when using network licenses, because the instrument must communicate with the server on each license check-out and check-in. This operation is usually fast (a few milliseconds), but it depends on the network communication lag between the instrument and server. For remote servers on slow or congested networks, this could be significantly slower than that.

4.7.4.2 Instrument Software Options

Instrument software licenses are those that are reported via `*OPT?` the same as HW options. For example, N9040RT1B-1NP is an instrument software option, and is reported via `*OPT?` as `RT1`. Note that the license is composed of the model number (in this case `N9040B`) combined with the option code (`RT1`).

When instrument software options are available from a network server, the instrument automatically checks them out at start-up, and only checks them in when shutting down.

4.7.4.3 License Checked Out Query (Remote Query Only)

Shows whether the specified license is checked out from a server. Since network served licenses may not always be available when there are limited licenses available compared to the desired number of users, the features available on an instrument can vary. Use this query to see whether the feature is currently checked-out to the instrument. The return value is boolean (0 or 1), returning 1 if the feature

exists and is checked out from a server. Note that querying a license that is local to the instrument (-xFP or -xTP) also returns 0, even though the license exists and is valid, because it does not require a check-out. Also, querying a license that does not exist returns 0.

| | |
|----------------|--|
| Remote Command | <code>:SYSTem:LKEY:COU? <feature></code> |
| Example | <code>:SYST:LKEY:COU? "N9080EM0E"</code> 1 |
| Notes | <code><"OptionInfo"></code> contains the feature and the version. You must specify the feature but can omit the version. If you omit the version, the system regards it as the latest one Return Value: 0 if not checked out, 1 if checked out |

4.7.4.4 List Licenses Checked Out (Remote Query Only)

Lists the licenses checked out from a server. Since network served licenses may not always be available when there are limited licenses available compared to the desired number of users, the features available on an instrument can vary. Use this query to see which features are currently checked-out to the instrument.

| | |
|----------------|---|
| Remote Command | <code>:SYSTem:LKEY:COU:LIST?</code> |
| Example | <code>:SYST:LKEY:COU:LIST?</code> #284 N9073EM0E,2018.0831 N9077EM0E,2018.0831 N9080EM0E,2018.0831 N9081EM0E,2018.0831 |

4.7.4.5 Borrowed Network Licenses

Network licenses can be borrowed from the network license server for a time. The maximum amount of time a license can be borrowed is specified in the license installed on the server and is set at the time the license is generated by Keysight. As part of the borrow operation, you specify how long to borrow the license. This borrow period is in hours and can be any time up to the maximum allowed by the license. Once borrowed, the license appears as a local license and can be used even when not connected to the network, and the instrument software treats them the same as other time-based licenses that are installed on the instrument. This means the licenses are validated when the instrument is started and then are used without the overhead of checking them out and back in when switching Modes. At the time of the borrow, a time is specified for how long the license will be borrowed. When that time expires, the license is automatically returned to the network license server

even if the instrument is not connected to the network. If you are done with the license before it automatically returns to the network server, the license can be explicitly returned earlier.

4.7.4.6 Borrow a License

Licenses are borrowed by using the Keysight License Manager 6 application. This can be launched from the **System Licensing** screen.

Graphic

The corresponding remote command is:

| | |
|----------------|---|
| Remote Command | <code>:SYSTEM:LKEY:BORROW "<feature>[,<version>]",<return date></code> <code>:SYSTEM:LKEY:BORROW? "<feature>[,<version>]"</code> |
| Example | <code>:SYST:LKEY:BORR "N9080EM0E", "20-Aug-2018"</code> <code>:SYST:LKEY:BORR? "N9080EM0E"</code> <code>: "20-Aug-2018"</code> |
| Notes | If <code><version></code> is not specified, the highest available version will be borrowed The <code><return date></code> is the day when the borrow will automatically be returned to the server |
| Dependencies | For the command, when <code><feature></code> is not a valid license, or when a license is not currently available for borrowing, one of the following errors is issued: <ul style="list-style-type: none"> - -224, "IllegalParameterValue;License is not installed" - -224, "IllegalParameterValue;Unknown license feature" |

-
- -224, "IllegalParameterValue;License not available for borrowing"

Additionally, the return date is evaluated. If it is not a valid date, the following error is issued:

- -224, "IllegalParameterValue;Invalid return date"
- -200, "Execution error; No Available Borrow Licenses For Feature: <feature>"

The return date may be clipped to the maximum borrow allowed by the license. When this happens, the following warning is issued:

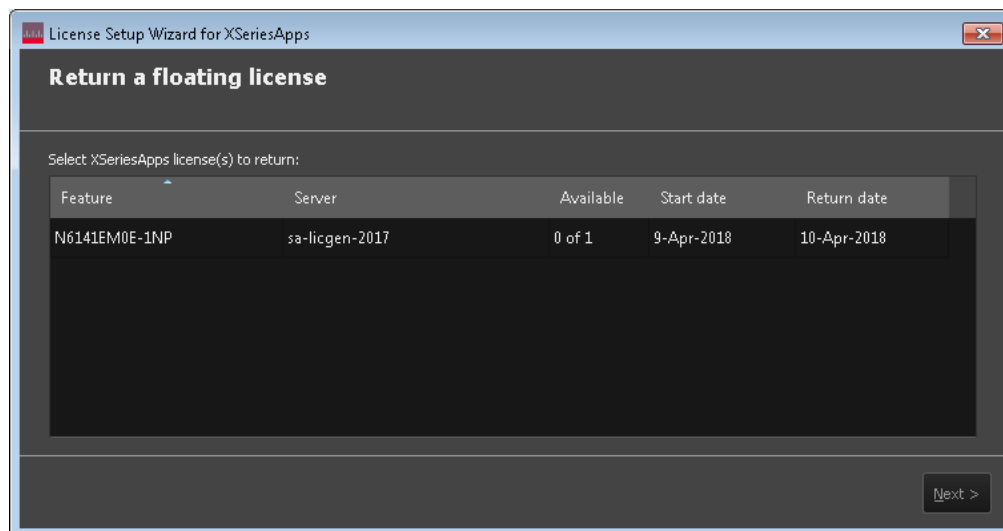

- -221, "Return date clipped to maximum of <max date>"

For the query, the return is the borrow return date (as a string in **dd-mmm-yyyy** format) if the license is borrowed. In all other cases, (not borrowed, not installed, etc.) the return is an empty string

4.7.4.7 Listing Borrowed Licenses and Return a Borrowed License

The Keysight License Manager 6 can also be used to see the currently borrowed licenses or return a license before the automatic return time.

Graphic

List Borrowed Licenses (Remote Query Only)

Remote Command :SYSTem:LKEY:BORRow:LIST?

Example :SYST:LKEY:BORR:LIST?
 #266

```
N9073EM0E, 2018.0831, 20-Aug-2018
```

```
N9077EM0E, 2018.0831, 20-Aug-2018
```

Return a Borrowed License (Remote Command Only)

| | |
|----------------|--|
| Remote Command | <code>:SYSTem:LKEY:BORRow:RETurn "<feature>"</code> |
| Example | <code>:SYST:LKEY:BORR:RET "N9080EM0E"</code> |
| Dependencies | When <code><feature></code> is not a valid license or when a license is not borrowed, one of the following errors is issued: <ul style="list-style-type: none"> - -224, "IllegalParameterValue;License is not installed" - -224, "IllegalParameterValue;Unknown license feature" - -224, "IllegalParameterValue;License not borrowed" |

4.7.4.8 Enabling Network Checkouts While Borrowed

The default for borrowed license use is that you will be explicitly borrowing all desired network licenses, and that all other available network licenses should be ignored. This allows you to intentionally limit the functionality available to the instrument to what is explicitly borrowed.

For example, the RT1/RT2 options that enable the RTSA Mode are automatically checked out when the instrument is started, because the hardware must be configured for them at startup time. If you do not intend to use RTSA, then by borrowing only the licenses you want to use and disabling other network checkouts, the RT1/RT2 licenses will not be checked out at startup. This leave more RTSA licenses available for others to use. Note that the instrument must be restarted after the borrowing has been done to ensure the release of any network licenses already acquired.

If your intent in borrowing is to ensure access to a particular feature or application, but you still want to opportunistically use other features or applications, the default behavior can be changed to enable network license checkouts even when licenses have been borrowed.

| | |
|----------------|---|
| Remote Command | <code>:SYSTem:LKEY:BORRow:NETWork:COU:ENABle</code> |
| Example | <code>:SYST:LKEY:BORR:NETW:COU:ENAB 0</code> <code>:SYST:LKEY:BORR:NETW:COU:ENAB?</code> |
| Dependencies | Only visible when licensing is configured to use a network server. SCPI is always available |
| Preset | Unaffected by Preset but set to 0 by Restore Defaults > "Misc" on page 1917 or Restore Defaults > "All" on page 1918 |
| State Saved | Power On Persistent (survives shutdown and restart) |

4.7.5 USB Portable Licenses

The USB Portable license is implemented with a physical dongle that is a USB device, like a USB thumb drive. It has a Host ID fixed in the dongle HW. It does not contain any writable data and so is acceptable to high security A/D customers. Transporting licenses from one instrument to another just requires moving the dongle and license files to the desired instrument. The license files can be installed on many instruments, but they will only be valid the one instrument that has the dongle. The use of USB portable licenses requires that the Keysight Floating License Manager is installed on the instrument. The licenses can then be added to the instrument's server.

USB Portable licenses are checked out and in like Network licenses. Because the licenses are local, there will be no network latency involved in the check-out/check-in, but there can still be a slight performance degradation compared to Fixed and Transportable licenses. If the instrument allows multiple concurrent instances of the X-Series software (as is the case for modular products), there may also be availability issues if all licenses are already checked out to other X-Series instances. Plugging/un-plugging the dongle is equivalent to transporting a license to/from the instrument, however, the software must be restarted whenever the dongle is plugged in.

4.7.6 Configuring Network and USB Portable Licenses

The Keysight Floating License Manager must be used to configure the Network or USB Portable licenses before the licenses can be used. Currently, an instrument can only be configured for Network or USB Portable licenses or both.

- To set up USB Portable licenses, in the Keysight Floating License Manager select "Start a floating license server with a license file" and add files containing the USB Portable licenses desired
- To set up Network licenses, in the Keysight Floating License Manager select "Connect to a floating license server" and enter the network server's name preceded by the "@" character (example: "@myserver")
- To set up both Network and USB Portable license, first configure the USB Portable license, then configure the Network licenses, but append ";@localhost" to the server name (example: "@myserver;@localhost"). Whenever the configuration is changed, the X-Series software must be restarted

4.7.7 Floating License Manager

Opens the License Explorer for Network and USB Portable licenses.

NOTE This feature is not available if Option SF1 is installed.

For help on licensing, select **Help** in the menu bar at the top of the License Explorer window.

4.7.8 Install License (Remote Command Only)

Used to add a license to the instrument.

An example of such a command would be as below. The parameter is a unique 120-character code for each license.

```
SYST:LKEY "N9073A-1FP", "027253AD27F83CDA5673A9BA5F427FDA5E4F25AEB1017638211AC9F60D9C639FE539735909C551DE0A91"
```

Another example using one of the optional clauses.

```
SYST:LKEY "N9063EM0E-1FP,2019.0330", "02220210867E187713C9AFD4C90EA0DE2B674615DD0255798EE5B237A146A0D4E411E0ABFE04D3CAFDFFA", "ISSUED=30-Mar-2018"
```

NOTE This command does not work for Transportable, Network or USB Portable licenses.

| | |
|----------------|---|
| Remote Command | <code>:SYSTem:LKEY <"OptionInfo">, <"LicenseInfo">, <"Optional1">, <"Optional2">, <"Optional3">, <"Optional4">, <"Optional5"></code> |
| Notes | <p><"OptionInfo"> contains the feature and the version. You must specify the feature but can omit the version. If you omit the version, the system regards it as the latest one, since the system knows which version is supported for each feature</p> <p><"LicenseInfo"> contains the signature, the expiration date, and serial number for transport if transportable. You must specify the signature, but you can omit the other information. If you omit the expiration date, the system regards it as permanent. If you omit the serial number, the system regards it as non-transportable. As a result, this supports reverse compatibility</p> <p><"Optional#"> are optional parameters that may be needed to match the information in the original license</p> |

4.7.9 Remove License (Remote Command Only)

Removes a particular license.

An example of such a command would be as below. The parameter is a unique 120-character code for each license.

```
SYST:LKEY:DEL "N9073A-
```

4 System
4.7 Licensing

```
1FP", "027253AD27F83CDA5673A9BA5F427FDA5E4F25AEB1017638211AC9F60D9C639FE53973590  
9C551DE0A91"
```

NOTE

This command does not work for Transportable, Network or USB Portable licenses.

| | |
|----------------|---|
| Remote Command | <code>:SYSTem:LKEY:DElete <"OptionInfo">,<"LicenseInfo"></code> |
|----------------|---|

| | |
|-------|--|
| Notes | <p><code><"OptionInfo"></code> contains the feature and the version. You must specify the feature but can omit the version. If you omit the version, the system regards it as the latest one, if more than one version is installed</p> <p><code><"LicenseInfo"></code> contains the signature, the expiration date, and whether be transportable. You must specify the signature, but you can omit the other information. If you omit the expiration date, the system regards it as permanent. If you omit the transportability, the system regards it as non-transportable. As a result, this supports reverse compatibility</p> |
|-------|--|

4.7.10 List Licenses (Remote Query Only)

Returns a list of installed licenses.

| | |
|----------------|---------------------------------|
| Remote Command | <code>:SYSTem:LKEY:LIST?</code> |
|----------------|---------------------------------|

| | |
|-------|--|
| Notes | <p>Return Value:</p> <p>An <code><arbitrary block data></code> of all the installed instrument licenses</p> <p>The format of each license is as follows</p> <pre><Feature>,<Version>,<Signature>,<Expiration Date>,<Serial Number for Transport>,...</pre> <p>Return Value Example:</p> <pre>#3136 N9073A-1FP,1.000,B043920A51CA N9060A-2FP,1.000,4D1D1164BE64 N9020A-508,1.000,389BC042F920 N9073A-1F1,1.000,5D71E9BA814C,13-aug-2005</pre> <p><code><arbitrary block data></code> is:</p> <pre>#NMMM<data></pre> <p>Where:</p> <p>N is the number of digits that describes the number of MMM characters. For example, if the data was 55 bytes, N would be 2</p> <p>MMM would be the ASCII representation of the number of bytes. In the previous example, N would be 55</p> <p><code><data></code> ASCII contents of the data</p> <p>Additional fields may appear depending on the type of license (Fixed, Transportable, Network, USB Portable)</p> |
|-------|--|

4.7.11 Validate License (Remote Query Only)

Lets you query whether a particular license is currently valid.

| | |
|----------------|--|
| Remote Command | <code>:SYSTem:LKEY? <"OptionInfo"></code> |
| Example | <code>:SYST:LKEY? "N9073A-1FP"</code> |
| Notes | <p><code><"OptionInfo"></code> contains the feature and the version. You must specify the feature but can omit the version. If you omit the version, the system regards it as the latest one</p> <p>Return Value: <code><"LicenseInfo"></code> if the license is valid, null otherwise <code><"LicenseInfo"></code> contains the signature, the expiration date, and serial number if transportable</p> <p>Return Value Example: <code>"B043920A51CA"</code></p> |

4.7.12 Host ID Query (Remote Query Only)

Returns the Host ID as a string.

| | |
|----------------|---------------------------|
| Remote Command | <code>:SYSTem:HID?</code> |
|----------------|---------------------------|

4.8 Security

Accesses capabilities for operating the instrument in a security-controlled environment.

The **Security** page of the **System** menu has two controls: **USB Read/Write** and **Restore Security Defaults**.

| | |
|--------------|----------------------|
| Dependencies | Not available in UXM |
|--------------|----------------------|

4.8.1 USB Write Protect

The Windows operating system can be configured to disable write access to the USB ports for users who are in a secure environment where transferring data from the instrument is prohibited. The **USB Write Protect** control is a convenient way for you to disable write access to USB.

NOTE

This control is only available to users with Administrator privileges.

| | |
|----------------|--|
| Remote Command | <code>:SYSTem:SECurity:USB:WPRotect[:ENABle] ON OFF 0 1</code> <code>:SYSTem:SECurity:USB:WPRotect[:ENABle]?</code> |
|----------------|--|

| | |
|---------|--|
| Example | Set USB ports to Read-only: <code>:SYST:SEC:USB:WPR ON</code> Set USB ports to Read-Write: <code>:SYST:SEC:USB:WPR OFF</code> |
|---------|--|

| | |
|-------|---|
| Notes | When the USB ports are in Read-only mode, then no data can be stored to USB, including the internal USB memory used for a back-up location for the calibration data |
|-------|---|

| | |
|--------------|---|
| Dependencies | Grayed-out unless the current user has Administrator privileges |
|--------------|---|

| | |
|--------|---|
| Preset | Unaffected by Preset or any "Restore Defaults" on page 1915. A Keysight Recovery sets the USB to write protect OFF |
|--------|---|

| | |
|-------------|----|
| State Saved | No |
|-------------|----|

| | |
|-------|------------------------|
| Range | Read-Write Read only |
|-------|------------------------|

4.8.2 Restore Security Defaults

Sets USB Read/Write to Enable.

NOTE

This control is only available to users with Administrator privileges.

4.9 Diagnostics

Displays a slider that allows you to view Hardware Statistics.

| | |
|--------------|----------------------|
| Dependencies | Not available in UXM |
|--------------|----------------------|

4.9.1 Show Hardware Statistics

Provides a display of various hardware statistics. The statistics include the following:

- Mechanical relay cycles (on models with mechanical relays)
- High and Low temperature extremes
- Elapsed time that the instrument has been powered-on (odometer)

Modular instruments display only time and temperature information.

| | |
|---------|------------------------------|
| Example | <code>:SYST:SHOW HWST</code> |
|---------|------------------------------|

| | |
|-------|--|
| Notes | The values displayed on the screen are only updated upon entry to the screen and not updated while the screen is being displayed |
|-------|--|

4.9.2 Pathwave Calibration Advisor...

This is a separate application that helps maintain your instrument at peak performance. You can set the cal interval, configure cal due reminders, check the cal status, view cal certificates and test reports, and contact Keysight for a cal service.

The embedded help documentation can be accessed in the instrument at: <C:\Program Files\Keysight\Calibration Advisor\PCA.chm>, or via the ? button at the top right of the **PathWave Calibration Advisor** window.

4.9.3 Query the Mechanical Relay Cycle Count (Remote Query Only)

Returns the count of mechanical relay cycles.

| | |
|----------------|------------------------------------|
| Remote Command | <code>:SYSTem:MRELAY:COUNT?</code> |
|----------------|------------------------------------|

| | |
|---------|-------------------------------|
| Example | <code>:SYST:MREL:COUN?</code> |
|---------|-------------------------------|

| | |
|-------|------------|
| Notes | Query Only |
|-------|------------|

The return value is a comma-separated list of the individual counts for each mechanical relay
The position of the relays in the list is:

“<Cal Signal>, <AC/DC>, <2dB #1 Atten>, <2dB #2 Atten>, <6dB Atten>, <10dB Atten>, <20dB Atten>, <30dB Atten>, <Fixed Atten>, <Low Noise Path Switch>, <PreSel Bypass>”

Items in the list not pertaining to your hardware configuration return as -999 for those items

Dependencies *Not supported by E6607C*

4.9.4 Query the Operating Temperature Extremes (Remote Query Only)

Returns the low operating temperature extreme value. The value survives a power-cycle and is the temperature extreme encountered since the value was reset by the factory or service center.

Remote Command `:SYSTem:TEMPerature:LEXTreme?`

Example `:SYST:TEMP:LEXT?`

Notes Value is in degrees Celsius at which the lowest operating temperature has been recorded since 1st power-up

State Saved No

Returns the high operating temperature extreme value. The value survives a power-cycle and is the temperature extreme encountered since the value was reset by the factory or service center.

Remote Command `:SYSTem:TEMPerature:HEXTreme?`

Example `:SYST:TEMP:HEXT?`

Notes Value is in degrees Celsius at which the highest operating temperature has been recorded since 1st power-up

State Saved No

4.9.5 Query the Elapsed Time since 1st power on (Remote Query Only)

Returns the elapsed on-time in minutes since 1st power-on.

Remote Command `:SYSTem:PON:ETIMe?`

Example `:SYST:PON:ETIM?`

Notes Query Only

4.10 Service

Accesses capabilities performed in the factory or under instructions from repair procedures. This key is only visible when the logged-in user is “**advanceduser**” or “**saservice**”. The first access to the **Service** menu after invoking the instrument application will require an authentication Service Code.

| | |
|--------------|----------------------|
| Dependencies | Not available in UXM |
|--------------|----------------------|

4.11 SCPI Recorder

Allows you to view active recording content, and edit the content. Right-click or touch and hold on any UI control to display a menu allowing you to record the SCPI associated with the control.

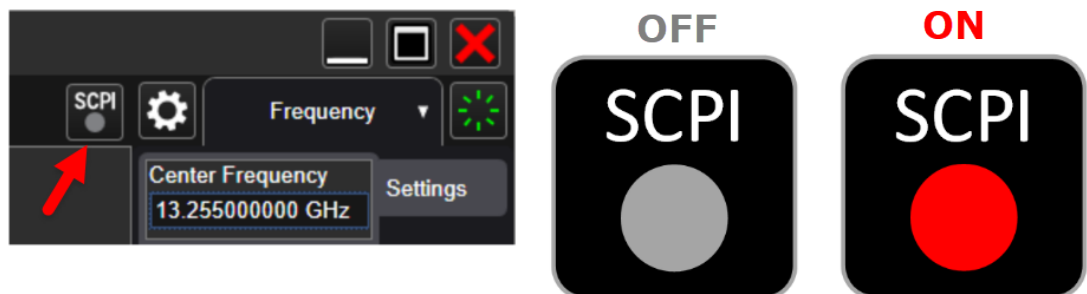

Selecting this tab displays the **Recorder** dialog on the right. The dialog displays the recorder table with the data in chronological order of recording. The Function Label column shows the feature name, for example, Center Frequency, and the SCPI column shows the full mnemonic corresponding to the feature.

4.11.1 Continuous SCPI Recording

Toggles the state of continuous recording.

When enabled (**ON**), *all* user interaction with settings that are Immediate Actions, and that have associated SCPI commands or queries, are added as recording entries in chronological order. Not every User Interface action has a corresponding SCPI command/query, for example, navigation actions between dialogs and menus in the User Interface do not have corresponding SCPI commands. All settings or a measurement that are accessible via menus have SCPI commands, so modifying those settings will create entries in the Recorder.

As a convenience, this feature can also be toggled (without visiting the SCPI Recording menu) by clicking the SCPI icon which has been added to the left of the “gear” icon (as illustrated below):

NOTE

When recording is turned on, some entries are automatically created and added to the recording. These are: `:INST:CONF:<mode>:<meas>` (see ["Mode" on page 90](#)) and `*OPC?` (see ["*OPC? - Operation Complete" on page 2562](#)). These commands set the current Mode and Measurement, perform a **Mode Preset**, then cause the instrument to wait for the completion of any previous commands. When **Continuous SCPI Recording** fills the recording container to the limit, a warning message is displayed to notify you that the recording container is full

and recording will be stopped, unless the recording limit is increased.

NOTE

To maintain the integrity of recording, stop recording *before* sending remote commands to the instrument. Changes made to the instrument via remote SCPI are *not* recorded.

4.11.2 Recording Limit

When "[Continuous SCPI Recording](#)" on page 2010 is enabled, every change you make is recorded into the recording system, which can lead to extremely large recordings.

This value limits how much content can be saved into the recording table. You may change this number to suit your needs, but the value cannot be less than 0 or greater than 500. When the recording length reaches the limit, a warning is displayed to indicate that the recording size has reached the limit and recording will be stopped.

The default limit is 250. If the limit is reduced after recording entries are added, the reduced count cannot be less than the current number of entries in the recording. If the newly-entered limit is smaller than the existing number of entries, then the actual new limit is set to the current number of entries. Increasing the limit will increase memory consumption.

4.11.3 Play All

Clicking this control causes each of the entries in the SCPI Recorder table to be executed.

If execution results in any errors, then a message box showing the SCPI command, and its corresponding error are displayed after play has completed.

4.11.4 Play Selected

You can select a row in the SCPI recording table, then click **Play Selected** to play that entry. **Play Selected** is disabled if the recording table is empty, or when no row is selected. You can then select another row and play the selection, but, if you want to play back in a particular order, you must execute the plays in the desired sequence.

After playing the selected entry, the selected row is moved down by one entry.

4.11.5 Copy

Copies the SCPI column data to the system clipboard, to make it available for Paste operations.

4.11.6 Insert *OPC? Below

Certain queries and commands must be sent during instrument programming, but there is no corresponding user-interface control for these commands. This control allows you to insert one such query: ***OPC?** below the selected row.

4.11.7 Move Up

Moves the selected / highlighted row up by 1 slot. Note that moving a mode or measurement switch entry in the table may impact context for subsequent entries in the table.

4.11.8 Move Down

Moves the selected / highlighted row down by 1 slot. Note that moving a mode or measurement switch entry in the table may impact context for subsequent entries in the table.

4.11.9 Delete Row

Deletes the selected entry from the recording table. Note that some entries may have subsequent entries related to the row that you delete, for example, ***OPC?**, which may be added automatically after a mode or measurement switch.

4.11.10 Delete All

Deletes all entries from the recording table. A warning message is displayed: "All recording data will be deleted".

To confirm that you want to delete the entire recording content, click **OK**, or click **Cancel** to avoid deleting it.

4.12 System Remote Commands (Remote Commands Only)

These commands have no front-panel key equivalent.

- "List installed Options (Remote Query Only)" on page 2013
- "Lock the Front-panel keys (Remote Command Only)" on page 2014
- "Lock Workstation (Remote Command Only)" on page 2014
- "List SCPI Commands (Remote Query Only)" on page 2016
- "Front Panel activity history (Remote Query only)" on page 2016
- "SCPI activity history (Remote Query only)" on page 2017
- "Instrument start time (Remote Query only)" on page 2017
- "SCPI Version Query (Remote Query Only)" on page 2018
- "Date (Remote Command Only)" on page 2018
- "Time (Remote Command Only)" on page 2018
- "Input Overload Enable (Remote Command Only)" on page 2019
- "Power Up (Remote Query Only)" on page 2019

4.12.1 List installed Options (Remote Query Only)

Lists the installed options that pertain to the instrument (signal analyzer).

| | |
|----------------|---|
| Remote Command | <code>:SYSTem:OPTions?</code> |
| Example | <code>:SYST:OPT?</code> |
| Notes | The return string is a comma-separated list of the installed options. For example: <code>"503,P03,PFR"</code> <code>:SYSTem:OPTions?</code> and <code>*OPT?</code> are the same |
| State Saved | No |

4.12.2 Lock the Front-panel keys (Remote Command Only)

Disables the instrument keyboard to prevent local input when the instrument is controlled remotely. Annunciation showing a “K” for **KLOCK** (keyboard lock) alerts the local user that the keyboard is locked. **KLOCK** is similar to the GPIB Local Lockout function; namely that no front-panel keys are active except for the **Power Standby** key. (The instrument is allowed to be turned-off if **KLOCK** is **ON**.) The **KLOCK** command is used in remote control situations where Local Lockout cannot be used.

Although primary intent of **KLOCK** is to lock-out the front panel, it will lock-out externally connected keyboards through USB. **KLOCK** has no effect on externally connected pointing devices (mice).

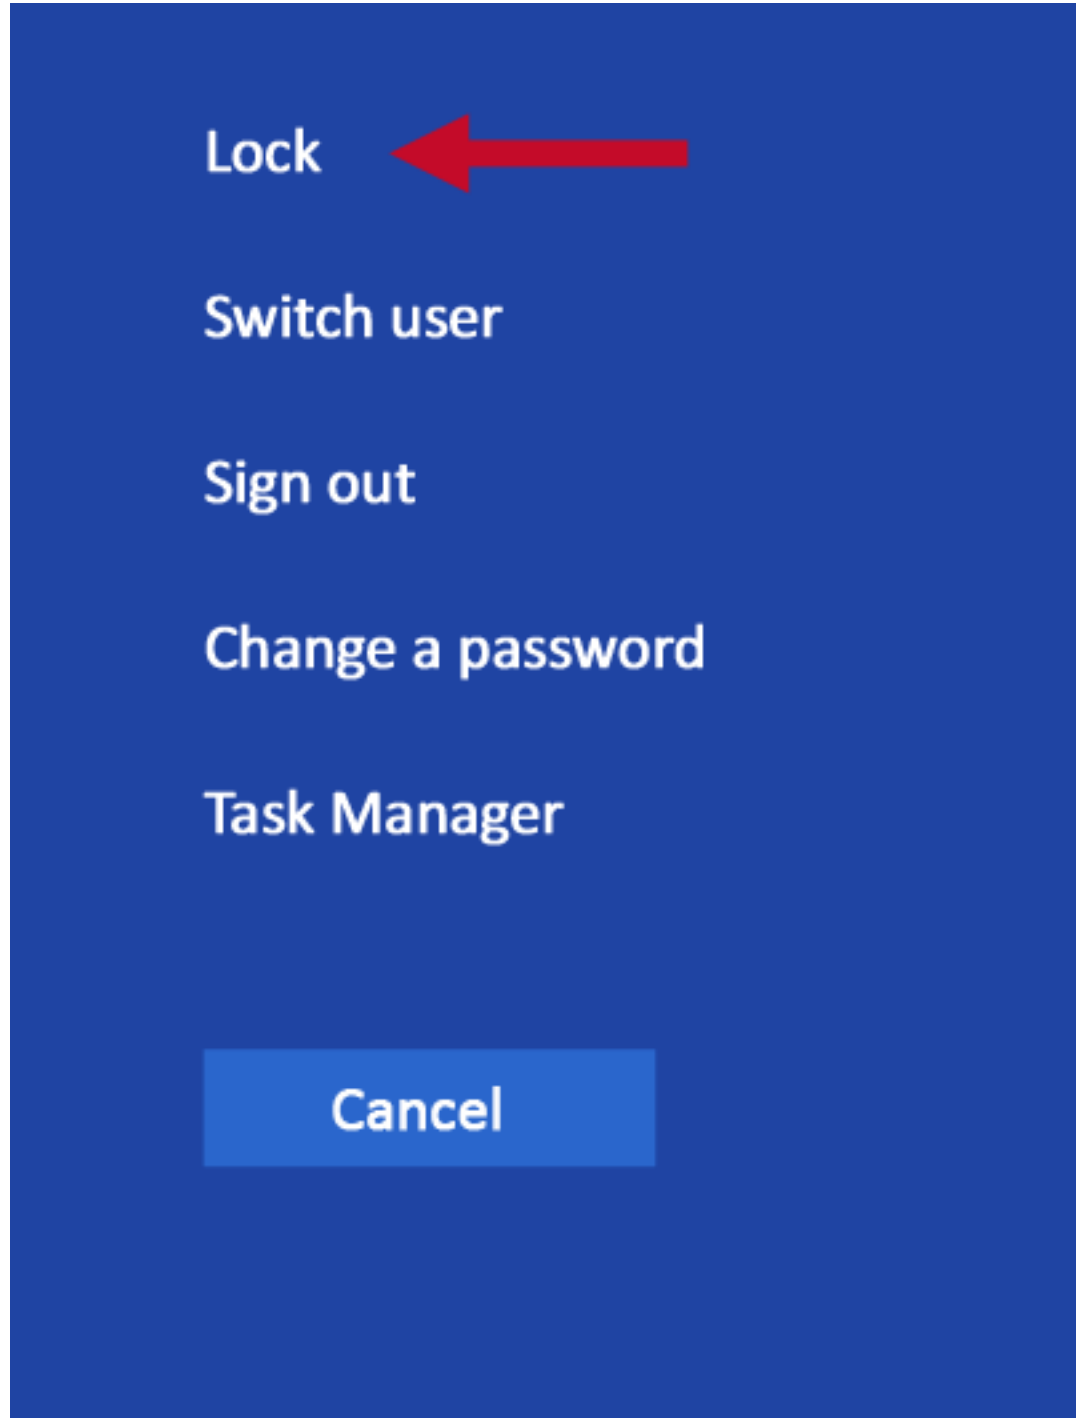

The front panel ‘**Local**’ key (**Cancel/Esc**) has no effect if **KLOCK** is **ON**.

See also "[Local Button](#)" on page 137.

| | |
|----------------|---|
| Remote Command | <code>:SYSTem:KLOCK OFF ON 0 1</code> <code>:SYSTem:KLOCK?</code> |
| Example | <code>:SYST:KLOC ON</code> |
| Notes | Keyboard lock remains in effect until turned-off, or until the instrument is power-cycled |
| Preset | Initialized to OFF at startup, unaffected by Preset |
| State Saved | No |

4.12.3 Lock Workstation (Remote Command Only)

Performs the same functionality as the **Win+L** function or the “Lock” function on the **CTL-ALT-DEL** screen in Windows.

As soon as you do this, the computer is locked. The initial login screen appears; no one can access the computer at that point unless they have an account and know the account's password.

Failure to initiate adds an error to the Windows event log for SA;

4 System
4.12 System Remote Commands (Remote Commands Only)

"LockWorkStation - Failed to initiate function"

See also "Local Button" on page 137.

| | |
|----------------|---|
| Remote Command | :SYSTem:LWSTation |
| Example | :SYST:LWST |
| Notes | The lock remains in effect until a user logs in |
| State Saved | No |

4.12.4 List SCPI Commands (Remote Query Only)

Outputs a list of the valid SCPI commands for the currently selected Mode.

| | |
|----------------|--|
| Remote Command | :SYSTem:HELP:HEADers? |
| Example | :SYST:HELP:HEAD? |
| Notes | The output is an IEEE Block format, with each command separated with the New-Line character (0x0A) |

4.12.5 Front Panel activity history (Remote Query only)

Instrument front panel usage can be monitored using :SYSTem:METRics:FPANel?. The monitoring occurs for front panel hardkey or softkey operation (including mouse or touch operation on instruments with Multi-Touch User Interface). The information of the usage pertains to the activity since the instrument application was started; the information does not persist after the application is terminated, or the instrument has been rebooted.

To prevent the front panel from being placed into Remote the monitoring must occur via an I/O protocol such as LAN Socket, or the remote program performing the monitoring must explicitly place the instrument into Local after the query has been performed.

| | |
|----------------|---|
| Remote Command | :SYSTem:METRics:FPANel? |
| Example | :SYST:METR:FPAN? |
| Notes | The return value is a string with the format "YYYY-MM-DD<space>HH:MM:SS", in instrument local time If no front panel activity has occurred since the instrument was booted (instrument application started), the return value will be the time the instrument application started. The instrument application start time can be obtained with the query :SYSTem:METRics:STIME? |

4.12.6 SCPI activity history (Remote Query only)

Instrument remote operation usage via SCPI can be monitored using `:SYSTem:METRics:SCPI?`. The monitoring occurs for SCPI control from any I/O channel (GPIB, USB, or LAN). The information of the usage pertains to the activity since the instrument application was started; the information does not persist after the application is terminated, or the instrument has been rebooted.

| | |
|----------------|---|
| Remote Command | <code>:SYSTem:METRics:SCPI?</code> |
| Example | <code>:SYST:METR:SCPI?</code> |
| Notes | <p>The return value is a string with the format “YYYY-MM-DD<space>HH:MM:SS”, in instrument local time</p> <p>The following commands are excluded from the history accounting:</p> <ul style="list-style-type: none"> - <code>*IDN?</code> - <code>*OPT?</code> - <code>:SYSTem:DATE?</code> - <code>:SYSTem:TIME?</code> - <code>:SYSTem:PON:TIME?</code> - Queries in the <code>:SYSTem:ERRor</code> subsystem - Queries in the <code>:SYSTem:LKEY</code> subsystem - Queries in the <code>:SYSTem:METRics</code> subsystem - Queries in the <code>:SYSTem:MODUle</code> subsystem <p>If no SCPI activity has occurred since the instrument was booted (instrument application started), the return value will be the time the instrument application started. The instrument application start time can be obtained with <code>:SYSTem:METRics:STIME?</code></p> |

4.12.7 Instrument start time (Remote Query only)

To determine if instrument activity has occurred, `:SYSTem:METRics:STIME?` can be used to determine the instrument application start time.

| | |
|----------------|---|
| Remote Command | <code>:SYSTem:METRics:STIME?</code> |
| Example | <code>:SYST:METR:STIM?</code> |
| Notes | <p>The return value is a string with the format “YYYY-MM-DD<space>HH:MM:SS”, in instrument local time</p> |

4.12.8 SCPI Version Query (Remote Query Only)

Returns the SCPI version number with which the instrument complies. The SCPI industry standard changes regularly. This command indicates the version used when the instrument SCPI commands were defined.

| | |
|----------------|-------------------------------|
| Remote Command | <code>:SYSTem:VERSion?</code> |
| Example | <code>:SYST:VERS?</code> |

4.12.9 Date (Remote Command Only)

The recommended access to the Date, Time, and Time zone of the instrument is through the Windows native control (Control Panel, or accessing the Task Bar). You may also access this information remotely, as shown in here and in "[Time \(Remote Command Only\)](#)" on page 2018.

Sets or queries the date in the instrument.

| | |
|----------------|---|
| Remote Command | <code>:SYSTem:DATE "<year>,<month>,<day>"</code> <code>:SYSTem:DATE?</code> |
| Example | <code>:SYST:DATE "2006,05,26"</code> |
| Notes | <code><year></code> is the four-digit representation of year (for example, 2006) <code><month></code> is the two-digit representation of year (01 to 12) <code><day></code> is the two-digit representation of day (01 to 28, 29, 30, or 31, depending on the month and year) Unless the current account has Power User or Administrator privileges, sending this command generates an error, and no action is taken |

4.12.10 Time (Remote Command Only)

Sets or queries the time in the instrument.

| | |
|----------------|---|
| Remote Command | <code>:SYSTem:TIME "<hour>,<minute>,<second>"</code> <code>:SYSTem:TIME?</code> |
| Example | <code>:SYST:TIME "13,05,26"</code> |
| Notes | <code><hour></code> is the two-digit representation of the hour in 24-hour format <code><minute></code> is the two-digit representation of minute <code><second></code> is the two-digit representation of second Unless the current account has Power User or Administrator privileges, sending this command generates an error, and no action is taken |

4.12.11 Input Overload Enable (Remote Command Only)

Input Overload errors are reported using the Input Overload status bit (bit 12 in the Measurement Integrity Status Register). Input Overloads (for example, ADC Overload errors) can come and go with great frequency, generating many error events (for example, for signals just on the verge of overload), and so are not put into the SCPI error queue by default. Normally the status bit is the only way for detecting these errors remotely.

Use this command to enable or disable Input Overload reporting to the SCPI queue. By default, reporting is disabled. Send `:SYSTem:ERRor:OVERload ON` to enable, or `:SYSTem:ERRor:OVERload OFF` to disable. In either case, Input Overloads *always* set the status bit.

NOTE

For versions of firmware before A.10.01, Input Overload was only a Warning and so was never available in the SCPI queue, although it did set the status bit. For A.10.01 and later, Input Overload is an error, which can be enabled to the SCPI queue using this command.

| | |
|----------------|---|
| Remote Command | <code>:SYSTem:ERRor:OVERload[:STATe] 0 1 OFF ON</code> |
| Example | Enable overload errors: <code>:SYST:ERR:OVER 1</code> |
| Preset | Set to OFF by Restore Misc Defaults (no Overload errors go to SCPI) |
| State Saved | Saved in instrument state |

4.12.12 Power Up (Remote Query Only)

Returns a list of errors encountered during the application boot-up, such as: mismatch FW-FPGA, missing Calibration data, missing hardware, and construction errors.

| | |
|----------------|---|
| Remote Command | <code>:SYSTem:ERRor:PUP?</code> |
| Notes | If no error occurs, the return value is: "No Power Up Errors" Return Value: <code><List of error strings></code> in <code><IEEE488 Block></code> format Return Value Example: "Power up errors, see details in Windows Event Log" "Unmatched FPGA Version(s), See details in Windows Event Log" |

5 Preset

The Preset functions can be accessed in two ways:

- By pressing the **Mode Preset** or **User Preset** front panel keys:

- From the menu "**Preset Dropdown**" on page 2023, which appears when you press the green **Preset** icon (in the upper right corner of the display):

Types of Preset

The table below shows all possible presets, their corresponding SCPI commands and front-panel access methods.

Instrument settings are tiered in scope from those local to the current measurement to those global to all measurements and Modes. There are presets tailored to each scope. The table identifies the scope of each preset type.

NOTE

To get a Mode back to a fully predefined state, you should execute "**Restore Mode Defaults**" on page 2026 and "**Input/Output Preset**" on page 2027, but since **Input/Output Preset** is a global function, it affects *all* Modes.

| Type Of Preset | SCPI Command | Scope of Preset | Front Panel Access |
|----------------------------|---------------------|---|---|
| "Auto Couple" on page 1833 | :COUPle ALL | Local to the current measurement, only affects Auto/Man variables | Meas Setup menu |
| Meas Preset | :CONFigure:<meas> | Local to the current measurement Does not preset the RF Source | Meas Setup menu |
| "Mode Preset" on page 2024 | :SYSTem:PRESet | Local to the current Mode, global to all measurements in the Mode, affects most but not all parameters in the Mode Does not affect Input/Output or System variables Presets the RF Source | Mode Preset key " Preset Dropdown " on page 2023 |
| "Restore Mode | :INSTrument:DEFault | Local to the current Mode, global to | "Preset |

| Type Of Preset | SCPI Command | Scope of Preset | Front Panel Access |
|---|----------------------------|---|--|
| Defaults" on page 2026 | | all measurements in the Mode, affects all parameters in the Mode, but does not affect Input/Output or System variables Does not preset the RF Source. | Dropdown" on page 2023 |
| "Restore Defaults All Modes" on page 2033 | :SYSTem:DEFault MODEs | Affects all parameters in <i>all</i> Modes, but does not affect Input/Output or System variables Presets the RF Source | "Preset Dropdown" on page 2023 |
| "Restore Screen Defaults" on page 2036 | :SYSTem:DEFault SCReen | Deletes all Screens but one, restores that screen to its default mode and performs Mode Preset for that mode Does not affect Input/Output or System variables Presets the RF Source | "Preset Dropdown" on page 2023 |
| "User Preset" on page 2029 | :SYSTem:PRESet:USER | Local to the current Mode, global to all measurements in the Mode, affects all parameters in the Mode, as well as Input/Output variables Does not affect System variables | User Preset key "Preset Dropdown" on page 2023 |
| "User Preset All Modes" on page 2032 | :SYSTem:PRESet:USER:ALL | Same as User Preset , but affects all Modes in the current Screen | "Preset Dropdown" on page 2023 |
| "User Preset All Screens" on page 2034 | | Affects the entire Screen Configuration; global to all Modes and Screens | "Preset Dropdown" on page 2023 |
| *RST | *RST | Same as Mode Preset . Additionally always sets Single/Cont to Single | Not available from front panel |
| "Input/Output Preset" on page 2027 | :SYSTem:DEFault INPut | Affects all Input/Output variables Does not preset the RF Source | Input/Output menu "Preset Dropdown" on page 2023 System > Restore Defaults |
| "Full Mode Preset" on page 2028 | :SYSTem:PRESet:FULL | Same as Mode Preset + Restore Mode Defaults + Input/Output Preset . Essentially a factory preset of the current Mode Presets the RF Source | "Preset Dropdown" on page 2023 |
| "Restore User | :SYSTem:DEFault UINTErface | Affects all variables in the "User | System > Restore |

| Type Of Preset | SCPI Command | Scope of Preset | Front Panel Access |
|---|--|--|--|
| Interface Defaults" on page 1900 | | Interface" group Does not preset the RF Source | Defaults User Interface tabs |
| "Restore Power On Defaults" on page 1909 | <code>:SYSTem:DEFault PON</code> | Affects all variables in the "Power On" group Presets the RF Source | System > Restore Defaults Power On tabs |
| "Restore Alignment Defaults" on page 1986 | <code>:SYSTem:DEFault ALIGn</code> | Affects all variables in the "Alignments" group Presets the RF Source | System > Restore Defaults Alignments tabs |
| "Restore Defaults" on page 1915 (Misc) | <code>:SYSTem:DEFault MISC</code> | Affects various variables not reset by other commands Presets the RF Source | System > Restore Defaults |
| "Restore Defaults" on page 1915 (All) | <code>:SYSTem:DEFault [ALL]</code> <code>:SYSTem:PRESet:PERSistent</code> | Affects all variables Presets the RF Source | System > Restore Defaults |

5.1 Preset Dropdown

The Preset dropdown contains the following controls. In the image below, click a control for details of that control.

5.2 Mode Preset

Returns the current Mode to a known state. **Mode Preset** only presets the current Screen; it does not affect any other Screens.

Mode Preset also presets the RF Source. In this sense, it is equivalent to pressing **Source Preset** on the **Input/Output, RF Source** menu panel.

Mode Preset can be executed from the "**Preset Dropdown**" on page 2023, or by pressing the **Mode Preset** front panel key:

It does the following for the currently active Mode:

- Aborts the currently running measurement
- Switches to the default measurement and displays the default menu for that measurement
- Sets most parameters for the Mode and all its Measurements to a preset state
- Clears the input and output buffers
- Sets Status Byte to 0

Mode Preset does *not* cause a Mode switch, nor affect any **Input/Output** or **System** settings (those set in the **System Settings** dialog).

Furthermore, some Mode settings are unaffected by **Mode Preset** (for example, Noise Floor Extensions, Limit Line data, reference marker numbers, etc.) These are only reset by "**Restore Mode Defaults**" on page 2026. In each parameter's definition table there is a note that indicates whether it is reset by **Mode Preset** or by **Restore Mode Defaults**.

See "**Preset**" on page 2020 for more details.

| | |
|------------------------------|---|
| Remote Command | <code>:SYSTem:PRESet</code> |
| Example | <code>:SYST:PRES</code> |
| Notes | *RST is preferred over <code>:SYST:PRES</code> for remote operation. *RST performs Mode Preset , as done by the <code>:SYST:PRES</code> command, and sets the measurement mode to Single measurement rather than Continuous , for optimal remote control throughput See also " *RST - Reset " on page 2563 |
| Status Bits/OPC dependencies | Clears all pending OPC bits. The Status Byte is set to 0 |

5 Preset

5.2 Mode Preset

Backwards Compatibility Notes

In X-Series, the legacy “Factory Preset” has been replaced by **Mode Preset**, which only presets the currently active Mode, not the entire instrument. In X-Series, you preset the entire instrument by using **System, Restore System Defaults All**, which behaves essentially the same way as restore System Defaults did in ESA and PSA

There is also no “Preset Type” as there was in PSA. The green **Mode Preset** front-panel key does a Mode Preset, and the **User Preset** front-panel key does a User Preset. The old **PRESet:TYPE** command is ignored (without generating an error), and **SYST:PRES** without a parameter does **Mode Preset**

The settings and correction data under the **Input/Output** front-panel key (examples: Input Z Corr, Ext Amp Gain, etc.) are no longer part of any Mode, so they are not preset by **Mode Preset**. They are preset by **Restore Input/Output Defaults, Restore System Defaults All**. Note that because “**User Preset**” on [page 2029](#) performs Recall State, and all these settings are saved in State, they *are* recalled when using **User Preset**

5.3 Restore Mode Defaults

Most settings within a Mode are affected by "[Mode Preset](#)" on page 2024, but some Mode settings are unaffected (for example, Noise Floor Extensions, Limit Line data, reference marker numbers, etc.) **Restore Mode Defaults** resets all these additional settings, as well as all the **Mode Preset** settings, *except* the RF Source.

In each parameter's definition table, there is a note that indicates whether that parameter is reset by **Mode Preset** or by **Restore Mode Defaults**.

Note that a Recall State affects all a Mode's settings, both the **Mode Preset** settings and the ones additionally affected by **Restore Mode Defaults**.

Restore Mode Defaults can be executed from the "[Preset Dropdown](#)" on page 2023.

When **Restore Mode Defaults** is selected, a message appears saying

*This will reset all of the current Mode's variables to their default state.
This action cannot be undone. Do you want to proceed?*

The message provides **OK** and **Cancel** buttons, to let you confirm or cancel the reset operation.

| | |
|----------------|--|
| Remote Command | <code>:INSTRUMENT:DEFAULT</code> |
| Example | <code>:INST:DEF</code> |
| Notes | Clears all pending OPC bits. The Status Byte is set to 0 |
| Couplings | Causes the currently running measurement to be aborted, and causes the default measurement to be active. Sets the Mode to a consistent state, with all default couplings set |

5.4 Input/Output Preset

Resets the group of settings and data associated with the **Input/Output** front-panel key to their default values. These settings are not affected by "**Mode Preset**" on page 2024, because they are generally associated with connections to the instrument, which generally should remain unaltered.

All the variables set under the **Input/Output** front panel key are reset by **Input/Output Preset**, including Amplitude Corrections and Data (described in the **Corrections** section), with the exception of **RF Source** settings, which are unaffected.

By using **Input/Output Preset** and "**Restore Mode Defaults**" on page 2026, a full preset of the current Mode can be performed, with the caveat that, since **Input/Output Preset** is a global function, it affects *all* Modes.

Input/Output Preset can be executed from the **Input/Output** menu, from the "**Preset Dropdown**" on page 2023, or from the **Restore Defaults** menu under the **System** key.

When **Input/Output Preset** is selected, a message appears saying:

"This will reset all of the Input/Output variables to their default state, including which input is selected, all Amplitude Correction settings and data, all External Mixing settings, all Frequency Reference settings and all Output settings.

It will not affect Alignment data or settings.

It will not affect RF Source settings.

This action cannot be undone. Do you want to proceed?"

The message provides **OK** and **Cancel** buttons, to let you confirm or cancel the operation.

Example

```
:SYST:DEF INP
```

Presets all **Input/Output** variables to their factory default values

5.5 Full Mode Preset

Same as performing "Mode Preset" on page 2024, "Restore Mode Defaults" on page 2026, and "Input/Output Preset" on page 2027. Essentially a factory preset of the current Mode.

When **Full Mode Preset** is selected, a message appears saying:

This will reset all of the current Mode's variables and all of the Input/Output variables to their default state, including Input and Output selection and settings, Amplitude Correction, Frequency Reference and RF Source settings.

It will not affect Alignment data or settings.

This action cannot be undone. Do you want to proceed?

The message provides **OK** and **Cancel** buttons, to let you confirm or cancel the operation.

| | |
|------------------------------|--|
| Remote Command | :SYSTem:PRESet:FULL |
| Example | :SYST:PRES:FULL |
| Status Bits/OPC dependencies | Clears all pending OPC bits. The Status Byte is set to 0 |

5.6 User Preset

Recalls a state previously saved using ["Save User Preset" on page 2031](#). You can save a **User Preset** state for each Mode, allowing you to define your own favorite state for each Mode and recall it at the touch of a single button.

User Preset can be executed by pressing the **User Preset** front panel key, or from the ["Preset Dropdown" on page 2023](#).

Because **User Preset** is actually a Recall State, rather than a predefined Preset, it works a little differently from ["Mode Preset" on page 2024](#), in that it affects all the variables that normally only reset on ["Restore Mode Defaults" on page 2026](#), and it affects the **Input/Output** variables, because both of these are included in State files.

A default **User Preset** file is provided for each Mode, which simply matches the current Mode's state after **Restore Mode Defaults** and ["Input/Output Preset" on page 2027](#) has been performed.

NOTE

In products that run multiple instances of the X-Series Application, all instances use the same location to save User Preset state. So, saving User Preset of one instance will overwrite the Save User Preset of another instance.

| | |
|-------------------------------|---|
| Remote Command | <code>:SYSTem:PRESet:USER</code> |
| Example | <p>Save the User Preset: <code>:SYST:PRES:USER:SAVE</code></p> <p>Recall the User Preset: <code>:SYST:PRES:USER</code></p> |
| Notes | <p><code>:SYST:PRES:USER:SAVE</code> is used to save the current state as the user preset state</p> <p>If loading a User Preset file from a different instrument, some settings may be limited and/or coupled differently, since the capabilities of the mode may have changed from when the User Preset file was saved</p> |
| Status Bits/OPC dependencies | Clears all pending OPC bits. The Status Byte is set to 0 |
| Backwards Compatibility Notes | <p>In X-Series A-models, the User Preset key opened a menu that let you select from User Preset, Save User Preset, or User Preset All Modes. In B-models, the User Preset key immediately performs a User Preset, and the menu items are found under the Preset dropdown</p> <p>User Preset actually loads a state, and in legacy analyzers, it was possible to load a state without affecting the trace data, limit lines or correction data. Similarly, it was possible to do a User Preset without affecting the trace data, limit lines or correction data</p> |

In X-Series, “state” always includes all of this data; so whenever state is loaded, or **User Preset** is executed, all the traces, limit lines and corrections are affected

In ESA and PSA, **User Preset** affected the entire instrument’s state. In X-Series, **User Preset** only recalls the state for the active Mode. There is a User Preset file for each Mode. **User Preset** can never cause a Mode switch as it could in legacy analyzers. If you want to recall all Modes to their user preset file state, perform User Preset *after* switching into each Mode

User Preset recalls Mode state, which can now include data, such as traces, whereas in ESA and PSA, User Preset did not affect data

5.7 Save User Preset

Saves the state of the currently active Mode in a unique location, for recall by the key "**User Preset**" on page 2029. Each Mode has one such location, so, for each Mode, one User Preset can be defined.

Save User Preset can be executed from the "**Preset Dropdown**" on page 2023.

All the Mode variables are saved, including those reset by "**Mode Preset**" on page 2024, those only reset by "**Restore Mode Defaults**" on page 2026, and all **Input/Output** variables, so when you subsequently press **User Preset**, the instrument returns to the exact same setup that existed when you pressed **Save User Preset**. Thus, **User Preset** has wider scope than **Mode Preset**.

| | |
|----------------|--|
| Remote Command | <code>:SYSTem:PRESet:USER:SAVE</code> |
| Example | <code>:SYST:PRES:USER:SAVE</code> |
| Notes | <code>:SYST:PRES:SAVE</code> creates the same file as if you requested <code>*SAV</code> or <code>:MMEM:STOR:STAT</code> , except that Save User Preset does not allow you to specify the file name or location |

5.8 User Preset All Modes

Recalls all the User Preset files for each Mode, switches to the Power-on Mode, and activates the saved measurement from the Power-on Mode **User Preset** file.

User Preset All Modes can be executed from the "[Preset Dropdown](#)" on page 2023

See also "[User Preset](#)" on page 2029.

| | |
|------------------------------|--|
| Remote Command | <code>:SYSTem:PRESet:USER:ALL</code> |
| Example | <code>:SYST:PRES:USER:SAVE</code> <code>:SYST:PRES:USER:ALL</code> |
| Notes | <code>:SYST:PRES:USER:SAVE</code> is used to save the current state as the user preset state |
| Status Bits/OPC dependencies | Clears all pending OPC bits. The Status Byte is set to 0 |

5.9 Restore Defaults All Modes

Resets all Modes in the current Screen back to their default states, just as **Restore Mode Defaults** does, switches the current Screen to the Power-on Mode, and causes the default measurement for the **Power On Mode** to be active in the current Screen. Only the current Screen is affected.

Restore Defaults All Modes can be executed from the "Preset Dropdown" on page 2023.

When **Restore Defaults All Modes** is selected, a message appears saying:

This will reset all of the variables for all of the Modes in the current Screen to their default state. This action cannot be undone. Do you want to proceed?

The message provides **OK** and **Cancel** buttons.

| | |
|-----------|--|
| Example | <code>:SYST:DEF MOD</code> |
| Couplings | Causes the currently running measurement to be aborted, a switch to the Power-on Mode, and activates the default measurement for the Power-on Mode |

5.10 User Preset All Screens

Recalls a screen configuration previously saved using "[Save User Preset All Screens](#)" on page 2035. The complete configuration of all Screens is loaded, including the state of each Screen.

Because **User Preset All Screens** performs a Recall State as part of its function, it affects all variables that are normally only reset by "[Restore Mode Defaults](#)" on page 2026, and affects **Input/Output** variables, because both are included in State files.

Note that recalling a screen configuration in this manner wipes out your current screen configuration, and all states of all Screens.

| | |
|------------------------------|--|
| Notes | <p>"Save User Preset All Screens" on page 2035 is used to save the current screen configuration as the "user preset all screens" configuration</p> <p>If loading a User Preset All Screens file from a different instrument, some settings may be limited and/or coupled differently, since the capabilities of the Mode may have changed from when the User Preset All Screens file was saved</p> |
| Status Bits/OPC dependencies | <p>Clears all pending OPC bits</p> <p>The Status Byte is set to 0</p> |

5.11 Save User Preset All Screens

Saves the current Screen Configuration in a unique location, for recall by "[User Preset All Screens](#)" on page 2034.

Save User Preset All Screens can be executed from the "[Preset Dropdown](#)" on page 2023.

Besides the screen configuration, *all* Mode variables of all Screens are saved, including those reset by "[Mode Preset](#)" on page 2024, and those only reset by "[Restore Mode Defaults](#)" on page 2026, as well as all **Input/Output** variables, so when you subsequently press **User Preset All Screens**, the instrument returns to the exact Screen setup that existed when you pressed **Save User Preset All Screens**.

Notes

Creates the same file as if you requested **Screen Config + State** save, except that **Save User Preset All Screens** does not allow you to specify the file name or location

5.12 Restore Screen Defaults

Resets the Screen configuration to the factory default; deleting all screens, all screen names, all screen states, and setting "Multiscreen" on page 177 to Off. A single screen will remain, set to the Power-on Mode, in a preset state with the default screen name.

Restore Screen Defaults can be executed from the "Preset Dropdown" on page 2023.

When **Restore Screen Defaults** is selected, a message appears saying:

This function will delete all defined screens and their settings. This action cannot be undone.

Do you want to proceed?

The message provides **OK** and **Cancel** buttons.

Example `:SYST:DEF SCReen`

5.13 Preset Type (Remote Command Only)

| | |
|----------------|---|
| Remote Command | <code>:SYSTem:PRESet:TYPE FACTory MODE USER</code> <code>:SYSTem:PRESet:TYPE?</code> |
| Example | <code>:SYST:PRES:TYPE FACT</code> |
| Notes | Supported for backwards compatibility only. It is a no-op, which does not change the behavior of any preset operation |
| Preset | Unaffected by Preset, but set to <code>MODE</code> by <code>Restore System Defaults->All</code> |
| State Saved | No |

5.14 Restart Instrument (Shutdown)

Shuts down the instrument, then reboots it.

Remote Command :SYSTem:PUP

Example :SYST:PUP

5.15 Restart Application (Application Shutdown)

Restarts the instrument application without rebooting the instrument. Before you send this command, make sure you have saved any trace or measurement data that you want to preserve.

| | |
|----------------|--|
| Remote Command | <code>:SYSTem:PUP:PROcess</code> |
| Example | <code>:SYST:PUP:PROC</code> After sending this command, you must wait for the instrument software to restart |
| Notes | You cannot use <code>*WAI</code> or <code>*OPC?</code> to synchronize operation after a restart. This command stops and restarts the instrument application, so the SCPI operation is terminated and restarted A remote program must wait a fixed time before resuming sending commands to the instrument. The appropriate wait time depends on which applications are pre-loaded |

5.16 System Log Off (Remote Command Only)

Provides a means to terminate all open Windows applications, and log off the current user. This is equivalent to performing the Windows command:

```
shutdown -l -f -t0
```

| | |
|----------------|---|
| Remote Command | :SYSTem:LOFF |
| Example | :SYST:LOFF |
| Notes | Initiates an immediate log off of the current user. Exits the instrument application, so any unsaved measurement results will be lost. You cannot use *WAI or *OPC? to synchronize operation. In addition to the instrument application, all other Windows programs will be terminated, without the opportunity to save any work in progress. To perform a subsequent login, and regain instrument operation, human intervention will be required |

5.17 Power Standby (Instrument Shutdown)

Pressing the power switch powers down the instrument. You are warned that shutting down will cause the application to lose unsaved data, and the instrument lets you respond to this warning before shutting down.

The command below has the same effect, except that you can specify Normal mode (**NORMa1**) or Forced mode(**FORCe**):

- In **NORMa1** mode, the system waits until you respond to the warning prompt
- In **FORCe** mode, the system shuts down after 20 seconds, and all data will be lost

If the instrument is not properly shut down prior to removal of line power, the system will validate the Journaling File System and the Power-On Last State (if the instrument is in Power-On Last State) during the following power-on. If a problem is detected, a message appears indicating that the system 'recovered' from an inappropriate shutdown. This is only an issue if **Power-On Type** is Last State. If the Last State is not valid, the instrument will power up in the last active Mode, but will perform "**Mode Preset**" on page 2024.

| | |
|----------------|---|
| Remote Command | :SYSTem:PDOWn [NORMa1 FORCe] |
| Example | :SYST:PDOW Executes a normal shutdown |
| Notes | If no parameter is sent, NORMa1 is assumed |

6 Input/Output

Accesses menus that let you control the Input/Output parameters of the instrument. In general, these are functions associated with external connections to the instrument, either to the inputs or the outputs.

Input/output connections tend to be based on situation-specific hardware set up. For that reason, input/output settings do *not*, in general, change when you perform a Mode Preset. You can revert to the default values in one of three ways:

- Use **Restore Input/Output Defaults**, in the **Input/Output** menu
- Use **System->Restore System Defaults->Input/Output Settings**
- Use **System -> Restore System Defaults->All**

The settings survive a Preset and a Power cycle.

A few Input/Output settings *do* respond to Mode Preset. For example, if the Calibrator is on, **Preset** turns it off, and if DC coupling is in effect, **Preset** switches it to AC. These exceptions are noted in the SCPI tables for the excepted functions.

Input/Output features are common across multiple Modes and Measurements. In general, they do not change when you change Mode or Measurement, although some controls appear only in certain measurements.

6.1 RF Source

Lets you control and configure the internal RF Source. This tab only appears in models that support a built-in independent RF Source, which include E7760B, and modular products such as EXM and VXT.

External Source Control and built-in Tracking Sources are controlled using the **Source** tab in **Meas Setup**.

| | |
|--------------|---|
| Dependencies | Only appears in models that support a built-in independent RF Source, such as E7760B, EXM and VXT |
|--------------|---|

6.1.1 RF Output

Sets the source RF power output state.

| | |
|----------------|--|
| Remote Command | <code>:OUTPut[:EXTernal][:STATe] ON OFF 1 0</code> <code>:OUTPut[:EXTernal][:STATe]?</code> |
| Example | <code>:OUTP OFF</code> <code>:OUTP?</code> |
| Notes | This setting is for the independent mode and has no effect on the " List Sequencer " on page 2053. If Sequencer is ON , the List Sequencer controls the source output, and this key is grayed-out When Sequencer is OFF , makes source leave List Sequencer and this setting is blanked out, taking effect immediately |
| Dependencies | For E7760B, the RF Output cannot be set to ON if the RF Output port is set to NONE . If you attempt to set RF Output to ON in this situation, the error message -221, "Settings conflict; Source Output is not available while Output Port is None" is displayed <code>:OUTPut:EXTernal[:STATe]</code> is supported only when Option ESC is installed. Otherwise, only <code>:OUTPut[:STATe]</code> is supported |
| Preset | OFF |
| Range | ON OFF |

6.1.2 RF Output Port

Specifies the RF Output Port used by the internal source.

Switching from the RF Output port to one of the RFIO ports changes the transmitter performance of the instrument.

The **NONE** selection is available to allow setting a half-duplex port to an Input, if it was previously assigned as an Output. Set the Output to **NONE** first, then any port can be assigned as an Input.

When using VXT M9410A/11A/15A/16A with Remote Radio Heads (such as the Keysight M1740A mmWave Transceiver for 5G), the choices in the dropdown menu appear as:

Head h RFHD p

For example, if you have two Radio Heads (numbered 1 and 2), each of which have two RF half-duplex ports, the choices for these ports will appear as below:

| Head and Port | Choice in dropdown | SCPI parameter |
|-------------------------|--------------------|----------------|
| Head 1, port RF Tx/Rx 1 | Head 1 RFHD 1 | RRH1RFHD1 |
| Head 1, port RF Tx/Rx 2 | Head 1 RFHD 2 | RRH1RFHD2 |
| Head 2, port RF Tx/Rx 1 | Head 2 RFHD 1 | RRH2RFHD1 |
| Head 2, port RF Tx/Rx 2 | Head 2 RFHD 2 | RRH2RFHD2 |

When using the E7770A Common Interface Unit, outputs may come from the DUT IF OUT ports on the rear of the CIU or the half-duplex ports on the front of the CIU labeled DUT IF In/Out. You would select GUI parameter IF Out n or SCPI parameter IFOutn for the DUT IF OUT ports or GUI parameter IFHD n or SCPI parameter IFHDn for the DUT IF In/Out ports. See ["RF Input Port" on page 2157](#) "Parameters for VXT M9410A/11A/15A/16A and EXM when used with Radio Heads/CIU" for more details.

Remote Command `[:SENSe]:FEED:RF:PORT:OUTPut RFOut | RFIO1 | RFIO2 | RFIO3 | RFIO4 | RFHD | RFFD | A1 | A2 | A3 | B1 | B2 | B3 | IFIO1 | IFIO2 | GEN | TR | RRHhRFHDp | IFOutn | IFHDn | NONE`

For details of each option, see ["Port Options" on page 2045](#)

`[:SENSe]:FEED:RF:PORT:OUTPut?`

Example

Set output to RF Output:

`:FEED:RF:PORT:OUTP RFO`

Set output to Radio Head 1, RF Tx/Rx Port 2:

`:FEED:RF:PORT:OUTP RRH1RFHD2`

Dependencies

Only appears in models that support multiple output ports. If the SCPI command is sent with unsupported parameters in any other model, an error is generated, -221, "Settings conflict; option not installed"

RFHD and **RFFD** are only available on VXT. Option HDX is required to enable RFHD port. Option FDX is required to enable RFFD port

For E7760B: Ports IFIO1 and IFIO2 are available if Option RF2 is installed. Ports A1, A2, A3, B1, B2, B3 are available if Option RF3 is installed. Attempting to select a port for which the option is not present generates the error, -241, "Hardware missing; Output not available"

A port cannot be selected as an Output while it is occupied as an Input. If the SCPI command is sent while the port is occupied, an error is generated, -221, "Settings conflict; Output Port is not available while occupied by Input"

Additionally, the mmWave ports are divided into two banks: the A Bank and the B Bank. A port cannot be selected as an Output if any port on the *same* bank is occupied as an Input. If the SCPI command is sent for this situation, an error is generated, -221 "Settings conflict; Output Port is not available while

6 Input/Output
6.1 RF Source

| | |
|------------------------------|---|
| | <p>port bank is occupied by Input”</p> <p>Lastly, if RF3 is present, and RF4 is absent, a mmWave port cannot be selected as an Output if the Input Port is occupied by wwWave Transceiver with a different frequency range. If the SCPI command is sent for this situation an error is generated, -221 “Settings conflict; Output Port is not available while occupied by Input of incompatible frequency”</p> <p>Ports GEN and TR are only available in modular analyzers, and only when the M9470A module is installed, such as in M8920A. Option HDX is required to enable the T/R port</p> <p>When any output is selected in a measurement that does not support it, the "No result; Meas invalid with this output" error condition occurs, and the measurement returns invalid data when queried</p> |
| Preset | Unaffected by Mode Preset , but set to default by Source Preset or Restore System Defaults -> All |
| State Saved | Saved in State |
| Backwards Compatibility SCPI | <p>:FEED:RF:PORT:OUTPut IFIO1</p> <p>IFIO1 is treated as IF01 and sets the IF output to be the port labeled DUT IF Out on the CIU rear panel. This is for compatibility with earlier implementations on EXM and VXT when using the E7770A Common Interface Unit</p> |

Port Options

| Value | Notes |
|---------------------------|---|
| RF Output RFOut | <p>On EXM with hardware M9430A, if RF Output is selected as RF Output Port, use the settings in the Half Duplex Config menu to determine which port (RFIO3 or RFIO4) will be used</p> <p>On EXM with hardware M9431A, this setting is not supported. If the SCPI command is sent with this setting, an error is generated, -221, “Settings conflict; option not installed”</p> |
| RFHD | <p>RFHD port is exclusive for RF Input and RF Output. If HD Port is chosen as RF Input port, pressing this key, or sending SCPI to set it, generates error message: “-221, Settings conflict; RFHD is being used as RF Input Port”</p> <p>Option HDX is required to enable RFHD port</p> |
| RFFD | Option FDX is required to enable RFFD port |
| GEN | Selects the Gen port on M8920A/20B |
| T/R TR | Selects the T/R port on M8920A/20B |
| RRHhRFHDp | <p>Used to select a port on a Radio Head (such as the Keysight M1740A mmWave Transceiver) as an output</p> <p>RRHhRFHDp corresponds to Head h, port RF Tx/Rx p. For example, RRH1RFHD2 = the port labeled RF Tx/Rx 2 on Head 1</p> |

6.1.3 Half Duplex Output Port

Specifies whether **RFIO3** or **RFIO4** is the Half Duplex Output port.

| | |
|----------------|---|
| Remote Command | [:SENSE]:HDUPlex:PORT:OUTPut RFIO3 RFIO4 |
|----------------|---|

| | |
|--------------|---|
| Example | <code>:HDUPlex:PORT:OUTPut RFI03</code> <code>:HDUPlex:PORT:OUTPut?</code> |
| Dependencies | Only appears in EXM If RFI03 is selected as “Half Duplex Input Port”, then “Half Duplex Output Port” will be set to RFI04 automatically If RFI04 is selected as “Half Duplex Input Port”, then “Half Duplex Output Port” will be set to RFI03 automatically |
| Preset | RFI04 |
| State Saved | Saved in State |

6.1.4 RF Power

Lets you control the amplitude of the Source output. Same as "RF Power" on page 2046 in **Amplitude Setup**.

| | |
|---------|---------------------------------|
| Example | <code>:SOUR:POW -100 dBm</code> |
|---------|---------------------------------|

6.1.5 T/R Port High Power Attenuator

Controls whether additional attenuation is added at the T/R Port. The T/R port has two output paths, one that provides a 16 dB attenuator, another that bypasses this attenuator. When this control is **ON**, the path includes the 16 dB attenuator, so the maximum output level for this path is 0 dBm. When this control is **OFF**, the 16 dB attenuator is bypassed, so the maximum output level for this path is +5 dBm.

| | |
|---------|---|
| Example | <code>:FEED:RF:PORT:TR:HPOW:ATT ON</code> |
|---------|---|

6.1.6 Amplitude Setup

Lets you access the **Amplitude Setup** panel.

| | |
|-------|--|
| Notes | This menu under this control is for independent mode, and has no effect on "List Sequencer" on page 2053. If "Sequencer" on page 2054 is ON , the List Sequencer controls the source output, and this control is grayed-out on the front panel, to indicate out-of-scope. When you set "Sequencer" on page 2054 to OFF , makes source leave List Sequencer and this control is blanked out |
|-------|--|

6.1.6.1 RF Power

Lets you adjust the power level of the source using the numeric keypad, step keys, or RPG. Pressing any digit, 0 through 9 on the numeric keypad displays the unit terminator.

6 Input/Output
6.1 RF Source

Please refer to the "RF Power Range" on page 2047 table below for the valid ranges.

| | |
|----------------|---|
| Remote Command | <code>:SOURce:POWer[:LEVel][:IMMediate][:AMPLitude] <ampl></code> <code>:SOURce:POWer[:LEVel][:IMMediate][:AMPLitude]?</code> |
| Example | <code>:SOUR:POW -100 dBm</code> |
| Notes | <p>Amplitude corrections can be specified for use with the source. In the event of amplitude corrections being applied, the valid ranges for the RF power do not change dependent on the current amplitude correction setting. If the combination of RF power + amplitude correction is higher or lower than the source output range, the Source Unleveled bit is set, and the "Source Unleveled" indicator will appear on status panel to indicate that the source cannot maintain the output power that has been requested</p> <p>When signal generator is unable to maintain the requested output level, the "Source Unleveled" indicator will appear on status panel. When the source output setting is restored to the normal range, the "Source Unleveled" is removed from status panel</p> <p>Internal source has list sequence mode, which comprises of several steps which contain separate output power, frequency and waveform etc. When the source list sequence playing is complete, the last step keeps playing, and user can use this command to change the list sequence last step's output power</p> <p>For EXT, The multiport adapter RFIO TX ports and GPS ports cannot ensure power accuracy when power setting is lower than -130dBm, this power setting value is defined by the sum of RF Power setting and related amplitude correction value. But user settable value could be lower than this limit. When application detected there exists power setting lower than -130dBm on MPA RFIO TX ports, then popup warning message . When application detected there exists power setting lower than -130dBm on MPA GPS ports, then popup warning message . This is only warning message, and check is performed when RF is ON</p> |
| Dependencies | The RF power is dependent on the RF output port and frequency, such that the current frequency and selected output port determine the valid range of power values |
| Couplings | For if AWGN State is ON and ARB State is ON , this setting is adjusted to the value to maintain the AWGN power relationship defined by Power Control Mode and other noise settings |
| Preset | -100 dBm |
| Min | The range of values depends on the current frequency and selected RF output port. See "RF Power Range" on page 2047 below for the valid ranges |
| Max | The range of values depends on the current frequency and selected RF output port. Refer to "RF Power Range" on page 2047 below for the valid ranges |

RF Power Range

| RF Output Port | Frequency Range | Min Output Power | Max Output Power |
|-------------------|--------------------|------------------|------------------|
| High Power RF Out | 10 MHz ≤ f ≤ 6 GHz | -150 dBm | 20 dBm |
| RFIO 1 & RFIO 2 | 10 MHz ≤ f ≤ 6 GHz | -150 dBm | 0 dBm |

Note: This is the UI power range, which is larger than the actual specification.

VXT model M9420A

| RF Output Port | Frequency Range | Min Output Power | Max Output Power without Option "1EA" | Max Output Power with Option "1EA" |
|----------------|------------------------------|------------------|---------------------------------------|------------------------------------|
| RF Output | 60 MHz \leq f \leq 6 GHz | -150 dBm | 10 dBm | 25 dBm |
| RFHD | 60 MHz \leq f \leq 6 GHz | -150 dBm | 10 dBm | 15 dBm |
| RFFD | 60 MHz \leq f \leq 6 GHz | -150 dBm | 0 dBm | 0 dBm |

Note 1: This is the UI power range, which is larger than the actual specification.

Note 2: Max output power with Option 1EA can be set to 25 dBm, but Meas Uncal (measurement uncalibrated) warning is given in the Status Bar in the lower right corner of the screen when output power set higher than 20 dBm.

VXT models M9410A/11A

| Ports | Option LFE | Frequency Range | Min Output Power | Max Output Power without option "1EA" | Max Output Power with "1EA" |
|-----------|--------------------|-------------------------------|------------------|---------------------------------------|-----------------------------|
| RF Output | With Option LFE | 1 MHz \leq f \leq 60 MHz | -150 dBm | 5 dBm | 5 dBm |
| | | 60 MHz \leq f \leq 380MHz | -150 dBm | 5 dBm | 25 dBm |
| | Without Option LFE | 380 MHz \leq f \leq 6 GHz | -150 dBm | 5 dBm | 25 dBm |
| RFHD | | 1 MHz \leq f \leq 6 GHz | -150 dBm | 5 dBm | 5 dBm |

Note 1: Min Output Power is the UI power range, which is smaller than the actual specification.

Note 2: Max output power with Option 1EA can be set to 25 dBm for RF Output Port, but Meas Uncal (measurement uncalibrated) warning is given in the Status Bar in the lower right corner of the screen when the output power is set higher than 20 dBm.

Note 3: Option LFE provides Low Frequency Extension, which covers frequency from 1 MHz to 380 MHz.

VXT models M9415A/16A

| RF Output Port | Frequency Range | Min Output Power | Max Output Power without Option "1EA" | Max Output Power with Option "1EA" |
|----------------|------------------------|------------------|---------------------------------------|------------------------------------|
| RF Output | 380 MHz ≤ f ≤ 12.3 GHz | -150 dBm | 5 dBm | 25 dBm |
| RFHD | 380 MHz ≤ f ≤ 12.3 GHz | -150 dBm | 5 dBm | 18 dBm |

Note 1: For RF output port, the Max output power with Option 1EA can be set to 25 dBm for RF Output Port, but Meas Uncal (measurement uncalibrated) warning is given in the Status Bar in the lower right corner of the screen when the output power is set higher than 20 dBm.

Note 2: For RFHD port, the Max output power with Option 1EA can be set to 18 dBm for RF Output Port, but Meas Uncal (measurement uncalibrated) warning is given in the Status Bar in the lower right corner of the screen when the output power is set higher than 15 dBm.

M9410E/11E/15E/16E

| Ports | Option LFE | Frequency Range | Min Output Power | Max Output Power |
|-----------|--------------------|------------------------|------------------|------------------|
| RF Output | With Option LFE | 1 MHz ≤ f ≤ 380 MHz | -150 dBm | 13 dBm |
| | | 380 MHz ≤ f ≤ 25.9 GHz | -150 dBm | 25 dBm |
| | Without Option LFE | 380 MHz ≤ f ≤ 25.9 GHz | -150 dBm | 25 dBm |
| RFHD | | 1 MHz ≤ f ≤ 25.9 GHz | -150 dBm | 5 dBm |

VXT Models with Remote Radio Heads/CIU

| RRH | Port | Frequency Range | Min Output Power | Max Output Power |
|--------|---------------|---------------------|------------------|------------------|
| M1742A | Head h RFHD p | 10 GHz ≤ f ≤ 32 GHz | -150 dBm | 10 dBm |

M8920A/20B

| RF Output Port | Frequency Range | Min Output Power | Max Output Power |
|----------------|---------------------|------------------|---|
| Gen | 100 kHz ≤ f ≤ 6 GHz | -150 dBm | without option 1EA: 3 dBm with option 1EA: 15 dBm |
| T/R | 100 kHz ≤ f ≤ 6 GHz | -150 dBm | T/R port high power attenuator On: -15 dBm T/R port high power attenuator Off: 3 dBm |

Note: This is the UI power range, which is larger than the actual specification.

6.1.6.2 Set Reference Power

Turns the power reference state to **ON**, sets the reference power value to the current RF output power, maintains this power at the RF output, and sets the displayed power to 0.00 dB. All subsequent RF power values entered under **Source**, **Amplitude**, **RF Power** are interpreted as being relative to this reference power.

When you use a power reference, the signal generator outputs an RF power that is set relative to the reference power by the value entered under **Source**, **Amplitude**, **RF Power** as follows:

Output power = reference power – entered power

Where:

- reference power equals the original RF Power entered under **Source>Amplitude>RF Power** and set as the reference power
- entered power equals a new value entered under **Source>Amplitude>Amptd Offset**

In addition, the displayed power value is the same as a new value entered under **Source**, **Amplitude**, **RF Power**.

NOTE

If Power Ref is **ON** with a reference value set, entering a value under **Source**, **Amplitude**, **RF Power** and pressing **Set Reference Power** adds that value to the existing Power Ref value.

If you wish to change the reference power value to a new value entered under **Source**, **Amplitude**, **RF Power**, first set Power Ref to **OFF**, then press **Set Reference Power**.

Dependencies Unavailable, and grayed-out, when "List Sequencer" on page 2053 is **ON**

6.1.6.3 Power Ref

Lets you toggle the state of the power reference. When you use a power reference, the signal generator outputs an RF power that is set relative to the reference power by the value entered under **Source>Amplitude>RF Power** as follows:

Output power = reference power + entered power

Where:

- reference power equals the original RF Power entered under **Source>Amplitude>RF Power** and set as the reference power
- entered power equals a new value entered under **Source>Amplitude>Amptd Offset**

For more information on Reference Frequency, see ["Set Reference Power" on page 2050](#).

| | |
|----------------|---|
| Remote Command | <code>:SOURce:POWer:REFerence <ampl></code> <code>:SOURce:POWer:REFerence?</code> |
| Example | <code>:SOUR:POW:REF 0.00 dBm</code> |
| Dependencies | Unavailable and grayed-out when "List Sequencer" on page 2053 is ON |
| Couplings | Coupled to "Set Reference Power" on page 2050 , such that pressing Set Reference Power updates the reference power with the current output power |
| Preset | 0.00 dBm |
| Min | -125.00 dBm |
| Max | 10.00 dBm |
| Auto Function | |

| | |
|----------------|--|
| Remote Command | <code>:SOURce:POWer:REFerence:STATe OFF ON 0 1</code> <code>:SOURce:POWer:REFerence:STATe?</code> |
| Example | <code>:SOUR:POW:REF:STATe ON</code> |
| Preset | OFF |

6.1.6.4 Power Unit

Modifies the units for RF Power and Power Ref. The change is immediate and does not force a restart.

| | |
|----------------|--|
| Remote Command | <code>:SOURce:POWer[:LEVel][:IMMediate][:AMPLitude]:UNIT DBM W V DBUV</code> <code>:SOURce:POWer[:LEVel][:IMMediate][:AMPLitude]:UNIT?</code> |
| Example | Set the RF Power units to volts: |

| | |
|-------------|---|
| | <code>:SOUR:POW:UNIT V</code> |
| Couplings | RF Power and Power Ref units are modified by Power Unit |
| Preset | dBm |
| State Saved | Saved in Instrument State |

6.1.6.5 Amptd Offset

Lets you specify the RF output power offset value.

When the amplitude offset is set to zero (0) and you set a new offset value (positive or negative), the displayed amplitude value changes as follows, and the RF output power does not change:

Displayed value = output power + offset value

Where:

- output power equals the original RF Power entered under **Source, Amplitude, RF Power**
- offset value equals the value entered under **Source, Amplitude, Amptd Offset**

When the amplitude offset is set to a value other than zero (0) and you enter a new RF power value under **Source, Amplitude, RF Power**, the displayed power will be the same as the value entered and the RF output power will be equal to the value entered minus the offset value as follows:

Output power = entered power – offset power

Displayed Power = output power + offset power

Displayed power = entered power

Where:

- entered power equals the amplitude entered under **Source, Amplitude, RF Power**
- offset power equals the value previously entered and set under **Source, Amplitude, Amptd Offset**

| | |
|----------------|--|
| Remote Command | <code>:SOURce:POWer[:LEVel][:IMMediate]:OFFSet <rel_amp1></code> <code>:SOURce:POWer[:LEVel][:IMMediate]:OFFSet?</code> |
| Example | <code>:SOUR:POW:OFFS 0.00 dB</code> |
| Notes | The amplitude Offset unit follows the units set in Power Unit |
| Dependencies | Unavailable, and grayed-out, when List Sequencer is ON |
| Preset | 0.00 dB |

6 Input/Output

6.1 RF Source

| | |
|-----|------------|
| Min | -200.00 dB |
| Max | 200.00 dB |

6.1.6.6 Amplitude Increment

Changes the step size for the RF Power function. Once an increment size has been selected and the RF Amplitude function is active, the step keys (and the **UP | DOWN** parameters for RF Power from remote commands) change the RF Power by the set value. This feature exists in EXG and MXG.

| | |
|----------------|--|
| Remote Command | <code>:SOURce:POWer:STEP[:INCRement] <amp1></code> <code>:SOURce:POWer:STEP[:INCRement]?</code> |
| Example | <code>:SOUR:POW:STEP 1</code> |
| Notes | The Amplitude Increment unit follows the units set in Power Unit |
| Couplings | Coupled to the Step size of the RF Power function |
| Preset | 1 dB |
| Min | 0.1 dB |
| Max | 10 dB |

6.1.7 Frequency

Lets you control the frequency of the Source. Same as "[Frequency](#)" on page 2078 under "[Frequency Setup](#)" on page 2078.

| | |
|---------|----------------------------------|
| Example | <code>:SOUR:FREQ 1.00 GHz</code> |
|---------|----------------------------------|

6.1.8 List Sequencer

Accesses sub-menus for configuring the **List Sequencer**.

List sequences allow you to enter frequencies and amplitudes at unequal intervals in nonlinear ascending, descending or random order. Each step within the list can also include its own waveform file for playback, step duration, trigger event and trigger output.

The complexities involved in configuring the **List Sequencer** do not lend themselves to manual configuration; hence the manual configuration for this feature is limited. For easier configuration of the List Sequencer, it is recommended that you use either SCPI, or load a tab-delimited file containing the setup parameters in a tabular form. The details of the SCPI for configuring the List Sequencer can be found in "[Step Configuration \(Remote Command Only\)](#)" on page 2069.

Once the **List Sequencer** has been configured using the front panel, SCPI, or by loading a tab-delimited file, the sequence must be initiated using the front panel **Initiate Sequence** key, or the corresponding SCPI command.

Dependencies Not available in E7760B

6.1.8.1 Sequencer

Sets the state of "[List Sequencer](#)" on page 2053

- When **List Sequencer** is **ON**, the source outputs the sequence defined by the sequencer
- When **List Sequencer** is **OFF**, the source outputs a single waveform segment or sequence (independent mode) at a single frequency and amplitude

Remote Command `:SOURce:LIST[:STATe] ON | OFF | 1 | 0`
`:SOURce:LIST[:STATe]?`

Example `:SOUR:LIST OFF`

Notes When the sequencer is **ON**, the List Sequencer controls the output of the source

Dependencies Not available in E7760B

Couplings When in Sequence Analyzer Mode, and the List Sequencer state is **OFF**, **Include Source** is forced to **NO**, and the **Include Source** key is grayed-out
When in Sequence Analyzer Mode, and the List Sequencer state is **ON**, **Include Source** is available to set, and an ARB memory related operation such as load or delete will be rejected

Preset **OFF**

Range **ON | OFF**

6.1.8.2 Initiate Sequence

Arms the sequence for single execution. Once the sequence is armed, the source begins the sequence as soon as the trigger is received. If trigger is set to **Free Run**, the sequence starts immediately.

Remote Command `:SOURce:LIST:TRIGger[:IMMediate]`

Example `:SOUR:LIST:TRIG`

Notes When in Sequence Analyzer Mode, and **Include Source** is **ON**, the Initiate List Sequencer operation is rejected, and the key is grayed-out if the file needed by the sequencer is not already in ARB memory, the sequence cannot be initiated, and an error is generated
There is a blocking SCPI query that can be used to check whether source list sequence was initiated successfully (see "[Remote Software Trigger \(Remote command Only\)](#)" on page 2078)

Dependencies In Sequence Analyzer Mode, if **Meas Setup**, **Include Source** is set to **YES**, **Source**, **List Sequencer**, **Initiate Sequence** is disabled
Not available in E7760B

6.1.8.3 Repetition

Accesses a sub-menu to select the repetition type for the List Sequencer globally. It cannot be changed between different sequence steps.

In **Single**, the Source list plays one time after initiation. In **Continuous**, the Source list plays continuously after initiation.

This setting is available on EXM.

| | |
|----------------|--|
| Remote Command | <code>:SOURce:LIST:REPetition:TYPE SINGle CONTInuous</code> |
| Example | <code>:SOUR:LIST:REP:TYPE SING</code> <code>:SOUR:LIST:REP:TYPE?</code> |
| Dependencies | Available on EXM Not available in E7760B |
| Preset | <code>SINGle</code> |
| Range | <code>SINGle CONTInuous</code> |

6.1.8.4 Trig Out Type

Accesses a sub-menu to select the output trigger type for the List Sequencer globally. It cannot be changed between different sequence steps. It sets the output trigger type for the whole source sequence.

| | |
|---------------------------------|---|
| Remote Command | <code>:SOURce:LIST:TRIGger:OUTPut:TYPE STEP MARKer</code> <code>:SOURce:LIST:TRIGger:OUTPut:TYPE?</code> |
| Notes | <code>STEP</code> = Start of Step <code>MARKer</code> = Data Marker |
| Dependencies | Available on EXM Not available in E7760B |
| Preset | <code>STEP</code> |
| Backwards Compatibility SCPI | <code>:SOURce:LIST:TRIGgerout:TYPe BEGInningofstep DATAmarker</code> |

6.1.8.5 Select Data Marker

When "**Trig Out Type**" on page 2055 is set to Data **MARKer**, specifies which marker to route.

| | |
|----------------|---|
| Remote Command | <code>:SOURce:LIST:TRIGger:OUTPut:TYPE:MARKer M1 ... M4</code> <code>:SOURce:LIST:TRIGger:OUTPut:TYPE:MARKer?</code> |
|----------------|---|

Backwards Compatibility :SOURce:LIST:TRIGgerout:TYPe:Marker
SCPI

6.1.8.6 Manual Trigger Now

Provides a software trigger event to the List Sequencer. During execution of a sequence, if the sequencer is halted on any step that has been configured with a “Manual” step trigger, then this keypress causes the sequencer to continue and execute the step.

Notes No remote command, front panel only

6.1.8.7 List Sequencer Setup

Accesses the List Sequencer setup menus.

Number of Steps

Lets you specify the number of steps within the list sequence.

Remote Command :SOURce:LIST:NUMBer:STEPs <integer>
:SOURce:LIST:NUMBer:STEPs?

Example :SOUR:LIST:NUMB:STEP 1

Notes Increasing the number of steps creates additional steps at the end of the list, with all the settings within the steps set to their default values
Decreasing the number of steps removes steps from the end of the list. The settings within the removed steps are not reset. This means that increasing the number of steps again would allow you to retrieve these steps

Dependencies The Step Count parameter is increased or decreased when you insert or delete a point from within the GUI interface to the sequencer
Not available in E7760B

Preset 1

Min 1

Max 1000

Go To Step

Lets you select the step number you wish to view or edit.

Preset 1

| | |
|-----|------------|
| Min | 1 |
| Max | Step Count |

Insert Step Before

Inserts a new step, with default values, before the currently selected step. Inserting a step automatically increases the Step Count parameter by 1. If a sequence has already reached the upper limit of 1000 steps, then this operation is rejected, and error -221, "Setting Conflict; Cannot insert more steps, maximum number of steps reached" is displayed.

| | |
|-------|--|
| Notes | If the list already contains the maximum limit (1000 steps), pressing this control has no effect |
|-------|--|

Delete Step

Deletes the current step. Deleting a step automatically decreases the Step Count parameter by 1. If the sequence only has one step left, then this operation is rejected, and error -221, "Setting conflict; Cannot delete current step, minimum number of steps reached" is displayed

| | |
|-------|---|
| Notes | If the list already contains the minimum limit of 1 step, pressing this control has no effect |
|-------|---|

Clear List

Clears the list. Clearing the list sets the number of steps to the default value (1) and sets the parameters for the only step to their default values.

Step Trigger

Lets you select the trigger input for the current step.

| | |
|----------------|---|
| Remote Command | <code>:SOURce:LIST:STEP[1] 2 ... 1000:SETup:INPut:TRIGger IMMEDIATE INTERNAL EXTERNAL2 KEY BUS EXTERNAL4</code> For details of options, see " More Information " on page 2058 <code>:SOURce:LIST:STEP[1] 2 ... 1000:SETup:INPut:TRIGger?</code> |
| Example | <code>:SOUR:LIST:STEP2:SET:INP:TRIG BUS</code> <code>:SOUR:LIST:STEP2:SET:INP:TRIG?</code> |
| Notes | SCPI is supported after A.09.40 |
| Dependencies | Not available in E7760B |
| Preset | <code>IMMEDIATE</code> |
| Range | <code>IMMEDIATE INTERNAL EXTERNAL2 KEY BUS EXTERNAL4</code> |

More Information

| Parameter | SCPI | Notes |
|-------------------------|----------------------|--|
| Free Run | IMM | Sets the trigger input for the current step to Free Run |
| Internal | INT | Sets the trigger input for the current step to Internal |
| Manual (Trigger Key) | KEY | Sets the trigger input for the current step to Manual (Trigger Key). Any step in the sequence set to Manual will cause the sequence execution to stop until the manual trigger key is pressed. Sending the Bus Trigger SCPI command will have no effect. At any point in the sequence where the List Sequencer is paused waiting for a software trigger, a pop-up dialog is displayed until the trigger event occurs |
| Bus | BUS | Sets the trigger input for the current step to Bus. Any step in the sequence set to Bus will cause the sequence execution to stop until the Bus Trigger command is sent. Pressing the manual trigger key has no effect. At any point in the sequence where the List Sequencer is paused waiting for a software trigger, a pop-up dialog is displayed until the trigger event occurs |
| External 2 | EXT2 | Sets the trigger input for the current step to External 2 Note: When on EXM, trigger 2 is a bi-directional trigger port. So, when trigger 2 has been configured as OUTPUT type, choosing External 2 as the input trigger for the current step will generate error |

Transition Time

Lets you specify the transition time for the current step.

The following table lists recommended values for appropriate settling times to allow for changes within the source.

| Value Changed | Recommended Transition Time |
|---------------|---|
| Frequency | 500 μ s |
| Amplitude | 100 μ s to within 0.1 dB 20 μ s to within 1.0 dB |

If the Transition Time value is shorter than the time necessary for the hardware to settle and a List Sequence is initiated, a **warning** is generated. If the Transition Time value is longer than the Step Duration, an error is generated when initiating a source list sequence. For source list sequence, transition time is included in the step duration length. If the Transition Time value is longer than the Step Duration Time, the real step duration length is extended to equal the transition time and cause a timing shift.

| | |
|----------------|--|
| Remote Command | <code>:SOURce:LIST:STEP[1] 2 ... 1000:SETup:TRANSition:TIME <time></code> <code>:SOURce:LIST:STEP[1] 2 ... 1000:SETup:TRANSition:TIME?</code> |
| Example | <code>:SOUR:LIST:STEP2:SET:TRAN:TIME 1ms</code> |

6 Input/Output
6.1 RF Source

| | |
|--------------|--|
| | <code>:SOUR:LIST:STEP2:SET:TRAN:TIME?</code> |
| Notes | SCPI is supported after A.09.40 |
| Dependencies | Not available in E7760B |
| Preset | 1.0 ms |
| Min | 0.0 ms |
| Max | 4.0 ks |

Band

Lets you select the radio band for use in the current step.

| | |
|----------------|---|
| Remote Command | <code>:SOURce:LIST:STEP[1] 2 ... 1000:SETup:RADio:BAND <band></code> |
| | where <band> is one of: NONE PGSM EGSM RGSM DCS1800 PCS1900 GSM450 GSM480 GSM700 GSM850 TGSM810 USCELL USPCS JAPAN KOREAN NMT IMT2K UPPER SECOND PAMR400 PAMR800 IMTEXT PCS1DOT9G AWS US2DOT5G PUBLIC LOWER BANDI BANDII BANDIII BANDIV BANDV BANDVI BANDVII BANDVIII BANDIX BANDX BANDXI BANDXII BANDXIII BANDXIV BANDXIX BAND1 BAND2 BAND3 BAND4 BAND5 BAND6 BAND7 BAND8 BAND9 BAND10 BAND11 BAND12 BAND13 BAND14 BAND17 BAND18 BAND19 BAND20 BAND21 BAND24 BAND25 BAND26 BAND27 BAND28 BAND29 BAND30 BAND31 BAND65 BAND66 BAND67 BAND68 BAND71 BAND252 BAND255 BAND33 BAND34 BAND35 BAND36 BAND37 BAND38 BAND39 BAND40 BAND41 BAND42 BAND43 BAND44 BAND45 BAND46 BANDA BANDB BANDC BANDD BANDE BANDF N1 N2 N3 N5 N7 N8 N12 N20 N25 N28 N34 N38 N39 N40 N41 N50 N51 N66 N70 N71 N74 N75 N76 N77 N78 N79 N80 N81 N82 N83 N84 N86 N257 N258 N260 N261 <code>:SOURce:LIST:STEP[1] 2 ... 1000:SETup:RADio:BAND?</code> |

| N 260 | 5G NR | :SOUR:LIST:STEP2:SET:RAD:BAND N260 |
| N 261 | 5G NR | :SOUR:LIST:STEP2:SET:RAD:BAND N261 |

Device

Lets you specify the radio band link direction for the steps within the list sequence. The link is used in conjunction with the channel band and channel number to determine the output frequency.

| Setting | Option | Description |
|----------|--------|---|
| Uplink | UP | The source calculates the uplink frequency according to an uplink formula together with selected channel band and channel number |
| Downlink | DOWN | The source calculates the downlink frequency according to a downlink formula together with selected channel band and channel number |

| | |
|----------------|---|
| Remote Command | :SOURce:LIST:STEP[1] 2 ... 1000:SETup:RADio:BAND:LINK DOWN UP :SOURce:LIST:STEP[1] 2 ... 1000:SETup:RADio:BAND:LINK? |
| Example | :SOUR:LIST:STEP2:SET:RAD:BAND:LINK UP :SOUR:LIST:STEP2:SET:RAD:BAND:LINK? |
| Notes | SCPI is supported after A.09.40 |

| | |
|--------------|-------------------------|
| Dependencies | Not available in E7760B |
| Preset | DOWN |
| Range | DOWN UP |

Freq/Chan

Lets you select the frequency or channel value for the current step. If the Band selection for the current row is **NONE**, you enter a frequency. Otherwise, enter a channel, which causes the frequency to be automatically selected, based on the Band selection.

Entering a Frequency

If the Band selection for the current row is **NONE**, enter a Frequency. This field in the table allows you to select the frequency value for the current step.

| | | |
|----------------|---|----------|
| Remote Command | :SOURCE:LIST:STEP[1] 2 ... 1000:SETup:CNFRrequency <double> :SOURCE:LIST:STEP[1] 2 ... 1000:SETup:CNFRrequency? | |
| Example | :SOUR:LIST:STEP2:SET:CNFR 1GHz :SOUR:LIST:STEP2:SET:CNFR? | |
| Notes | SCPI is supported after A.09.40 Used to setup channel number or frequency setting, according to the current Radio Band setting. If Radio Band is NONE , then the value is frequency. If Radio Band is not NONE , then the value is channel number | |
| Dependencies | Not available in E7760B | |
| Couplings | The frequency value is coupled to the channel band and number for the step, such that updates to the radio band and channel number will update the frequency value to the corresponding absolute frequency. The reverse is also true, changing the frequency value causes the value of the channel number to be updated | |
| Preset | 1.00 GHz | |
| Min | 10.00 MHz | |
| Max | Hardware Dependent: | |
| | Option 503 | 3.6 GHz |
| | Option 504 | 3.9 GHz |
| | Option 506 | 6.00 GHz |
| | Option F06 | 6.08 GHz |
| | Option F06 & EP6 | 6.60 GHz |

Entering a Channel

If the Band selection for the current row is not **NONE**, enter a Channel Number. This field in the table allows you to select the channel value for the current step. The frequency is selected automatically, based on the Band.

| | |
|--------------|---|
| Example | <code>:SOUR:LIST:STEP2:SET:CNFR 124</code> <code>:SOUR:LIST:STEP2:SET:CNFR?</code> |
| Notes | SCPI is supported after A.09.40 Used to setup channel number or frequency setting, according to current Radio Band setting. If Radio Band is NONE , then the value is a frequency. If Radio Band is not NONE , then the value is a channel number |
| Dependencies | Not available in E7760B |
| Couplings | The channel number is coupled to the step frequency value. When the step frequency value is changed, the channel number increases or decreases to match the new step frequency. If the step frequency is not at an exact match for a channel number, the nearest channel number is displayed, along with a greater-than or less-than sign, to indicate the frequency is above or below the channel number |
| Preset | 1 |
| Min/Max | 0/10838 (See " Channel " on page 2081 for valid ranges) |

Power

Lets you specify the power value for the current step.

| | |
|----------------|--|
| Remote Command | <code>:SOURce:LIST:STEP[1] 2 ... 1000:SETup:AMPLitude <double></code> <code>:SOURce:LIST:STEP[1] 2 ... 1000:SETup:AMPLitude?</code> |
| Example | <code>:SOUR:LIST:STEP2:SET:AMPL -50dBm</code> <code>:SOUR:LIST:STEP2:SET:AMPL?</code> |
| Dependencies | The RF power is dependent on the RF output port and frequency, such that the current frequency and selected output port determine the valid range of power values Not available in E7760B |
| Preset | -100 dBm |
| Min/Max | The range of values depends on the current frequency and selected RF output port See " RF Power " on page 2046 and the RF Power Range table for valid ranges |

Waveform

Lets you select the waveform to be played back during the current step. Options are: CW, a Waveform file, Continue the previous step's waveform, or Off.

| | |
|----------------|--|
| Remote Command | <code>:SOURce:LIST:STEP[1] 2 ... 1000:SETup:WAVEform <string></code> |
|----------------|--|

| | |
|--------------|---|
| | <p>where <code><string></code> is one of: <code>"CW"</code>, <code>"waveform name"</code>, <code>"Cont"</code>, <code>"Off"</code> For full details of options, see "More Information" on page 2066 <code>:SOURce:LIST:STEP[1] 2 ... 1000:SETup:WAVeform?</code></p> |
| Example | <code>:SOUR:LIST:STEP2:SET:WAV "CW"</code> <code>:SOUR:LIST:STEP2:SET:WAV?</code> |
| Notes | SCPI is supported after A.09.40 |
| Dependencies | Not available in E7760B For VXT models M9410A/11A/16A, if the Waveform is not Continue Previous, there is always a time gap between the current step and the previous step |
| Preset | <code>CW</code> |
| Range | <code>"CW"</code> , <code>"waveform name"</code> , <code>"Cont"</code> , <code>"Off"</code> |

More Information

| Parameter | SCPI | Notes |
|-------------------|------------------------------|---|
| CW | <code>"CW"</code> | Sets the current step to output a CW tone |
| Selected Waveform | <code>"waveform name"</code> | Inserts a waveform from the Select Waveform dialog as the waveform for playback during the current step If the selected waveform contains header (which contains ARB play parameters), source list sequence will automatically apply header settings of the selected waveform in that step |
| Continue Previous | <code>"Cont"</code> | Sets the current step to continue with playback of the waveform from the previous step. When continuing the previous waveform, the ARB playback will not pause while the source retunes to the new frequency or amplitude that may be defined for the new step |
| Off | <code>"Off"</code> | Disable RF output of the current step |

Waveform File

Pressing the slide–aside field of this column (>) opens the ["Select Waveform" on page 2122](#) screen, which lets you select a waveform in ARB memory to playback during the current step. When you select a waveform, and press **OK**, it returns to the List Sequencer Setup screen with that file name in the table.

Step Duration

Lets you select the duration of play for the current step.

6 Input/Output
6.1 RF Source

The duration can be set to be either the number of times for the ARB file associated with the sequence to play, or a specific time value, or continuous. If the step is set to play a CW tone, the step duration cannot be set to a play count.

| | |
|----------------|--|
| Remote Command | <code>:SOURce:LIST:STEP[1] 2 ... 1000:SETup:DURation:TYPE TIME COUNT CONTInuous CABort</code> See "Option Details" on page 2067 <code>:SOURce:LIST:STEP[1] 2 ... 1000:SETup:DURation:TYPE?</code> |
| Example | <code>:SOUR:LIST:STEP2:SET:DUR:TYPE TIME</code> <code>:SOUR:LIST:STEP2:SET:DUR:TYPE?</code> |
| Dependencies | Not available in E7760B If in VXT models M9410A/11A/16A, Step Duration is TIME or Play COUNT , only Free Run is available for the next step. Otherwise, an error message is generated: "Parameter error; only Free Run is available as step trigger on step<n>" |
| Range | TIME COUNT CONTInuous CABort |

Option Details

| Parameter | SCPI | Notes |
|------------------|-------------------|--|
| Time | TIME | Sets the duration of the current step to be a time value for the length of time the step will play When TIME is selected, the Time may be set using the second field under Step Duration and/or by the "Duration Time" on page 2067 command |
| Count | COUNT | Sets the duration of the current step to be an integer value for the number of times (play count) the ARB file is selected for playback during this step. For example, a 5 second ARB will be set to play 5 times during the step When COUNT is selected, the Count may be set using the second field under Step Duration and/or by the "Play Count" on page 2068 command |
| Continuous | CONTInuous | Sets the current step to be played continuously until the next step starts. The waveform will always play completely before transitioning to the next step |
| Continuous Abort | CABort | Sets the current step to be played continuously or until the trigger event of the next step is detected. When a trigger event is received, the waveform play will be aborted after the interval specified by the Duration Time parameter and it will then transition to the next step When Continuous Abort is selected, the Duration Time may be set using the second field under Step Duration and/or by the "Duration Time" on page 2067 command |

Duration Time

Lets you specify the length of time the current step will play when ["Step Duration" on page 2066](#) is Time.

When "Step Duration" on page 2066 is Continuous Abort, this parameter specifies the maximum duration that the waveform will continue to play after a step trigger is received before the transition to the next waveform will occur. Duration is limited to a maximum of 20 seconds.

If the Transition Time value is longer than the Step Duration Time, an error is generated when initiating a source list sequence. For source list sequence, transition time is included in the step duration length (not occupy additional time). If the Transition Time value is longer than the Step Duration Time, the real step duration length is extended to equal the transition time and cause a timing shift.

| | |
|----------------|--|
| Remote Command | <code>:SOURce:LIST:STEP[1] 2 ... 1000:SETup:DURation:TCOunt <double></code> <code>:SOURce:LIST:STEP[1] 2 ... 1000:SETup:DURation:TCOunt?</code> |
| Example | <code>:SOUR:LIST:STEP2:SET:DUR:TCO 1s</code> <code>:SOUR:LIST:STEP2:SET:DUR:TCO?</code> |
| Notes | When Repetition is Single , the last step continues playing after the sequence is completed. In this extended playing time, <code>:STAT:OPER:COND?</code> returns 0 for the Source Sweeping Status Bit (bit 9) SCPI is supported after A.09.40 If current Duration Type is Continuous , then error -221, "Settings conflict; Cannot accept time or count input when step duration type is Continuous on step #" is displayed |
| Dependencies | Not available in E7760B |
| Preset | VXT models M9410A/11A/16A: 2.0 ms All others: 1.00 ms |
| Min | For VXT models M9410A/11A/16A, the minimum duration time for first step is 1.2 ms. If the Waveform is "waveform name", the minimum duration time is 1.2 ms All others: 100 µs |
| Max | 1800 s |

Play Count

Lets you specify the number of times the current ARB waveform file will play during a step when "Step Duration" on page 2066 is Count.

"Duration Time" on page 2067

| | |
|----------------|--|
| Remote Command | <code>:SOURce:LIST:STEP[1] 2 ... 1000:SETup:DURation:TCOunt <double></code> <code>:SOURce:LIST:STEP[1] 2 ... 1000:SETup:DURation:TCOunt?</code> |
| Example | <code>:SOUR:LIST:STEP2:SET:DUR:TCO 10</code> <code>:SOUR:LIST:STEP2:SET:DUR:TCO?</code> |
| Notes | SCPI is supported after A.09.40 This command is reused by Play Count and Duration Time if Duration Type is set to Play Count or Duration Time If Duration Type is Continuous , then error -221, "Settings conflict; Cannot accept time or count input |

6 Input/Output
6.1 RF Source

| | |
|--------------|---|
| | when step duration type is Continuous on step #" is displayed If Play Count is set for the last step, the last step of ARB keeps playing as if set to Continuous after play count setting is reached |
| Dependencies | Not available in E7760B |
| Preset | 1 |
| Min | 1 |
| Max | 65536 |

Trig Out

Lets you specify the trigger output for the current step. The trigger output signal is sent at the start of the step.

When this is **ON**, a trigger event occurs on both Internal and External2 paths. Selecting **OFF** turns off trigger output.

| | |
|----------------|--|
| Remote Command | <code>:SOURce:LIST:STEP[1] 2 ... 1000:SETup:OUTPut:TRIGger ON OFF 1 0</code> <code>:SOURce:LIST:STEP[1] 2 ... 1000:SETup:OUTPut:TRIGger?</code> |
| Example | <code>:SOUR:LIST:STEP2:SET:OUTP:TRIG ON</code> <code>:SOUR:LIST:STEP2:SET:OUTP:TRIG?</code> |
| Notes | SCPI is supported after A.09.40 |
| Dependencies | Not available in E7760B |
| Preset | OFF |
| Range | ON OFF |

Step Configuration (Remote Command Only)

Used to configure the List Sequencer, as detailed in the table below. The command is defined such that you send one command per step, with the step number being specified as a subopcode of the SCPI command. Each command includes all the parameter settings for the step. As a step is set up, the values entered are run through several levels of validation.

| | |
|----------------|---|
| Remote Command | <code>:SOURce:LIST:STEP[1] 2 ... 1000:SETup <step_trigger>, <trans_time>, <band>, <link_type>, <freq_chan>, <power>, <waveform>, <duration>, <time_count>, <trig_state></code> For details of each option, see " Step Configuration Parameters " on page 2070 below <code>:SOURce:LIST:STEP[1] 2 ... 1000:SETup?</code> |
| Example | <code>:SOUR:LIST:STEP1:SET INT, 1ms, PGSM, DOWN, 10, -25 dBm, "GSM_Test1.bin", TIME, 10ms, OFF</code> |
| Dependencies | The range of subopcode values is 1 to 1000, and the value you enter is determined by the number of |

steps you have configured. For details see ["Number of Steps" on page 2056](#)
If you attempt to remotely set or query a subopcode that is out of range, an error is generated

Step Configuration Parameters

There are 10 parameters for each step, which must be in the following order in the command:

- | | | |
|---|---|---|
| 1 | Step Trigger <step_trigger> | Data Type: enum Specifies the input trigger for the step. For further details, see "Step Trigger" on page 2057 |
| 2 | Transition Time <trans_time> | Data Type: enum Specifies the transition time for the step, in seconds. For further details, see "Transition Time" on page 2058 |
| 3 | Radio Band <band> | Data Type: enum Specifies the radio band for the step, as any one of: NONE PGSM EGSM RGSM DCS1800 PCS1900 TGSM810 GSM450 GSM480 GSM700 GSM850 BANDI BANDII BANDIII BANDIV BANDV BANDVI BANDVII BANDVIII BANDIX BANDX BANDXI BANDXII BANDXIII BANDXIV BANDXIX USCELL USPCS JAPAN KOREAN NMT IMT2K UPPER SECOND PAMR400 PAMR800 IMTEXT PCS1DOT9G AWS US2DOT5G PUBLIC LOWER NONE BAND1 BAND2 BAND3 BAND4 BAND5 BAND6 BAND7 BAND8 BAND10 BAND11 BAND12 BAND13 BAND14 BAND17 BAND18 BAND19 BAND20 BAND21 BAND24 BAND25 BAND26 BAND33 BAND34 BAND35 BAND36 BAND37 BAND38 BAND39 BAND40 BAND41 BAND42 BAND43 BANDA BANDB BANDC BANDD BANDE BANDF N1 N2 N3 N5 N7 N8 N12 N20 N25 N28 N34 N38 N39 N40 N41 N50 N51 N66 N70 N71 N74 N75 N76 N77 N78 N79 N80 N81 N82 N83 N84 N86 N257 N258 N260 N261 For further details, see "Band" on page 2059 |
| 4 | Radio Band Link <link_type> | Data Type: enum Specifies the radio band link direction for the step, as either of: DOWN UP For further details, see "Device" on page 2063 The old Device BTS MS is obsolete, but is still supported, acting as an alias for the Link parameter |
| 5 | Frequency/Channel Number <freq_chan> | Data Type: freq/chan num Specifies the frequency in Hz or the channel number for the step. The channel number and frequency are combined as one parameter that represents the frequency or channel number depending on the radio band setting. If the radio band is set to NONE , this value is interpreted as a frequency value in Hz. If the radio band is set to a valid band, this value is interpreted as a channel number For further details, see "Freq/Chan" on page 2064 |

6 Input/Output

6.1 RF Source

| | | | | | | | | | | |
|------------|--|---|------------|--|------|---|----|-------------------|-----|--------------------|
| 6 | Power <power> | Data Type: ampl Specifies the output power for the step in dBm. For details of the valid ranges see "Power" on page 2065 | | | | | | | | |
| 7 | Waveform <waveform> | Data Type: string Specifies the waveform for playback during the step. The step can output either a new ARB waveform, continue playback of the previous waveform, or output a CW tone. The options for specifying these are: <table border="0" style="margin-left: 20px;"> <tr> <td style="vertical-align: top;"><filename></td> <td>Plays the specified waveform from the start. The filename value is the name of the file within ARB playback memory, it does not include the windows path to the file on the HDD. If you enter a filename for a waveform that does not reside within ARB playback memory, an error is generated</td> </tr> <tr> <td style="vertical-align: top;">CONT</td> <td>Continues playback of the ARB file from the previous step</td> </tr> <tr> <td style="vertical-align: top;">CW</td> <td>Outputs a CW tone</td> </tr> <tr> <td style="vertical-align: top;">OFF</td> <td>Disables RF output</td> </tr> </table> For further details, see "Waveform" on page 2065 and "Waveform File" on page 2066 | <filename> | Plays the specified waveform from the start. The filename value is the name of the file within ARB playback memory, it does not include the windows path to the file on the HDD. If you enter a filename for a waveform that does not reside within ARB playback memory, an error is generated | CONT | Continues playback of the ARB file from the previous step | CW | Outputs a CW tone | OFF | Disables RF output |
| <filename> | Plays the specified waveform from the start. The filename value is the name of the file within ARB playback memory, it does not include the windows path to the file on the HDD. If you enter a filename for a waveform that does not reside within ARB playback memory, an error is generated | | | | | | | | | |
| CONT | Continues playback of the ARB file from the previous step | | | | | | | | | |
| CW | Outputs a CW tone | | | | | | | | | |
| OFF | Disables RF output | | | | | | | | | |
| 8 | Step Duration <duration> | Data Type: enum Specifies the duration of the step, as one of: TIME COUNT CONTinuous The duration can be specified to be either time, or play count of the ARB file associated with the step, or continuous. If Waveform is set to CW , this value cannot be set to Play Count and an error will be generated. If CONTinuous is selected, the following Time or Count value is ignored. For further details, see "Step Duration" on page 2066 | | | | | | | | |
| 9 | Time or Count <time_count> | Data Type: time/int Specifies time duration in seconds, or play count of the ARB file associated with the step For further details, see "Play Count" on page 2068 | | | | | | | | |
| 10 | Output Trigger <trig_state> | Data Type: boolean Specifies the output trigger state for the step, as one of: ON OFF 1 0 For further details, see "Trig Out" on page 2069 | | | | | | | | |

Step Configuration of Step Trigger parameter list (Remote Command Only)

Configures the "Step Trigger" parameter array of the whole List Sequencer at one time. The number of arrays is the same as the step number defined in ["Number of](#)

[Steps](#) on page 2056. As a step is setup, the value entered runs through several levels of validation.

| | |
|----------------|--|
| Remote Command | <code>:SOURce:LIST:SETup:INPut:TRIGger <enum>, <enum>, <enum>, ...</code> <code>:SOURce:LIST:SETup:INPut:TRIGger?</code> |
| Example | <code>:SOUR:LIST:SET:INP:TRIG IMM,INT,EXT2</code> <code>:SOUR:LIST:SET:INP:TRIG?</code> |
| Notes | The command is to setup below parameter array of whole list sequence Step Trigger <enum> - specifies the input trigger for the step. For details of the valid types of step trigger see "Step Trigger" on page 2057 If input parameter number exceeds the step number defined by "Number of Steps" on page 2056 , then error -221 "Settings conflict; The number of input parameters is too large and is truncated to current list step number" is generated, and only those parameters whose index number falls in number of steps will be updated |
| Dependencies | The range is 1 to 1000, which is determined by the number of steps you have configured. For details see "Number of Steps" on page 2056 |

Step Configuration of Transition Time parameter list (Remote Command Only)

Configures the "Transition Time" parameter array of the whole List Sequencer at once. The array size is the same as step number defined in ["Number of Steps" on page 2056](#). As a step is setup, the value entered runs through several levels of validation.

| | |
|----------------|---|
| Remote Command | <code>:SOURce:LIST:SETup:TRANSition:TIME <time>, <time>, <time>, ...</code> <code>:SOURce:LIST:SETup:TRANSition:TIME?</code> |
| Example | <code>:SOUR:LIST:SET:TRAN:TIME 1ms,1ms,1ms</code> <code>:SOUR:LIST:SET:TRAN:TIME?</code> |
| Notes | The command is to setup below parameter array of whole list sequence Transition Time <time> - specifies the transition time for the step in seconds. For details of the valid ranges for the transition time see "Transition Time" on page 2058 If input parameter number exceeds the step number defined by "Number of Steps" on page 2056 , then the error -221, "Settings conflict; The number of input parameters is too large and is truncated to current list step number" is generated, and only those parameters whose index number falls in number of steps will be updated |
| Dependencies | The range is 1 to 1000 which is determined by the number of steps you have configured. For details see "Number of Steps" on page 2056 |

Step Configuration of Radio Band parameter list (Remote Command Only)

Configures the **Radio Band** parameter array of the whole List Sequencer at once. The size of the array is the same as the step number defined in ["Number of Steps"](#)

on page 2056. As a step is set up, the value entered runs through several levels of validation.

| | |
|----------------|--|
| Remote Command | <code>:SOURce:LIST:SETup:RADio:BAND <enum>, <enum>, <enum>, ...</code> <code>:SOURce:LIST:SETup:RADio:BAND?</code> |
| Example | <code>:SOUR:LIST:SET:RAD:BAND PGSM, EGSM, RGSM</code> <code>:SOUR:LIST:SET:RAD:BAND?</code> |
| Notes | The command sets up the parameter array of whole list sequence Radio Band <enum> - specifies the radio band for the step. For available options, see "Band" on page 2059 If the input parameter number exceeds the step number defined by "Number of Steps" on page 2056, then error -221, "Settings conflict; The number of input parameters is too large and is truncated to current list step number" is generated, and only those parameters whose index number falls within the number of steps will be updated |
| Dependencies | The range is 1 to 1000, which is determined by the number of steps you have configured. For details see "Number of Steps" on page 2056 |

Step Configuration of Radio Band Link parameter list (Remote Command Only)

Configures the **Radio Band Link** parameter array of the whole List Sequencer at one time. The number of arrays is same as step number defined in "Number of Steps" on page 2056. As a step is set up, the value entered runs through several levels of validation.

| | |
|----------------|---|
| Remote Command | <code>:SOURce:LIST:SETup:RADio:BAND:LINK <enum>, <enum>, <enum>, ...</code> <code>:SOURce:LIST:SETup:RADio:BAND:LINK?</code> |
| Example | <code>:SOUR:LIST:SET:RAD:BAND:LINK DOWN,UP,UP</code> <code>:SOUR:LIST:SET:RAD:BAND:LINK?</code> |
| Notes | The command sets up the parameter array of whole list sequence Radio Band Link <enum> - specifies the radio band link direction for the step. Options are: <code>DOWN UP</code> If input parameter number exceeds the step number defined by "Number of Steps" on page 2056, then error -221, "Settings conflict; The number of input parameters is too large and is truncated to current list step number" is generated, and only those parameters whose index number falls within the number of steps will be updated |
| Dependencies | The range is 1 to 1000, which is determined by the number of steps you have configured. For details see "Number of Steps" on page 2056 |

Step Configuration of Frequency/Channel Number parameter list (Remote Command Only)

Configures the **Frequency** or **Channel Number** parameter array of the whole List Sequencer at one time. The number of arrays is same as step number defined in ["Number of Steps" on page 2056](#). As a step is set up, the value entered runs through several levels of validation.

| | |
|----------------|---|
| Remote Command | <code>:SOURce:LIST:SETup:CNFRrequency <double>, <double>, <double>, ...</code> <code>:SOURce:LIST:SETup:CNFRrequency?</code> |
| Example | <code>:SOUR:LIST:SET:CNFR 1GHz,100MHz,100MHz</code> <code>:SOUR:LIST:SET:CNFR?</code> <code>:SOUR:LIST:SET:CNFR 124,124,124</code> <code>:SOUR:LIST:SET:CNFR?</code> |
| Notes | <p>The command sets up the parameter array of whole list sequence</p> <p>Frequency/Channel Number <freq>/<chan num> - specifies the frequency in Hz or the channel number for the step. The channel number and frequency are combined as one parameter that represents the frequency or channel number depending on the radio band setting. If the radio band is set to NONE, this value is interpreted as a frequency value in Hz. If the radio band is set to a valid band, this value is interpreted as a channel number. For details of the valid ranges for frequency and channel numbers, see "Freq/Chan" on page 2064 and "Freq/Chan" on page 2064</p> <p>This command is used to setup/query channel number or frequency setting, according to current Radio Band setting of that step. If Radio Band is NONE, then it is frequency. If Radio Band is not NONE, then it is channel number</p> <p>If input parameter number exceeds the step number defined by "Number of Steps" on page 2056, then generate error -221, "Settings conflict; The number of input parameters is too large and is truncated to current list step number", and only those parameters whose index number falls in legal step number will be updated</p> |
| Dependencies | The range is 1 to 1000, which is determined by the number of steps you have configured. For details see "Number of Steps" on page 2056 |

Step Configuration of Power parameter list (Remote Command Only)

Configures the **Power** parameter array of the whole List Sequencer at one time. The number of arrays is the same as step number defined in ["Number of Steps" on page 2056](#). As a step is set up, the value entered runs through several levels of validation.

| | |
|----------------|---|
| Remote Command | <code>:SOURce:LIST:SETup:AMPLitude <ampl>, <ampl>, <ampl>, ...</code> <code>:SOURce:LIST:SETup:AMPLitude?</code> |
| Example | <code>:SOUR:LIST:SET:AMPL -50dBm,-40dBm,-30dBm</code> <code>:SOUR:LIST:SET:AMPL?</code> |
| Notes | The command sets up the parameter array of whole list sequence |

Power **<ampl>** - specifies the output power for the step in dBm. For details of the valid ranges, see ["Power" on page 2065](#)

If input parameter number exceeds the step number defined by ["Number of Steps" on page 2056](#), then error -221, "Settings conflict; The number of input parameters is too large and is truncated to current list step number" is generated, and only those parameters whose index number falls within legal step number will be updated

Dependencies The range is 1 to 1000, which is determined by the number of steps you have configured. For details see ["Number of Steps" on page 2056](#)

Step Configuration of Waveform parameter list (Remote Command Only)

Configures the **Waveform** parameter array of the whole List Sequencer at one time. The number of arrays is same as step number defined in ["Number of Steps" on page 2056](#). As a step is set up, the value entered runs through several levels of validation.

Remote Command `:SOURce:LIST:SETup:WAVEform <string>, <string>, <string>, ...`
`:SOURce:LIST:SETup:WAVEform?`

Example `:SOUR:LIST:SET:WAV "CW", "Off", "CONT"`
`:SOUR:LIST:SET:WAV?`

Notes Sets up or queries the parameter array of whole list sequence
Waveform **<string>** - specifies the waveform for playback during the step. The step can output either a new ARB waveform, continue playback of the previous waveform, or output a CW tone. The options for specifying these are:

| | |
|-------------------------|---|
| <filename> | Plays the specified waveform from the start. The filename value is the name of the file within ARB playback memory, it is does not include the windows path to the file on the HDD. If you enter a filename for a waveform that does not reside within ARB playback memory, an error is generated |
| CONT | Continues playback of the ARB file from the previous step |
| CW | Outputs a CW tone |
| OFF | Disables the RF output |

If input parameter number exceeds the step number defined by ["Number of Steps" on page 2056](#), then error -221, "Settings conflict; The number of input parameters is too large and is truncated to current list step number" is generated, and only those parameters whose index number falls within number of steps will be updated

Dependencies The range is 1 to 1000 which is determined by the number of steps you have configured. For details see ["Number of Steps" on page 2056](#)

Range `"filename" | "CW" | "Off" | "CONT"`

Step Configuration of Step Duration parameter list (Remote Command Only)

Configures the **Step Duration** parameter array of the whole List Sequencer at one time. The number of arrays is same as step number defined in "[Number of Steps](#)" on [page 2056](#). As a step is set up, the value entered runs through several levels of validation.

| | |
|----------------|---|
| Remote Command | <code>:SOURce:LIST:SETup:DURation:TYPE <enum>, <enum>, <enum>, ...</code> <code>:SOURce:LIST:SETup:DURation:TYPE?</code> |
| Example | <code>:SOUR:LIST:SET:DUR:TYPE COUN,TIME,CONT</code> <code>:SOUR:LIST:SET:DUR:TYPE?</code> |
| Notes | <p>Sets up or queries the parameter array of whole list sequence</p> <p>Step Duration <enum> - specifies the duration of the step. The duration can be specified to be either time, or play count of the ARB file associated with the step, or continuous. If Waveform is set to "CW", this value cannot be set to Play Count and an error will be generated. If continuous is selected, the following Time or Count value is ignored. For further details of this setting, see "Step Duration" on page 2066</p> <p>Options are: <code>TIME COUNT CONTInuous</code></p> <p>If input parameter number exceeds the step number defined by "Number of Steps" on page 2056, then error -221, "Settings conflict; The number of input parameters is too large and is truncated to current list step number" is generated, and only those parameters whose index number falls within number of steps will be updated</p> |
| Dependencies | The range is 1 to 1000, which is determined by the number of steps you have configured. For details see " Number of Steps " on page 2056 |

Step Configuration of Duration Time or Play Count parameter list (Remote Command Only)

Configures the **Duration Time** or **Play Count** parameter array of the whole List Sequencer at one time. The number of arrays is same as step number defined in "[Number of Steps](#)" on [page 2056](#). As a step is set up, the value entered runs through several levels of validation.

| | |
|----------------|---|
| Remote Command | <code>:SOURce:LIST:SETup:TOCount <time/int>, <time/int>, <time/int>, ...</code> <code>:SOURce:LIST:SETup:TOCount?</code> |
| Example | <code>:SOUR:LIST:SET:TOC 1s,2s,3s</code> <code>:SOUR:LIST:SET:TOC?</code> <code>:SOUR:LIST:SET:TOC 5,6,7</code> <code>:SOUR:LIST:SET:TOC?</code> |
| Notes | Sets up or queries the parameter array of whole list sequence |

| | |
|--|--|
| Time or Count <time/int> | - specifies time duration in seconds or play count of the ARB file associated with the step |
| If input parameter number exceeds the step number defined by "Number of Steps" on page 2056, | then an error is generated, and only those parameters whose index number falls within number of steps will be updated |
| If current "Step Duration" on page 2066 is "Continuous", | then error -221, "Settings conflict; Cannot accept time or count input when step duration type is Continuous on step #" is generated |

| | |
|--------------|--|
| Dependencies | The range is 1 to 1000, which is determined by the number of steps you have configured. For details see "Number of Steps" on page 2056 |
|--------------|--|

Step Configuration of Output Trigger parameter list (Remote Command Only)

Configures the **Output Trigger** parameter array of the whole List Sequencer at one time. The number of arrays is same as step number defined in "Number of Steps" on page 2056. As a step is set up, the value entered runs through several levels of validation.

| | |
|----------------|---|
| Remote Command | <code>:SOURce:LIST:SETup:OUTPut:TRIGger <bool>, <bool>, <bool>, ...</code> <code>:SOURce:LIST:SETup:OUTPut:TRIGger?</code> |
|----------------|---|

| | |
|---------|---|
| Example | <code>:SOUR:LIST:SET:OUTP:TRIG ON,OFF,ON</code> <code>:SOUR:LIST:SET:OUTP:TRIG?</code> |
|---------|---|

| | |
|-------|---|
| Notes | Sets up or queries the parameter array of whole list sequence Output Trigger <Boolean> - specifies the output trigger for the step. Options are: <code>ON OFF 1 0</code> If input parameter number exceeds the step number defined by "Number of Steps" on page 2056, then error -221, "Settings conflict; The number of input parameters is too large and is truncated to current list step number" is generated, and only those parameters whose index number falls within legal step number are updated |
|-------|---|

| | |
|--------------|--|
| Dependencies | The range is 1 to 1000, which is determined by the number of steps you have configured. For details see "Number of Steps" on page 2056 |
|--------------|--|

Clear List (Remote Command Only)

The SCPI equivalent of the Clear List UI feature described in "Clear List" on page 2057.

| | |
|----------------|---------------------------------------|
| Remote Command | <code>:SOURce:LIST:SETup:CLEar</code> |
|----------------|---------------------------------------|

| | |
|---------|-----------------------------------|
| Example | <code>:SOUR:LIST:SETup:CLE</code> |
|---------|-----------------------------------|

| | |
|--------------|-------------------------|
| Dependencies | Not available in E7760B |
|--------------|-------------------------|

6.1.8.8 Remote Software Trigger (Remote command Only)

During execution of a list sequence, the sequence halts and waits at any step that has Step Trigger set to “Bus”. Sending this command triggers the step and continues the sequence.

| | |
|----------------|--|
| Remote Command | <code>:SOURce:LIST:TRIGger:INITiate[:IMMediate]</code> |
| Example | <code>:SOUR:LIST:TRIG:INIT</code> |
| Dependencies | Not available in E7760B |

6.1.8.9 Query List Sequence Initiation Armed Status (Remote Query Only)

This is a blocking SCPI query to determine whether a source list sequence has been initiated successfully.

| | |
|----------------|--|
| Remote Command | <code>:SOURce:LIST:INITiation:ARMed?</code> |
| Example | <code>:SOUR:LIST:INIT:ARMed?</code> |
| Notes | <p>Returns “1” if list sequence has been initiated successfully, or “0” if not. If the response is “0”, use <code>:SYST:ERR?</code> to query the actual error</p> <p>Like <code>*OPC?</code>, this command can be blocked until event/status “IsSourceSweeping” occurs, and then returns. Doing so can help a script query the armed status only once during the time interval of the initiation. As an ancillary to the existing <code>:SOUR:LIST:TRIGger[:IMMediate]</code> (see "Initiate Sequence" on page 2054), send this query after <code>:SOUR:LIST:TRIG</code>. Otherwise, this query will return “1” immediately</p> <p>The return data is in the following format: Integer</p> <p>There is an alias: <code>:SOURce:LIST:TRIGger:INITiation:ARMed?</code></p> |
| Dependencies | Not available in E7760B |

6.1.9 Frequency Setup

Lets you access the Frequency Setup sub-menu panel.

| | |
|-------|---|
| Notes | The menu under this control is for independent mode and has no effect on the "List Sequencer" on page 2053 . If "Sequencer" on page 2054 is ON , the List Sequencer controls the source output and this key is grayed-out, to indicate out-of-scope. When "Sequencer" on page 2054 is OFF , source leaves List Sequencer and this button is blanked out |
|-------|---|

6.1.9.1 Frequency

Lets you set the RF Output Frequency. You can adjust the frequency of the source using the numeric keypad, step keys, or RPG. Pressing any digit (0 through 9) on the

6 Input/Output
6.1 RF Source

numeric keypad displays the unit terminator.

| | | |
|----------------|--|---|
| Remote Command | :SOURce:FREQuency[:CW] <freq> :SOURce:FREQuency[:CW]? | |
| Example | :SOUR:FREQ 1.00 GHz | |
| Notes | Internal source has list sequence mode, which comprises of several steps that contain separate output power, frequency and waveform etc. When the source list sequence playing is complete, the last step keeps playing, and you can use this command to change the list sequence last step's output frequency | |
| Couplings | The frequency value is coupled to the current channel band and number, such that updates to the band and number will update the frequency value to the corresponding absolute frequency | |
| Preset | E7760B | Depends on port selected |
| | EXM, with license F1A or 5WC | 2.412 GHz |
| | VXT Models with Radio Heads/CIU | See "VXT Models with Remote Radio Heads/CIU" on page 2080 |
| | M941xE(VXT Models with M9471A) | See "M941xE(VXT Models with M9471A)" on page 2080 |
| | All other models | 1.00 GHz |
| Min | E7760B | Depends on port selected |
| | VXT model M9420A | 60 MHz |
| | VXT models M9410A/11A/15A/16A | 380 MHz |
| | VXT model M9411A with Option LFE | 1 MHz |
| | VXT Models with Radio Heads/CIU | See "VXT Models with Remote Radio Heads/CIU" on page 2080 |
| | M941xE(VXT Models with M9471A) | See "M941xE(VXT Models with M9471A)" on page 2080 |
| | All other models | 10.00 MHz |
| Max | Hardware Dependent: | |
| | Option 503 | 3.6 GHz |
| | Option 504 | 3.8 GHz |
| | Option 506 | 6.00 GHz |
| | Option F06 | 6.00 GHz |
| | Parameters for "VXT models M9415A/16A" on page 2080 | |
| | Parameters for "VXT Models with Remote Radio Heads/CIU" on page 2080 | |
| | Parameters for "M941xE(VXT Models with M9471A)" on page 2080 | |
| | For E7760B: Depends on port selected | |
| | For EXM, if license 5WC is present, the frequency range should be limited to: 1.1GHz-1.7GHz, 2.4GHz-2.5GHz, 4.8GHz-6.0GHz. If the user-defined frequency is outside of range, reports error message "Settings conflict; Frequency is outside available range" | |

VXT models M9410A/11A

| RF Output Port | Preset | Min Without Option “LFE” | Min With Option “LFE” | Max |
|----------------|--------|-----------------------------|--------------------------|-------|
| RF Output | 1 GHz | 380 MHz | 1 MHz | 6 GHz |
| RFHD | 1 GHz | 380 MHz | 1 MHz | 6 GHz |

VXT models M9415A/16A

| Freq Option | Preset | Min | Max |
|-------------|--------|---------|----------|
| F06 | 1 GHz | 380 MHz | 6.0 GHz |
| F08 | 1 GHz | 380 MHz | 8.0 GHz |
| F12 | 1 GHz | 380 MHz | 12.3 GHz |

E7760B

| RF Output Port | Preset | Min | Max |
|----------------|-----------|--------|--------|
| IFIO | 16 GHz | 2 GHz | 18 GHz |
| M1650A | 58.32 GHz | 55 GHz | 69 GHz |
| M1720A | 28 GHz | 25 GHz | 29 GHz |

VXT Models with Remote Radio Heads/CIU

| Products with Radio Heads/CIU | Preset | Min frequency | Max frequency |
|-------------------------------|--------|---------------|---------------|
| VXT + CIU | 6 GHz | 5.9 GHz | 12 GHz |
| VXT + CIU + RRH | 28 GHz | 24.25 GHz | 43.5 GHz |
| VXT + M1742A RRH | 28 GHz | 10 GHz | 32 GHz |

M941xE(VXT Models with M9471A)

| Products with M9471A | Preset | Minimum settable frequency | Minimum frequency with Spec | Maximum settable frequency |
|---|--------|----------------------------------|-----------------------------------|----------------------------------|
| M941xE without LFE option | 1 GHz | 330 MHz | 380MHz | 26.5GHz |
| M941xE with LFE option (LFE option in M9411A or M9471A) | 1 GHz | 750 kHz | 1MHz | 26.5GHz |

NOTE

The minimum spec frequency is 380 MHz, minimum settable center frequency is 330 MHz.

With Option LFE in M9411A or in M9471A, the minimum settable frequency is 750 kHz, but Spec to customer only ensure down to 1 MHz.

6.1.9.2 Channel

The frequency of the source can be specified by a channel number of a given frequency band. This control allows you to specify the current channel number. For the appropriate range of channel numbers for a given frequency band, see the following tables: ["GSM/EDGE Channel Number Ranges" on page 2081](#), ["W-CDMA Channel Number Ranges" on page 2082](#), ["LTE FDD Channel Number Ranges" on page 2083](#), and ["LTE TDD Channel Number Ranges" on page 2085](#).

Channel is not available on E7760B.

| | |
|----------------|---|
| Remote Command | :SOURce:FREQuency:CHANnels:NUMBER <int> |
| Example | :SOUR:LIST:STEP2:SET:RAD:NUMB 1 |
| Notes | Grayed-out when the "Radio Standard/Radio Band" on page 2086 is set to NONE |
| Couplings | The channel number is coupled to the frequency value when "Radio Standard/Radio Band" on page 2086 is not set to NONE When the frequency value is changed, the channel number increases or decreases to match the new frequency. If the frequency is not at an exact match for a channel number, the nearest channel number is displayed, with > or < indicating whether the frequency is above or below the channel number |
| Preset | 1 |
| Min/Max | See "GSM/EDGE Channel Number Ranges" on page 2081 , "W-CDMA Channel Number Ranges" on page 2082 , "LTE FDD Channel Number Ranges" on page 2083 , and "LTE TDD Channel Number Ranges" on page 2085 |

GSM/EDGE Channel Number Ranges

| Band | Link (Device) | Range | Frequency (MHz) |
|----------|---------------|----------------|-------------------------|
| P-GSM | Uplink (MS) | 1 £ n £ 124 | 890.0 + 0.2*n |
| | Downlink (BS) | 1 £ n £ 124 | 935.0 + 0.2*n |
| E-GSM | Uplink (MS) | 0 £ n £ 124 | 890.0 + 0.2*n |
| | | 975 £ n £ 1023 | 890.0 + 0.2*(n-1024) |
| | Downlink (BS) | 0 £ n £ 124 | 935.0 + 0.2*n |
| DCS 1800 | Uplink (MS) | 975 £ n £ 1023 | 935.0 + 0.2*(n-1024) |
| | | 512 £ n £ 885 | 1710.200 + 0.20*(n-512) |
| PCS 1900 | Downlink (BS) | 512 £ n £ 885 | 1805.200 + 0.20*(n-512) |
| | | 512 £ n £ 810 | 1850.200 + 0.2*(n-512) |
| R-GSM | Uplink (MS) | 512 £ n £ 810 | 1930.200 + 0.2*(n-512) |
| | | 0 £ n £ 124 | 890.0 + 0.2*n |
| | Downlink (BS) | 955 £ n £ 1023 | 890.0 + 0.2*(n-1024) |
| | | 0 £ n £ 124 | 935.0 + 0.2*n |

| Band | Link (Device) | Range | Frequency (MHz) |
|----------|---------------|----------------|------------------------|
| GSM 450 | Uplink (MS) | 955 £ n £ 1023 | 935.0 + 0.2*(n-1024) |
| | Downlink (BS) | 256 £ n £ 293 | 450.6 + 0.2*(n-259) |
| GSM 480 | Uplink (MS) | 256 £ n £ 293 | 460.6 + 0.2*(n-259) |
| | Downlink (BS) | 306 £ n £ 340 | 479.000 + 0.20*(n-306) |
| GSM 850 | Uplink (MS) | 306 £ n £ 340 | 489.000 + 0.20*(n-306) |
| | Downlink (BS) | 128 £ n £ 251 | 824.200 + 0.20*(n-128) |
| GSM 700 | Uplink (MS) | 128 £ n £ 251 | 869.200 + 0.20*(n-128) |
| | Downlink (BS) | 438 £ n £ 516 | 777.200 + 0.20*(n-438) |
| T-GSM810 | Uplink (MS) | 438 £ n £ 516 | 747.200 + 0.20*(n-438) |
| | Downlink (BS) | 350 £ n £ 425 | 806.0 + 0.20*(n-350) |
| | | 350 £ n £ 425 | 851.0 + 0.20*(n-350) |

W-CDMA Channel Number Ranges

| Band | Link (Device) | Range | Frequency (MHz) |
|----------|---------------|-------------------|-----------------|
| Band I | Downlink | 10562 £ n £ 10838 | n÷5 |
| | Uplink | 9612 £ n £ 9888 | n÷5 |
| Band II | Downlink | 412 £ n £ 687 | n÷5 + 1850.1 |
| | | 9662 £ n £ 9938 | n÷5 |

LTE FDD Channel Number Ranges

The carrier frequency in the uplink and downlink is designated by the E-UTRA Absolute Radio Frequency Channel Number (EARFCN) in the range 0 - 65535. The relation between EARFCN and the carrier frequency in MHz for the downlink is given by the following equation, where F_{DL_low} and $N_{Offs-DL}$ are given in table 5.4.4-1 and N_{DL} is the downlink EARFCN.

$$F_{DL} = F_{DL_low} + 0.1(N_{DL} - N_{Offs-DL})$$

The relation between EARFCN and the carrier frequency in MHz for the uplink is given by the following equation where F_{UL_low} and $N_{Offs-UL}$ are given in table 5.4.4-1 and N_{UL} is the uplink EARFCN.

$$F_{UL} = F_{UL_low} + 0.1(N_{UL} - N_{Offs-UL})$$

| Band | Downlink | | | Uplink | | |
|------|---------------------|---------------|-------------------|---------------------|---------------|-------------------|
| | F_{DL_low} (MHz) | $N_{Offs-DL}$ | Range of N_{DL} | F_{UL_low} (MHz) | $N_{Offs-UL}$ | Range of N_{UL} |
| 1 | 2110 | 0 | 0 – 599 | 1920 | 18000 | 18000 – 18599 |
| 2 | 1930 | 600 | 600 – 1199 | 1850 | 18600 | 18600 – 19199 |
| 3 | 1805 | 1200 | 1200 – 1949 | 1710 | 19200 | 19200 – 19949 |

| ... | | | | | | |

Note: The channel numbers that designate carrier frequencies so close to the operating band edges that the carrier extends beyond the operating band edge shall not be used. This implies that the first 7, 15, 25, 50, 75 and 100 channel numbers at the lower operating band edge and the last 6, 14, 24, 49, 74 and 99 channel numbers at the upper operating band edge shall not be used for channel bandwidths of 1.4, 3, 5, 10, 15 and 20 MHz respectively.

LTE TDD Channel Number Ranges

The carrier frequency in the uplink and downlink is designated by the E-UTRA Absolute Radio Frequency Channel Number (EARFCN) in the range 0 - 65535. The relation between EARFCN and the carrier frequency in MHz for the downlink is given by the following equation, where F_{DL_low} and $N_{Offs-DL}$ are given in table 5.4.4-1 and N_{DL} is the downlink EARFCN.

$$F_{DL} = F_{DL_low} + 0.1(N_{DL} - N_{Offs-DL})$$

The relation between EARFCN and the carrier frequency in MHz for the uplink is given by the following equation where F_{UL_low} and $N_{Offs-UL}$ are given in table 5.4.4-1 and N_{UL} is the uplink EARFCN.

$$F_{UL} = F_{UL_low} + 0.1(N_{UL} - N_{Offs-UL})$$

| Band | Downlink | | | Uplink | | |
|------|---------------------|---------------|-------------------|---------------------|---------------|-------------------|
| | F_{DL_low} (MHz) | $N_{Offs-DL}$ | Range of N_{DL} | F_{UL_low} (MHz) | $N_{Offs-UL}$ | Range of N_{UL} |
| 33 | 1900 | 36000 | 36000 - 36199 | 1900 | 36000 | 36000 - 36199 |
| 34 | 2010 | 36200 | 36200 - 36349 | 2010 | 36200 | 36200 - 36349 |

| 40 | 2300 | 38650 | 38650 - 39649 | 2300 | 38650 | 38650 - 39649 |
| 41 | 2496 | 39650 | 39650 - 41589 | 2496 | 39650 | 39650 - 41589 |
| 42 | 3400 | 41590 | 41590 - 43589 | 3400 | 41590 | 41590 - 43589 |
| 43 | 3600 | 43590 | 43590 - 45589 | 3600 | 43590 | 43590 - 45589 |

Note: The channel numbers that designate carrier frequencies so close to the operating band edges that the carrier extends beyond the operating band edge shall not be used. This implies that the first 7, 15, 25, 50, 75 and 100 channel numbers at the lower operating band edge and the last 6, 14, 24, 49, 74 and 99 channel numbers at the upper operating band edge shall not be used for channel bandwidths of 1.4, 3, 5, 10, 15 and 20 MHz respectively.

6.1.9.3 Radio Setup

Lets you select the radio standard and associated radio band. You can also set the Radio Band Link to Uplink or Downlink.

Radio Standard/Radio Band

Lets you select the radio standard and associated radio band. The first column in the dialog lets you set the Radio Standard; for each standard, and the second column in the dialog changes to show you the available bands.

Once you have selected the radio standard, you can then set an active channel band. The radio standard and the active channel band allow you to use the ["Channel" on page 2081](#) control to set Channel numbers, thus setting ["Frequency" on page 2078](#) automatically.

Radio Band Link

Lets you specify the channel band type as either uplink or downlink link direction. This value is used in conjunction with the channel band and channel number to determine the absolute frequency output by the source.

- When set to **Uplink (UP)**, the source calculates the uplink frequency using an uplink formula together with the selected channel band and channel number
- When set to **Downlink (DOWN)** the source calculates the downlink frequency using a downlink formula together with the selected channel band and channel number

| | |
|-------------------------------|---|
| Remote Command | :SOURce:RADio:BAND:LINK DOWN UP :SOURce:RADio:BAND:LINK? |
| Example | :SOUR:RAD:BAND:LINK UP |
| Preset | DOWN |
| Range | DOWN UP |
| Backwards Compatibility SCPI | :SOURce:RADio:DEVIce BTS MS :SOURce:RADio:DEVIce? |
| Backwards Compatibility Notes | DOWN = BTS UP = MS |

6.1.9.4 Set Reference Frequency

Lets you set the frequency reference. Pressing this control turns the frequency reference state to **ON**, sets the reference frequency value to the current frequency, maintains this frequency at the RF output, and sets the displayed frequency to 0.00 Hz. All subsequent frequencies entered under Source>Frequency>Frequency are interpreted as being relative to this reference frequency.

6 Input/Output

6.1 RF Source

When you use a frequency reference, the signal generator outputs a frequency that is set relative to the reference frequency by the value entered under **Source, Frequency, Frequency** as follows:

Output frequency = reference frequency - entered frequency

Where:

- reference frequency equals the original RF frequency entered under **Source>Frequency>Frequency** and set as the reference frequency
- entered frequency equals a new value entered under **Source, Frequency, Frequency**

In addition, the displayed frequency value will be the same as the value entered under **Source>Frequency>Frequency**.

NOTE

If **Freq Reference** is **ON** with a reference value set, entering a value under **Source, Frequency, Frequency** and pressing **Set Frequency Reference** adds that value to the existing **Freq Reference** value.

If you wish to change the reference frequency value to the new value entered under **Source, Frequency, Frequency**, first set **Freq Reference** **OFF** then press **Set Frequency Reference**.

| | |
|----------------|--|
| Remote Command | : SOUR ce: FREQ uency: REF erence: SET |
| Example | : SOUR : FREQ : REF : SET |
| Dependencies | Unavailable, and grayed-out, when List Sequencer is ON |

6.1.9.5 Freq Reference

Lets you toggle the state of the frequency reference. When the frequency reference state is **ON**, an annunciator is displayed on the main source view to indicate this state to the user.

When you use a frequency reference, the signal generator outputs a frequency that is set relative to the reference frequency by the value entered under **Source, Frequency, Frequency** as follows:

Output frequency = reference frequency + entered frequency

Where:

- reference frequency equals the original RF frequency entered under **Source, Frequency, Frequency** and set as the reference frequency
- entered frequency equals a new value entered under **Source, Frequency, Frequency**

For more information on Reference Frequency, see ["Set Reference Frequency" on page 2090](#).

| | | | | | | | |
|----------------|---|------------|---------|------------|---------|------------|----------|
| Remote Command | <code>:SOURce:FREQuency:REFerence <freq></code> <code>:SOURce:FREQuency:REFerence?</code> | | | | | | |
| Example | <code>:SOUR:FREQ:REF 0.00 Hz</code> | | | | | | |
| Dependencies | Unavailable, and grayed-out, when List Sequencer is ON | | | | | | |
| Couplings | The frequency reference state is coupled to the frequency reference set immediate action. When the reference set immediate action key is pressed, or the SCPI command issued, it turns the frequency reference state ON | | | | | | |
| Preset | 0.00 Hz | | | | | | |
| Min | 0.00 Hz | | | | | | |
| Max | Hardware Dependent: <table border="1" data-bbox="406 772 1404 903"> <tr> <td>Option 503</td> <td>3.6 GHz</td> </tr> <tr> <td>Option 504</td> <td>3.8 GHz</td> </tr> <tr> <td>Option 506</td> <td>6.00 GHz</td> </tr> </table> For E7760B: Dependent on port selected Auto Function | Option 503 | 3.6 GHz | Option 504 | 3.8 GHz | Option 506 | 6.00 GHz |
| Option 503 | 3.6 GHz | | | | | | |
| Option 504 | 3.8 GHz | | | | | | |
| Option 506 | 6.00 GHz | | | | | | |
| Remote Command | <code>:SOURce:FREQuency:REFerence:STATe OFF ON 0 1</code> <code>:SOURce:FREQuency:REFerence:STATe?</code> | | | | | | |
| Example | <code>:SOUR:FREQ:REF:STATe ON</code> | | | | | | |
| Preset | OFF | | | | | | |

6.1.9.6 Freq Offset

Lets you specify the frequency offset value. When the frequency offset state is **ON**, an annunciator is displayed on the main source view to indicate this state.

When the frequency offset is set to zero (0) and you set a new offset value, the displayed frequency value changes as follows, and the RF output frequency does not change:

Displayed value = output frequency + offset value

Where:

- output frequency equals the original frequency entered under **Source, Frequency, Frequency**
- offset value equals the value entered under **Source, Frequency, Freq Offset**

Option 506 6.00 GHz

For E7760B: Dependent on port selected

For EXM, if license 5WC is present, the frequency range should be limited to: 1.1GHz-1.7GHz, 2.4GHz-2.5GHz, 4.8GHz-6.0GHz. If the user-defined frequency is outside of range, reports error message "Settings conflict; Frequency is outside available range"

6.1.9.8 Rx/Tx Coupling

Allows coupling between the frequency of the Internal Source, RF Output Frequency, and the instrument Center Frequency. For all settings except **NONE**, this parameter couples the **Center Frequency** of the instrument to the RF Output Frequency of the source. Valid setting changes result in the Analyzer CF and RF Output Frequency parameters being set to the same value, plus the "Rx/Tx Offset" on page 2095.

The four states for coupling are:

| | |
|-----------------|---|
| SOURCE | Source follows Analyzer Coupling is in one direction only. Changes to the Center Frequency will result in the RF Output Frequency being set to the same value, with any Rx/Tx Frequency Offset applied. Changes to the RF Output Frequency will not change the Center Frequency and will change Rx/Tx Frequency Coupling to None |
| ANALYZER | Analyzer follows Source Coupling is in one direction only. Changes to the RF Output Frequency will result in the Center Frequency being set to the same value, with any Rx/Tx Frequency Offset applied. Changes to the Center Frequency will not change the RF Output Frequency and will change Rx/Tx Frequency Coupling to None |
| BOTH | Analyzer/Source Coupled Coupling is bi-directional. Changes to the Center Frequency will result in the RF Output Frequency being set to the same value, with any Rx/Tx Frequency Offset applied. Changes to the RF Output Frequency will result in the Center Frequency being set to the same value, with any Rx/Tx Frequency Offset applied |
| NONE | None RF Output Frequency and CF Frequency are independently controlled |

Remote Command `:SOURCE:FREQUENCY:COUPLING NONE | BOTH | SOURCE | ANALYZER`
`:SOURCE:FREQUENCY:COUPLING?`

Example `:SOUR:FREQ:COUP BOTH`

Dependencies Only appears in Radio Test Mode

Preset **NONE**

Input/Output Preset

State Saved Yes

6.1.9.9 Rx/Tx Offset

Lets you offset the RF Output Frequency of the source from the **Center Frequency** of the instrument. See ["Rx/Tx Coupling" on page 2094](#) for coupling behavior.

| | | | | | | | |
|----------------|--|------------|---------|------------|---------|------------|----------|
| Remote Command | <code>:SOURce:FREQuency:COUPling:OFFSet <freq></code> <code>:SOURce:FREQuency:COUPling:OFFSet?</code> | | | | | | |
| Example | <code>:SOUR:FREQ:COUP:OFF 100 kHz</code> | | | | | | |
| Dependencies | Grayed-out when "Rx/Tx Coupling" on page 2094 is set to NONE . If the grayed-out control is selected, the following message appears: "The parameter cannot be changed when Rx/Tx Coupling is Off" Only appears in Radio Test Mode | | | | | | |
| Preset | 0 Hz (Input/Output Preset) | | | | | | |
| Min | -6 GHz | | | | | | |
| Max | Hardware Dependent: <table border="1" data-bbox="406 903 1404 1039"> <tr> <td>Option 503</td> <td>3.6 GHz</td> </tr> <tr> <td>Option 504</td> <td>3.8 GHz</td> </tr> <tr> <td>Option 506</td> <td>6.00 GHz</td> </tr> </table> For E7760B: Dependent on port selected For E6640A, if license 5WC is present, the frequency range should be limited to: 1.1GHz-1.7GHz, 2.4GHz-2.5GHz, 4.8GHz-6.0GHz. If the user-defined frequency is outside of range, UI reports an error message: "Settings conflict; Frequency is outside available range" | Option 503 | 3.6 GHz | Option 504 | 3.8 GHz | Option 506 | 6.00 GHz |
| Option 503 | 3.6 GHz | | | | | | |
| Option 504 | 3.8 GHz | | | | | | |
| Option 506 | 6.00 GHz | | | | | | |

6.1.10 Modulation

Lets you toggle the state of modulation.

| | |
|----------------|---|
| Remote Command | <code>:OUTPut:MODulation[:STATe] ON OFF 1 0</code> <code>:OUTPut:MODulation[:STATe]?</code> |
| Example | <code>:OUTP:MOD OFF</code> |
| Notes | This setting is for independent mode and has no effect on the "List Sequencer" on page 2053 . If Sequencer is ON , the List Sequencer controls the source output, and this key is grayed-out When Sequencer is OFF , source leaves List Sequencer, and this setting is blanked out, taking effect immediately When Modulation is ON , the "MOD" annunciator is displayed in the system settings panel. When Modulation is OFF , the "MOD" annunciator is cleared If Sequencer is ON , the "MOD" annunciator will be replaced by "SEQ" in the system settings panel, indicating that the output is controlled by List Sequencer |

| | |
|--------|--------|
| Preset | OFF |
| Range | ON OFF |

6.1.11 Modulation Setup

Allows access to the menus for setting up the available modulation types.

Not available in E7760B.

AM/FM/PM are not available for VXT models M9415A/16A and M9415E/16E .

6.1.11.1 AM

Enables or disables amplitude modulation.

Turning **AMON** when another modulation format is already on results in the previous modulation format being turned off, and generates an error.

| | |
|----------------|--|
| Remote Command | <code>:SOURce:AM:STATe ON OFF 1 0</code> <code>:SOURce:AM:STATe?</code> |
| Example | <code>:SOUR:AM:STAT OFF</code> |
| Dependencies | Not available in E7760B |
| Preset | OFF |
| Range | ON OFF |

6.1.11.2 AM Mod Depth

Lets you set the amplitude modulation depth in percent.

| | |
|----------------|--|
| Remote Command | <code>:SOURce:AM[:DEPTH][:LINear] <real></code> <code>:SOURce:AM[:DEPTH][:LINear]?</code> |
| Example | <code>:SOUR:AM 0.1</code> |
| Dependencies | Not available in E7760B |
| Preset | 0.1 % |
| Min | 0.1 % |
| Max | 95.0 % |

6.1.11.3 AM Rate

Lets you set the internal amplitude modulation rate.

6 Input/Output
6.1 RF Source

| | |
|----------------|--|
| Remote Command | <code>:SOURce:AM:INTernal:FREQuency <freq></code> <code>:SOURce:AM:INTernal:FREQuency?</code> |
| Example | <code>:SOUR:AM:INT:FREQ 40.0 Hz</code> |
| Dependencies | Not available in E7760B |
| Preset | 400.0 Hz |
| Min | 10 Hz |
| Max | 40 kHz |

6.1.11.4 AM Rate Increment

Changes the step size for "AM Rate" on page 2096. Once an increment size has been selected and **AM Rate** is active, the step keys (and the **UP | DOWN** parameters for **AM Rate** from remote commands) change **AM Rate** by the increment value.

| | |
|----------------|--|
| Remote Command | <code>:SOURce:AM:INTernal:FREQuency:STEP[:INCRement] <freq></code> <code>:SOURce:AM:INTernal:FREQuency:STEP[:INCRement]?</code> |
| Example | <code>:SOUR:AM:INT:FREQ:STEP 100 Hz</code> <code>:SOUR:AM:INT:FREQ:STEP?</code> |
| Couplings | Coupled to the increment size of AM Rate |
| Preset | 10 Hz |
| State Saved | Yes |
| Min | 1 Hz |
| Max | 40 kHz |

6.1.11.5 FM

Enables or disables frequency modulation.

Turning **FMON** when another modulation format is already on results in the previous modulation format being turned off and the generation of an error.

| | |
|----------------|--|
| Remote Command | <code>:SOURce:FM:STATe ON OFF 1 0</code> <code>:SOURce:FM:STATe?</code> |
| Example | <code>:SOUR:FM:STAT OFF</code> |
| Dependencies | Not available in E7760B |
| Preset | OFF |
| Range | ON OFF |

6.1.11.6 FM Deviation

Lets you set the frequency modulation deviation.

| | |
|----------------|--|
| Remote Command | <code>:SOURce:FM[:DEVIation] <freq></code> <code>:SOURce:FM[:DEVIation]?</code> |
| Example | <code>:SOUR:FM 1.00 kHz</code> |
| Dependencies | Not available in E7760B |
| Preset | 1.00 Hz |
| Min | 1.00 Hz |
| Max | 100.00 kHz |

6.1.11.7 FM Rate

Lets you set the internal frequency modulation rate.

| | |
|----------------|--|
| Remote Command | <code>:SOURce:FM:INTernal:FREQuency <freq></code> <code>:SOURce:FM:INTernal:FREQuency?</code> |
| Example | <code>:SOUR:FM:INT:FREQ 40.0 Hz</code> |
| Dependencies | Not available in E7760B |
| Preset | 400.0 Hz |
| Min | 10 Hz |
| Max | 40 kHz |

6.1.11.8 FM Rate Increment

Changes the step size for "FM Rate" on page 2098. Once an increment size has been selected and **FM Rate** is active, the step keys (and the **UP | DOWN** parameters for **FM Rate** from remote commands) change **FM Rate** by the increment value.

| | |
|----------------|--|
| Remote Command | <code>:SOURce:FM:INTernal:FREQuency:STEP[:INCRement] <freq></code> <code>:SOURce:FM:INTernal:FREQuency:STEP[:INCRement]?</code> |
| Example | <code>:SOUR:FM:INT:FREQ:STEP 100 Hz</code> <code>:SOUR:FM:INT:FREQ:STEP?</code> |
| Couplings | Coupled to the increment size of FM Rate |
| Preset | 10 Hz |
| State Saved | Yes |
| Min | 1 Hz |
| Max | 40 kHz |

6.1.11.9 PM

Enables or disables phase modulation.

Turning **PMON** when another modulation format is already on results in the previous modulation format being turned **OFF** and the generation of an error.

| | |
|----------------|--|
| Remote Command | <code>:SOURce:PM:STATe ON OFF 1 0</code> <code>:SOURce:PM:STATe?</code> |
| Example | <code>:SOUR:PM:STAT OFF</code> |
| Dependencies | Not available in E7760B |
| Preset | OFF |
| Range | ON OFF |

6.1.11.10 PM Deviation

Lets you set the phase modulation deviation in radian.

| | | |
|----------------|--|--------------|
| Remote Command | <code>:SOURce:PM[:DEVIation] <real></code> <code>:SOURce:PM[:DEVIation]?</code> | |
| Example | <code>:SOUR:PM 1.00</code> | |
| Dependencies | Not available in E7760B | |
| Preset | 0.1 rad | |
| Min | 0.1 rad | |
| Max | Instrument Type | Value |
| | M9410A/11A | 10.0 rad |
| | All Others | 20.0 rad |

6.1.11.11 PM Rate

Lets you set the internal phase modulation rate.

| | |
|----------------|--|
| Remote Command | <code>:SOURce:PM:INTernal:FREQuency <freq></code> <code>:SOURce:PM:INTernal:FREQuency?</code> |
| Example | <code>:SOUR:PM:INT:FREQ 40.0 Hz</code> |
| Dependencies | Not available in E7760B |
| Preset | 400.0 Hz |

| | |
|-----|--------|
| Min | 10 Hz |
| Max | 40 kHz |

6.1.11.12 PM Rate Increment

Changes the step size for "PM Rate" on page 2099. Once an increment size has been selected and **PM Rate** is active, the step keys (and the **UP | DOWN** parameters for **PM Rate** from remote commands) change **PM Rate** by the increment value.

| | |
|----------------|--|
| Remote Command | <code>:SOURce:PM:INTernal:FREQuency:STEP[:INCRement] <freq></code> <code>:SOURce:PM:INTernal:FREQuency:STEP[:INCRement]?</code> |
| Example | <code>:SOUR:PM:INT:FREQ:STEP 100 Hz</code> <code>:SOUR:PM:INT:FREQ:STEP?</code> |
| Couplings | Coupled to the increment size of PM Rate |
| Preset | 10 Hz |
| State Saved | Yes |
| Min | 1 Hz |
| Max | 40 kHz |

6.1.11.13 ARB Setup

Accesses menus for setting up the Arbitrary Waveform Generator.

Basic Control

Lets you set up the basic ARB parameters and select a waveform to play.

ARB State

Lets you toggle the state of the ARB function. When the ARB is **ON**, a "MOD" annunciator is displayed in the system settings panel. When the ARB is **OFF**, the MOD annunciator is cleared

| | |
|----------------|---|
| Remote Command | <code>:SOURce:RADio:ARB[:STATe] ON OFF 1 0</code> <code>:SOURce:RADio:ARB[:STATe]?</code> |
| Example | <code>:SOUR:RAD:ARB OFF</code> <code>:SOUR:RAD:ARB?</code> |
| Notes | If ARB is ON , and you then load or delete another file to ARB memory, the playing waveform segment may not keep phase continuity during the ARB memory operation. The waveform will be replayed after the ARB operation is finished |

6 Input/Output
6.1 RF Source

| | |
|--------------|--|
| Dependencies | <p>This setting is for the independent mode, and has no effect on "List Sequencer" on page 2053. If Sequencer is ON, this will make the source enter List Sequencer mode, and even if ARB state is ON, the ARB file will not be played. When Sequencer is OFF, source leaves List Sequencer and this setting takes effect immediately</p> <p>The ARB can only be turned on when there is a waveform file selected for playback. On the GUI, If no waveform is selected, this key is grayed out. If you send the SCPI command to turn the ARB on with no waveform selected for playback, the ARB state remains OFF and an error is generated</p> <p>-If you try to recall a certain set of states in which the selected waveform is not in ARB memory and the ARB state is ON, errors are reported</p> |
| Preset | OFF |
| Range | ON OFF |

Sample Rate

Lets you set the ARB waveform playback sample rate.

See ["More Information" on page 2102](#)

| | | |
|----------------|---|----------|
| Remote Command | <pre>:SOURce:RADio:ARB:SCLock:RATE <freq> :SOURce:RADio:ARB:SCLock:RATE?</pre> | |
| Example | :SOUR:RAD:ARB:SCL:RATE 48.00 MHz | |
| Notes | <p>If there is a sample rate specified in the header of the waveform file, changing that sample rate is not recommended, as it may cause problems with burst timing</p> <p>For E7760B, the Sample Rate is fixed. If this control is attempted to be set the error -221, "Settings conflict; Sample Rate is fixed" is generated</p> | |
| Dependencies | <p>When a new waveform is selected for playback the settings contained within the associated waveform header file are applied to the ARB. The sample rate is one of the values stored within the header file. If the newly selected waveform file has an associated header file, the sample rate is updated with the value from the header file. The sample rate will remain unchanged if the newly selected waveform does not have an associated header file</p> | |
| Preset | E7760B | 2.64 GHz |
| | Option B40 | 50 MHz |
| | Option B85 | 100 MHz |
| | Option B1X | 200 MHz |
| | Option B3X | 375 MHz |
| | Option B6X | 750 MHz |
| | Option B4X | 500 MHz |
| | Option B8X | 1.0 GHz |
| | Option B12 | 1.5 GHz |

| | | | |
|-----|--|------------|----------|
| Min | E7760B: 2.64 GHz All Others: 1.00 kHz | | |
| Max | Hardware Dependent: | | |
| | E7760B | | 2.64 GHz |
| | VXT model M9420A | Option B40 | 50 MHz |
| | | Option B85 | 100 MHz |
| | | Option B1X | 200 MHz |
| | VXT models M9410A/11A and M9410E/11E | Option B40 | 50 MHz |
| | | Option B3X | 375 MHz |
| | | Option B6X | 750 MHz |
| | | Option B12 | 1.5 GHz |
| | VXT models M9415A/16A and M9415E/16E | Option B4X | 500 MHz |
| | | Option B8X | 1.0 GHz |
| | | Option B12 | 1.5 GHz |

For VXT models M9410A/11A/15A/16A, M9410E/11E/15E/16E and E6680A/81A, the sample rate is only limited by the option, but the IF BW is limited by center frequency in addition to options. See ["More Information" on page 2102](#). Performance is guaranteed only when the bandwidth of the selected waveform is smaller than the Max IF BW

More Information

Although the range of Sample Rate only depends on the installed option, the Maximum IF BW depends on options as well as the Center Frequency.

VXT models M9410A/11A, E6680A and E6681A

Option Limitation:

| Option | Maximum IF BW |
|--------|---------------|
| B40 | 40 MHz |
| B3X | 300 MHz |
| B6X | 600 MHz |
| B12 | 1200 MHz |

Center Frequency Limitation:

| Center Frequency | Maximum IF BW |
|------------------------------|--------------------|
| 6.5 kHz ~ 9 kHz (Option LFE) | (CF - 6.5 kHz) * 2 |
| 9 kHz ~ 100 kHz (Option LFE) | 5 kHz |

6 Input/Output
6.1 RF Source

| Center Frequency | Maximum IF BW |
|--|---------------------|
| 100 kHz ~ 1 MHz (Option LFE) | 50 kHz |
| 1 MHz ~ 10 MHz (Option LFE) | 500 kHz |
| 10 MHz ~ 20 MHz (Option LFE) | 5 MHz |
| 20 MHz ~ 60 MHz (Option LFE) | 10 MHz |
| 60 MHz ~ 80 MHz (Option LFE) | 20 MHz |
| 80 MHz ~ 380 MHz (Option LFE) | 40 MHz |
| 330 MHz ~ 380 MHz (without Option LFE) | (CF - 330 MHz) * 2 |
| 380 MHz ~ 550 MHz | 100 MHz |
| 550 MHz ~ 1310 MHz | 200 MHz |
| 1310 MHz ~ 2000 MHz (without Option EP6) | 600 MHz |
| 2000 MHz ~ 5480 MHz (without Option EP6) | 1200 MHz |
| 5480 MHz ~ 6080 MHz (without Option EP6) | (6080 MHz - CF) * 2 |
| 1310 MHz ~ 1900 MHz (Option EP6) | 600 MHz |
| 1900 MHz ~ 6000 MHz (Option EP6) | 1200 MHz |
| 6000 MHz ~ 6600 MHz (Option EP6) | (6600 MHz - CF) * 2 |

VXT models M9415A/16A

Option Limitation:

| Option | Maximum IF BW |
|--------|---------------|
| B4X | 400 MHz |
| B8X | 800 MHz |
| B12 | 1200 MHz |

Center Frequency Limitation:

| Center Frequency | Maximum IF BW |
|-----------------------|----------------------|
| 330 MHz ~ 380 MHz | (CF - 330 MHz) * 2 |
| 380 MHz ~ 550 MHz | 100 MHz |
| 550 MHz ~ 1310 MHz | 200 MHz |
| 1310 MHz ~ 2000 MHz | 600 MHz |
| 2000 MHz ~ 12300 MHz | 1200 MHz |
| 12300 MHz ~ 12900 MHz | (12900 MHz - CF) * 2 |

M9410E/11E

Option Limitation:

| Option | Maximum IF BW |
|--------|---------------|
| B40 | 40 MHz |
| B3X | 300 MHz |
| B6X | 600 MHz |
| B12 | 1200 MHz |

Center Frequency Limitation:

| Center Frequency | Maximum IF BW |
|--|---|
| 1 MHz ~ 10 MHz (Option LFE) | 500 kHz |
| 10 MHz ~ 20 MHz (Option LFE) | 5 MHz |
| 20 MHz ~ 60 MHz (Option LFE) | 10 MHz |
| 60 MHz ~ 80 MHz (Option LFE) | 20 MHz |
| 80 MHz ~ 380 MHz (Option LFE) | 40 MHz |
| 330 MHz ~ 380 MHz (without Option LFE) | (CF - 330 MHz) * 2 |
| 380 MHz ~ 550 MHz | 100 MHz |
| 550 MHz ~ 1310 MHz | 200 MHz |
| 1310 MHz ~ 2000 MHz (without Option EP6) | 600 MHz |
| 2000 MHz ~ 25.9 GHz (without Option EP6) | 1200 MHz |
| 1310 MHz ~ 1900 MHz (Option EP6) | 600 MHz |
| 1900 MHz ~ 25.9 GHz (Option EP6) | 1200 MHz |
| 25.9 GHz ~ 26.5 GHz | Min(Max BW by option, 2*(26.5 GHz-Center Freq)) |

M9415E/16E

Option Limitation:

| Option | Maximum IF BW |
|--------|---------------|
| B4X | 400 MHz |
| B8X | 800 MHz |
| B12 | 1200 MHz |

Center Frequency Limitation:

| Center Frequency | Maximum IF BW |
|-------------------------------|---------------|
| 1 MHz ~ 10 MHz (Option LFE) | 500 kHz |
| 10 MHz ~ 20 MHz (Option LFE) | 5 MHz |
| 20 MHz ~ 60 MHz (Option LFE) | 10 MHz |
| 60 MHz ~ 80 MHz (Option LFE) | 20 MHz |
| 80 MHz ~ 380 MHz (Option LFE) | 40 MHz |

6 Input/Output
6.1 RF Source

| Center Frequency | Maximum IF BW |
|--|---|
| 330 MHz ~ 380 MHz (without Option LFE) | (CF - 330 MHz) * 2 |
| 380 MHz ~ 550 MHz | 100 MHz |
| 550 MHz ~ 1310 MHz | 200 MHz |
| 1310 MHz ~ 2000 MHz | 600 MHz |
| 2000 MHz ~ 25.9 GHz | 1200 MHz |
| 25.9 GHz ~ 26.5 GHz | Min(Max BW by option, 2*(26.5 GHz-Center Freq)) |

Run-Time Scaling

Lets you adjust the run-time scaling value. The run-time scaling value is applied in real-time while the waveform is playing.

| | |
|----------------|---|
| Remote Command | <code>:SOURce:RADio:ARB:RSCaling <real></code> <code>:SOURce:RADio:ARB:RSCaling?</code> |
| Example | <code>:SOUR:RAD:ARB:RSC 100.00</code> |
| Notes | Cannot be set in EXM and VXT. Grayed-out in menu, and the value is fixed at 70.00% |
| Dependencies | When a new waveform is selected for playback the settings contained within the associated waveform header file are applied to the ARB. The run-time scaling is one of the values stored within the header file. If the newly selected waveform file has an associated header file, the run-time scaling is updated with the value from the header file. The run-time scaling will remain unchanged if the newly selected waveform does not have an associated header file |
| Preset | 70.00 % |
| Min | 1.00 % |
| Max | 100.00 % |

Baseband Freq Offs

Lets you adjust the value by which the baseband frequency is offset relative to the carrier.

| | |
|----------------|---|
| Remote Command | <code>:SOURce:RADio:ARB:BASEband:FREQuency:OFFSet <freq></code> <code>:SOURce:RADio:ARB:BASEband:FREQuency:OFFSet?</code> |
| Example | <code>:SOUR:RAD:ARB:BAS:FREQ:OFFS 0.00 Hz</code> |
| Dependencies | When a new waveform is selected for playback the settings contained within the associated waveform header file are applied to the ARB. The baseband frequency offset is one of the values stored within the header file. If the newly selected waveform file has an associated header file, the baseband frequency offset is updated with the value from the header file. The baseband frequency offset will remain unchanged if the newly selected waveform does not have an associated header file Not available in E7760B |

| | |
|--------|------------|
| Preset | 0.00 Hz |
| Min | -50.00 MHz |
| Max | 50.00 MHz |

Baseband Power

Lets you quickly control the power of the modulator prior to up-conversion to the RF carrier.

| | |
|----------------|---|
| Remote Command | <code>:SOURce:RADio:ARB:BASEband:POWer <ampl></code> <code>:SOURce:RADio:ARB:BASEband:POWer?</code> |
| Example | <code>:SOUR:RAD:ARB:BAS:POW -10 dB</code> |
| Notes | The Source Power level equals RF Power plus Baseband Power. For example, if the RF Power is set to -10 dBm and the Baseband Power is set to -4 dB, the actual Source Power level is -14 dBm Can be used to change the output level very quickly compared to the RF Power |
| Dependencies | Only appears in VXT models M9410A/11A/15A/16A and M9410E/11E/15E/16E |
| Preset | 0 dB |
| Min | -50 dB |
| Max | 20 dB |

Mkr 1-4 Polarity

Lets you set the polarity of markers 1 through 4 respectively.

| | |
|----------------|---|
| Remote Command | <code>:SOURce:RADio:ARB:MPOLarity:MARKer1 ... 4 POSitive NEGative</code> <code>:SOURce:RADio:ARB:MPOLarity:MARKer1 ... 4?</code> |
| Example | <code>:SOUR:RAD:ARB:MPOL:MARK1 NEG</code> |
| Dependencies | When a new waveform is selected for playback the settings contained within the associated waveform header file are applied to the ARB. The marker polarity is one of the values stored within the header file. If the newly selected waveform file has an associated header file, the marker polarity is updated with the value from the header file. The marker polarity will remain unchanged if the newly selected waveform does not have an associated header file Not available in E7760B |
| Preset | <code>POSitive</code> |
| Range | <code>POSitive NEGative</code> |

Pulse/RF Blank

Lets you select which marker is used for **Pulse/RF Blank**. This function blanks the RF when the marker signal goes low. The marker polarity determines when the

6 Input/Output

6.1 RF Source

marker signal is high. For a positive polarity, this is during the marker points. For a negative polarity, this is when there are no marker points.

Marker points should be set before using this function. Enabling this function without setting maker points may create a continuous low or high signal, dependent on the marker polarity. This causes either no RF output, or a continuous RF output.

Remote Command `:SOURce:RADio:ARB:MDEStination:PULSe NONE | M1 | M2 | M3 | M4`

For option details, see ["More Information" on page 2107](#)

`:SOURce:RADio:ARB:MDEStination:PULSe?`

Example `:SOUR:RAD:ARB:MDES:PULS NONE`

Dependencies When a new waveform is selected for playback the settings contained within the associated waveform header file are applied to the ARB. The **Pulse/RF Blank** setting is one of the values stored within the header file. If the newly selected waveform file has an associated header file, the **Pulse/RF Blank** setting is updated with the value from the header file. The **Pulse/RF Blank** setting remains unchanged if the newly selected waveform does not have an associated header file

Range `NONE | M1 | M2 | M3 | M4`

More Information

| Parameter | SCPI | Notes |
|-----------|-------------------|--|
| None | <code>NONE</code> | Sets no marker to be used for Pulse/RF Blank function, essentially turning the RF blanking function off |
| Marker 1 | <code>M1</code> | Sets marker 1 to be used for Pulse/RF Blank |
| Marker 2 | <code>M2</code> | Sets marker 2 to be used for Pulse/RF Blank |
| Marker 3 | <code>M3</code> | Sets marker 3 to be used for Pulse/RF Blank |
| Marker 4 | <code>M4</code> | Sets marker 4 to be used for Pulse/RF Blank |

ALC Hold

Lets you specify which marker is routed for use within **ALC Hold**. This function holds the ALC circuitry at the average value of the sample points set by the marker.

ALC Hold operates during the low periods of the marker signal. The marker polarity determines when the marker signal is high. For positive polarity, this is during the marker points. For a negative polarity, this is when there are no maker points.

Remote Command `:SOURce:RADio:ARB:MDEStination:ALCHold NONE | M1 | M2 | M3 | M4`

For option details, see ["Option Details" on page 2108](#)

`:SOURce:RADio:ARB:MDEStination:ALCHold?`

Example `:SOUR:RAD:ARB:MDES:ALCH NONE`

Dependencies When a new waveform is selected for playback the settings contained within the associated waveform header file are applied to the ARB. The **ALC Hold** setting is one of the values stored within the header file. If the newly selected waveform file has an associated header file, the **ALC Hold** setting is updated

with the value from the header file. The **ALC Hold** setting remains unchanged if the newly selected waveform does not have an associated header file

Not available in E7760B, and VXT models M9410A/11A/15A/16A and M9410E/11E/15E/16E

Range [NONE](#) | [M1](#) | [M2](#) | [M3](#) | [M4](#)

Option Details

| Parameter | SCPI | Notes |
|-----------|----------------------|---|
| None | NONE | Use no marker for ALC Hold , essentially turning ALC Hold off |
| Marker 1 | M1 | Use marker 1 for ALC Hold |
| Marker 2 | M2 | Use marker 2 for ALC Hold |
| Marker 3 | M3 | Use marker 3 for ALC Hold |
| Marker 4 | M4 | Use marker 4 for ALC Hold |

Trigger Type

Determines the behavior of the waveform when it plays.

| | |
|----------------|--|
| Remote Command | :SOURce:RADio:ARB:TRIGger:TYPE CONTInuous SINGle SADVance :SOURce:RADio:ARB:TRIGger:TYPE? |
| Example | :SOUR:RAD:ARB:TRIG:TYPE CONT :SOUR:RAD:ARB:TRIG:TYPE? |
| Preset | CONTInuous |
| Range | Continuous Single Seg Adv |

Continuous trigger

Sets the active trigger type to **Continuous**. If **Continuous** is already selected as the active trigger type, pressing this control allows access to the **Continuous trigger** type setup menu. In **Continuous** trigger mode, the waveform repeats continuously.

| | |
|----------------|---|
| Remote Command | :SOURce:RADio:ARB:TRIGger:TYPE:CONTInuous[:TYPE] FREE TRIGger RESet See " Option Details " on page 2109 :SOURce:RADio:ARB:TRIGger:TYPE:CONTInuous[:TYPE]? |
| Example | :SOUR:RAD:ARB:TRIG:TYPE:CONT FREE |
| Preset | FREE |
| Range | Free Run Trigger + Run Reset + Run |

Option Details

| Parameter | SCPI | Notes |
|---------------|----------------|--|
| Free Run | FREE | Sets the waveform generator to play a waveform sequence or segment continuously, without waiting for a trigger. In this mode, the waveform generator does not respond to triggers |
| Trigger + Run | TRIGger | Sets the waveform generator to play a waveform sequence or segment continuously when the first trigger is received, and to ignore any subsequent triggers |
| Reset + Run | RESet | Sets the waveform generator to play a waveform sequence or segment continuously when the first trigger is received. Subsequent triggers reset the waveform sequence or segment to the start, and then play it continuously |

Single trigger

Sets the active trigger type to **Single**. If **Single** is already selected as the active trigger type, pressing this control allows access to the single trigger type setup menu. In **Single** trigger mode, the waveform plays once.

| | |
|----------------|--|
| Remote Command | :SOURce:RADio:ARB:RETRigger ON OFF IMMEDIATE See " Option Details " on page 2109 :SOURce:RADio:ARB:RETRigger? |
| Example | :SOUR:RAD:ARB:RETR OFF |
| Notes | ON : Buffered Trigger OFF : No Retrigger IMMEDIATE : Restart on Trigger This is defined as an enumerated SCPI command, with ON OFF being considered as enumerated types rather than Boolean. This means the query returns OFF instead of 0, and ON instead of 1 |
| Preset | ON |

Option Details

| Parameter | SCPI | Notes |
|--------------------|------------------|---|
| No Retrigger | OFF | Sets the waveform generator to play a waveform sequence or segment once when a trigger is received. Any triggers then received during playback are ignored |
| Buffered Trigger | ON | Sets the waveform generator to play a waveform sequence or segment once when a trigger is received. If a trigger is received during playback, the waveform generator plays the sequence or segment to the end, then plays the sequence or segment once more |
| Restart on Trigger | IMMEDIATE | Sets the waveform generator to play a waveform sequence or segment once when a trigger is received. If a trigger is received during playback, the waveform generator resets and plays the sequence or segment from the start |

Segment Advance trigger

Sets the active trigger type to **Segment Advance**. If **Segment Advance** is already selected as the active trigger type, pressing this control allows access to the segment advance trigger type setup menu.

Segment Advance triggering allows you to control the playback of waveform segments within a waveform sequence. When a trigger is received the ARB advances to the next waveform segment within the waveform sequence. This type of triggering ignores the repetition count for the waveform segment within the waveform sequence. For example, if a waveform segment has a repetition count of 10 and you select single segment advance triggering mode, the waveform segment will only play once.

Segment Advance triggering can also be used for waveform segments only. In this situation, the same waveform segment is played again when a trigger is received.

| | |
|----------------|--|
| Remote Command | <code>:SOURce:RADio:ARB:TRIGger:TYPE:SADVance[:TYPE] SINGLE CONTinuous</code> See " Option Details " on page 2110 <code>:SOURce:RADio:ARB:TRIGger:TYPE:SADVance[:TYPE]?</code> |
| Example | <code>:SOUR:RAD:ARB:TRIG:TYPE:SADV SING</code> |
| Dependencies | Not available in E7760B |
| Preset | <code>CONTinuous</code> |
| Range | <code>SINGLE CONTinuous</code> |

Option Details

| Parameter | SCPI | Notes |
|------------------|-------------------------|--|
| Single | <code>SINGLE</code> | Once a trigger is received a segment is played once. If a trigger is received during playback of a segment, the segment plays to completion and the next segment is played once |
| Continuous | <code>CONTinuous</code> | Once a trigger is received a segment is played continuously. When subsequent triggers are received, the currently playing segment plays to completion and then the next segment is played continuously |
| Trigger Initiate | Front panel only | If " Trigger Source " on page 2110 is set to <code>KEY</code> , initiates an immediate trigger event |

Trigger Source

Determines how the source receives the trigger that starts the waveform playing. Grayed-out if "[Trigger Type](#)" on page 2108 is free run, since free run triggers immediately with no trigger source required.

6 Input/Output

6.1 RF Source

| | |
|----------------|--|
| Remote Command | <code>:SOURce:RADio:ARB:TRIGger[:SOURce] KEY BUS EXTerna11 EXTerna12 PXI</code> See "Option Details" on page 2111 <code>:SOURce:RADio:ARB:TRIGger[:SOURce]?</code> |
| Example | <code>:SOUR:RAD:ARB:TRIG KEY</code> |
| Notes | For E7760B, the available selections are KEY BUS |
| Dependencies | Grayed-out if Trigger Type is Continuous, Free Run |
| Preset | EXTerna12 For E7760B: BUS |
| Range | Key Bus External11 External 2 PXI |

Option Details

| Parameter | SCPI | Notes |
|------------|---------------------------|--|
| Key | KEY | The waveform is triggered when you press the front panel Trigger key |
| Bus | BUS | Enables triggering over GPIB, LAN, or USB using: <code>:SOURce:RADio:ARB:TRIGger:INITiate</code> |
| External 1 | EXTerna11 | Enables triggering a waveform by an externally-applied signal |
| External 2 | EXTerna12 | Enables triggering a waveform by an externally-applied signal Note: in EXM, trigger 2 is a bi-directional trigger port, so when trigger 2 has been configured as OUTPUT type, selecting External 2 as the input trigger for the current step generates an error Note 2: in VXT model M9420A, triggers on an externally connected trigger source marked Trigger 1 on the front panel |
| PXI | PXI | Enables triggering a waveform by a PXI backplane Line applied signal |

Bus Trigger Command (Remote Command Only)

Used to initiate an immediate trigger event if ["Trigger Source" on page 2110](#) is set to [BUS](#).

| | |
|----------------|---|
| Remote Command | <code>:SOURce:RADio:ARB:TRIGger:INITiate</code> |
| Example | <code>:SOUR:RAD:ARB:TRIG:INIT</code> |

Sync to Trigger Source

There is a time interval (system processing time) between the trigger event and the beginning of playing waveform. Turn on this control to compensate the system latency at the cost of cutting off the beginning of the ARB. The figure below shows the turn-on and turn-off behavior of the control.

| | |
|----------------|---|
| Remote Command | <code>:SOURce:RADio:ARB:TRIGger:SYNC[:STATe] ON OFF 1 0</code> <code>:SOURce:RADio:ARB:TRIGger:SYNC[:STATe]?</code> |
| Example | <code>:SOUR:RAD:ARB:TRIG:SYNC ON</code> <code>:SOUR:RAD:ARB:TRIG:SYNC?</code> |
| Notes | Compensates for the instrument internal latency. The negative trigger delay compensates the external latency (that is, heads and cables). See "External Trigger Delay" on page 2112 and "PXI Trigger Delay" on page 2115 The first PerARB trigger is cut off if Sync to Trigger Source is ON |
| Dependencies | Only available when "Trigger Source" on page 2110 is EXTernal1 , EXTernal2 , or PXI |
| Preset | OFF |
| Range | ON OFF |

External Trigger Delay

Lets you toggle the state and value of external trigger delay. The value you enter sets a delay time between when an external trigger is received and when it is applied to the waveform. Only active if ["Trigger Source" on page 2110](#) is **EXTernal1** or **EXTernal2**.

Negative trigger delay is only supported by VXT models M9410A/11A/15A/16A and M9410E/11E/15E/16E (see ["More Information" on page 2113](#)).

| | |
|----------------|--|
| Remote Command | <code>:SOURce:RADio:ARB:TRIGger[:SOURce]:EXTernal:DELay <time></code> <code>:SOURce:RADio:ARB:TRIGger[:SOURce]:EXTernal:DELay?</code> |
|----------------|--|

6 Input/Output
6.1 RF Source

| | | | |
|--------------|---|---------------|---|
| Example | :SOUR:RAD:ARB:TRIG:EXT:DEL 100ns :SOUR:RAD:ARB:TRIG:EXT:DEL? | | |
| Notes | External trigger delay time set by users will be rounded to the nearest integer multiple of the resolution | | |
| Dependencies | Unavailable and grayed-out when Trigger Source is not set to EXTernal11 or EXTernal12 Not available in E7760B | | |
| Preset | 1 ms | | |
| Min | VXT models M9410A/11A/15A/16A and M9410E/11E/15E/16E: -10 s All others: 0 s | | |
| Max | Instrument/Condition | Value | Derivation |
| | VXT models M9410A/11A/15A/16A | 11.45324612 s | 2.666667ns*(2 ³² -1) |
| | M9410E/11E/15E/16E | 11.45324612 s | 2.666667ns*(2 ³² -1) |
| | Continuous – Trigger + Run | 11.45324612 s | 2.666667ns*(2 ³² -1) |
| | Other trigger conditions | 17.17986918 s | 4 ns*(2 ³² -1) |
| | All others | 8.589934588 s | 4ns*(2 ³¹ - 1) = 8589934588 ns |

Auto Function

| | |
|----------------|--|
| Remote Command | :SOURce:RADio:ARB:TRIGger[:SOURce]:EXTernal:DELay:STATe OFF ON 0 1 :SOURce:RADio:ARB:TRIGger[:SOURce]:EXTernal:DELay:STATe? |
| Example | :SOUR:RAD:ARB:TRIG:EXT:DEL:STAT ON :SOUR:RAD:ARB:TRIG:EXT:DEL:STAT? |
| Preset | OFF |

More Information

There is a time interval (system processing time) between the trigger event and the beginning of playing waveform. The figure below shows you the behavior. The negative trigger delay allows you to specify the beginning of a waveform.

Note: the first PerArb trigger signal will be missed when the trigger delay is negative.

External Trigger Polarity

Sets the polarity of the external trigger. When **POSitive** is selected, trigger event happens on a rising edge of the external trigger in signal. When **NEGative** is selected, trigger event happens on a falling edge of the external trigger in signal.

Active only if "**Trigger Source**" on page 2110 is **EXTernal1** or **EXTernal2**.

| | |
|----------------|---|
| Remote Command | <code>:SOURce:RADio:ARB:TRIGger[:SOURce]:EXTernal:SLOPe POSitive NEGative</code> <code>:SOURce:RADio:ARB:TRIGger[:SOURce]:EXTernal:SLOPe?</code> |
| Example | <code>:SOUR:RAD:ARB:TRIG:EXT:SLOP POS</code> <code>:SOUR:RAD:ARB:TRIG:EXT:SLOP?</code> |
| Dependencies | Unavailable and grayed-out when " Trigger Source " on page 2110 is not EXTernal1 or EXTernal2 Not available in E7760B |
| Preset | POSitive |
| Range | POSitive NEGative |

Select PXI Line

Controls which `PXI_TRIG[0..7]` backplane line is used for the trigger source.
Only appears in modular analyzer products.

| | |
|----------------|--|
| Remote Command | <code>:SOURce:RADio:ARB:TRIGger[:SOURce]:PXI:LINE <line></code> <code>:SOURce:RADio:ARB:TRIGger[:SOURce]:PXI:LINE?</code> |
| Example | <code>:SOUR:RAD:ARB:TRIG:PXI:LINE 2</code> |
| Dependencies | Unavailable and grayed-out when "Trigger Source" on page 2110 is not set to <code>PXI</code> Not available in E7760B |
| Preset | 0 |
| State Saved | Saved in instrument state |
| Range | [0,7] |

PXI Trigger Delay

Lets you toggle the state and value of PXI trigger delay. The value you enter sets a delay time between when an PXI trigger is received and when it is applied to the waveform.

Only active if "Trigger Source" on page 2110 is `PXI`.

| | | | |
|----------------|--|---------------|-----------------------------------|
| Remote Command | <code>:SOURce:RADio:ARB:TRIGger[:SOURce]:PXI:DElay <time></code> <code>:SOURce:RADio:ARB:TRIGger[:SOURce]:PXI:DElay?</code> | | |
| Example | <code>:SOUR:RAD:ARB:TRIG:PXI:DEL 100ns</code> <code>:SOUR:RAD:ARB:TRIG:PXI:DEL?</code> | | |
| Notes | PXI trigger delay time set by users will be rounded to the nearest integer multiple of the resolution | | |
| Dependencies | Unavailable and grayed-out when "Trigger Source" on page 2110 is not <code>PXI</code> Not available in E7760B | | |
| Preset | 1 ms | | |
| Min | VXT models M9410A/11A/15A/16A and M9410E/11E/15E/16E: -10 s | | |
| Max | Instrument/Condition | Value | Derivation |
| | VXT models M9410A/11A/15A/16A | 11.45324612 s | 2.666667ns * (2 ³² -1) |
| | M9410E/11E/15E/16E | 11.45324612 s | 2.666667ns * (2 ³² -1) |
| | Continuous - Trigger + Run" trigger | 11.45324612 s | 2.666667ns * (2 ³² -1) |
| | Other trigger conditions | 17.17986918 s | 4 ns * (2 ³² -1) |
| | All Others | 8.589934588 s | 4ns * (2 ³¹ - 1) |

Auto Function

| | |
|----------------|--|
| Remote Command | <code>:SOURce:RADio:ARB:TRIGger[:SOURce]:PXI:DELay:STATe OFF ON 0 1</code> <code>:SOURce:RADio:ARB:TRIGger[:SOURce]:PXI:DELay:STATe?</code> |
| Example | <code>:SOUR:RAD:ARB:TRIG:PXI:DEL:STAT ON</code> <code>:SOUR:RAD:ARB:TRIG:PXI:DEL:STAT?</code> |
| Preset | OFF |

PXI Trigger Polarity

Sets the polarity of the PXI trigger:

- When **POSitive** is selected, trigger event happens on a rising edge of the PXI trigger in signal
- When **NEGative** is selected, trigger event happens on a falling edge of the PXI trigger in signal

Active only if "[Trigger Source](#)" on page 2110 is **PXI**.

| | |
|----------------|---|
| Remote Command | <code>:SOURce:RADio:ARB:TRIGger[:SOURce]:PXI:SLOPe POSitive NEGative</code> <code>:SOURce:RADio:ARB:TRIGger[:SOURce]:PXI:SLOPe?</code> |
| Example | <code>:SOUR:RAD:ARB:TRIG:PXI:SLOP POS</code> <code>:SOUR:RAD:ARB:TRIG:PXI:SLOP?</code> |
| Dependencies | Unavailable and grayed-out when " Trigger Source " on page 2110 is PXI Not available in E7760B |
| Preset | POSitive |
| Range | POSitive NEGative |

I/Q Adjustments

Enables or disables the I/Q adjustments.

| | |
|----------------|--|
| Remote Command | <code>:SOURce:RADio:ARB:IQADjustment:[STATe] OFF ON 0 1</code> <code>:SOURce:RADio:ARB:IQADjustment:[STATe]?</code> |
| Example | <code>:SOUR:RAD:ARB:IQAD ON</code> <code>:SOUR:RAD:ARB:IQAD?</code> |
| Dependencies | Not available in E7760B |
| Preset | OFF |

I/Q Gain

Lets you adjust the ratio of I to Q while preserving the composite, vector magnitude. Adding Gain (+x dB) to the signal increases the I component and decreases the Q component proportionally. Reducing Gain (-x dB) decreases the I component and increases the Q component proportionally.

| | |
|----------------|---|
| Remote Command | <code>:SOURce:RADio:ARB:IQADjustment:GAIN <value><unit></code> <code>:SOURce:RADio:ARB:IQADjustment:GAIN?</code> |
| Example | <code>:SOUR:RAD:ARB:IQAD:GAIN 0.5</code> <code>:SOUR:RAD:ARB:IQAD:GAIN?</code> |
| Notes | Effective only if the I/Q adjustment function is ON |
| Dependencies | Unavailable and grayed-out when the ARB state is OFF Not available in E7760B |
| Preset | +0.00000000E+000 |
| Min | -1 dB |
| Max | 1 dB |

I/Q Delay

Lets you change the absolute phase of both I and Q with respect to triggers and markers. A positive value delays I and Q. This value affects both the external I/Q out signals and the baseband signal modulated on the RF output. This adjustment does not affect external I/Q inputs.

| Remote Command | <code>:SOURce:RADio:ARB:IQADjustment:DELAy <value><unit></code> <code>:SOURce:RADio:ARB:IQADjustment:DELAy?</code> | | | | | | | | | |
|--------------------|---|-----------------|-----|-----|--------------------|-------|------|------------|--------|-------|
| Example | <code>:SOUR:RAD:ARB:IQAD:DEL 10ps</code> <code>:SOUR:RAD:ARB:IQAD:DEL?</code> | | | | | | | | | |
| Notes | User-set IQ delay time values are rounded to the nearest integer multiple of the resolution | | | | | | | | | |
| Dependencies | Unavailable and grayed-out when the ARB state is off Not available in E7760B | | | | | | | | | |
| Preset | +0.00000000E+000 | | | | | | | | | |
| Min/Max | <table border="1"> <thead> <tr> <th>Instrument Type</th> <th>Min</th> <th>Max</th> </tr> </thead> <tbody> <tr> <td>M9410A/11A/15A/16A</td> <td>-80ns</td> <td>80ns</td> </tr> <tr> <td>All Others</td> <td>-250ns</td> <td>250ns</td> </tr> </tbody> </table> | Instrument Type | Min | Max | M9410A/11A/15A/16A | -80ns | 80ns | All Others | -250ns | 250ns |
| Instrument Type | Min | Max | | | | | | | | |
| M9410A/11A/15A/16A | -80ns | 80ns | | | | | | | | |
| All Others | -250ns | 250ns | | | | | | | | |

RMS

Lets you directly specify current RMS value used to playback currently selected waveform.

For EXM, note that an incorrect RMS value may cause inaccurate power output that is sensitive to RMS value.

This setting is also updated by RMS in waveform header or updated when invoking RMS calculation operation.

This setting can be saved to the header of currently selected waveform by ["Save Header" on page 2138](#).

| | |
|----------------|---|
| Remote Command | <code>:SOURCE:RADio:ARB:RMS <float></code> <code>:SOURCE:RADio:ARB:RMS?</code> |
| Example | <code>:SOUR:RAD:ARB:HEAD:RMS 0.7</code> <code>:SOUR:RAD:ARB:HEAD:RMS?</code> |
| Notes | The valid range for this setting is 0 to 1.414 (linear). Values outside the range are clipped to the closest boundary This value does not affect Source List Sequencer, which always uses the RMS value included in each ARB header. If this setting is to take effect in List Sequencer, use "Save Header" on page 2138 to save the current RMS value to the header, then play the ARB in Source List Sequencer |
| Dependencies | When a new waveform is selected for playback this setting is updated by the RMS value included in the associated waveform header file. If the selected waveform has no associated header file or the header file does not include the RMS value then the instrument will try to calculate the value automatically based on the RMS Calculation Mode setting Pressing Calculate also updates this setting |
| Preset | 0 |
| Range | 0 ~ 1.414 |

RMS Calculation Mode

Lets you specify the mode to calculate the current RMS.

| | |
|----------------|---|
| Remote Command | <code>:SOURCE:RADio:ARB:RMS:CALCulation:MODE AUTO M1 M2 M3 M4</code> See "Option Details" on page 2119 <code>:SOURCE:RADio:ARB:RMS:CALCulation:MODE?</code> |
| Example | <code>:SOUR:RAD:ARB:RMS:CALC:MODE AUTO</code> |
| Notes | If no waveform is selected, or selected waveform is waveform sequence, the key is grayed-out |
| Preset | <code>AUTO</code> |
| Range | <code>AUTO M1 M2 M3 M4</code> |

Option Details

| Parameter | SCPI | Notes |
|-----------|----------------------|---|
| Auto | AUTO | In Auto, RMS is calculated based on the whole sample range of the currently selected waveform |
| Marker 1 | M1 | Marker 1 designates the sample range for RMS calculation |
| Marker 2 | M2 | Marker 2 designates the sample range for RMS calculation |
| Marker 3 | M3 | Marker 3 designates the sample range for RMS calculation |
| Marker 4 | M4 | Marker 4 designates the sample range for RMS calculation |

Calculate

Lets you calculate current RMS based on mode selected. Updates the setting in the ["RMS" on page 2118](#) control.

| | |
|----------------|--|
| Remote Command | :SOURce:RADio:ARB:RMS:CALCulate |
| Example | :SOUR:RAD:ARB:RMS:CALC |
| Notes | <p>If no waveform is selected, invoking this operation generates error “-221 Setting conflict; No waveform is selected for RMS operation”</p> <p>Grayed-out if no waveform is selected, or selected waveform is waveform sequence</p> <p>If selected waveform does not contain marker data, but "RMS Calculation Mode" on page 2118 is set to marker, invoking a calculation operation generates error “-221 Setting conflict; There is no marker for currently selected waveform, auto RMS calculation mode is used instead”, and "RMS Calculation Mode" on page 2118 is coupled to Auto mode automatically</p> <p>RMS calculation is not suitable for waveform sequence. If selected waveform is waveform sequence file, invoking this operation generates error “-221 Setting conflict; RMS calculation does not apply to waveform sequence”</p> <p>You can still edit current RMS as play parameter, and save current RMS to waveform sequence header for later use</p> |

Use Header RMS

Lets you quickly set RMS to value in ARB header. Updates the setting in the ["RMS" on page 2118](#) control.

| | |
|-------|--|
| Notes | <p>Grayed-out if no waveform is selected</p> <p>If no waveform is selected, invoking this operation generates error “-221 Setting conflict; No waveform is selected for RMS operation”</p> |
|-------|--|

Real-Time 5G NR Compensation

Phase compensation is a new concept introduced into 5G NR baseband signal generation in TS38.211 as below, to address a typical 5G scenario that Tx and Rx frequencies may not be the same. In that case, without properly compensating the phase, receiver would not be able to correctly demodulate the received signal.

Modulation and up-conversion to the carrier frequency f_0 of the complex-valued OFDM baseband signal for antenna port p , subcarrier spacing configuration μ , and OFDM symbol l in a subframe assumed to start at $t = 0$ is given by the following equation for all channels and signals except PRACH:

$$Re \left\{ s_l^{(p,\mu)}(t) \cdot e^{j2\pi f_0(t - t_{start,l}^\mu - N_{CP,l}^\mu T_c)} \right\}$$

$$Re \left\{ s_l^{(p,\mu)}(t) \cdot e^{j2\pi f_0(t - t_{start,l}^\mu - N_{CP,l}^\mu T_c)} \right\}$$

From the 3GPP specification equation above, it can be observed that phase compensation is performed for a specific transmission frequency f_0 . So that means, even if a same signal configuration needs to be transmitted at multiple frequencies, we'll have to generate a different waveform for each frequency point. As a result, the number of test waveforms will increase significantly along with the frequency number. This would be a big challenge for test engineers, considering the complexity of 5G NR signal configurations - they have to maintain a large waveform library and identify each waveform carefully with its "frequency tag".

Real-Time 5G NR Phase Compensation allows you to play the same 5G NR waveform while performing phase compensation along with transmission frequency change automatically. This control allows you to turn on or off the real-time phase compensation for 5G NR waveform.

| | |
|----------------|---|
| Remote Command | <code>:SOURce:RADio:ARB:NR5G:PHASe[:STATe] ON OFF 1 0</code> <code>:SOURce:RADio:ARB:NR5G:PHASe[:STATe]?</code> |
| Example | <code>:SOUR:RAD:ARB:NR5G:PHAS ON</code> <code>:SOUR:RAD:ARB:NR5G:PHAS?</code> |
| Dependencies | Only appears when Option RPC is present If the waveform is not for 5G NR, there may be error message and the output signal may be incorrect To ensure that you do <i>not</i> compensate for phase twice, once at waveform generation and again during playback, turn off this control if you had turned on phase compensation while generating the waveform |
| Preset | <code>OFF</code> |
| Range | <code>ON OFF</code> |

SCS

Sets the SCS for real-time 5G NR phase compensation.

| | | | |
|----------------|---|-----------|--------------|
| Remote Command | :SOURce:RADio:ARB:NR5G:PHASe:SCS SCS15K SCS30K SCS60K SCS60KECP SCS120K SCS240K SCS480K | | |
| | :SOURce:RADio:ARB:NR5G:PHASe:SCS? | | |
| Example | :SOUR:RAD:ARB:NR5G:PHAS:SCS SCS15K | | |
| | :SOUR:RAD:ARB:NR5G:PHAS:SCS? | | |
| Preset | SCS30K | | |
| Range | μ | CP | Value |
| | 0 | | 15 kHz |
| | 1 | | 30 kHz |
| | 2 | Normal | 60 kHz |
| | | Extended | 60 kHz |
| | 3 | | 120 kHz |
| | 4 | | 240 kHz |
| | 5 | | 480 kHz |

Filter

Sets the state of Filter usage after real-time 5G NR phase compensation.

| | | | |
|----------------|--|--|--|
| Remote Command | :SOURce:RADio:ARB:NR5G:PHASe:FILTer[:STATe] ON OFF 1 0 | | |
| | :SOURce:RADio:ARB:NR5G:PHASe:FILTer[:STATe]? | | |
| Example | :SOUR:RAD:ARB:NR5G:PHAS:FILT ON | | |
| | :SOUR:RAD:ARB:NR5G:PHAS:FILT? | | |
| Preset | OFF | | |
| Range | ON OFF | | |

Filter Bandwidth

Sets the Filter Bandwidth if Filter is used.

By searching <FilterBandwidth> node in the *.scp file, you can get the correct filter bandwidth value for phase compensation.

| | |
|--------|--|
| Remote | :SOURce:RADio:ARB:NR5G:PHASe:FILTer:BANDwidth <freq> |
|--------|--|

| | |
|---------|---|
| Command | :SOURce:RADio:ARB:NR5G:PHASe:FILTer:BANDwidth? |
| Example | :SOUR:RAD:ARB:NR5G:PHAS:FILT:BAND 99MHz :SOUR:RAD:ARB:NR5G:PHAS:FILT:BAND? |
| Preset | 100 MHz |
| Min | 10 Hz |
| Max | 1200 MHz |

Select Waveform

Lets you select a waveform segment or sequence to be played by the ARB player. Presents you with a list of waveform segments files and waveform sequence files. The list of waveform segment files and waveform sequence files contains the names of all the waveform segments and waveform sequence files currently loaded into ARB playback memory.

Waveform sequences are not available in E7760B.

Waveforms formatted as ***.mat**, ***.csv** and ***.txt** are supported by models with a built-in source, such as VXT and EXM.

NOTE

To load a file from the hard drive into ARB memory, go to the **Recall, Waveform dialog**

NOTE

Selecting a waveform file does not result in automatic adjustments to burst timing; that adjustment occurs only when a waveform is loaded to ARB memory.

| | |
|----------------|--|
| Remote Command | :SOURce:RADio:ARB:WAVEform <string> :SOURce:RADio:ARB:WAVEform? |
| Example | :SOUR:RAD:ARB:WAV "test_waveform.bin" |
| Notes | <p>If the intended waveform is not in the memory yet, then issuing this command invokes ARB loading operation first, which involves a delay of unpredictable length, so this command should be followed by *OPC?, which holds off subsequent commands until the loading operation is complete</p> <p><string> - specifies the name of the waveform segment or waveform sequence to be played by the ARB</p> <p>Sequence Analyzer Mode only:</p> <ul style="list-style-type: none"> - If Include Source is Yes, and you attempt to play a waveform sequence but not all the required waveform segments are in the ARB playback memory, the application rejects the loading operation and an error is generated - If Include Source is No, and you attempt to play a waveform sequence but not all the required waveform segments are contained in the ARB playback memory, the application attempts to load the required segments from either the default directory or the current directory. If the ARB memory |

does not have enough space for all the waveform segments to be loaded, an error is generated and none of the waveform segments is loaded

If ARB is **ON**, and you attempt to play a waveform sequence but not all the waveform segments within the sequence could be found to be loaded into ARB memory, an error is generated. The selected waveform keeps the previous value and ARB state remains On

If you specify a waveform segment via SCPI but the waveform segment is not present within ARB playback memory, and cannot be found for auto loading within the current directory or the default directory, an error is generated and the file selection remains unchanged

If you select a waveform for playback and the waveform requires a license that is not installed on the instrument, an error is generated

If ARB is **ON** and you load a file to ARB memory or delete a file from ARB memory, the playing waveform segment may not keep phase continuity during the ARB memory operation. The waveform will be replayed after the ARB operation is finished

Segments in ARB Memory

Shows you which files are loaded into the ARB memory and lets you select a file for playback.

Recall Waveform

This is the same as **Recall From File** in the **Recall, Waveform** dialog.

Delete Segment From ARB Mem

This is the same as **Delete Segment From ARB Mem** in the **Recall, Waveform** dialog.

Delete All From ARB Memory

This is the same as **Delete All From ARB Memory** in the **Recall, Waveform** dialog.

Query ARB Memory File List (Remote Query Only)

Queries the test set for the list of waveform segments in the ARB memory.

NOTE

Returns a string for waveform segment names in ARB memory. If you require a string list of waveform segments in the ARB memory, use **"Query ARB Memory Full File List (Remote Query Only)"** on page 2124

| | | | | | | | |
|---------------------------------|--|------------------------------|--------------------|------------------------------|--------------------|---------------------------------|---|
| Remote Command | <code>:SOURce:RADio:ARB:CATalog?</code> | | | | | | |
| Example | <code>:SOUR:RAD:ARB:CAT?</code> | | | | | | |
| Notes | The return data is in the following format: | | | | | | |
| | <table border="1"> <tr> <td><code><integer></code></td> <td>Memory used, in kB</td> </tr> <tr> <td><code><integer></code></td> <td>Memory free, in kB</td> </tr> <tr> <td><code><string> ...</code></td> <td>Comma-separated list of waveform segments within ARB memory</td> </tr> </table> | <code><integer></code> | Memory used, in kB | <code><integer></code> | Memory free, in kB | <code><string> ...</code> | Comma-separated list of waveform segments within ARB memory |
| <code><integer></code> | Memory used, in kB | | | | | | |
| <code><integer></code> | Memory free, in kB | | | | | | |
| <code><string> ...</code> | Comma-separated list of waveform segments within ARB memory | | | | | | |

Query ARB Memory Full File List (Remote Query Only)

Queries the test set for the string list of waveform segments in the ARB memory. Returns a string list for waveform segment names in the ARB memory.

| | | | | | | | | | |
|---|--|------------------------------|--------------------|------------------------------|--------------------|------------------------------|--------------------------|---|--|
| Remote Command | <code>:SOURce:RADio:ARB:FCATalog?</code> | | | | | | | | |
| Example | <code>:SOUR:RAD:ARB:FCAT?</code> | | | | | | | | |
| Notes | The return data is in the following format: | | | | | | | | |
| | <table border="1"> <tr> <td><code><integer></code></td> <td>Memory used, in kB</td> </tr> <tr> <td><code><integer></code></td> <td>Memory free, in kB</td> </tr> <tr> <td><code><integer></code></td> <td>File count in ARB memory</td> </tr> <tr> <td><code><string>, <string>, ... <string></code></td> <td>Comma-separated string list of waveform segments within ARB memory</td> </tr> </table> | <code><integer></code> | Memory used, in kB | <code><integer></code> | Memory free, in kB | <code><integer></code> | File count in ARB memory | <code><string>, <string>, ... <string></code> | Comma-separated string list of waveform segments within ARB memory |
| <code><integer></code> | Memory used, in kB | | | | | | | | |
| <code><integer></code> | Memory free, in kB | | | | | | | | |
| <code><integer></code> | File count in ARB memory | | | | | | | | |
| <code><string>, <string>, ... <string></code> | Comma-separated string list of waveform segments within ARB memory | | | | | | | | |

EXT returns: 27499,2069653,3,"c2k.wfm", "gsm.wfm", "wcdma.wfm"

Waveform Sequences

Not available in E7760B.

Lets you build new sequences or edit existing sequences. The Sequences table displayed in this dialog shows you the sequences in the current directory. You may build a new sequence or select one of the sequences in the table and tap **Edit Selected Sequence**. The default current directory is `C:\NVARB`. Tapping any element of this path lets you select an alternate route. Tapping the **Computer** arrow lets you select a different drive. Tapping the **Back** arrow navigates to the previously selected directory.

Build New Sequence

Lets you build a new sequence of waveform segments. When you build a sequence you are building the "current sequence", and the next time you press "Build New

6 Input/Output
6.1 RF Source

Sequence” the sequence you have been building will still be there, allowing you to add or remove segments from it.

Segment

Shows the segment number assigned to this row.

Waveform

Shows the file name for the waveform inserted into this row. Use ["Insert Waveform" on page 2126](#) to insert a waveform.

Repetitions

Lets you specify the number of times the currently selected waveform is played within the sequence.

| | |
|--------|-------|
| Preset | 1 |
| Min | 1 |
| Max | 65535 |

Marker 1 – Marker 4

Lets you enable or disable Marker 1, 2, 3, or 4 for the currently selected waveform. For a waveform sequence, you can enable and disable markers on a per-segment basis, allowing you to output markers from some waveform segments within the sequence, but not for others.

| | |
|--------|--------------------|
| Preset | Enabled |
| Range | Enabled Disabled |

Sync Seq File

Enables or disables the saving of secondary modules' waveform sequence files based on the current primary module segment's waveform settings.

| | |
|----------------|--|
| Remote Command | <code>:SOURce:RADio:ARB:SEQuence:SYNC ON OFF</code> <code>:SOURce:RADio:ARB:SEQuence:SYNC?</code> |
| Example | <code>:SOUR:RAD:ARB:SEQ:SYNC OFF</code> |
| Notes | Available only on primary modules If this setting is ON , when Sync Config is not NONE , the responding secondary module's waveform |

| | |
|--------------|--|
| | sequence file will be saved accordingly when save sequence... on the primary module, and the primary sequence file name should end with xxx0.seq , so the secondary module will be named according to the "Naming Rule" on page 2126 |
| | Waveform names in sequence files should also follow the Naming Rule |
| Dependencies | Not available in E7760B |
| Preset | OFF |
| Range | ON OFF |

Naming Rule

If Sync Config is not 2x2 +2x2 or 1x1+1x1, the waveform files to be used should follow this naming convention: the waveform file for the primary source should end in 0; the waveform files for the controlled sources should end in 1, 2, or 3 (reflecting the order of the TRXs). For example, for DL 11AC80 3X3 MIMO, sequence file names for TRX1, TRX2 and TRX3 should be xxx0.xx, xxx1.xx and xxx2.xx

If Sync Config is 2x2+2x2, the waveform files to be used should follow this naming convention: the waveform file for the primary source of first 2x2 should end in 0_0; the waveform files for the secondary source of first 2x2 should end in 0_1; the waveform files for the primary source of second 2x2 should end in 1_0; the waveform files for the secondary source of second 2x2 should end in 1_1. For example, for DL 11AC80 2x2 + 2x2 MIMO, waveform file names for TRX1, TRX2, TRX3 and TRX4 should be xxx0_0.xx, xxx0_1.xx, xxx1_0.xx and xxx1_1.xx

If Sync Config is 1x1+1x1, the waveform files to be used should follow this naming convention: the waveform file for the first source should end in 0_0; the waveform files for the second source should end in 1_0. For example, for DL 11AC80 1x1 + 1x1 MIMO, waveform file names for TRX1 and TRX2 should be xxx0_0.xx and xxx1_0.xx

Insert Waveform

Lets you select a waveform segment to be added to the sequence.

NOTE

To load a file from the hard drive into ARB memory, go to the **Recall, Waveform** dialog

Segments in ARB Memory

Shows you which files are loaded into the ARB memory and lets you select a file for inclusion in the sequence.

Delete Segment From ARB Mem

This is the same as **Delete Segment From ARB Mem** in the **Recall, Waveform** dialog.

Delete All From ARB Memory

This is the same as **Delete All From ARB Memory** in the **Recall, Waveform** dialog.

Delete Segment

Lets you delete the selected segment from the waveform sequence.

Save Sequence

Lets you save the newly built Waveform Sequence to the disk drive.

Sequence files have the extension `.seq`. The default filename is `WfmSequence_0000.seq`, where the 4-digit number is the lowest number that does not conflict with any filename in the current directory. Use “File Name” and “File Type” to specify your waveform sequence. The newly build sequence will be stored in the current directory.

Build New Sequence (Remote Command Only)

This is the SCPI equivalent of the waveform sequence creation features described in ["Build New Sequence" on page 2124](#).

Writes a waveform sequence file to the hard disk. You must specify the waveform sequence file path and filename which will be saved on the hard disk, and the waveform segment file path and name which will be nested into the waveform sequence file. You can utilize mass storage unit specifier (MSUS) “NVWFM” or use a real full path representation. See the example below. MSUS “NVWFM” is mapped to D:\NVARB directory on test set hard disk.

Any number of segments, up to a segment count limit of 64, can be used to create a sequence. Repeated segments are included in the count limit.

Each waveform segment name string length upper limit is 128 chars. Do not attempt to insert a waveform with a name string that exceeds 128 chars.

The internal source does not support nesting one waveform sequence file into another waveform sequence file.

Remote `:SOURce:RADio:ARB:SEquence[:MwAVEform] <filename>, <waveform1>, <reps>, NONE`

| | |
|---------|--|
| Command | <pre> M1 M2 M3 M4 M1M2 M1M3 M1M4 M2M3 M2M4 M3M4 M1M2M3 M1M2M4 M1M3M4 M2M3M4 M1M2M3M4 ALL, \{<waveform2>, <reps>, NONE M1 M2 M3 M4 M1M2 M1M3 M1M4 M2M3 M2M4 M3M4 M1M2M3 M1M2M4 M1M3M4 M2M3M4 M1M2M3M4 ALL,\} ...</pre> |
|---------|--|

For additional description of each item, see ["For Setup SCPI" on page 2128](#) below

`:SOURce:RADio:ARB:SEQuence[:MWAVEform]? <filename>`

For additional description of each item, see ["For Query SCPI" on page 2129](#) below

| | |
|---------|--|
| Example | <p>For setup:</p> <pre>:SOUR:RAD:ARB:SEQ "NVWFM:testSeq1.seq", "NVWFM:wfmSegment1.wfm",10, M2M3M4, "NVWFM:wfmSegment2.wfm", 20, M1M3</pre> |
|---------|--|

Or

```
:SOUR:RAD:ARB:SEQ "D:\NVARB\testSeq1.seq", "D:\NVARB\wfmSegment1.wfm",10,
M2M3M4, "D:\NVARB\wfmSegment2.wfm", 20, M1M3
```

For query, must specify which waveform sequence file to query

```
:SOUR:RAD:ARB:SEQ? "NVWFM:testSeq1.seq"
```

Or

```
:SOUR:RAD:ARB:SEQ? "D:\NVARB\testSeq1.seq"
```

For Setup SCPI

For the Setup SCPI command, the parameters are:

<filename> - String Type

This variable specifies the path and name for the waveform sequence file. The path supports MSUS (NVWFM) or a real full path representation. See example.

<waveform1> - String Type

This variable specifies the path and name of the first existing waveform segment. The path supports MSUS (NVWFM) or a real full path representation. See example.

The segment file must reside within ARB playback memory before it can be played by the ARB player.

<reps> - Integer Type

This variable specifies the number of times a segment or sequence plays before moving on to the next segment or sequence.

<marker> - Enum Type

NONE – This choice disables all four markers for the waveform. Disabling markers means that the waveform sequence ignores the segments or sequence marker settings.

M1, M2, M3, M4 – these choices, either individually or a combination of them, enable the markers for the waveform segment or sequence. Markers not specified are ignored for that segment or sequence.

ALL – This choice enables all four markers in the waveform segment or sequence.

<waveform2> - String type.

This variable specifies the name of a second existing waveform segment. The path supports MSUS (NVWFM) and real full path representation both. See example.

The segment file must reside within ARB playback memory before it can be played by the ARB player.

<reps> same as above, for the 2nd waveform segment.

<marker> same as above, for the 2nd waveform segment.

You can insert several waveform segments into a waveform sequence file. Just repeat inserting waveform segments as described above.

Error Checks for Setup SCPI command:

If you do not specify a filename, or you use an unsupported MSUS (that is, not NVWFM), or have an error in the waveform sequence file path, an error is generated. If the specified waveform sequence file name suffix is not “.seq”, error is generated.

If you use an unsupported MSUS (that is, not NVWFM), or have an error in the waveform segment file path, an error is generated.

If the first specified waveform file cannot be found, an error is generated.

If you nest one waveform sequence file into another waveform sequence file, an error is generated.

If the specified repetition value is larger than 65535 or smaller than 1, an error is generated.

If the specified marker type is unrecognized, an error is generated.

For Query SCPI

For the Query the parameters are:

<filename> - String type.

This variable specifies the path and name of the waveform sequence file being queried. The path supports MSUS (NVWFM) or a real full path representation. See example.

The return value is a **<string>**, which includes each waveform segment file name, repetitions, and marker type. For example:

```
>:SOUR:RAD:ARB:SEQ? "NVWFM:testSeq1.seq",  
<"wfmSegment1. wfm, 10, ALL, wfmSegment2.wfm, 20, M1M3",
```

Error Checks for Query SCPI command:

If you do not specify a filename, an error is generated.

If the waveform sequence file name is empty, an error is generated. If the specified waveform sequence file cannot be found, an error is generated.

Edit Selected Sequence

This dialog lets you edit an existing sequence of waveform segments. A table of the segments in the currently selected sequence displays, allowing you to insert waveform segments or edit the characteristics of each segment.

Segment

This field in the table shows the segment number assigned to this row.

Waveform

This field in the table shows the file name for the waveform inserted into this row. Use ["Insert Waveform" on page 2126](#) to insert a waveform.

Repetitions

Lets you specify the number of times the currently selected waveform is played within the sequence.

| | |
|--------|---|
| Preset | 1 |
| Min | 1 |

Marker 1 – Marker 4

Lets you enable or disable Marker 1, 2, 3, or 4 for the currently selected waveform. For a waveform sequence, you can enable and disable markers on a per-segment basis, allowing you to output markers from some waveform segments within the sequence, but not for others.

| | |
|--------|-------------------------------------|
| Notes | No remote command, front panel only |
| Preset | Enabled |
| Range | Enabled Disabled |

Sync Seq File

Change this setting to enable/disable the function of saving secondary modules' waveform sequence files based on the current primary segment's waveform settings.

| | |
|----------------|---|
| Remote Command | See "Sync Seq File" on page 2125 |
| Notes | Available only on primary modules If this setting is ON , when Sync Config is not NONE , the responding secondary module's waveform sequence file will be saved accordingly when save sequence... on the primary module, and the primary sequence file name should end with xxx0.seq , so the secondary module will be named according to the "Naming Rule" on page 2131 Waveform names in sequence files should also follow the Naming Rule |
| Dependencies | Not available in E7760B |
| Preset | OFF |
| Range | ON OFF |

Naming Rule

If Sync Config is not 2x2 + 2x2 or 1x1 + 1x1, the waveform files to be used should follow this naming convention: the waveform file for the primary source should end in 0; the waveform files for the controlled sources should end in 1, 2, or 3 (reflecting the order of the TRXs). For example, for DL 11AC80 3X3 MIMO, sequence file names for TRX1, TRX2 and TRX3 should be xxx0.xx, xxx1.xx and xxx2.xx

If Sync Config is 2x2+2x2, the waveform files to be used should follow this naming convention: the waveform file for the primary source of first 2x2 should end in 0_0; the waveform files for the secondary source of first 2x2 should end in 0_1; the waveform files for the primary source of second 2x2 should end in 1_0; the waveform files for the secondary source of second 2x2 should end in 1_1. For example, for DL 11AC80 2x2 + 2x2 MIMO, waveform file names for TRX1, TRX2, TRX3 and TRX4 should be xxx0_0.xx, xxx0_1.xx, xxx1_0.xx and xxx1_1.xx

If Sync Config is 1x1+1x1, the waveform files to be used should follow this naming convention: the waveform file for the first source should end in 0_0; the waveform files for the second source should end in 1_0. For example, for DL 11AC80 1x1 + 1x1 MIMO, waveform file names for TRX1 and TRX2 should be xxx0_0.xx and xxx1_0.xx

Insert Waveform

This dialog p select a waveform segment to be added to the sequence.

NOTE

To load a file from the hard drive into ARB memory, go to the Recall, Waveform dialog

Segments in ARB Memory

This table shows you which files are loaded into the ARB memory and lets you select a file for inclusion in the sequence.

Delete Segment From ARB Mem

Deletes a segment from ARB memory. This is the same as **Delete Segment From ARB Mem** in the **Recall, Waveform** dialog.

Delete All From ARB Memory

Removes all segments from ARB memory. This is the same as **Delete All From ARB Memory** in the **Recall, Waveform** dialog.

Delete Segment

Lets you delete the current segment from the waveform sequence.

Notes No remote command, front panel only

Waveform Utilities

Not available in E7760B.

Only appears if there is at least one Multi-pack license installed in the instrument.

On modular instruments, such as EXM , multi-pack license operations are only allowed on the default module, that is, "TRX1" module for EXM.

For EXM, if access multi-pack license sub-menu from modules other than "TRX1", an advisory message like "Please go to "TRX1" to operate multi-pack license" will display.

Add Waveform

Use this dialog to select and add waveforms. Pressing **OK** in this dialog adds the currently highlighted waveform to the next available slot, and returns you to the **"Waveform Utilities" on page 2132** dialog.

6 Input/Output

6.1 RF Source

| | |
|----------------|--|
| Remote Command | <code>:SYSTem:LKEY:WAVeform:ADD <string></code> or <code>:SYSTem:LICense[:FPACK]:WAVeform:ADD <string></code> |
| Example | <code>:SYST:LKEY:WAV:ADD "mywaveform.wfm"</code> or <code>:SYST:LIC:WAV:ADD "mywaveform.wfm"</code> |
| Notes | <p>The second form, <code>:SYSTem:LICense[:FPACK]:WAVeform:ADD</code>, is provided for consistency with Keysight signal sources. You can use either form</p> <p>Since adding a waveform segment to a Multi-Pack license causes the license slot to enter the trial period of only 48 hours, pressing this key causes a confirmation dialog to be displayed to ensure you do want to add the waveform segment to the Multi-Pack</p> <p>If you attempt to license a waveform that is already licensed using another slot an error is generated</p> <p>For EXM, if current module is not "TRX1" module, the key is grayed-out, and error message is generated "-221 Setting conflict; Not allowed on current module. Go to "TRX1" to operate multi-pack license" when invoking SCPI</p> |
| Dependencies | Only available if the currently selected file is a secure waveform requiring a license, and there is at least one slot available within at least one multi-pack license. Unavailable if the waveform highlighted is a secure waveform, but is already licensed |

Replace Selected Waveform

Lets you replace the waveform in the currently selected slot with the waveform currently selected in the Multi-Pack License Waveform Add view. Pressing **OK** in this dialog replaces the waveform in the currently selected slot with that currently highlighted, and returns you to the ["Waveform Utilities" on page 2132](#) dialog.

| | |
|----------------|---|
| Remote Command | <code>:SYSTem:LKEY:WAVeform:REPLace <int>, <string></code> or <code>:SYSTem:LICense[:FPACK]:WAVeform:REPLace <int>, <string></code> |
| Example | <code>:SYST:LKEY:WAV:REPL 1, "myotherwaveform.wfm"</code> or <code>:SYST:LIC:WAV:REPL 1, "myotherwaveform.wfm"</code> |
| Notes | <p>The second command form, <code>:SYSTem:LICense[:FPACK]:WAVeform:REPLace</code> is provided for consistency with Keysight signal sources. You can use either form</p> <p>If you attempt to license a waveform that is already licensed using another slot an error is generated</p> <p>Waveform slot number <int> is positive. If you attempt to input a slot number less than or equals 0, an error is generated</p> <p>For EXM, if current module is not "TRX1" module, the key is grayed-out, and error message is generated "-221 Setting conflict; Not allowed on current module. Go to "TRX1" to operate multi-pack license" when invoking SCPI</p> |

Clear Waveform from Slot

Lets you clear the waveform from the selected slot.

| | |
|----------------|--|
| Remote Command | <code>:SYSTem:LKEY:WAVeform:CLEar <int></code> or <code>:SYSTem:LICense[:FPACK]:WAVeform:CLEar <int></code> |
| Example | <code>:SYST:LKEY:WAV:CLE 1</code> or <code>:SYST:LIC:WAV:CLE 1</code> |
| Notes | The second form: <code>:SYSTem:LICense[:FPACK]:WAVeform:CLEar</code> is provided for consistency with the style of Keysight signal sources. You can use either form Waveform slot number <code><int></code> is positive. If you attempt to input a slot number less than or equal to 0, an error is generated For EXM, if current module is not "TRX1" module, the key is grayed-out, and error message is generated "-221 Setting conflict; Not allowed on current module. Go to "TRX1" to operate multi-pack license" when invoking SCPI |
| Dependencies | Only available if the currently selected slot is in the trial state |

Lock Waveform in Slot

If the selected slot is in the trial state or the lock required state, the waveform that occupies the slot is locked and permanently licensed.

| | |
|----------------|--|
| Remote Command | <code>:SYSTem:LKEY:WAVeform:LOCK <int></code> or <code>:SYSTem:LICense[:FPACK]:WAVeform:LOCK <int></code> |
| Example | <code>:SYST:LKEY:WAV:LOCK 1</code> or <code>:SYST:LIC:WAV:LOCK 1</code> |
| Notes | The command form <code>:SYSTem:LICense[:FPACK]:WAVeform:LOCK</code> is provided for consistency with Keysight signal sources. You can use either form Waveform slot number <code><int></code> is positive. If you attempt to input a slot number less than or equal to 0, an error is generated For EXM, if current module is not "TRX1" module, the key is grayed-out, and error message is generated "-221 Setting conflict; Not allowed on current module. Go to "TRX1" to operate multi-pack license" when invoking SCPI |
| Dependencies | Only available if the currently selected slot is in the trial state, or the lock required state |

Slot Status Query (Remote Command Only)

Returns the status of the specified slot.

| | |
|----------------|---|
| Remote Command | <code>:SYSTem:LKEY:WAVeform:STATus? <int></code> or <code>:SYSTem:LICense[:FPACK]:WAVeform:STATus? <int></code> |
| Example | <code>:SYST:LKEY:WAV:STAT? 1</code> <"Locked" or <code>:SYST:LIC:WAV:STAT? 1</code> <"Locked" |
| Notes | The command form <code>:SYSTem:LICense[:FPACK]:WAVeform:STATus</code> is provided for consistency with Keysight signal sources. You can use either form Waveform slot number <code><int></code> is positive. If you attempt to input a slot number less than or equal to 0, an error is generated Result type is string. If input slot number exceeds total available slot numbers, "Nonexistent" is returned |
| Range | "Locked" "Available" "Trail" "LockRequired" "Nonexistent" |

Slots Free Query (Remote Query Only)

Returns the number of license slots free.

| | |
|----------------|---|
| Remote Command | <code>:SYSTem:LKEY:WAVeform:FREE?</code> or <code>:SYSTem:LICense[:FPACK]:WAVeform:FREE?</code> |
| Example | <code>:SYST:LKEY:WAV:FREE?</code> or <code>:SYST:LIC:WAV:FREE?</code> |
| Notes | The second form: <code>:SYSTem:LICense[:FPACK]:WAVeform:FREE</code> is provided for consistency with the style of Keysight signal sources. You can use either one |

Slots Used Query (Remote Query Only)

Returns the number of license slots used.

| | |
|----------------|---|
| Remote Command | <code>:SYSTem:LKEY:WAVeform:USED?</code> or <code>:SYSTem:LICense[:FPACK]:WAVeform:USED?</code> |
|----------------|---|

| | |
|---------|---|
| Example | <code>:SYST:LKEY:WAV:USED?</code> or <code>:SYST:LIC:WAV:USED?</code> |
| Notes | The second form: SCPI <code>:SYSTEM:LICense[:FPACK]:WAVeform:USED</code> is provided for consistency with the style of Keysight signal sources. You can use either form |

Slot Waveform Name Query (Remote Command Only)

Returns the waveform name of the specified slot.

| | |
|----------------|--|
| Remote Command | <code>:SYSTEM:LKEY:WAVeform:NAME? <int></code> or <code>:SYSTEM:LICense[:FPACK]:WAVeform:NAME? <int></code> |
| Example | <code>:SYST:LKEY:WAV:NAME? 1</code> <code><"CDMA2K_22.wfm"</code> or <code>:SYST:LIC:WAV:NAME? 1</code> <code><"CDMA2K_22.wfm"</code> |
| Notes | Waveform slot number <code><int></code> is positive. If you attempt to input a slot number less than or equal to 0, an error is generated Result type is string. If input slot number exceeds total available slot numbers, "Nonexistent" is returned If no waveform stored in the specified slot, then empty string is returned |

Slot Waveform Unique ID Query (Remote Command Only)

Returns the waveform unique ID of the specified slot.

| | |
|----------------|--|
| Remote Command | <code>:SYSTEM:LKEY:WAVeform:UID? <int></code> or <code>:SYSTEM:LICense[:FPACK]:WAVeform:UID? <int></code> |
| Example | <code>:SYST:LKEY:WAV:UID? 2</code> <code><"1346752140"</code> or <code>:SYST:LIC:WAV:UID? 2</code> <code><"1346752140"</code> |
| Notes | Waveform slot number <code><int></code> is positive. If you attempt to input a slot number less than or equal to 0, an error is generated Result type is string. If input slot number exceeds total available slot numbers, "Nonexistent" is returned |

Only Signal Studio waveform has a unique ID, which is a positive number. User-generated waveforms have no unique ID. If no waveform is stored in the specified slot, returns "0"

Locked Waveform Name List Query (Remote Query Only)

Returns the waveform name list of locked.

| | |
|----------------|--|
| Remote Command | <code>:SOURCE:RADio:ARB:MPLicensed:NAME:LOCKed?</code> |
| Example | <code>:SOUR:RAD:ARB:MPL:NAME:LOCKed?</code> < "CDMA2K_27.wfm","GSM_MCS1.WFM","c2kWfm.wfm" |

Locked Waveform Unique ID List Query (Remote Query Only)

Returns the waveform unique id list of locked.

| | |
|----------------|--|
| Remote Command | <code>:SOURCE:RADio:ARB:MPLicensed:UID:LOCKed?</code> |
| Example | <code>:SOUR:RAD:ARB:MPL:UID:LOCKed?</code> < "2996927136","3812603511","3710986266" |
| Notes | Each Signal Studio waveform has a unique id recorded in header. If the unique ids are same, that means they are the same waveform. For this reason, in addition to the locked waveform name list query, there is also a locked waveform unique id list query |

Multi-Pack License multi-module control state (Remote Command Only)

When **ON**, multi-pack license operations (such as adding/locking/replacinwaveform etc.) from TRXs other than TRX1 are allowed. If **OFF**, only TRX1 is allowed to operate multi-pack license, while other TRXs are only able to show the related multi-pack license information.

| | |
|----------------|--|
| Remote Command | <code>:SERVice[:PRODUCTION]:SOURCE:MCONTROL:MPLicense[:STATE] ON OFF 1 0</code> <code>:SERVice[:PRODUCTION]:SOURCE:MCONTROL:MPLicense[:STATE]?</code> |
| Example | <code>:SERV:SOUR:MCON:MPL OFF</code> |
| Notes | Only effective in modular-based OBTs, such as EXM |
| Preset | OFF |
| Range | ON OFF |

Header Utilities

If there is currently a waveform selected for playback, this table shows you the header information for the file. You can clear the header information out or edit it and save it.

| | |
|--------------|--|
| Dependencies | Only available if there is currently a waveform selected for playback. Grayed-out if no waveform is selected |
|--------------|--|

Clear Header

Lets you clear the header information from the file header associated with the currently selected waveform.

| | |
|----------------|---|
| Remote Command | <code>:SOURce:RADio:ARB:HEADer:CLEar</code> |
| Example | <code>:SOUR:RAD:ARB:HEAD:CLE</code> |
| Notes | Attempting to clear the header details via SCPI when no waveform was selected for playback generates an error |

Save Header

Lets you save new file header information details to the file.

| | |
|----------------|--|
| Remote Command | <code>:SOURce:RADio:ARB:HEADer:SAVE</code> |
| Example | <code>:SOUR:RAD:ARB:HEAD:SAVE</code> |
| Notes | Attempting to save the header details via SCPI when no waveform was selected for playback generates an error |

Query Waveform Unique ID (Remote Query Only)

Each Signal Studio waveform contains a unique waveform ID, which recorded in the header. This command allows you to query the unique waveform ID from the header.

| | |
|----------------|---|
| Remote Command | <code>:MMEMory:HEADer:ID? "<file name>"</code> |
| Example | <p>Query the waveform already loaded into the ARB memory:</p> <pre><code>:MMEM:HEAD:ID? "test.wfm"</code></pre> <p>Query the waveform on the hard disk by absolute path:</p> <pre><code>:MMEM:HEAD:ID? "D:\NVARB\test.wfm"</code></pre> |

6 Input/Output
6.1 RF Source

Query the waveform on the hard disk by MSUS:

`:MMEM:HEAD:ID? "NVWFM:test.wfm"`

Notes

The queried waveform file can be in ARB memory, or on hard disk. If want to query ARB in ARB memory, then give out the file name directly. If want to query ARB on the hard disk, then absolute file path or MSUS should be given along with the file name. The valid MSUS is **NVWFM**, which is mapped to **D:\NVARB** on the hard disk
If the file cannot be found in ARB memory or on hard disk, an error is generated and value -1 is returned

Query Selected Waveform Header info (Remote Query Only)

Returns a listing of the current selected ARB header info. If no ARB selected, then empty string is returned.

Remote Command

`:SOURCE:RADio:ARB:HEADer:INFormation?`

Example

`:SOUR:RAD:ARB:HEAD:INF?`

Notes

After each colon of field title string, related header info string is appended
The field title string in "Range" part cannot change, for Sequence Studio needs to accurately match those string character to know which header info field it is
Below are the abbreviation descriptions:

| DESC | Description |
|----------|---------------------------|
| SR | Sample Rate |
| RTS | Run Time Scaling |
| RMS | Root Mean Square |
| M1P | Marker 1 Polarity |
| M2P | Marker 2 Polarity |
| M3P | Marker 3 Polarity |
| M4P | Marker 4 Polarity |
| ALCHR | ALC Hold Routing |
| RFBR | RF Blank Routing |
| FOFF | Frequency Offset |
| AWGNST | AWGN State |
| AWGNCN | AWGN C/N Ratio |
| AWGNCBW | AWGN Carrier Bandwidth |
| AWGNNBW | AWGN Noise Bandwidth |
| AWGNCRMS | AWGN Carrier RMS |
| ORP | DAC Over Range Protection |

| | | |
|-------|---|----------------|
| | UID | Unique ID |
| | LICSTS | License Status |
| Range | "DESC:", "SR:", "RTS:", "RMS:", "M1P:", "M2P:", "M3P:", "M4P:", "ALCHR:", "RFBR:", "FOFF:", "AWGNST:", "AWGNCN:", "AWGNCBW:", "AWGNNBW:", "AWGNCRMS:", "ORP:", "UID:", "LICSTS" | |

6.1.12 Trigger Initiate

Initiates an immediate trigger event if the trigger source (under ARB Setup) is set to [KEY](#).

Dependencies Grayed-out unless Trigger Source is set to [KEY](#) and an ARB waveform is configured

6.1.13 Source Sync

Accesses a menu for setting up Source Synchronization for multiple models.

Only appears in modular products such as VXT, and only when the instrument is configured for MIMO analysis.

6.1.13.1 Sync Config

Lets you config MIMO type for source.

Grayed-out when Primary and Secondary modules are in Sync State.

| | | |
|----------------|--|---|
| Remote Command | :SOURce:SYNC:CONFig NONE TWO THRee FOUR SIX EIGHt DONE DTWO DTHR DFOU See " Option Details " on page 2141 :SOURce:SYNC:CONFig? | |
| Example | :SOUR:SYNC:CONF TWO | |
| Dependencies | EXM | 2x2 and 1x1+1x1 MIMO are supported when license E6640A-M22 is enabled <hr/> 2x2 and 3x3 MIMO are supported when license E6640A-M33 is enabled <hr/> 2x2, 3x3, 4x4 and 2x2+2x2 MIMO are supported when license E6640A-M44 is enabled <hr/> VXT models M9410A/11A |
| | | No-Across chassis MIMO is supported when license M941xA-MMO is enabled <hr/> Across chassis MIMO is supported when license M941xA-MTS is enabled |

6 Input/Output
6.1 RF Source

| | | |
|-------|--|--|
| | VXT models M9415A/16A | No-Across chassis MIMO is supported when license M941xA-MMO is enabled |
| Range | NONE TWO THRee FOUR SIX EIGHT DONE DTWO DTHR DFOU | |

Option Details

| Parameter | SCPI | Notes |
|-----------|--------------|---|
| None | NONE | Sets MIMO Config type as None |
| 2x2 | TWO | Sets 2x2 as MIMO Config Type. 2 models are configured to Sync |
| 3x3 | THRee | Sets 3x3 as MIMO Config Type. 3 models are configured to Sync |
| 4x4 | FOUR | Sets 4x4 as MIMO Config Type. 4 models are configured to Sync |
| 6x6 | SIX | Sets 6x6 as MIMO Config Type. 6 models are configured to Sync |
| 8x8 | EIGHT | Sets 8x8 as MIMO Config Type. 8 models are configured to Sync |
| 1x1+1x1 | DONE | Sets 1x1+1x1 as MIMO Config Type. 2 models are configured to Sync with different center frequency. Use Segment 2 Setup to config the second model |
| 2x2+2x2 | DTWO | Sets 2x2+2x2 as MIMO Config Type. 2 groups of 2x2 MIMO. First group consists of Primary and TRX1. Second group consists of TRX2 and TRX3. Segment 2 Setup allows you to config the second group |
| 3x3+3x3 | DTHR | Sets 3x3+3x3 as MIMO Config Type. 2 groups of 3x3 MIMO. First group consists of Primary, TRX1 and TRX2. Second group consists of TRX3, TRX4 and TRX5. Segment 2 Setup allows you to config the second group |
| 4x4+4x4 | DFOU | Sets 4x4+4x4 as MIMO Config Type. 2 groups of 4x4 MIMO. First group consists of Primary, TRX1, TRX2 and TRX3. Second group consists of TRX4, TRX5, TRX6 and TRX7. Segment 2 Setup allows you to config the second group |

6.1.13.2 Sync Type

Grayed-out when models are in Sync State.

| | |
|----------------|---|
| Remote Command | :SOURce:SYNC:TYPE PRIMary SECondary OFF For details of parameter options, see "Options" on page 2142 :SOURce:SYNC:TYPE? |
| Example | :SOUR:SYNC:TYPE PRIM |
| Preset | OFF |
| Range | PRIMary SECondary OFF |

Options

| Parameter | Notes |
|-----------|--|
| OFF | This model is not listed in the Secondary module List |
| SECondary | Use <code>:SOURCE:SYNC:CONNECTED:NAME?</code> to obtain the Primary's name in Sync State |
| PRIMary | Sync Setup is only available for Primary |

6.1.13.3 Sync Settings

Grayed-out when Primary and Secondary are in Sync State.

Dependencies Grayed-out when Sync Type is set to **OFF** or Secondary

Secondary Module List

Lists the parameters of Secondary modules. The Selected checkbox in each row allows you to select the Secondary module when the Sync Type is set to Primary.

- When Sync Config is set to NxN, use this control to enable N-1 Secondary modules
- When Sync Config is set to NxN+NxN, use this control to enable 2N-1 Secondary modules

See "[More Information](#)" on page 2142

| | |
|----------------|--|
| Remote Command | <code>:SOURCE:SYNC:REMOte:SECOndary<integer> ON OFF 1 0</code> <code>:SOURCE:SYNC:REMOte:SEC<integer>?</code> |
| Example | <code>:SOUR:SYNC:REM:SEC1 ON</code> <code>:SOUR:SYNC:REM:SEC2 OFF</code> |
| Notes | <code><integer></code> Secondary module number in Available Models |
| Preset | OFF |

More Information

| Parameter | SCPI Example | Notes |
|-----------------------------|--|--|
| Available Secondary modules | <code>:SOUR:SYNC:REM:SEC:List?</code> | All the available Secondary models are listed |
| IP Address | <code>:SOUR:SYNC:REM:SEC1:ADDR?</code> | Refer to Remote Chassis to add the IP Address for remote chassis |

6 Input/Output
6.1 RF Source

| Parameter | SCPI Example | Notes |
|------------------------|---------------------------|--|
| Slot Number | :SOUR:SYNC:REM:SEC2:SLOT? | “Local Host” indicates that the Primary and Secondary modules share the same chassis |
| Socket Port | :SOUR:SYNC:REM:SEC2:SPOR? | Indicates the slot number of available models |
| Secondary module Order | | Indicates the socket port of available models |
| | | Shows you the models to be Secondary devices |
| | | Use Selected to choose from available Secondary models |

Sync Settings

Lets you apply the source settings of the Primary module to its Secondary modules.

| | |
|----------------|--|
| Remote Command | :SOURce:SYNC:SETTings:ENABle ON OFF 1 0 :SOURce:SYNC:SETTings:ENABle? |
| Example | :SOUR:SYNC:SETT:ENAB ON :SOUR:SYNC:SETT:ENAB? |
| Notes | When Sync Settings is ON , the source settings of Primary are applied to Secondary modules. The supported settings are Amplitude, Frequency, Trigger Source, Trigger Type, RF Output and waveform related information When Sync Segment 2 is switched ON , this Toggle is set ON simultaneously |
| Dependencies | Waveform files naming convention: For NxN MIMO: <ul style="list-style-type: none"> - xxx0.wfm for Primary - xxx[n].wfm for TRX[n] For example, in 3x3 MIMO: <ul style="list-style-type: none"> - xxx0.wfm for Primary - xxx1.wfm for TRX1 - xxx2.wfm for TRX2 For NxN+NxN MIMO, in the first group: <ul style="list-style-type: none"> - xxx0_0.wfm for Primary - xxx0_n.wfm for TRX[n] in the second group: <ul style="list-style-type: none"> - xxx1_n.wfm for TRX[n+N] For example, in 3x3+3x3 MIMO: <ul style="list-style-type: none"> - xxx0_0 for Primary |

| | |
|--------|--|
| | <ul style="list-style-type: none"> - xxx0_1.wfm for TRX1 - xxx0_2.wfm for TRX2 - xxx1_0.wfm for TRX3 - xxx1_1.wfm for TRX4 |
| | xxx1_2.wfm for TRX5 |
| Preset | OFF |
| Range | ON OFF |

Sync Segment 2

Lets you config the models in the second group of NxN+NxN MIMO.

| | |
|----------------|--|
| Remote Command | :SOURCE:SYNC:SETTINGS:SEGMENT2:ENABLE ON OFF 1 0 :SOURCE:SYNC:SETTINGS:SEGMENT2:ENABLE? |
| Example | :SOUR:SYNC:SETT:SEGM2:ENAB ON :SOUR:SYNC:SETT:SEGM2:ENAB? |
| Notes | Only Frequency in settings is supported |
| Dependencies | When this setting is ON, Sync Settings will be turned on accordingly |
| Preset | OFF |
| Range | ON OFF |

Segment 2 Frequency

When Sync Segment 2 is ON, allows you to set the frequency of models in the second group of NxN+NxN MIMO.

| | |
|----------------|--|
| Remote Command | :SOURCE:SYNC:SETTINGS:SEGMENT2:FREQUENCY <freq> :SOURCE:SYNC:SETTINGS:SEGMENT2:FREQUENCY? |
| Example | :SOUR:SYNC:SETT:SEGM2:FREQ 1.00 GHz :SOUR:SYNC:SETT:SEGM2:FREQ? |
| Preset | 1.00 GHz |
| Min | VXT models M9410A/11A/15A/16A: 380 MHz |
| Max | Hardware Dependent VXT models M9410A/11A/15A/16A: <ul style="list-style-type: none"> - Option F06 = 6.0 GHz |

IP Address

Sets up the controller's IP address of Remote Secondary models.

| | |
|----------------|---|
| Remote Command | <code>:SOURCE:SYNC:REMOte:ADDReSS <string></code> |
| Example | <code>:SOUR:SYNC:REM:ADDR "192.168.1.2"</code> |
| Notes | <code><string></code> - IP Address |

SCPI Socket Port

Sets up the controller's SCPI socket port of Remote Secondary models.

| | |
|----------------|---|
| Remote Command | <code>:SOURCE:SYNC:REMOte:IPPort <integer></code> |
| Example | <code>:SOUR:SYNC:REM:IPP 5025</code> |
| Notes | <code><integer></code> - Port |

Add Secondary Module

Lets you connect the remote chassis specified by IP Address and Socket Port.

| | |
|----------------|---|
| Remote Command | <code>:SOURCE:SYNC:REMOte:ADDReSS:ADD</code> |
| Example | <code>:SOUR:SYNC:REM:ADDR:ADD</code> |
| Notes | Example of how to add a remote chassis: <code>:SOUR:SYNC:REM:ADDR "192.168.1.2"</code> <code>:SOUR:SYNC:REM:IPP 5025</code> <code>:SOUR:SYNC:REM:ADDR:ADD</code> Once a remote chassis is connected, the "Secondary Module List" on page 2142 shows you the available Secondary modules |

Delete Secondary Module

Lets you delete a selected remote chassis IP Address from the ["Secondary Module List" on page 2142](#).

| | |
|----------------|--|
| Remote Command | <code>:SOURCE:SYNC:REMOte:ADDReSS:DELeTe</code> |
| Example | <code>:SOUR:SYNC:REM:ADDR:DEL</code> |
| Notes | Example of how to delete a remote chassis: <code>:SOUR:SYNC:REM:ADDR "192.168.1.2"</code> |

`:SOUR:SYNC:REM:ADDR:DEL`

Sync Runtime Settings (Remote Command Only)

Lets you Sync runtime settings to the Secondary modules without restarting Sync.

| | |
|----------------|--|
| Remote Command | <code>:SOURCE:SYNC:RTSetting:STATE ON OFF 1 0</code> <code>:SOURCE:SYNC:RTSetting:STATE?</code> |
| Example | <code>:SOUR:SYNC:RTS:STAT ON</code> <code>:SOUR:SYNC:RTS:STAT?</code> |
| Notes | When OFF , Sync is interrupted when changing frequency or power settings on the Primary module. After applying the new settings to the Secondary modules, Sync will restart When ON , setting changes on the Primary module are applied to the Secondary modules immediately without interrupting Sync status. This is the default behavior. The supported settings are Amplitude and Frequency |
| Preset | ON |
| Range | ON OFF |

6.1.13.4 Sync Start

Lets you start synchronizing Primary and Secondary modules to play Arb synchronously.

When the Sync connection is built successfully, Primary and Secondary modules are in the Sync State.

Sync Start and Sync Config menu are grayed-out when Primary and Secondary modules are in Sync State.

| | |
|----------------|---|
| Remote Command | <code>:SOURCE:SYNC:START</code> |
| Example | <code>:SOUR:SYNC:STAR</code> |
| Notes | If you change the source settings during Sync State, an error message appears in the status bar: "Settings conflict; Sync connection is already established" and the change will not be applied until Sync Stop |

6.1.13.5 Sync Stop

Stops the synchronization.

When Sync Stops, Sync Config menu and Sync Start will be available.

| | |
|----------------|--------------------------------|
| Remote Command | <code>:SOURCE:SYNC:STOP</code> |
| Example | <code>:SOUR:SYNC:STOP</code> |

6.1.13.6 Sync Connected (Remote Query Only)

Lets you query the state of synchronization.

| | |
|----------------|--------------------------------------|
| Remote Command | <code>:SOURce:SYNC:CONNected?</code> |
|----------------|--------------------------------------|

| | |
|---------|-------------------------------|
| Example | <code>:SOUR:SYNC:CONN?</code> |
|---------|-------------------------------|

Returns: 1 when synchronization is established, 0 when synchronization is stopped

6.1.14 Source Preset

Lets you preset the source settings to their default values.

| | |
|----------------|-----------------------------|
| Remote Command | <code>:SOURce:PRESet</code> |
|----------------|-----------------------------|

| | |
|---------|-------------------------|
| Example | <code>:SOUR:PRES</code> |
|---------|-------------------------|

6.2 Input

The controls on this tab let you select and configure the instrument's inputs.

6.2.1 Select Input

Lets you choose which signal input you want to analyze:

- "RF Input" on page 2150
- "External Mixer" on page 2150
- "I/Q" on page 2153

See also:

- "External Mixer Setup" on page 2175
- "I/Q Setup" on page 2195

| | |
|----------------|--|
| Remote Command | <code>[:SENSe] :FEED RF AIQ EMIXer</code> <code>[:SENSe] :FEED?</code> |
| Example | Select the RF Input: <code>:FEED RF</code> Select External Mixing: <code>:FEED EMIX</code> Select BBIQ: <code>:FEED AIQ</code> |
| Dependencies | I/Q only appears when Option BBA present Ext Mix only appears when Option EXM present |
| Couplings | Connecting a U7227A USB Preamplifier to one of the instrument's USB ports causes the Input to automatically switch to the RF Input. If the RF Calibrator is on, it is turned off. Subsequently disconnecting the USB Preamp from USB does not change the Input selection, nor restore the previous selection <code>[:SENSe] :FEED RF</code> turns the calibrator OFF |
| Preset | Unaffected by Preset or power cycle. Survives a Mode Preset and mode changes Set to RF by Restore Input/Output Defaults or Restore System Defaults->All |
| State Saved | Saved in instrument state |
| Annotation | Displayed in the Meas Bar as "Input:." followed by: RF or Ext Mix or I/Q depending on which input is selected |

6 Input/Output

6.2 Input

| | |
|-------------------------------------|--|
| Backwards Compatibility SCPI | <p><code>[:SENSe]:FEED AREFERENCE</code></p> <p>In the PSA the calibrator was one of the inputs and selected using the AREF parameter to the same :FEED command that switched the inputs. In the X-Series, it is controlled in a separate menu and overrides the input selection. For code compatibility, <code>[:SENSe]:FEED AREFERENCE</code> is provided, and is aliased to <code>[SENSe]:FEED:AREF REF50</code>, which causes the input to be switched to the 50 MHz calibrator. <code>[:SENSe]:FEED RF</code> switches the input back to the RF port and turns the calibrator OFF, thus providing full compatibility with the PSA calibrator function</p> <p>Note that after sending this, <code>[:SENSe]:FEED?</code> does <i>not</i> return "AREF" but instead the currently selected input:</p> <pre>[:SENSe]:FEED IQ IONLy QONLy [:SENSe]:FEED?</pre> <p>The parameters <code>IQ IONLy QONLy</code> are supported for backwards compatibility with the E44406A</p> <pre>[:SENSe]:FEED IQ aliases to [:SENSe]:FEED: IQ:TYPE IQ [:SENSe]:FEED IONLy aliases to [:SENSe]:FEED:IQ:TYPE IONLy [:SENSe]:FEED QONLy aliases to [:SENSe]:FEED:IQ:TYPE QONLy [:SENSe]:FEED? always returns AIQ, whatever type of legacy parameter IQ IONLy QONLy has been used</pre> |
| Backwards Compatibility Notes | <p>Most of the settings in the X-Series Input/Output system, including External Gain, Amplitude Corrections settings and data, etc., are shared by all modes and are not changed by a mode switch. Furthermore, most variables under the Input/Output menu are not affected by Mode Preset. Both of these behaviors represent a departure from legacy behavior</p> <p>In X-Series. Input/Output settings are reset by using Restore Input/Output Defaults. They can also be reset to their default values by System->Restore System Defaults-> In/Out Config, or by System ->Restore System Defaults -> All (and corresponding SCPI)</p> <p>While this matches most use cases better, it does create some code compatibility issues. For example, Amplitude Corrections are no longer turned off by Mode Preset, but instead by Restore Input/Output Defaults</p> <p>Although Input/Output settings are not part of each Mode's State, they are saved in Save State files, so that all of the instrument settings can be recalled with Recall, State, as in legacy instruments</p> |
| Notes | <p>In legacy analyzers you choose between the Internal mixer or an External Mixer. In X-Series, the External Mixer is one of the choices for the Input and is selected using the FEED command (<code>:SENSe:FEED EXTMixer</code>)</p> <p>For compatibility, the <code>:INPut:MIXer EXTernal INTernal</code> legacy command is mapped as follows:</p> <ol style="list-style-type: none">1. When <code>:INPut:MIXer EXTernal</code> is received, <code>:SENSe:FEED EMIXer</code> is executed2. When <code>:INPut:MIXer INTernal</code> is received, <code>:SENSe:FEED RF</code> is executed3. When <code>:INPut:MIXer?</code> is received, the response is INT if any input other than the external mixer is selected, and EXT if the external mixer is selected |
| Preset | INT |

| | |
|------------------------------|---|
| Backwards Compatibility SCPI | <code>:INPut:MIXer EXTERNAL INTERNAL</code> <code>:INPut:MIXer?</code> |
|------------------------------|---|

| | |
|-------------------------------|---|
| Backwards Compatibility Notes | PSA supports the following SCPI Command : <code>:INPut:MIXer:TYPE PRESelected UNPReselect</code> <code>:INPut:MIXer:TYPE?</code> PSA does not support the <code>:INPut:MIXer:TYPE</code> command |
|-------------------------------|---|

RF Input

Selects the front-panel RF input port to be the instrument signal input. If RF is already selected, pressing this key accesses the RF input setup functions.

External Mixer

Lets you select an External Mixer through which to apply signal input to the instrument. When selected, the LO/IF port becomes the input to the instrument.

External Mixing requires option EXM. The External Mixer key will not appear unless option EXM is installed. The presence of the LO/IF connector alone does not indicate that you have Option EXM licensed. To verify that option EXM is installed, press **System, Show, System**.

When External Mixer is selected, the **Center Freq** key controls the setting of the Center Freq in external mixing, which is separate from the settings of Center Freq for the RF Input or BBIQ. Each input retains its unique settings for Center Freq. A unique SCPI command is provided solely for the external mixing Center Freq (see the **Center Freq** key description), which only affects the External Mixer CF, although sending the generic Center Freq command while External Mixer is selected also controls the External Mixer CF.

Unless option EXM is present, the External Mixer key is blanked, and all SCPI commands associated with menus accessed by this key return an error. Manual FFT mode is available with external mixing, but not with Signal ID. All settings under this key, and all Frequency settings, are remembered when you go out of External Mixer, so that when **External Mixer** is chosen again, all the external mixer functions will retain their previous settings, with the exception of Signal ID which is set to OFF (Signal ID is also set to Off unless External Mixer is the selected Input). Note that this differs from ESA and PSA, in which all external mixer settings including Center Frequency are lost when you turn off External Mixing or Preset the instrument.

X-series instruments have a combined LO Out/IF In connection, whereas earlier instruments used separate ports for the LO Out and the IF in. Internal diplexers in the instrument and the mixer simplify the connection for users – only a single SMA cable is required.

6 Input/Output
6.2 Input

Legacy HP/Agilent and some third-party mixers have separate LO In and IF out connections. This requires you to use an external diplexer to connect these mixers. A diplexer can easily be purchased for this purpose (for example, Diplexer Model # DPL.26 or # DPL.313B from OML Inc., Morgan Hill, California, USA).

The connection diagram for such a legacy mixer is:

In addition, External Mixing in the X-Series supports the new Keysight M1970 series of Harmonic Mixers, which provide a USB connection for download of calibration data and additional control.

The connection diagram for one of the Keysight USB mixers is:

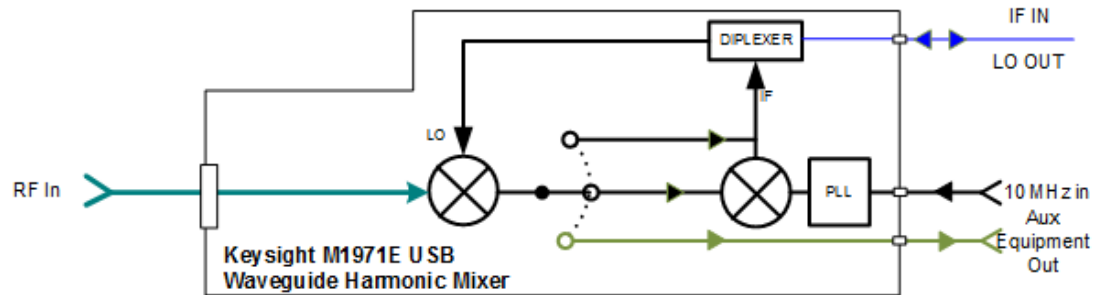

Also available in the M197x series are the M1971 series USB Mixers, which provide additional inputs and outputs for special functionality as described below. These mixers have multiple signal paths which allow them to function in three different states:

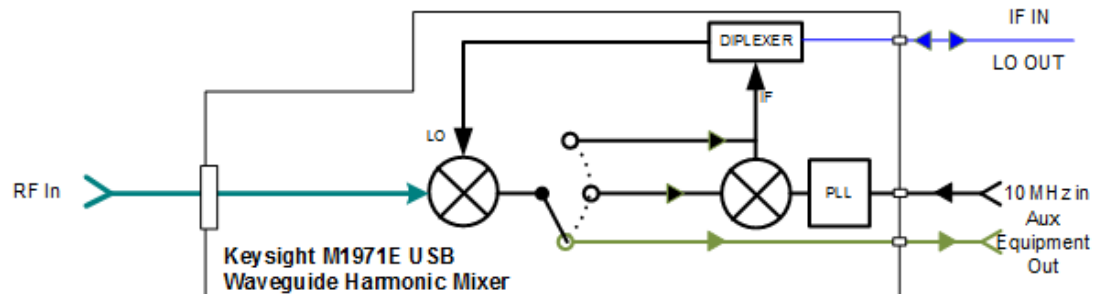

- Normal, in which the mixer functions as a classic external mixer with a single conversion:

- Dual Conversion, which gives you a wider image-free range. In Dual Conversion, the first conversion is to a higher IF frequency and you provide a 10 MHz signal to which an internal PLL is locked, to effect a second downconversion:

- Aux Equipment, wherein the first mixer output drives an output connector on the mixer and the instrument is out of the circuit:

External Mixing is only supported in certain Modes and Measurements in the X-Series, as shown in the table below. When External Mixer is selected in a

6 Input/Output
6.2 Input

measurement that does not support it, the "No result; Meas invalid with Ext Mixing" error condition occurs:

| Mode | Measurements | Sig ID (Image Suppress only) |
|------------------------|-------------------------|------------------------------|
| Spectrum Analyzer | Swept SA | Y* |
| | TOI | Y |
| | Harmonics | N |
| | Spurious Emissions | Y |
| | Channel Power | Y |
| | Occupied BW | Y |
| | ACP | Y |
| | Spectrum Emissions Mask | Y |
| | CCDF | N |
| | Burst Power | N |
| | List Sweep | N |
| Phase Noise | Monitor Spectrum | Y |
| | Log Plot | Y |
| | Spot Frequency | N |
| | Waveform | N |
| I/Q Analyzer | Complex Spectrum | N |
| | Waveform | N |
| Vector Signal Analyzer | Vector Analysis | N |
| | Analog Demod | N |
| | Digital Demod | N |
| Analog Demod | AM | N |
| | FM | N |
| | PM | N |
| | FM Stereo | N |

* the Swept SA measurement also supports Image Shift

I/Q

Selects the front-panel I/Q input ports to be the instrument signal input. If I/Q is already selected, pressing this key accesses the I/Q setup menu.

The Baseband I/Q functionality is a hardware option. It is option BBA. If the option is not installed, none of the I/Q functionality is enabled.

The Baseband I/Q has four input ports and one output port. The input ports are I, I-bar, Q, and Q-bar. The I and I-bar together compose the I channel, and the Q and Q-

bar together compose the Q channel. Each channel has two modes of operation, Single-Ended (also called "unbalanced") and Differential Input (also called "balanced"). When in Single-Ended operation, only the main port (I or Q) is used, and the complementary port (I-bar or Q-bar) is ignored. When in Differential Input mode, both main and complementary ports are used.

The input settings (range, attenuation, skew, impedance, external gain) apply to the channels, not the individual ports.

The system supports a variety of 1 M Ω input passive probes as well as the Keysight 113x Series active differential probes using the Infinimax probe interface.

The Keysight 113x Series active probes can be used for both single ended and differential measurements. In either case a single connection is made for each channel (on either the I or Q input). The input is automatically configured to 50 Ω single ended and the probe power is supplied through the Infinimax interface. The probe can be configured for a variety of input coupling and low frequency rejection modes. In addition, a wide range of offset voltages and probe attenuation accessories are supported at the probe interface. The active probe has the advantage that it does not significantly load the circuit under test, even with unity gain probing.

With passive 1 M Ω probes, the probe will introduce a capacitive load on the circuit, unless higher attenuation is used at the probe interface. Higher attenuation reduces the signal level and degrades the signal-to-noise-ratio of the measurement. Passive probes are available with a variety of attenuation values for a moderate cost. Most Keysight passive probes can be automatically identified by the system, setting the input impedance setting required as well as the nominal attenuation. For single ended measurements a single probe is used for each channel. Other passive probes can be used, with the attenuation and impedance settings configured manually.

For full differential measurements, the system supports probes on each of the four inputs. The attenuation of the probes should be the same for good common mode rejection and channel match.

Both active and passive probes in single ended and differential configurations can be calibrated. This calibration uses the Cal Out BNC connection and a probe connection accessory. The calibration achieves excellent absolute gain flatness in a probed measurement. It matches both the gain and frequency response of the I and Q channels as well as any delay skew, resulting in high accuracy in derived measurements such as Error Vector Magnitude (EVM).

When a probe is connected a status message will be displayed. The message will indicate if calibration data is available or not. Calibration data is saved for each type of probe (including "none") for each port and will be reapplied whenever that type of probe is re-connected to the same port. For probes with EEPROM identification, the calibration data will be stored based on the unique probe identifier and will reapply data for that particular probe if it is available. The data will not follow a probe from one port to another. For probes without EEPROM identification, the instrument

6 Input/Output

6.2 Input

cannot distinguish between different probes of the same type, and it will use the data from the last calibration for that probe type on that port.

When in differential mode, both the main and complementary probes are expected to be of the same type.

In some situations, the I and Q channels should be configured identically. In other situations, it is convenient to control them independently. Some menus have a "Q Same as I" setting that will cause the Q channel configuration to mirror the I channel configuration, avoiding the overhead of double data entry when the channels should be the same.

The output port is for calibrating the I/Q input ports, although it can also be manually controlled.

There are two types of calibrations available: cable calibration and probe calibration. The cable calibration will guide the user through connecting each input port in turn. All ports must be calibrated together. The probe calibration is done for a specific channel (I or Q). If in Single-Ended mode, only the main port is calibrated. When in Differential Input mode, the user is guided through calibrating both main and complementary ports.

The front panel I/Q port LEDs indicate the current state of that port. On (green) indicates it is active, and off (dark) indicates it is not in use. For example, the Cal Out port LED is on if and only if there is signal coming out of that port.

The input is a context, and some parameters have separate values for each context. The SCPI for these parameters has an optional "[:RF|IQ]" node. If the specific context is omitted, the command acts on the current input context's value. Here are the parameters that are input context sensitive:

- Center Frequency
- Trigger Source

It is important to distinguish between the I and Q input ports and the displayed I and Q data values. The I and Q input ports feed into a digital receiver that does digital tuning and filtering. The I and Q data seen by the user (either on the display or through SCPI) corresponds to the real ("I") and the imaginary ("Q") output from the digital receiver. When the input path is I+jQ or I Only and the center frequency is 0 Hz the I input ends up in as the real output from the receiver and appears as "I" data. Likewise, when the input path is I+jQ and the center frequency is 0 Hz, the Q input ends up as the imaginary output from the receiver and appears as "Q" data. However, when the input path is Q Only, the Q input is sent to the receiver as Q+j0, so the receiver output has the Q input coming out on the real output, and so in Q Only, the signal from the Q input port appears as the "I" data. Another situation where the I and Q data do not necessarily correspond directly to the I and Q inputs is when the center frequency is non-zero. The digital processing involved in the tuning

is a complex operation. This will result in I Only data appearing as both "I" and "Q" data, the same as that signal would appear if seen through the RF input port.

BBIQ is only supported in certain Modes and Measurements in the X-Series. When I/Q is selected in a measurement that does not support it, the "No Result; Meas invalid with I/Q inputs" message appears. This is error 135

Baseband I/Q Remote Language Compatibility

For the Agilent E4406A VSA Series Transmitter Tester, Option B7C provided baseband I/Q inputs. Code compatibility has been provided to allow many of the commands for Option B7C to function properly with X-Series. X-Series has hardware differences and additional capabilities (for example, E4406A does not have independent settings of I & Q, nor does it provide for probe calibrations), which make 100% compatibility impossible.

The following commands are supported:

```
:CALibration:IQ:FLATness
```

```
:INPut:IMPedance:IQ U50 | B50 | U1M | B1M
```

```
:INPut:IMPedance:REFerence <integer>
```

[:SENSe]:FEED RF | IQ | IONLY | QONLY | AREFERENCE | IFALIgn supports all parameters except IFALIgn. The FEED? query returns only RF | AIQ | AREF.

The following commands are not supported:

```
:CALibration:GIQ
```

```
:CALibration:IQ:CMR
```

```
:INPut:IQ:ALIGn OFF | ON | 0 | 1
```

The Rohde & Schwarz FSQ-B71 also provides baseband I/Q inputs. A certain amount of code compatibility is provided in X-Series, but hardware differences make this a somewhat limited set.

Supported:

The "<1|2>" is supported as "[1]".

```
INPut<1|2>:IQ:BALAnced[:STATe] ON | OFF
```

```
INPut<1|2>:IQ:TYPE I | Q | IQ
```

```
INPut<1|2>:IQ:IMPedance LOW | HIGH
```

Not Supported:

```
DIAGnostic<1|2>:SERVice:IQ:CALibration:DC 0 | 0.1 | 0.178 | 0.316 | 0.562 | 1.0
```

```
DIAGnostic<1|2>:SERVice:IQ:CALibration:DESTination IHIGH | ILOW | QHIGH | QLOW
```

```
DIAGnostic<1|2>:SERVice:IQ:CALibration:PULSe: PRATe 10 kHz | ... | 4 MHz
```

```
DIAGnostic<1|2>:SERVice:IQ:INPut IQ | GND | CALDc | CALPulse
```

6 Input/Output

6.2 Input

```
INPut<1|2>:SElect AIQ | RF
TRACe<1|2>:IQ:DATA:FORMat COMPatible | IQBlock | IQPair>
TRACe<1|2>:IQ:DATA:MEMory? <offset samples>,<# of samples>
TRACe<1|2>:IQ:DATA?
TRACe<1|2>:IQ:SET <filter type>,<rbw>,<sample rate>,<trigger source>,<trigger
slope>,<pretrigger samples>,<# of samples>
TRACe<1|2>:IQ:SRATe 10.0kHz to 81.6MHz
TRACe<1|2>:IQ[:STATe] ON | OFF
```

The Rohde & Schwarz FMU has the following SCPI, which is *not* supported (these commands start/abort the probe calibration procedure, which is manually interactive from the front panel):

```
CALibration:ABORT
CALibration:PROBe[:START]
```

6.2.2 RF Input Port

Specifies the RF input port used. Only appears on units with multiple RF inputs, and lets you switch between the inputs.

Instruments that include multiple RF Input ports include:

- N9041B
- N9000B (CXA)
- N9048B (PXE)
- VXT, M941xE and EXM
- M8920A/20B
- E7760B

NOTE

Switching input ports may change the receiver performance of the instrument.

See ["Instruments with 2 Inputs" on page 2159](#)

Remote Command `[:SENSe]:FEED[:RF]:PORT[:INPut] <port>`

For instrument-specific definitions of `<port>`, see:

["Parameters for UXA/PXA/MXA/EXA/CXA/MXE/PXE/NFA" on page 2159](#)

["Parameters for EXT, EXF and EXM Wireless Test Sets" on page 2160](#)

| | |
|--------------|---|
| | <p>"Parameters for VXT M9410A/11A/15A16A, M9410E/11E/15E/16E and M9420A Vector Transceivers" on page 2160</p> <p>"Parameters for VXT M9410A/11A/15A/16A and EXM when used with Radio Heads/CIU" on page 2162</p> <p>"Parameters for E7760B Wideband Transceiver" on page 2165</p> <p>"Parameters for M8920A/20B Radio Test Set" on page 2166</p> <p>"Parameters for UXM Wireless Test Set" on page 2166</p> <p><code>[:SENSe] : FEED [:RF] : PORT [:INPut] ?</code></p> |
| Example | <p>Use the port labeled RF Input when the selected input is RF: <code>:FEED:RF:PORT RFIN</code></p> <p>Use the port labeled RF Input 2 when the selected input is RF: <code>:FEED:RF:PORT RFIN2</code></p> |
| Dependencies | <p>Only appears when RF Input is selected as the Input</p> <p>Only appears in models that support multiple inputs. If the SCPI command is sent with unsupported parameters in any other model, an error is generated, -221, "Settings conflict; option not installed"</p> <p>When any input is selected in a measurement that does not support it, the "No result; Meas invalid with this input" error condition occurs, and the measurement returns invalid data when queried</p> |
| Couplings | <p>When switching between inputs, you may find the new input has a different frequency range than the current input. This means the frequency at the new input may be limited, depending on where you were tuned</p> <p>When you switch from an input whose maximum frequency is greater than the input to which you are switching:</p> <ol style="list-style-type: none"> 1. If the current Stop Freq is below the Max Freq for the new input, then neither Stop Freq or Start Freq needs to change 2. But if the current Stop Freq is above the Max Freq for the new input, Stop Freq must change; so, it is set to the Max Freq for the new input 3. If the Stop Freq is forced to change then, if possible, the Span is preserved with the new Stop Freq; however, the Start Freq can't go below zero <p>Example: Input 2 has a Max Freq of 110 GHz and Input 1 has a Max Freq of 52 GHz</p> <p>Case 1: Input 2 is selected and Start Freq=40 GHz, Stop Freq=60 GHz. Change to Input 1. Stop Freq changes to 52 GHz so, to preserve Span, Start Freq is set to 32 GHz</p> <p>Case 2: Input 2 is selected and Start Freq=40 GHz, Stop Freq=110 GHz. Change to Input 1. Stop Freq changes to 52 GHz. Span was 70 GHz, but new Span maximum is 52 GHz so Start Freq is set to 0 Hz</p> <p>Case 3: Input 2 is selected and Start Freq=10 GHz, Stop Freq=20 GHz. Change to Input 1. No change is necessary, Start Freq and Stop Freq don't change</p> |
| Preset | <p>Unaffected by Mode Preset, but set to <code>RFIN</code> on Restore Input/Output Defaults or Restore System Defaults -> All, unless noted in the platform-specific sections below</p> |
| State Saved | <p>Saved in instrument state</p> |
| Annotation | <p>Annotation in the Meas Bar reads as follows: When input is RF In: Input: RF</p> |

6 Input/Output
6.2 Input

When input is RF In 2: Input: RF2

Backwards `:INPut<1|2>:TYPE INPUT1 | INPUT2`
 Compatibility SCPI `:INPut<1|2>:TYPE?`

Included for R&S ESU compatibility. In MXE, the INPUT1 parameter is aliased to RFIN and the INPUT2 parameter is aliased to RFIN2

Instruments with 2 Inputs

In models with two inputs, the second input usually has a different maximum frequency than the first input. For your convenience, the actual “Max Freq” value is allowed to go slightly higher than the nominal Max Freq for the second input, just as is the case with the first input.

| Model | Nominal Input 2 Max Freq | Absolute Input 2 Max Freq | Transition rule for switching from Input 1 to Input 2 |
|------------------------|--------------------------|---------------------------|--|
| N9038A | 1 GHz | 1.000025 GHz | If Stop Freq is above 1.000025 GHz, it is set to 1.000025 GHz, otherwise it does not change If Start Freq is above 1.000024990 Hz, Start Freq is set to 1.000024990 Hz and Span to 10 Hz, otherwise nothing changes |
| N9000A with option C75 | 1.5 GHz | 1.58 GHz | If Stop Freq is above 1.58 GHz, it is set to 1.58 GHz, otherwise it does not change If Start Freq is above 1.579999990 GHz, Start Freq is set to 1.579999990 GHz and Span to 10 Hz, otherwise nothing changes |

Parameters for UXA/PXA/MXA/EXA/CXA/MXE/PXE/NFA

| <port> | Input |
|--------|-------------|
| RFIN | RF Input |
| RFIN2 | RF Input 2 |
| ERFIN | External RF |

Example Set the RF input to be RF Input:
`:FEED:RF:PORT RFIN`
 Set the RF input to be RF Input 2 if that port exists:
`:FEED:RF:PORT RFIN2`
 Set the RF input to be External RF if the V3050A unit is connected:
`:FEED:RF:PORT ERFIN`

Dependencies If the command is sent with **RFIN2** or **ERFIN** and that port does not exist, an error is generated, -221, “Settings conflict; option not installed”
ERFIN requires option “EXW”

| | |
|------------|---|
| Couplings | Connecting a V3050A changes the Preset to ERFIN and automatically switches the input to ERFIN . Disconnecting the V3050A changes the Preset back to RFIN and automatically switches the input to RFIN |
| Preset | ERFIN when V3050A is connected, otherwise RFIN |
| Annotation | Annotation in the Meas Bar reads as follows: <ul style="list-style-type: none"> - When input is RFIN: Input: RF - When input is RFIN2: Input: RF2 - When input is ERFIN: Input: Ext RF |

Parameters for EXT, EXF and EXM Wireless Test Sets

| <port> | Input |
|--------------|---------|
| RFIO1 | RFIO 1 |
| RFIO2 | RFIO 2 |
| RFIO3 | RF3 I O |
| RFIO4 | RF4 I O |

See also "[Parameters for VXT M9410A/11A/15A/16A and EXM when used with Radio Heads/CIU](#)" on page 2162

| | |
|--------------|---|
| Example | Set the RF input to RFIO 1: :FEED:RF:PORT RFIO1 |
| Dependencies | In EXF, or in EXM with hardware M9430A, if RF Input is selected as RF Input Port, you need to choose the settings in the Half Duplex Config menu to determine which port (RFIO3 or RFIO4) will be used In EXM with hardware M9431A, this setting is not supported. If the SCPI command is sent with this setting, an error is generated, -221, "Settings conflict; option not installed" |
| Preset | RFIO1 |
| Annotation | Annotation in the Meas Bar reads as follows: <ul style="list-style-type: none"> - When input is RFIO1: Input: RFIO1 - When input is RFIO2: Input: RFIO2 - When input is RFIO3: Input: RFIO3 - When input is RFIO4: Input: RFIO4 |

Parameters for VXT M9410A/11A/15A/16A, M9410E/11E/15E/16E and M9420A Vector Transceivers

| <port> | Input |
|-------------|----------|
| RFIN | RF Input |

6 Input/Output
6.2 Input

| <port> | Input |
|--------|----------------------|
| RFFD | RFIO FD |
| RFHD | RFIO HD, Half Duplex |

Example

```
:FEED:RF:PORT RFIN
:FEED:RF:PORT RFFD
:FEED:RF:PORT RFHD
:FEED:RF:PORT NONE
```

Notes

RFIN sets the RF input to be the RF Input port, labeled RF Input

RFFD sets the RF input to be the full duplex port, labeled RFIO FD. Note that Option “FDX” is required to enable this port

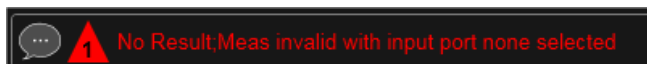

RFHD sets the RF input to be the half duplex port, labeled Half Duplex (M9410A/11A/15A/16A) or RFIO HD (M9420A)

M9410E/11E/15E/16E also has HD port, which is the HD port on M9471A module

NONE sets the RF In port and Half Duplex port (if HD Port is not set to RF Output) to connect to 50Ω load, as shown below:

When using Source only, set RF Input to **NONE** to provide better isolation. When the input port is set to **NONE**, an error appears in the status area:

Dependencies

Option HDX is required to enable the Half Duplex (RFIO HD) port

You cannot set this port to be the input if it is already set to be the output. Attempting to do so generates error message: “-221, Settings conflict; RF Input cannot be set to RFIO HD when RF Output is RFIO HD”

NONE is not available in VXT model M9420A

Preset

RFIN

Annotation

Annotation in the Meas Bar reads as follows:

When input is RF Input: Input: RF

When input is RFIO FD: Input: RFFD

When input is RFIO HD or Half Duplex: Input: RFHD

When input is None: Input: NONE

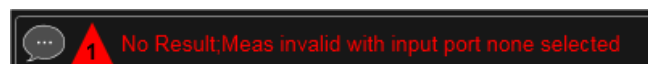

Parameters for VXT M9410A/11A/15A/16A and EXM when used with Radio Heads/CIU

| <port> | Input |
|-----------|---|
| RRHhRFHDp | Head <i>h</i> , RF Tx/Rx <i>p</i> , for example RRH1RFHD2 = Head 1, RF Tx/Rx 2 |
| IFINn | DUT IF IN for Channel <i>n</i> , for example IFIN1 = DUT IF IN for Channel 1 |
| IFHDn | DUT IF In/Out for Channel <i>n</i> , for example IFHD1 = DUT IF In/Out for Channel 1 |

When using a Remote Radio Head (RRH), such as the Keysight M1740A mmWave Transceiver for 5G, with the VXT or EXM, the choices in the dropdown are dependent on which heads are installed. For example, in the case where two M1740As are present, each with two ports, the dropdown will look like this:

Note the inclusion of the **None** choice, which allows the input port to become unassigned, and thus allows any Output port to be assigned without concern about an Input port conflict. When the input port is unassigned, an error appears in the status area:

The user interface parameter RFHD *p* corresponds to the port labeled RF Tx/Rx *p*; for example, RFHD 2 means the port labeled RF Tx/Rx 2 on the M1740A.

When using a E7770A Common Interface Unit, you may make connections to the half-duplex port on the front of the CIU labeled DUT IF In/Out, and/or to ports on the rear of the CIU labeled DUT IF IN and DUT IF OUT. For example, if your DUT has an IF Output you will usually connect it to one of the DUT IF IN ports on the rear panel of the CIU. The user interface parameter IFIN *n* corresponds to the DUT IF IN port for Channel *n* on the CIU, so you would choose IFIN 1 in the dropdown to

6 Input/Output
6.2 Input

connect to the DUT IF IN port for Channel 1, and the corresponding SCPI parameter would be IFIN1. See the figure below:

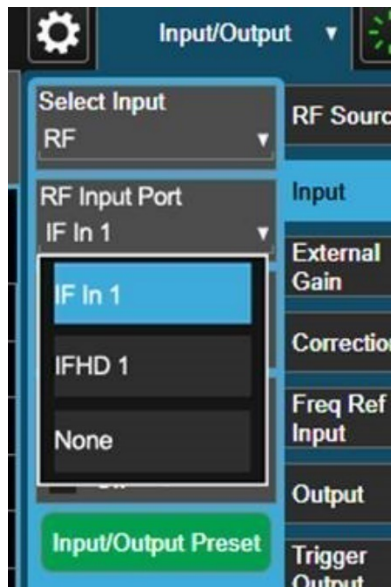

The following table lists the GUI parameter for each input or output on the CIU, and the SCPI parameter for the RF Input Port command (`[:SENSe] :FEED[:RF] :PORT [:INPut]`) and the RF Output Port command (`[:SENSe] :FEED:RF:PORT:OUTPut`):

| Port | Port name on CIU | Name displayed in GUI | SCPI parameter for RF Input Port and Output Port commands |
|----------------------|------------------|-----------------------|---|
| IF input port | DUT IF IN | IF In n | <code>IFINn</code> , for example <code>IFIN1</code> |
| IF output port | DUT IF OUT | IF Out n | <code>IFOutn</code> , for example <code>IFO1</code> |
| IF port, half duplex | DUT IF In/Out | IFHD n | <code>IFHDn</code> , for example, <code>IFHD1</code> |

NOTE

The value of n for each port, in the multiple-port use case, may vary according to your system configuration. For the value of n for your use case, consult the Startup Guide for your particular system (for example S9100A).

An example of the GUI for the CIU ports appears below:

| | |
|--------------|--|
| Example | <p>Set the RF input to be the port labeled RF Tx/Rx 2 on Head 1: :FEED:RF:PORT RRH1RFHD2</p> <p>Set the RF input to be the Channel 1 port labeled DUT IF IN on the CIU: :FEED:RF:PORT IFIN1</p> |
| Notes | <p>Parameter RRHhRFHDp corresponds to Head h, port RF Tx/Rx p; for example, RRH1RFHD2 = the port labeled RF Tx/Rx 2 on Head 1</p> <p>For the CIU, the parameter IFINc corresponds to the DUT IF IN for channel c. For example, IFIN1 would connect to the DUT IF IN port for Channel 1</p> |
| Dependencies | <p>The Radio Head and CIU parameters only appear when a Remote Radio Head or CIU is connected to the instrument. If these parameters are sent at any other time, an error is generated, “-221, Settings conflict; option not installed”</p> |
| Preset | RRH1RFHD1 |
| Annotation | <p>Annotation in the Meas Bar reads as follows: Input:Hd <i>h</i> RFHD <i>p</i></p> <p>For example, in the case above, with RFHD 2 on Head 1 selected: Input:Hd 1 RFHD 1</p> <p>When using the CIU:</p> <ul style="list-style-type: none"> - When input is IFIN1: Input: IFIN 1 - When input is IFIN2: Input: IFIN 2 - When input is IFIN3: Input: IFIN 3 - When input is IFIN4: Input: IFIN 4 |
| Backwards | :FEED:RF:PORT A1 |

6 Input/Output
6.2 Input

Compatibility SCPI A1 is treated as RRH1RFHD1 and sets the RF input to be the port labeled RF Tx/Rx 1 on Head 1
:FEED:RF:PORT B1

B1 is treated as RRH1RFHD2 and sets the RF input to be the port labeled RF Tx/Rx 2 on Head 1
:FEED:RF:PORT IFIO2

IFIO2 is treated as IFIN1, and sets the IF input to be the port labeled “DUT IF In/Out” on the CIU rear panel

Parameters for E7760B Wideband Transceiver

| <port> | Input |
|----------|---|
| A n | Bank A, Channel n , for example A1 |
| B n | Bank B, Channel n , for example B1 |
| IFIO n | IF In/Out for Channel n , for example IFIO1 |

Example Set the RF input to A1:
:FEED:RF:PORT A1

Set the RF input to B3:
:FEED:RF:PORT B3

Set the RF input to IFIO1:
:FEED:RF:PORT IFIO1

Dependencies Ports A1, A2, A3, B1, B2, and B3 are available if Option RF3 is installed. Ports IFIO1 and IFIO2 are available if option RF2 is installed

Note that for E7760B:

- Attempting to select a port for which the option is not present will generate the error, -241, “Hardware missing; Input not available”
- A port cannot be selected as an Input while it is occupied as an Output. Sending such a command while the port is occupied generates error: -221, “Settings conflict; Input Port is not available while occupied by Output”
- The mmWave ports are divided into two banks; the A Bank and the B Bank. A port cannot be selected as an Input if any port on the same bank is occupied as an Output. Sending a command for this situation generates error: -221 “Settings conflict; Input Port is not available while port bank is occupied by Output”

If RF3 is present and RF4 is absent, a mmWave port cannot be selected as an Input if the Output Port is occupied by mmWave Transceiver with a different frequency range. Sending a command for this situation generates error: -221 “Settings conflict; Input Port is not available while occupied by Output of incompatible frequency”

Preset E7760B with Option RF2: IFIO1
E7760B without Option RF2: the first port with mmWave Transceiver attached. If no mmWave Transceiver attached: NONE

Annotation Annotation in the Meas Bar reads as follows:

- When input is A1: Input: A1
- When input is A2: Input: A2
- When input is A3: Input: A3
- When input is B1: Input: B2
- When input is B2: Input: B2
- When input is B3: Input: B3
- When input is IFIO1: Input: IFIO1
- When input is IFIO2: Input: IFIO2

Parameters for M8920A/20B Radio Test Set

| <port> | Input |
|--------|-------|
| ANT | Ant |
| TR | T/R |

Example Set the RF input to be the Antenna port on M9470A, labeled **Ant**:
`:FEED:RF:PORT ANT`

Set the RF input to be the T/R port on M9470A and M8920A/20B, labeled **T/R**. Note that Option HDX is required to enable the T/R port:
`:FEED:RF:PORT TR`

Dependencies **ANT** and **TR** are only available in modular analyzers, and only when the M9470A module is installed, such as in M8920A. Option HDX is required to enable the T/R port

Preset **ANT**

Annotation Annotation in the Meas Bar reads as follows:

- When input is Ant: Input: Ant
- When input is T/R: Input: T/R

Parameters for UXM Wireless Test Set

| <port> | Input |
|--------|----------|
| RFIN | RF Input |
| RFIO1 | RFIO 1 |
| RFIO2 | RFIO 2 |

Example Set the RF input to RFIO 2:
`:FEED:RF:PORT RFIO2`

Preset **RFIN**

6.2.3 SA Frequency Extender Firmware Update (Front Panel Only)

When a Frequency Extender device (for example, V3050A) is connected and selected, if a firmware update is available for that device, this control will be visible. Because the measurement will be stopped for the duration of the firmware update, and because the update cannot be un-done, a confirmation dialog will be presented before proceeding with the firmware update. The update can take some time, so while in process, a modal dialog will be shown indicating that the update is in process and warning not to disconnect the device or turn off power. Typically, the update will take about a minute, but time can vary with the model of the Frequency Extender. When complete, the modal dialog will be dismissed, and a pop-up message will be shown for a few seconds indicating the success or failure of the update.

See ["Error Messages" on page 2167](#)

| | |
|--------------|---|
| Notes | Measurement is stopped while the update is in process |
| Dependencies | Not available unless an External RF device is connected, External RF is the selected RF Input Port, and there is a firmware update available for the device |

Error Messages

Update Already in Process Error

If a firmware update is already in process, the following message is displayed:

```
Another external device FW update is already in process. Only one update is allowed at a time
```

If received, wait until the current FW update is complete and then try again if still needed.

Unknown Assembly Error

When updating the firmware, the target hardware assembly needs to be identified. If for some reason the assembly cannot be identified, the firmware will not be able to initiate the update, and this error message will be displayed:

```
Error updating FW for external device model <model number>' serial number <serial number>
```

```
Could not find HW assembly, cannot perform FW update
```

The `<model number>` and `<serial number>` contain the actual numbers for the device.

This is a failure that warrants investigation, so you should contact Keysight Customer Support for service.

Error During Firmware Update Process

If there is an execution problem during the FW update, the specific error message(s) is written to the SA Event Log and this error message is displayed:

```
Error updating FW for external device model <model number>' serial number
<serial number>
```

Error during FW update. See windows event log for more details

The <model number> and <serial number> contain the actual numbers for the device.

6.2.4 SA Frequency Extender Cable Correction

An SA Frequency Extender, such as V3050A, is attached to the instrument with several cables. Keysight provides several cables for purchase with the frequency extender. Typically, these are 1-, 2-, or 3-meter cables for the RF and IF connections. Keysight has characterized these cables and can correct for their loss. This control allows you to specify which cable is being used.

If you are using another type of cable, the instrument *cannot* automatically correct for it, so this function must be set to **OFF**. In this case, you can use RCal to characterize the corrections.

| | |
|----------------|--|
| Remote Command | <code>:INPut:FEXtender:CABLe:CORRection OFF V3050A1M V3050A2M V3050A3M</code> |
| Example | <code>:INP:FEXT:CABL:CORR V3050A1M</code> |
| Notes | The RF Input Port selections that support an SA Frequency Extender (such as V3050A) are: N9042B: External RF No other instruments support an SA Frequency Extender |
| Dependencies | An SA Frequency Extender must be attached, and the frequency extender's port must be the selected input for this control to be visible <ul style="list-style-type: none"> - If the instrument does not support frequency extenders, the SCPI command returns error -241, "Hardware missing; option not available" - If the instrument does support frequency extenders, but a frequency extender is not attached, the SCPI command returns error -241, "Hardware missing; Cable selection only available when supporting frequency extender attached" <p>When a frequency extender is attached, the control is not visible unless the frequency extender's port is the selected RF input, but the command will still be available. Setting the cable selection when the frequency extender's port is not active has no effect until the port is selected</p> |
| Preset | Unaffected by Mode Preset but set to preset value by Restore Input/Output Defaults or Restore System Defaults -> All |
| State Saved | Saved in instrument state |

6.2.5 Half Duplex Input Port

Specify whether **RFIO3** or **RFIO4** is the Half Duplex Input port.

6 Input/Output
6.2 Input

| | |
|----------------|---|
| Remote Command | <code>[:SENSe]:HDUPlex:PORT:INPut RFI03 RFI04</code> |
| Example | <code>:HDUPlex:PORT:INPut RFI03</code> <code>:HDUPlex:PORT:INPut?</code> |
| Dependencies | Only appears in EXM If RFI03 is selected as “Half Duplex Output Port”, then “Half Duplex Input Port” will be set to RFI04 automatically. If RFI04 is selected as “Half Duplex Output Port”, then “Half Duplex Input Port” will be set to RFI03 automatically |
| Preset | RFI03 |
| State Saved | Saved in State |

6.2.6 Port Information (Remote Command Only)

Provides information about an instrument port. The return information consists of two comma-separated fields:

- Field 1: the connection status (0 or 1)
- Field 2: a string of port information

The return information is device-dependent.

| | |
|----------------|--|
| Remote Command | <code>[:SENSe]:FEED[:RF]:PORT:INformation? RFIN RFIN2 RFFD RFHD A1 A2 A3 B1 B2 B3 IFIO1 IFIO2 ANT TR</code> |
| Example | <code>:FEED:PORT:INF? A1</code> example = 1 , ”US56160060” where 1 is the connection status and ”US56160060” is the port information |
| Notes | For E7760B: The connection status (first field in the return value) indicates: 0 – the port is either not licensed for use or is not connected to a mmWave Transceiver 1 – the port is licensed; and for the case of mmWave ports, the port is connected to a mmWave Transceiver The port information (second field in the return value) contains: ” (empty string) – no applicable information Serial Number – the serial number of the connected mmWave Transceiver If you send an incompatible parameter, the return values are: 0,” |
| Dependencies | Only valid for E7760B |

6.2.7 RF Preselector

In models that support the RF Preselector, such as PXE (N9048B), allows you to turn the preselector on or off.

NOTE

When using the RF Preselector, if your measurement starts below 3.6 GHz and finishes above 3.6 GHz, the preselector bypass switch will have to switch in and out for every measurement. When this is the case, you will hear a clicking sound from the instrument and a warning message will be displayed: “Settings Alert: Mechanical switch cycling”. You are advised to *avoid* such setups as much as possible, to minimize switch wear. Pressing **Mode Preset** resets Stop Freq to 3.6 GHz, to exit this state, or you can manually set Stop Freq to be below 3.6 GHz.

| | |
|------------------------------|---|
| Remote Command | <code>[:SENSe]:POWer[:RF]:RFPSelector[:STATe] 1 0 ON OFF</code> <code>[:SENSe]:POWer[:RF]:RFPSelector[:STATe]?</code> |
| Example | <code>:POW:RFPS 1</code> <code>:INP:PRES:STAT ON</code> |
| Notes | Set full compliance measurement: <code>[:SENSe]:POWer[:RF]:RFPSelector[:STATe] 1 ON</code> Set pre-compliance measurement: <code>[:SENSe]:POWer[:RF]:RFPSelector[:STATe] 0 OFF</code> |
| Dependencies | Only appears when RF Input is selected as the Input Only appears in MXE and PXE The RF Preselector is not available in all measurements. The key is grayed out in measurements that do not support it, unless you are in a Mode in which no measurements support it, in which case the key does not appear at all. If the preselector is unavailable, it is forced to Off. Attempting to turn it on or off in measurements that do not support it generates the error message: -221, Settings conflict; Feature not supported for this measurement The RF Preselector is not available when FFT Sweep Type is manually selected. Attempting to turn it on or off when this is the case generates an error message: -221, Settings conflict; RF Presel unavailable when Sweep Type=Manual FFT Only appears in Modes that support the RF Preselector, in other Modes, sending the SCPI command or query generates an error In Frequency Scan measurement, this key is grayed-out when final measurement is running. Warning message “Function not available while measurement is running” appears if the grayed-out key is pressed |
| Preset | ON |
| Annotation | When RF Preselector=On, “RF PRESEL” is displayed on the Settings Panel |
| Backwards Compatibility SCPI | <code>:INPut<1 2>:PRESelection[:STATe] ON OFF</code> <code>:INPut<1 2>:PRESelection[:STATe]?</code> Included for R&S ESU compatibility |

6.2.8 Notch Filter

In some models that support the RF Preselector, such as PXE, there is also a notch filter to suppress signals in the frequency band from 2.4 GHz to 2.5 GHz. This control allows you to turn the notch filter on or off.

| | |
|--------------------|--|
| Remote Command | <code>[:SENSe]:POWer[:RF]:RFPSelector:NFIlter[:STATe] OFF ON 0 1</code> <code>[:SENSe]:POWer[:RF]:RFPSelector:NFIlter[:STATe]?</code> |
| Example | <code>:POW:RFPS:NFIL 1</code> <code>:POW:RFPS:NFIL?</code> |
| Dependencies | <p>Only appears when RF Input is selected as the Input</p> <p>Only appears in models that support the notch filter, such as PXE. Attempting to turn it on or off via SCPI in models that do not support it generates error message: -241 Hardware missing; Not available for this model number</p> <p>Only appears in measurements that support the Notch Filter, such as EMI Receiver measurements. Attempting to turn it on or off via SCPI in measurements that do not support it generates error message: -221, Settings conflict; Feature not supported for this measurement</p> <p>In Frequency Scan measurement, this control is grayed-out when final measurement is running, aligned with the RF Preselector key. The warning message "Function not available while measurement is running" appears if the grayed-out control is pressed</p> |
| Preset | <code>OFF</code> |
| State Saved | Saved in instrument state |
| Range | <code>OFF ON</code> |
| Annotation | <p>Due to limited space in the Measurement Bar, Notch Filter annotation is shown as part of the RF Presel state</p> <ul style="list-style-type: none"> - <code>RF Presel: On, NF</code>, when both RF Presel and Notch Filter are turned on - <code>RF Presel: On</code>, when RF Presel = on and Notch Filter= off - <code>RF Presel: Off</code>, when RF Presel = off |
| Backwards | <code>:INPut<1 2>:PRESelection:FILTer:NOTCh[:STATe] ON OFF</code> |
| Compatibility SCPI | <code>:INPut<1 2>:PRESelection:FILTer:NOTCh[:STATe]?</code> |

6.2.9 RF Calibrator

Lets you choose a calibrator signal to look at or turns the calibrator off.

| | |
|----------------|---|
| Remote Command | <code>[:SENSe]:FEED:AREFERENCE REF50 REF4800 OFF</code> <code>[:SENSe]:FEED:AREFERENCE?</code> |
| Example | Select the 50 MHz amplitude reference as the signal input: <code>:FEED:AREF REF50</code> |

| | |
|------------------------------|--|
| | Select the 4.8 GHz amplitude reference as the signal input: <code>:FEED:AREF REF4800</code> |
| | Turn the calibrator "off" (switches back to the selected input - RF or I/Q): <code>:FEED:AREF OFF</code> |
| Dependencies | Only appears when RF Input is selected as the Input Selecting an input (RF, Ext Mix or I/Q) turns the Calibrator OFF . This is true whether the input is selected using the menu panel or <code>[:SENSe]:FEED</code> The 4.8 GHz internal reference is only available in some models and frequency range options. If the 4.8 GHz reference is not present, the 4.8 GHz choice does not show, and if the REF4800 parameter is sent, the instrument generates an error |
| Couplings | When one of the calibrator signals is selected, the instrument routes that signal (an internal amplitude reference) to the instrument, and changes the main input selection to RF so the calibrator signal can be seen. When you turn the calibrator off it does not switch back to the previously selected input |
| Preset | OFF |
| State Saved | Saved in instrument state |
| Annunciation | An advisory message is sent, indicating that the input is set to internal |
| Backwards Compatibility SCPI | |
| Notes | For ESA backwards compatibility In the ESA the calibrator was a separate output which you connected to the input and switched on with this command In X-Series, the ON parameter is aliased to <code>[:SENSe]:FEED:AREF REF50</code> and the OFF parameter is aliased to <code>[:SENSe]:FEED:AREF OFF</code> When <code>:CALibration:SOURce:STATe?</code> is received, 1 is returned if any of the references is selected, or 0 if the Calibrator is OFF |
| Preset | OFF |
| Backwards Compatibility SCPI | <code>:CALibration:SOURce:STATe OFF ON 0 1</code> <code>:CALibration:SOURce:STATe?</code> |

6.2.10 RF Coupling

Specifies alternating current (**AC**) or direct current (**DC**) coupling at the instrument RF input port. Selecting **AC** coupling switches in a blocking capacitor that blocks any DC voltage present at the instrument input. This decreases the input frequency range of the instrument, but prevents damage to the input circuitry of the instrument if there is a DC voltage present at the RF input.

NOTE

When operating in DC coupled mode, ensure protection of the instrument input circuitry by limiting the DC part of the input level to within 200 mV of 0 Vdc. In AC or DC coupling, limit the input RF power to +30 dBm (1 Watt).

6 Input/Output

6.2 Input

| | |
|----------------|--|
| Remote Command | <code>:INPut:COUPling AC DC</code> <code>:INPut:COUPling?</code> |
| Example | <code>:INP:COUP DC</code> |
| Dependencies | Only appears when RF Input is selected as the Input Does not appear in models that are always AC coupled. When the SCPI command to set DC coupling is sent to these models, it generates the error "Illegal parameter value; This model is always AC coupled" In these models, <code>:INP:COUP?</code> always returns AC Does not appear in models that are always DC coupled. When the SCPI command to set AC coupling is sent to these models, it generates the error "Illegal parameter value; This instrument is always DC coupled" In these models, <code>:INP:COUP?</code> always returns DC |
| Preset | AC on models that support AC coupling On models that are always DC coupled, such as millimeter wave models (frequency ranges 30 GHz and above), the preset is DC |
| State Saved | Saved in instrument state |

Annunciation When the RF Input is selected, and AC coupling is selected, annunciators appear in the Meas Bar to that effect:

appears in the settings panel (the row of annunciators across the top of the display) to that effect, as shown below:

When the RF Input is selected, and DC coupling is in effect, the annunciator changes as shown below:

Note the amber color, which indicates that you should exercise caution when applying a signal to any DC coupled input (see note above this table for the specific cautions)

On models that support both AC and DC coupling: when DC coupling is selected, a warning condition message appears in the status line "DC coupled" as shown below:

On models that support both AC and DC coupling: when AC coupling is selected, and any part of the displayed frequency range is below 10 MHz, a warning condition message appears in the status line: "AC: Accy unspec'd below 10 MHz"

In AC coupling mode, you can view signals below the corner frequency of the DC block, but below a certain frequency the amplitude accuracy is not specified.

The lowest frequency for which specifications apply is:

| X-Series Model | Lowest Freq for meeting specs when AC coupled | Lowest Freq for meeting specs when DC coupled |
|----------------|---|---|
| CXA-503/507 | 100 kHz | n/a |

| X-Series Model | Lowest Freq for meeting specs when AC coupled | Lowest Freq for meeting specs when DC coupled |
|-----------------|---|---|
| CXA-C75 Input 2 | 1 MHz | n/a |
| CXA-513/526 | 10 MHz | 9 kHz |
| CXA-m | 10 MHz | 9 kHz |
| EXA | 10 MHz | 9 kHz |
| MXA | 10 MHz | 20 Hz |
| PXA | 10 MHz | 3 Hz |
| UXA | 10 MHz | 3 Hz |

Some amplitude specifications apply only when coupling is set to DC. Refer to the appropriate amplitude specifications and characteristics for your instrument.

6.2.11 Input Z Correction

Sets the input impedance for unit conversions. This affects the results when the y-axis unit is voltage or current units (dBmV, dB μ V, dB μ A, V, A), but not when it is power units (dBm, W). The impedance you select is for computational purposes only, since the actual impedance is set by internal hardware to 50 ohms. Setting the computational input impedance to 75 ohms is useful when using a 75 ohm to 50-ohm adapter to measure a 75-ohm device on an instrument with a 50-ohm input impedance.

There are a variety way to make 50-to-75-ohm transitions, such as impedance transformers or minimum loss pads. The choice of the solution that is best for your measurement situation requires balancing the amount of loss that you can tolerate with the amount of measurement frequency range that you need. If you are using one of these pads/adaptors with the **Input Z Corr** function, you might also want to use the **Ext Gain** key. This function is used to set a correction value to compensate for the gain (loss) through your pad. This correction factor is applied to the displayed measurement values.

| | |
|----------------|--|
| Remote Command | <code>[:SENSe]:CORRection:IMPedance[:INPut][:MAGNitude] 50 75</code> <code>[:SENSe]:CORRection:IMPedance[:INPut][:MAGNitude]?</code> |
| Example | Set the input impedance correction to 75 ohms: <code>:CORR:IMP 75</code> |
| Couplings | In CXA option C75, when RF Input 2 is selected, the Input Z Correction automatically changes to 75 ohms. You may then change it to whatever is desired. When the main RF Input is selected, the Input Z Correction automatically changes to 50 ohms. You may then change it to whatever is desired |
| Preset | Unaffected by Preset, but set to 50 ohms by Restore Input/Output Defaults or Restore System Defaults→All Some instruments/options may have 75 ohms available |
| State Saved | Saved in instrument state |

6.2.12 All Screens Use Same Input

If **ON**, then all Screens share the same Input settings. This is the default state.

If **OFF**, then certain settings are allowed to be local to each Screen, meaning one Screen can have them set one way and another can have them set another way.

The Input settings that become local to each Screen when **All Screens Use Same Input** is **OFF** are:

Input Tab:

- Selected Input (RF, Ext Mix, BBIQ)
- RF Input Port (only appears in instruments with multiple RF ports, such as N9041B, MXE, and CXA)
- RF Coupling (AC/DC)
- Input Z Correction

External Gain Tab:

- External Preamp
- MS
- BTS

Corrections Tab:

- For each Correction, whether it is on or off

Note that if **All Screens Use Same Input** is **OFF** and you press the + control to create a new Screen, the new Screen contains a copy of the old Screen's state, including all its Input/Output variables.

| | |
|----------------|--|
| Remote Command | :INSTrument:COUPle:SCReen:INPut ON OFF 1 0 |
|----------------|--|

| | |
|--|----------------------------------|
| | :INSTrument:COUPle:SCReen:INPut? |
|--|----------------------------------|

| | |
|---------|------------------------|
| Example | :INST:COUP:SCR:INP OFF |
|---------|------------------------|

| | |
|--------|----|
| Preset | ON |
|--------|----|

Not affected by **Input/Output Preset**, but set to **ON** by **Restore Input/Output Defaults**

6.2.13 External Mixer Setup

Lets you select the mixer type, and lets you configure your mixer (if necessary). The first page of the dialog shows you the current settings for the selected mixer. These

settings may be dependent on which IF path is currently in use, whether a + or – harmonic is currently selected, etc.

To apply any amplitude correction factors needed to correct mixer flatness, you enter values into one of the Correction tables (under **Input/Output, Corrections**). The correction conversion loss values can be extracted from data supplied with the mixer or from manual measurements you make to determine the conversion loss. Note that the correction applied by the Correction tables is global to the instrument; therefore, you should make sure to turn off the External Mixer corrections when you are not using the External Mixer input.

NOTE

Keysight USB Mixers automatically supply their flatness data to the instrument, and the correction is applied internally. No correction needs be entered, and the correction does not appear in the user-accessible Corrections tables. You are free to enter additional corrections into the Correction tables under **Input/Output, Corrections.**

| | |
|--------------|--|
| Notes | The setup summary on the menu panel appears just above this control, showing the current external mixer setup |
| Dependencies | Only appears when External Mixer is selected as the Input |
| State Saved | All settings in the External Mixer Setup dialog are part of the Input/Output system, and hence are saved whenever State is saved |

The **External Mixer Setup** screen looks like this:

6 Input/Output

6.2 Input

The current Mixer selection (the current or most recently connected USB Mixer, or the most recent Mixer Preset, or **Custom** if you have modified the setup) reads out at the top of this screen as **Mixer Selection**

The Harmonic Table currently being used reads out below the Mixer Selection. It shows each range being used for the current mixer. Note that a band may be made up of up to 3 ranges. Each range represents a choice of mixer harmonic and doubler state. When you select a Mixer Preset, it sets the instrument Start and Stop frequency to the values shown in the Harmonic Table; Start Freq is set to the Min Freq for the bottom range, and Stop Freq is set to the Max Freq for the top range. In many cases you can exceed these nominal values; the absolute maximum and minimum frequency for each preset are shown in the tables that accompany the control descriptions for the Mixer Presets.

NOTE

If the current measurement has a limited Span available to it and cannot achieve the Span shown in the table (Span = Stop Freq - Start Freq), the instrument uses the maximum Span the measurement allows, and sets **Center Frequency to the midpoint of the Start and Stop Freq values in the Harmonic Table.**

You may edit some of the Harmonic and LO Doubler fields in the Harmonic Table, as shown by the gray backgrounds of these fields. When you edit the Harmonic Table, the Mixer Selection changes to **Custom**. To change it back you must go back into the Mixer Presets menu and select a Preset.

When you edit the Harmonic Table, the nominal Min Freq and Max Freq that are available will usually be different than the Preset you were using; and the absolute frequency limits will change as well. This may result in a change to your Start and/or Stop Freq, if the current values fall outside the new range, requiring you to retune your Center Freq to get your signal back in the center.

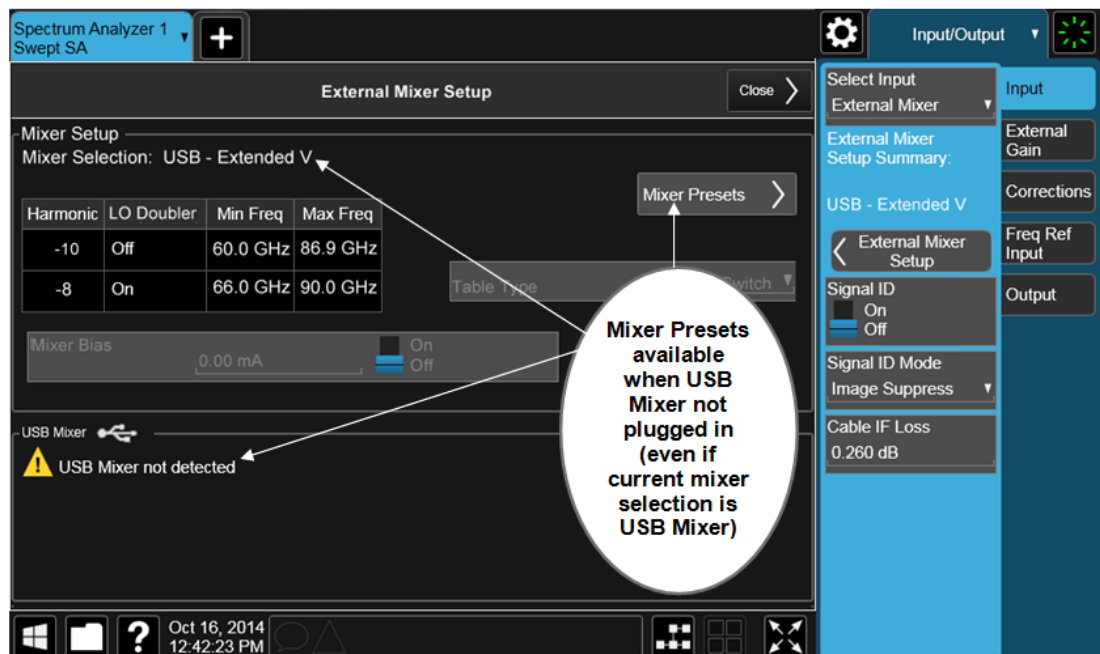

The instrument supports the Keysight M1970 Series Harmonic Mixers with USB connection. While in External Mixing, if one of these mixers is plugged in to a USB port, it is automatically detected and displayed in the "USB Mixer" area of the setup screen, including its model number and serial number.

The instrument assumes that if you plug a mixer into the USB you want to use that mixer, so:

1. If a USB mixer is connected to the USB port, the Mixer Presets button is grayed-out, as none of the presets make sense with a USB Mixer connected. Note that once the instrument has acquired the USB Mixer, the mixer selection will remain if it is subsequently unplugged from the USB, allowing you to plug it back in with no change to your settings. However, once you unplug it, the Mixer Presets control ceases to be grayed-out, allowing you to preset to a different mixer
2. When Restore Input/Output Defaults is performed, if a Keysight USB Mixer is plugged into the instrument's USB port, the Mixer Selection remains unchanged

- When recalling an instrument state, if a Keysight USB Mixer is plugged into the instrument's USB port, and the Mixer Selection in the recalled state is for a USB Mixer that does not match the mixer currently plugged in, you will have to unplug your mixer and then plug it back in to get the instrument to recognize your mixer

As long as the selection in Ext Mixer Setup shows one of the USB mixers, the **Mixer Bias** control is grayed-out and the Harmonic Table is no longer editable, as shown by the fact that the fields in the Harmonic Table are now black and the **Table Type** control is grayed-out.

Only one USB Mixer is supported at a time. To switch to a different USB Mixer, disconnect the one that is no longer being used prior to connecting a new one.

The **Mixer Selection** displayed and menu panel readback for the Keysight M1970 series mixers is:

| Mixer Model | Mixer Selection display on Setup Screen | Readback |
|---|---|---------------------|
| Keysight M1970E: Option 001: 60 to 90 GHz Waveguide Harmonic Mixer | USB - M1970E-001 E-Band | USB Mixer E-Band |
| Keysight M1971E: Option 001: 60 to 90 GHz Waveguide Harmonic Mixer | USB - M1971E-001 E-Band | USB Mixer E-Band |
| Keysight M1971E: Option 003: 55 to 90 GHz | USB - M1971E-003 Extended E-Band | USB Mixer |

6 Input/Output
6.2 Input

| Mixer Model | Mixer Selection display on Setup Screen | Readback |
|--|---|-------------------------|
| GHz Waveguide Harmonic Mixer | | Extended E |
| Keysight M1971V: Option 001: 50 to 75 GHz Waveguide Harmonic Mixer | USB - M1971E-001 V-Band | USB Mixer V-Band |
| Keysight M1971W: Option 001: 75 to 110 GHz Waveguide Harmonic Mixer | USB - M1971E-001 W-Band | USB Mixer W-Band |
| Keysight M1970V Option 001: 50 to 75 GHz Waveguide Harmonic Mixer | USB - M1970V-001 V-Band | USB Mixer V-Band |
| Keysight M1970V Option 002: 50 to 80 GHz Waveguide Harmonic Mixer | USB - M1970V-002 Extended V-Band | USB Mixer Extended V |
| Keysight M1970W Option 001: 75 to 110 GHz Waveguide Harmonic Mixer | USB - M1970W-001 W-Band | USB Mixer W-Band |

The Keysight USB mixer essentially acts as a “remote front end” and is fully calibrated over the specified frequency range, without requiring any user interaction. This is particularly useful at high mm-wave frequencies, where cable loss is typically quite large, and it is desirable to bring the front end right up to the device under test, rather than bringing the mm-wave signal to the instrument using a lossy and uncalibrated cable or waveguide connection.

Connecting the mixer to the USB port on the instrument switches you to External Mixing, aborts the current measurement, and initiates an alignment of the mixer. A popup message, “USB Mixer connected” appears on the display. When a USB mixer and the LO/IF cable are connected the alignment is performed. When the alignment begins, an “Aligning” popup replaces the previous message on the display. When the alignment completes, the current measurement restarts.

6.2.13.1 Mixer Presets

Presets the mixer setup for the particular type of mixer that you are using.

These presets are divided into four groups:

- One for legacy HP/Agilent/Keysight mixers (11970)
- Three for general purpose mixers:

- presets that use a single harmonic and no doubling
- presets that use a single harmonic but double the LO
- presets that use multiple harmonics

Note that the IF/LO port provides a 3.8-14 GHz LO in two bands: 3.8-8.7 (LO fundamental), and 8.6-14 GHz (doubled LO).

In most cases, once you have executed the preset, you will not need to adjust any further settings.

| | | | | | | | | | |
|-----------------|--|--------------|---------------------------|--------------|---------------------------|-----------------|------------------------------------|--------------|---------------------------|
| Remote Command | <pre>[:SENSe]:MIXer:BAND A Q U V W NA ND NE NF NG NJ NK NQ NU NV NW NY NEXT DD DF DG DJ DK DQ DV DW DY DEXT MA ME MU MCOAX USB VDIWR6PT5M4 [:SENSe]:MIXer:BAND?</pre> | | | | | | | | |
| Example | <pre>:MIX:BAND A :MIX:BAND?</pre> | | | | | | | | |
| Notes | <p>A Q U V W select HP/Agilent/Keysight 11970 mixer presets NA ND NE NF NG NJ NK NQ NU NV NW NY NEXT select single harmonic, non-doubled LO presets DD DF DG DJ DK DQ DV DW DY DEXT select single harmonic, doubled LO presets MA ME MU MCOAX select multiple harmonic presets VDIWR6PT5M4 selects presets for the VDI WR6.5CCD-M4 external mixer (a Compact Down-Converter in the Keysight N9029ACST Series) VDIWR6PT5M4 requires Model N9042B with the EXW option. To use this selection, you must connect cables from the external mixer to the High LO Out and High IF In ports (not the Ext Mixer port) of the N9042B All these presets are detailed in their respective control descriptions The query returns the most recent preset, <i>unless</i> the harmonic table has been edited after the preset was executed. If the harmonic table has been edited, returns CUSTOM The command USB refreshes the USB mixer connection and automatically detects the mixer band. The query returns the following if a Keysight USB Mixer is plugged into the instrument's USB port:</p> <table border="1"> <tr> <td>USB E</td> <td>Keysight E-Band USB Mixer</td> </tr> <tr> <td>USB V</td> <td>Keysight V-Band USB Mixer</td> </tr> <tr> <td>USB VEXT</td> <td>Keysight Extended V-Band USB Mixer</td> </tr> <tr> <td>USB W</td> <td>Keysight W-Band USB Mixer</td> </tr> </table> <p>Note that the parameters CUSTOM, USB V, USB VEXT, and USB W are query responses only, and cannot be sent to the instrument The following cross-reference matches the mixer band designators used by Keysight to the EIA waveguide designations:</p> | USB E | Keysight E-Band USB Mixer | USB V | Keysight V-Band USB Mixer | USB VEXT | Keysight Extended V-Band USB Mixer | USB W | Keysight W-Band USB Mixer |
| USB E | Keysight E-Band USB Mixer | | | | | | | | |
| USB V | Keysight V-Band USB Mixer | | | | | | | | |
| USB VEXT | Keysight Extended V-Band USB Mixer | | | | | | | | |
| USB W | Keysight W-Band USB Mixer | | | | | | | | |

6 Input/Output
6.2 Input

| EIA | Keysight | Freq Range |
|-------|----------|---------------|
| WR-28 | A | 26.5 - 40 GHz |
| WR-22 | Q | 33 - 50 GHz |
| WR-19 | U | 40 - 60 GHz |
| WR-15 | V | 50 - 75 GHz |
| WR-12 | E | 60 - 90 GHz |
| WR-10 | W | 75 - 110 GHz |
| WR-8 | F | 90 - 140 GHz |
| WR-6 | D | 110 - 170 GHz |
| WR-5 | G | 140 - 220 GHz |
| WR-3 | J | 220 - 325 GHz |

Preset

When **Restore Input/Output Defaults** is performed, an “A” mixer preset is also issued (11970A band), unless a Keysight USB Mixer is plugged into the instrument’s USB port, in which case the Mixer Selection remains unchanged

When using Keysight USB Mixers, if **Restore All Defaults (:SYSTEM:DEFault)** has been performed, either remove and reinsert the USB cable or press the **Refresh USB Mixer Connection** control

VDI CCD (N9029)

These presets select a setup that uses a single harmonic and no LO doubling.

This setup is used with an external mixer in the series VDI CCD (N9029ACST). The currently supported example is the D-band mixer VDI WR6.5CCD-M4.

| Mixer | Readout on setup dialog and menu panel | Harm # | RF start | RF stop | RF center |
|-------------------|--|--------|----------|---------|-----------|
| WR6.5 M4 (D-band) | VDI WR6.5CCD-M4 | -4 | 110 | 170 | 140 |

This mixer setup is enabled only for model N9042B with the EXW option. You must connect cables from this external mixer to the High LO Out and High IF In ports (not the Ext Mixer port) of the N9042B, as illustrated below:

11970

Lets you preset for a model in the HP/Agilent/Keysight 11970 series.

Because the X-Series has an LO range of 3.8 - 14 GHz, and older analyzers had an LO range of 3.0 - 6.8 GHz, the harmonic numbers used in the X-Series may differ from those used on older analyzers for the same mixers. Additionally, some of the 11970 mixers cannot be operated over their full range with the X-Series without switching harmonics. Consequently, you will find that some of the bands (A-Band, for example) are broken into two ranges for use with the X-Series.

Below are the 11970A presets. The 11970U and the 11970W use a single harmonic. The other three switch harmonic mid-band. Both harmonic ranges are shown in the table. None of these mixers use LO doubling.

The 11970 K-band mixer and the 11974 preselected mixer series are not supported.

| Preset | Readout on setup dialog and menu panel | Range | Harm # | RF start | RF stop | RF center |
|--------|--|-------|--------|----------|---------|-----------|
| A-band | 11970A | 1 | -6 | 26.5 | 30.45 | 28.475 |
| | | 2 | -8 | 30.35 | 40 | 35.175 |
| Q-band | 11970Q | 1 | -8 | 33 | 40.8 | 36.9 |
| | | 2 | -10 | 39.8 | 50 | 44.9 |
| U-band | 11970U | .. | -10 | 40 | 60 | 50 |
| V-band | 11970V | 1 | -12 | 50 | 66 | 58 |
| | | 2 | -14 | 53 | 75 | 64 |
| W-band | 11970W | .. | -18 | 75 | 110 | 92.5 |

Single Harmonic

These presets select a setup that uses a single harmonic and no doubling for the LO.

| Mixer | Readout on setup dialog and menu panel | Harm # | RF start | RF stop | RF center |
|----------|--|--------|----------|---------|-----------|
| K-band | K-band Single Harmonic, no doubler | -4 | 18 | 26.5 | 22.25 |
| A-band | A-band Single Harmonic, no doubler | -6 | 26.5 | 40 | 33.25 |
| D-band | D-band Single Harmonic, no doubler | -20 | 110 | 170 | 140 |
| E-band | E-band Single Harmonic, no doubler | -12 | 60 | 90 | 75 |
| F-band | F-band Single Harmonic, no doubler | -18 | 90 | 140 | 115 |
| Q-band | Q-band Single Harmonic, no doubler | -6 | 33 | 50 | 41.5 |
| U-band | U-band Single Harmonic, no doubler | -8 | 40 | 60 | 50 |
| V-band | V-band Single Harmonic, no doubler | -10 | 50 | 75 | 62.5 |
| W-band | W-band Single Harmonic, no doubler | -14 | 75 | 110 | 92.5 |
| G-band | G-band Single Harmonic, no doubler | -26 | 140 | 220 | 180 |
| Y-band | Y-band Single Harmonic, no doubler | -30 | 170 | 260 | 215 |
| J-band | J-band Single Harmonic, no doubler | -38 | 220 | 325 | 272.5 |
| Extended | Extended Single Harmonic, no doubler | -40 | 155 | 345 | 250 |

Single Harmonic with doubler

These presets select a setup that uses a single harmonic and doubling for the LO.

| Mixer | Readout on setup dialog and menu panel | Harm # | RF start | RF stop | RF center |
|----------|--|--------|----------|---------|-----------|
| D-band | D-band Single Harmonic w/doubler | -14 | 110 | 170 | 140 |
| F-band | F-band Single Harmonic w/doubler | -10 | 90 | 140 | 115 |
| G-band | G-band Single Harmonic w/doubler | -16 | 140 | 220 | 180 |
| J-band | J-band Single Harmonic w/doubler | -24 | 220 | 325 | 272.5 |
| K-band | K-band Single Harmonic w/doubler | -2 | 18 | 26.5 | 22.25 |
| Q-band | Q-band Single Harmonic w/doubler | -4 | 33 | 50 | 41.5 |
| V-band | V-band Single Harmonic w/doubler | -6 | 50 | 75 | 62.5 |
| W-band | W-band Single Harmonic w/doubler | -8 | 75 | 110 | 92.5 |
| Y-band | Y-band Single Harmonic w/doubler | -20 | 170 | 260 | 215 |
| Extended | Extended Single Harmonic w/doubler | -28 | 245 | 390 | 317.5 |

Multiple Harmonics

These presets select a setup that uses multiple harmonics and may or may not use doubling for the LO.

| Mixer | Readout on setup dialog and menu panel | Range | Harm # | Dblr? | RF start | RF stop | RF Center |
|---------|--|-------|--------|-------|----------|---------|-----------|
| A-band | A-band Multiple Harmonic | 1 | -4 | N | 26.5 | 34.1 | 30.3 |
| | | 2 | -4 | Y | 33.1 | 40 | 36.55 |
| E-band | E-band Multiple Harmonic | 1 | -6 | Y | 60 | 83 | 71.5 |
| | | 2 | -8 | Y | 65 | 90 | 77.5 |
| U-band | U-band Multiple Harmonic | 1 | -6 | N | 40 | 51.5 | 45.75 |
| | | 2 | -6 | Y | 49.5 | 60 | 54.75 |
| Coaxial | Coaxial Multiple Harmonic | 1 | -4 | N | 26.5 | 34 | 30.25 |
| | | 2 | -4 | Y | 32.5 | 55 | 43.75 |
| | | 3 | -6 | Y | 50 | 70 | 60 |

6.2.13.2 Mixer Bias

Adjusts an internal bias source for use with external mixers. The bias signal is present on the center conductor of the IF input connector on the front panel. The shunt current range is from -10 mA to 10 mA, and it can be set whether Mixer Bias state is On or Off, but it will only be applied if it is On.

The bias remains as set if you switch to another input (for example, the RF Input).

| | |
|---------|---|
| Remote | <code>[:SENSe] :MIXer :BIAS <real></code> |
| Command | <code>[:SENSe] :MIXer :BIAS?</code> |

6 Input/Output
6.2 Input

| | |
|----------------|---|
| Example | <code>:MIX:BIAS 0</code> <code>:MIX:BIAS?</code> |
| Preset | Unaffected by Preset, but set to OFF (0) by Restore Input/Output Defaults |
| State Saved | Saved in instrument state |
| Min | -10 mA |
| Max | 10 mA |
| Annunciation | When the bias is turned on this (together with the bias polarity) is indicated in the Meas Bar with a plus or minus sign:  otherwise, it reads "Off" Auto Function |
| Remote Command | <code>[:SENSe]:MIXer:BIAS:STATe OFF ON 0 1</code> <code>[:SENSe]:MIXer:BIAS:STATe?</code> |
| Example | <code>:MIX:BIAS:STAT 0</code> <code>:MIX:BIAS:STAT?</code> |
| Preset | OFF |

6.2.13.3 Table Type

Determines the Custom Mixer configuration type. You can choose: Single Row, Harmonic Switching, or Doubler Switching. For details, see ["Available Types" on page 2185](#).

The Harmonic Table can be configured as:

- A single row (meaning only one harmonic number is used and the LO Doubler is either on or off)
- Two rows where the harmonic number switches between the first row and the second
- Two rows where the LO Doubler state switches between the first row and the second

Available Types

| Table Type | Behavior |
|------------|---|
| Single Row | The External Mixer always stays in the same Harmonic Number and the LO Doubler is either on or off and does not change state during a sweep. You may change the Harmonic Number and you may change the state of the Doubler |
| Harmonic | The External Mixer switches the Harmonic Number in the middle of the sweep. The LO Doubler may be on |

| Table Type | Behavior |
|-------------------|---|
| Switching | or off, but it is the same for both Harmonic Numbers. You can set the initial Harmonic Number, and when it switches it decrements by two when the harmonic is negative and increments by two when the harmonic is positive For example, if you set the initial number to -6, when it switches it will go to -8. If you set the harmonic number to 8, when it switches it will go to 10 |
| Doubler Switching | The External Mixer switches the doubler from Off to On in the middle of the sweep. You can set the Harmonic Number, but it stays the same for the Doubler Off state as for the Doubler On state. The LO Doubler control is grayed-out in this table type |

Editable Fields

| Table Type | Fields you can edit |
|--------------------|--|
| Single Row | Harmonic and LO Doubler cells |
| Harmonic Switching | Harmonic and LO Doubler cells (only the first row) |
| Doubler Switching | Harmonics cell (only the first row) |

Note that you cannot add or delete rows from the table; you can only modify the rows that are already there.

| | |
|----------------|--|
| Remote Command | <code>[:SENSe]:MIXer:TTYPe SINGLE HARMonic DOUBler</code> <code>[:SENSe]:MIXer:TTYPE?</code> |
| Example | <code>:MIX:TTYP SING</code> |
| Couplings | When you change the Table Type, the Mixer Selection changes to Custom |
| Preset | Depends on the current Mixer Preset. Unaffected by Mode Preset , but Restore Input/Output Defaults presets the Mixer to 11970A, for which the Table Type is Harmonic Switching |
| State Saved | Saved in instrument state |

6.2.13.4 Select VDI CCD Correction

Selects the appropriate VDI CCD Correction data by mixer Serial Number.

| | |
|----------------|--|
| Remote Command | <code>[:SENSe]:VCORrection:SElect NONE <serialNumber></code> <code>[:SENSe]:VCORrection:SElect?</code> |
| Example | <code>:VCOR:SEL NONE</code> <code>:VCOR:SEL 123123</code> |
| Dependencies | Requires EXW (External Mixing Wide Bandwidth) and Ampcor (Amplitude Correction) licenses |
| Couplings | When the External Mixer Model or VDI CCD Corrections data changes, this field checks whether VDI CCD corrections are stored for the currently-selected External Mixer Model, and automatically selects the first serial number found, or NONE if no matching corrections are found When setting this parameter via SCPI, if no match is found for the given serial number, the parameter |

is set to **NONE**. If the correction should be automatically selected, this can be done by setting the value via SCPI to **Any** (see "[External Mixer Setup](#)" on page 2175)

State Saved Saved in instrument state

6.2.13.5 Delete All VDI CCD Corrections

Erases all stored VDI CCD corrections.

| | |
|----------------|--|
| Remote Command | <code>[:SENSe]:VCORrection:DELeTe</code> |
| Example | <code>:VCOR:DEL</code> |
| Dependencies | Requires EXW (External Mixing Wide Bandwidth) and Ampcor (Amplitude Correction) licenses |
| Couplings | When the VDI CCD corrections are deleted from memory, " Select VDI CCD Correction " on page 2186 is set to NONE |

6.2.13.6 Harmonic

Lets you enter the **Harmonic** value with its associated sign (mixing mode). Only the first row of the table is editable. When you edit a value or change "[Table Type](#)" on [page 2185](#), the Mixer Selection changes to **Custom**.

In **Custom** mode, the maximum start and stop frequencies are strictly set by the LO range and the harmonic number you have chosen. The undoubled LO range is approximately 3.8 - 8.7 GHz, and (for LOs that support doubling) the doubled range is approximately 8.0 - 14.0 GHz. That range times the harmonic you have selected determines the tuning range. If your frequency is currently outside that range when you edit the Harmonic Table, the frequency will be changed to fall at the edge of the range. To change it back, go to the **Mixer Presets** menu and select a Preset.

The harmonic number is a signed integer, where the sign distinguishes between positive and negative mixing products. Desired mixing products occur at an IF frequency that equals the difference between the RF frequency (f_{RF}) and the LO frequency (Nf_{LO}). When this difference is positive, we can say $f_{IF} = f_{RF} - Nf_{LO}$. When this difference is negative, we can say $f_{IF} = Nf_{LO} - f_{RF}$. Thus, a negative harmonic means the instrument will be tuned such that the harmonic of the LO is higher than the indicated frequency by the frequency of the first IF. A positive harmonic means the instrument will be tuned such that the harmonic of the LO is lower than the indicated frequency by the frequency of the first IF.

| | |
|----------------|---|
| Remote Command | <code>[:SENSe]:MIXer:HARMonic <integer></code> |
| Example | <code>:MIX:HARM -28</code> <code>:MIX:HARM?</code> |
| Notes | The query returns the harmonic value of the first row of the harmonic table |

| | |
|-------------|---|
| Couplings | When you set a value for Harmonic via SCPI, the Mixer Selection changes to Custom |
| Preset | Unaffected by Mode Preset , but Restore Input/Output Defaults turns editing off, the Harmonic Table returns to normal, and the Mixer is preset to 11970A, which has -6 in the first row of its Harmonic Table |
| State Saved | Saved in instrument state |
| Min | -400 |
| Max | 400 |

6.2.13.7 LO Doubler

Lets you specify whether the Doubler is on or off. Only the first row of the table is editable, and the LO Doubler field is only editable in Single Row and Harmonic Switching table types. When you edit a value or change the Table Type, the Mixer Selection changes to **Custom**.

The LO Doubler setting controls the choice of the LO doubler state for LO's that support doubled operation. In Single Row mode it is either on or off for the one row in the table. In Harmonic Switching mode it is on for both rows or off for both rows. In Doubler switching it is off for row 1 and on for row 2, so it is not editable.

In LOs that support doubling, the fundamental band is approximately 3.8 – 8.7 GHz, and the doubled band is approximately 8.0 – 14 GHz. The higher LO frequency can result in a lower mixer harmonic and reduced mixer conversion loss.

| | |
|----------------|--|
| Remote Command | <code>[:SENSe]:MIXer:LODoubler ON OFF 0 1</code> <code>[:SENSe]:MIXer:LODoubler?</code> |
| Example | <code>:MIX:LOD 0</code> <code>:MIX:LOD?</code> |
| Notes | The query returns the doubler value of the first row of the harmonic table |
| Dependencies | Grayed-out and set to OFF when " Table Type " on page 2185 is set to Doubler Switching Grayout message: "-221 Settings conflict; Function unavailable while Table Type=Doubler Switching" |
| Couplings | When you set a value via SCPI, the Mixer Selection changes to Custom |
| Preset | Unaffected by Mode Preset , but Restore Input/Output Defaults turns off editing, the Harmonic Table returns to normal, and the Mixer is preset to 11970A, which has the doubler Off in the first row of its Harmonic Table |
| State Saved | Saved in instrument state |

6.2.13.8 Refresh USB Mixer Connection

Re-reads the USB devices and refreshes connection to Keysight USB mixers. This operation is the same as physically removing and reinserting the mixer's USB connection.

| | |
|---------|---|
| Example | <code>:MIX:BAND USB</code> |
| Notes | When using Keysight USB Mixers, if Restore All Defaults (<code>:SYSTem:DEFault</code>) has been performed, either remove and reinsert the USB cable or press Refresh USB Mixer Connection |

6.2.14 Mixer Path

Determines which path you wish to use when using M1971 series USB mixers:

- **NORMa1**, in which they function as a classic external mixer with a single conversion
- **DUAL** Conversion, in which the first conversion is to a higher IF frequency (nominally 1.5 GHz) and you provide a 10 MHz signal to which an internal PLL is locked, to effect a second downconversion. The higher IF frequency used in Dual Conversion increases the image frequency offset, giving you a wider image-free conversion range. This reduces aliasing effects and improves the image suppress functionality for wideband signals
- **AUX** Equipment, wherein the first mixer output drives an output connector on the mixer and the instrument is out of the circuit. When you connect an M1971 Mixer to USB, the instrument will pull the IF and RF flatness data from the USB mixer and write this data to a user-accessible file in CSV format for your use when Aux Equipment is selected

| | |
|----------------|--|
| Remote Command | <code>[:SENSe]:MIXer:MPATH NORMa1 DUAL AUX</code> <code>[:SENSe]:MIXer:MPATH?</code> |
| Example | <code>:MIX:MPAT NORM</code> |
| Dependencies | <p>Only appears when an M1971 series Mixer is connected to the USB port of the instrument</p> <p>When AUX Equipment is the selection, Sig Id is turned off to avoid shifting the LO. It is <i>not</i> turned back on when a different path is selected</p> <p>When AUX Equipment is the selection, there is no valid result, so the instrument displays a “No Result; Meas invalid with Aux Equip” error condition message (error 135)</p> <p>DUAL Conversion is grayed-out unless in the Swept SA measurement. If grayed-out and the command is sent, generates error:”-221, Settings Conflict; Dual Conversion mixer path is only available in Swept SA”</p> <p>If in DUAL Conversion and you exit Swept SA, reverts to NORMa1 setting. If you subsequently return to Swept SA, does <i>not</i> automatically return to DUAL Conversion</p> <p>When DUAL Conversion is selected, if no signal is sensed at the 10 MHz input port, an error condition is generated, “Ref missing or out of range; M1971” (error 521). This also lights the Error LED on the mixer itself</p> |
| Couplings | When AUX path is selected, the instrument switches to Zero Span |
| Preset | NORMa1 |
| State Saved | Saved in instrument state |

| | |
|------------|---|
| Annotation | In the Meas Bar, if an M1971 series Mixer is connected to the USB port of the instrument, the field Mixer Path appears and says: <ul style="list-style-type: none"> - Normal for Normal - 2xConv for Dual Conversion - Aux for Aux Equipment |
|------------|---|

6.2.15 User IF Freq

Specifies the desired IF frequency when using the Aux Equipment path. This setting determines the LO frequency that the instrument will drive into the mixer to correspond to the specified center frequency. Note that the Aux Equipment path always uses “Negative Mixing”, that is, the LO frequency is always higher than the RF frequency.

| | |
|----------------|--|
| Remote Command | <code>[:SENSe]:MIXer:UIFFreq <real></code> <code>[:SENSe]:MIXer:UIFFreq?</code> |
| Example | <code>:MIX:UIFF 300 MHz</code> |
| Dependencies | Only appears if an M1971 mixer is connected to USB and the Mixer Path is Aux Equipment |
| Preset | 1.2 GHz |
| State Saved | Saved in Input/Output state |
| Min | 0 GHz |
| Max | 4 GHz |

6.2.16 Signal ID On/Off

Toggles the Signal ID (signal identification) function On or Off. This function lets you identify multiple responses of a single input signal that are generated when using un-preselected external mixers. The use of mixers without pre-selecting filters offers the advantage of improved receiver sensitivity because of the absence of the filter insertion loss, but results in multiple responses due to images and undesired harmonic mixing products.

While in **Signal ID**, basic spectrum analyzer functions work normally (for example, you can change Span normally), but some functions are disabled (for example, some traces are unavailable).

There are two forms of **Signal ID**, Image Suppress and Image Shift. Choose the one most appropriate for your application. For Image Shift, an LO-shifted and an unshifted trace are taken in Trace 1 and Trace 2 and displayed together. Any peaks that are not the same in both traces are images. For Image Suppress, image

6 Input/Output
6.2 Input

cancellation is performed in the background using two hidden traces, and the result displayed in Trace 1, which shows only the valid signals.

When **Signal ID** is **ON**, this is indicated in the Meas Bar as Signal ID: On. The annotation is displayed in amber to alert you, because it can cause unexpected behavior if you are not aware that it is on.

| | |
|----------------|---|
| Remote Command | <code>[:SENSe]:SIDentify[:STATe] OFF ON 0 1</code> <code>[:SENSe]:SIDentify[:STATe]?</code> |
| Example | <code>:SID 0</code> <code>:SID?</code> |
| Notes | Signal ID uses data from two successive sweeps. Therefore, if the instrument is in single sweep mode, two sweep triggers are used to generate the data needed for signal identification For the Log Plot measurement in the Phase Noise Mode, Signal ID works only in the segment of LO sweeping where the offsets are greater than the Rejection Offset setting. When turning it on, you may notice a discontinuity in the Phase Noise trace at the Rejection Offset setting frequency by a few dB due to the under response inherent to Signal ID |
| Dependencies | Only appears when External Mixer is selected as the Input Not available in some measurements. If Signal ID does not appear or is grayed-out while in your measurement, then it is not available Because Signal ID uses data from two successive sweeps, several trace and sweep functions are grayed-out in Signal ID . See the documentation for your measurement for details on which trace functions are grayed-out Not available with Signal Track, in which case Signal ID is grayed-out Turned off when External Mixer is turned off. Signal ID cannot be turned on when using internal mixing Rules for auto coupling of the Sweep and FFT controls are changed with Signal ID ON . For both the dynamic range case and the speed case, swept is chosen whenever any form of Signal ID is on. If Manual FFT is selected, Signal ID is grayed-out If Signal ID is selected in a measurement that does not support it, a warning message is generated |
| Couplings | The Auto Rules for detector selection select Normal for all active traces when Signal ID is turned ON |
| Preset | Unaffected by Preset, but set to OFF by Restore Input/Output Defaults |
| Annunciation | When Signal ID is on this is indicated in the Meas Bar as Signal ID: On. The annotation is displayed in amber color to alert you to the fact that Signal ID is on, as it can cause unexpected behavior if you are not aware that it is on |

6.2.17 Signal ID Mode

Determines the **Signal ID** mode to use, either Image Suppress or Image Shift.

Image Suppress

Mathematically removes all image and multiple responses of signals present at the mixer input. Two hidden sweeps are taken in succession. The second sweep is offset in LO frequency by $2 * IF / N$. For each point in each trace, the smaller amplitude

from the two traces is taken and placed in that point in the selected trace. The Peak detector is auto-selected to improve the image suppression effectiveness. Responses of each trace that lie on top of one another will remain and are valid signals, others are images and are suppressed. The action of taking the smaller of the two traces will make the average noise level lower in all points that do not have an image, thus reducing the accuracy of the measurement of noise and noise-like signals.

NOTE

When changing from Image Shift to Image Suppress mode, Trace 2 is blanked, as it was used for Image Shift and contains data that you will probably not want to see in Image Suppress

Image Shift

Like the Image Suppress mode, Image Shift is a two-sweep sequence. The data from the first sweep is placed in Trace 1 and the data from the second (LO frequency shifted by $2 * IF / N$) sweep is placed in Trace 2. On alternate sweeps, the alternate trace (trace 2) is placed in front of trace 1. This way, you can see a signal at the same place on alternate sweeps, showing in yellow (trace1) and blue (trace2). Signal responses of Trace 1 and Trace 2 that have the same horizontal position are considered to be in the current band and therefore can be analyzed with the amplitude and frequency measurement systems of the SA. All other responses are invalid and should be ignored.

NOTE

This function takes control of and uses Trace 1 and Trace 2. Any data in these traces prior to activating Image Shift will be lost.

| | |
|----------------|---|
| Remote Command | <code>[:SENSe] :SIDentify :MODE ISUPpress IShift</code> <code>[:SENSe] :SIDentify :MODE ?</code> |
| Example | <code>:SID:MODE ISUP</code> <code>:SID:MODE ISH</code> <code>:SID:MODE ?</code> |
| Dependencies | Only appears when External Mixer is selected as the Input |
| Preset | Unaffected by Preset, but set to <code>ISUPpress</code> by Restore Input/Output Defaults |
| State Saved | Saved in instrument state |

6.2.18 Cable IF Loss

The loss at the IF in the IF/LO cable can be compensated for with this function, by entering the loss in dB for your cable.

6 Input/Output

6.2 Input

The cable loss will depend on the IF frequency. The IF frequency varies depending on which IF path your measurement is using. For best accuracy, characterize your cable's loss for the IF frequency or frequencies you will be using.

IF Frequencies

| | |
|--------------|-----------|
| 10 MHz path | 322.5 MHz |
| 25 MHz path | 322.5 MHz |
| 40 MHz path | 250 MHz |
| 140 MHz path | 300 MHz |

| | |
|----------------|--|
| Remote Command | <code>[:SENSe]:MIXer:CIFLoss <rel_amp1></code> <code>[:SENSe]:MIXer:CIFLoss?</code> |
| Example | <code>:MIX:CIFL 0.23 DB</code> <code>:MIX:CIFL?</code> |
| Dependencies | Only appears when External Mixer is selected as the Input |
| Preset | 0.26 dB |
| State Saved | Saved in instrument state |
| Min | -100 |
| Max | 100 |

6.2.19 I/Q Path

Selects which I/Q input channels are active. The LED next to each I/Q input port will be on when that port is active.

The analysis bandwidth for each channel is the same as that of the instrument. For example, the base N9020A has a bandwidth of 10 MHz. With I/Q input the I and Q channels would each have an analysis bandwidth of 10 MHz, giving 20 MHz of bandwidth when the I/Q Path is I+jQ. With option B25, the available bandwidth becomes 25 MHz, giving 25 MHz each to I and Q and 50 MHz to I+jQ.

I/Q voltage to power conversion processing is dependent on the I/Q Path selected:

- With I+jQ input, we know that the input signal may not be symmetrical about 0 Hz, because it has a complex component. Therefore, above 0 Hz only the positive frequency information is displayed, and below 0 Hz only the negative frequency information is displayed
- With all other Input Path selections, the input signal has no complex component and therefore is always symmetrical about 0 Hz. In this case, by convention, the power conversion shows the combined voltage for both the positive and negative frequencies. The information displayed below 0 Hz is the mirror of the

information displayed above 0 Hz. This results in a power reading 6.02 dB higher (for both) than would be seen with only the positive frequency voltage. Note also that, in this case the real signal may have complex modulation embedded in it, but that must be recovered by further signal processing

| | |
|------------------------------|---|
| Remote Command | <code>[:SENSe]:FEED:IQ:TYPE IQ IONLy QONLy</code> For option details, see More Information <code>[:SENSe]:FEED:IQ:TYPE?</code> |
| Example | Set the input to be both the I and Q channels, combined as $I + j * Q$: <code>:FEED:IQ:TYPE IQ</code> Set the input to be only the I channel: <code>:FEED:IQ:TYPE IONL</code> Set the input to be only the Q channel: <code>:FEED:IQ:TYPE QONL</code> Turn on both I and Q channels and treat I as channel 1 and Q as channel 2: <code>:FEED:IQ:TYPE IND</code> |
| Dependencies | Only appears when I/Q is the selected input |
| Preset | <code>IQ</code> |
| State Saved | Yes Unaffected by Preset, but set to the default value by Restore Input/Output Defaults or Restore System Defaults->All Backwards Compatibility SCPI |
| Notes | For R&S FSQ-B71 compatibility |
| Preset | <code>IQ</code> |
| Backwards Compatibility SCPI | <code>:INPut[1]:IQ:TYPE IQ I Q</code> <code>:INPut[1]:IQ:TYPE?</code> |

More Information

I+jQ

Sets the signal input to be both the I and Q channels. The I and Q channel data will be combined as $I + j * Q$.

I Only

Sets the signal input to be only the I channel. The Q channel will be ignored. The data collected is still complex. When the center frequency is 0 the imaginary part will always be zero, but for any other center frequency both the real and imaginary parts will be significant.

Q Only

6 Input/Output

6.2 Input

Sets the signal input to be only the Q channel. The I channel will be ignored. The Q channel will be sent to the digital receiver block as $Q+j0$. The receiver's output is still complex. When the center frequency is 0 the imaginary part will always be zero, but for any other center frequency both the real and imaginary parts will be significant. Note that since the receiver's real output is displayed as the "I" data, when the center frequency is 0, the Q Only input appears as the "I" data.

6.2.20 Reference Z

Sets the value of the impedance to be used in converting voltage to power for the I and Q channels. This does not change the hardware's path impedance (see ["Input Z" on page 2196](#)).

| | |
|----------------|---|
| Remote Command | <code>:INPut:IMPedance:REference <integer></code> <code>:INPut:IMPedance:REference?</code> |
| Example | Set the I/Q reference impedance to 50 Ω <code>:INP:IMP:REF 50</code> |
| Dependencies | Only appears when I/Q is the selected input |
| Preset | 50 Ω |
| State Saved | Yes Unaffected by a Preset, but set to the default value by Restore Input/Output Defaults or Restore System Defaults->All |
| Min/Max | 1 Ω - 1 M Ω |

6.2.21 I/Q Setup

Lets you set up and calibrate various parameters for the I/Q inputs.

| | |
|--------------|---|
| Dependencies | Only appears when I/Q is the selected input |
|--------------|---|

6.2.21.1 I Setup

Accesses the channel setup parameters for the I channel.

Differential

Selects differential input on or off for the I channel. For differential input (also called balanced input), the instrument uses both main and complementary ports. When differential input is off (also called single-ended or unbalanced input), the instrument uses only the main port.

| | |
|------------------------------|---|
| Remote Command | <code>:INPut:IQ[:I]:DIFFerential OFF ON 0 1</code> <code>:INPut:IQ[:I]:DIFFerential?</code> |
| Example | Put the I channel in Differential mode: <code>:INP:IQ:DIFF ON</code> Put the I channel in Single Ended mode: <code>:INP:IQ:DIFF OFF</code> |
| Notes | When I Differential Input = On, the instrument checks for attenuation mismatches between the I and I-bar ports. If the difference in attenuation values exceeds 0.5 dB, a Settings Alert error condition, error 159 is set When I Differential Input = On, and IQ Path is I+jQ, the Q Differential input must also be On. Similarly, when I Differential Input = Off, and IQ Path is I+jQ, the Q Differential input must also be Off. If the states of the two inputs do not match, an error condition message is generated, 159, Settings Alert; I/Q mismatch: Differential |
| Couplings | Some active probes include built-in differential capability. When one of these probes is sensed, this key is disabled. Since the differential capability is handled in the probe, the Instrument will use only the main port and the key will show that the Instrument's Differential Input mode is Off (indicating that the complementary port is not in use) When Q Same as I is On, the value set for I will also be copied to Q |
| Preset | OFF (Single Ended) Unaffected by Mode Preset, but set to the default value by Restore Input/Output Defaults or Restore System Defaults->All |
| State Saved | Yes |
| Annotation | The LED on the I-bar port indicates the Differential Input setting Backwards Compatibility Command |
| Notes | For R&S FSQ-B71 compatibility, with no independent settings for the I and Q channels. Therefore, it is tied only to the I channel and does not provide an equivalent for the Q channel. For proper operation of the backwards compatibility command, Q Same as I should be ON |
| Preset | OFF |
| Backwards Compatibility SCPI | <code>:INPut[1]:IQ:BALanced[:STATe] OFF ON 0 1</code> <code>:INPut[1]:IQ:BALanced[:STATe]?</code> |

Input Z

Selects the input impedance for the I channel. The impedance applies to both the I and I-bar ports.

The input impedance controls the hardware signal path impedance match. It is not used for converting voltage to power. The voltage to power conversion always uses the Reference Z parameter. The Reference Z parameter applies to both I and Q channels.

6 Input/Output

6.2 Input

| | |
|----------------|---|
| Remote Command | <code>:INPut[1]:IQ[:I]:IMPedance LOW HIGH</code> <code>:INPut[1]:IQ[:I]:IMPedance?</code> |
| Example | Set the I channel input impedance to 1 M Ω : <code>:INP:IQ:IMP HIGH</code> Set the I channel input impedance to 50 Ω : <code>:INP:IQ:IMP LOW</code> |
| Notes | LOW = 50 Ω , HIGH = 1 M Ω When IQ Path is I+jQ, the I Input Z setting must be the same as the Q Input Z setting. If the settings of the two inputs do not match, an error condition message is generated, 159; Settings Alert; I/Q mismatch: Input Z |
| Couplings | Input impedance is a built-in characteristic of a probe. Therefore, whenever a probe is sensed, this key is disabled, and the value is set to match the probe When no probe is sensed on Q and Q Same as I is On, the value set for I will also be copied to Q |
| Preset | LOW Unaffected by Mode Preset, but set to the default value by Restore Input/Output Defaults or Restore System Defaults->All |
| State Saved | Yes |
| Annotation | "I:<I Input Z>" (examples, "I:50 Ω " or "I:1M Ω ") in the Measurement Bar. The annotation shows both the I and Q Input Z values |

Skew

Sets the skew factor for the I channel. The skew will shift the channel's data in time. Use this to compensate for differences in the electrical lengths of the input paths due to cabling.

| | |
|----------------|--|
| Remote Command | <code>[:SENSe]:CORRection:IQ[:I]:SKEW <seconds></code> <code>[:SENSe]:CORRection:IQ[:I]:SKEW?</code> |
| Example | Delay the data for the I channel by 10 ns: <code>:CORR:IQ:SKEW 10 ns</code> |
| Preset | 0 |
| State Saved | Yes Unaffected by Mode Preset, but set to the default value by Restore Input/Output Defaults or Restore System Defaults->All |
| Range | 0 s to 100 ns |
| Min | 0 s |
| Max | +100 ns |

Combined Differential/Input Z (Remote Command Only)

For backwards compatibility only. It combines the Differential Input and Input Z selections into a single command.

| | | | | | | | | | |
|------------------------------|---|------------|---|------------|--|------------|--|------------|---|
| Notes | <p>Provided for E4406A code compatibility</p> <p>The enum values translate as follows:</p> <table border="1"> <tr> <td>U50</td> <td>Differential Input = Off, Input Z = 50 Ω</td> </tr> <tr> <td>B50</td> <td>Differential Input = On, Input Z = 50 Ω</td> </tr> <tr> <td>U1M</td> <td>Differential Input = Off, Input Z = 1 MΩ</td> </tr> <tr> <td>B1M</td> <td>Differential Input = On, Input Z = 1 MΩ</td> </tr> </table> <p>Combines the Input Z (50 Ω or 1 M Ω) parameter with the Differential Input (Off = "Unbalanced", On = "Balanced") parameter into a single enumeration</p> <p>This backwards-compatibility command was for an instrument without independent settings for the I and Q channels. Therefore, it is tied only to the I channel and does not provide an equivalent for the Q channel. For proper operation of the backwards-compatibility command, Q Same as I should be set to ON</p> <p>Note also the subtle difference between this command and the backwards-compatibility command for Input Z. The Input Z SCPI has "IQ" before "IMP", while this command has that order reversed</p> | U50 | Differential Input = Off, Input Z = 50 Ω | B50 | Differential Input = On, Input Z = 50 Ω | U1M | Differential Input = Off, Input Z = 1 M Ω | B1M | Differential Input = On, Input Z = 1 M Ω |
| U50 | Differential Input = Off, Input Z = 50 Ω | | | | | | | | |
| B50 | Differential Input = On, Input Z = 50 Ω | | | | | | | | |
| U1M | Differential Input = Off, Input Z = 1 M Ω | | | | | | | | |
| B1M | Differential Input = On, Input Z = 1 M Ω | | | | | | | | |
| Couplings | Does not have an independent parameter, but instead is tied to the Differential Input and Input Z parameters. The coupling for those parameters apply to this command too | | | | | | | | |
| Preset | U50 | | | | | | | | |
| Backwards Compatibility SCPI | :INPut:IMPedance:IQ U50 B50 U1M B1M :INPut:IMPedance:IQ? | | | | | | | | |

6.2.21.2 I Probe

Access the probe setup parameters for the I channel.

| | |
|--------------|--|
| Dependencies | <p>Only appears when I/Q is the selected input</p> <p>The set of I/Q probe setup parameters will change based on the type of probe that is sensed. All probe types have the Attenuation parameter, and all probe types can be calibrated. The remaining parameters are only available for some probe types and will not be shown when not available. The probe type is determined by and reported for only for the I and Q ports, never the I-bar or Q-bar ports. The menu title will be "<ch>: <probe id>", where "<ch>" is either "I" or "Q" and "<probe id>" is the type of probe. For example, for the I Probe setup with an Keysight 1130A probe connected to the I port, the title will be "I: 1130A".</p> |
|--------------|--|

6 Input/Output
6.2 Input

Probe calibration data is stored for each probe type for each channel. When no probe is sensed, the probe type "Unknown" is used, and this is also treated like a probe type with its own calibration data. When a probe is changed, the calibration data for that probe type for that port is restored. An advisory message will be displayed showing the new probe type and the calibration status. The calibration data is stored permanently (survives a power cycle) and is not affected by a Preset or any of the Restore commands. When the probe has EEPROM identification (most newer Keysight probes have this), the calibration data is stored by probe serial number and port, so if you have two probes of the same type, the correct calibration data will be used for each. For probes that do not have EEPROM identification, the calibration data is stored by probe type and port and the instrument cannot distinguish between different probes of the same type. In all cases (with or without EEPROM identification), the calibration data is port specific, so it will not follow a specific probe from port to port if the probe is moved.

The "Unknown" probe type is used whenever no probe is sensed. When no calibration data exists for "Unknown" the latest cable calibration data is used.

Attenuation

The attenuation is part of the calibration data stored with the probe type and is initially the value that was returned by the last calibration. You can modify this value and any changes will be stored with the calibration data and will survive power cycles and presets. When a probe calibration is performed the attenuation value will be overwritten by the calibration.

| | |
|----------------|---|
| Remote Command | <code>[:SENSe]:CORRection:IQ:I:ATTenuation:RATio <real></code> <code>[:SENSe]:CORRection:IQ:I:ATTenuation:RATio?</code> |
| Example | Set the attenuation for the current I probe to 100.00:1: <code>:CORR:IQ:I:ATT:RAT 100</code> |
| Notes | Each probe type has its own attenuation setting. As probes are changed the attenuation value will reflect the new probe's setting. Changing the attenuation affects only the current probe type's setting and leaves all others unchanged When the IQ Path is I+jQ, the Q probe attenuation setting must match the I Probe attenuation setting within 1 dB. If this is not the case, an error condition message is generated, 159; Settings Alert; I/Q mismatch: Attenuation |
| Preset | 1 |
| State Saved | Saved with probe calibration data. Survives a power cycle and is not affected by Preset or Restore |
| Min/Max | 0.001/10000 This is an alternate form of the SCPI command that allows input as a power instead of a ratio. |
| Remote Command | <code>[:SENSe]:CORRection:IQ:I:ATTenuation <rel_amp1></code> <code>[:SENSe]:CORRection:IQ:I:ATTenuation?</code> |

| | |
|---------|--|
| Example | Set the attenuation for the current I probe type to 100.00:1: <code>:CORR:IQ:I:ATT 20 dB</code> |
| Min/Max | -60 dB /+80 dB |

Offset

Some active probes have DC offset capability. When one of these probes is connected, this control will be visible. The signal is adjusted for the DC offset before entering the instrument's port. This allows for removal of a DC offset before reaching the instrument's input port voltage limits. For example, a signal that varies 1 V peak-to-peak with a DC offset equal to the instrument's max input voltage would exceed the input limits of the instrument for half its cycle. Removing the DC offset allows the instrument to correctly process the entire signal.

| | |
|----------------|---|
| Remote Command | <code>:INPut:OFFSet:I <voltage></code> <code>:INPut:OFFSet:I?</code> |
| Example | Remove a DC offset of -0.5 V from the I channel input: <code>:INP:OFFS:I -0.5</code> |
| Notes | Only some probe types support Offset . For those that do, each probe type has its own Offset setting. As probes are changed, the Offset value will reflect the new probe's setting. Changing Offset affects only the current probe type's setting and leaves all others unchanged |
| Preset | 0 V |
| State Saved | Saved with probe calibration data. Survives power cycle and is not affected by Preset or Restore |
| Min/Max | -18 V/+18 V |

Coupling

Some probe types allow coupling to reject low frequencies. This filters out the DC component of a signal that is composed of a DC bias plus some AC signal. This control is visible only for probe types that have this capability.

| | |
|----------------|---|
| Remote Command | <code>:INPut:COUPling:I DC LFR1 LFR2</code> <code>:INPut:COUPling:I?</code> |
| Example | Turn off low frequency rejection on the I channel, allowing signals down to DC: <code>:INP:COUP:I DC</code> Turn on low frequency rejection on the I channel for frequencies lower than 1.7 Hz: <code>:INP:COUP:I LFR1</code> Turn on low frequency rejection on the I channel for frequencies lower than 0.14 Hz: <code>:INP:COUP:I LFR2</code> |
| Notes | Only some probe types support Coupling . For those that do, each probe type has its own Coupling setting. As probes are changed, the Coupling value will reflect the new probe's setting. Changing |

6 Input/Output

6.2 Input

| | |
|-------------|--|
| | Coupling affects only the current probe type's setting and leaves all others unchanged |
| Preset | DC |
| State Saved | Saved with probe calibration data. Survives a power cycle and is not affected by a Preset or Restore |
| Range | DC AC 1.7 Hz LFR1 AC 0.14 Hz LFR2 |

Clear Calibration

Clears the calibration data for the current port and probe. It does not clear the data for other probe types or other ports. If the sensed probe has EEPROM identification, only the data for that specific probe is cleared. After this command has completed, the probe calibration state will be the same as if no probe calibration had ever been performed for the specified channel and probe. The probe attenuation will be the default value for that probe type and the Cable Calibration frequency response corrections will be used. This command is dependent on the Differential Input state. When Differential Input is on, both the data for the probe attached to the main port and the data for the probe attached to the complementary port are cleared. When Differential Input is off, only data for the probe attached to the main port is cleared.

| | |
|----------------|--|
| Remote Command | <code>:CALibration:IQ:PROBe:I:CLEar</code> |
| Example | Clear the calibration data for the I channel and the current probe (with EEPROM identification) or probe type (without EEPROM identification): <code>:CAL:IQ:PROBe:I:CLE</code> |

6.2.21.3 Calibrate

Invokes the guided probe calibration. The guided probe calibration is context sensitive and depends on the channel (I or Q) and the Differential Input state. The calibration is only performed on the selected channel. When the Differential control is switched to Differential, both the probe attached to the main port and the probe attached to the complementary port are calibrated. When the Differential control is switched to Single Ended, only the probe attached to the main port is calibrated.

Calibrating the Baseband I/Q ports requires several steps and manual connections. The Guided Calibration will interactively step you through the required steps, displaying diagrams to help with the connections. The steps will vary depending on the setup.

In the Guided Calibration windows, the date and time of the last calibration are displayed. If any of the items listed are displayed in yellow, this indicates that the calibration for that item is inconsistent with the latest calibration, and you should complete the entire calibration process before you exit the calibration. For passive probes with Differential On, any calibration that is more than a day older than the most recent calibration will be displayed with the color amber.

The I/Q probe calibration creates correction data for one of the front panel I/Q channels. When the probe has EEPROM identification, the data is unique to that specific probe. When the probe does not have EEPROM identification, the data will be used for all probes of the same type. The data is also unique to the channel, so calibration data for the I channel will not be used for the Q channel and vice versa.

The guided calibration (front panel only) will show connection diagrams and guide you through the I/Q Isolation Calibration and through calibrating each port. The calibration data for each port is stored separately, so as soon as a port is calibrated that data is saved and will be used. If a user presses "Exit" to exit the calibration process, the data for the port already completed will still be used. It is recommended that a calibration be completed once started, or if exited, that it be properly done before the next use of the probe. The "Next" button will perform the calibration for the current port and then proceed to the next step in the calibration procedure. The "Back" button will return to the prior port in the procedure. Both softkeys and dialog buttons are supplied for ease of use. The dialog buttons are for mouse use and the softkeys for front panel use.

The calibration can also be done via SCPI, but no connection diagrams will be shown. You will need to make the correct connections before issuing each port calibration command. Again, it is recommended that all ports be calibrated at the same time.

For Active probes or when Differential is Off, only the main port is calibrated, otherwise both the main and complementary ports are calibrated.

The instrument state remains as it was prior to entering the calibration procedure except while a port is actually being calibrated. Once a port is calibrated it returns to the prior state. A port calibration is in process only from the time the "Next" button is pressed until the next screen is shown. For SCPI, this corresponds to the time from issuing the CAL:IQ:PROB:I|B|Q|QB command until the operation is complete.

For example, if the prior instrument state is Cal Out = Off, Input = I+jQ, and Differential = Off, then up until the time the "Next" button is pressed the I Input and Q Input LEDs are on and the Cal Out, I-bar Input and Q-bar Input LEDs are off. Once the "Next" button is pressed for the I port calibration, only the Cal Out and I Input LEDs will be on, and the others will be off. When the screen progresses to the next step ("Next" button again enabled), the prior state is restored and only the I Input and Q Input LEDs are on (Cal Out is off again).

I/Q Isolation Calibration

I/Q Isolation Calibration must be run before calibrating any port with either the I/Q Cable Calibration or I/Q Probe Calibration. This calibration is performed with nothing connected to any of the front panel I/Q ports. This is the first step in both the I/Q Cable Calibration and the I/Q Probe Calibration. This dialog appears if the Calibration is being run for the first time. It can also be accessed by pressing Back

6 Input/Output
6.2 Input

from the I Input Cal, the Q Input Cal, or the I/Q Cable Cal. Pressing Next from this dialog runs the calibration

| | |
|----------------|---|
| Remote Command | <code>:CALibration:IQ:ISOLation</code> |
| Example | <code>:CAL:IQ:ISOL</code> |
| Notes | All front panel I/Q ports must be unconnected |
| State Saved | No |

I/Q Isolation Calibration Time (Remote Query Only)

Returns the last date and time that the I/Q Isolation Calibration was performed.

| | |
|----------------|--|
| Remote Command | <code>:CALibration:IQ:ISOLation:TIME?</code> |
| Example | <code>:CAL:IQ:ISOL:TIME?</code> |
| Notes | Returns 6 integer values: year, month, day, hour, minute, second. When no calibration has been performed, all values are 0 |
| Annunciation | Guided Calibration, Isolation Calibration, Last Calibration |

I Port

The I port calibration is performed with the probe body attached to the front panel's I port, and the probe tip connected via an adapter to the Cal Out port. The guided calibration will show a diagram of the required connections.

| | |
|----------------|--|
| Remote Command | <code>:CALibration:IQ:PROBe:I</code> |
| Example | <code>:CAL:IQ:PROB:I</code> |
| Notes | The I port must be connected to the Cal Out port before issuing the command The calibration data is saved as soon as the port is calibrated and will survive power cycles. It is not reset by any preset or restore data commands |
| State Saved | No |

I Port Probe Calibration Time (Remote Query Only)

Return the last date and time that the I/Q Probe Calibration was performed for a specific port.

| | |
|----------------|---|
| Remote Command | <code>:CALibration:IQ:PROBe:I :TIME?</code> |
| Example | <code>:CAL:IQ:PROB:I:TIME?</code> |

| | |
|-------|---|
| Notes | This returns 6 integer values: year, month, day, hour, minute, second. When no calibration has been performed, all values are 0. The value is specific to both the port and probe, so the value will change as probes are connected or disconnected |
|-------|---|

I-bar Port

The I-bar port calibration is performed with the probe body attached to the front panel's I-bar port and the probe tip connected via an adapter to the Cal Out port. The I-bar probe calibration is only available for passive probes with Differential On. The guided calibration will show a diagram of the required connections.

| | |
|----------------|---|
| Remote Command | <code>:CALibration:IQ:PROBe:IBar</code> |
|----------------|---|

| | |
|---------|------------------------------|
| Example | <code>:CAL:IQ:PROB:IB</code> |
|---------|------------------------------|

| | |
|-------|--|
| Notes | The I-bar port must be connected to the Cal Out port before issuing the command The calibration data is saved as soon as the port is calibrated and will survive power cycles. It is not reset by any preset or restore data commands |
|-------|--|

| | |
|-------------|----|
| State Saved | No |
|-------------|----|

I-bar Port Probe Calibration Time (Remote Query Only)

Return the last date and time that the I/Q Probe Calibration was performed for a specific port.

| | |
|----------------|---|
| Remote Command | <code>:CALibration:IQ:PROBe:IBAR:TIME?</code> |
|----------------|---|

| | |
|---------|--------------------------------------|
| Example | <code>:CAL:IQ:PROB:IBAR:TIME?</code> |
|---------|--------------------------------------|

| | |
|-------|--|
| Notes | Returns 6 integer values: year, month, day, hour, minute, second. When no calibration has been performed, all values are 0. The value is specific to both the port and probe, so the value will change as probes are connected or disconnected |
|-------|--|

| | |
|--------------|---|
| Annunciation | Guided Calibration, Probe Calibration, Last Calibration |
|--------------|---|

6.2.21.4 Q Setup

Access the channel setup parameters for the Q channel.

| | |
|--------------|---|
| Dependencies | Only appears when I/Q is the selected input |
|--------------|---|

Q Same as I

Many, but not all, usages require the I and Q channels have an identical setup. To simplify channel setup, the Q Same as I will cause the Q channel parameters to be

6 Input/Output

6.2 Input

mirrored from the I channel. That way you only need to set up one channel (the I channel). The I channel values are copied to the Q channel, so at the time Q Same as I is turned off the I and Q channel setups will be identical. This does not apply to Probe settings or to parameters that are determined by the probe.

| | |
|----------------|---|
| Remote Command | <code>:INPut:IQ:MIRROred OFF ON 0 1</code> <code>:INPut:IQ:MIRROred?</code> |
| Example | Turn off the mirroring of parameters from I to Q: <code>:INP:IQ:MIRR OFF</code> |
| Couplings | Only displayed for the Q channel. When Yes, the I channel values for some parameters are mirrored (copied) to the Q channel. However, when a parameter is determined by the type of probe and a probe is sensed, the probe setting is always used and the I channel setting is ignored. The following parameters are mirrored: Differential Input (when not determined by probe) Input Z (when not determined by probe) |
| Preset | Unaffected by Preset, but set to the default value (Q Same as I set to ON) by Restore Input/Output Defaults or Restore System Defaults->All |
| State Saved | Saved in instrument state |
| Range | OFF ON |

Differential

Selects differential input on or off for the Q channel. For differential input (also called balanced input), the instrument uses both the Q and Q-bar ports. When differential input is off (also called single-ended or unbalanced input), the instrument uses only the Q port.

| | |
|----------------|---|
| Remote Command | <code>:INPut:IQ:Q:DIFFerential OFF ON 0 1</code> <code>:INPut:IQ:Q:DIFFerential?</code> |
| Example | Put the Q channel in Differential mode: <code>:INP:IQ:Q:DIFF ON</code> Put the Q channel in Single Ended mode: <code>:INP:IQ:Q:DIFF OFF</code> |
| Notes | When Differential Input = ON , the instrument checks for attenuation mismatches between the Q and Q-bar ports. If the difference in attenuation values exceeds 0.5 dB a Settings Alert error condition, error 159 will be set When Q Differential Input = ON , and IQ Path is I+jQ, the I Differential input must also be ON . Similarly, when Q Differential Input = OFF , and IQ Path is I+jQ, the I Differential input must also be OFF . If the states of the two inputs do not match, an error condition message is generated, 159; Settings Alert; I/Q mismatch: Differential |
| Couplings | Some active probes include built-in differential capability. When one of these probes is sensed, this key is disabled. Since the differential capability is handled in the probe, the Instrument will use only the main port and the key will show that the Instrument's Differential Input mode is Off (indicating that the |

| | |
|-------------|---|
| | complementary port not in use) When a differential probe is not sensed and Q Same as I is On, the value set for I will be copied to Q. This key is disabled when Q Same as I is On |
| Preset | OFF |
| State Saved | Yes Unaffected by a Preset, but set to the default value by Restore Input/Output Defaults or Restore System Defaults->All |
| Range | OFF ON |
| Annotation | The LED on the Q-bar port indicates the Differential Input setting |

Input Z

Selects the input impedance for the Q channel. The impedance applies to both the Q and Q-bar ports.

The input impedance controls the hardware signal path impedance match. It is not used for converting voltage to power. The voltage to power conversion always uses the Reference Z parameter. The Reference Z parameter applies to both I and Q channels.

| | |
|----------------|---|
| Remote Command | :INPut[1]:IQ:Q:IMPedance LOW HIGH :INPut[1]:IQ:Q:IMPedance? |
| Example | Set the Q channel input impedance to 1 M Ω : :INP:IQ:Q:IMP HIGH Set the Q channel input impedance to 50 Ω : :INP:IQ:Q:IMP LOW |
| Notes | LOW = 50 Ω , HIGH = 1 MΩ When IQ Path is I+jQ, the I Input Z setting must be the same as the Q Input Z setting. If the settings of the two inputs do not match, an error condition message is generated, 159; Settings Alert; I/Q mismatch: Input Z |
| Couplings | Input impedance is a built-in characteristic of a probe. Therefore, whenever a probe is sensed, this key is disabled, and the value is set to match the probe When no probe is sensed and Q Same as I is On, the value set for I will also be copied to Q. This key is disabled when Q Same as I is On |
| Preset | LOW |
| State Saved | Yes Unaffected by a Preset, but set to the default value by Restore Input/Output Defaults or Restore System Defaults->All |
| Range | 50 Ω 1 MΩ |
| Annotation | "Q:<Q Input Z>" (examples, "Q:50 Ω " or "Q:1M Ω ") in the Measurement Bar. The annotation shows both the I and Q Input Z values |

Skew

Sets the skew factor for the Q channel. The skew will shift the channel's data in time. Use this to compensate for differences in the electrical lengths of the input paths due to cabling and probes.

| | |
|----------------|---|
| Remote Command | <code>[:SENSe]:CORRection:IQ:Q:SKEW <seconds></code> <code>[:SENSe]:CORRection:IQ:Q:SKEW?</code> |
| Example | Delay the data for the Q channel by 10 ns <code>:CORR:IQ:Q:SKEW 10 ns</code> |
| Preset | 0 |
| State Saved | Yes Unaffected by a Preset, but set to the default value by Restore Input/Output Defaults or Restore System Defaults->All |
| Min/Max | 0 s/ 100 ns |

6.2.21.5 Q Probe

Accesses the probe setup parameters for the Q channel. See "[Combined Differential/Input Z \(Remote Command Only\)](#)" on page 2198.

| | |
|--------------|---|
| Dependencies | Only appears when I/Q is the selected input |
|--------------|---|

Attenuation

The attenuation is part of the calibration data stored with the probe type and is initially the value that was returned by the last calibration. You can modify this value and any changes will be stored with the calibration data and will survive power cycles and presets. When a probe calibration is performed the attenuation value will be overwritten by the calibration.

| | |
|----------------|---|
| Remote Command | <code>[:SENSe]:CORRection:IQ:Q:ATTenuation:RATio <real></code> <code>[:SENSe]:CORRection:IQ:Q:ATTenuation:RATio?</code> |
| Example | Set the attenuation for the current Q probe to 100.00:1: <code>:CORR:IQ:Q:ATT:RAT 100</code> |
| Notes | Each probe type has its own attenuation setting. As probes are changed the attenuation value will reflect the new probe's setting. Changing the attenuation affects only the current probe type's setting and leaves all others unchanged When the IQ Path is I+jQ, the Q probe attenuation setting must match the I Probe attenuation setting within 1 dB. If this is not the case, an error condition message is generated, 159; Settings Alert; I/Q mismatch: Attenuation |

| | |
|----------------|--|
| Preset | Each probe type has its own default. The default for the "Unknown" probe type is 1:1 |
| State Saved | Saved with probe calibration data. Survives a power cycle and is not affected by Preset or Restore |
| Min/Max | 0.001/10000 This is an alternate form of the SCPI command that allows input as a power instead of a ratio. |
| Remote Command | <code>[:SENSe]:CORRection:IQ:Q:ATTenuation <rel_ampl></code> <code>[:SENSe]:CORRection:IQ:Q:ATTenuation?</code> |
| Example | Set the attenuation for the current Q probe type to 100.00:1: <code>:CORR:IQ:Q:ATT 20 dB</code> |
| Min/Max | -60 dB /+80 dB |

Offset

Some active probes have DC offset capability. When one of these probes is connected this control will be visible. The signal is adjusted for the DC offset before entering the instrument's port. This allows for removal of a DC offset before reaching the instrument's input port voltage limits. For example, a signal that varies 1 V peak-to-peak with a DC offset equal to the instrument's max input voltage would exceed the input limits of the instrument for half its cycle. Removing the DC offset allows the instrument to correctly process the entire signal.

| | |
|----------------|---|
| Remote Command | <code>:INPut:OFFSet:Q <voltage></code> <code>:INPut:OFFSet:Q?</code> |
| Example | Remove a DC offset of -0.5 V from the Q channel input: <code>:INP:OFFS:Q -0.5</code> |
| Notes | Only some probe types support Offset . For those that do, each probe type has its own Offset setting. As probes are changed, the Offset value will reflect the new probe's setting. Changing Offset affects only the current probe type's setting and leaves all others unchanged |
| Preset | 0 V |
| State Saved | Saved with probe calibration data. Survives power cycle and is not affected by Preset or Restore |
| Min/Max | -18 V/+18 V |

Coupling

Some probe types allow coupling to reject low frequencies. This filters out the DC component of a signal that is composed of a DC bias plus some AC signal. This control is visible only for probe types that have this capability.

| | |
|----------------|--|
| Remote Command | <code>:INPut:COUPling:Q DC LFR1 LFR2</code> <code>:INPut:COUPling:Q?</code> |
|----------------|--|

6 Input/Output

6.2 Input

| | |
|-------------|--|
| Example | <p>Turn off low frequency rejection on the Q channel, allowing signals down to DC: <code>:INP:COUP:Q DC</code></p> <p>Turn on low frequency rejection on the Q channel for frequencies lower than 1.7 Hz: <code>:INP:COUP:Q LFR1</code></p> <p>Turn on low frequency rejection on the Q channel for frequencies lower than 0.14 Hz: <code>:INP:COUP:Q LFR2</code></p> |
| Notes | Only some probe types support Coupling . For those that do, each probe type has its own Coupling setting. As probes are changed, the Coupling value will reflect the new probe's setting. Changing Coupling affects only the current probe type's setting and leaves all others unchanged |
| Preset | DC |
| State Saved | Saved with probe calibration data. Survives a power cycle and is not affected by a Preset or Restore |
| Range | DC AC 1.7 Hz LFR1 AC 0.14 Hz LFR2 |

Clear Calibration

Clears the calibration data for the current port and probe. It does not clear the data for other probe types or other ports. If the sensed probe has EEPROM identification, only the data for that specific probe is cleared. After this command has completed, the probe calibration state will be the same as if no probe calibration had ever been performed for the specified channel and probe. The probe attenuation will be the default value for that probe type and the Cable Calibration frequency response corrections will be used. This command is dependent on the Differential Input state. When Differential Input is on, both the data for the probe attached to the main port and the data for the probe attached to the complementary port are cleared. When Differential Input is off, only data for the probe attached to the main port is cleared.

| | |
|----------------|---|
| Remote Command | <code>:CALibration:IQ:PROBe:Q:CLEar</code> |
| Example | <p>Clear the calibration data for the Q channel and the current probe (with EEPROM identification) or probe type (without EEPROM identification): <code>:CAL:IQ:PROBe:I:CLE</code></p> |

6.2.21.6 Calibrate

Invokes the guided probe calibration. The guided probe calibration is context sensitive and depends on the channel (I or Q) and the Differential Input state. The calibration is only performed on the selected channel. When the Differential control is switched to Differential, both the probe attached to the main port and the probe attached to the complementary port are calibrated. When the Differential control is switched to Single Ended, only the probe attached to the main port is calibrated.

The I/Q Isolation Calibration must be run before calibrating any port with either the I/Q Cable Calibration or I/Q Probe Calibration. See "[I/Q Isolation Calibration](#)" on [page 2202](#)

Q Port

The Q port calibration is performed with the probe body attached to the front panel's Q port and the probe tip connected via an adapter to the Cal Out port. The guided calibration will show a diagram of the required connections.

| | |
|----------------|--|
| Remote Command | <code>:CALibration:IQ:PROBe:Q</code> |
| Example | <code>:CAL:IQ:PROB:Q</code> |
| Notes | The Q port must be connected to the Cal Out port before issuing the command The calibration data is saved as soon as the port is calibrated and survives power cycles. It is not reset by any preset or restore data commands |
| State Saved | No |

Q Port Probe Calibration Time (Remote Query Only)

Return the last date and time that the I/Q Probe Calibration was performed for a specific port.

| | |
|----------------|--|
| Remote Command | <code>:CALibration:IQ:PROBe:Q:TIME?</code> |
| Example | <code>:CAL:IQ:PROB:Q:TIME?</code> |
| Notes | Returns 6 integer values: year, month, day, hour, minute, second. When no calibration has been performed, all values are 0. The value is specific to both the port and probe, so the value will change as probes are connected or disconnected |
| Annunciation | Guided Calibration, Probe Calibration, Last Calibration |

Q-bar Port

The Q-bar port calibration is performed with the probe body attached to the front panel's Q-bar port and the probe tip connected via an adapter to the Cal Out port. The Q-bar probe calibration is only available for passive probes with Differential On. The guided calibration will show a diagram of the required connections.

| | |
|----------------|---|
| Remote Command | <code>:CALibration:IQ:PROBe:QBar</code> |
| Example | <code>:CAL:IQ:PROB:QB</code> |
| Notes | The Q-bar port must be connected to the Cal Out port before issuing the command |

6 Input/Output

6.2 Input

The calibration data is saved as soon as the port is calibrated and will survive power cycles. It is not reset by any preset or restore data commands

State Saved No

Q-bar Probe Calibration Time (Remote Query Only)

Return the last date and time that the I/Q Probe Calibration was performed for a specific port.

Remote Command :CALibration:IQ:PROBe:QBAR:TIME?

Example :CAL:IQ:PROB:QBAR:TIME?

Notes Returns 6 integer values: year, month, day, hour, minute, second. When no calibration has been performed, all values are 0. The value is specific to both the port and probe, so the value will change as probes are connected or disconnected

Annunciation Guided Calibration, Probe Calibration, Last Calibration

6.2.22 I/Q Cable Calibrate

The I/Q cable calibration creates correction data for each of the front panel I/Q ports. This calibration data is used whenever no probe specific calibration data is available. It is important that all ports are calibrated using the same short BNC cable so that the data is comparable from port to port.

The guided calibration (front panel only) will show connection diagrams and guide you through the isolation calibration and calibrating each port. The calibration data for each port is stored separately, so as soon as a port is calibrated that data is saved and will be used. If you press "Exit" to exit the calibration process, the data for the ports already completed will still be used. It is recommended that a calibration be completed once started, or if exited, that it be properly done before the next use of the I/Q ports. The "Next" button will perform the calibration for the current port and then proceed to the next step in the calibration procedure. The "Back" button will return to the prior port in the procedure. Both keys and dialog buttons are supplied for ease of use. The dialog buttons are for mouse use and the softkeys for front panel use.

The calibration can also be done via SCPI, but no connection diagrams will be shown. You will have to make the correct connections before issuing each port calibration command. Again, it is recommended that all ports be calibrated at the same time.

The instrument state remains as it was prior to entering the calibration procedure except while a port is actually being calibrated. Once a port is calibrated it returns to the prior state. A port calibration is in process only from the time the "Next" button is

pressed until the next screen is shown. For SCPI, this corresponds to the time from issuing the CAL:IQ:FLAT:I|B|Q|QB command until the operation is complete.

For example, if the prior instrument state is Cal Out = Off, Input = I+jQ, and Differential = Off, then up until the time the "Next" button is pressed the I Input and Q Input LEDs are on and the Cal Out, I-bar Input and Q-bar Input LEDs are off. Once the "Next" button is pressed for the I port calibration, only the Cal Out and I Input LEDs will be on and the others will be off. When the screen progresses to the next step ("Next" button again enabled), the prior state is restored and only the I Input and Q Input LEDs are on (Cal Out is off again).

The last calibration date and time for each port will be displayed. Any calibrations that are more than a day older than the most recent calibration will be displayed with the color amber.

The I/Q Isolation Calibration must be run before calibrating any port with either the I/Q Cable Calibration or I/Q Probe Calibration. See "[I/Q Isolation Calibration](#)" on [page 2202](#)

| | |
|--------------|---|
| Dependencies | Only appears when I/Q is the selected input |
|--------------|---|

6.2.22.1 I Port

The I port calibration is performed with the front panel's I port connected via a short BNC cable to the Cal Out port. The guided calibration will show a diagram of the required connections.

| | |
|----------------|----------------------------|
| Remote Command | :CALibration:IQ:FLATness:I |
|----------------|----------------------------|

| | |
|---------|----------------|
| Example | :CAL:IQ:FLAT:I |
|---------|----------------|

| | |
|-------|--|
| Notes | <p>The recommended procedure is to use the same BNC cable to calibrate all I/Q ports. All I/Q ports should be calibrated sequentially during the procedure</p> <p>The calibration data is saved as soon as the port is calibrated and will survive power cycles. It is not reset by any preset or restore data commands</p> <p>The I port must be connected to the Cal Out port before issuing the command</p> |
|-------|--|

| | |
|-------------|----|
| State Saved | No |
|-------------|----|

6.2.22.2 I-bar Port

The I-bar port calibration is performed with the front panel's I-bar port connected via a short BNC cable to the Cal Out port. The guided calibration will show a diagram of the required connections.

| | |
|----------------|-------------------------------|
| Remote Command | :CALibration:IQ:FLATness:IBAR |
|----------------|-------------------------------|

6 Input/Output

6.2 Input

| | |
|-------------|--|
| Example | <code>:CAL:IQ:FLAT:IBAR</code> |
| Notes | <p>The recommended procedure is to use the same BNC cable to calibrate all I/Q ports. All I/Q ports should be calibrated sequentially during the procedure</p> <p>The calibration data is saved as soon as the port is calibrated and will survive power cycles. It is not reset by any preset or restore data commands</p> <p>The I-bar port must be connected to the Cal Out port before issuing the command</p> |
| State Saved | No |

6.2.22.3 Q Port

The Q port calibration is performed with the front panel's Q port connected via a short BNC cable to the Cal Out port. The guided calibration will show a diagram of the required connections.

| | |
|----------------|--|
| Remote Command | <code>:CALibration:IQ:FLATness:Q</code> |
| Example | <code>:CAL:IQ:FLAT:Q</code> |
| Notes | <p>The recommended procedure is to use the same BNC cable to calibrate all I/Q ports. All I/Q ports should be calibrated sequentially during the procedure</p> <p>The calibration data is saved as soon as the port is calibrated and will survive power cycles. It is not reset by any preset or restore data commands</p> <p>The Q port must be connected to the Cal Out port before issuing the command</p> |
| State Saved | No |

6.2.22.4 Q-bar Port

The Q-bar port calibration is performed with the front panel's Q-bar port connected via a short BNC cable to the Cal Out port. The guided calibration will show a diagram of the required connections.

| | |
|----------------|--|
| Remote Command | <code>:CALibration:IQ:FLATness:QBAR</code> |
| Example | <code>:CAL:IQ:FLAT:QBAR</code> |
| Notes | <p>The recommended procedure is to use the same BNC cable to calibrate all I/Q ports. All I/Q ports should be calibrated sequentially during the procedure</p> <p>The calibration data is saved as soon as the port is calibrated and will survive power cycles. It is not reset by any preset or restore data commands</p> <p>The Q-bar port must be connected to the Cal Out port before issuing the command</p> |
| State Saved | No |

6.2.22.5 I/Q Cable Calibration Time (Remote Query Only)

Returns the last date and time that the I/Q Cable Calibration was performed for a specific port.

| | |
|----------------|--|
| Remote Command | <code>:CALibration:IQ:FLATness:I IBAR Q QBAR:TIME?</code> |
| Example | <code>:CAL:IQ:FLAT:I:TIME?</code> |
| Notes | Returns 6 integer values: year, month, day, hour, minute, second. When no calibration has been performed, all values are 0 |
| Annunciation | Guided Calibration, Cable Calibration, Last Calibration |

6.2.23 Audio Input Channel

Determines which Audio Input to be used for audio measurements.

| | |
|----------------|---|
| Remote Command | <code>[:SENSe]:FEED:AFINput:PORT CH1 CH2</code> <code>[:SENSe]:FEED:AFINput:PORT?</code> |
| Example | <code>:FEED:AFIN CH1</code> |
| Dependencies | Only appears in Radio Test Mode Only appears in modular products, and only if an M9260A Audio Analyzer module is installed |
| Preset | Unaffected by Mode Preset, but set to Channel 1 by Input/Output Preset |

6.2.24 Audio Calibrator

Lets you turn on the internal calibrator in the X-Series Audio board.

| | |
|----------------|---|
| Remote Command | <code>[:SENSe]:FEED:AFALign OFF REF10</code> <code>[:SENSe]:FEED:AFALign?</code> |
| Example | <code>:FEED:AFAL REF10</code> |
| Dependencies | Only appears in Measuring Receiver Mode's Audio Measurements when Option 107 is present |
| Preset | <code>OFF</code> |

6.2.25 Audio Coupling

Lets you set AC or DC coupling for the currently selected audio input.

| | |
|----------------|---|
| Remote Command | <code>[:SENSe]:AFINput[1] 2:COUPling AC DC</code> <code>[:SENSe]:AFINput[1] 2:COUPling?</code> |
|----------------|---|

6 Input/Output

6.2 Input

| | |
|--------------|---|
| Example | <code>:AFIN:COUP AC</code> |
| Dependencies | Only appears in Measuring Receiver Mode and Radio Test Mode In Measuring Receiver Mode, only appear in Audio Measurements, and only if Option 107 is present In Radio Test Mode, only appears in modular products, and only if an M9260A Audio Analyzer module is installed |
| Preset | <code>AC</code> |

6.2.26 Audio Input Ground

Lets you float or ground the low side of the currently selected audio input channel. When you choose `FLOat`, the low side of the input is disconnected from ground.

| | |
|----------------|---|
| Remote Command | <code>[:SENSe]:AFINput[1] 2:LOW FLOat GROund</code> <code>[:SENSe]:AFINput[1] 2:LOW?</code> |
| Example | <code>:AFIN2:LOW FLO</code> |
| Dependencies | Only appears in Radio Test Mode Only appears in modular products, and only if an M9260A Audio Analyzer module is installed |
| Preset | Unaffected by Mode Preset, but set to <code>GROund</code> by Input/Output Preset |

6.2.27 Audio In Impedance

Lets you set the Impedance of the currently selected audio input channel. The value you enter is rounded up to the nearest allowed value.

| | |
|----------------|---|
| Remote Command | <code>[:SENSe]:AFINput[1] 2:IMPedance 50 600 1000000</code> <code>[:SENSe]:AFINput[1] 2:IMPedance?</code> |
| Example | <code>:AFIN:IMP 50</code> |
| Dependencies | Only appears in Radio Test Mode Only appears in modular products, and only if an M9260A Audio Analyzer module is installed |
| Preset | Unaffected by Mode Preset, but set to 600 by Input/Output Preset |

6.2.28 Input/Output Preset

Resets the group of settings and data associated with the **Input/Output** front-panel key to their default values. These settings are not affected by **Mode Preset** because they are generally associated with connections to the instrument, which you generally would not want to reset every time you press **Mode Preset**.

This is the same as the control in the **Preset** dropdown, and also the same as **Input/Output** button in the **Restore Defaults** menu under **System**.

All the variables set under the **Input/Output** front panel key are reset by **Input/Output Preset**, including Amplitude Corrections and Data (described in the **Corrections** section), with the exception of RF Source settings, which are unaffected.

By using **Input/Output Preset** and **Restore Mode Defaults**, a full preset of the current mode will be performed, with the caveat that since **Input/Output Preset** is a global function it will affect *all* Modes.

When **Input/Output Preset** is selected, a message appears saying:

“This will reset all of the Input/Output variables to their default state, including which input is selected, all Amplitude Correction settings and data, all External Mixing settings, all Frequency Reference settings and all Output settings.

It will not affect Alignment data or settings.

It will not affect RF Source settings.

This action cannot be undone. Do you want to proceed?”

Use the **OK** or **Cancel** buttons to affirm or cancel the operation.

Example

:SYST:DEF INP

presets all Input/Output variables to their factory default values

6.3 External Gain

Contains controls that allow you to compensate for gain or loss in the measurement system outside the instrument. The External Gain is subtracted from the amplitude readout (or the loss is added to the amplitude readout). So, the displayed signal level represents the signal level at the output of the device-under-test, which can be the input of an external device that provides gain or loss.

Entering an External Gain value does not affect the Reference Level, therefore the trace position on screen changes, as do all of the values represented by the trace data. Thus, the values of exported trace data, queried trace data, marker amplitudes, trace data used in calculations such as N dB points, trace math, peak threshold, etc., are all affected by External Gain. Changing the External Gain, even on a trace that is not updating, immediately changes all of the above, without new data needing to be taken.

NOTE

Changing the External Gain causes the instrument to immediately stop the current sweep and prepare to begin a new sweep. The data will not change until the trace data updates because the offset is applied to the data as it is taken. If a trace is exported with a nonzero External Gain, the exported data will contain the trace data with the offset applied.

In Spectrum Analyzer Mode, a Preamp is the common external device providing gain or loss. In a measurement application mode like GSM or W-CDMA, the gain or loss could be from a BTS (Base Transceiver Station) or an MS (Mobile Station). So, in the Spectrum Analyzer mode MS and BTS would be grayed out and the only choice would be Ext Preamp. Similarly, in some of the digital communications applications, Ext Preamp will be grayed out and you would have a choice of MS or BTS.

The Ext Preamp, MS, and BS controls may be grayed-out depending on which measurement is currently selected. If any of the grayed-out controls are pressed, or the equivalent SCPI command is sent, an advisory message is generated.

6.3.1 External Preamp

This function is similar to the reference level offset function. Both affect the displayed signal level. Ref Lvl Offset is a mathematical offset only, no instrument configuration is affected. Ext Preamp gain is used when determining the auto-coupled value of the Attenuator. The External Gain value and the Maximum Mixer Level settings are both part of the automatic setting equation for the RF attenuation setting. (10 dB of Attenuation is added for every 10 dB of External Gain.)

Note that the Ref Lvl Offset and Maximum Mixer Level are described in the Amplitude section. They are reset by Mode Preset. The External Preamp Gain is reset by the "Restore Input/Output Defaults" or "Restore System Defaults->All" functions.

The Swept SA Measurement in SA Mode only supports the "Ext Preamp" function under External Gain. The other External Gain functions are grayed-out, and generate a settings conflict, if the SCPI for them is sent.

See ["More Information" on page 2218](#)

| | |
|------------------------------|--|
| Remote Command | <code>[:SENSe]:CORRection:SA[:RF]:GAIN <rel_amp1></code> <code>[:SENSe]:CORRection:SA[:RF]:GAIN?</code> |
| Example | Set the Ext Gain value to 10 dB: <code>:CORR:SA:GAIN 10</code> Set the Ext Gain value to -10 dB (that is, an attenuation of 10 dB): <code>:CORR:SA:GAIN -10</code> |
| Notes | Does not auto return This command is new in X-Series |
| Dependencies | The reference level limits are determined in part by the External Gain/Atten, Max Mixer Level, and RF Atten Grayed-out in Modes that do not support External Gain |
| Preset | Unaffected by Preset, but set to 0 dB by Restore Input/Output Defaults or Restore System Defaults->All 0.00 dB, Gain |
| State Saved | Saved in instrument state |
| Min | -120 dB |
| Max | 120 dB |
| Annotation | Displayed in the Meas Bar as "Ext Gain <value>". When the gain is zero, no annotation is shown |
| Backwards Compatibility SCPI | <code>[:SENSe]:CORRection:OFFSet[:MAGNitude]</code> The legacy Ext Preamp Gain key is now called Ext Gain and the sub-menu has choices of Ext Preamp MS BTS for backwards compatibility The MS and BTS choices are unavailable in Swept SA and the Ext Preamp is unavailable in the cell comms measurements |

More Information

The U7227A USB Preamplifier is an accessory for the X-Series Signal Analyzer that provides gain externally, and whose gain settings are automatically loaded into the instrument over USB whenever it is connected to one of the instrument's USB ports.

While the USB Preamplifier is plugged into one of the instrument's USB ports, the instrument will consider it to be in the signal path of the RF Input and will apply the

6 Input/Output

6.3 External Gain

calibration data from the USB Preamp to measurements taken at the RF Input (on 2 input boxes, it will be considered to be in the signal path of RF Input 1; it is not supported for RF Input 2).

The USB Preamplifier contains its own cal data. This includes a noise trace suitable for use with NFE, for those models which support NFE. The act of connecting the Preamp to USB will cause the cal data to be downloaded from the preamp. When this happens, an informational message is provided saying "Cal data loaded from USB Preamp". The instrument will then automatically apply the calibration factors loaded from the Preamp in any measurement that supports the USB Preamp.

The External Preamp Gain setting may still be used, even though it is not required for the USB Preamp (since the USB Preamp supplies its own gain data to the instrument which is applied automatically). Connecting the USB Preamp does not change the External Preamp Gain setting, however unless you have another gain or attenuation element in the signal path, the appropriate setting for External Preamp Gain is 0 dB.

Overload detection and reporting will apply when the USB preamplifier is connected to USB. The USB Preamplifier has its own overload detector which reports overloads to the instrument over USB. This generates an error condition, "Input Overload; USB Preamp."

If, while the USB Preamp is connected to USB, a measurement is selected that does not support the USB preamplifier, the "No result; Meas invalid with Preamp" error condition is generated.

6.3.2 External Gain - MS

Sets an external gain/attenuation value for MS (Mobile Station) tests.

| | |
|----------------|---|
| Remote Command | <code>[:SENSe]:CORRection:MS[:RF]:GAIN <rel_amp1></code> <code>[:SENSe]:CORRection:MS[:RF]:GAIN?</code> |
| Example | Set the Ext Gain value to 10 dB: <code>:CORR:MS:GAIN 10</code> Set the Ext Gain value to -10 dB (that is, a loss of 10 dB): <code>:CORR:MS:GAIN -10</code> |
| Notes | Does not auto return |
| Dependencies | The reference level limits are determined in part by the External Gain, Max Mixer Level, RF Atten Grayed-out in modes that do not support MS |
| Preset | Unaffected by Preset, but set to 0 dB by Restore Input/Output Defaults or Restore System Defaults->All 0.00 dB, Gain |
| State Saved | Saved in instrument state |

| | |
|------------------------------|---|
| Min | -100 dB |
| Max | 100 dB |
| Backwards Compatibility SCPI | |
| Example | Set the Ext Gain value to -10 dB, and subsequently querying :LOSS will give 10 dB: <code>:CORR:MS:LOSS 10</code> Set the Ext Gain value to 10 dB. Subsequently querying :LOSS will return -10 dB: <code>:CORR:MS:LOSS -10</code> |
| Notes | A positive value of <code><rel_amp1></code> in the above command means a loss and a negative value indicates a gain If <code>:LOSS</code> is set, <code>:GAIN</code> is set to the negative value of the parameter sent If <code>:LOSS</code> is queried, it returns the negative of <code>:GAIN</code> |
| Preset | Unaffected by Preset, but set to 0 dB by Restore Input/Output Defaults or Restore System Defaults->All |
| Min/Max | -/+100 dB |
| Backwards Compatibility SCPI | <code>[:SENSe]:CORRection:MS[:RF]:LOSS <rel_amp1></code> <code>[:SENSe]:CORRection:MS[:RF]:LOSS?</code> |

6.3.3 External Gain - BTS

Sets an external attenuation value for BTS (Base Transceiver Station) tests.

| | |
|------------------------------|---|
| Remote Command | <code>[:SENSe]:CORRection:BTS[:RF]:GAIN <rel_amp1></code> <code>[:SENSe]:CORRection:BTS[:RF]:GAIN?</code> |
| Example | Set the Ext Gain value to 10 dB: <code>:CORR:BTS:GAIN 10</code> Set the Ext Gain value to -10 dB (that is, a loss of 10 dB): <code>:CORR:BTS:GAIN -10</code> |
| Notes | Does not auto return |
| Dependencies | The reference level limits are determined in part by the External Gain, Max Mixer Level, RF Atten Grayed-out in modes that do not support BTS |
| Preset | Unaffected by Preset, but set to 0 dB by Restore Input/Output Defaults or Restore System Defaults->All 0.00 dB, Gain |
| State Saved | Saved in instrument state |
| Min | -100 dB |
| Max | 100 dB |
| Backwards Compatibility SCPI | |

6 Input/Output

6.3 External Gain

| | |
|------------------------------|---|
| Example | <p>Set the Ext Gain value to -10 dB, and subsequently querying :LOSS will give 10 dB: :CORR:BTS:LOSS 10</p> <p>Set the Ext Gain value to 10 dB. Subsequently querying :LOSS will return -10 dB: :CORR:BTS:LOSS -10</p> |
| Notes | <p>A positive value of <rel_amp1> in the above command means a loss and a negative value indicates a gain</p> <p>If :LOSS is set, :GAIN is set to the negative value of the parameter sent</p> <p>If :LOSS is queried, it returns the negative of :GAIN</p> |
| Preset | Unaffected by Preset, but set to 0 dB by Restore Input/Output Defaults or Restore System Defaults->All |
| Min/Max | -/+100 dB |
| Backwards Compatibility SCPI | <p>[:SENSe]:CORRection:BTS[:RF]:LOSS <rel_amp1></p> <p>[:SENSe]:CORRection:BTS[:RF]:LOSS?</p> |

6.3.4 I Ext Gain

Affects the I channel input. However, when Q Gain in I+jQ is set to Same as I Gain, this value is applied to both I and Q channel inputs.

| | |
|----------------|---|
| Remote Command | <p>[:SENSe]:CORRection:IQ:I:GAIN <rel_amp1></p> <p>[:SENSe]:CORRection:IQ:I:GAIN?</p> |
| Example | <p>Set the I Ext Gain to 10 dB: :CORR:IQ:I:GAIN 10</p> <p>Set the I Ext Gain to -10 dB (that is, a loss of 10 dB): :CORR:IQ:I:GAIN -10</p> |
| Dependencies | <p>Not available unless option BBA is installed</p> <p>Grayed-out when I/Q Path is Q Only</p> |
| Preset | <p>0 dB</p> <p>Unaffected by Preset, but set to 0 dB by Restore Input/Output Defaults or Restore System Defaults->All</p> |
| State Saved | Yes |
| Min/Max | -/+100 dB |
| Annotation | <p>Ext Gain: <I Ext Gain> dB</p> <p>No annotation is shown when Input is not I/Q. Also not shown when I Ext Gain is 0.00 dB. I Ext Gain is not shown for Input Path Q Only. When the Input Path is Independent I and Q and I Ext Gain is not the same as Q Ext Gain, both are shown. "Ext Gain: <I Ext Gain> dB, <Q Ext Gain> dB"</p> |

6.3.5 Q Ext Gain

Affects the Q channel input.

| | |
|----------------|---|
| Remote Command | <code>[:SENSe]:CORRection:IQ:Q:GAIN <rel_amp1></code> <code>[:SENSe]:CORRection:IQ:Q:GAIN?</code> |
| Example | Set the Q Ext Gain to 10 dB: <code>:CORR:IQ:Q:GAIN 10</code> Set the Q Ext Gain to -10 dB (that is, a loss of 10 dB): <code>:CORR:IQ:Q:GAIN -10</code> |
| Dependencies | Not available unless option BBA is installed Grayed-out when Q gain in I+jQ is set to Same as I Gain |
| Preset | 0 dB Unaffected by Preset, but set to 0 dB by Restore Input/Output Defaults or Restore System Defaults->All |
| State Saved | Saved in instrument state |
| Min/Max | -/+100 dB |
| Annotation | Ext Gain: <Q Ext Gain> dB No annotation is shown when Input is not I/Q. Also not shown when Q Ext Gain is 0.00 dB. Q Ext Gain is not shown for Input Path I Only or I+jQ. When Input Path is Independent I and Q and when I and Q Ext Gain are both non-zero but are the same the annotation will be "Ext Gain: <Ext Gain> dB" and when I Ext Gain is not the same as Q Ext Gain, both are shown. "Ext Gain: <I Ext Gain> dB, <Q Ext Gain> dB" |

6.3.6 Q Gain in I+jQ

When Same as I Gain (**ON**) is selected, I Ext Gain value is applied to both I and Q channel input if the Input Path is I+jQ.

When Independent (**OFF**) is selected, I and Q Ext Gain values are applied to I and Q channel input independently.

| | |
|----------------|--|
| Remote Command | <code>[:SENSe]:CORRection:IQ:Q:GAIN:COUPle ON OFF 0 1</code> <code>[:SENSe]:CORRection:IQ:Q:GAIN:COUPle?</code> |
| Example | <code>:CORR:IQ:Q:GAIN:COUP ON</code> <code>:CORR:IQ:Q:GAIN:COUP?</code> |
| Preset | ON |
| State Saved | Yes |
| Range | Same as I Gain Independent |

6.4 Data Source

Contains controls that let you select the source of the data being fed to the instrument analysis engine.

The ability to Save and Record files of I/Q data is an important feature of some X-Series applications, and the Data Source controls allow you to switch back and forth from actual data at the instrument input and recorded data from a File.

In addition, some measurements allow you to retain a single measurement record in a Capture Buffer, and some measurements allow you to retain a specified length data record internally in a Recorded data area.

So, for measurements that support it, the controls on this tab allow you to select data from the instrument inputs, a recalled recording File, the Capture Buffer, or the Recorded data area. For measurements that do not support these features, the **Data Source** tab does not appear, and if `:FEED:DATA SCPI` is sent, an Undefined Header error is generated.

The available choices depend on which measurement you are running. All measurements support Input; Capture Buffer and File are only available in certain measurements, as shown in the table below. The choice of the internal Recorded data area is only available in Pulse Mode.

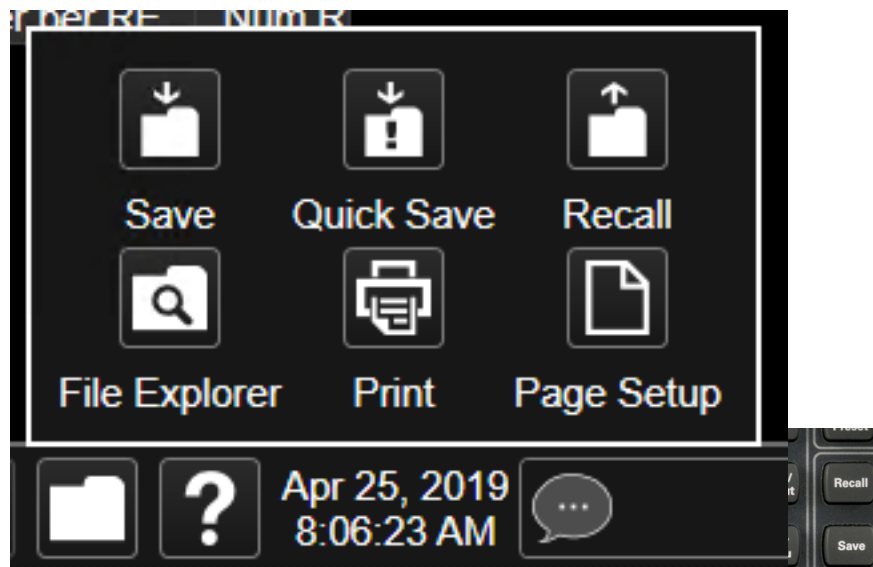

| Measurement | Capture Buffer | File |
|-------------------------------|----------------|------|
| WCDMA Code Domain | x | |
| WCDMA Mod Accuracy | x | |
| VMA Digital Demod | | x |
| VMA Custom OFDM | | x |
| 5G NR Modulation Analysis | | x |
| FDD LTE-A Modulation Analysis | | x |
| TDD LTE-A Modulation Analysis | | x |
| WLAN Modulation Analysis | x | x |
| WLAN Spectral Flatness | | x |
| WLAN MIMO Modulation Analysis | | x |
| Analog Demod AM | | x |
| Analog Demod PM | | x |
| Analog Demod FM | | x |
| Analog Demod FM Stereo | | x |
| Bluetooth Transmit Analysis | x | x |
| IoT & SRComms LoRa CSS Demod | | x |

How to Record and Playback I/Q Data

In several Demod measurements (and certain other measurements), it is possible to record I/Q data to files on your hard drive or network, and then recall these files for subsequent playback. These are the measurements shown in the table above with an “x” in the **File** column.

The Recording and Playback of signal data files is a multi-step process which involves controls in several menus (listed below).

Menus involved in Record/Playback:

- Save, Recording (under the **Save** hardkey or the **Save** icon in the **File** panel)
- Recall, Recording (under the **Recall** hardkey or the **Recall** icon in the **File** panel)
- Sweep, Recording tab
- Sweep, Playback tab
- Input/Output, Data Source tab (this tab)

Saving a Recording

When you save a recording, a certain number of measurement records are saved to a Recording file. The amount of data that is saved varies depending on the measurement and measurement settings. The following example uses VMA Digital Demod to illustrate the process.

6 Input/Output

6.4 Data Source

If you press the **Recording** tab in the **Sweep** menu, you will see a certain number of parameters displayed on the menu panel. Before you save a Recording, these parameters are all 0, as shown below:

To save the data for the current measurement, press the **Save** hardkey (or the **Save** icon in the **File** panel) and press the **Recording** tab on the left side of the **Save** panel:

Then press **Save As** and choose the file type you would like to use for the Save (**CSV**, **SDF**, **TXT**, **BIN**, **BINX**). You can find details of the file formats in **Save > Recording**.

Then press **Save** to save the raw I/Q data of the current measurement.

After the Save, you will see that the data on the Recording panel has changed to describe the data in the file you just saved. You should note this data in case you need to refer to it when you recall the file, particularly as not all file formats include the Sample Rate that was used to save the data. In particular, **BIN** and **BINX** files do not include sampling rate information inside the file, so after recalling one of these file types, you will need to set the Sample Rate manually in the **Sweep, Playback** menu.

6 Input/Output
 6.4 Data Source

Step 2: Recalling a Recording

If you press the **Playback** tab in the **Sweep** menu, you will see a certain number of parameters displayed on the menu panel. Before you recall a Recording, these parameters are all 0, as shown below:

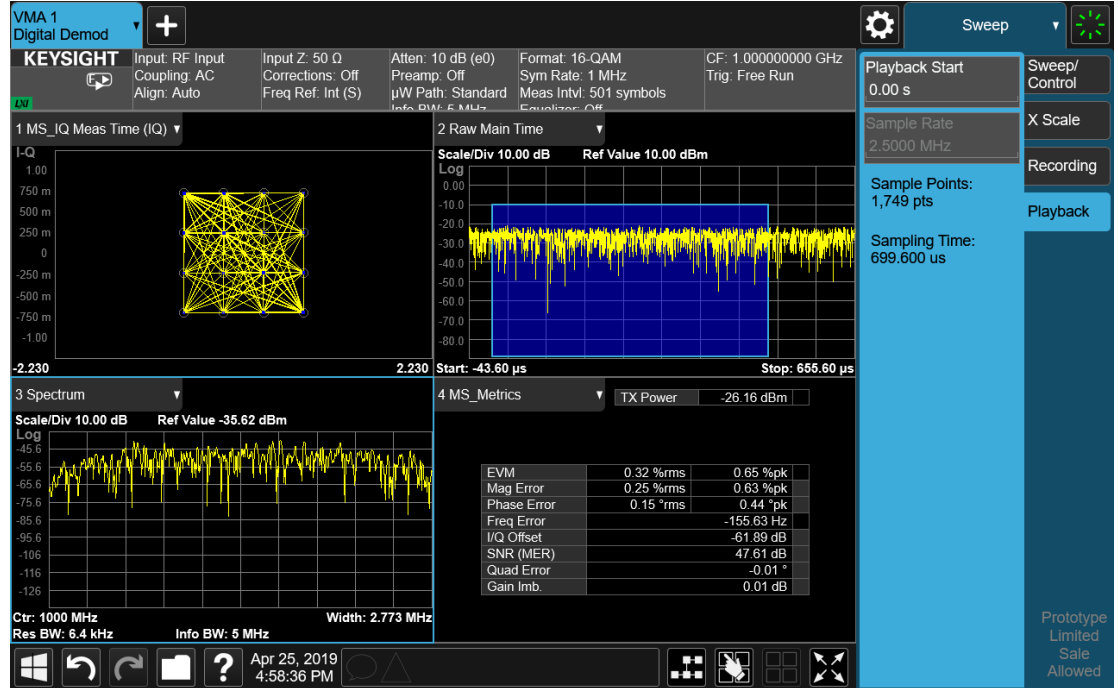

To recall a Recording, press the **Recall** hardkey (or the **Recall** icon in the **File** panel) and press the **Recording** tab on the left side of the **Recall** panel. Then press **Recall From** and choose the file you would like to recall. This will read the raw I/Q data from the specified file and feed it to the current measurement.

After the Recall, you will see that the data on the Recording panel has changed to describe the data in the file you just recalled:

6 Input/Output

6.4 Data Source

Note that the **Sample Rate** key is grayed out if the file type you loaded contains Sample Rate information. **BIN** and **BINX** files do not include sampling rate information inside the file, so after recalling one of these file types, you will need to set the Sample Rate. You should have noted the Sample Rate that was displayed on the **Sweep, Recording** menu panel after you saved the file.

After the recall is performed, you will also see that the **Data Source** control has switched to **File**. You can see this on the **Data Source** menu panel, and also on the dropdown from the Measurement Bar on the far-left side of the instrument:

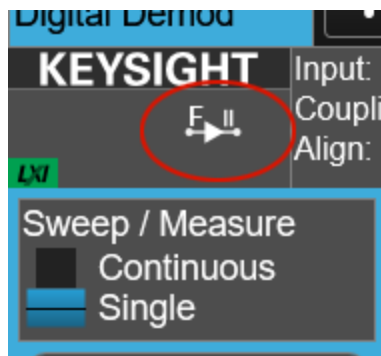

You can also see that the control indicator on the measurement bar has an “F” in it and the playback symbol (right facing triangle) displayed:

This indicates that the instrument is in **Continuous Playback** mode and is using data from a File.

If you select **Single** in the control dropdown, the indicator will change to show that it is in **Single Pause** mode as below:

6 Input/Output

6.4 Data Source

You can now examine data in the recorded file which you loaded. How you do this depends on whether you are in **Continuous Playback** mode or **Single Pause** mode.

If you wish to return to looking at data at the instrument input, simply change the **Data Source** control from **File** back to **Input**.

Looking at your Recorded data

To examine the data you loaded, go to the **Playback** menu panel under **Sweep**. How you proceed from here depends on whether you are in **Continuous Playback** mode or **Single Pause** mode.

Continuous Playback mode

In this mode, turn the knob clockwise or use the **Up** key on the front panel to move through successive records in the recording. You will see the Playback Start control change from 0 to successively higher values as you move through the records.

Single Pause mode

In this mode, you can only look at one record. Set the Playback Start time to the desired offset from zero and press **Restart**. A single record will be displayed.

Note that until you press **Restart**, the “invalid data” indicator (yellow asterisk) will be displayed in each window as below:

Once you press Restart, the invalid data indicator will disappear, as below:

6.4.1 Data Source

Lets you select the input to the analysis engine. The following options are available:

| | | |
|----------------|-----------------|---|
| Input | INPut | A hardware input signal (the default). This causes the measurement to take its input data from the hardware input (for example RF, I/Q, or EXTMixer) currently selected on the Input tab under Input/Output |
| Capture Buffer | STORed | Data stored in a storage buffer from a single earlier acquisition. Selecting "Capture Buffer" allows you to use data that has been previously stored using the "Current Meas -> Capture Buffer" control. You can make a measurement and then, if you want to make a different measurement using the exact same data, store the raw data using the "Current Meas -> Capture Buffer" control and select "Capture Buffer" as the Data Source, then switch to the other measurement. You must have previously done a "Current Meas -> Capture Buffer" before the Capture Buffer choice is available for use |
| Recorded | RECORded | Data recorded to memory from a set of earlier acquisitions. Selecting "Recorded" lets you use the record buffer, previously filled by using the "Recording" tab in the Sweep menu, as the input (only available in the Pulse measurement) |
| File | FILE | Data recorded on a storage device from a set of earlier acquisitions. If you load a Recording using Recording under the Recall key, "File" is automatically selected, which lets you use the recorded data as though it were coming from the Input |

See "[Data Source](#)" on page 2223 for a table of available choices on a per-measurement basis.

| | |
|------------------------------|---|
| Remote Command | <code>[:SENSe]:FEED:DATA INPut STORed RECORded FILE</code> <code>[:SENSe]:FEED:DATA?</code> |
| Example | Cause the measurement to look at the input selection: <code>:FEED:DATA INP</code> Cause stored measurement data to be used with a different measurement that supports this: <code>:FEED:DATA STOR</code> |
| Dependencies | If you switch to a measurement that does not support the currently selected Data Source, the instrument switches Data Source to "Input". Attempting to select an unavailable Data Source via SCPI generates an error The Data Source setting is independent for each mode. Not all Data Sources are available in all modes |
| Preset | Unaffected by Preset, but set to INPut by Restore Input/Output Defaults or Restore System Defaults->All |
| State Saved | Saved in instrument state |
| Backwards Compatibility SCPI | <code>[:SENSe]:FEED:SOURce INPut STORed</code> <code>[:SENSe]:FEED:SOURce?</code> |

6.4.2 Current Meas -> Capture Buffer

Stores the raw data of one measurement in the internal memory of the instrument where it can then be used by a different measurement by pressing **Stored Data**. When raw data is stored, then the data source selection switch automatically changes to **Stored Data**. Stored raw data cannot be directly accessed. There is no save/recall function to save the raw data in an external media. If you want to get the stored raw data, you must first perform a measurement using the stored raw data. Now you can access the used raw data, which is the same as stored raw data, using the **:FETCh** or **:READ** commands.

| | |
|---------------------------------|--|
| Remote Command | [:SENSe] :FEED:DATA:STORe |
| Example | :FEED:DATA:STOR stores recorded data |
| Notes | Command only; no query |
| Dependencies | Grayed-out in the SA measurement |
| Backwards Compatibility SCPI | [:SENSe] :FEED:SOURce:STORe |

6.5 Corrections

Accesses the **Corrections** menu, which lets you select, turn on and off, and configure and edit Corrections. You can also select, turn on and off and configure Complex Corrections and Corrections Groups.

Corrections arrays provide Amplitude Corrections, and can be entered by the user, sent over SCPI, or loaded from a file. They allow you to correct the response of the instrument for various use cases. X-Series supports eight separate Corrections arrays, each of which can contain up to 2000 points. They can be turned on and off individually and any or all can be on at the same time. Corrections Groups let you load several (Amplitude) Corrections at a time into a Correction Group.

Complex Correction arrays provide both Amplitude and Phase Corrections, and can be loaded from a file. Currently the file type supported has the extension .s2p. Complex Corrections operate in much the same manner as Corrections - the X-series supports eight separate Complex Corrections arrays, each of which can contain up to 30000 points, and each Complex Correction can be turned on and off individually and any or all can be on at the same time. Some Modes, such as Spectrum Analyzer Mode, only support only the Amplitude (Magnitude) element of Complex Corrections. Other Modes, such as IQ Analyzer Mode and VMA, support both the Amplitude and Phase elements of Complex Corrections. If a Complex Correction is turned on in a Measurement that does not support Phase, only the Magnitude information will be used for the Correction.

Trace data is in absolute units and corrections data is in relative units. You can edit the Corrections arrays in the Corrections editor using the "Edit Correction" dialog (you cannot edit the Complex Corrections arrays; they can only be loaded from a file).

In zero span measurements (such as Zero Span in the Swept SA measurement), where the frequency is always the center frequency of the instrument, we apply the (interpolated) correction for the center frequency to all points in the trace. In the event where there are two correction amplitudes at the center frequency, we apply the first one in the table.

Note that the corrections are applied as the data is taken; therefore, a trace in **View** (Update Off) will not be affected by changes made to the corrections after the trace is put in **View**.

The **Corrections** tab only appears in Modes and Measurements that support Corrections and/or Complex Corrections. In other Modes, sending SCPI for Corrections and/or Complex Corrections will generate a Settings Conflict message

Corrections and Complex Corrections arrays are not affected by a Preset, because they are in the Input/Output system. They also survive shutdown and restarting of the instrument application, which means they will survive a power cycle. Corrections

and Complex Corrections arrays are reset (deleted) by Restore Input/Output Defaults. The following commands delete the correction registers:

- User Preset the current mode :**SYST:PRES:USER**
- User Preset all modes :**SYST:PRES:USER ALL**
- Full mode preset :**SYST:PRES:FULL**
- Restore power on default :**SYST:DEF PON**
- Restore all defaults :**SYST:DEF; :SYST:DEF ALL**
- Preset Input/Output variables :**SYST:DEF INP**
- Delete all corrections :**CORR:CSET:ALL:DEL**

The instrument Save State and Save Screen Config + State includes the data in the correction registers. If a measurement setup is saved and then recalled at a later time, the correction data will be recalled as well. This feature is useful for recreating the full instrument condition, but the user has to be careful that the recalled correction data is the desired data. For example, if the state is recalled on a different instrument different correction data might be needed. Or if the system is recalibrated, the correction data in the save state would then be stale. Applications that use measured data for corrections will generally need to reload the correction data from file whenever a state is recalled; this ensures that the correction data is current and applies to hardware in use.

In the EXM and EXF, on the RF Input/Output panel, there are two full-duplex RF ports (RFIO1 and RFIO2), RF Input and RF Output. When RF Input is selected, it will correspond to one input port from two half-duplex RF ports (RFIO3 and RFIO4), and when RF Output is selected, it will correspond to one output port from two half-duplex RF ports (RFIO3 and RFIO4). So, there are 8 sets of corrections in all that can be applied to the RF ports. Ports cannot share the same set of corrections, but a single port can have multiple corrections applied to it. The correction data is applied to incoming signals as well as transmitted signals and is in the form of a list of spot frequencies and amplitude correction levels.

| | |
|------------|--|
| Annotation | In EMI Mode, you can choose to display the correction details in the graph area by turning on Display, Annotation, Correction Annotation |
|------------|--|

6.5.1 Select Correction

Specifies the selected correction. The term "selected correction" is used throughout this document to specify which correction will be affected by the functions.

| | |
|--------|--|
| Notes | The selected correction is remembered even when not in the correction menu |
| Preset | Set to Correction 1 by Restore Input/Output Defaults |

6.5.2 Correction On/Off

Turning the Selected Correction from **OFF** to **ON** allows the values in it to be applied to the data. This state transition also automatically turns on "Apply Corrections" (sets it to **ON**), otherwise the correction would not take effect.

A new sweep is initiated if an amplitude correction is switched on or off. Note that changing, sending or loading corrections data does *not* directly initiate a sweep, however in general these operations will turn corrections on, which *does* initiate a sweep.

| | |
|-------------------------------|--|
| Remote Command | <code>[:SENSe]:CORRection:CSET[1] 2 ... 16[:STATe] ON OFF 1 0</code> <code>[:SENSe]:CORRection:CSET[1] 2 ... 16[:STATe]?</code> |
| Example | <code>:SENS:CORR:CSET1 ON</code> |
| Dependencies | Changing this from OFF to ON automatically turns on "Apply Corrections" Note that if any Correction is turned on that has a transducer unit set (other than "None"), the Y-Axis Unit of the instrument is forced to that Transducer Unit. All other Y-Axis Unit choices are grayed-out This command generates an "Option not available" error unless you have the proper option installed in your instrument |
| Preset | Not affected by Preset. Set to OFF by Restore Input/Output Defaults |
| State Saved | Saved in instrument state |
| Annotation | If <i>any</i> Correction is turned on, Corr in the Meas Bar displays in amber to indicate Corrections are in use |
| Backwards Compatibility Notes | Unlike legacy instruments, Preset does not turn Corrections off (Restore Input/Output Defaults does) |

6.5.3 Correction Port

Maps one of the sets of corrections to a particular I/O port. This control allows any Input port (including External Mixing, BBIQ, the RF2 input, etc.) to be mapped to a specific Correction, so that the Correction is only applied when that Port is being used by the current Screen. You can also map any internal source Output port to a specific Correction.

When Current Input (CINPut) is selected for **Correction Port**, it chooses the current input port of the current Screen for the selected Correction. In other words, the Correction applies to whichever input is selected. If the input changes, the correction applies to the new input.

When using the VXT M9410A/11A with Remote Radio Heads (such as the Keysight M1740A mmWave Transceiver for 5G), the choices in the dropdown menu appear as :

Head h RFHD p

For example, if you have two Radio Heads (numbered 1 and 2), each of which have two RF half duplex ports, the choices for these ports appear as below:

| Head and Port | Choice in dropdown | SCPI parameter |
|-------------------------|--------------------|----------------|
| Head 1, port RF Tx/Rx 1 | Head 1 RFHD 1 | RRH1RFHD1 |
| Head 1, port RF Tx/Rx 2 | Head 1 RFHD 2 | RRH1RFHD2 |
| Head 2, port RF Tx/Rx 1 | Head 2 RFHD 1 | RRH2RFHD1 |
| Head 2, port RF Tx/Rx 2 | Head 2 RFHD 2 | RRH2RFHD2 |

Remote Command `[:SENSe]:CORRection:CSET[1]|2|...|16:RF:PORT CINPut | RFIN | RFIN2 | AIQ | EMIXer | RFIO1 | RFIO2 | RFIO3 | RFIO4 | RFOut | RFHD | RFFD | ANT | GEN | TR | A1 | A2 | A3 | B1 | B2 | B3 | IFIO1 | IFIO2 | RRHnRFHDp | ERFIN`

See "Parameter Options" on page 2238

`[:SENSe]:CORRection:CSET[1]|2|...|16:RF:PORT?`

Example Set Correction Port for Correction 1 to apply to the currently selected input:
`:CORR:CSET:RF:PORT CINP`

Set Correction Port for Correction 4 to apply to Radio Head 1, RF Tx/Rx Port 2:
`:CORR:CSET4:RF:PORT RRH1RFHD2`

Notes The **RF** node in this command is retained for backwards compatibility, even though the scope of the Correction Port command goes beyond the RF ports and includes BBIQ and External Mixing

Dependencies **RFIN2** | **AIQ** | **EMIXer** are only available on C/E/M/P/UXA analyzers with the appropriate options loaded

RFOut is only available on modular products such as VXT

ANT, **GEN** and **TR** are only available in VXT and only when the M9470A module is installed, such as in the M8920A. Option "HDX" is required to enable the TR port

RFHD and **RFFD** are only available on VXT. Option HDX is required to enable RFHD port and option FDX is required to enable RFFD port

RFIO3 and **RFIO4** are only available on EXM with hardware M9431A

RFIN and **RFOut** are not available on EXM with hardware M9431A

ERFIN requires option "EXW"

Preset Unaffected by Preset. Set as below by **Restore Input/Output Defaults**:
For VXT: **RFIN**
For EXM, EXF: **RFIO1**
For all other models: **CINPut** (the currently selected input)

State Saved Saved in State

Parameter Options

Note that the presence of these ports is highly hardware dependent.

6 Input/Output

6.5 Corrections

| Correction Port | SCPI | Note |
|-----------------|---------------|--|
| Current Input | CINPut | The correction will be applied to whichever input is currently selected in the Input menu |
| RF Input | RFIN | Main RF Port Not available on EXM with hardware M9431A |
| RF Input 2 | RFIN2 | Second RF Port, labeled RF Input 2 Only available on certain instruments. Not available on modular instruments |
| BBIQ input | AIQ | Requires option BBA Not available on modular instruments |
| External Mixer | EMIXer | Requires option EXM Not available on modular instruments |
| Antenna | ANT | Antenna input port on M9470A, labeled Ant |
| Generator | GEN | Generator output port on M9470A, labeled Gen |
| T/R | TR | T/R port on M9470A, labeled T/R |
| RF Full Duplex | RFFD | On modular instruments, labeled RFFD . Option “FDX” is required to enable RFFD port |
| RF Half Duplex | RFHD | On modular instruments, labeled RFHD . Option “HDX” is required to enable RFHD port |
| A1 | A1 | On E7760B |
| A2 | A2 | On E7760B |
| A3 | A3 | On E7760B |
| B1 | B1 | On E7760B |
| B2 | B2 | On E7760B |
| B3 | B3 | On E7760B |
| IFIO1 | IFIO1 | On E7760B |
| IFIO2 | IFIO2 | On E7760B |
| RF Output | RFOut | Appears on some modular instruments Not available on EXM with hardware M9431A |
| RFIO1 | RFIO1 | Appears on some modular instruments |
| RFIO2 | RFIO2 | Appears on some modular instruments |
| RFIO3 | RFIO3 | Only available in EXM with hardware M9431A |
| RFIO4 | RFIO4 | Only available in EXM with hardware M9431A |
| GPS out | GPS | Appears on some modular instruments |
| GNSS out | GNSS | Appears on some modular instruments |

6.5.4 Correction Direction

Selects whether corrections will be applied when the device associated with the specified correction is being used as an input, an output or in both directions. The choices are:

| | |
|---------------|--|
| INPut | Correct the port only when the port is used as an Input |
| OUTPut | Correct the port only when the port is used as an Output |
| BOTH | Correct the port when the port is used as either an Input or an Output (or both) |

A port that is only an Output is always corrected as an output if the Correction is On. A port that is only an Input is always corrected as an Input if the Correction is On. For a port that can be either an Input or an Output (or both), the Correction is determined by the Correction Direction setting. The default is **BOTH**, which means that by default a port that can be either an Input or an Output (or both) is corrected in both directions if the Correction is On.

| | |
|------------------------------|---|
| Remote Command | <code>[:SENSe]:CORRection:CSET[1] 2 ... 16:DIRection INPut OUTPut BOTH</code> <code>[:SENSe]:CORRection:CSET[1] 2 ... 16:DIRection?</code> |
| Example | <code>:CORR:CSET2:DIR INP</code> |
| Dependencies | The Correction Direction control only appears when Correction Port selects a port that can either function as an input or an output (or both simultaneously), such as RFIO HD, RFFD or T/R. If the SCPI command is sent to any other port, it is accepted but ignored |
| Preset | Not affected by a Preset. Set to BOTH by Restore Input/Output Defaults |
| State Saved | Saved in State |
| Backwards Compatibility SCPI | The following SCPI results in the selection of BOTH (included for compatibility with early Multitouch implementations): <code>[:SENSe]:CORRection:CSET[1] 2 ... 8:DIRection BIDirectiona</code> included for compatibility with A-models modular products: <code>[:SENSe]:CORRection:CSET[1] 2 ... 8:RF:PORT:RFFD SOURce ANALyzer BOTH</code> <code>[:SENSe]:CORRection:CSET[1] 2 ... 8:RF:PORT:RFIO1 SOURce ANALyzer BOTH</code> <code>[:SENSe]:CORRection:CSET[1] 2 ... 8:RF:PORT:RFIO2 SOURce ANALyzer BOTH</code> <code>[:SENSe]:CORRection:CSET[1] 2 ... 8:RF:PORT:RFIO3 SOURce ANALyzer BOTH</code> <code>[:SENSe]:CORRection:CSET[1] 2 ... 8:RF:PORT:RFIO4 SOURce ANALyzer BOTH</code> |

6.5.5 Edit Correction

Invokes the integrated editing facility for this correction set. When entering the menu, the editor window turns on, the selected correction is turned **On**, **Apply Corrections** is set to **On**, the amplitude scale is set to **Log**, and the Amplitude Correction (“Ampcor”) trace is displayed. The actual, interpolated correction trace is shown in green for the selected correction. Note that since the actual interpolated correction is shown, the correction trace may have some curvature to it. This trace represents only the correction currently being edited, rather than the total, accumulated amplitude correction for all amplitude corrections which are currently on, although the total, accumulated correction for all corrections which are turned on is still applied to the data traces.

Because corrections data is always in dB, but the Y-axis of the instrument is in absolute units, it is necessary to establish a reference line for display of the Corrections data. The reference line is halfway up the display and represents 0 dB of correction. It is labeled "0 dB CORREC". It is drawn in blue. Corrections data is always in dB. Whatever dB value appears in the correction table represents the correction to be applied to that trace at that frequency. So, if a table entry shows 30 dB that means we ADD 30 dB to each trace to correct it before displaying it. By definition all points are connected. If a gap is desired for corrections data, enter 0 dB.

Note that a well-designed Corrections array should start at 0 dB and end at 0 dB. This is because whatever the high-end point is will be extended to the top frequency of the instrument, and whatever the low-end point is will be extended down to 0 Hz. So, for a Corrections array to have no effect outside its range, you should start and end the array at 0 dB.

NOTE

The table editor only operates properly if the instrument is sweeping, because its updates are tied to the sweep system. Thus, you should not try to use the editor in single sweep, and its response will be sluggish during compute-intensive operations like narrow-span FFT sweeps.

When exiting the edit menu (by using the **Return** key or by pressing an instrument front-panel key), the editor window turns off and the Ampcor trace is no longer displayed; however, **Apply Corrections** remains **On**, any correction that was on while in the editor remains on, and the amplitude scale returns to its previous setting.

Corrections arrays are not affected by a Preset, because they are in the Input/Output system. They also survive shutdown and restarting of the instrument application, which means they will survive a power cycle.

When editing a correction, the editor remembers which correction and which element in the correction array you were editing, and returns you to that correction and that element when you return to the editor after leaving it.

6.5.5.1 Select Correction

Specifies the selected correction. The term "selected correction" is used throughout this document to specify which correction will be affected by the functions.

| | |
|--------|--|
| Notes | The selected correction is remembered even when not in the correction menu |
| Preset | Set to Correction 1 by Restore Input/Output Defaults |

6.5.5.2 Frequency

Touching a frequency value makes the touched row the current row and lets you edit the frequency.

| | |
|-----|-------|
| Min | 0 |
| Max | 1 THz |

6.5.5.3 Amplitude

Touching an amplitude value makes the touched row the current row and lets you edit the amplitude.

| | |
|-----|----------|
| Min | -1000 dB |
| Max | 1000 dB |

6.5.5.4 Go to Row

Lets you move through the table to edit the desired point.

| | |
|-----|------|
| Min | 1 |
| Max | 2000 |

6.5.5.5 Insert Row Below

Inserts a point below the current point. The new point is a copy of the current point and becomes the current point. The new point is not yet entered into the underlying table, and the data in the row is displayed in light gray. To enter the row into the table, press the **Enter** key, or tap either value and edit it.

6.5.5.6 Delete Row

Deletes the currently-selected point, whether or not that point is being edited, and selects the Navigate functionality. The point following the currently-selected point (or the point preceding if there is none) will be selected.

6.5.5.7 Scale X Axis

Matches the X-Axis to the selected Correction, as well as possible. Sets the Start and Stop Frequency to contain the minimum and maximum Frequency of the selected Correction. The range between Start Frequency and Stop Frequency is 12.5% above the range between the minimum and maximum Frequency, so that span exceeds this range by one graticule division on either side. If in zero-span, or there is no data in the Ampcor table, or the frequency range represented by the table is zero, no action is taken. Standard clipping rules apply if the value in the table is outside the allowable range for the X-Axis.

6 Input/Output
6.5 Corrections

Dependencies If either the first or last point in the array is outside the frequency range of the current input, an error message is generated:
“-221. Settings conflict; Start or Stop Freq out of range for current input settings”

6.5.5.8 Delete Correction

Deletes the correction values for this set. When this key is pressed, a prompt appears on the screen saying “Please press **Enter** or **OK** key to delete correction. Press **ESC** or **Cancel** to close this dialog.” The deletion is only performed if you press **OK** or **Enter**.

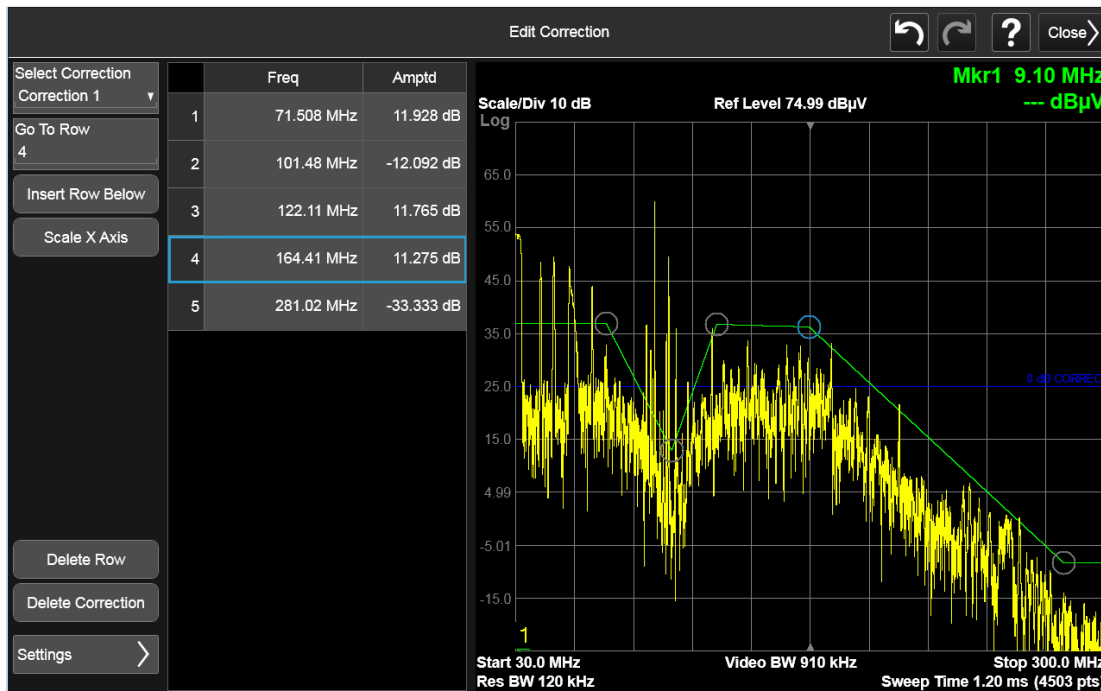

Remote Command `[:SENSe]:CORRection:CSET[1]|2|...|16:DELeTe`

Example `:CORR:CSET:DEL`
`:CORR:CSET1:DEL`
`:CORR:CSET4:DEL`

Notes Pressing this key when no corrections are present is accepted without error

6.5.5.9 Correction Graph

The **Correction Graph** embedded in the Edit Correction dialog lets you edit the Amplitude Correction visually. Each node in the Correction is represented by a gray circle. The current node has a blue outline in the table and a blue circle in the graph. Touch any circle and drag it where you want it to go.

6.5.6 Edit Correction Settings

Opens another menu page that lets you set certain properties of the selected correction, such as Interpolation, Transducer Unit, Description and Comment.

6.5.6.1 Select Correction

Specifies the selected correction. The term "selected correction" is used throughout this document to specify which correction will be affected by the functions.

| | |
|--------|--|
| Notes | The selected correction is remembered even when not in the correction menu |
| Preset | Set to Correction 1 by Restore Input/Output Defaults |

6.5.6.2 Freq Interpolation

Controls how the correction values per-bucket are calculated. We interpolate between frequencies in either the logarithmic or linear scale.

This setting is handled and stored individually per correction set.

VXT models M9410A/11A/15A/16A only support Linear Interpolation. For more details, see ["Interpolation" on page 2244](#)

| | |
|----------------|--|
| Remote Command | <code>[:SENSe]:CORRection:CSET[1] 2 ... 16:X:SPACing LINear LOGarithmic</code> <code>[:SENSe]:CORRection:CSET[1] 2 ... 16:X:SPACing?</code> |
| Example | <code>:CORR:CSET:X:SPAC LIN</code> |
| Preset | Unaffected by Preset. Set to Linear by Restore Input/Output Defaults |
| State Saved | Saved in instrument state |

Interpolation

For each bucket processed by the application, all of the correction factors at the frequency of interest (center frequency of each bucket) are summed and added to the amplitude. All trace operations and post processing treat this post-summation value as the true signal to use.

To effect this correction, the goal, for any particular start and stop frequency, is to build a correction trace, whose number of points matches the current Sweep Points setting of the instrument, which will be used to apply corrections on a bucket-by-bucket basis to the data traces.

6 Input/Output
6.5 Corrections

For amplitudes that lie between two user specified frequency points, we interpolate to determine the amplitude value. You may select either linear or logarithmic interpolation between the frequencies.

If we interpolate on a log scale, we assume that the line between the two points is a straight line on the log scale. For example, let's say the two points are (2,4) and (20,1). A straight line between them on a log scale looks like:

vsd17

On a linear scale (like that of the spectrum analyzer), this translates to:

vsd19

If we interpolate on a linear scale, we assume that the two points are connected by a straight line on the linear scale, as below:

The correction to be used for each bucket is taken from the interpolated correction curve at the center of the bucket.

6.5.6.3 Transducer Unit

For devices (like antennas) that make measurements of field strength or flux density, the correction array should contain within its values the appropriate conversion factors such that, when the data on the instrument is presented in dBμV, the display is calibrated in the appropriate units. The "Transducer Unit" used for the conversion is contained within the corrections array database. It may be specified or loaded in from an external file or SCPI.

When an array with a Transducer Unit other than "None" is turned on, the Y Axis Unit of the instrument is forced to that unit. When this array is turned on, and it contains a Transducer Unit other than "None", the Y Axis Unit of the instrument is forced to that Transducer Unit., and all other Y Axis Unit choices are grayed out.

Transducer Unit only appears in certain Modes, it does not appear in all Modes that support Corrections.

See ["Examples" on page 2247](#)

| | |
|----------------|---|
| Remote Command | <code>[[:SENSe]:CORRection:CSET[1] 2 ... 16:ANTenna[:UNIT] GAUSS PTES1a UVM UAM UA NOConversion</code> <code>[[:SENSe]:CORRection:CSET[1] 2 ... 16:ANTenna[:UNIT]?</code> |
| Example | <code>:CORR:CSET:ANT GAUS</code> |
| Dependencies | Only one Transducer units can be on at any given time. Note that this means that if a correction file with a Transducer Unit is loaded into a particular Correction, all other Corrections are set to that same Transducer unit When Normalize is On (in the Trace, Normalize menu) Transducer Unit is grayed-out and forced to None |
| Preset | Unaffected by Preset. Set to NOC by Restore Input/Output Defaults |
| State Saved | Saved in instrument state |

Examples

The units that may be specified and what appears in the file and on the screen are shown below:

| Transducer Unit | SCPI Example | In the Correction file | On the screen (also Y Axis Unit forced to) |
|-----------------|------------------------|--------------------------------------|--|
| dB μ V/m | :CORR:CSET:ANT UVM | Antenna Unit= μ V/m | dB μ V/m |
| dB μ A/m | :CORR:CSET:ANT UVA | Antenna Unit= μ A/m | dB μ A/m |
| dB μ A | :CORR:CSET:ANT UA | Antenna Unit= μ A | dB μ A |
| dBpT | :CORR:CSET:ANT PTES | Antenna Unit=pTesla | dBpT |
| DBG | :CORR:CSET:ANT GAUS | Antenna Unit=Gauss | DBG |
| None | :CORR:CSET:ANT NOC | Antenna Unit= (or no line at all) | none (not forced) |

6.5.6.4 Description

Sets an ASCII description field which will be stored in an exported file. Can be displayed in the active function area by selecting as the active function, if desired to appear in a screen capture.

| | |
|----------------|--|
| Remote Command | <code>[:SENSe]:CORRection:CSET[1] 2 ... 16:DESCription "text"</code> <code>[:SENSe]:CORRection:CSET[1] 2 ... 16:DESCription?</code> |
| Example | <code>:CORR:CSET1:DESC "11941A Antenna correction"</code> |
| Notes | 45 chars max; may not fit on display if max chars used |
| Preset | Unaffected by a Preset. Set to empty by Restore Input/Output Defaults |
| State Saved | Saved in instrument state |

6.5.6.5 Comment

Sets an ASCII comment field which will be stored in an exported file. Can be displayed in the active function area by selecting as the active function, if desired to appear in a screen capture.

| | |
|----------------|--|
| Remote Command | <code>[:SENSe]:CORRection:CSET[1] 2 ... 16:COMMeNT "text"</code> <code>[:SENSe]:CORRection:CSET[1] 2 ... 16:COMMeNT?</code> |
|----------------|--|

| | |
|-------------|--|
| Example | <code>:CORR:CSET1:COMM "this is a comment"</code> |
| Notes | 60 chars max; may not fit on display if max chars used |
| Preset | Unaffected by Preset. Set to empty by Restore Input/Output Defaults |
| State Saved | Saved in instrument state |

6.5.7 Complex Corrections

This dialog is used to set up and display information about the **Complex Corrections** set. It also lets you view and edit certain information such as the Description and Comment for the selected Complex Correction.

Complex Corrections (loaded from `.s2p` files) support both magnitude and phase corrections, whereas standard corrections (loaded from standard Ampcor `.csv` files) support only magnitude corrections.

When loading an `.s2p` file, the component representing S21 is the one that is used to generate the complex correction. If no S21 component is present, a Mass Storage error is reported.

NOTE

Data types RI, MA, and DB are supported.

The phase components of the S2P file are taken to be in degrees, not in radians. You must provide the phase correction in degrees.

Unlike Correction files, S2P files describe device characteristics, rather than the correction required to compensate for those characteristics; so, when an S2P file is loaded, both the magnitude and phase are negated to turn it into a correction

Complex Corrections and standard corrections can be turned on at the same time. For example, you could turn on Correction 2, Correction 4, and Complex Correction 1 and 2, all at the same time. The magnitude part of all the corrections would add, and the phase part of the complex corrections would add.

You can have up to 64 Complex Corrections loaded simultaneously. Each Complex Correction can hold up to 30,000 points.

You can load a standard correction into Complex Corrections, but it will only provide a magnitude correction, not a phase correction.

NOTE

A standard correction (from a CSV file) can be loaded into a Complex Correction, but when it is loaded the Phase correction is set to 0 for all points.

Some measurements, like Swept SA, have no phase component to the measurement, but nonetheless support Complex Corrections. For such measurements, only the Magnitude part of the Complex Correction is applied.

6.5.7.1 Go To Row (Select Correction)

Specifies the selected complex correction. The selected correction will be identified by the blue outlined row in the dialog.

The "selected complex correction" is an important concept when sending SCPI commands to the Complex Corrections system, because in each case the SCPI command is directed to the currently selected Complex Correction and that will be the Correction which is modified by the SCPI command.

| | |
|----------------|---|
| Remote Command | <code>[:SENSe]:CCORrection:CSET:SElect <integer></code> <code>[:SENSe]:CCORrection:CSET:SElect?</code> |
| Example | <code>:CCOR:CSET:SEL 3</code> <code>:CCOR:CSET:SEL?</code> |
| Notes | The selected correction is remembered even when not in the correction menu |
| Preset | Set to Correction 1 by Restore Input/Output Defaults |
| Min | 1 |
| Max | 64 |

6.5.7.2 Delete Row

Deletes the currently-selected Complex Correction and clears all entries in that row to the default.

| | |
|----------------|--|
| Remote Command | <code>[:SENSe]:CCORrection:CSET:DElete</code> |
| Example | Select correction 3: <code>:CCOR:CSET:SEL 3</code> Delete correction 3: <code>:CCOR:CSET:DEL</code> |

6.5.7.3 Delete All

Deletes all complex corrections and clears all entries in all rows to the default.

When this key is pressed a prompt is placed on the screen that says "Please press Enter or OK key to delete all complex corrections. Press ESC or Cancel to close this dialog." The deletion is only performed if you press **OK** or **Enter**.

| | |
|----------------|--|
| Remote Command | <code>[:SENSe]:CCORrection:CSET:ALL:DElete</code> |
| Example | <code>:CCOR:CSET:ALL:DEL</code> |

6.5.7.4 Correction On

Checking or unchecking this box turns the Selected Complex Correction **ON** or **OFF**. Turning it **ON** causes the values in it to be applied to the data. This state transition also automatically turns on "Apply Corrections" (sets it to **ON**), otherwise the correction would not take effect.

A new sweep/acquisition is initiated if a complex correction is switched on or off. Note that changing, sending or loading corrections data does *not* directly initiate a sweep, however in general these operations will turn corrections on, which *does* initiate a sweep.

| | |
|----------------|---|
| Remote Command | <code>[:SENSe]:CCORrection:CSET[:STATe] ON OFF 1 0</code> <code>[:SENSe]:CCORrection:CSET[:STATe]?</code> |
| Example | Select correction 3: <code>:CCOR:CSET:SEL 3</code> Turn correction 3 on: <code>:CCOR:CSET ON</code> |
| Dependencies | Changing this from OFF to ON automatically turns on "Apply Corrections" Grayed-out if Complex Corrections is not supported by the current measurement. A warning or SCPI error is generated if you try to turn it on under these circumstances: "Feature not supported for this measurement" |
| Preset | Not affected by Preset. Set to OFF by Restore Input/Output Defaults |
| State Saved | Saved in instrument state |
| Annotation | If <i>any</i> Complex Correction is turned on, CC in the Meas Bar will display in amber to indicate Complex Corrections are in use |

6.5.7.5 Correction Port

Maps one of the sets of corrections to a particular I/O port. This control allows any Input port (including External Mixing, BBIQ, the RF2 input, etc.) to be mapped to a specific Correction, so that the Correction is only applied when that Port is being used by the current Screen. You can also map any internal source Output port to a specific Correction.

When Current Input (CINPut) is selected for **Correction Port**, it chooses the current input port of the current Screen for the selected Correction. In other words, the Correction applies to whichever input is selected. If the input changes, the correction applies to the new input.

When using the VXT M9410A/11A with Remote Radio Heads (such as the Keysight M1740A mmWave Transceiver for 5G), the choices in the dropdown menu will appear as

Head h RFHD p

6 Input/Output
6.5 Corrections

For example, if you have two Radio Heads (numbered 1 and 2), each of which have two RF half duplex ports, the choices for these ports will appear as below:

| Head and Port | Choice in dropdown | SCPI parameter |
|-------------------------|--------------------|----------------|
| Head 1, port RF Tx/Rx 1 | Head 1 RFHD 1 | RRH1RFHD1 |
| Head 1, port RF Tx/Rx 2 | Head 1 RFHD 2 | RRH1RFHD2 |
| Head 2, port RF Tx/Rx 1 | Head 2 RFHD 1 | RRH2RFHD1 |
| Head 2, port RF Tx/Rx 2 | Head 2 RFHD 2 | RRH2RFHD2 |

See also the parameters, notes and examples table under "[Correction Port](#)" on page 2237.

| | |
|----------------|--|
| Remote Command | <pre>[:SENSe]:CCORrection:CSET:PORT CINPut RFIN RFIN2 AIQ EMIXer RFOut RFIO1 RFIO2 RFIO3 RFIO4 RFHD RFFD ANT GEN TR A1 A2 A3 B1 B2 B3 IFIO1 IFIO2 RRHnRFHD ERFIN [:SENSe]:CCORrection:CSET:PORT?</pre> |
| Example | <p>Select correction 2: :CCOR:CSET:SEL 2</p> <p>Set correction 2 to RFIN: :CCOR:CSET:PORT RFIN</p> <p>Set Correction 2 to Radio Head 1, RF Tx/Rx Port 2: :CCOR:CSET:PORT RRH1RFHD2</p> |
| Dependencies | <p>RFIN2 AIQ EMIXer are only available on C/E/M/P/UXA analyzers with the appropriate options loaded</p> <p>RFOut is only available on modular products such as VXT</p> <p>ANT, GEN and TR are only available in VXT and only when the M9470A module is installed, such as in the M8920A. Option "HDX" is required to enable the TR port</p> <p>RFHD and RFFD are only available on VXT. Option HDX is required to enable RFHD port and Option FDX is required to enable RFFD port</p> <p>RFIO3 and RFIO4 are only available on EXM with hardware M9431A</p> <p>RFIN and RFOut are not available on EXM with hardware M9431A</p> <p>ERFIN requires option "EXW"</p> |
| Preset | Not affected by Preset. Set to CINPut by Restore Input/Output Defaults |
| State Saved | Saved in State |

6.5.7.6 Direction

Selects whether corrections will be applied when the device associated with the specified correction is being used as an input, an output or in both directions. The choices are:

INPut Correct the port only when the port is used as an Input

| | |
|---------------|--|
| OUTPut | Correct the port only when the port is used as an Output |
| BOTH | Correct the port when the port is used as either an Input or an Output (or both) |

| | |
|------------------------------|---|
| Remote Command | <code>[:SENSe]:CCORrection:CSET:DIRection INPut OUTPut BOTH</code> <code>[:SENSe]:CCORrection:CSET:DIRection?</code> |
| Example | Firstly, select correction 4: <code>:CCOR:CSET:SEL 4</code> Set correction 4 to Input: <code>:CCOR:CSET:DIR INP</code> |
| Dependencies | For Inputs, the only choice is INPut , so an empty table cell is displayed. For Outputs, the only choice is OUTPut , so an empty table cell is displayed. If the SCPI command is sent while one of these ports is selected, it is accepted but ignored For a port that can be either an Input or an Output (or both), such as RFHD, RFFD or T/R, all three choices are available |
| Preset | Not affected by Preset. Set to BOTH by Restore Input/Output Defaults |
| State Saved | Saved in State |
| Backwards Compatibility SCPI | The following SCPI will result in the selection of BOTH (included for compatibility with early Multitouch implementations): <code>[:SENSe]:CCORrection:CSET:DIRection BIDirectiona</code> |

6.5.7.7 Description

Shows the Description field for the selected Complex Correction. The Description field is loaded from the second line of the `.s2p` file. (Note that, if line 2 begins with “!”, the ! is not displayed in the Description field.)

| | |
|----------------|---|
| Remote Command | <code>[:SENSe]:CCORrection:CSET:DESCription "text"</code> <code>[:SENSe]:CCORrection:CSET:DESCription?</code> |
| Example | Firstly, select correction 4: <code>:CCOR:CSET:SEL 4</code> <code>:CCOR:CSET:DESC "PNA data import 1-1-18"</code> |
| Notes | 45 chars max; may not fit on display if max chars used |
| Preset | Unaffected by Preset. Set to empty by Restore Input/Output Defaults |
| State Saved | Saved in instrument state |

6.5.7.8 Comment

Shows the Comment field for the selected Complex Correction. The Comment field is loaded from the third line of the `.s2p` file. (Note that, if line 3 begins with “!”, the ! is not displayed in the Comment field.)

6 Input/Output
6.5 Corrections

| | |
|----------------|--|
| Remote Command | <code>[:SENSe]:CCORrection:CSET:COMMeNt "text"</code> <code>[:SENSe]:CCORrection:CSET:COMMeNt?</code> |
| Example | Firstly, select correction 4: <code>:CCOR:CSET:SEL 4</code> <code>:CCOR:CSET:COMM "this is a comment"</code> |
| Notes | 60 chars max; may not fit on display if max chars used |
| Preset | Unaffected by Preset. Set to empty by Restore Input/Output Defaults |
| State Saved | Saved in instrument state |

6.5.7.9 File

Shows the file from which the selected correction was loaded. If correction was loaded with a SCPI command (see ["Set Data \(Remote Command Only\)" on page 2254](#)) displays "(SCPI)". If no correction is loaded, displays "(No correction loaded)"

| | |
|-------------|--|
| Notes | 60 chars max; may not fit on display if max chars used |
| State Saved | Saved in instrument state |

6.5.7.10 Freq Interpolation (Remote Command Only)

Controls how the correction values per-bucket are calculated. We interpolate between frequencies in either the logarithmic or linear scale.

This setting is handled and stored individually per correction set.

VXT models M9410A/11A/15A/16A and M9410E/11E/15E/16E only support Linear Interpolation.

See ["Interpolation" on page 2244](#) under Corrections.

| | |
|----------------|---|
| Remote Command | <code>[:SENSe]:CCORrection:CSET:X:SPACing LINear LOGarithmic</code> <code>[:SENSe]:CCORrection:CSET:X:SPACing?</code> |
| Example | Firstly, select correction 4: <code>:CCOR:CSET:SEL 4</code> Set linear interpolation: <code>:CCOR:CSET:X:SPAC LIN</code> |
| Preset | Unaffected by Preset. Set to LINear by Restore Input/Output Defaults |
| State Saved | Saved in instrument state |

6.5.7.11 Set Data (Remote Command Only)

Lets you set the magnitude part of a complex correction's data via a SCPI command. This is provided for compatibility with the similar command for standard corrections, to allow you to use Complex Corrections as an extension to standard corrections.

Sending this command sets the phase part of the selected correction to 0 for all points.

The command takes an ASCII series of alternating frequency and amplitude points, each value separated by commas.

The values sent in the command will totally replace all existing correction points in the specified set.

A Complex Correction array can contain 30000 points maximum.

| | | |
|----------------|---|------------|
| Remote Command | <code>[:SENSe]:CCORrection:CSET:DATA <freq>, <ampl>, ...</code> <code>[:SENSe]:CCORrection:DATA?</code> | |
| Example | Firstly, select correction 4: <code>:CCOR:CSET:SEL 4</code> This defines two correction points at (10 MHz, -1.0 dB) and (20 MHz, 1.0 dB) for correction set 4: <code>:CCOR:CSET:DATA 10000000,-1.0,20000000,1.0</code> | |
| Preset | Empty after Restore Input/Output Defaults . Survives a shutdown or restart of instrument application (including a power cycle) | |
| State Saved | Saved in instrument state | |
| Min/Max | Min | Max |
| | Freq | 1 THz |
| | Amptd | +1000 dBm |

6.5.8 Apply Corrections

When you turn on Apply Corrections, all of the Corrections that are turned On are applied to the measured data. When you turn off Apply Corrections, no Corrections are applied, even if they are turned On.

With this switch you can turn the entire Corrections system on and off without affecting the settings of any individual Corrections. Turning Apply Corrections On and Off has no effect on the On/Off switches under the individual Corrections.

6 Input/Output
6.5 Corrections

Apply Corrections affects both normal Corrections and Complex Corrections. Normal Corrections are turned On and Off using the Correction switch under Select Correction:

Complex Corrections are turned On and Off using the checkboxes in the Complex Corrections dialog:

| Correction | On | Port | Direction | |
|------------|-------------------------------------|---------------|-----------|---|
| 1 | <input checked="" type="checkbox"/> | Current Input | Input | D |
| 2 | <input type="checkbox"/> | Current Input | Input | |

See "[Correction On/Off](#)" on page 2237) and "[Complex Corrections](#)" on page 2248.

| | |
|----------------|---|
| Remote Command | <code>[:SENSe]:CORRection:CSET:ALL[:STATe] ON OFF 1 0</code> <code>[:SENSe]:CORRection:CSET:ALL[:STATe]?</code> |
| Example | <code>:SENS:CORR:CSET:ALL OFF</code> This command makes sure that no amplitude corrections are applied, regardless of their individual on/off settings |
| Couplings | Whenever you turn on any Correction or Complex Correction, Apply Corrections is automatically set to ON |
| Preset | Not affected by Preset. Set to OFF by Restore Input/Output Defaults |
| State Saved | Saved in instrument state |
| Annunciation | When ON , 'CORREC' appears in the Meas Bar as long as at least one of the individual corrections is enabled |

6.5.9 Delete All Corrections

Erases all correction values for all Amplitude Correction sets and Complex Corrections.

When this key is pressed a prompt is placed on the screen that says “Please press Enter or OK key to delete all corrections. Press ESC or Cancel to close this dialog.” The deletion is only performed if you press **OK** or **Enter**.

| | |
|----------------|--|
| Remote Command | <code>[:SENSe]:CORRection:CSET:ALL:DELeTe</code> |
|----------------|--|

| | |
|---------|---------------------------------|
| Example | <code>:CORR:CSET:ALL:DEL</code> |
|---------|---------------------------------|

6.5.10 Correction Group On/Off

Turns the Correction Group on and off. The Correction Group allow you to preload Correction files and associate them with specific frequency ranges, so that they can be switched in and out during a sweep at the appropriate frequencies. Use the control “Edit Correction Group” below to set up your Correction Group.

The state of each Correction will be set dynamically depending on the active measurement frequency. Only the correction selected for the range that matches the active measurement frequency will be turned on, and vice versa.

Note that the Corrections in the Correction Group, although they are loaded into memory, are independent of the main Correction registers at the top of the Corrections menu, and will not display under the Select Correction, Correction On/Off or Edit Correction functions.

| | |
|----------------|--|
| Remote Command | <code>[:SENSe]:CORRection:CSET:GRoup[:STATe] ON OFF 1 0</code> <code>[:SENSe]:CORRection:CSET:GRoup[:STATe]?</code> |
|----------------|--|

| | |
|---------|-------------------------------------|
| Example | <code>:SENS:CORR:CSET:GRO ON</code> |
|---------|-------------------------------------|

| | |
|--------------|--|
| Dependencies | Correction group is supported in EMI Receiver Mode, and in Spectrum Analyzer Mode if option EMC or EMI Receiver Mode is present. If you switch to other measurements or modes, correction group is turned off and the Correction Group functions are not visible |
|--------------|--|

| | |
|-----------|--|
| Couplings | When on, Correction 1 through 8 is set to OFF and the correction on/off state keys are grayed out. If the grayed-out key is pressed, it generates an advisory message. If sending the SCPI to turn it on, this same message is generated as part of Settings conflict |
|-----------|--|

| | |
|--------|---|
| Preset | Not affected by Preset. Set to OFF by Restore Input/Output Defaults |
|--------|---|

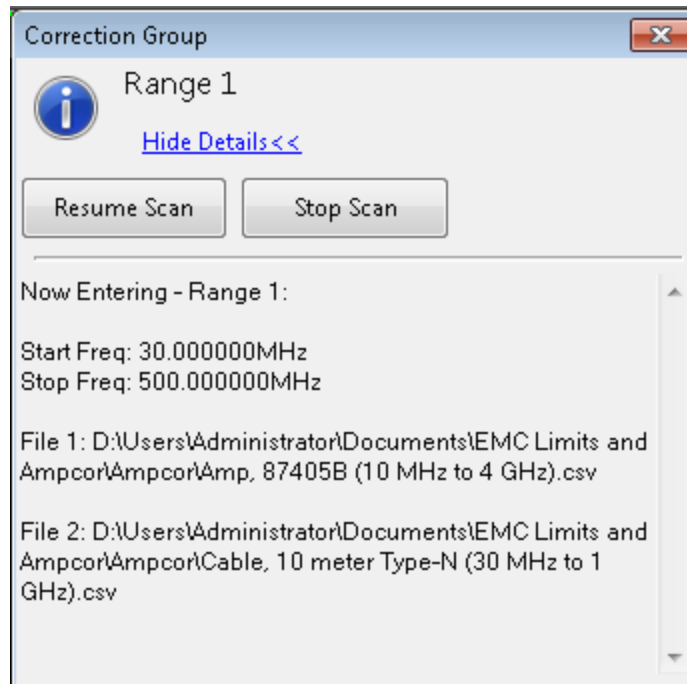

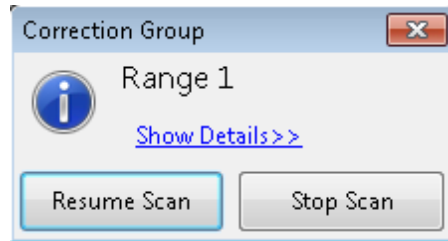

| | |
|-------------|---------------------------|
| State Saved | Saved in instrument state |
|-------------|---------------------------|

6.5.11 Break

If break is turned on, the scan or sweep will be paused when it reaches the boundary of correction group ranges. At the same time, a window at the size of ~ 6.5cm x 3.5 cm is prompt at the upper right-hand corner of the graticule.

When running Frequency Scan measurement of Emi Receiver application, the message prompt is like below. You are given the option to resume the scan or stop the scan.

6 Input/Output
6.5 Corrections

When running the Swept SA measurement in Spectrum Analyzer Mode, the message prompt is as below. You are given the option to resume the sweep or turn off the break. If in Continuous sweep, the sweep will resume after the break is turned off.

| | |
|----------------|---|
| Remote Command | <code>[:SENSe]:CORRection:CSET:GROup:BRake ON OFF 1 0</code> <code>[:SENSe]:CORRection:CSET:GROup:BRake?</code> |
| Example | <code>:SENS:CORR:CSET:GRO:BR ON</code> |
| Notes | <p>When running the Frequency Scan measurement in EMI Receiver Mode, if break is turned on when a SCPI is sent to start the scan, the scan pauses when it reaches the boundary of correction group ranges. Bit 8 (Paused) of status operation register is set to true. To resume, send <code>:INITiate:RESume</code>. To stop the scan, send <code>:ABORT</code></p> <p>When running the Swept SA measurement in Spectrum Analyzer Mode, the break state does not affect the operation of sweep when SCPI to control the sweep is sent. Instead, the SCPI commands close the message prompt if it is showing at the point the commands are sent, and the break is turned off. The SCPI includes:</p> <p><code>:INITiate:IMMEdiate</code></p> <p><code>:INITiate:REStart</code></p> <p><code>:INITiate:CONTinuous ON OFF 1 0</code></p> <p><code>:ABORT</code></p> |
| Dependencies | Correction group is supported in EMI Receiver Mode, and in Spectrum Analyzer Mode if option EMC or EMI Receiver mode is present. If you switch to other measurements or modes, correction group is turned off and the Correction Group functions (like Break) are not visible |
| Preset | Not affected by Preset. Set to OFF by Restore Input/Output Defaults |
| State Saved | Saved in instrument state |

6.5.12 Reload Corrections From Files

Because the Correction data for the Correction Group is loaded into memory from Correction files at the time the Group is defined, it will be necessary to reload some or all of the data if any of the files changes. This function reloads all of the correction data from all of the correction files defined in all of the ranges in the Correction Group.

| | |
|----------------|---|
| Remote Command | <code>[:SENSe] :CORRection:CSET:GROup:RELoad</code> |
| Example | <code>:MMEM:STOR:CORR:GRO:REL</code> |
| Notes | If invalid data is found in the files, the correction group will be set to off, and an Execution error is generated. Error icon appears on the status column correction group table |
| Dependencies | Correction group is supported in EMI Receiver Mode, and in Spectrum Analyzer mode if option EMC or EMI Receiver Mode is present. If you switch to other measurements or modes, correction group is turned off and the Correction Group functions (like Reload Correction From File) are not visible |
| Annotation | If reload fails, error icons appear in the status column of correction group editor for the range that has the error |

6.5.13 Edit Correction Group

Opens the Table Editor for the correction group. The content of correction group table including the correction data loaded from the files is not affected by Preset, and it survives power cycle. You can set it to empty with **Restore Input/Output Defaults**.

| | |
|--------------|---|
| Dependencies | Correction group is supported in EMI Receiver Mode, and in Spectrum Analyzer Mode if option EMC or EMI Receiver Mode is present. If you switch to other measurements or modes, correction group is turned off and the Correction Group functions (like Edit Correction Group) are not visible |
|--------------|---|

6.5.13.1 Go to Row

Lets you move through the table to edit the desired point.

| | |
|-----|------|
| Min | 1 |
| Max | 2000 |

6.5.13.2 Insert Row Below

Inserts a point below the current point. The new point starts from the current range stop frequency and becomes the current point. The new point is not yet entered into the underlying table, and the data in the row is displayed in light gray.

6.5.13.3 Delete Row

Deletes the currently-selected point, whether or not that point is being edited, and selects the Navigate functionality. The point following the currently-selected point (or the point preceding if there is none) will be selected.

6.5.13.4 Select File

Indicate the correction files in which the specify file and remove file operations will take effect.

| | |
|--------|--|
| Preset | Unaffected by a Preset. Set to empty by Restore Input/Output Defaults |
|--------|--|

6.5.13.5 Specify File

Displays the file browsing menu. When a file is selected, correction data will be loaded from the file. The correction data remains until the file is removed or the range is deleted.

| | |
|-------|---|
| Notes | <p>If the file is empty, error -250 is reported. If the file does not exist error -256 is reported. If there is a mismatch of data type, error -250 is reported</p> <p>Only one file with antenna unit can be supported per range. If you try to add another file which contains an antenna unit, a Mass Storage error is generated</p> <p>All ranges have to use a common antenna unit. If you try to add a correction file that contains a different antenna unit, a Mass Storage error is generated</p> <p>If you try to add a correction file that contains data that does not cover the range frequency, the file cannot be added, and an Execution error is generated</p> |
|-------|---|

6.5.13.6 Remove File

Removes the selected file. When a file is removed, correction data for that file will be removed as well.

| | |
|--------------|--|
| Dependencies | The key is grayed-out if there the file has not been specified. If the grayed-out key is pressed, an advisory message is generated |
|--------------|--|

6.5.13.7 Correction Trace Display

Enables you to view the correction traces of all corrections that are added to the range currently selected. A 2-column table in the function of frequency and the accumulated amplitude correction is displayed at the left pane.

| | |
|-------------|---------------------------|
| Preset | OFF |
| State Saved | Saved in instrument state |

6.5.13.8 Description

Provides a description of up to 60 characters by which you can easily identify the correction group. The descriptions will be stored in the exported file and can be displayed in the active function area by selecting them as the active function, if desired to be in a saved screen dump.

| | |
|----------------|--|
| Remote Command | <code>[:SENSe]:CORRection:CSET:GROup:DESCription "text"</code> |
| Example | <code>:CORR:CSET:GRO:DESC "Radiated Setup"</code> |
| Notes | 60 chars max; may not fit on display if max chars used |
| Preset | Unaffected by Preset. Set to empty by Restore Input/Output Defaults |
| State Saved | Saved in instrument state |

6.5.13.9 Comment

Provides a comment of up to 60 characters by which you can easily identify the correction group. The comments will be stored in the exported file and can be displayed in the active function area by selecting them as the active function, if desired to be in a saved screen dump.

| | |
|----------------|--|
| Remote Command | <code>[:SENSe]:CORRection:CSET:GROup:COMMent "text"</code> |
| Example | <code>:CORR:CSET:GRO:COMM "For internal only"</code> |
| Notes | 60 chars max; may not fit on display if max chars used |
| Preset | Unaffected by Preset. Set to empty by Restore Input/Output Defaults |
| State Saved | Saved in instrument state |

6.5.13.10 Start Frequency

Touching a **Start Frequency** value makes the touched row the current row and lets you edit the start frequency.

| | |
|-------|---|
| Notes | You cannot set the Start Frequency to a value greater than Stop Frequency or equal to Stop Frequency. You cannot set the Start Frequency to a value that would create a span of less than 10 Hz. If you try to do any of these, the Stop Frequency will change to maintain a minimum span of 10 Hz If you change the Start Frequency of the selected range to a value smaller than the previous range's Stop Frequency, the Stop Frequency of the previous range will be changed to the same value |
|-------|---|

| | |
|--------|---|
| | If you change the Start Frequency of the selected range to a value out of the correction data frequency range, an error icon appears on the status column and an Execution error is generated |
| Preset | Unaffected by Preset. Set to empty by Restore Input/Output Defaults |
| Min | 0 |
| Max | 1 THz |

6.5.13.11 Stop Frequency

Touching a **Stop Frequency** value makes the touched row the current row and lets you edit the stop frequency.

| | |
|--------|--|
| Notes | You cannot set the Stop Frequency to a value greater than Start Frequency or smaller than Start Frequency. You cannot set the Stop Frequency to a value that would create a span of less than 10 Hz. If you try to do any of these, the Start Frequency will change to maintain a minimum span of 10 Hz If you change the Stop Frequency of the selected range to a value greater the next range's Start Frequency, the Start Frequency of the next range will be changed to the same value If you change the Stop Frequency of the selected range to a value out of the correction data frequency range, an error icon appears on the status column and an Execution error is generated |
| Preset | Unaffected by Preset. Set to empty by Restore Input/Output Defaults |
| Min | 0 |
| Max | 1 THz |

6.5.14 Merge Correction Data (Remote Command Only)

Accepts an ASCII series of alternating frequency and amplitude points, each value separated by commas. The difference between this command and **Set Data** is that this merges new correction points into an existing set.

If any new point has the same frequency as an existing correction point, the existing point's amplitude is replaced by that of the new point.

An Ampcor array can contain 2000 total points, maximum.

| | |
|----------------|--|
| Remote Command | <code>[[:SENSE]:CORRection:CSET[1] 2 ... 16:DATA:MERGe <freq>, <ampl>, ...</code> |
| Example | <code>:CORR:CSET1:DATA:MERGE 15000000,-5.0,25000000,5.0</code> This adds two correction points at (15 MHz, -5.0 dB) and (25 MHz, 5.0 dB) to whatever values already exist in correction set 1 |
| Preset | Empty after Restore Input/Output Defaults . Survives shutdown/restart of instrument application (including power cycle) |

| Min/Max | Min | Max |
|---------|-----------|-----------|
| Freq | 0 Hz | 1 THz |
| Amptd | -1000 dBm | +1000 dBm |

6.5.15 Set (Replace) Data (Remote Command Only)

Accepts an ASCII series of alternating frequency and amplitude points, each value separated by commas.

The values sent in the command totally replace all existing correction points in the specified set.

An Ampcor array can contain 2000 points maximum.

| | |
|----------------|---|
| Remote Command | <code>[:SENSe]:CORRection:CSET[1] 2 ... 16:DATA <freq>, <amp1>, ...</code> <code>[:SENSe]:CORRection:CSET[1] 2 ... 16:DATA?</code> |
| Example | <code>:CORR:CSET1:DATA 10000000,-1.0,20000000,1.0</code> This defines two correction points at (10 MHz, -1.0 dB) and (20 MHz, 1.0 dB) for correction set 1 |
| Preset | Empty after Restore Input/Output Defaults . Survives a shutdown or restart of instrument application (including a power cycle) |
| State Saved | Saved in instrument state |
| Min | Freq: 0 Hz Amptd: -1000 dBm |
| Max | Freq: 1 THz Amptd: +1000 dBm |

6.5.16 Correction Group Range Data (Remote Command Only)

Accepts an ASCII series of alternating start frequency, stop frequency and file names, each value separated by commas.

The values sent in the command replace the content of correction group.

The default path for CSV files is:

`D:\My Documents\amplitudeCorrections\`

| | |
|----------------|---|
| Remote Command | <code>[:SENSe]:CORRection:CSET:GR0up[1] 2 ... 10:DATA <startFreq>,<stopFreq>,<filename1>,<filename2>,...,<filename8></code> See Notes below for explanation of the <filenameN> parameters <code>[:SENSe]:CORRection:CSET:GR0up[1] 2 ... 10:DATA?</code> |
|----------------|---|

| | |
|-------------|---|
| Example | <code>:CORR:CSET:GRO:DATA 10000000,20000000,"myAmpcor.csv"</code> <code>myAmpcor.csv</code> refers to the Amplitude Correction data from the file <code>myAmpcor.csv</code> in the default path |
| Notes | <code><filename></code> is the string containing the path of the correction files <code><filename2></code> , <code><filename3></code> , <code><filename4></code> , <code><filename5></code> , <code><filename6></code> , <code><filename7></code> , <code><filename8></code> are optional. You can define only <code><filename1></code> . The file name defined is added to corresponding File keys based on the sequence sent in the command. File keys with no file name set in the SCPI will be emptied Data for ranges 1 to 10 must be set in ascending order. If you try to set the data for a correction group range that is not connecting to the range currently available, a Data out of range error is generated If the file defined in data is empty, error -250 is reported. If the file does not exist, error -256 is reported. If there is a mismatch of data type, error -250 is reported Only one file with antenna unit can be supported per range. If you try to add another file that contains an antenna unit, a Mass Storage error is generated All ranges have to use a common antenna unit. If you try to add a correction file that contains a different antenna unit, a Mass Storage error is generated |
| Preset | Reset to Not a Number (9.91e+37) for frequencies and "" for File 1 through File 8 after Restore Input/Output Defaults . Survives a shutdown or restart of instrument application (including a power cycle) |
| State Saved | Saved in instrument state |
| Min | Start Freq and Stop Freq: 0 Hz |
| Max | Start Freq and Stop Freq:1 THz |

6.5.17 Delete Correction Group Range (Remote Command Only)

Deletes all range values of corrections Group.

| | |
|----------------|--|
| Remote Command | <code>[:SENSe] :CORRection:CSET:GROup:DELeTe</code> |
| Example | <code>:CORR:CSET:GRO:DEL</code> |
| Notes | Sending this command when no range is defined in table is accepted without error |

6.6 Freq Ref Input

Lets you configure the External Frequency Reference input on the rear panel.

6.6.1 Freq Ref Input

Specifies the frequency reference as being the internal reference, an external reference at the rear panel input labeled EXT REF IN, a 1 pulse per second signal at the EXT REF IN input, or automatically sensing the appropriate reference.

See "[More Information](#)" on page 2267

| | |
|----------------|--|
| Remote Command | <code>[:SENSe]:ROSCillator:SOURce:TYPE INTernal EXTernal SENSe PULSe</code> <code>[:SENSe]:ROSCillator:SOURce:TYPE?</code> |
| Example | <code>:ROSC:SOUR:TYPE SENS</code> <code>:ROSC:SOUR:TYPE INT</code> <code>:ROSC:SOUR:TYPE EXT</code> <code>:ROSC:SOUR:TYPE PULS</code> |
| Dependencies | The PULSe parameter, and support of the 1 pps signal at the EXT REF IN input, are not available in some models. If not available, the choice does not appear, and sending the PULSe parameter via SCPI generates an error For VXT models M9420A/10A/11A/15A and M9410E/11E/15E/16E the only available selection is EXTernal1 , unless M9420A/10A/11A/15A is configured in MIMO mode as Primary module. If configured in MIMO mode as Primary module, the available selection is INTernal EXTernal SENSe For EXM the only available selections are INTernal EXTernal SENSe For E7760B and M8920A/20B the only available selections are INTernal EXTernal Not available in UXM |
| Preset | Unaffected by Preset, but set to EXTernal in VXT models M9420A/10A/11A/15A, INTernal for E7760B, and SENSe for other models, by Restore Input/Output Defaults or Restore System Defaults->All |
| State Saved | Saved in instrument state |
| Annunciation | In the Meas Bar: If you set this to Internal and no external reference is plugged in: Freq Ref: Internal If you set this to Internal and an external reference between 1 and 50 MHz, or a 1 pps signal, IS plugged in: Freq Ref: Internal (in amber, as a warning sign) If you set this to External and an External Reference between 1 and 50 MHz is plugged in: Freq Ref: External |

| | |
|-------------------------------|---|
| | <p>If you set this to External and no External Reference is sensed: Freq Ref: External (in amber, as a warning sign)</p> <p>When set to Pulse and a 1 pps signal is plugged in: Freq Ref: Pulse</p> <p>If you set this to Pulse and no Pulse Reference is sensed: Freq Ref: Pulse (in amber, as a warning sign)</p> <p>When set to Sense and neither a signal between 1 and 50 MHz nor a 1 pps signal is detected at the EXT REF IN input, "Sense:Int" is displayed: Freq Ref: Sense,Int</p> <p>When set to Sense and a signal within 5 ppm of the External Ref Freq (as set on the Ext Ref Freq control) is detected at the EXT REF IN input: Freq Ref: Sense,Ext</p> <p>When set to Sense and a 1 pps signal is detected at the EXT REF IN input, "Sense:Pulse" is displayed: Freq Ref: Sense,Pls</p> |
| Status Bits/OPC dependencies | <p>STATUS:QUESTIONABLE:FREQUENCY bit 1 set if unlocked</p> <p>Note: In EXM, the status bit is not set for non-controlling instances. To determine if the frequency reference is unlocked, the controlling instance must be queried</p> |
| Backwards Compatibility Notes | <p>Freq Ref In was not saved in state in the legacy instruments. It is part of state in the X-Series</p> |
| Remote Query | |
| Remote Command | <p>[:SENSe] :ROSCillator :SOURce?</p> |
| Notes | <p>Returns the current switch setting. This means:</p> <ol style="list-style-type: none"> 1. If it was set to SENSe but there is no external reference nor 1 pps signal, so the instrument is actually using the internal reference, then this query returns INTernal1, not SENSe 2. If it was set to SENSe and there is an external reference present, the query returns EXTernal1, not SENSe 3. If it was set to SENSe and there is a 1 pps signal present, the query returns PULSe, not SENSe 4. If it was set to EXTernal1, then the query returns EXTernal1 5. If it was set to INTernal1, then the query returns INTernal1 6. If it was set to PULSe, then the query returns PULSe <p>Note: In EXM, the SCPI query always returns INTernal1 for non-controlling instances</p> |
| Preset | <p>For VXT models M9420A/10A/11A/15A: EXTernal1</p> <p>For E7760B, M8920A/20B: INTernal1</p> <p>All other models: SENSe</p> |
| Backwards | <p>[:SENSe] :ROSCillator :SOURce? was query-only in ESA which always returned whichever</p> |

6 Input/Output

6.6 Freq Ref Input

| | |
|------------------------------|--|
| Compatibility Notes | <p>reference the instrument was using. The instrument automatically switched to the ext ref if it was present</p> <p>In PSA (which had no sensing), <code>[:SENSe]:ROSCillator:SOURce</code> set the reference (INT or EXT), so again its query returned the actual routing</p> <p>Thus, the query is 100% backwards compatible with both instruments</p> <p>Backwards Compatibility Command</p> |
| Notes | <p>For PSA compatibility the command form is provided and is directly mapped to <code>[:SENSe]:ROSCillator:SOURce:TYPE</code></p> <p>Note: In EXM, the command does nothing for non-controlling instances</p> |
| Backwards Compatibility SCPI | <code>[:SENSe]:ROSCillator:SOURce INTernal EXTernal</code> |

More Information

When the frequency reference is set to internal, the internal 10 MHz reference is used even if an external reference is connected.

When the frequency reference is set to external, the instrument will use the external reference. However, if there is no external signal present, or it is not within the proper amplitude range, a condition error message is generated. When the external signal becomes valid, the error is cleared.

When the frequency reference is set to Pulse, the instrument expects a 1 pulse per second signal at the EXT REF IN input. The instrument uses this signal to adjust the frequency of the internal reference.

If Sense is selected, the instrument checks whether a signal is present at the external reference connector. If it senses a signal within 5 ppm of the External Ref Freq (as set on the **External Ref Freq** control), it will automatically switch to the external reference. If it senses a 1 pulse per second signal, it enters Pulse mode, wherein the signal is used to adjust the internal reference. When no signal is present, it automatically switches to the internal reference. No message is generated as the reference switches between pulse, external and internal. The monitoring of the external reference occurs approximately on 1 millisecond intervals, and never occurs in the middle of a measurement acquisition, only at the end of the measurement (end of the request).

If for any reason the instrument's frequency reference is not able to obtain lock, Status bit 1 in the Questionable Frequency register will be true and a condition error message is generated. When lock is regained, Status bit 1 in the Questionable Frequency register will be cleared and the condition error will be cleared.

If an external frequency reference is being used, you must enter the frequency of the external reference if it is not exactly 10 MHz. The **External Ref Freq** key is provided for this purpose.

For VXT models M9420A/10A/11A/15A, there is no internal frequency reference. To work correctly, a 100MHz external frequency reference signal is needed to connect to the front panel of the module. The default Freq Ref In setting is “External” and it cannot be set to any other types.

For VXT models M9410A/11A, External Freq Ref Input controls the “100 MHz In” port on the front panel. For VXT models M9415A/16A, External Freq Ref Input controls the “REF In” port on the front panel. For M941xE, the External Freq Ref Input is the reference in port on M941xA module.

NOTE

In EXM, a common frequency reference module serves all instrument instances, but only one instance of the software application can change the reference input type (INT or EXT or SENSE). The software application allowed to change the reference input is called the primary or controlling instance; by default, the leftmost instrument instance is the controlling instance. This can be changed in the config file “[E66XXModules.config](#)” located in the folder [E:\Keysight\Instrument](#). For the non-controlling instance(s) the reference input types (in SCPI commands, and in the Virtual Front Panel menus) are blanked and unavailable for use.

Sense

If **Sense** is selected, the instrument checks whether a signal is present at the external reference connector. If it senses a signal within 5 ppm of the External Ref Freq (as set by **External Ref Freq**), it uses this signal as an External Reference. If it senses a 1 pulse per second signal, it uses this signal to adjust the internal reference by adjusting the User setting of the Timebase DAC. When no signal is present, it automatically switches to the internal reference.

If set to **SENSe** and the instrument senses a 1 pulse per second signal, it sets the **System, Alignments, Timebase DAC** setting to **User**. This setting survives Preset and Power Cycle but is set to **Calibrated** by **System, Restore Defaults, Align** or **System, Restore Defaults, All**

Internal

The internal reference is used. A 1 pps signal at the EXT REF IN port, or a signal there between 1 and 50 MHz, causes a warning triangle to appear in the settings panel next to the word “INTERNAL”, but will otherwise be ignored.

External

The external reference is used.

Pulse

The internal reference continues to be the frequency reference for the instrument in that it determines the reference contribution to the phase noise, but its average frequency is adjusted to follow the 1 pps signal at the EXT REF IN input. Therefore, the instrument frequency accuracy will be dominated by the aging rate of the 1 pps signal instead of the aging rate of the internal reference, except during the time it takes to lock to a new 1 pps signal, approximately 10 minutes.

Sets the System, Alignments, Timebase DAC setting to “User”. This setting survives Preset and Power Cycle, but it set to “Calibrated” on a System, Restore Defaults, Align or a System, Restore Defaults, All

When a 1 pps signal is present at the EXT REF IN input, and either **Pulse** or **Sense** is selected, the internal reference frequency is affected by this signal; in effect, it “learns” a new accuracy setting. This setting can be seen by going to the **System, Alignments, Timebase Dac** menu, and looking at the **User** key in that menu. You will note that User has become automatically selected, and that the value shown on the **User** key is the updated value of the timebase DAC as “learned” from the 1 pps signal. Note that this replaces any value the user might have previously set on this key.

Once the setting is learned the user may remove the 1 pps signal; the User setting for the Timebase DAC is retained until you manually select “Calibrated” or execute a System, Restore Defaults, Align or a System, Restore Defaults, All. If you want to make the User setting permanent there is information in the Service Guide that tells you how to change the Calibrated setting of the Timebase DAC.

Note also that if the 1 pps signal is removed when Sense is selected, the instrument will simply switch to the normal state of the Internal reference and display SENSE:INT in the Settings Panel. However, if the 1 pps signal is removed when Pulse is selected, the instrument will generate an error

The J7203A Atomic Frequency Reference is an accessory for the X-Series Signal Analyzer that provides a highly accurate 1 pps timebase to use in conjunction with the Pulse setting. With the J7203A, the 1 pps signal is guaranteed to meet the input requirements of the EXT REF IN port, and the improved accuracy of the instrument’s internal frequency reference is specified. This is the only 1 pps signal that is guaranteed to function properly with the X-Series.

6.6.2 Ext Ref Freq

This key tells the instrument the frequency of the external reference. When the external reference is in use (either because the reference has been switched to External or because the Reference has been switched to Sense and there is a valid external reference present) this information is used by the instrument to determine the internal settings needed to lock to that particular external reference signal.

For the instrument to stay locked, the value entered must be within 5 ppm of the actual external reference frequency. So, it is important to get it close, or you risk an unlock condition.

Note that this value only affects the instrument's ability to lock. It does not affect any calculations or measurement results. See "Freq Offset" in the Frequency section for information on how to offset frequency values.

| | |
|----------------|--|
| Remote Command | <code>[:SENSe]:ROSCillator:EXTernal:FREQuency <freq></code> <code>[:SENSe]:ROSCillator:EXTernal:FREQuency?</code> |
| Example | Set the external reference frequency to 20 MHz, but does not select the external reference: <code>:ROSC:EXT:FREQ 20 MHz</code> Select the external reference: <code>:ROSC:SOUR:TYPE EXT</code> |
| Dependencies | Still available with Internal or Pulse selected, to allow setup for when External is in use. However, the setting has no effect if the Internal Reference is in use (Freq Ref In set to Internal, Pulse, or SENSE:INT or SENSE:PULSE) Not available in UXM For VXT models M9420A/10A/11A/15A/16A and M9410E/11E/15E/16E: only 100 MHz is available |
| Preset | Unaffected by Mode Preset , Input/Output Preset , or Restore Defaults, Input/Output , but set to 100 MHz for VXT models and 10 MHz for other models, by Restore Defaults, Misc , or Restore Defaults, All , or Default External Ref Freq |
| State Saved | Power On Persistent (survives power cycle) |
| Min/Max | See " Minimum & Maximum Values " on page 2270 |

Minimum & Maximum Values

| Model | Min | Max |
|--|--------|--------|
| CXA, N897xB, E7760B, M8920A/20B, CXA-m | 10 MHz | 10 MHz |
| EXA without option R13 | 10 MHz | 10 MHz |
| EXA with option R13 | 10 MHz | 20 MHz |
| MXA, PXA, EXM | 10 MHz | 50 MHz |

6 Input/Output
6.6 Freq Ref Input

| Model | Min | Max |
|--------------------|---------|---------|
| VXT models | 100 MHz | 100 MHz |
| M9410E/11E/15E/16E | 100 MHz | 100 MHz |
| All other models | 1 MHz | 100 MHz |

6.6.3 Default External Ref Freq

Restores the External Ref Freq to its default of 10 MHz.

When you set an External Ref Freq value with the **Ext Ref Freq** control, that Frequency is persistent; is not affected by Mode Preset or Input/Output Preset, and survives shutdown and power cycle. This control allows you to reset the External Ref Freq to its default value.

NOTE

The persistence of the External Ref Freq is a new behavior as of firmware version A.18.00, necessitating the addition of this control. In versions before A.18.00, the frequency reset on a power cycle/restart. Thus, you may need to use this command to retain backwards compatibility.

| | |
|----------------|---|
| Remote Command | <code>[:SENSe]:ROSCillator:EXTernal:FREQuency:DEFault</code> |
| Example | <code>:ROSC:EXT:FREQ:DEF</code> resets the external ref frequency |
| Notes | Command only; no query |
| Dependencies | Grayed-out if the Ext Ref Freq is already set to the default Does not appear in EXM, UXM, VXT models or M8920A/20B |

6.6.4 LO Ref Input

This parameter sets the LO Reference signal Input to External or Internal.

| | |
|----------------|--|
| Remote Command | <code>[:SENSe]:ROSCillator:LO:INPut INTernal EXTernal</code> See " Option Details " on page 2272 <code>[:SENSe]:ROSCillator:LO:INPut?</code> |
| Example | <code>:ROSC:LO:INP EXT</code> <code>:ROSC:LO:INP?</code> |
| Dependencies | Only available in VXT models M9410A/11A/15A/16A when MIMO is on |
| Preset | <code>INTernal</code> |
| State Saved | Saved in instrument state |

Option Details

| Parameter | SCPI | Notes |
|-----------|-----------------------|--|
| Internal | <code>INTernal</code> | When Internal is selected, internal reference signal will be used to synchronize the LO board |
| External | <code>EXTernal</code> | When External is selected, external reference signal will be used to synchronize the LO board. Route the correct reference signal to the specified port before changing the LO Ref Input to External For VXT models M9410A/11A, a 4.8 GHz reference signal is required to rout to the 4.8 GHz In port |

6.6.5 Ref Lock BW

Lets you adjust the Frequency Reference phase lock bandwidth. This control is available in some models of the X-Series.

It is possible to improve the phase noise of the instrument by several dB, even tens of dB, by using an external reference with excellent phase noise. When an external reference is used the instrument's close-in phase noise improves to match that of the reference.

Normally a narrow loop bandwidth is used to phase lock to the external reference. However, the Ref Lock BW control allows you to choose a wider loop bandwidth to reduce the phase noise at low offset frequencies, especially 4 to 400 Hz offset. The Wide setting represents about a 60 Hz loop bandwidth, the Narrow setting about 15 Hz.

When using an external reference with superior phase noise, Keysight recommends setting the external reference phase-locked-loop bandwidth to Wide to take advantage of that superior performance.

When using an external reference with inferior phase noise performance, Keysight recommends setting the bandwidth to Narrow.

In these relationships, inferior and superior phase noise are with respect to -134 dBc/Hz at 30 Hz offset from a 10 MHz reference. Because most reference sources have phase noise behavior that falls off at a rate of 30 dB/decade, this is usually equivalent to -120 dBc/Hz at 10 Hz offset.

In instruments with EP1 or EP2, this control only affects the external reference loop bandwidth. In instruments with EP0, this control also affects the loop bandwidth used when the Internal reference is selected (reference set manually to Internal or Pulse, or set to Sense and set by sensing to Internal or Pulse).

Remote Command `[:SENSe]:ROSCillator:BAWdth WIDE | NARRow`
 `[:SENSe]:ROSCillator:BAWdth?`

6 Input/Output
6.6 Freq Ref Input

| | |
|--------------|---|
| Example | <code>:ROSC:BAND WIDE</code> |
| Dependencies | In instruments with EP1 or EP2: the control is available (not grayed-out) even with Internal or Pulse selected, to allow setup for when External is in use. However, the setting has no effect if the Internal Reference is in use Only appears in instruments equipped with the required hardware Does not appear in EXM, UXM, VXT models, or E7760B |
| Preset | Unaffected by Preset, but set to NARRow by Restore Input/Output Defaults or Restore System Defaults -> All |
| State Saved | Saved in Input/Output state |

6.6.6 Reference Oscillator On/Off (Remote Command Only)

Provided for PSA code compatibility.

In PSA it turned the Reference Oscillator on and off, however in the X-Series the reference oscillator cannot be turned off, so no hardware is affected when it is received.

If queried it returns the state you set with the command, but note that this does not necessarily reflect the actual state of the Reference Oscillator, which is always **ON**.

| | |
|------------------------------|--|
| Example | <code>:ROSCillator:OUTP ON</code> |
| Preset | Unaffected by Preset, but set to ON by Restore Input/Output Defaults or Restore System Defaults -> All |
| Backwards Compatibility SCPI | <code>[:SENSe]:ROSCillator:OUTPut[:STATe] ON OFF 1 0</code> <code>[:SENSe]:ROSCillator:OUTPut[:STATe]?</code> |

6.6.6.1 Select Ref

Lets you select the reference model to control.

The reference status is not saved in a state file, because Reference is a standard alone module.

| | |
|----------------|---|
| Remote Command | <code>[:SENSe]:ROSCillator:PXIReference:SElect NONE M9300a</code> <code>[:SENSe]:ROSCillator:PXIReference:SElect?</code> |
| Example | <code>:ROSC:PXIR:SEL M9300</code> <code>:ROSC:PXIR:SEL?</code> |
| Dependencies | Only Keysight M9300A Frequency Reference is supported |
| State Saved | No |

6.6.6.2 Freq Ref In

Specifies the frequency reference as being the internal reference, an external reference at the front panel input labeled **Ref In**.

| | |
|----------------|---|
| Remote Command | <code>[:SENSe]:ROSCillator:PXIReference:SOURce INTernal EXTernal</code> <code>[:SENSe]:ROSCillator:PXIReference:SOURce?</code> |
| Example | <code>:ROSC:PXIR:SOUR INT</code> <code>:ROSC:PXIR:SOUR?</code> |
| Dependencies | Only available when Select Ref is not NONE |
| Preset | INTernal |
| State Saved | Saved in instrument state |

6.6.6.3 External Freq Ref

Tells the PXIe Ref module the frequency of the external reference. When the external reference is in use this information is used by the Ref module to determine the internal settings needed to lock to that particular external reference signal.

For the instrument to stay locked, the value entered must be within 5 ppm of the actual external reference frequency. So, it is important to get it close, or you risk an unlock condition.

| | |
|----------------|--|
| Remote Command | <code>[:SENSe]:ROSCillator:PXIReference:EXTernal:FREQuency <freq></code> <code>[:SENSe]:ROSCillator:PXIReference:EXTernal:FREQuency?</code> |
| Example | Set the external reference frequency to 20 MHz, but does not select the external reference: <code>:ROSC:PXIR:EXT:FREQ 20 MHz</code> Select the external reference: <code>:ROSC:PXIR:SOUR EXT</code> |
| Dependencies | Only available when Select Ref is not NONE |
| Preset | 10 MHz |
| State Saved | Yes |
| Min | 1 MHz |
| Max | 110 MHz |

6.6.6.4 Ext Ref Locked (Remote Query Only)

Returns the External Reference locked status

| | |
|----------------|--|
| Remote Command | <code>[:SENSe]:ROSCillator:PXIReference:EXTernal:LOCK?</code> |
|----------------|--|

6 Input/Output

6.6 Freq Ref Input

| | |
|--------------|---|
| Example | <code>:ROSC:PXIR:EXT:LOCK?</code> |
| Notes | Returns "1" if the Freq Ref Input is External and Reference is locked. Otherwise returns "0" When the Freq Ref Input is External and Reference is unlocked, the following warning message appears in the status bar: <code>Settings Alert; M9300A Ext Ref Unlocked</code> |
| Dependencies | Only available when Select Ref is not NONE |

6.7 Output

Accesses controls that configure various output settings, like the frequency reference output, IF outputs and analog output.

Not all measurements support all output functions. For example, the Swept SA Measurement does not support the Digital Bus function or the I/Q Cal Out function under the **Output** tab; although the controls are visible, the outputs do not function in this measurement.

In addition, if the appropriate license is not present, some controls may not appear. In Modes/Measurements that do not support particular controls, the controls may appear, but no output will be generated if they are selected.

This tab does not appear in EXM or VXT model M9420A.

6.7.1 Analog Out

Lets you control which signal is fed to the “Analog Out” connector on the instrument rear panel.

In the Auto state, the Analog Output will automatically be set to the most sensible setting for the current mode or measurement.

If you make a selection manually from the **Analog Out** menu, the manually selected choice will remain in force until you change it (or re-select Auto), even if you switch to a mode or measurement for which the selected output does not apply.

| | |
|-------------------------------|--|
| Remote Command | <code>:OUTPut:ANALog OFF SVIDeo LOGVideo LINVideo DAUDio!See Option Details</code> <code>:OUTPut:ANALog?</code> |
| Example | <code>:OUTP:ANAL SVIDeo</code> causes the analog output type to be Screen Video |
| Preset | Unaffected by Preset, but set to DAUDio by Restore Input/Output Defaults or Restore System Defaults->All |
| State Saved | Saved in Input/Output State |
| Backwards Compatibility Notes | Prior to A.04.00, OFF was the default functionality except when in the Analog Demod application or with Tune and Listen, in which case it was DAUDio , and there was no selection menu. For backwards compatibility with earlier X-Series firmware versions, Auto (<code>:OUTP:ANAL:AUTO ON</code>) duplicates the prior behavior The DNWB and SANalyzer parameters, which were legal in PSA but perform no function in the X-Series, are accepted without error Auto Function |

6 Input/Output
6.7 Output

| | |
|----------------|--|
| Remote Command | <code>:OUTPut:ANALog:AUTO OFF ON 0 1</code> <code>:OUTPut:ANALog:AUTO?</code> |
| Example | <code>:OUTP:ANAL:AUTO ON</code> |
| Preset | ON |

Option Details

| Source | SCPI | Notes |
|--------------|----------|--|
| Off | OFF | The Analog Output is off |
| Screen Video | SVIDeo | Selects the analog output to be the screen video signal. In this mode, the pre-detector data is output to the Analog Out connector. The output looks very much like the trace displayed on the instrument's screen, and depends on the Log/Lin display Scale, Reference Level, and dB per division, but is not influenced by the selected detector or any digital flatness corrections or trace post-processing (like Trace Averaging) |
| Log Video | LOGVidéo | Selects the analog output to be the log of the video signal. In this mode, the pre-detector data is output to the Analog Out connector with a Log scaling. The output is referenced to the current level at the mixer, does not depend on display settings like Reference Level or dB per division, and it is not influenced by the selected detector or any digital flatness corrections or trace post-processing (like Trace Averaging), but does change with input attenuation |
| Linear Video | LINVidéo | Selects the analog output to be the envelope signal on a linear (voltage) scale. In this mode, the pre-detector data is output to the Analog Out connector with a Linear scaling. The output is based on the current Reference Level, and is not influenced by the selected detector or any digital flatness corrections or trace post-processing (like Trace Averaging) |
| Demod Audio | DAUDio | Selects the analog output to be the demodulation of the video signal. When Demod Audio is selected, the demodulated audio signal appears at this output whenever the Analog Demod application is demodulating a signal or when Analog Demod Tune and Listen is operating in the Swept SA measurement When Analog Out is in the Auto state, this output is auto-selected when in the Analog Demod mode or when Analog Demod Tune and Listen is operating in the Swept SA measurement |

The table below specifies the range for each output.

| Analog Out | Nominal Range exc (10% overrange) | Scale Factor | Notes |
|--------------|---|-----------------|--|
| Off | 0 V | | |
| Screen Video | 0 – 1 V open circuit | 10%/division | 8566 compatible |
| Log Video | 0 – 1 V terminated | 1/(192.66 dB/V) | dB referenced to mixer level, 1V out for –10 dBm at the mixer |
| Linear Video | 0 – 1 V terminated | 100%/V | Linear referenced to Ref Level, 1 V out for RF envelope at the Ref Level |

| Analog Out | Nominal Range exc (10% overrange) | Scale Factor | Notes |
|----------------|---|--------------|-------|
| Demod Audio | (varies with instrument setting) | | |

Notes about the Analog Outputs

Screen Video

This mode is similar to the Analog Output of the HP 8566 family and the Video Out (opt 124) capability of the Keysight PSA analyzer (E444x), although there are differences in the behavior.

Screen Video output changes while in FFT Sweeps, so for measurements that use exclusively FFT Sweeps, or if the user manually chooses FFT Sweeps, the Screen Video output will look different than it does in swept mode

Because the Screen Video output uses one of the two IF processing channels, only one detector is available while Screen Video is selected. All active traces will change to use the same detector as the selected trace when Screen Video is activated.

Screen Video output is not available while any EMI Detector is selected (Quasi Peak, RMS Average or EMI Average), because these detectors use both IF processing channels. Consequently, if the user chooses an EMI Detector, there will be no Screen Video output.

The output holds at its last value during an alignment and during a marker count. After a sweep:

- If a new sweep is to follow (as in Continuous sweep mode), the output holds at its last value during the retrace before the next sweep starts. If the instrument is in zero-span, there is no retrace, as the instrument remains tuned to the Center Frequency and does not sweep. Therefore, in zero-span, the output simply remains live between display updates
- If no new sweep is to follow (as in Single sweep mode), the output remains live, and continues to show the pre-detector data

This function depends on optional capability; the selection is not available, and the command will generate an “Option not available” error unless you have Option YAV or YAS licensed in your instrument.

The Screen Video function is intended to be very similar to the 8566 Video Output and the PSA Option 124. However, unlike the PSA, it is not always on; it must be switched on by the Screen Video key. Also, unlike the PSA, there are certain dependencies (detailed above) – for example, the Quasi Peak Detector is unavailable when Screen Video is on.

6 Input/Output

6.7 Output

Furthermore, the PSA Option 124 hardware was unipolar, and its large range was padded to be exactly right for use as a Screen Video output. In the X-Series, the hardware is bipolar and has a wider range to accommodate the other output choices. Therefore, the outputs won't match up exactly and users may have to modify their setup when applying the X-Series in a PSA application.

Log Video

Log Video shows the RF Envelope with the Reference equal to the Mixer Level. The output is designed so that full scale (1 V) corresponds to -10 dBm at the mixer. The full range (0-1 V) covers 192.66 dB ; thus, 0 V corresponds to -202.66 dBm at the mixer.

Because the Log Video output uses one of the two IF processing channels, only one detector is available while Screen Video is selected. All active traces will change to use the same detector as the selected trace when Log Video is activated.

Log Video output is not available while any EMI Detector is selected (Quasi Peak, RMS Average or EMI Average), because these detectors use both IF processing channels. Consequently, if the user chooses an EMI Detector, there will be no Log Video output.

The output holds at its last value during an alignment, during a marker count, and during retrace (after a sweep and before the next sweep starts).

This function depends on optional capability. The choice will not appear, and the command will generate an "Option not available" error unless you have Option YAV licensed in your instrument.

Log Video output changes while in FFT Sweeps, so for measurements that use exclusively FFT Sweeps, or if the user manually chooses FFT Sweeps, the Log Video output will look different than it does in swept mode.

Linear Video

Linear Video shows the RF Envelope with the Reference equal to the Ref Level. The scaling is set so that 1 V output occurs with an instantaneous video level equal to the reference level, and 0 V occurs at the bottom of the graticule. This scaling gives you the ability to control the gain without having another setup control for the key. But it requires you to control the look of the display (the reference level) in order to control the analog output.

This mode is ideal for looking at Amplitude Modulated signals, as the linear envelope effectively demodulates the signal.

Because the Linear Video output uses one of the two IF processing channels, only one detector is available while Linear Video is selected. All active traces will change to use the same detector as the selected trace when Log Video is activated.

Linear Video output is not available while any EMI Detector is selected (Quasi Peak, RMS Average or EMI Average), because these detectors use both IF processing

channels. Consequently, if the user chooses an EMI Detector, there will be no Linear Video output.

The output holds at its last value during an alignment and during a marker count and during retrace (after a sweep and before the next sweep starts).

This function depends on optional capability; the choice will not appear, and the command will generate an “Option not available” error unless you have Option YAV licensed in your instrument. Linear Video output changes while in FFT Sweeps, so for measurements that use exclusively FFT Sweeps, or if the user manually chooses FFT Sweeps, the Linear Video output will look different than it does in swept mode.

Demod Audio

When Analog Out is in the Auto state, this output is auto-selected when in the Analog Demod mode or when **Analog Demod Tune and Listen** is operating in the Swept SA measurement.

If any other Analog Output is manually selected when in the Analog Demod mode or when **Analog Demod Tune and Listen** is operating in the Swept SA measurement, a condition warning message appears. This choice only appears if the Analog Demod application (N9063A), the N6141A or W6141A application, or Option EMC is installed and licensed, otherwise the choice will not appear, and the command will generate an “Option not available” error.

The output holds at its last value during an alignment and during a marker count. It is not held between sweeps, in order for Tune and Listen to work properly.

When Demod Audio is the selected Analog Output, all active traces are forced to use the same detector, and the CISPR detectors (QPD, EMI Avg, RMS Avg) are unavailable

6.7.2 Screen Video Level

Lets you control the amplitude of the Analog Output when Screen Video is selected.

- The 1V (**NORMAL**) setting provides a nominal output of 1 V peak-to-peak into an open circuit. This matches the traditional behavior of X-series instruments
- The 2V (**COMPATIBLE**) setting provides a nominal output of 2 V peak-to-peak into an open circuit. This matches the legacy behavior of PSA and earlier analyzers

Remote Command `:OUTPut:ANALog:SVIDeo NORMAL | COMPATible`
 `:OUTPut:ANALog:SVIDeo?`

Example `:OUTP:ANAL:SVID COMP`
 causes the Screen Video level to be 2 V

| | |
|--------------|--|
| Dependencies | Only appears if Screen Video is the selected Analog Output |
| Preset | Unaffected by Preset, but set to NORM by Restore Input/Output Defaults or Restore System Defaults->All |
| State Saved | Saved in Input/Output State |

6.7.3 Digital Bus Out

Turns on the LVDS Digital Output port for outputting digital acquisition data.

- When **ON**, all acquisitions are streamed to the output port including acquisitions for internal purposes such as Alignment. The internal processing and routing of acquisitions continues as usual and is unaffected by the state of Bus Out
- When **OFF**, no signal appears on the LVDS port

| | |
|----------------|---|
| Remote Command | <code>:OUTPut:DBUS[1][:STATE] ON OFF 1 0</code> <code>:OUTPut:DBUS[1][:STATE]?</code> |
| Example | <code>:OUTP:DBUS ON</code> |
| Dependencies | Requires option RTL or control is not displayed Digital Bus Out and Wideband Digital Bus cannot both be ON at the same time, so: <ul style="list-style-type: none"> – When Wideband Digital Bus is turned ON, if Digital Bus Out is already ON, an advisory message is displayed, “Wideband Digital Bus On, Digital Bus (narrow band) forced to Off” – When Digital Bus Out is turned ON, if Wideband Digital Bus is already ON, an advisory message is displayed, “Digital Bus (narrow band) On, Wideband Digital Bus forced to Off” |
| Preset | OFF Set by Restore Input/Output Defaults |
| State Saved | Saved in Input/Output State |

6.7.4 Wideband Digital Bus

Turns on the LVDS port on the Wideband IF, which causes the I/Q pairs from the current measurement to be sent to this port.

NOTE

This control is grayed-out in all Modes except RTSA, which offers the only measurement that supports wideband streaming.

- When **ON**, the internal processing and routing of acquisitions continues as usual, and the display of measurement data is unaffected
- When **OFF**, no signal appears on the LVDS port

| | |
|----------------|---|
| Remote Command | <code>:OUTPut:DBUS2[:STATe] OFF ON 0 1</code> <code>:OUTPut:DBUS2[:STATe]?</code> |
| Example | <code>:OUTP:DBUS2 ON</code> |
| Notes | If this command is sent while running a measurement that does not support Wideband Digital Bus , the message “Settings conflict; Feature not supported for this measurement” is displayed |
| Dependencies | Requires option RTS or control is not displayed Digital Bus Out and Wideband Digital Bus cannot both be ON at the same time, so: <ul style="list-style-type: none"> – When Wideband Digital Bus is turned ON, if Digital Bus Out is already ON, an advisory message is displayed, “Wideband Digital Bus On, Digital Bus (narrow band) forced to Off” – When Digital Bus Out is turned ON, if Wideband Digital Bus is already ON, an advisory message is displayed, “Digital Bus (narrow band) On, Wideband Digital Bus forced to Off” |
| Preset | OFF Set by Restore Input/Output Defaults |
| State Saved | Saved in Input/Output State |

Here is the Wideband LVDS connector as viewed from the rear panel. The pin assignments are listed below:

| Stream_MARK_2 | Stream Mark Bit 2 | |
| Stream_ALT | currently unused | |

6.7.5 Data Stream

Lets you choose data or a test pattern to output to the Wideband IF LVDS port. This can help you set up your streaming target devices.

| | |
|----------------|---|
| Remote Command | <code>:OUTPut:DBUS2:DATA MEASure TEST</code> <code>:OUTPut:DBUS2:DATA?</code> |
| Example | <code>:OUTP:DBUS2:DATA TEST</code> |
| Notes | Selecting TEST routes a test pattern to the Wideband Digital Bus stream output |
| Preset | MEAS (set by Restore Input/Output Defaults) |
| State Saved | Saved in Input/Output State |

6.7.6 I/Q Cal Out

The Baseband I/Q "Cal Out" port can be turned on with either a 1 kHz or a 250 kHz square wave. This can be turned on independent of the input selection. Preset resets this to **OFF**.

| | |
|----------------|--|
| Remote Command | <code>:OUTPut:IQ:OUTPut IQ1 IQ250 OFF</code> <code>:OUTPut:IQ:OUTPut?</code> |
| Example | <code>:OUTP:IQ:OUTP IQ1</code> |
| Dependencies | Only available with Option BBA |
| Couplings | An I/Q Cable Calibration or an I/Q Probe Calibration will change the state of the Cal Out port as needed by the calibration routine. When the calibration is finished the I/Q Cal Out is restored to the pre-calibration state |
| Preset | OFF |

6 Input/Output
6.7 Output

| | |
|-------------|---|
| State Saved | Saved in instrument state |
| Range | 1 kHz Square Wave 250 kHz Square Wave Off |

6.7.7 Aux IF Out

Controls the signals that appear on the SMA output on the rear panel labeled **AUX IF OUT**

NOTE

Aux IF Out is valid for the RF Input and for the External Mixer input. In external mixing, the Aux IF output level is set by factory default to accommodate expected IF levels for the RF path. When using the External Mixing path, the **Aux IF Out** levels (for all three options CR3, CRP and ALV) will therefore be uncalibrated.

| | |
|-------------------------------|---|
| Remote Command | <code>:OUTPut:AUX SIF AIF LOGVideo OFF</code> See " Option Details " on page 2285 and " Notes on the Aux IF Outputs " on page 2286 below <code>:OUTPut:AUX?</code> |
| Dependencies | Does not appear in models that do not support the Aux IF Out |
| Preset | Unaffected by Preset, but set to OFF by Restore Input/Output Defaults or Restore System Defaults->All |
| State Saved | Saved in Input/Output state |
| Backwards Compatibility Notes | In PSA, the IF output had functionality equivalent to the SIF option in X-Series' Aux IF Out menu. In X-Series, it is necessary to switch Aux IF Out to SIF to get this functionality, whereas in PSA it is always on, since there are no other choices Hence, if you are migrating remote code from PSA, and you use the IF Output in PSA, you will need to add a command to switch this function to SIF |

Option Details

The Aux IF Output options are:

| Source | SCPI | Notes |
|--------------|------------|---|
| Off | OFF | No signal is output from the AUX IF OUT connector on the rear panel The connector appears as an open-circuit (that is, it is not terminated in any way) |
| Second IF | SIF | The 2 nd IF output is routed to the rear panel connector. Annotation on the menu panel shows the current 2 nd IF frequency in use in the instrument |
| Arbitrary IF | AIF | The 2 nd IF output is mixed with a local oscillator and mixer to produce an arbitrary IF output between 10 MHz and 75 MHz with 500 kHz resolution. The phase noise in this mode will not be as good as in Second IF mode The IF output frequency is adjustable, through an active function which appears on the menu panel, from 10 MHz to 75 MHz with 500 kHz resolution Note that, in instruments with Options B2X or B5X, the Arbitrary IF Output is only |

| Source | SCPI | Notes |
|----------------|----------|--|
| Fast Log Video | LOGVideo | <p>practical when the IF Bandwidth is ≤ 40 MHz, IF Path is ≤ 40 MHz, or FFT Width is ≤ 40 MHz</p> <p>The 2nd IF output is passed through a log amp and the log envelope of the IF signal is sent to the rear panel. The open circuit output level varies by about 25 mV per dB, with a top-of-screen signal producing about 1.6 Volts. The output impedance is nominally 50 ohms</p> <p>This mode is intended to meet the same requirement as Option E4440A-H7L Fast Rise Time Video Output on E4440A PSA Series, allowing you to characterize pulses with fast rise times using standard measurement suites on modern digital scopes</p> |

Notes on the Aux IF Outputs

Second IF

Does not appear unless Option CR3 is installed.

The frequency of the 2nd IF depends on the current IF signal path as shown in the table below:

| IF Path Selected | Frequency of "Second IF" Output |
|------------------|---------------------------------|
| 10 MHz | 322.5 MHz |
| 25 MHz | 322.5 MHz |
| 40 MHz | 250 MHz |
| 85-160 MHz | 300 MHz |
| 255 MHz | 750 MHz |
| 510 MHz | 877.1484375 MHz |

The signal quality, such as signal to noise ratio and phase noise, are excellent in this mode.

Arbitrary IF

Does not appear unless Option CRP is installed.

The bandwidth of this IF output varies with band and center frequency, but is about 40 MHz at the -3 dB width. When the output is centered at lower frequencies in its range, signal frequencies at the bottom of the bandwidth will "fold". For example, with a 40 MHz bandwidth (20 MHz half-bandwidth), and a 15 MHz IF center, a signal -20 MHz relative to the spectrum analyzer center frequency will have a relative response of about -3 dB with a frequency 20 MHz below the 15 MHz IF center. This -5 MHz frequency will fold to become a +5 MHz signal at the IF output. Therefore, lower IF output frequencies are only useful with known band-limited signals.

Fast Log Video

Does not appear unless Option ALV is installed.

The output is off during an alignment but not during a marker count, and is not blanked during retrace (after a sweep and before the next sweep starts).

6.7.8 Arbitrary IF Freq

Sets the frequency of the Arbitrary IF when "Aux IF Out" on page 2285 is set to **AIF**.

NOTE

In instruments with Options B2X or B5X, the Arbitrary IF Output is only practical when the IF Bandwidth is ≤ 40 MHz, IF Path is ≤ 40 MHz, or FFT Width is ≤ 40 MHz.

| | |
|----------------|---|
| Remote Command | <code>:OUTPut:AUX:AIF <value></code> <code>:OUTPut:AUX:AIF?</code> |
| Example | <code>:OUTP:AUX:AIF 50 MHZ</code> |
| Dependencies | Only appears if "Aux IF Out" on page 2285 is AIF |
| Preset | Unaffected by a Preset, but set to 70 MHz by Restore Input/Output Defaults or Restore System Defaults->All |
| State Saved | Saved in Input/Output State |
| Min | 10 MHz |
| Max | 75 MHz |

6.7.9 Ext/Wide IF Out

Causes the signal that is normally routed to the IF to be routed instead to the **Ext IF Out** connector on the rear panel (N9041B) or **Wide IF Out** connector on the front panel (N9042B) or rear panel (N9032B). This is available in N9041B when RF Input 2 is the selected input port and in N9032B/N9042B on RF Input and, when V3050A is attached, External RF Input.

Only one IF output (**Ext/Wide IF Out**, IF2 Out, or Aux IF Out) can be selected at a time, so switching Ext/Wide IF Out to **ON** changes IF2 Out and Aux IF Out to **OFF**, and setting Aux IF Out to something other than **OFF** or IF2 Out to **ON** forces Ext/Wide IF Out to **OFF**.

| | |
|----------------|---|
| Remote Command | <code>:OUTPut:EIF ON OFF 1 0</code> <code>:OUTPut:EIF?</code> |
| Example | <code>:OUTP:EIF ON</code> |
| Dependencies | Only appears in N9041B, N9032B, and N9042B For N9041B, enabled when RF Input 2 is the selected input. When RF Input 2 is not selected, the control is grayed out and forced to Off and attempting to set it On will result in an error message |

| | |
|------------------------------|--|
| | For N9032B/N9042B, enabled on RF Input and on External RF Input when V3050A is attached When this switch is ON , no measurement is displayed, and the error “No result; meas invalid with Ext/Wide IF Out set to On” appears in the Status bar |
| Preset | OFF Not affected by Mode Preset , but set to OFF by Input/Output Preset |
| State Saved | Saved in Input/Output state |
| Annotation | None (but error message appears when on) |
| Status Bits/OPC dependencies | STATUS:QUESTIONABLE:INTEGRITY bit 1 is set when Ext/Wide IF Out is ON . This indicates an error, because no valid data is on the screen or available via SCPI. However, the signal at the Ext/Wide IF Out port is still valid given the other settings |

6.7.10 IF2 Out

Causes the signal that is normally routed to the IF, when the 1 GHz IF Path is selected, to be routed instead to the **IF2 Out** connector on the rear panel.

Only one IF output (Ext IF Out, **IF2 Out**, or Aux IF Out) can be selected at a time, so switching IF2 Out to On changes Ext IF Out and Aux IF Out to Off, and setting Aux IF Out to something other than Off or Ext IF Out to On forces IF2 Out to Off.

This control only appears if Option H1G is installed. It is only available when the 1 GHz IF Path is chosen, either directly or indirectly. In all other paths it is visible but grayed out and forced to Off. Attempting to set it On when the 1GHz path is not selected generates an error.

- Direct selection of the 1 GHz path: Measurements that directly support the 1 GHz path have a 1 GHz selection in the IF Path menu in Meas Setup
- Indirect selection of the 1 GHz path: certain measurements, like CCDF, always choose the widest available path, and so will choose the 1 GHz path if it is available, even if there is no IF Path menu in the measurement. IF2 Out will be visible when this results in the 1 GHz path being selected, even if there is no control or readout indicating that the 1 GHz path is chosen

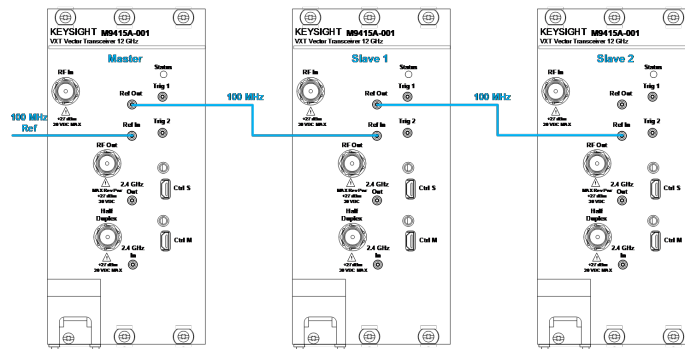

| | |
|----------------|---|
| Remote Command | :OUTPut:IF2 ON OFF 1 0 :OUTPut:IF2? |
| Example | :OUTP:IF2 ON |
| Dependencies | Only appears in UXA and only when Option HIG is installed When this is ON , no measurement is displayed, and the error “No result; meas invalid with IF2 Out set to On” appears in the Status bar |
| Preset | OFF Not affected by Mode Preset but set to OFF by Input/Output Preset |
| State Saved | Saved in Input/Output state |

6 Input/Output
6.7 Output

| | |
|------------------------------|---|
| Annotation | None (but error message appears when on) |
| Status Bits/OPC dependencies | STATUS:QUESTIONABLE:INTEGRITY bit 1 is set when IF2 Out is ON . This indicates an error, because no valid data is on the screen or available via SCPI. However, the signal at the IF2 Out port is still valid given the other settings |

6.7.11 REF Out

Lets you toggle the state of REF Out. The REF Out port is designed for MIMO, which provides the reference daisy chain for the Primary and Secondary modules.

| | |
|----------------|---|
| Remote Command | <code>:OUTPut:EREFerence:OUTPut ON OFF 1 0</code> <code>:OUTPut:EREFerence:OUTPut?</code> |
| Example | <code>:OUTP:EREF:OUTP ON</code> <code>:OUTP:EREF:OUTP?</code> |
| Notes | Used to route the 100 MHz reference signal on the REF In port to the REF Out port |
| Dependencies | Only available in VXT models M9415A/16A and M9415E/16E when Freq Ref Input is External, and Ext Ref Freq is 100 MHz |
| Preset | OFF |
| Range | ON OFF |

6.7.12 LO Ref Out

Turns the LO Reference Signal Out on or off. **LO Ref Out** is used to provide reference daisy chain in MIMO or Phase Coherency.

For VXT models M9410A/11A, controls the **4.8 GHz Out** port on the front panel. Setting it **ON** outputs a 4.8 GHz reference signal.

| | |
|----------------|--|
| Remote Command | <code>:OUTPut:ROSCillator:LO:OUTPut ON OFF 1 0</code> <code>:OUTPut:ROSCillator:LO:OUTPut?</code> |
| Example | <code>:OUTP:ROSC:LO:OUTP ON</code> <code>:OUTP:ROSC:LO:OUTP?</code> |
| Dependencies | Only available in VXT models M9410A/11A/15A/16A and M9410E/11E/15E/16E |
| Preset | <code>OFF</code> |

6.8 Trigger Output

Accesses controls that configure the **Trigger Output** settings.

6.8.1 Trig 1 – 4 Out

Selects the type of output signal that will be output from the available **Trig n Out** connectors, where **n** = 1, 2, 3, or 4.

Some instruments do *not* support **Trig 2 Out** through **Trig 4 Out** outputs, nor their associated controls.

For most instruments, **Trig 1 Out** applies to the connector labeled **Trigger 1**, but for VXT model M9420A, it is labeled **Trigger 4**.

The front panel includes separate controls for each available trigger: **Trig 1 Out – Trig 4 Out**. The remote command can be used for *any* of the **Trig n Out** connectors, by specifying the appropriate parameter (for example **TRIG1**, **TRIG2**, etc.).

NOTE

Option **TARMed** is *not* available in modular instruments.

| | |
|----------------|--|
| Remote Command | <pre>:TRIGger[1] 2 ... 4[:SEQuence]:OUTPut HSWP MEASuring MAIN GATE GTRigger OEVen TARMed SP0int S1Marker S2Marker S3Marker S4Marker PARB FSYNc OFF</pre> <p>See "Trigger Out Options" on page 2292</p> <pre>:TRIGger[1] 2 ... 4[:SEQuence]:OUTPut?</pre> |
| Example | <pre>:TRIG:OUTP HSWP :TRIG2:OUTP GATE</pre> |
| Notes | <p>Trig 2 Out is used as the source trigger out in EXM and VXT model M9420A</p> <p>The available choices in EXM and VXT model M9420A are S1Marker, S2Marker, S3Marker, S4Marker and OFF</p> <p>For Power Amplifier Mode, Trig 2 Out is set to Source Marker2 when Burst Shape & Mask is ON. In this case, Trigger 2 is used to output PA Enable Mask</p> |
| Dependencies | <p>Trig 2 Out through Trig 4 Out are not supported in all models. In models that do not support them, the Trig n Out control is blanked, and sending the SCPI command for this output generates an error, "Hardware missing; Not available for this model number"</p> <p>Querying Trig 2 Out through Trig 4 Out in models that do not support them returns OFF</p> <p>For VXT models M9410A/11A/15A/16A and M9410E/11E/15E/16E:</p> <ul style="list-style-type: none"> - When Trig n Out Device is ANALyzer, only MEASuring, MAIN and OFF are available - When Trig n Out Device is SOURce, only S1Marker, S2Marker, S3Marker, S4Marker, PARB, FSYNc and OFF are available |

| | | | | | | | | | |
|-------------|---|-----------|--------------------------|-----------|------|-----------|--------------------------|-----------|------|
| | For VXT model M9421A, Trig 2 Out is used as the Analyzer trigger output | | | | | | | | |
| Preset | Unaffected by Preset, but preset to the following values by Restore Input/Output Defaults or Restore System Defaults->All : | | | | | | | | |
| | <table border="1"> <tr> <td>Trigger 1</td> <td>Sweeping (HSWP)</td> </tr> <tr> <td>Trigger 2</td> <td>Gate</td> </tr> <tr> <td>Trigger 3</td> <td>Sweeping (HSWP)</td> </tr> <tr> <td>Trigger 4</td> <td>Gate</td> </tr> </table> | Trigger 1 | Sweeping (HSWP) | Trigger 2 | Gate | Trigger 3 | Sweeping (HSWP) | Trigger 4 | Gate |
| Trigger 1 | Sweeping (HSWP) | | | | | | | | |
| Trigger 2 | Gate | | | | | | | | |
| Trigger 3 | Sweeping (HSWP) | | | | | | | | |
| Trigger 4 | Gate | | | | | | | | |
| State Saved | Saved in instrument state | | | | | | | | |

Trigger Out Options

| Source | SCPI | Notes |
|----------------------|------------------|---|
| Off | OFF | Selects no signal to be output to the Trig n Out connector |
| Sweeping | HSWP | Selects the Sweeping Trigger signal to be output to the Trig n Out connector when a measurement is made This signal has historically been known as HSWP (High = Sweeping), and is 5 V TTL level with 50 Ω output impedance |
| Measuring | MEASuring | Selects the Measuring trigger signal to be output to the Trig n Out connector. This signal is true while the Measuring status bit is true |
| Main Trigger | MAIN | Selects the current instrument trigger signal to be output to the Trig n Out connector Note: For multi segment sweeps, only the first sweep segment uses the selected trigger signal. All other sweep segments trigger using Free-Run and the trigger output will reflect that |
| Gate Trigger | GTRigger | Selects the gate trigger signal to be output to the Trig n Out connector. This is the source of the gate timing, not the actual gate signal |
| Gate | GATE | Selects the gate signal to be output to the Trig n Out connector. The gate signal has been delayed and its length determined by delay and length settings. When the polarity is positive, a high on the Trig n Out connector represents the time the gate is configured to pass the signal |
| Odd/Even Trace Point | OEVen | Selects either the odd or even trace points as the signal to be output to the Trig n Out connector when performing swept spectrum analysis. When the polarity is positive, this output goes high during the time the instrument is sweeping past the first point (Point 0) and every other following trace point. The opposite is true if the polarity is negative |
| Trigger Armed | TARMed | Selects the “trigger armed” trigger signal to be output to the Trig n Out connector. This signal is true when the instrument reaches its trigger armed state <i>Not available in modular instruments</i> |
| Source Point Trigger | SPOint | Selects the gate signal to be output to the Trig n Out connector for use as the Point Trigger when operating an external source in Tracking mode. When Ext Trigger 1 is |

| Source | SCPI | Notes |
|-----------------|-----------------|---|
| | | selected as the Point Trigger under Source , the Source Point Trigger under Trig 1 Out automatically gets selected. A similar pattern is used for the other Ext Trigger inputs; for example, when Ext Trigger 2 is selected as the Point Trigger under Source , the Source Point Trigger under Trig 2 Out automatically gets selected |
| Source Marker 1 | S1Marker | Only available in VXT and M941xE. For M9420A, only for TRIG2 , for M9410A/11A/15A/16A available for both TRIG1 and TRIG2 Selects the Trigger Output at Marker 1 in the Waveform file that is currently playing |
| Source Marker 2 | S2Marker | Only available in VXT and M941xE. For M9420A, only for TRIG2 , for M9410A/11A/15A/16A and M9410E/11E/15E/16E available for both TRIG1 and TRIG2 Selects the Trigger Output at Marker 2 in the Waveform file that is currently playing |
| Source Marker 3 | S3Marker | Only available in VXT and M941xE. For M9420A, only for TRIG2 , for M9410A/11A/15A/16A and M9410E/11E/15E/16E available for both TRIG1 and TRIG2 Selects the Trigger Output at Marker 3 in the Waveform file that is currently playing |
| Source Marker 4 | S4Marker | Only available in VXT and M941xE. For M9420A, only for TRIG2 , for M9410A/11A/15A/16A and M9410E/11E/15E/16E available for both TRIG1 and TRIG2 Selects the Trigger Output at Marker 4 in the Waveform file that is currently playing |
| PerArb | PARB | Only available in VXT Models M9410A/11A/15A/16A and M9410E/11E/15E/16E Selects the Trigger Output as PerArb. PerArb is a synchronization trigger which is generated by the ARB at the beginning of each repetition of playing the signal |
| FSYnc | FSYnc | Only available in VXT Models M9410A/11A/15A/16A and M9410E/11E/15E/16E Selects the Trigger Output as FSYnc , routing the Periodic Timer Sync Source signal to the specified Trigger output. That is, the signal selected by :TRIGger[:SEquence]:FRAMe:SYnc is routed to the specified trigger output The following example specifies that External 1 trigger will be used as the Periodic Timer Sync Source, and this signal will then be routed to the Trigger 2 output: TRIG:FRAM:SYnc EXT1 TRIG2:OUTP FSYnc |
| | | – |

6.8.2 Trig 1 – 4 Out Polarity

Sets the output to the **Trig n Out** connector to trigger on either the positive or negative polarity.

| | |
|----------------|---|
| Remote Command | :TRIGger[1] 2 ... 4[:SEquence]:OUTPut:POLarity POSitive NEGative :TRIGger[1] 2 ... 4[:SEquence]:OUTPut:POLarity? |
| Example | :TRIG1:OUTP:POL POS |

| | |
|--------------|---|
| Dependencies | You can only send TRIG parameters for the hardware you have; for example, you cannot send a TRIG3 parameter if your hardware does not support TRIG3 . Sending the command for an output you do not have generates an error, “Hardware missing; Not available for this model number” Querying a non-existent output returns OFF Trig 2 Out Polarity does not appear in EXM or VXT |
| Preset | Unaffected by Preset, but set to POSitive by Restore Input/Output Defaults or Restore System Defaults->All |
| State Saved | Saved in instrument state |

6.8.3 Trig 1 – 4 Out Device

Sets the output to the **Trig n Out** connector to trigger on either **ANALyzer** or **SOURce**.

| Remote Command | <code>:TRIGger[1] 2 ... 4[:SEquence]:OUTPut:DIRection ANALyzer SOURce</code> <code>:TRIGger[1] 2 ... 4[:SEquence]:OUTPut:DIRection?</code> | | | | | | |
|-------------------|---|-------------------|--------|---------|-----------------|---|---------------|
| Example | <code>:TRIG1:OUTP:DIR ANAL</code> | | | | | | |
| Dependencies | Only available on VXT models M9410A/11A/15A/16A and M9410E/11E/15E/16E | | | | | | |
| Preset | Unaffected by Preset Restore Input/Output Defaults and Restore System Defaults->All preset the triggers as follows: | | | | | | |
| | <table border="1"> <thead> <tr> <th>Trig n Out Device</th> <th>Preset</th> </tr> </thead> <tbody> <tr> <td>1, 3, 4</td> <td>ANALyzer</td> </tr> <tr> <td>2</td> <td>SOURce</td> </tr> </tbody> </table> | Trig n Out Device | Preset | 1, 3, 4 | ANALyzer | 2 | SOURce |
| Trig n Out Device | Preset | | | | | | |
| 1, 3, 4 | ANALyzer | | | | | | |
| 2 | SOURce | | | | | | |
| State Saved | Saved in instrument state | | | | | | |

6.8.4 Src PXI Trig Out

Selects which signal will be routed to the backplane Source PXI Trigger Output Line.

| | |
|----------------|---|
| Remote Command | <code>:TRIGger:PXIE:SOURce[:SEquence]:OUTPut S1Marker S2Marker S3Marker S4Marker PARB OFF</code> See " Option details " on page 2295 <code>:TRIGger:PXIE:SOURce[:SEquence]:OUTPut?</code> |
| Example | <code>:TRIG:PXIE:SOUR:OUTP S1M</code> <code>:TRIG:PXIE:SOUR:OUTP?</code> |
| Dependencies | Only appears in EXM, VXT and M941xE |
| Preset | OFF |
| State Saved | Saved in instrument state |

Option details

Here are details of all Source PXI Trigger Output options:

| Source | SCPI | Notes |
|-----------------|-----------------|---|
| Off | OFF | Selects no signal to be output to the Source PXI backplane line |
| Source Marker 1 | S1Marker | Selects the Trigger Output at Marker 1 in the Waveform file that is currently playing to be output to the Source PXI backplane line |
| Source Marker 2 | S2Marker | Selects the Trigger Output at Marker 2 in the Waveform file that is currently playing to be output to the Source PXI backplane line |
| Source Marker 3 | S3Marker | Selects the Trigger Output at Marker 3 in the Waveform file that is currently playing to be output to the Source PXI backplane line |
| Source Marker 4 | S4Marker | Selects the Trigger Output at Marker 4 in the Waveform file that is currently playing to be output to the Source PXI backplane line |
| PerArb | PARB | A synchronization trigger that is generated by the ARB at the beginning of each repetition of playing the signal. This selection causes the PerArb Trigger Output that is currently playing to be output to the Source PXI backplane line Only available in VXT Models M9410A/11A/15A/16A and M9410E/11E/15E/16E |

6.8.5 Src Trig Out Polarity

Sets the output to the Source PXI backplane trigger line to trigger on either the positive or negative polarity.

| | |
|----------------|---|
| Remote Command | <code>:TRIGger:PXIE:SOURce[:SEQuence]:OUTPut:POLarity POSitive NEGative</code> <code>:TRIGger:PXIE:SOURce[:SEQuence]:OUTPut:POLarity?</code> |
| Example | <code>:TRIG:PXIE:SOUR:OUTP:POL POS</code> |
| Dependencies | Only appears in EXM, VXT and M941xE |
| Preset | Unaffected by Preset, but set to POSitive by Restore Input/Output Defaults or Restore System Defaults->All |
| State Saved | Saved in instrument state |

6.8.6 Select Src PXI Line

Controls which backplane trigger line `TRIG[0..7]` is used for the Source Trigger Output.

| | |
|----------------|--|
| Remote Command | <code>:TRIGger:PXIE:SOURce[:SEQuence]:OUTPut:LINE <line></code> <code>:TRIGger:PXIE:SOURce[:SEQuence]:OUTPut:LINE?</code> |
|----------------|--|

| | |
|--------------|---|
| Example | <code>:TRIGger:PXIE:SOURce:OUTPut:LINE 0</code> |
| Dependencies | Only appears in EXM, VXT and M941xE |
| Preset | 4 |
| State Saved | Saved in instrument state |
| Range | [0,7] |

6.8.7 Analyzer PXI Trig Out

Selects the signal that will be output from Analyzer PXI Trigger Line (Backplane Trigger Line 0~3).

| | |
|----------------|--|
| Remote Command | <code>:TRIGger:PXIE:ANALyzer[:SEQuence]:OUTPut HSWP MEASuring MAIN GATE GTRigger OEVEN OFF</code> See "Option Details" on page 2296 <code>:TRIGger:PXIE:ANALyzer[:SEQuence]:OUTPut?</code> |
| Example | <code>:TRIG:PXIE:ANAL:OUTP HSWP</code> |
| Dependencies | Only available on certain modular analyzers, such as CXA-m, VXT models M9410A/11A/15A/16A and M9410E/11E/15E/16E For VXT models M9410A/11A/15A/16A, only OFF , MEASuring and MAIN are available |
| Preset | Unaffected by Preset but is preset to OFF by Restore Input/Output Defaults or Restore System Defaults->All |
| State Saved | Saved in instrument state |

Option Details

Here are details of all Analyzer PXI Trigger Output options:

| Source | SCPI | Notes |
|-----------------|-------------|--|
| Off | OFF | Selects no signal to be output to the Analyzer PXI backplane trigger line |
| Sweeping (HSWP) | HSWP | Selects the Sweeping Trigger signal to be output to the Analyzer PXI backplane trigger line when a measurement is made. This signal has historically been known as "HSWP" (High = Sweeping), and is 5 V TTL level with 50-ohm output impedance |
| Measuring | MEAS | Selects the Measuring trigger signal to be output to the Analyzer PXI backplane trigger line. This signal is true while the Measuring status bit is true |
| Main Trigger | MAIN | Selects the current instrument trigger signal to be output to the Analyzer PXI backplane trigger line |
| Gate Trigger | GTR | Selects the gate trigger signal to be output to the Analyzer PXI backplane trigger line. This is the source of the gate timing, not the actual gate signal |
| Gate | GATE | Selects the gate signal to be output to the Analyzer PXI backplane trigger line. The gate signal has been delayed and its length determined by delay and length settings. When the |

6 Input/Output
6.8 Trigger Output

| Source | SCPI | Notes |
|----------------------|------|---|
| Odd/Even Trace Point | OEV | polarity is positive, a high on the Trig Out connector represents the time the gate is configured to pass the signal Selects either the odd or even trace points as the signal to be output to the Analyzer PXI backplane trigger line when performing swept spectrum analysis. When the polarity is positive, this output goes high during the time the instrument is sweeping past the first point (Point 0) and every other following trace point. The opposite is true if the polarity is negative |

6.8.8 Analyzer Trig Out Polarity

Sets the output to the Analyzer PXI backplane trigger line to trigger on either the positive or negative polarity.

| | |
|----------------|---|
| Remote Command | <code>:TRIGger:PXIE:ANALyzer[:SEQuence]:OUTPut:POLarity POSitive NEGative</code> <code>:TRIGger:PXIE:ANALyzer[:SEQuence]:OUTPut:POLarity?</code> |
| Example | <code>:TRIG:PXIE:ANAL:OUTP:POL POS</code> |
| Dependencies | Only available on certain modular analyzers, such as CXA-m, VXT models M9410A/11A/15A/16A and M9410E/11E/15E/16E |
| Preset | Unaffected by Preset, but set to POSitive by Restore Input/Output Defaults or Restore System Defaults->All POSitive |
| State Saved | Saved in instrument state |

6.8.9 Select Analyzer PXI Line

Controls which `PXI_TRIG[0...3]` is used for the Analyzer Trigger Output.

| | |
|----------------|--|
| Remote Command | <code>:TRIGger:PXIE:ANALyzer[:SEQuence]:OUTPut:LINE <line></code> <code>:TRIGger:PXIE:ANALyzer[:SEQuence]:OUTPut:LINE?</code> |
| Example | <code>:TRIGger:PXIE:ANALyzer:OUTPut:LINE 0</code> |
| Dependencies | Only available on certain modular analyzers, such as CXA-m, VXT models M9410A/11A/15A/16A and M9410E/11E/15E/16E |
| Preset | 0 |
| State Saved | Saved in instrument state |
| Range | [0,3] |

6.8.10 Source Internal Trig Out

Selects the signal which will be output from Source Internal Trigger Line.

NOTE

In some software released in 2018 and 2019, the SCPI command for this function was as below:

```
:TRIGger[:SEquence]:INTernal[:SEquence]:OUTPut
S1Marker|S2Marker|S3Marker|S4Marker|OFF
```

It was necessary to change this SCPI in release A.24.00 due to internal conflicts in the software. User code written for the A.22.xx or A.23.xx instrument software which used the old form must be rewritten to use the form below.

| | |
|----------------|---|
| Remote Command | <code>:TRIGger[:SEquence]:INTernal:SOURce:OUTPut S1Marker S2Marker S3Marker S4Marker PARB OFF</code> <code>:TRIGger[:SEquence]:INTernal:SOURce:OUTPut?</code> |
| Example | <code>:TRIG:INT:SOUR:OUTP S1M</code> |
| Notes | PARB (Per ARB) -A synchronization trigger that is generated by the ARB at the beginning of each repetition of playing the signal |
| Dependencies | Only available on VXT models M9420A, M9410A/11A/15A/16A and M9410E/11E/15E/16E |
| Preset | Unaffected by Preset but preset by Restore Input/Output Defaults or Restore System Defaults->All . The value is Mode-dependent: Power Amplifier Mode: S1Marker All other Modes: OFF |
| State Saved | Saved in instrument state |

6.8.11 Source Internal Trig Out Polarity

Sets the output to the Source Internal trigger line to trigger on either the positive or negative polarity.

NOTE

In some software released in 2018 and 2019, the SCPI command for this function was as below:

```
:TRIGger[:SEquence]:INTernal[:SEquence]:OUTPut:POLarity
POSitive|NEGative
```

It was necessary to change this SCPI in release A.24.00 due to internal conflicts in the software. User code written for the A.22.xx or A.23.xx instrument software which used the old form must be rewritten to use the form below.

| | |
|----------------|---|
| Remote Command | <code>:TRIGger[:SEquence]:INTernal:SOURce:OUTPut:POLarity POSitive NEGative</code> <code>:TRIGger[:SEquence]:INTernal:SOURce:OUTPut:POLarity?</code> |
| Example | <code>:TRIG:INT:SOUR:OUTP:POL POS</code> |
| Dependencies | Only available on VXT models and M9410E/11E/15E/16E |
| Preset | Unaffected by Preset , but set to POSitive by Restore Input/Output Defaults or Restore System |

6.9.1.1 Cal Group

This is the same as "Cal Group" on page 2335 in the Calibration tab.

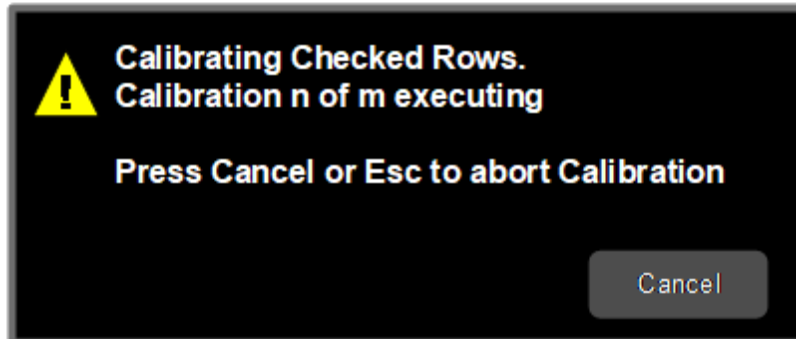

6.9.1.2 Calibrate Checked Rows

Executes the Cals within the currently selected Cal Group that have the Calibrate box checked in the RCal Configuration Table.

Once selected, the following dialog box is displayed;

When you click OK, the following dialog is displayed;

If there are multiple Cals being executed in a Cal Group, this dialog advises you when each Cal is complete. It also provides the ability to abort the Execute Cal Request. If you choose to abort, calibrations that have completed use the new Cal data and update the Last Cal field. Calibrations that have not completed retain the existing Cal data and Last Cal timestamp, or show “---” if the Cal had never been executed.

| | |
|----------------|---|
| Remote Command | <code>:SYSTem:CALibration:INITiate:SElected</code> |
| Example | <code>:SYST:CAL:INIT:SEL</code> |
| Notes | Cals cannot be applied until they have been calibrated. Once a Cal has been calibrated, the Last Cal field in the table displays the date and time the Cal was last calibrated |
| Dependencies | Applied to the currently selected Cal Group |
| Couplings | Calibrate Selected is disabled if there are no Calibrate checkboxes checked. If the disabled control is selected, the advisory message “Check the Calibrate box for the Cals you want to calibrate” is displayed |

6.9.1.3 Apply Cal Group

This is the same as ["Apply Cal Group" on page 2335](#) in the **Calibration** tab.

6.9.1.4 Abort Calibration

Aborts the Calibration routine of the currently selected Cal Group

| | |
|----------------|--|
| Remote Command | <code>:SYSTem:CALibration:ABORt</code> |
| Example | <code>:SYST:CAL:ABOR</code> |
| Dependencies | Aborts the currently running calibration. The previously-run calibrations will still be available, but the current calibration is halted, and next calibrations selected are not executed. Once the calibration starts, the modal dialog appears, and the abort can be executed by selecting Cancel |

6.9.1.5 Copy From Cal Group

Determines the Cal Group from which existing rows are copied when using the "Copy" on page 2304 Group feature.

| | |
|----------------|---|
| Remote Command | :SYSTem:CALibration:CGRoup:COPIY:FROM <integer> |
| Example | :SYST:CAL:CGR:COPIY:FROM 2 :SYST:CAL:CGR:COPIY:FROM? |
| Preset | 1 |
| Min | 1 |
| Max | 100 |

6.9.1.6 Copy

Lets you copy the settings in the Cal Group specified by the **Copy From Cal Group** parameter.

All the rows in the table are copied to the selected Cal Group. The columns **Apply**, **Last Cal** and **Applied** are set to their default values.

The group level parameters are also copied, with the exception of **Apply Cal Group** and **Copy From Cal Group**.

| | |
|----------------|--|
| Remote Command | :SYSTem:CALibration:CGRoup:COPIY |
| Example | :SYST:CAL:CGRoup:COPIY |
| Dependencies | Applied to the currently selected Cal Group |
| Couplings | Disabled if Copy From Cal Group is the same as the currently selected Cal Group. If the disabled control is selected, the advisory message "Unable to Copy from same Cal Group" is displayed, and the same message is returned remotely as a Settings Conflict If you attempt to copy from a Cal Group that is empty, the advisory message "Copy From Cal Group is empty" is displayed, and the same message is returned remotely as a Settings Conflict |

6.9.1.7 Cal Input

Maps the currently selected Cal Group to a particular I/O port. This control allows any Input port (including External Mixing, the RF2 input, etc.) to be mapped to a specific Cal Group

| | |
|----------------|--|
| Remote Command | <code>:SYSTem:CALibration:INPut RFIN RFIN2 EMIXer ERFIN</code> See "Option Details" on page 2305 <code>:SYSTem:CALibration:INPut?</code> |
| Example | <code>:SYST:CAL:INPut RFIN2</code> |
| Dependencies | <code>RFIN2</code> <code>EMIXer</code> are only available on C/E/M/P/UXA analyzers with the appropriate options loaded <code>ERFIN</code> is only available if a V3050A unit is connected |
| State Saved | Saved in State |

Option Details

Note that the presence of these ports is highly hardware dependent.

| Cal Input | SCPI | Notes |
|----------------|--------------------|---|
| RF Input | <code>RFIN</code> | Main RF Port Not available on EXM with hardware M9431A |
| RF Input 2 | <code>RFIN2</code> | Second RF Port, labeled RF Input 2 Only available on certain instruments |
| External Mixer | <code>EMIX</code> | Requires option EXM |
| External RF | <code>ERFIN</code> | Only available if a V3050A unit is connected |

6.9.1.8 Freq Offset

Specifies any frequency offset that is to be applied to the currently selected Cal Group. This can be used when using an external mixer.

| | |
|----------------|--|
| Remote Command | <code>:SYSTem:CALibration:FREQuency:OFFSet <freq></code> <code>:SYSTem:CALibration:FREQuency:OFFSet?</code> |
| Example | <code>:SYST:CAL:FREQ:OFFS 1e9</code> |
| Dependencies | The query applies to the currently selected Cal Group |
| Preset | All 0 Hz |
| State Saved | Saved in instrument state |
| Min | 0 Hz |
| Max | 100.0 GHz |

6.9.1.9 Select Calibrator

Selects the calibrator for the currently selected Cal Group to use for executing the calibration when multiple modules are connected.

| | |
|----------------|---|
| Remote Command | <code>:SYSTem:CALibration:MODule:SElect NONE RCM1 RCM2 RCM3 RCM4 RCM5 RCM6 RCM7 RCM8 RCM9 RCM10</code> <code>:SYSTem:CALibration:MODule:SElect?</code> |
| Example | <code>:SYST:CAL:MODule:SElect RCM1</code> |
| Notes | Details of the RCal module are displayed beneath the control. If there are no modules connected, the text states “No Modules Connected” For SCPI, if the parameter sent is for a module that is not currently connected to the instrument, the message “Selected RCal module not connected” is generated |
| Dependencies | The SCPI command is applied to the currently selected Cal Group |
| State Saved | Saved in instrument state |
| Range | All connected RCal modules |

6.9.1.10 Identify RCal Module

Control to connect to the RCal module of the currently selected Cal Group and blink its identity light

6.9.1.11 RCal Module Serial Number (Remote Query Only)

Returns the serial number of the specified module

| | |
|----------------|--|
| Remote Command | <code>:SYSTem:CALibration:MODule[1] 2 ... 10:SNUMber?</code> |
| Example | <code>:SYST:CAL:MOD:SNUM?</code> |
| Notes | If there is no module associated with the specified module number, returns an empty string |

6.9.1.12 RCal Reference

Determines the reference type used by the RCal module of the currently selected Cal Group

| | |
|----------------|---|
| Remote Command | <code>:SYSTem:CALibration:REFerence INTernal EXTernal</code> <code>:SYSTem:CALibration:REFerence?</code> |
| Example | <code>:SYST:CAL:REF EXT</code> |
| Dependencies | The SCPI command is applied to the currently selected Cal Group |

| | |
|-------------|---------------------------|
| Preset | EXternal |
| State Saved | Saved in instrument state |
| Range | Internal External |

6.9.1.13 RCal Status

Opens a dialog that is used to provide the status of all active rows in all groups. Status can be one of the following: Calibrated, Applied, Calibration Failed or Apply Failed.

If a Calibration Fails, an error icon is shown in the **Calibrate** column of the row(s) that failed, with a message indicating the nature of the failure. If the failure cannot be addressed by the user, the error message “Calibration Failed. See Error Log” will be shown and details of the failure will be written to the SA Event Log.

Applying the Calibration can result in a warning if there is a mismatch between the currently executing instrument state and any of the following parameter settings;

- Cal Input
- Frequency
- IF Path
- IF Gain
- Phase Noise Optimization
- Preamp
- Coupling
- Mechanical Attenuator
- Electrical Attenuator
- Full Range Attenuator
- uW Path Control
- Mixing Mode
- External Mixer

When there is a mismatch a warning icon will be shown in the Applied column of the row(s) that had the mismatch with details in the format “<Parameter Name> does not match meas state”.

The Status dialog provides you with the group and row of a Calibration and its current state and any error details if the status is not OK.

RCal Status (Remote Query Only)

Returns a comma-separated list of the status of an individual row status in the format “Group”, “Row”, ‘Status’, “Details”

| | |
|----------------|---|
| Remote Command | <code>:SYSTem:CALibration:ROW[1] 2 ... 100:STATus?</code> |
| Example | Return a comma-separated list for the status of an individual row, in the format “Group”, “Row”, ‘Status’, “Details”: <code>:SYST:CAL:ROW2:STAT?</code> |
| Dependencies | The SCPI command is applied to the currently selected Cal Group. The subopcode is used to identify the Cal row in the Cal Group If the subopcode does not reference an existing Cal row in the Cal Group, the error message “-221, Settings conflict; Subopcode does not reference an existing Cal row” is generated |

All RCal Status (Remote Query Only)

Returns a comma-separated list of all entries in the Cal Status table in the format “Group”, “Row”, ‘Status’, “Details”, which is repeated for each row in the table. If there are no entries in the table, returns an empty string.

| | |
|----------------|---|
| Remote Command | <code>:SYSTem:CALibration:STATus:ALL?</code> |
| Example | Return a comma-separated list of all entries in the Cal Status table in the format “Group”, “Row”, ‘Status’, “Details”, repeated for each row in the table: <code>:SYST:CAL:STAT:ALL?</code> |

6.9.1.14 Go to Row

Sets the selected row in the Cal table for the currently selected Cal Group.

| | |
|-------------|--|
| Notes | You can only go to a row that has already been added |
| Preset | 1 |
| State Saved | Saved in instrument state |
| Min | 1 |
| Max | 32 |

6.9.1.15 Insert Row Below

Adds a new row to the currently selected Cal Group, under the currently selected row in the table or after the sub opcode used in the SCPI command. The default values for each of the settings in the row is used.

| | |
|----------------|---|
| Remote Command | <code>:SYSTem:CALibration:ROW[1] 2 ... 100:INSert</code> |
| Example | <code>:SYST:CAL:ROW2:INSert</code> |
| Dependencies | The SCPI command is applied to the currently selected Cal Group. The subopcode is used to identify the Cal row in the Cal Group If the subopcode does not reference an existing Cal row in the Cal Group, the error message “-221, Settings conflict; Subopcode does not reference an existing Cal row” is generated |

6.9.1.16 Description

Provides a description for the currently selected Cal Group from which the operator can easily identify the Cal Group.

| | |
|----------------|---|
| Remote Command | <code>:SYSTem:CALibration:DESCription "Description"</code> <code>:SYSTem:CALibration:DESCription?</code> |
| Example | <code>:SYST:CAL:DESC "Description"</code> |
| Notes | Also shown on the Calibration menu panel, but limited to the first 18 characters |
| Dependencies | The SCPI command is applied to the currently selected Cal Group |
| State Saved | Saved in instrument state |

6.9.1.17 Use Current Meas

Takes the settings from the current running measurement state to populate the Cal Row settings of the currently selected Cal Group.

| | |
|----------------|--|
| Remote Command | <code>:SYSTem:CALibration:ROW[1] 2 ... 100:UCMeas</code> |
| Example | <code>:SYST:CAL:ROW2:UCM</code> |
| Dependencies | The SCPI command is applied to the currently selected Cal Group. The subopcode is used to identify the Cal row in the Cal Group If the group table is empty and subopcode is omitted or 1, a new row is created and populated using the current running measurement If the subopcode does not reference an existing Cal row in the Cal Group, the error message “-221,Settings conflict; Subopcode does not reference an existing Cal row” is generated Pressing the control or sending the SCPI command in measurements that do not support this parameter generates error -221, “Settings conflict; Feature not supported for this measurement” |

6.9.1.18 Duplicate Row

Creates a new row the currently selected row, and populates the new row with the settings from the selected row of the currently selected Cal Group

| | |
|----------------|--|
| Remote Command | <code>:SYSTem:CALibration:ROW[1] 2 ... 100:DUPLicate</code> |
| Example | <code>:SYST:CAL:ROW2:DUPL</code> |
| Dependencies | The SCPI command is applied to the currently selected Cal Group. The subopcode is used to identify the Cal row in the Cal Group If the subopcode does not reference an existing Cal row in the Cal Group, the error message “-221,Settings conflict; Subopcode does not reference an existing Cal row” is generated |

6.9.1.19 Delete Row

Deletes the settings from the selected row of the currently selected Cal Group

| | |
|----------------|---|
| Remote Command | <code>:SYSTem:CALibration:ROW[1] 2 ... 100:DELeTe</code> |
| Example | <code>:SYST:CAL:ROW2:DEL</code> |
| Notes | Disabled if the Cal Group contains no Cal rows |
| Dependencies | The SCPI command is applied to the currently selected Cal Group. The subopcode is used to identify the Cal row in the Cal Group If the subopcode does not reference an existing Cal row in the Cal Group, the error message “-221, Settings conflict; Subopcode does not reference an existing Cal row” is generated |

6.9.1.20 Delete All

Deletes all the Cals in the currently selected Cal Group

| | |
|----------------|---|
| Remote Command | <code>:SYSTem:CALibration:DELeTe:ALL</code> |
| Example | <code>:SYST:CAL:DEL:ALL</code> |
| Notes | Disabled if the Cal Group contains no Cal rows |
| Dependencies | The SCPI command is applied to the currently selected Cal Group |

6.9.1.21 Calibrate

Determines whether the Cal row should be included when Calibrate Selected is executed.

| | |
|----------------|--|
| Remote Command | <code>:SYSTem:CALibration:ROW[1] 2 ... 100:CALibrate:STATe ON OFF 1 0</code> <code>:SYSTem:CALibration:ROW[1] 2 ... 100:CALibrate:STATe?</code> |
|----------------|--|

| | |
|--------------|---|
| Example | <code>:SYST:CAL:ROW2:CAL:STAT ON</code> <code>:SYST:CAL:ROW2:CAL:STAT?</code> |
| Dependencies | The SCPI command is applied to the currently selected Cal Group. The subopcode is used to identify the Cal row in the Cal Group If the subopcode does not reference an existing Cal row in the Cal Group, the error message “-221, Settings conflict; Subopcode does not reference an existing Cal row” is generated |
| Preset | All OFF |
| State Saved | Saved in instrument state |
| Range | ON OFF |

6.9.1.22 Apply

Determines the Cal that is applied.

| | |
|----------------|---|
| Remote Command | <code>:SYSTem:CALibration:ROW[1] 2 ... 100:APPLY:STATe ON OFF 1 0</code> <code>:SYSTem:CALibration:ROW[1] 2 ... 100:APPLY:STATe?</code> |
| Example | <code>:SYST:CAL:ROW2:APPL:STAT ON</code> <code>:SYST:CAL:ROW2:APPL:STAT?</code> |
| Dependencies | The SCPI command is applied to the currently selected Cal Group. The subopcode is used to identify the Cal row in the Cal Group If the subopcode does not reference an existing Cal row in the Cal Group, the error message “-221, Settings conflict; Subopcode does not reference an existing Cal row” is generated You can only check the Apply checkbox for a Cal that has been executed. If you attempt to select the Apply checkbox for Cal’s that have not been executed, the advisory message “Cal must be executed before it can be applied” is displayed If Apply Cal is ON , and you attempt to check the Apply checkbox for a Cal that is invalid for use with the current measurement state, the error “Cal invalid with current measurement settings is shown, and the checkbox remains unchecked |
| Couplings | When the Apply check box is checked, if the Apply Cal Group setting is OFF , it will be turned on. Calibrations are only applied when the Apply Cal Group is ON |
| Preset | All OFF |
| State Saved | Saved in instrument state |
| Range | ON OFF |
| Annotation | If <i>any</i> Cal check box in any group is checked and Apply Cal Group for that group is ON , RCal in the Meas Bar displays in amber to indicate Calibrations are in use |

6.9.1.23 Name

Sets an ASCII text field allowing you to name the selected Cal

| | |
|----------------|---|
| Remote Command | <code>:SYSTem:CALibration:ROW[1] 2 ... 100:NAME <string></code> <code>:SYSTem:CALibration:ROW[1] 2 ... 100:NAME?</code> |
| Example | <code>:SYST:CAL:ROW2:NAM "Monday AM Cal"</code> |
| Notes | 45 chars max; may not fit on display if max chars used |
| Dependencies | The SCPI command is applied to the currently selected Cal Group. The subopcode is used to identify the Cal row in the Cal Group If the subopcode does not reference an existing Cal row in the Cal Group, the error message “-221, Settings conflict; Subopcode does not reference an existing Cal row” is generated |
| Preset | “Cal #”, where # is corresponding Cal number |
| State Saved | Saved in instrument state |

6.9.1.24 Last Cal

Displays the date and time the selected Cal was last executed. Read only field.

| | |
|----------------|--|
| Remote Command | <code>:SYSTem:CALibration:ROW[1] 2 ... 100:LAST?</code> |
| Example | Return data and time Cal 2 was last executed: <code>:SYST:CAL:ROW2:LAST?</code> |
| Notes | Returns a string containing the date and time the Cal was executed. If the Cal has never been executed, or any of the settings are changed, SCPI returns an empty string, and the front panel displays “---” |
| Dependencies | The SCPI query applies to the currently selected Cal Group If the subopcode does not reference an existing Cal row in the Cal Group, the error message “-221, Settings conflict; Subopcode does not reference an existing Cal row” is generated |

6.9.1.25 Cal Applied

Displays the status of a Cal once it is applied. Is either Yes or No, depending on if the Cal was successfully applied or not. See RCalStatus for more details. If it is not being applied, the field shows “---”. Read-only field.

| | |
|----------------|--|
| Remote Command | <code>:SYSTem:CALibration:ROW[1] 2 ... 100:CAPLied?</code> |
| Example | Return Cal Stats of Cal 2: <code>:SYST:CAL:ROW2:CAPP?</code> |
| Notes | Returns a string containing the date and time the Cal was executed. If the Cal has never been executed, or any of the settings are changed, SCPI returns an empty string, and the front panel displays “---” |
| Dependencies | The SCPI query applies to the currently selected Cal Group If the subopcode does not reference an existing Cal row in the Cal Group, the error message “-221, Settings conflict; Subopcode does not reference an existing Cal row” is generated |

6.9.1.26 Cal Type

Specifies how the calibration is to be performed on the selected Cal. Options are;

- **MAGNitude**: A single CW tone is measured at the center of the screen for each frequency point
- **COMPLex**: A comb signal is measured across the full IF passband at each frequency point. Magnitude and Phase are measured

| | |
|----------------|---|
| Remote Command | <code>:SYSTem:CALibration:ROW[1] 2 ... 100:TYPE MAGNitude COMPLex</code> <code>:SYSTem:CALibration:ROW[1] 2 ... 100:TYPE?</code> |
| Example | <code>:SYST:CAL:ROW2:TYPE COMP</code> |
| Dependencies | Only available if the selected RCal module has a license for complex calibrations. If it does not, this control is disabled The SCPI command applies to the currently selected Cal Group If the subopcode does not reference an existing Cal row in the Cal Group, the error message “-221, Settings conflict; Subopcode does not reference an existing Cal row” is generated |
| Preset | MAGNitude |
| State Saved | Saved in instrument state |
| Range | MAGNitude COMPLex |

6.9.1.27 Start Freq

Specifies the start frequency of the selected Cal.

| | |
|----------------|--|
| Remote Command | <code>:SYSTem:CALibration:ROW[1] 2 ... 100:FREQUENCY:START <freq></code> <code>:SYSTem:CALibration:ROW[1] 2 ... 100:FREQUENCY:START?</code> |
| Example | <code>:SYST:CAL:ROW2:FREQ:STAR 1e9</code> |
| Notes | Max values depend on Hardware Options (503, 507, 508, 513, 526) |
| Dependencies | The SCPI command applies to the currently selected Cal Group If the subopcode does not reference an existing Cal row in the Cal Group, the error message “-221, Settings conflict; Subopcode does not reference an existing Cal row” is generated By direct entry: You cannot set Start Frequency > Stop Frequency. You can set the Start frequency = Stop frequency. If you set Start Frequency = Stop Frequency, " Freq Step " on page 2315 is adjusted to 0, and " Freq Points " on page 2315 is adjusted to 1 With the knob or step keys: If you set Start Frequency = Stop Frequency, Freq Step is adjusted to 0, and Freq Points is adjusted to 1 |
| Couplings | If you change the start frequency of the selected range to a value > the range's stop frequency, the |

| | |
|-------------|---|
| | <p>stop frequency of the previous range is changed to the same value. Freq Step is set to 0 Hz and Freq Points is set to 1</p> <p>If you change the start frequency \leq min frequency of the instrument, the start frequency of the selected range is set to the minimum frequency of the instrument</p> <p>If you change the start frequency \geq maximum frequency of the instrument, the start frequency of the selected range is set to the maximum frequency of the instrument and the stop frequency of selected range is set to the maximum frequency of the instrument. Freq Step is set to 0 Hz and Freq Points is set to 1</p> |
| Preset | Depends on the instrument maximum frequency |
| State Saved | Saved in instrument state |
| Min | If Scale Type is set to Lin, the min Start Frequency changes to -80 MHz |
| Max | Depends on the instrument maximum frequency – 10 Hz minimum span |

6.9.1.28 Stop Freq

Specifies the stop frequency of the selected Cal.

| | |
|----------------|---|
| Remote Command | <pre>:SYSTem:CALibration:ROW[1] 2 ... 100:FREQUENCY:STOP <freq> :SYSTem:CALibration:ROW[1] 2 ... 100:FREQUENCY:STOP?</pre> |
| Example | <pre>:SYST:CAL:ROW2:FREQ:STOP 1e9</pre> |
| Notes | Max values depend on Hardware Options |
| Dependencies | <p>The SCPI command applies to the currently selected Cal Group</p> <p>If the subopcode does not reference an existing Cal row in the Cal Group, the error message “-221, Settings conflict; Subopcode does not reference an existing Cal row” is generated</p> <p>By direct entry:</p> <p>You cannot set Stop frequency < Start frequency. You cannot set Start frequency = Stop frequency. You can set Start frequency = Stop frequency. If you set Start Frequency = Stop Frequency, "Freq Step" on page 2315 is adjusted to 0, and "Freq Points" on page 2315 is adjusted to 1</p> <p>With the knob or step keys:</p> <p>If you set Start Frequency = Stop Frequency, Freq Step is adjusted to 0, and Freq Points is adjusted to 1</p> |
| Couplings | <p>If you change the stop frequency of the selected range to a value < the range's start frequency the start frequency of the range is changed to the same value. Freq Step is set to 0 Hz and Freq Points is set to 1</p> <p>If you change the stop frequency \geq the maximum frequency of the instrument, the stop frequency of the selected range is set to the maximum frequency of the instrument</p> <p>If you change stop frequency \leq the minimum frequency of the instrument, the stop frequency of the selected range is set to the minimum frequency of the instrument and the start frequency of the selected range is set to the minimum frequency of the instrument. Freq Step is set to 0 Hz and Freq Points is set to 1</p> |
| Preset | Depends on the instrument maximum frequency |

| | |
|-------------|--|
| State Saved | Saved in instrument state |
| Min | If Scale Type is Lin, the min Stop Frequency is changed to -79.999990 MHz |
| Max | Depends on the instrument maximum frequency |

6.9.1.29 Freq Step

Specifies the step frequency of the selected Cal. This determines the points between the start and stop frequencies to use for Calibration.

| | |
|----------------|---|
| Remote Command | <code>:SYSTem:CALibration:ROW[1] 2 ... 100:FREQUENCY:STEP <freq></code> <code>:SYSTem:CALibration:ROW[1] 2 ... 100:FREQUENCY:STEP?</code> |
| Example | <code>:SYST:CAL:ROW2:FREQ:STEP 1e9</code> |
| Notes | Max values depend on Hardware Options |
| Dependencies | The SCPI command applies to the currently selected Cal Group If the subopcode does not reference an existing Cal row in the Cal Group, the error message “-221, Settings conflict; Subopcode does not reference an existing Cal row” is generated You cannot set Freq Step > Stop frequency - Start frequency Attempts to set Freq Step > Stop frequency - Start frequency results in Freq Step being set to Stop frequency - Start frequency |
| Couplings | Coupled to " Freq Points " on page 2315. Changing Freq Step adjusts Freq Points using $((\text{Stop Freq} - \text{Start Freq}) / \text{Freq Step} + 1)$ and clips to the next integer value, which may result in Freq Step being clipped too If Freq Step is set to a value > Stop Freq - Start Freq Stop Freq is increased, and Freq Points is set to 1 |
| Preset | All 10 kHz |
| State Saved | Saved in instrument state |
| Min | 1 Hz |
| Max | Depends on the instrument maximum frequency |

6.9.1.30 Freq Points

Specifies the frequency points of the selected Cal. This determines the points between the start and stop frequencies to use for Calibration.

| | |
|----------------|---|
| Remote Command | <code>:SYSTem:CALibration:ROW[1] 2 ... 100:FREQUENCY:POINTS</code> <code>:SYSTem:CALibration:ROW[1] 2 ... 100:FREQUENCY:POINTS?</code> |
| Example | <code>:SYST:CAL:ROW2:FREQ:POIN 100</code> |
| Couplings | Coupled to " Freq Step " on page 2315. Changing Freq Points adjusts Freq Step using $(\text{Stop Freq} - \text{Start Freq}) / (\text{Freq Points} - 1)$ and clips to the next integer value, which may result in Freq Step being clipped |

| | |
|--------|--------|
| Preset | 1 |
| Min | 1 |
| Max | 100000 |

6.9.1.31 Mech Atten Type

Specifies the Mech Atten type to use:

- **STEP**: Use multiple Mech Atten states determined by Mech Atten Start, Mech Atten Stop and Mech Atten Step
- **ALL**: Use all the attenuator states
- **BYPass**: Bypasses the attenuator

| | |
|----------------|---|
| Remote Command | <code>:SYSTem:CALibration:ROW[1] 2 ... 100:ATTenuation:TYPE STEP ALL BYPass</code> <code>:SYSTem:CALibration:ROW[1] 2 ... 100:ATTenuation:TYPE?</code> |
| Example | <code>:SYST:CAL:ROW3:ATT:TYPE STEP</code> |
| Dependencies | The SCPI command applies to the currently selected Cal Group If the subopcode does not reference an existing Cal row in the Cal Group, the error message “-221,Settings conflict; Subopcode does not reference an existing Cal row” is generated |
| Preset | STEP |
| State Saved | Saved in instrument state |
| Range | STEP ALL BYPass |

6.9.1.32 Mech Atten Start

Determines the first Mechanical Attenuator to be used in the Calibration

| | |
|----------------|---|
| Remote Command | <code>:SYSTem:CALibration:ROW[1] 2 ... 100:ATTenuation:START <rel_amp></code> <code>:SYSTem:CALibration:ROW[1] 2 ... 100:ATTenuation:START?</code> |
| Example | <code>:SYST:CAL:ROW3:ATT:START 20</code> |
| Dependencies | Disabled unless " Mech Atten Type " on page 2316 is STEP The SCPI command applies to the currently selected Cal Group If the subopcode does not reference an existing Cal row in the Cal Group, the error message “-221,Settings conflict; Subopcode does not reference an existing Cal row” is generated |
| Couplings | Coupled to " Mech Atten Stop " on page 2317. Mech Atten Start must be \leq Mech Atten Stop . If Mech Atten Start $>$ Mech Atten Stop , then Mech Atten Stop = Mech Atten Start |
| Preset | 10 dB |
| State Saved | Saved in instrument state |
| Min | 0 dB |

6 Input/Output
6.9 Calibration

| | |
|-----|--|
| | The attenuation set by this control cannot be decreased below 6 dB with the knob or step keys. To get to a value below 6 dB it must be directly entered from the keypad or via SCPI. This protects from adjusting the attenuation to a dangerously small value, which can put the instrument at risk of damage to input circuitry. However, if the current mechanical attenuation is below 6 dB it can be increased with the knob and step keys, but not decreased |
| Max | CXA Option 503 or 507: 50 dB EXA: 60 dB All other models: 70 dB Note that, in the single attenuator configuration, the total of ATT and EATT cannot exceed 50 dB, so if the EATT is set to 24 dB first, the main attenuation cannot be greater than 26 dB and is reduced accordingly; if the main attenuator is set to 40 dB first, EATT cannot be greater than 10 dB |

6.9.1.33 Mech Atten Stop

Determines the last Mechanical Attenuator to be used in the Calibration

| | | |
|----------------|---|-------|
| Remote Command | <code>:SYSTem:CALibration:ROW[1] 2 ... 100:ATTenuation:STOP <rel_amp1></code> <code>:SYSTem:CALibration:ROW[1] 2 ... 100:ATTenuation:STOP?</code> | |
| Example | <code>:SYST:CAL:ROW3:ATT:STOP 30</code> | |
| Dependencies | Disabled unless " Mech Atten Type " on page 2316 is STEP The SCPI command applies to the currently selected Cal Group If the subopcode does not reference an existing Cal row in the Cal Group, the error message “-221,Settings conflict; Subopcode does not reference an existing Cal row” is generated | |
| Couplings | Coupled to " Mech Atten Start " on page 2316. Mech Atten Start must be \leq Mech Atten Stop . If Mech Atten Start $>$ Mech Atten Stop , then Mech Atten Stop = Mech Atten Start | |
| Preset | 10 dB | |
| State Saved | Saved in instrument state | |
| Min | 0 dB The attenuation set by this control cannot be decreased below 6 dB with the knob or step keys. To get to a value below 6 dB it must be directly entered from the keypad or via SCPI. This protects from adjusting the attenuation to a dangerously small value which can put the instrument at risk of damage to input circuitry. However, if the current mechanical attenuation is below 6 dB it can be increased with the knob and step keys, but not decreased | |
| Max | CXA Option 503 or 507 | 50 dB |
| | EXA | 60 dB |
| | All other models | 70 dB |
| | Note that, in the single attenuator configuration, the total of ATT and EATT cannot exceed 50 dB, so if the EATT is set to 24 dB first, the main attenuation cannot be greater than 26 dB and is reduced accordingly; if the main attenuator is set to 40 dB first, EATT cannot be greater than 10 dB | |

6.9.1.34 Mech Atten Step

Determines the Mech Attenuation Step. This determines the points between the Mechanical Attenuation min and max to use for Calibration.

| | |
|----------------|--|
| Remote Command | <code>:SYSTem:CALibration:ROW[1] 2 ... 100:ATTenuation:STEP <rel_amp1></code> <code>:SYSTem:CALibration:ROW[1] 2 ... 100:ATTenuation:STEP?</code> |
| Example | <code>:SYST:CAL:ROW2:ATT:STEP 2dB</code> |
| Dependencies | Disabled unless " Mech Atten Type " on page 2316 is STEP The SCPI command applies to the currently selected Cal Group If the subopcode does not reference an existing Cal row in the Cal Group, the error message "-221, Settings conflict; Subopcode does not reference an existing Cal row" is generated |
| Preset | 2 dB |
| State Saved | Saved in instrument state |
| Min | 2 dB |
| Max | 10 dB |

6.9.1.35 Elec Atten Type

Specifies the Elec Atten type to use:

- **STEP**: Use multiple Elec Atten states determined by Elec Atten Start, Elec Atten Stop and Elec Atten Step
- **ALL**: Use all the attenuator states
- **BYPass**: Bypasses the attenuator

| | |
|----------------|--|
| Remote Command | <code>:SYSTem:CALibration:ROW[1] 2 ... 100:EATTenuation:TYPE STEP ALL BYPass</code> <code>:SYSTem:CALibration:ROW[1] 2 ... 100:EATTenuation:TYPE?</code> |
| Example | <code>:SYST:CAL:ROW3:EATT:TYPE STEP</code> |
| Dependencies | The SCPI command applies to the currently selected Cal Group If the subopcode does not reference an existing Cal row in the Cal Group, the error message "-221, Settings conflict; Subopcode does not reference an existing Cal row" is generated |
| Preset | STEP |
| State Saved | Saved in instrument state |
| Range | STEP ALL BYPass |

6.9.1.36 Elec Atten Start

Determines the first Electronic Attenuator to be used in the Calibration

6 Input/Output
6.9 Calibration

| | |
|----------------|--|
| Remote Command | <code>:SYSTem:CALibration:ROW[1] 2 ... 100:EATTenuation:START <rel_amp1></code> <code>:SYSTem:CALibration:ROW[1] 2 ... 100:EATTenuation:START?</code> |
| Example | <code>:SYST:CAL:ROW3:EATT:START 0</code> |
| Dependencies | <p>Only appears in Dual Attenuator models with an Electronic Attenuator installed and licensed. It does not appear in models with the Single Attenuator configuration, as in the single attenuator configuration there is no “electronic attenuator” there is only a single integrated attenuator (which has both a mechanical and electronic stage)</p> <p>Disabled unless "Elec Atten Type" on page 2318 is STEP</p> <p>The electronic attenuator is unavailable above the low band (0-3.6 GHz, 0-3.4 GHz, or 0-3 GHz, depending on the model). If the low band ranges from 0-3.6 GHz, and Stop Frequency of the Calibration is > 3.6 GHz, then this parameter is grayed out</p> <p>If the Internal Preamp is on, meaning it is set to Low Band or Full, or the electronic attenuator is unavailable, then this parameter is grayed-out</p> <p>If either of the above is true, and if the SCPI command is sent, an error indicating that the electronic attenuator is unavailable is sent</p> <p>If both of the above are true, pressing the control generates error message -221, in other words, the frequency range lockout takes precedence</p> <p>The SCPI command applies to the currently selected Cal Group</p> <p>If the subopcode does not reference an existing Cal row in the Cal Group, the error message “-221, Settings conflict; Subopcode does not reference an existing Cal row” is generated</p> |
| Couplings | Coupled to Elec Atten Stop. Elec Atten Start must be <= Elec Atten Stop. If Elec Atten Start > Elec Atten Stop, Elec Atten Stop = Elec Atten Start |
| Preset | 0 dB |
| State Saved | Saved in instrument state |
| Min | 0 dB |
| Max | 24 dB |

6.9.1.37 Elec Atten Stop

Determines the last Electrical Attenuator to be used in the Calibration

| | |
|----------------|---|
| Remote Command | <code>:SYSTem:CALibration:ROW[1] 2 ... 100:EATTenuation:STOP <rel_amp1></code> <code>:SYSTem:CALibration:ROW[1] 2 ... 100:EATTenuation:STOP?</code> |
| Example | <code>:SYST:CAL:ROW3:EATT:STOP 10</code> |
| Dependencies | <p>Only appears in Dual Attenuator models with an Electronic Attenuator installed and licensed. It does not appear in models with the Single Attenuator configuration, as in the single attenuator configuration there is no “electronic attenuator” there is only a single integrated attenuator (which has both a mechanical and electronic stage)</p> <p>Disabled unless "Elec Atten Type" on page 2318 is STEP</p> <p>The electronic attenuator is unavailable above the low band (0-3.6 GHz, 0-3.4 GHz or 0-3 GHz, depending on the model). If the low band ranges from 0-3.6 GHz, and Stop Frequency of the</p> |

| | |
|-------------|---|
| | <p>Calibration is > 3.6 GHz, then this parameter is grayed out</p> <p>If the Internal Preamp is on, meaning it is set to Low Band or Full, the electronic attenuator is unavailable, then this parameter is grayed out</p> <p>If either of the above is true, and if the SCPI command is sent, an error indicating that the electronic attenuator is unavailable is sent</p> <p>If both of the above are true, pressing the control generates error message -221, in other words, the frequency range lockout takes precedence</p> <p>For SCPI, this query applies to the currently selected Cal Group</p> <p>If the subopcode does not reference an existing Cal row in the Cal Group, the error message “-221, Settings conflict; Subopcode does not reference an existing Cal row” is generated</p> |
| Couplings | Coupled to Elec Atten Start. Elec Atten Stop must be >= Elec Atten Start. If Elec Atten Stop < Elec Atten Start, Elec Atten Start = Elec Atten Stop |
| Preset | 0 dB |
| State Saved | Saved in instrument state |
| Min | 0 dB |
| Max | 24 dB |

6.9.1.38 Elec Atten Step

Determines the Elec Attenuation Step. This determines the points between the Electric Attenuation min and max to use for Calibration.

| | |
|----------------|---|
| Remote Command | <pre>:SYSTem:CALibration:ROW[1] 2 ... 100:EATTenuation:STEP <rel_amp></pre> <pre>:SYSTem:CALibration:ROW[1] 2 ... 100:EATTenuation:STEP?</pre> |
| Example | <pre>:SYST:CAL:ROW2:EATT:STEP 2dB</pre> |
| Dependencies | <p>Disabled unless "Elec Atten Type" on page 2318 is STEP</p> <p>The SCPI command applies to the currently selected Cal Group</p> <p>If the subopcode does not reference an existing Cal row in the Cal Group, the error message “-221, Settings conflict; Subopcode does not reference an existing Cal row” is generated</p> |
| Preset | 1 dB |
| State Saved | Saved in instrument state |
| Min | 1 dB |
| Max | 24 dB |

6.9.1.39 Full Range Atten Type

Specifies the Full Range Atten type to use. The Full Range Attenuator adds a second input attenuator at the beginning of the RF Input 2, which enhances the protection and optimizes the performance of the extra internal mixers used by RF Input 2.

- **STEP**: Use multiple Full Range Atten states determined by Full Range Atten Start and Full Range Atten Stop
- **ALL**: Use all the attenuator states

| | |
|----------------|---|
| Remote Command | <code>:SYSTem:CALibration:ROW[1] 2 ... 100:FATTenuation:TYPE STEP ALL </code> <code>:SYSTem:CALibration:ROW[1] 2 ... 100:FATTenuation:TYPE?</code> |
| Example | <code>:SYST:CAL:ROW3:FATT:TYPE STEP</code> |
| Dependencies | Only appears if input RF is selected, and RF Input Port 2 is selected, and the Full Range Attenuator exists The SCPI command applies to the currently selected Cal Group If the subopcode does not reference an existing Cal row in the Cal Group, the error message “-221, Settings conflict; Subopcode does not reference an existing Cal row” is generated |
| Preset | STEP |
| State Saved | Saved in instrument state |
| Range | STEP ALL |

6.9.1.40 Full Range Atten Start

Determines the first Full Range Attenuator to be used in the Calibration

| | |
|----------------|---|
| Remote Command | <code>:SYSTem:CALibration:ROW[1] 2 ... 100:FATTenuation:START <rel_amp></code> <code>:SYSTem:CALibration:ROW[1] 2 ... 100:FATTenuation:START?</code> |
| Example | <code>:SYST:CAL:ROW3:FATT:START 0</code> |
| Dependencies | Only appears in N9041B, when the RF input is selected, and the RF Input Port is set to RF Input 2, and the Full Range Attenuator is installed Disabled unless " Full Range Atten Type " on page 2320 is STEP The SCPI command applies to the currently selected Cal Group If the subopcode does not reference an existing Cal row in the Cal Group, the error message “-221, Settings conflict; Subopcode does not reference an existing Cal row” is generated |
| Couplings | Coupled to Full Range Atten Stop. Full Range Atten Start must be <= Full Range Atten Stop. If Full Range Atten Start > Full Range Atten Stop, Full Range Atten Stop = Full Range Atten Start |
| Preset | 20 dB |
| State Saved | Saved in instrument state |
| Min | 0 dB |
| Max | Only valid values are 0, 6, 14, 20 dB |

6.9.1.41 Full Range Atten Stop

Determines the last Full Range Attenuator to be used in the Calibration

| | |
|----------------|--|
| Remote Command | <code>:SYSTem:CALibration:ROW[1] 2 ... 100:FATTenuation:STOP <rel_amp1></code> <code>:SYSTem:CALibration:ROW[1] 2 ... 100:FATTenuation:STOP?</code> |
| Example | <code>:SYST:CAL:ROW3:FAT:PT:STOP 10</code> |
| Dependencies | Only appears in N9041B, when the RF input is selected, and the RF Input Port is set to RF Input 2, and the Full Range Attenuator is installed Disabled unless " Full Range Atten Type " on page 2320 is STEP The SCPI command applies to the currently selected Cal Group If the subopcode does not reference an existing Cal row in the Cal Group, the error message “-221, Settings conflict; Subopcode does not reference an existing Cal row” is generated |
| Couplings | Coupled to Full Range Atten Start. Full Range Atten Stop must be \geq Full Range Atten Start. If Full Atten Stop $<$ Full Range Atten Start, Full Range Atten Start = Full Range Atten Stop |
| Preset | 20 dB |
| State Saved | Saved in instrument state |
| Min | 0 dB |
| Max | Only valid values are 0, 6, 14, 20 dB |

6.9.1.42 Frequency Extender Attenuation Type

Specifies the Frequency Extender Attenuation type to use. **Frequency Extender Attenuation** is applied to the frequency extender’s high frequency input signal path (for example, with a V3050A frequency extender, the high frequency path is 50 GHz to 110 GHz).

- **STEP**: Use multiple Frequency Extender Attenuation states determined by Frequency Extender Attenuation Start and Frequency Extender Attenuation Stop
- **ALL**: Use all the attenuator states

| | |
|----------------|---|
| Remote Command | <code>:SYSTem:CALibration:ROW[1] 2 ... 100:FEATtenuation:TYPE STEP ALL</code> <code>:SYSTem:CALibration:ROW[1] 2 ... 100:FEATtenuation:TYPE?</code> |
| Example | <code>:SYST:CAL:ROW3:FEAT:TYPE STEP</code> |
| Dependencies | Only applies, and is only visible, when the External RF (ERFIN) input is selected The SCPI command applies to the currently selected Cal Group If the subopcode does not reference an existing Cal row in the Cal Group, the error message “-221, Settings conflict; Subopcode does not reference an existing Cal row” is generated |
| Preset | STEP |
| State Saved | No |
| Range | STEP ALL REFerence |

6.9.1.43 Frequency Extender Attenuation Start

Determines the first Frequency Extender Attenuator to be used in the Calibration.

| | |
|----------------|---|
| Remote Command | <code>:SYSTem:CALibration:ROW[1] 2 ... 100:FEATtenuation:START <rel_amp1></code> <code>:SYSTem:CALibration:ROW[1] 2 ... 100:FEATtenuation:START?</code> |
| Example | <code>:SYST:CAL:ROW3:FEAT:START 0</code> |
| Dependencies | Only applies, and is only visible, when the External RF (ERFIN) input is selected Disabled unless "Frequency Extender Attenuation Type" on page 2322 is STEP The SCPI command applies to the currently selected Cal Group If the subopcode does not reference an existing Cal row in the Cal Group, the error message "-221, Settings conflict; Subopcode does not reference an existing Cal row" is generated |
| Couplings | Coupled to Frequency Extender Attenuation Stop. Frequency Extender Attenuation Start must be <= Frequency Extender Attenuation Stop. If Frequency Extender Attenuation Start > Frequency Extender Attenuation Stop, Frequency Extender Attenuation Stop = Frequency Extender Attenuation Start |
| Preset | 0 dB |
| State Saved | Saved in instrument state |
| Min | 0 dB |
| Max | V3050A: 26 dB |

6.9.1.44 Frequency Extender Attenuation Stop

Determines the last Frequency Extender Attenuation to be used in the Calibration.

| | |
|----------------|---|
| Remote Command | <code>:SYSTem:CALibration:ROW[1] 2 ... 100:FEATtenuation:STOP <rel_amp1></code> <code>:SYSTem:CALibration:ROW[1] 2 ... 100:FEATtenuation:STOP?</code> |
| Example | <code>:SYST:CAL:ROW3:FEAT:PT:STOP 26</code> |
| Dependencies | Only applies, and is only visible, when the External RF (ERFIN) input is selected Disabled unless "Frequency Extender Attenuation Type" on page 2322 is STEP The SCPI command applies to the currently selected Cal Group If the subopcode does not reference an existing Cal row in the Cal Group, the error message "-221, Settings conflict; Subopcode does not reference an existing Cal row" is generated |
| Couplings | Coupled to Frequency Extender Attenuation Start. Frequency Extender Attenuation Stop must be >= Frequency Extender Attenuation Start. If Frequency Extender Attenuation Stop < Frequency Extender Attenuation Start, Frequency Extender Attenuation Start = Frequency Extender Attenuation Stop |
| Preset | 26 dB |
| State Saved | Saved in instrument state |
| Min | 0 dB |
| Max | V3050A: 26 dB |

6.9.1.45 Frequency Extender Atten Step

Determines the Frequency Extender Attenuation Step. This determines the points between the Frequency Extender Attenuation min and max to use for Calibration.

| | |
|----------------|--|
| Remote Command | <code>:SYSTem:CALibration:ROW[1] 2 ... 100:FEATtenuation:STEP <rel_amp1></code> <code>:SYSTem:CALibration:ROW[1] 2 ... 100:FEATtenuation:STEP?</code> |
| Example | <code>:SYST:CAL:ROW2:FEAT:STEP 2dB</code> |
| Dependencies | Only applies, and is only visible, when the External RF (ERFIN) input is selected The SCPI command applies to the currently selected Cal Group If the subopcode does not reference an existing Cal row in the Cal Group, the error message “-221, Settings conflict; Subopcode does not reference an existing Cal row” is generated |
| Preset | 1 dB |
| State Saved | No |
| Min | 1 dB |
| Max | V3050A: 26 dB |

6.9.1.46 IF Path

Determines the IF Path to be used in the Calibration.

| | | | | | | | | | | | | | | | | | | | | | | | | | |
|----------------|--|-------------|--------|-------------|--------|-------------|--------|-------------|--------|--------------|---------|--------------|---------|--------------|---------|--------------|---------|--------------|---------|------------|-------|---------------|---------|------------|-------|
| Remote Command | <code>:SYSTem:CALibration:ROW[1] 2 ... 100:IF:PATH B10M B25M B40M B85M B125M B140M B160M B255M B510M B1G B1500M B2G B4G EXT</code> <code>:SYSTem:CALibration:ROW[1] 2 ... 100:IF:PATH?</code> | | | | | | | | | | | | | | | | | | | | | | | | |
| Example | <code>:SYST:CAL:ROW2:IF:PATH B25M</code> | | | | | | | | | | | | | | | | | | | | | | | | |
| Notes | <table border="1"> <tr><td>B10M</td><td>10 MHz</td></tr> <tr><td>B25M</td><td>25 MHz</td></tr> <tr><td>B40M</td><td>40 MHz</td></tr> <tr><td>B85M</td><td>85 MHz</td></tr> <tr><td>B125M</td><td>125 MHz</td></tr> <tr><td>B140M</td><td>140 MHz</td></tr> <tr><td>B160M</td><td>160 MHz</td></tr> <tr><td>B255M</td><td>255 MHz</td></tr> <tr><td>B510M</td><td>510 MHz</td></tr> <tr><td>B1G</td><td>1 GHz</td></tr> <tr><td>B1500M</td><td>1.5 GHz</td></tr> <tr><td>B2G</td><td>2 GHz</td></tr> </table> | B10M | 10 MHz | B25M | 25 MHz | B40M | 40 MHz | B85M | 85 MHz | B125M | 125 MHz | B140M | 140 MHz | B160M | 160 MHz | B255M | 255 MHz | B510M | 510 MHz | B1G | 1 GHz | B1500M | 1.5 GHz | B2G | 2 GHz |
| B10M | 10 MHz | | | | | | | | | | | | | | | | | | | | | | | | |
| B25M | 25 MHz | | | | | | | | | | | | | | | | | | | | | | | | |
| B40M | 40 MHz | | | | | | | | | | | | | | | | | | | | | | | | |
| B85M | 85 MHz | | | | | | | | | | | | | | | | | | | | | | | | |
| B125M | 125 MHz | | | | | | | | | | | | | | | | | | | | | | | | |
| B140M | 140 MHz | | | | | | | | | | | | | | | | | | | | | | | | |
| B160M | 160 MHz | | | | | | | | | | | | | | | | | | | | | | | | |
| B255M | 255 MHz | | | | | | | | | | | | | | | | | | | | | | | | |
| B510M | 510 MHz | | | | | | | | | | | | | | | | | | | | | | | | |
| B1G | 1 GHz | | | | | | | | | | | | | | | | | | | | | | | | |
| B1500M | 1.5 GHz | | | | | | | | | | | | | | | | | | | | | | | | |
| B2G | 2 GHz | | | | | | | | | | | | | | | | | | | | | | | | |

6 Input/Output
6.9 Calibration

| | | |
|--------------|--|---|
| | B4G | 4 GHz |
| | EXT | Depends on the hardware |
| | In cases where the path is not available but is selected via SCPI, generates error -241, "Hardware missing; Option not installed" | |
| Dependencies | Path | Availability requires Installation of: |
| | 25 MHz | 25 MHz or wider IF Bandwidth option |
| | 40 MHz | 40 MHz or wider IF Bandwidth option |
| | 85 MHz | 85 MHz or wider IF Bandwidth option |
| | 125 MHz | 125 MHz or wider IF Bandwidth option |
| | 140 MHz | Option B1X |
| | 160 MHz | Option B1Y. B1Y cannot be installed without B1X |
| | 255 MHz | Option B2X or wider IF Bandwidth option |
| | 510 MHz | Option B5Y or wider IF Bandwidth option |
| | 1 GHz | Option H1G/B1G or wider IF Bandwidth option |
| | 2 GHz | Option B2G(R20) or wider IF Bandwidth option |
| | 4 GHz | Option B4G(R40) or wider IF Bandwidth option |
| | 1.5 GHz | Option R15 |
| | If Option B85 <i>and</i> either Option B1A or Option B1X are installed, the 85 MHz option does not appear, and B85M is disabled. Sending the command to select B85M in this case generates an error -221, "Settings Conflict; Use wider bandwidth selection" | |
| | If Option B1A <i>and</i> Option B1X are both installed, the 125 MHz option does not appear, and B125M is disabled. Sending the command to select B125M in this case generates an error -221, "Settings Conflict; Use wider bandwidth selection" | |
| | In cases where the path is not available, but is selected via SCPI, error -241, "Hardware missing; Option not installed" is generated | |
| | The preset value depends on the Digital IF BW setting of the default measurement | |
| Preset | If the 25 MHz path is not available, presets to 10 MHz | |
| State Saved | No | |
| Range | B10M B25M B40M B85M B125M B140M B160M B255M B510M B1G B1500M B2G B4G EXT | |

6.9.1.47 IF Gain

Determines the IF Gain to be used in the Calibration

| | |
|----------------|--|
| Remote Command | <code>:SYSTem:CALibration:ROW[1] 2 ... 100:IF:GAIN[:STATE]AUTO HIGH LOW ALL</code> <code>:SYSTem:CALibration:ROW[1] 2 ... 100:IF:GAIN[:STATE]?</code> |
|----------------|--|

| | |
|--------------|--|
| Example | <code>:SYST:CAL:ROW3:IF:GAIN ALL</code> |
| Dependencies | The SCPI command applies to the current selected Cal Group If the subopcode does not reference an existing Cal row in the Cal Group, the error message “-221, Settings conflict; Subopcode does not reference an existing Cal row” is generated |
| Preset | <code>AUTO</code> |
| State Saved | Saved in instrument state |
| Range | Auto High Gain Low Gain All |

6.9.1.48 Preamp

Determines if the Preamp is to be used in the Calibration

| | |
|----------------|--|
| Remote Command | <code>:SYSTem:CALibration:ROW[1] 2 ... 100:POWer[:RF]:GAIN:BAND OFF LOW FULL</code> <code>:SYSTem:CALibration:ROW[1] 2 ... 100:POWer:GAIN:BAND?</code> |
| Example | <code>:SYST:CAL:ROW2:POWer:GAIN:BAND OFF</code> |
| Dependencies | The SCPI command applies to the current selected Cal Group If the subopcode does not reference an existing Cal row in the Cal Group, the error message “-221, Settings conflict; Subopcode does not reference an existing Cal row” is generated |
| Preset | <code>OFF</code> |
| State Saved | Saved in instrument state |
| Range | <code>OFF LOW FULL</code> |

6.9.1.49 Low Noise Amplifier (LNA)

Determines if the LNA is to be used in the Calibration.

| | |
|----------------|---|
| Remote Command | <code>:SYSTem:CALibration:ROW[1] 2 ... 100:POWer[:RF]:GAIN:LNA[:STATe] ON OFF 1 0</code> <code>:SYSTem:CALibration:ROW[1] 2 ... 100:POWer[:RF]:GAIN:LNA[:STATe]?</code> |
| Example | <code>:SYST:CAL:ROW2:POW:GAIN:LNA ON</code> <code>:SYST:CAL:ROW2:POW:GAIN:LNA?</code> |
| Dependencies | The SCPI command is applied to the currently selected Cal Group. The subopcode is used to identify the Cal row in the Cal Group If the subopcode does not reference an existing Cal row in the Cal Group, the error message “-221, Settings conflict; Subopcode does not reference an existing Cal row” is generated |
| Preset | <code>OFF</code> |
| State Saved | No |
| Range | <code>ON OFF</code> |

6.9.1.50 μ W Path Control

Determines the μ W Path Control to be used in the Calibration.

| Option | SCPI |
|-----------------------|----------|
| Standard Path | STD |
| Low Noise Path | LNPath |
| μ W Presel Bypass | MPBypass |
| Full Bypass | FULL |

| | |
|----------------|--|
| Remote Command | <code>:SYSTEM:CALibration:ROW[1] 2 ... 100:POWer[:RF]:MW:PATH STD LNPath MPBypass FULL</code> <code>:SYSTEM:CALibration:ROW[1] 2 ... 100:POWer[:RF]:MW:PATH?</code> |
| Example | <code>:SYST:CAL:ROW2:POW:MW:PATH FULL</code> |
| Dependencies | <p>The SCPI command applies to the current selected Cal Group</p> <p>If the subopcode does not reference an existing Cal row in the Cal Group, the error message “-221, Settings conflict; Subopcode does not reference an existing Cal row” is generated</p> <p>This column is not shown in the table unless <i>either</i> Option MPB or Option LNB is present and licensed</p> <p>The Low Noise Path selection does not appear unless Option LNP is present and licensed</p> <p>The μW Presel Bypass selection does not appear unless Option MPB is present and licensed</p> <p>The Full Bypass selection does not appear unless Options LNP, MPB and FBP are installed and licensed</p> <p>In any of these cases, if the required options are not present and the SCPI command is sent, error - 241, "Hardware missing; Option not installed" is generated</p> |
| Preset | STD |
| State Saved | Saved in instrument state |
| Range | STD LNPath MPBypass FULL |

6.9.1.51 Coupling

Determines the Coupling to be used in the Calibration

| | |
|----------------|---|
| Remote Command | <code>:SYSTEM:CALibration:ROW[1] 2 ... 100:COUPling AC DC</code> <code>:SYSTEM:CALibration:ROW[1] 2 ... 100:COUPling?</code> |
| Example | <code>:SYST:CAL:ROW3:COUP AC</code> |
| Dependencies | <p>The SCPI command applies to the current selected Cal Group</p> <p>If the subopcode does not reference an existing Cal row in the Cal Group, the error message “-221, Settings conflict; Subopcode does not reference an existing Cal row” is generated</p> |
| Preset | AC |

| | |
|-------------|---------------------------|
| State Saved | Saved in instrument state |
| Range | AC DC |

6.9.1.52 Phase Noise Optimization

Selects the LO (local oscillator) phase noise behavior for various desired operating conditions.

For full details, see "[Parameter Options & Installed Options](#)" on page 2328 below.

| | |
|----------------|--|
| Remote Command | <code>:SYSTem:CALibration:ROW[1] 2 ... 100:FREQuency:SYNTHeSis[:STATe] 1 ... 5</code> For the meaning of each numeric option value, see " Parameter Options & Installed Options " on page 2328 below <code>:SYSTem:CALibration:ROW[1] 2 ... 100:FREQuency:SYNTHeSis[:STATe]?</code> |
| Example | Select optimization for best wide offset phase noise: <code>:SYST:CAL:ROW1:FREQ:SYNT 2</code> |
| Dependencies | The SCPI command applies to the current selected Cal Group If the subopcode does not reference an existing Cal row in the Cal Group, the error message “-221, Settings conflict; Subopcode does not reference an existing Cal row” is generated |
| Couplings | Coupled with " Phase Noise Optimization All Option " on page 2333 When Phase Noise Optimization All is ON , selects all available LO mappings, and Phase Noise Optimization parameter will display All in the Configuration table. SCPI Query is still available to determine which parameter will be displayed when Phase Noise Optimization All is OFF |
| Preset | 2 |
| State Saved | Yes |
| Range | See " Ranges " on page 2333 below |
| Min | 1 |
| Max | 5 |

Parameter Options & Installed Options

The Phase Noise Optimization control lets you optimize the setup and behavior of the Local Oscillator (LO) depending on your specific measurement conditions. You may wish to trade off noise and speed, for example, to make a measurement faster without regard to noise or with optimum noise characteristics without regard to speed.

Parameter Values Summary

| Option | # | Description |
|---|---|--|
| "Balanced" on page 2330 | 1 | – In instruments with EPO, balances close-in phase noise with spur avoidance |

| Option | # | Description |
|---------------------------------|---------|--|
| | | – In instruments without EPO optimizes phase noise for small frequency offsets from the carrier |
| "Best Wide-offset" on page 2330 | 2 | Optimizes phase noise for wide frequency offsets from the carrier |
| "Fast Tuning" on page 2330 | 3 | Optimizes LO for tuning speed |
| "Best Close-in" on page 2329 | 4 or 1* | – In instruments with EPO, emphasizes close-in phase noise performance without regard to spur avoidance – In instruments without EPO, this setting is accepted but no action is taken |
| "Best Spurs" on page 2330 | 5 | – In instruments with EPO, emphasizes spur avoidance over close-in phase noise performance – In instruments without EPO, this setting is accepted but no action taken |
| Auto | - | Automatically selects LO (local oscillator) phase noise behavior to optimize dynamic range and speed for various instrument operating conditions |

*Dependent on Option EPO installation. See "Best Close-in" on page 2329 below.

The actual behavior varies somewhat depending on model number and option; for example, you always get Fast Tuning by choosing Option #3, but in some models, "Fast Tuning" on page 2330 is identical in effect to "Best Close-in" on page 2329.

Best Close-in

Without option EPO

`:FREQ:SYNT 1`

The LO phase noise is optimized for smaller offsets from the carrier, at the expense of phase noise farther out.

The actual frequency offset within which noise is optimized is shown with in square brackets, as this can vary depending on the hardware set in use. For example, in some instruments this annotation appears as [offset < 20 kHz]

With option EPO

`:FREQ:SYNT 4`

In instruments with Option EPO, the LO is configured for the best possible close-in phase noise (offsets up to 600 kHz from the carrier), regardless of spurious products that occur with some center frequencies. Because this is generally less desirable for close-in measurements than the "Balanced" on page 2330 setting, parameter 1 selects "Balanced" on page 2330 in EPO instruments, in the interests of optimizing

code compatibility across the family. Parameter 4 selects "Best Close-in" on page 2329, which is usually not as good a choice as "Balanced" on page 2330.

Balanced

:FREQ:SYNT 1

In instruments with EPO, the LO is configured for the best possible phase noise at offsets up to 600 kHz from the carrier whenever there are no significant spurs within the span observed with an on-screen carrier. When there will be such a spur, the LO is reconfigured in a way that allows the phase noise to increase by 7 dB mostly within ± 1 octave around 400 kHz offset. The spurs will always be below -70 dBc.

Best Spurs

:FREQ:SYNT 5

In instruments with EPO, the LO is configured for better phase noise than the "Best Wide-offset" on page 2330 case close to the carrier, but the configuration has 11 dB worse phase noise than the "Best Close-in" on page 2329 case mostly within ± 1 octave around 300 kHz offset. Spurs are even lower than in the "Balanced" on page 2330 case at better than -90 dBc, whether or not the carrier is on-screen.

This setting is never selected when Phase Noise Optimization is in Auto, you must select it manually.

Best Wide-offset

:FREQ:SYNT 2

The LO phase noise is optimized for wider offsets from the carrier. Optimization is especially improved for offsets from 70 kHz to 300 kHz. Closer offsets are compromised and the throughput of measurements (especially remote measurements where the center frequency is changing rapidly), is reduced.

The actual frequency offset beyond which noise is optimized is shown with in square brackets, as this can vary depending on the hardware set in use. For example, in some instruments this annotation appears as [offset >30 kHz]

In instruments with Option EPO, the LO is configured for the best possible phase noise at offsets up to 600 kHz from the carrier whenever there are no significant spurs within the span observed with an on-screen carrier. When there will be such a spur, the LO is reconfigured in a way that allows the phase noise to increase by 7 dB mostly within ± 1 octave around 400 kHz offset. The spurs will always be below -70 dBc.

Fast Tuning

:FREQ:SYNT 3

In this mode, the LO behavior compromises phase noise at many offsets from the carrier in order to allow rapid measurement throughput when changing the center frequency or span. The term **"Fast Tuning" on page 2330** refers to the time it takes to move the local oscillator to the start frequency and begin a sweep; this setting does not impact the actual sweep time in any way.

In instruments with EP1, the LO behavior compromises phase noise at offsets below 4 MHz in order to improve measurement throughput. The throughput is especially affected when moving the LO more than 2.5 MHz and up to 10 MHz from the stop frequency to the next start frequency.

In instruments with Option EPO, this is the same configuration as **"Best Spurs" on page 2330**. It is available with the **"Fast Tuning" on page 2330** label for convenience, and to make the user interface more consistent with other X-Series instrument family members.

(In models whose hardware does not provide for a **"Fast Tuning" on page 2330** option, the settings for **"Best Close-in" on page 2329** are used if **"Fast Tuning" on page 2330** is selected. This gives the fastest possible tuning for that hardware set.)

Auto

:FREQ:SYNT:AUTO ON

Selects the LO (local oscillator) phase noise behavior to optimize dynamic range and speed for various instrument operating conditions. The selection rules are as follows.

Auto Optimization Rules

X-Series instruments have several grades of LO, offering different configurations when in the Auto Mode. The rules for Auto selection are as follows:

| Models with Option | Conditions | Selection |
|--|---------------------------------|--|
| EPO | Center frequency is < 699.9 kHz | "Balanced" on page 2330 |
| Models with option EPO have a two stage local oscillator, which switches to a single loop for fast tuning (available in UXA) | Span > 114.1 MHz, <i>or</i> | "Fast Tuning" on page 2330 |
| | RBW > 800 kHz | "Fast Tuning" on page 2330 |
| | RBW > 290 kHz, <i>or</i> | "Best Wide-offset" on page 2330 |
| | Span > 4.2 MHz | "Best Wide-offset" on page 2330 |
| | Other conditions | "Balanced" on page 2330 |
| EP1 | Span > 44.44 MHz, <i>or</i> | "Fast Tuning" on page 2330 |
| Models with option EP1 have a two- | RBW > 1.9 MHz, <i>or</i> | "Fast Tuning" on page 2330 |

| Models with Option | Conditions | Selection |
|---|--|---|
| loop local oscillator, which switches to a single loop for fast tuning (available in PXA) | Source Mode is set to "Tracking" Center frequency is < 195 kHz, <i>or</i> CF \geq 1 MHz <i>and</i> Span \leq 1.3 MHz <i>and</i> RBW \leq 75 kHz All other conditions | "Best Close-in" on page 2329 "Best Wide-offset" on page 2330 |
| EP2 Models with option EP2 use a different loop bandwidth for the fast-tuning choice, which is a compromise between tuning speed and phase noise, giving good tuning speed at all offsets. Although not as good as for "Best Close-in" on page 2329; this is useful when you have to look across a wide range of spans (available, for example, in MXA for excellent phase noise) | CF < 130 kHz, <i>or</i> CF > 12 MHz <i>and</i> Span < 495 kHz <i>and</i> RBW < 40 kHz Span > 22 MHz, <i>or</i> RBW > 400 kHz, <i>or</i> CF \leq 12 MHz <i>and</i> Span < 495 kHz <i>and</i> RBW < 23 kHz All other conditions | "Best Close-in" on page 2329 "Fast Tuning" on page 2330 "Best Wide-offset" on page 2330 |
| EP4 (available in CXA for improved phase noise) | Span > 101 MHz <i>or</i> RBW > 1.15 MHz <i>or</i> Source Mode is set to "Tracking" CF is < 109 kHz <i>or</i> CF \geq 4.95 MHz <i>and</i> Span \leq 666 kHz <i>and</i> RBW < 28 kHz All other conditions | "Fast Tuning" on page 2330 "Best Close-in" on page 2329 "Best Wide-offset" on page 2330 |
| All Other Models Note that in these models, the hardware does not actually provide for an extra-fast tuning option, so the settings for "Fast Tuning" on page 2330 are actually the same as "Best Close-in" on page 2329, but the rules are implemented this way so that the user who doesn't care about phase noise but does care about tuning speed doesn't have to remember which of the other two settings gives faster tuning | Span > 12.34 MHz, <i>or</i> RBW > 250 kHz, <i>or</i> Source Mode is set to "Tracking" Center frequency is < 25 kHz, <i>or</i> CF \geq 1 MHz <i>and</i> Span \leq 141.4 kHz <i>and</i> RBW \leq 5 kHz All other conditions | "Fast Tuning" on page 2330 "Best Close-in" on page 2329 "Best Wide-offset" on page 2330 |

In all the above cases:

- The RBW to be used in the calculations is the equivalent -3 dB bandwidth of the current RBW filter
- The rules apply whether in swept spans, zero span, or FFT spans

Ranges

| Option | Option # | Phase Noise Option | Range |
|---------------|----------|--------------------|-------------------------|
| No EPx Option | 1 | Best Close-in | [offset < 20 kHz] |
| | 2 | Best Wide-offset | [offset > 30 kHz] |
| | 3 | Fast Tuning | [same as Best Close-In] |
| EPO | 4 | Best Close-in | [offset < 600 kHz] |
| | 1 | Balanced | [offset < 600 kHz] |
| | 5 | Best Spurs | [offset < 600 kHz] |
| EP1 | 2 | Best Wide-offset | [offset > 800 kHz] |
| | 3 | Fast Tuning | [same as Best Close-In] |
| | 1 | Best Close-in | [offset < 140 kHz] |
| EP2, EP3, EP5 | 2 | Best Wide-offset | [offset > 160 kHz] |
| | 3 | Fast Tuning | [single loop] |
| | 1 | Best Close-in | [offset < 70 kHz] |
| EP4 | 2 | Best Wide-offset | [offset > 100 kHz] |
| | 3 | Fast Tuning | [medium loop bw] |
| | 1 | Best Close-in | [offset < 90 kHz] |
| | 2 | Best Wide-offset | [offset > 130 kHz] |
| | 3 | Fast Tuning | [same as Best Close-In] |

6.9.1.53 Phase Noise Optimization All Option

Selects all available LO settings

| | |
|----------------|--|
| Remote Command | <code>:SYSTem:CALibration:ROW[1] 2 ... 100:FREQuency:SYNTHeSis:ALL[:STATe] ON OFF 1 0 :SYSTem:CALibration:ROW[1] 2 ... 100:FREQuency:SYNTHeSis:ALL[:STATe]?</code> |
| Example | <code>:SYST:CAL:ROW1:FREQ:SYNT:ALL ON</code> |
| Notes | When this parameter is ON , it overrides the Phase Noise Optimization parameter, and selects all available LO settings |
| Dependencies | The SCPI command applies to the current selected Cal Group If the subopcode does not reference an existing Cal row in the Cal Group, the error message “-221, Settings conflict; Subopcode does not reference an existing Cal row” is generated |

| | |
|-------------|---|
| Couplings | Coupled with " Phase Noise Optimization " on page 2328. When this parameter is ON , it selects all available LO mappings, and Phase Noise Optimization parameter displays All in the Configuration table. When this parameter is OFF , the Phase Noise Optimization parameter displays its previously set value in the Configuration table |
| Preset | OFF |
| State Saved | Saved in instrument state |
| Range | ON OFF |

6.9.1.54 Mixing Mode

Determines the LO Mixing Mode to be used.

| | |
|----------------|---|
| Remote Command | <code>:SYSTem:CALibration:ROW[1] 2 ... 100:LO:MMODE NORMa1 ALTErnate ALL</code> <code>:SYSTem:CALibration:ROW[1] 2 ... 100:LO:MMODE?</code> |
| Example | <code>:SYST:CAL:ROW3:LO:MMOD NORM</code> |
| Dependencies | The SCPI command applies to the current selected Cal Group If the subopcode does not reference an existing Cal row in the Cal Group, the error message “-221,Settings conflict; Subopcode does not reference an existing Cal row” is generated |
| Preset | NORMa1 |
| State Saved | Saved in instrument state |
| Range | NORMa1 ALTErnate ALL |

6.9.1.55 Match State

Determines if the Cal settings must match exactly when applying the correction. If not, the system may find the closest matching state or interpolate between states.

| | |
|----------------|---|
| Remote Command | <code>:SYSTem:CALibration:ROW[1] 2 ... 100:MATCH[:STATE] ON OFF 1 0</code> <code>:SYSTem:CALibration:ROW[1] 2 ... 100:MATCH[:STATE]?</code> |
| Example | <code>:SYST:CAL4:MATC ON</code> <code>:SYST:CAL4:MATC?</code> |
| Dependencies | The SCPI command is applied to the currently selected Cal Group. The subopcode is used to identify the Cal row in the Cal Group If the subopcode does not reference an existing Cal row in the Cal Group, the error message “-221, Settings conflict; Subopcode does not reference an existing Cal row” is generated |
| Preset | All True |
| State Saved | Saved in instrument state |
| Range | True False |

6.9.2 Cal Group

Specifies the selected Calibration Group. You can use different Cal Groups for different external hardware configurations. The Cal Group is also an important concept when sending SCPI commands to the Calibration System, because in each case the SCPI command is directed to the currently-selected Cal Group, which is the Cal Group that is modified by the SCPI command.

| | |
|----------------|---|
| Remote Command | <code>:SYSTem:CALibration:CGRoup <integer></code> <code>:SYSTem:CALibration:CGRoup?</code> |
| Example | <code>:SYST:CAL:CGR 2</code> <code>:SYST:CAL:CGR?</code> |
| Preset | 1 |
| Min | 1 |
| Max | 100 |

6.9.3 Apply Cal Group

Controls whether or not the checked **Apply** rows of the currently selected Cal Group are applied.

| | |
|----------------|---|
| Remote Command | <code>:SYSTem:CALibration:CGRoup:APPLY <bool></code> <code>:SYSTem:CALibration:CGRoup:APPLY?</code> |
| Example | <code>:SYST:CAL:CGR:APPL ON</code> <code>:SYST:CAL:CGR:APPL?</code> |
| Dependencies | The SCPI command is applied to the currently selected Cal Group You can only turn on Apply Cal Group if at least one Cal for the currently selected group has been executed. If you attempt to select Apply Cal Group before any Cals have been executed, the advisory message "At least one Row must be calibrated before it can be applied" is displayed |
| Preset | OFF |
| State Saved | Saved in instrument state |
| Range | ON OFF |
| Annotation | If <i>any</i> Cal Group is ON , RCal in the Meas Bar displays in amber, to indicate that Calibrations are in use |

6.9.4 All Apply Cal Group Off

Turns off **Apply Cal Group** for all groups.

| | |
|--------|--|
| Remote | <code>:SYSTem:CALibration:CGRoup:APPLY:AOFF</code> |
|--------|--|

Command

Example :SYST:CAL:CGR:APPL:AOFF

6.9.5 Connection

Opens the **Connection** dialog, which provides step-by-step instructions for its use.

6.10 Calibrator Control

Lets you select a calibrator and control the calibrator settings.

6.10.1 Select Cal Source

Lets you select the calibrator to control.

| | | | | | | | | | | | | | |
|---------------------------|---|-------------------|------------------------|----------------------|---|---------------------|--|--------------------|-------------------|----------------------|--------------------|---------------------------|-------------|
| Remote Command | <code>:SYSTem:CALibration:TUNE[:SELEcted] NONE REF50 REF4800 TUNAb1e CALOUT RCM1 RCM2 RCM3 RCM4 RCM5 RCM6 RCM7 RCM8 RCM9 RCM10</code> <code>:SYSTem:CALibration:TUNE[:SELEcted]?</code> | | | | | | | | | | | | |
| Example | <code>:SYST:CAL:TUNE:SEL TUNABLE</code> <code>:SYST:CAL:TUNE?</code> | | | | | | | | | | | | |
| Notes | Options are: <table border="1"> <tr> <td><code>NONE</code></td> <td>No calibrator selected</td> </tr> <tr> <td><code>TUNAb1e</code></td> <td>Tunable internal calibrator present in N9042B</td> </tr> <tr> <td><code>CALOUT</code></td> <td>Tunable calibrator available through CALOUT front panel port in N9042B</td> </tr> <tr> <td><code>REF50</code></td> <td>50 MHz calibrator</td> </tr> <tr> <td><code>REF4800</code></td> <td>4.8 GHz calibrator</td> </tr> <tr> <td><code>RCM1 – RCM10</code></td> <td>RCal module</td> </tr> </table> | <code>NONE</code> | No calibrator selected | <code>TUNAb1e</code> | Tunable internal calibrator present in N9042B | <code>CALOUT</code> | Tunable calibrator available through CALOUT front panel port in N9042B | <code>REF50</code> | 50 MHz calibrator | <code>REF4800</code> | 4.8 GHz calibrator | <code>RCM1 – RCM10</code> | RCal module |
| <code>NONE</code> | No calibrator selected | | | | | | | | | | | | |
| <code>TUNAb1e</code> | Tunable internal calibrator present in N9042B | | | | | | | | | | | | |
| <code>CALOUT</code> | Tunable calibrator available through CALOUT front panel port in N9042B | | | | | | | | | | | | |
| <code>REF50</code> | 50 MHz calibrator | | | | | | | | | | | | |
| <code>REF4800</code> | 4.8 GHz calibrator | | | | | | | | | | | | |
| <code>RCM1 – RCM10</code> | RCal module | | | | | | | | | | | | |
| Dependencies | If the selected calibrator is not available, it does not appear in the dropdown. If you send SCPI to select a calibrator that is not available, the instrument generates an error | | | | | | | | | | | | |
| Couplings | Selecting <code>REF50</code> sets the RF Calibrator to <code>REF50</code> Selecting <code>REF4800</code> sets the RF Calibrator to <code>REF4800</code> Selecting a calibrator source other than <code>REF50</code> or <code>REF4800</code> sets RF Calibrator to <code>OFF</code> | | | | | | | | | | | | |
| Preset | Unaffected by Mode Preset . Set to <code>NONE</code> by Restore Input/Output Defaults or Restore System Defaults->All | | | | | | | | | | | | |

6.10.2 Cal Output

Lets you set the selected calibrator's RF power output state.

| | |
|----------------|--|
| Remote Command | <code>:SYSTem:CALibration:TUNE:OUTput[:STATe] ON OFF 1 0</code> <code>:SYSTem:CALibration:TUNE:OUTput[:STATe]?</code> |
| Example | <code>:SYST:CAL:TUNE:OUTP ON</code> <code>:SYST:CAL:TUNE:OUTP?</code> |

| | |
|--------|--|
| Preset | Unaffected by Mode Preset . Set to OFF by Restore Input/Output Defaults or Restore System Defaults->All |
|--------|--|

6.10.3 Cal Frequency

Lets you set the selected calibrator's frequency.

| | |
|----------------|---|
| Remote Command | <code>:SYSTem:CALibration:TUNE:FREQuency <freq></code> <code>:SYSTem:CALibration:TUNE:FREQuency?</code> |
| Example | Set source frequency to 150 MHz: <code>:SYST:CAL:TUNE:FREQ 150000000</code> |
| Preset | Unaffected by Mode Preset . Set to 1 GHz by Restore Input/Output Defaults or Restore System Defaults->All |
| Min/Max | Depend on the selected calibrator |

6.10.4 Cal Signal Type

Lets you set the selected calibrator's signal type.

| | |
|----------------|---|
| Remote Command | <code>:SYSTem:CALibration:TUNE:TYPE CW COMB</code> <code>:SYSTem:CALibration:TUNE:TYPE?</code> |
| Example | <code>:SYST:CAL:TUNE:TYPE CW</code> <code>:SYST:CAL:TUNE:TYPE?</code> |
| Dependencies | If the selected calibrator does not support a signal type, then that type is disabled in the dropdown Changing the signal type to a disabled option generates an error |
| Preset | Unaffected by Mode Preset . Set to CW by Restore Input/Output Defaults or Restore System Defaults->All |

6.10.5 Cal Comb Spacing

Lets you set the calibrator's comb spacing, when the signal type is **COMB**.

| | |
|----------------|---|
| Remote Command | <code>:SYSTem:CALibration:TUNE:SPACing <freq></code> <code>:SYSTem:CALibration:TUNE:SPACing?</code> |
| Example | Set comb spacing to 1 MHz: <code>:SYST:CAL:TUNE:SPAC 1000000</code> |
| Dependencies | Only appears when COMB is selected as "Cal Signal Type" on page 2338 If the selected calibrator does not support the Comb signal, attempting to set the spacing generates an error |

6 Input/Output
6.10 Calibrator Control

| | |
|---------|--|
| Preset | Unaffected by Mode Preset . Set to 0 Hz by Restore Input/Output Defaults or Restore System Defaults->All |
| Min/Max | Dependent on the selected calibrator |

6.10.6 Calibrator Reference

Determines the frequency reference type used by the RCal module of the currently selected Cal Group

| | |
|----------------|--|
| Remote Command | <code>:SYSTem:CALibration:TUNE:REFerence INTERNAL EXTERNAL</code> <code>:SYSTem:CALibration:TUNE:REFerence?</code> |
| Example | Set the calibrator frequency reference to Internal: <code>:SYSTem:CALibration:TUNE:REFerence INTERNAL</code> |
| Dependencies | Only displayed when an RCal module is the selected calibrator |
| Preset | Unaffected by Mode Preset . Set to preset value by Restore Input/Output Defaults or Restore System Defaults->All |
| Range | <code>INTERNAL EXTERNAL</code> |

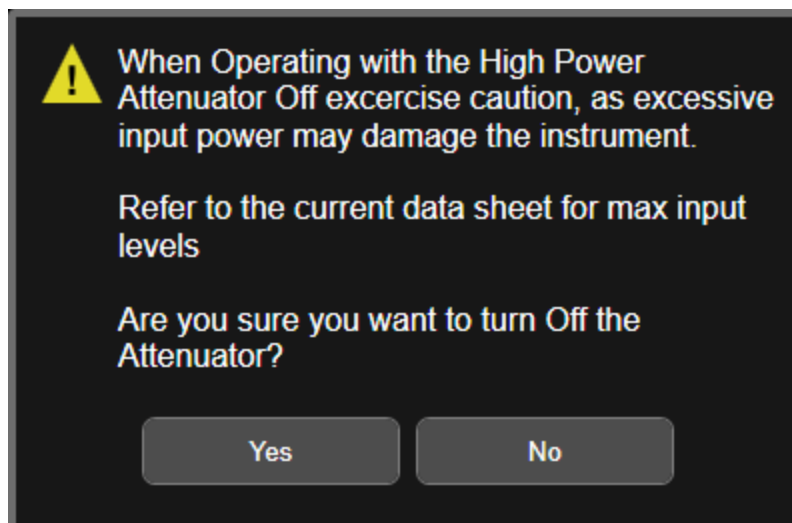

6.11 Advanced

6.11.1 T/R Port High Power Attenuator

Controls whether additional attenuation is added at the T/R Port. The T/R port has two input paths, one that provides a 16 dB attenuator, and the other that bypasses this attenuator.

- When **ON**, the path includes the 16 dB attenuator, so the max input level for this path is +47 dBm (50 W)
- When **OFF**, the 16 dB attenuator is bypassed, so the max input level for this path is +33 dBm (2 W)

If the attenuator is turned off, the following warning message is displayed and confirmation that the attenuator is to be turned off is required;

Whenever the attenuator is bypassed (**OFF**), a warning appears in the status bar: "Input caution; T/R unprotected"

In the case of an input overload at the T/R input, (>2 W with Attenuator off, or >50 W with attenuator on), or an over-temperature at the T/R input, the input is disconnected, and a dialog is displayed, stating:

"CAUTION! Excessive power has been detected at the T/R Port. The input has been disconnected. Remove the high signal power and press OK"

Or:

6 Input/Output
6.11 Advanced

“CAUTION! Over temperature has been detected at the T/R Port. The input has been disconnected. Remove the signal, allow to cool & press OK”

Until you press **OK**, the input remains disconnected, and no measurement can be made.

| | |
|----------------|---|
| Remote Command | <code>[:SENSe]:FEED:RF:PORT:TR:HPOWer:ATTenuator[:STATe] ON OFF</code> <code>[:SENSe]:FEED:RF:PORT:TR:HPOWer:ATTenuator[:STATe]?</code> |
| Example | <code>:FEED:RF:PORT:TR:HPOW:ATT ON</code> <code>:FEED:RF:PORT:TR:HPOW:ATT?</code> |
| Dependencies | Only appears in modular analyzers, and only when the M9470A module is installed, such as in M8920A. Option HDX is required to enable the T/R port |
| Preset | <code>ON</code> |
| State Saved | Saved in instrument state |

6.12 Aux I/O Control

This menu is only available with Option LSN, indicating that the LISN IO board is installed. It is used to control each of the eight control lines out of the rear panel connector independently. There are eight bits of control lines. The LISN Control (Mode setup) of the EMI Receiver application affects the **AUX I/O Control** settings. Whenever you change the LISN Control in Mode Setup, the corresponding AUX I/O Control data lines will also be changed. The selection at the AUX I/O Control does not affect the LISN Control (Mode Setup) setting.

6.12.1 Data 0 – Data 7

Sets the value for Data 0 through Data 7 respectively.

| | |
|----------------|---|
| Remote Command | <code>:OUTPut:AUX:IO:DATA<n> OFF ON 0 1</code> where <n> in an integer 0 - 7 |
| Example | <code>:OUTP:AUX:IO:DATA0 OFF</code> |
| Notes | Unaffected by Mode Preset , but Input/Output Preset presets the value to ON for all 8 data lines |
| Preset | ON |
| Range | OFF ON |

6.12.2 Aux IO Control (Remote Command Only)

Sets/Queries the value for all 8 data lines.

| | |
|---------------------------------|---|
| Remote Command | <code>:OUTPut:AUX:IO <Value></code> <code>:OUTPut:AUX:IO?</code> |
| Example | <code>:OUTP:AUX:IO 31</code> |
| Notes | Unaffected by Mode Preset , but Input/Output Preset presets the value to ON for all 8 data lines |
| Couplings | The states of Data 0 to Data 7 under the AUX I/O Control panel (Input/Output menu) change according to the keyed-in AUX IO value |
| Preset | 31 |
| Min | 0 |
| Max | 255 |
| Backwards Compatibility SCPI | <code>:OUTPut:UPORt <Value></code> |

7 Save/Recall/Print

This section describes the functions that can be accessed via the front panel **Save**, **Quick Save**, and **Recall** hardkeys, as well as via the controls in the front-panel folder icon, as shown below.

7.1 Quick Save

Quick Save repeats the previous Save at the touch of a single button. Whatever you saved before gets saved again to the same directory, and with a filename derived from the previous filename.

You access Quick Save by pressing the **Quick Save** hardkey, or by pressing the folder icon at the bottom of the display and then pressing the **Quick Save** icon. In addition, if you have a PC keyboard plugged in, the sequence **CTL-Q** will perform a Quick Save.

The **Quick Save** front-panel key repeats the most recent save that was performed from the **Save** menu, with the following exceptions:

- Register saves are not remembered as Saves for the purpose of the Quick Save function
- If the current measurement does not support the last non-register save that was performed, an informational message is generated, “File type not supported for this measurement”

Quick Save repeats the last type of qualified save (that is, a save qualified by the above criteria) in the last save directory by creating a unique filename using the Auto File Naming algorithm described below.

If the previous save was a Screen Image save, Quick Save saves a Screen Image when the Quick Save button is pressed. This image is *exactly* what is on the screen when the **Quick Save** button is pressed. Quick Save does *not* force a dialog exit or navigate in any way, it simply snaps the image on the screen and saves it. This lets you save images of dialogs and setup screens that would be impossible to save using the **Save** dialog.

NOTE

When **Quick Save** is pressed the display theme changes to the theme specified by the **Screen Image Theme** control in order to take the screen shot, and then changes back to the Display Theme, but no navigation is performed, and no dialogs are exited.

If **Quick Save** is pressed after startup and before any qualified Save has been performed, the Quick Save function performs a Screen Image save using the current settings for Screen Image saves (current theme, current directory), which then becomes the “last save” for the purpose of subsequent Quick Saves.

The Auto File Naming feature automatically generates a file name for use when saving a file. The filename consists of a prefix and suffix separated by a dot, as is standard for the Windows file system. A default prefix exists for each of the available file types:

| Type | Default Prefix | Menu |
|-----------------------|----------------|-----------------|
| State | State_ | (Save/Recall) |
| Trace + State | State_ | (Save/Recall) |
| Screen | Screen_ | (Save/Recall) |
| Amplitude Corrections | Ampcor_ | (Import/Export) |
| Traces | Trace_ | (Import/Export) |
| Limit Lines | Limit_ | (Import/Export) |
| Measurement Result | MeasR_ | (Import/Export) |
| Capture Buffer | CapBuf_ | (Import/Export) |

A four-digit number is appended to the prefix to create a unique file name. The numbering sequence starts at 0000 within each Mode for each file type and updates incrementally to 9999, then wraps to 0000 again. It remembers where it was through a Mode Preset and when leaving and returning to the Mode. It is reset by Restore Misc Defaults and Restore System Defaults and subsequent running of the instrument application. So, for example, the first auto file name generated for State files is **State_0000.state**. The next is **State_0001**, and so forth.

One of the key features of Auto File Name is that we guarantee that the Auto File Name will never conflict with an existing file. The algorithm looks for the next available number. If it gets to 9999, then it looks for holes. If it find no holes, that is no more numbers are available, it gives an error.

For example, if when we get to State_0010.state there is already a State_0010.state file in the current directory, it advances the counter to State_0011.state to ensure that no conflict will exist (and then it verifies that State_0011.state also does not exist in the current directory and advances again if it does, and so forth).

If you enter a file name for a given file type, then the prefix becomes the filename you entered instead of the default prefix, followed by an underscore. The last four letters (the suffix) are the 4-digit number.

For example, if you save a measurement results file as “**fred.csv**”, then the next auto file name chosen for measurement results save will be **fred_0000.csv**.

NOTE

Although 0000 is used in the example above, the number that is used is actually the current number in the Meas Results sequence, that is, the number that would

have been used if you had not entered your own file name.

NOTE

If the filename you entered ends with `_dddd`, where `d`=any digit, making it look just like an auto file name, then the next auto file name picks up where you left off with the suffix being `dddd + 1`.

Quick Save Mode

Quick Save can be operated in the Normal mode and in a special “Prompt” mode. There is a switch on the User Interface page of the **System** menus that lets you control this.

When Quick Save Mode is in Normal (the default setting), the instrument does an immediate save of a new file of the same type and to the same directory as the previous Save action. When Quick Save Mode is in the Prompt state, instead of immediately performing a Save, the Alpha Keyboard pops up with the proposed auto-filename in the entry area. The user can then press Enter to accept the auto filename, or edit the name and press Enter. This allows you to easily save a file with a custom file name.

Notes

No remote command for this key specifically

7.2 Recall

The **Recall** dialog lets you recall previously saved states, traces and other items to the instrument from files on the instrument's internal storage, from removable devices, and from directories on the network. You access the Recall dialog by pressing the **Recall** hardkey, or by pressing the folder icon at the bottom of the display and then pressing the **Recall** icon.

The dialog has section tabs running down the left side, which you use to specify what you want to recall, similar to the **Save** dialog. You choose the recall item and then complete the recall by choosing a register or file location from which to recall the item.

Notes No remote command for this key specifically, but `:MMEM:LOAD` is available for specific file types. For example: `:MMEM:LOAD:STATE <filename>`
If you try to recall a State file for a mode that is not licensed or not available in the instrument, an error message will occur and the state will not change

Backwards Compatibility Notes In legacy analyzers, it was possible to load a state without affecting the trace data, limit lines or correction data. Similarly (since User Preset is actually loading a state), it was possible to do a User Preset without affecting the trace data, limit lines or correction data
In the X-Series, "state" always includes all of this data; so, whenever state is loaded, all of the traces, limit lines and corrections are affected. Although this differs from previous behavior, it is desirable behavior, and should not cause adverse issues for users
Recall for the X-Series supports backward compatibility in the sense that you can recall a state file from any X-Series model number and any version of X-Series software. This is only possible if part of the recalling process goes through a limiting step after recalling the mode settings, at least for settings that may vary with version number, model number, option and license differences. If you try to recall a state file onto an instrument with less capability than what was available on the instrument during the save, the recall will ignore the state it doesn't support, and it will limit the recalled setting to what it allows
Example: if the saved state includes preamp ON, but the recalling instrument does not have a preamp; the preamp is limited to OFF. Conversely, if you save a state without a preamp, the preamp is OFF in the state file. When this saved file is recalled on an instrument with a licensed preamp, the preamp is changed to OFF. Another example is if the saved state has center frequency set to 20 GHz, but the instrument recalling the saved state is a different model and only supports 13.5 GHz. In this case, the

center frequency is limited along with any other frequency-based settings. Since the center frequency can't be preserved in this case, the recall limiting tries to at least preserve span to keep the measurement setup as intact as possible

Note that there is no state file compatibility outside of the X-Series. For example, you cannot recall a state file from ESA or PSA

7.2.1 Recall From File / Open

For every Recall type, a button appears called **Recall From File** or **Open**. “Recall From File” appears for recall types that also include registers (like State and Trace+State), and “Open” appears for all other recall types.

When you push the “Recall From File” or “Open” button, a dialog slides in from the right which allows you to see what files are saved in the current directory. See the “Save to File/Save As” section (3.1) for a depiction of this screen for the Save menu, which is similar to Recall.

The default directory is the internal directory for the current Mode and save type, on the D: drive. You may also change to another Mode's state directory by pressing the dropdown in the upper right corner labeled “Mode”. Once you have chosen a directory, the files in that directory whose extension matches the current data type (e.g., .state or .trace) are displayed in the right-hand window of the dialog. You can sort this list by name, date, file size or extension by tapping the Name, Date, Size, or Content header at the top of each column. A second tap toggles the sort order between Ascending and Descending.

Also displayed is a path depiction showing the path to the current directory. In the example shown, the path is D:\Users\Instrument\Documents\SA\screen. Tapping any element of this path lets you select an alternate route. Tapping the “Computer” arrow lets you select a different drive.

Tapping the “back” arrow navigates to the previously selected directory.

If you plug in a removable drive (e.g., a thumb drive), the browser immediately navigates to the root of that drive. Furthermore, if you had a thumb drive in and you were in a directory on the thumb, and then you exit the browser, when you come back in you are still in the same directory on that removable drive. If you remove the thumb drive, you return to the directory you had been in before the thumb drive was plugged in.

Note that for each data type there is a “current” directory, and it is the last directory used by either Save or Recall for that Mode. For example, if in SA Mode you save a Corrections file to a particular directory, then when you go to recall a Correction in SA Mode, you should be pointing at that directory. Or if in EMC Mode you recall a Limit from a particular directory then when in EMC Mode you go to save a Limit, it

should be pointing at that same directory. There is one “current” directory for each data type for each Mode (not one for Save and one for Recall).

The Filename field, just below the Path field, shows the filename that will be used. The **File Name** field is loaded with the name of the selected file. You may edit the filename by tapping it, which brings up the onscreen alpha keyboard. Press the “Done” button on this keyboard when you are done editing.

Select a file to load and press Recall. After a successful recall, a message "File <filename> recalled" or "State Register <register number> recalled" is displayed in an info box for a few seconds.

The **Files of Type** field shows the file suffix for the type of file you have selected to recall. This field only appears for files which have multiple file types that can be recalled. These file types are:

Amplitude Corrections:

- Amplitude Corrections (*.csv)
- Legacy Cable Corrections (*.cbl)
- Legacy User Corrections (*.amp)
- Legacy Other Corrections (*.oth)
- Legacy Antenna Corrections (*.ant)

Limits:

- Limit Data (*.csv)
- Legacy Limit Data (*.lim)

7.2.2 State

Lets you choose a register or file from which to recall the state.

See the Save State description for information on state files and their contents and the default paths. State files have the extension “.state”.

For rapid recall, the State menu lists 16 registers from which you can recall states. Pressing a Register button initiates the recall. You can also select a file from which to recall by pressing “Recall From File”.

Since each state file is only for one Mode, the settings for other Modes are unaffected when it is loaded. Recall State will cause a mode switch if the state being recalled is not from the current active mode.

NOTE

In products that run multiple simultaneous instances of the X-Series Application, all instances share the same registers and file directories, so make sure you know from what instance a file or register was saved before recalling it.

| | |
|------------------------------|---|
| Remote Command | <code>:MMEMory:LOAD:STATe <filename></code> |
| Example | Load the state file data (on the default file directory path) into the instrument state: <code>:MMEM:LOAD:STAT "MyStateFile.state"</code> |
| Notes | <p>When you pick a file to recall, the instrument first verifies that the file is recallable in the current instrument by checking the software version and model number of the instrument. If there is a mismatch between the file and the instrument, the recall function tries to recall as much as possible. It may limit settings that differ based on model number, licensing or version number. In general, variables in the instrument which are not contained in the state file will be unaffected, and variables in the state file which are not contained in the instrument will be ignored</p> <p>The recall proceeds by aborting the currently running measurement, clearing any pending operations, and then loading the State from the saved state file. You can open state files from any Mode, so recalling a State file switches the instrument to the Mode that was active when the save occurred. After switching to the Mode of the saved state file, Mode settings and data (if any for the Mode) become those from the saved file. The active measurement becomes the measurement which was running when the state file was saved and the data relevant to the measurement (if there is any) is recalled</p> <p>After recalling the state, the Recall State function does the following:</p> <ul style="list-style-type: none">- Clears the input and output buffers- Status Byte is set to 0- Executes <code>*CLS</code> <p>If the file specified is empty an error is generated. If the specified file does not exist, another error is generated. If there is a mismatch between the file and the proper file type, an error is generated. If there is a mismatch between file version or model number or instrument version or model number, a warning is displayed. Then it returns to the State menu and File Open dialog goes away</p> <p>After the Recall, the instrument exits the Recall menu and returns to the previous menu</p> |
| Backwards Compatibility SCPI | <code>:MMEMory:LOAD:STATe 1,<filename></code> The "1" is simply ignored |

7.2.3 Recall Type

If you have a built-in Source in your instrument, you may wish, when recalling State, to recall only the part of the State file that applies to the instrument, and leave the Source unaffected. Or you may wish to recall only the part of the State file that applies to the Source, and leave the instrument unaffected.

Lets you choose whether you wish to recall the entire Analyzer + Source state (**ALL**), just the Analyzer State (**ANALyzer**), or just the Source State (**SOURce**).

| | |
|----------------|---|
| Remote Command | :MMEMory:LOAD:RTYPE ALL ANALyzer SOURce |
| Example | :MMEM:LOAD:RTYP ALL |
| Dependencies | Only available in models with a built-in source, such as VXT models |
| Preset | ALL |
| Range | ALL ANALyzer SOURce |

7.2.4 Register 1 thru Register 16

Selecting any one of these register buttons causes the State to be recalled from the specified Register. The registers are provided for rapid saving and recalling, since you do not need to specify a filename or navigate to a file. Each of the register menu keys annotates whether it is empty or at what date and time it was last modified. In addition, you can edit any of the register names to enter custom names for any register.

Although these 16 registers are the only registers available from the front panel, there are 128 state registers available in the instrument. Registers 17-128 are only available from the SCPI interface, using the ***RCL** command.

There is one set of 128 state registers in the instrument, not one set for each Mode. When a state is saved, the Mode it was saved from is saved with it; then when it is recalled, the instrument switches to that Mode.

NOTE

In products that run multiple simultaneous instances of the X-Series Application, all instances share the same registers and file directories, so make sure you know from what instance a file or register was saved before recalling it.

The date displayed follows the format specified in the **Date Format** setting in the **Control Panel**. The time shows hours and minutes.

After the recall completes, the message "Register <register number> recalled" is displayed.

If you are in the Spectrum Analyzer Mode, and you are recalling a register that was saved in the Spectrum Analyzer Mode, then after the recall, you will still be in the Recall Register menu. If the Recall causes you to switch modes, then after the Recall, you will be in the Frequency menu.

If a requested register is empty an error is generated.

| | |
|---------|--|
| Example | *RCL 1 |
| Range | 1-16 from front panel, 1-128 from SCPI |

7.2.5 Edit Register Names

You may enter a custom name on any of the **Register** keys, to help you remember what you are using that state to recall. To do this, press the **Name** field for the register you want to rename, which brings up the onscreen alpha keyboard. Press the **Done** button on this keyboard when you are done editing.

The maximum number of characters for a register name is 30. If you delete all the characters in the custom name, it restores the default (time and date).

For more information and the SCPI command, see ["Edit Register Names" on page 2385](#) under **Save, State**.

7.2.6 Trace+State

Lets you choose a register or file for recalling the state.

See [Save, "State" on page 2384](#) for information on state files and their contents and the default paths. State files have the extension **".state"**.

For rapid recall, the **Trace+State** menu lists 16 registers from which you can recall trace+state files. Pressing a **Register** control initiates the recall. You can also select a file from which to recall by pressing **Recall From File**.

Since each trace+state file is only for one Mode, the settings for other Modes are unaffected when it is loaded. **Recall Trace+State** will cause a mode switch if the trace+state being recalled is not from the current active Mode.

NOTE

In products that run multiple simultaneous instances of the X-Series Application, all instances share the same registers and file directories, so make sure you know from what instance a file or register was saved before recalling it.

Trace+State files have the extension **.trace**.

The Trace+State selection only appears for measurements that support trace saves. It is blanked for modes that do not support trace saves. Saving Trace is identical to saving State, except that a **.trace** extension is used on the file instead of **.state**, and internal flags are set in the file indicating which trace was saved.

| | |
|----------------|--|
| Remote Command | <code>:MMEMory:LOAD:TRACe TRACE1 ... TRACE6,<filename></code> |
| Command | <code>:MMEMory:LOAD:TRACe:REGister TRACE1 ... TRACE6,<integer></code> |
| Example | Loads the trace file data (on the default file directory path) into the specified trace; if it is a "single trace" save file, that trace is loaded to trace 2, and is set to be not updating: <code>:MMEM:LOAD:TRAC TRACE2,"MyTraceFile.trace"</code> Restore the trace data in register 2 to Trace 1: |

```
:MMEM:LOAD:TRAC:REG TRACE1,2
```

Notes

When you perform the recall, the recalling Trace function must first verify the file is recallable in this instrument by checking instrument software version and model number, since it includes State. If everything matches, a full recall proceeds by aborting the currently running measurement, and loading the state from the saved state file to as close as possible to the context in which the save occurred. You can open .trace files from any mode that supports them, so recalling a Trace file switches to the mode that was active when the save occurred. After switching to the mode of the saved state file, mode settings and data (if any for the mode) are loaded with values from the saved file and the saved measurement of the mode becomes the newly active measurement, and the data relevant to the measurement (if there is any) is recalled

Once the state is loaded, the trace data must be loaded. The internal flags are consulted to see which trace to load and the "To Trace" setting to see where to load it. Trace data is always loaded with the specified trace set to View, so that the data is visible and not updating (so as not to erase the recalled data). If the file is an "all trace" file, all traces are loaded with the saved data (to the original trace the data was saved from) and set to View. Traces whose data is not loaded are restored to the update state that existed when they were saved

After recall, the instrument exits the **Recall** menu and returns to the previous menu

Some Modes and measurements do not have 6 available traces. For example, Phase Noise Mode:

```
:MMEMory:LOAD:TRACe TRACE1|TRACE2|TRACE3,<filename>
```

Some Modes and measurements have more than 6 traces. For example, Realtime SA Mode:

```
:MMEMory:STORe:TRACe TRACE1 | TRACE2 | TRACE3 | TRACE4 | TRACE5 |  
TRACE6 | TRACE7 | TRACE8 | TRACE9 | TRACE10 | TRACE11 | TRACE12 |  
ALL,<filename>
```

7.2.7 Recall To Trace

Lets you select which Trace to recall to. Not all Modes have the same number of available traces. The default is the currently selected trace, selected in this or any other menu with **Trace** selection. If you have selected **ALL**, then that remains selected until you specifically change it to a single trace, regardless of the trace selected in the **Trace** menu.

If the .trace file is an "all trace" type, **To Trace** is ignored, and the traces each go back to the trace from which they were saved.

7.2.8 Register 1 thru Register 16

Selecting any one of these register buttons causes the specified trace(s) and the state of the currently active mode to be recalled from the specified Register. The registers are provided for rapid saving and recalling, since you do not need to specify a filename or navigate to a file. Each of the register menu keys annotates whether it is empty or at what date and time it was last modified. In addition, you can edit any of the register names to enter custom names for any register.

7 Save/Recall/Print
7.2 Recall

There is one set of 16 trace+state registers in the instrument, not one set for each Mode. When trace+state is saved, the Mode it was saved from is saved with it; then when it is recalled, the instrument switches to that Mode.

NOTE

In products that run multiple simultaneous instances of the X-Series Application, all instances share the same registers and file directories, so make sure you know from what instance a file or register was saved before recalling it.

The date displayed follows the format specified in the **Date Format** setting under the **Control Panel**. The time shows hours and minutes.

After the recall completes, the message **Register <register number> recalled** is displayed. If a requested register is empty, an error is generated.

Recalling state from a Register is the same as recalling state from a **Trace+State File**.

| | |
|---------|---------------|
| Example | *RCL 1 |
| Range | 1-16 |

7.2.9 Edit Register Names

You may enter a custom name on any of the **Register** keys, to help you remember what you are using that state to recall. To do this, press the **Name** field for the register you want to rename, which brings up the onscreen alpha keyboard. Press the **Done** button on this keyboard when you are done editing.

The maximum number of characters for a register name is 30. If you delete all the characters in the custom name, it restores the default (time and date).

For more information and the SCPI command, see "[Edit Register Names](#)" on page [2385](#) under **Save, State**.

7.2.10 Screen Config + State

Lets you load the complete configuration of all your screens from a file which you specify.

Note that recalling a screen config file wipes out your current screen configuration; you do not see a warning before it loads, but there is a note on the **Recall** page letting you know what is going to happen.

The filenames are of the form:

`State_0001.screen`

| | |
|--------|---|
| Remote | <code>:MMEMory:LOAD:SCONfig <filename></code> |
|--------|---|

| | |
|---------|--|
| Command | |
| Example | Load the screen configuration from the file <code>MyScreenConfig.screen</code> in the default directory: <code>:MMEM:LOAD:SCON "myScreenConfig.screen"</code> |

7.2.11 Measurement Data

Lets you specify a data type (for example, trace data) and choose a file from which to import the data.

Measurement Data files are comma-separated value (CSV) files, and contain the requested data in a form that can be imported into Excel or other spreadsheets, as well as header data that gives information on relevant instrument settings at the time the save occurred.

For more on **Measurement Data** files, see "[Measurement Data](#)" on page 2390 under **Save**.

Since the commonly exported data files are in CSV format, you can edit the data prior to importing it. This allows you to export a data file, manipulate the data in Excel (for example) and then import it.

7.2.12 Data Type

Lets you select the data type to recall.

| | |
|--------------|--|
| Notes | There is no SCPI command for Data Type, as the type is implied in the SCPI command for each item |
| Dependencies | The Data Type menu for any given measurement only contains data types that are supported by that measurement. Data types that are not importable do not appear, even if they <i>do</i> appear in the corresponding Save menu |

7.2.13 Trace

Allows you to import Trace files in the PC-readable CSV format.

Trace data files have the extension `.csv`. The trace file contains a "metadata" header which describes the state of the instrument when the file was saved. This metadata is compared to the current state of the instrument when the file is recalled; if it does not match the current state, the "invalid data indicator" (*) is displayed.

The metadata is detailed in Trace File Contents in the **Save** section.

| | |
|----------------|---|
| Remote Command | <code>:MMEMory:LOAD:TRACe:DATA TRACE1 ... TRACE6,<filename></code> |
| Example | Import the 2nd trace from the file <code>myTrace2.csv</code> in the current path. For SA Mode, the default path |

7 Save/Recall/Print
7.2 Recall

is:
`My Documents\SA\data\traces`
`:MMEM:LOAD:TRAC DATA TRACE2,"myTrace2.csv"`

| | |
|------------------------------|---|
| Dependencies | For SA measurements, a trace cannot be recalled from a trace file that was exported with ALL traces selected A trace cannot be imported if the number of trace points in the file do not match the number of sweep points currently set for the measurement. If this happens, an error message is generated Errors are reported if the file is empty or missing, or if the file type does not match, or if there is a mismatch between the file type and the destination data type |
| Couplings | When a trace is imported, Trace Update is always turned OFF for that trace and Trace Display is always turned ON |
| Annotation | After recall is complete, an advisory is displayed in the message bar confirming which trace file was loaded |
| Status Bits/OPC dependencies | Sequential - aborts the current measurement |

7.2.14 Limit

Lets you select a file from which to import the **Limit** data.

Limit files are CSV files, and contain the limit data in a form that can be imported into Excel or similar spreadsheets, as well as header data that provides information on the limit.

See the **Save Limit** description ("**Limit**" on page 2416) for information on Limit files and their contents and the default paths. **Limit** files have the extension **.csv**.

For backwards compatibility, older limit files with the extension **.lim** can be read into the instrument, but you can only save limits as **.csv** files.

A set of preloaded **Limits** files can be found in the directory:

`My Documents/EMC Limits and Ampcor/Limits`

| | |
|----------------|--|
| Remote Command | <code>:MMEMory:LOAD:LIMit LLINE1 LLINE2 LLINE3 LLINE4 LLINE5 LLINE6,<-filename></code> |
| Example | Import the 2nd Limit Line from the file <code>myLimitLine2.csv</code> in the current path: <code>:MMEM:LOAD:LIM LLINE2,"myLimitLine2.csv"</code> |
| Dependencies | Errors are reported if the file is empty or missing, or if the file type does not match, or if there is a mismatch between the file type and the destination data type In the Log Plot measurement in Phase Noise Mode, there are only three Limit Lines, so the valid parameters are <code>LLINE1 LLINE2 LLINE3</code> This key only appears if you have the proper option installed in your instrument |
| Couplings | When a limit line is loaded from mass storage, it is automatically turned on. This allows the user to see it, thus confirming the load. The Margin settings will match those when the limit was saved |

| | |
|------------------------------|--|
| | The instrument cannot mix Limits domains (X Axis Unit must be Frequency or Time for both Limits). So, when a Limits file is loaded, the instrument sets the Limits domain (X Axis Unit) to match that of the file. If this changes the Limits domain from what it was before the file was loaded, all Limits data in all Limits sets is erased before the data loads. If this operation is over the remote interface, there is no warning if this occurs, so care should be taken to know the domain of the file you are loading |
| Annotation | After recall is complete, an advisory is displayed in the message bar confirming which limit file was loaded |
| Status Bits/OPC dependencies | Sequential - aborts the current measurement |

7.2.15 Select Limit

Selects the Limit register into which the recalled **Limit** will be placed, for example, **Limit 1**.

| | |
|--------|--|
| Preset | Not part of Preset , but is reset to LLIN1 by Restore Mode Defaults Survives shutdown |
|--------|--|

7.2.16 Correction

Allows you to import Amplitude Corrections files in the PC-readable CSV format.

Amplitude Correction files contain the correction data in a form that can be imported into Excel or similar spreadsheets, as well as header data that provides information on the correction.

For backwards compatibility, older limit files with the extensions **.amp**, **.cbl**, **.ant** and **.oth** can be read into the instrument.

A set of preloaded **Corrections** files can be found in the directory:

My Documents\EMC Limits and Ampcor\Ampcor

The default path for CSV files is:

My Documents\amplitudeCorrections

Antenna corrections are a particular kind of Amplitude Corrections – they are distinguished in the corrections file by having **Antenna Unit** set to a value other than **None**. When the Amplitude Correction is an Antenna correction and the **Antenna Unit** in the file is not **None**, the Y-Axis Unit setting changes to match the Antenna (Transducer) Unit in the file.

| | |
|----------------|---|
| Remote Command | :MMEMory:LOAD:CORRection 1 ... 8, <filename> |
| Example | Recall the Amplitude Correction data from the file myAmpcor.csv in the current directory to the 2nd Amplitude Correction table, and turns on Correction 2: |

7 Save/Recall/Print
7.2 Recall

| | |
|------------------------------|---|
| | <code>:MME:LOAD:CORR 2, "myAmpcor.csv"</code> |
| Dependencies | <p>Only one Transducer units can be on at any given time. Note that this means that if a correction file with a Transducer Unit is loaded into a particular Correction, all other Corrections are set to that same Transducer unit</p> <p>Corrections are not supported by all Measurements. If in a Mode in which some Measurements support it, this key is grayed-out in measurements that do not. The key does not show at all if no measurements in the Mode support it</p> <p>Errors are reported if the file is empty or missing, or if the file type does not match, or if there is a mismatch between the file type and the destination data type</p> <p>This key does not appear unless you have the proper option installed in your instrument</p> <p>This command will generate an "Option not available" error unless you have the proper option installed in your instrument</p> |
| Couplings | When a correction file is loaded from mass storage, it is automatically turned on (CorrectionON) and Apply Corrections is set ON . This allows you to see its effect, thus confirming the load |
| Annotation | After recall is complete, an advisory is displayed in the message bar confirming which file was recalled |
| Backwards Compatibility SCPI | <code>:MME:LOAD:CORRection ANTenna CABLe OTHer USER, <filename></code> |
| | For backwards compatibility, ANTenna maps to 1, CABLe maps to 2, OTHer maps to 3 and USER maps to 4 |

7.2.17 Select Correction

Selects the register into which the recalled **Correction** will be placed, for example, **Correction 1**.

| | |
|--------|---|
| Preset | Not part of Preset , but reset to Correction 1 by Restore Input/Output Defaults Survives a shutdown |
|--------|---|

7.2.18 Complex Correction

Imports **Complex Corrections** files in the PC-readable **.s2p** format.

Complex Correction files contain amplitude and phase correction data in a form that can be imported into Excel or similar spreadsheets, as well as header data that gives information on the correction.

The default path for Complex Corrections files is:

`My Documents\complexCorrections\`

| | |
|----------------|---|
| Remote Command | <code>:MME:LOAD:CCORrection <integer>, <filename></code> |
| Example | <p>Recall the Complex Correction data from the file mycor.s2p in the current directory to the 2nd Complex Correction table, and turns on Complex Correction 2:</p> <p><code>:MME:LOAD:CCOR 2, "mycor.s2p"</code></p> |

| | |
|--------------|---|
| Dependencies | Not supported by all measurements. The tab does not appear at all if no measurements in the Mode support it Errors are reported if the file is empty or missing, or if the file type does not match, or if there is a mismatch between the file type and the destination data type |
| Couplings | When a complex correction file is loaded from mass storage, it is automatically turned ON and Apply Corrections is set ON . This allows you to see its effect, thus confirming the load |
| Annotation | After recall is complete, an advisory is displayed in the message bar confirming which file was recalled |

7.2.19 Select Complex Correction

Selects the register into which the recalled **Complex Correction** will be placed, for example, **Complex Correction 1**.

| | |
|--------|---|
| Preset | Not part of Preset , but is reset to Correction 1 by Restore Input/Output Defaults Survives a shutdown |
|--------|---|

7.2.20 Recall VDI CCD Correction

Imports VDI CCD External Mixer Correction files in the PC-readable CSV (.csv) format.

The default path for VDI CCD External Mixer Correction files is the instrument's **My Documents** folder.

| | |
|----------------|--|
| Remote Command | <code>:MMEMory:LOAD:VCORrection <filename></code> |
| Example | <code>:MMEM:LOAD:VCOR "vdi_ccd_corr.csv"</code> |
| Dependencies | Requires the EXW (External Mixing Wide Bandwidth) and Ampcor (Amplitude Correction) licenses VDI CCD Corrections are not supported by all measurements. The tab does not appear at all if no measurements in the Mode support it Errors are reported if the file is empty or missing, or if the file type does not match, or if there is a mismatch between the file type and the destination data type If the file is empty, message -250 is reported. If the file does not exist, message -256 is reported. If there is a mismatch between the file and the destination data type, message -250 is reported |
| Couplings | When a VDI CCD correction file is loaded into memory, if the correction matches the current external mixer setup and " Select VDI CCD Correction " on page 2186 is NONE , the selected VDI CCD Correction is set to the serial number of the matching correction data |
| Annotation | After recall is complete, an advisory is displayed in the message bar confirming which file was recalled |

7.2.21 SCPI Recorder

Contains controls to let you recall SCPI recordings.

7.2.22 Recall From File

Recalls a previously saved SCPI Recorder file. For details of the SCPI Recording feature, see "[SCPI Recorder](#)" on page 2010.

After the file contents have been read, each of the SCPI commands or queries present in the file at the time of recall is applied to the system. If the file is from another instrument, or from a different model, some commands may cause unexpected data changes as each is applied. If any commands result in errors, the command(s) and the corresponding error(s) are displayed after playback is completed.

Recalling a SCPI recording plays the contents of the file immediately after recall. You can view the content of the file in the SCPI recorder dialog. If there are any entries in the SCPI recorder, you are prompted either to keep the previously recorded data, or let it be discarded.

If you choose to discard the data, all existing recording entries are cleared, and the SCPI recorder is populated with the recalled data.

If you choose to keep the existing recorded data, the recalled file content is appended to the existing recording.

NOTE

Some SCPI entries in the recorded file may require the presence of other files, if a command in the recorded file specifies the recall of other files.

7.2.23 Mask

The **Mask** data type is used to import and export Mask files for measurements that use masks, such as cellular comms and real-time measurements.

7.2.24 Sequence

These need to be brought over for the EXT and/or Sequence Analyzer when they are available in the Touch UI

7.2.25 Waveform

Recalls waveforms into the ARB memory of an Internal Source.

When you select the **Waveform** tab in the **Save** dialog,, a hint appears saying "Recalls files from Mass Storage to the ARB and lets you manage the ARB memory at the same time."

You then tap **Recall From File** to display the **Recall Waveform** dialog.

The left-hand window shows the files in ARB memory. The right-hand window shows the files on the hard drive.

You can select one or more waveform files in the right-hand window. Each file selected has a blue check box in it. To select a single file, tap that file's row. To select additional files, tap the check box in the row of the desired additional files.

When you have selected the file or files that you wish to recall, tap **Recall**. The file(s) are recalled into the ARB memory, and appear in the left-hand window.

If a file of the same name already exists within ARB memory, it is overwritten. If you wish to load two segments of the same name, you must rename one of the segments before loading it into ARB memory. To rename a segment, you can either use Windows File Explorer, or **:MMEMory:CoPY**.

You can select one or more segments in the left-hand window and tap "Delete Segments from ARB memory" to delete the selected files. You can also delete all files in ARB memory by tapping "Delete All from ARB memory."

You can change the current directory by tapping on an element of the file path at the top of the screen and selecting the desired subdirectory in the list that appears, and repeating until you have the path you want. The current directory is used for manually loading waveform segments into ARB memory for playback, and as a search location for waveform segments that are required to be loaded into ARB memory for playback of a waveform sequence or a list sequence.

File Type allows you to specify a waveform format. The available file types are listed below:

7 Save/Recall/Print
7.2 Recall

| Type | Extension | Notes |
|----------------|-------------------|--|
| Waveform Files | <code>.wfm</code> | Keysight Signal Studio files |
| Binary Files | <code>.bin</code> | Interleaved IQ data files. They could be single precision or double precision customer created files. One-byte marker may be added |
| CSV Files | <code>.csv</code> | Comma-separated value file. Could be generated by Excel |
| Text Files | <code>.txt</code> | |
| Matlab Files | <code>.mat</code> | Should be Level 4, Level 5 or HDF5 MAT-files (only Level 5 Matlab file is supported in X24) |

Waveforms in `.csv`, `.txt` and `.mat` formats are supported by models with a built-in source, such as VXT and EXM.

`.txt` files are formatted according to the following rules:

1. Text files only contain the IQ information. Data in the right column represents the amplitude of real(I) points, Data in the left column represents the amplitude of imaginary(Q) points
2. The amount of data should be multiple of two (IQ pairs)
3. The data range is from $-1e10$ to $1e10$, the data type should be `int`, `float` or `double`. 16 digits or fewer for every data is acceptable
4. The values are separated by comma or tab. Extra commas or tabs are ignored
5. Use **Enter** to separate IQ pairs

Example for text file data:

```
0.46425922, -0.57411048  
0.47184454, -0.58435995  
0.48107329, -0.59014958  
0.49223323, -0.58998679  
0.50419607, -0.58558843  
0.51679158, -0.57721768  
0.53005322, -0.56481976  
0.54373011, -0.54879346  
0.55759183, -0.52950807  
0.57141409, -0.50732489
```

Rules 1–3 above also apply to `.csv` data.

| | |
|--------------|---|
| Dependencies | Only appears if your hardware includes an Internal Source, such as in VXT |
|--------------|---|

7.2.26 Load Segment to ARB Memory

Loads a single segment to ARB memory. Same as pressing the **Recall** button with a single waveform selected.

| | |
|----------------|--|
| Remote Command | <code>:SOURce:RADio:ARB:LOAD <string></code> <code><string></code> - specifies the path name of the file to load from the HDD into ARB memory. May be a <full path + filename>, or <"NVWFM" MSUS + colon + filename> |
| Example | <code>:SOUR:RAD:ARB:LOAD "D:\NVARB\testwaveform.bin"</code> or <code>:SOUR:RAD:ARB:LOAD "NVWFM:testwaveform.bin"</code> |
| Notes | <p>Because loading the file involves a delay of unpredictable length, this command should be followed by <code>*OPC?</code>, which holds off subsequent commands until the loading operation is complete</p> <p>If you specify a file over SCPI, but the file is not at the specified location, an error is generated. If you try to load a waveform file but the file contains less than 500 IQ samples, an error is generated</p> <p>VXT models M9410A/11A/15A/16A and M9410E/11E/15E/16E:</p> <p>If you try to load a waveform file but the file contains less than 1024 IQ samples, an error is generated</p> <p>If you try to load a Signal Studio waveform <code>*.wfm</code> that contains invalid waveform header, an error is generated</p> <p>If the ARB is ON when you load a file to ARB memory or delete a file from ARB memory, the playing waveform segment may not keep phase continuity during the ARB memory operation. The waveform is replayed after the ARB operation is finished</p> <p>ARB can be loaded into ARB memory even if required licenses are not present on the instrument. In this case, a GUI-only warning message -800, "Operation complete; Loaded <filename> successfully, but no license <required licenses> installed". You can install required licenses according to <required licenses> string to license it, or multi-pack license it</p> <p>When in Sequence Analyzer Mode, and Include Source is Yes, an attempt to load a file to ARB memory is rejected with an error. When Include Source is No, and if there is insufficient free ARB memory to load the selected waveform, an error is generated</p> |
| Remote Command | <code>:SOURce:RADio:ARB:LOAD:ALL <string></code> <code><string></code> specifies the directory on the HDD to load the files into ARB memory from |
| Example | <code>:SOUR:RAD:ARB:LOAD:ALL "D:\nvarb"</code> |
| Notes | <p>Loads all the segment files within the currently selected directory into ARB memory. If a file of the same name already exists within ARB memory, it is overwritten. If you wish to load two segments of the same name, you must rename one of the segments before loading it into ARB memory. To rename a segment, either use Windows File Explorer, or <code>:MEMory:COpy</code></p> <p>If you specify a directory over SCPI, but the directory does not exist, an error is generated</p> <p>If the ARB is ON, and you then load or delete a file to ARB memory, the playing waveform segment may not keep phase continuity during the ARB memory operation. The waveform is replayed after the ARB operation is finished</p> <p>When in Sequence Analyzer Mode, and Include Source is Yes, an attempt to load all files from a</p> |

directory to ARB memory is rejected with an error. When **Include Source** is **No** and there is insufficient free ARB memory to load all the waveforms, when the ARB memory is full, the copy ceases, and an error is generated

7.2.27 Delete Segment From ARB Mem

Deletes a segment from ARB memory.

| | |
|----------------|--|
| Remote Command | <code>:SOURCE:RADio:ARB:DElete <string></code> <code><string></code> specifies the waveform to be deleted from the ARB playback memory |
| Example | <code>:SOUR:RAD:ARB:DEL "testwaveform.bin"</code> |
| Notes | <p>It is possible to delete files from within the ARB memory when the ARB is ON. However, if you attempt to delete the file that is currently playing an error is generated</p> <p>It is possible to delete a file from within the ARB memory when the sequencer state is ON, and the file is not being used by the List Sequencer. If you attempt to delete a file that is being used by the list sequencer, an error is generated</p> <p>When the Sequencer state of the List Sequencer is On, even if ARB state is On, the selected waveform will not be played. In this case, if the selected waveform is not used in List Sequence, it can be deleted, and the ARB state is turned Off</p> <p>If the ARB is ON and you load a file to ARB memory or delete a file from ARB memory, the playing waveform segment may not keep phase continuity during the ARB memory operation. The waveform is replayed after the ARB operation is finished</p> <p>When in Sequence Analyzer Mode, and Include Source is Yes, an attempt to delete a file from ARB memory is rejected with an error. When Include Source is No, and you specify a file that does not exist within ARB memory, an error is generated</p> |

7.2.28 Delete All From ARB Memory

Removes all segments from ARB memory.

| | |
|----------------|---|
| Remote Command | <code>:SOURCE:RADio:ARB:DElete:ALL</code> |
| Example | <code>:SOUR:RAD:ARB:DElete:ALL</code> |
| Notes | <p>If you attempt to delete all files from ARB memory when there are waveform files used in the Sequencer function of the List Sequencer and the Sequencer state is ON, all files except the files currently being used in list sequencer are deleted, and an error is generated</p> <p>If the ARB is ON and you load a file to ARB memory or delete a file from ARB memory, the playing waveform segment may not keep phase continuity during the ARB memory operation. The waveform is replayed after the ARB operation is finished</p> <p>When in Sequence Analyzer Mode, and Include Source is Yes, an attempt to delete all files from ARB memory is rejected with an error. When Include Source is No, and you attempt to delete all files from ARB memory when the ARB is currently playing a file, all files except the one playing are deleted and an error is generated</p> |

7.2.29 Set Default Directory (Remote Command Only)

Sets the default directory for loading ARB files from SCPI.

| | |
|----------------|--|
| Remote Command | <code>:SOURce:RADio:ARB:DEFault:DIRectory <string></code> <code>:SOURce:RADio:ARB:DEFault:DIRectory?</code> |
| Example | <code>:SOUR:RAD:ARB:DEF:DIR "D:\ArbFiles"</code> <code>:SOUR:RAD:ARB:DEF:DIR?</code> |
| Notes | Sets the default directory to be used as a search location for waveform segments that are required to be loaded into ARB memory for playback of a waveform sequence, and as a search location for selecting waveforms using SCPI |
| State Saved | Persistent, survives a power cycle and a preset but not saved in the instrument state |

7.2.30 Query ARB Memory File List (Remote Query Only)

Queries the instrument for the list of waveform segments in the ARB memory.

NOTE

Returns a string for waveform segment names in ARB memory. If you want a string list of waveform segments in the ARB memory, use **"Query ARB Memory Full File List (Remote Query Only)"** on page 2365.

| | | | | | | | |
|--------------------------------|--|------------------------------|-------------|------------------------------|-------------|--------------------------------|---|
| Remote Command | <code>:SOURce:RADio:ARB:CATalog?</code> | | | | | | |
| Example | <code>:SOUR:RAD:ARB:CATalog?</code> | | | | | | |
| Notes | The return data is in the following format: <table border="1"> <tr> <td><code><integer></code></td> <td>memory used</td> </tr> <tr> <td><code><integer></code></td> <td>memory free</td> </tr> <tr> <td><code><string>...</code></td> <td>comma separated list of waveform segments within ARB memory</td> </tr> </table> | <code><integer></code> | memory used | <code><integer></code> | memory free | <code><string>...</code> | comma separated list of waveform segments within ARB memory |
| <code><integer></code> | memory used | | | | | | |
| <code><integer></code> | memory free | | | | | | |
| <code><string>...</code> | comma separated list of waveform segments within ARB memory | | | | | | |

7.2.31 Query ARB Memory Full File List (Remote Query Only)

Queries the instrument for the string list of waveform segments in the ARB memory. Returns a string list for waveform segment names in the ARB memory.

| | |
|----------------|---|
| Remote Command | <code>:SOURce:RADio:ARB:FCATalog?</code> |
| Example | <code>:SOUR:RAD:ARB:FCATalog?</code> |
| Notes | The return data is in the following format: |

| | |
|------------------------------------|--|
| <integer> | Memory used |
| <integer> | Memory free |
| <integer> | File count in ARB memory |
| <string>,<string>, ... <string> | Comma-separated string list of waveform segments within ARB memory |

Example:

`:SOUR:RAD:ARB:FCAT?`

EXT returns: 27499,2069653,3,"c2k.wfm","gsm.wfm","wcdma.wfm"

7.2.32 Demod Info

Recalls various **Demod Info** data types to help you setup your measurement. The available data types vary depending on which measurement you are in.

7.2.33 Data Type (WLAN EVM / MIMO EVM Measurement)

There are several Demod Info Data Types available. You can choose which data type you want to recall using the radio button control in the **Recall** menu.

7.2.34 OFDMA Setup

Recalls an OFDMA Setup file to demod/decode signal correctly for Trigger-Based signal or for signals that SIG info is not correct.

OFDMA Setup File (*.csv) Format

| | | | |
|---|-----|----|-----|
| SIG-B Symbols | 5 | | |
| HE-SIG-B / EHT-SIG symbols | | | |
| ofdm11axTBAfactor | 1 | | |
| Pre-FEC Padding Factor (decode only) | | | |
| ofdm11axTBPeDisambgty | 0 | | |
| PE Disambiguity (decode only) | | | |
| ofdm11axTBStbc | 0 | | |
| STBC (decode only) | | | |
| ofdm11axTBLdpcExtraSymSeg | 1 | | |
| LDPC Extra Symbol Segment (decode only) | | | |
| Vector-RU Size | 106 | 26 | 106 |
| Vector-RU State | 1 | 0 | 0 |

| | | | |
|---|--------|--------|--------|
| Vector-Number of Users Per each RU | 1 | 1 | 1 |
| Vector-Number of STS Per each user in each RU | 1 | 1 | 1 |
| Vector-Number of Tx Chains Per each RU | 1 | 1 | 1 |
| Vector-Modulation Format Per each user in each RU | 256QAM | 256QAM | 256QAM |
| Vector-MCS Per each user in each RU | 8 | 8 | 8 |
| Vector-CodingType Per each user in each RU | 1 | 1 | 1 |
| Vector-DCM Per each user in each RU | 0 | 0 | 0 |

Following is the detailed explanation of each parameter.

Some parameters are noted as 'decode only' which indicates that these parameters are just used for data decoding. If 'Data Decode' is disabled, there is no need to specify these parameters in OFDMA setup file.

| | |
|--|---|
| SIG-B Symbols HE-SIG-B / EHT-SIG symbols | The number of HE-SIG-B / EHT-SIG symbols |
| ofdm11axTBAfactor Pre-FEC Padding Factor (decode only) | Pre-FEC Padding Factor 4 : Pre-FEC Padding Factor 0 1: Pre-FEC Padding Factor 1 2: Pre-FEC Padding Factor 2 3: Pre-FEC Padding Factor 3 |
| ofdm11axTBPDisambgty PE Disambiguity (decode only) | PE Disambiguity 0: no PE disambiguity 1: PE disambiguity |
| ofdm11axTBStbc STBC (decode only) | STBC 0: no STBC encoding; 1: STBC encoding |
| ofdm11axTBLdpcExtraSymSeg LDPC Extra Symbol Segment (decode only) | LDPC Extra Symbol Segment 0: LDPC extra symbol segment is not present; 1: the LDPC extra symbol segment is present |
| Vector-RU Size | RU size of each RU |
| Vector-RU State | Enable state of each RU, 0 disable, 1 enable |
| Vector-Number of Users Per each RU | User number of each RU |
| Vector-Number of STS Per each user in each RU | Stream number of each RU |
| Vector-Number of Tx Chains Per each RU | Channel number of each RU |
| Vector-Modulation Format Per each user in each RU | Modulation format of each user in each RU. BPSK, QPSK, 16QAM, 64QAM, 256QAM, 1024QAM, 4096QAM are valid input |

7 Save/Recall/Print

7.2 Recall

| | |
|--|--|
| Vector-MCS Per each user in each RU | MCS of each user in each RU. 0~15 |
| Vector-CodingType Per each user in each RU (decode only) | Coding type of each user in each RU 0: BCC; 1: LDPC |
| Vector-DCM Per each user in each RU (decode only) | DCM state of each user in each RU 0: DCM is not used; 1: DCM is used |

Following is valid Vector-RU Size.

| RU/MRU Size in 11be specification | RU Size in X-apps RU Allocation setup file |
|--|---|
| 26 | 26 |
| 52 | 52 |
| 26+52 | 78 |
| 52+26 | 79 |
| 52+26(Center26) | 80 |
| 106 | 106 |
| 26+106 | 132 |
| 106+26 | 133 |
| 242 | 242 |
| 484 | 484 |
| []+242+484 | 726 |
| 242+[]+484 | 727 |
| 484+[]+242 | 728 |
| 484+242+[] | 729 |

| 996+996+996+484+[] | 3479 |
| 4x996 | 3984 |

| | |
|---------------------------------|---------------------------------------|
| Remote Command | :MMEMory:LOAD:RUALlocation <fileName> |
| Example | :MMEM:LOAD:RUAL "mySetup.csv" |
| Backwards Compatibility SCPI | :MMEMory:LOAD:AXConfig <fileName> |

7.2.35 Reference Symbols

Load Reference Symbols (I/Q data).

| | |
|----------------|---|
| Remote Command | :MMEMory:LOAD:REFS <filename> |
| Example | :MMEM:LOAD:REFS 'RefSymbols_0001.csv' |
| Notes | The file format interleaves I/Q ref symbols <i>without</i> commas, for example: I Q |

| | |
|--|-----|
| | I |
| | Q |
| | ... |

| | |
|------------------------------|---|
| Status Bits/OPC dependencies | Sequential - aborts the current measurement |
|------------------------------|---|

7.2.36 Power Sensor Cal Factor

Selects a file to which to export the Power Sensor Cal factor data.

Cal Factor files are XML files, and contain the cal factor data and header data that gives information on the power sensor.

The default path for **Cal Factor** Files is:

`My Documents\<<mode name>\data\PSCF`

where `<mode name>` is the parameter used to select the mode with `:INST:SEL` (for example, `MRECEIVE` for Measuring Receiver Mode). Hence, a **Cal Factor** file from any measurement in the Measuring Receiver mode would be stored in:

`My Documents\MRECEIVE\data\PSCF`

Cal Factor files have the extension `.xml`. The default filename is `<Sensor Model>_<Sensor Serial Number>_0000.xml`, where the 4-digit number is the lowest number that does not conflict with any filename in the current directory. If the sensor model or serial number is blank, the default filename is `PSCF_0000.xml`.

| | |
|----------------|---|
| Remote Command | <code>:MMEMory:STORe:PSCFactor <file_name></code> |
| Example | <code>:MMEM:STOR:PSCF "myPSCF.xml"</code> |
| Notes | <p>If the save is initiated via SCPI, and the file already exists, the file will be overwritten</p> <p>Using the C: drive is strongly discouraged, since it runs the risk of being overwritten during an instrument software upgrade</p> <p>Both single and double quotes are supported for any filename parameter over SCPI</p> |
| Dependencies | Only appears if you have the proper option installed in your instrument |

7.2.37 Recording

Lets you specify a data type (for example, I/Q data) and select a file from which to import the data, then the data can be routed to the measurement engine as though it were being acquired from the Input.

The recording and playback of signal data files is a multi-step process that involves controls in several menus.

The menus that are involved in Record/Playback are:

- **Save**, "**Recording**" on page 2430 (under the **Save** hardkey or the **Save** icon in the **File** panel)
- **Recall**, **Recording** (this menu)
- **Sweep**, **Recording** tab
- **Sweep**, **Playback** tab
- **Input/Output**, "**Data Source**" on page 2223 tab

NOTE

A complete tutorial for the Record/Playback functionality, including how to load and save Recording files, can be found under the **Data Source** tab in **Input/Output**.

| | |
|--------------|---|
| Dependencies | Only available in the following modes and measurements: <ul style="list-style-type: none">- VMA (Digital Demod and Custom OFDM)- 5G NR (Modulation Analysis)- LTE (Modulation Analysis)- WLAN (Modulation Analysis, MIMO Modulation Analysis, Spectral Flatness)- Analog Demod- Bluetooth (Transmit Analysis)- IoT & SRComms (LoRa CSS Demod) |
|--------------|---|

7.2.38 Data Type

Allows you to recall IQ data from the measurement using a specified file type (**CSV**, **SDF**, **TXT**, **BIN**, **BINX**, **BINF**, **ORB**). See "**Recording**" on page 2370 for details about the available file types.

Note that **BIN**, **BINX** and **BINF** files do not include sampling rate information inside the file, so after recalling one of these file types you will need to set the Sample Rate in **Sweep, Playback**., based on your note of the Sample Rate that was displayed on the **Sweep, Recording** menu panel when you saved the file.

Example `:MMEM:LOAD:RECORDING "C:\TEMP\MyIQData.csv"`

7.2.39 Channel

Select data channels to recall. This is only supported in the 5GNR EVM, VMA Digital Demod, VMA Custom OFDM and WLAN MIMO EVM measurements.

The `<meas>` param in the command must be replaced with the node of the active measurement:

- `EVM` for 5GNR EVM
- `EVMM` for WLAN MIMO EVM
- `DDEM` for VMA Digital Demod
- `OFDM` for VMA Custom OFDM

| | |
|----------------|---|
| Remote Command | <code>:MMEMory:LOAD:<meas>:RECORDing:CHANnel ALL CH1 CH2 CH3 CH4 CH5 CH6 CH7 CH8</code> <code>:MMEMory:LOAD:<meas>:RECORDing:CHANnel?</code> |
| Example | <code>:MMEM:LOAD:EVM:REC:CHAN CH1</code> <code>:MMEM:LOAD:EVM:REC:CHAN?</code> |
| Preset | <code>ALL</code> |
| State Saved | No |
| Range | <code>ALL CH1 CH2 CH3 CH4 CH5 CH6 CH7 CH8</code> |

7.2.40 Reset

Clears all recalled data channels.

This is only supported by 5GNR EVM, VMA Digital Demod, VMA Custom OFDM and WLAN MIMO EVM measurements.

The `<meas>` param in the command must be replaced with the node of the active measurement:

- `EVM` for 5GNR EVM
- `EVMM` for WLAN MIMO EVM
- `DDEM` for VMA Digital Demod
- `OFDM` for VMA Custom OFDM

| | |
|----------------|---|
| Remote Command | <code>:MMEMory:LOAD:<meas>:RECORDing:RESet</code> |
|----------------|---|

Example `:MME:LOAD:EVM:REC:RES`

7.2.41 Recalled data channel table (Display only)

Displays recalled IQ data file for each channel in a table.

7.2.42 CC Setup

You can recall a **Component Carrier Setup** file, which sets up the 5G NR Modulation Analysis measurement with the settings in the file.

Using the **Component Carrier** dropdown, you can specify which component carrier you wish to apply this setup to, or **ALL**.

The following file formats are supported:

| Format | Extension |
|---|-----------|
| Signal Studio N7631C Setup | .scp |
| M9384B VXG 5GNR Setup | .sgen |
| PWSG Desktop Setup | .pwsg |
| 89600 VSA 5GNR Setup | .setx |
| X-Series Measurement Application 5GNR Component Carrier Setup | .nrcc |

Remote Command `:MME:LOAD:EVM:SETup ALL | CC0 | CC1 | CC2 | CC3 | CC4 | CC5 | CC6 | CC7 | CC8 | CC9 | CC10 | CC11 | CC12 | CC13 | CC14 | CC15,<string>`

Example `:MME:LOAD:EVM:SET CC0,"mySetup.scp"`

Status Bits/OPC dependencies Sequential - aborts the current measurement

7.2.43 Frame Index (.scp and .pwsg only)

Signal Studio (N7631C) and PWSG desktop may have configuration for multiple frames. This parameter specifies which frame's configuration will be recalled in 5GNR Modulation Analysis measurement from a **.scp** or **.pwsg** file.

Remote Command `:MME:LOAD:EVM:FRAMe <int>`
`:MME:LOAD:EVM:FRAMe?`

Example `:MME:LOAD:EVM:FRAM 1`
`:MME:LOAD:EVM:FRAM?`

Preset 0

| | |
|-------------|-----|
| State Saved | No |
| Min | 0 |
| Max | 100 |

7.2.44 Close VSA after recall (.setx only)

Automatically launches VSA (VSA 2021 or later version with valid license is required) in the background, if it is needed to recall the specified **.setx** file. This provides recalled settings to the 5GNR EVM measurement through an internal API. This process will be slower and will consume more memory, because VSA is running in the background.

Lets you specify whether VSA will be closed after recalling the current **.setx** file:

- ON** Close VSA to improve performance and minimize memory usage
- OFF** Keep VSA running to allow faster recall of additional **.setx** files

| | |
|----------------|--|
| Remote Command | :MMEemory:LOAD:EVM:VSA:RELease 0 1 OFF ON :MMEemory:LOAD:EVM:VSA:RELease? |
| Example | :MMEEM:LOAD:EVM:VSA:REL 1 :MMEEM:LOAD:EVM:VSA:REL? |
| Preset | OFF |
| State Saved | No |
| Range | OFF ON |

7.2.45 Custom IQ Constellation State

Selects a text (**.txt**) file from which to import the Constellation States definition for the Custom IQ modulation type. This file format is the same as Signal Studio N7608C Custom IQ constellation file format and VMA Digital Demod measurement Custom IQ. To use a recalled constellation, change the PDSCH/PUSCH MCS to -1, then change the modulation format to Custom IQ.

A preloaded **Constellation State** file can be found under VMA directory:

My Documents\VMA\data\DDEMOD\ConstlnState

| | |
|----------------|--|
| Remote Command | :MMEemory:LOAD:EVM:CONStln:STATe <string> |
| Example | Import the constellation state from the file myConstlnState.txt in the current path: :MMEEM:LOAD:EVM:CONS:STAT "myConstlnState.txt" |
| Dependencies | Only appears in 5GNR Mode, in the Modulation Analysis measurement Errors are reported if the file is empty or missing, or if the file type does not match, or if there is a |

| | |
|------------|---|
| | mismatch between the file type and the destination data type |
| Annotation | After recall is complete, an advisory is displayed in the message bar confirming the constellation state was loaded |

7.2.46 Memory Polynomial and Volterra Coefficients Files

This section includes details of:

- ["Sample file" on page 2375](#)
- ["Coefficient Lengths" on page 2377](#)
- ["How to apply the coefficients to signal" on page 2378](#)

7.2.47 Sample file

The following is a sample file for a Volterra coefficients file, with Memory order = 4, Nonlinear order = 9, Cross term order = 2, and Odd Order Only = True.

The file format is simple and explicit.

`DPD_ModelType,Volterra`

`DPD_MemoryOrder,4`

`DPD_NonlinearOrder,9`

`DPD_CrossTermOrder,2`

`DPD_OddOrderOnly,True`

`DPDScale` is average rms voltage of PA_Out waveform when extracting DPD model coefficients and can be used with 3 steps:

1. Calculate rms voltage ratio of PA_Out waveform to PA_In waveform which is normalized
2. Apply ratio got from step 1 on normalized PA_In waveform by multiplying calculation
3. Apply DPD model coefficients on waveform got from step 2 to get pre-distorted waveform which then to be normalized before downloading to signal generator

`DPD_Scale,0.099999999999999086`

DPD Model coefficients:

`(1.00223 + 0.00970452i)`

`(-0.001965723 - 0.01462447i)`

7 Save/Recall/Print
7.2 Recall

 (-3440.768 + 15373.81i)
 (230.9595 - 1877.854i)
 (308.9818 - 5781.878i)
 (126.123 + 1276.467i)

7.2.48 Coefficient Lengths

The coefficient lengths depend on the following settings:

| | |
|-----------------------------|------------------------------------|
| <code>ModelType</code> | Memory Polynomial (MP) Volterra |
| <code>MemoryOrder</code> | integer |
| <code>NonlinearOrder</code> | integer |
| <code>CrossTermOrder</code> | integer |
| <code>OddOrderOnly</code> | True/false |

ModelType is MP

If `OddOrderOnly` is false, then $\text{CoeffsLength} = \text{NonlinearOrder} * (\text{MemoryOrder} + 1)$, otherwise $\text{CoeffsLength} = \text{Int}((\text{NonlinearOrder} + 1)/2) * (\text{MemoryOrder} + 1)$

ModelType is Volterra

In the following formulae, $K = \text{integer value of } (\text{NonlinearOrder} + 1) / 2$

| OddOrderOnly | NonlinearOrder Modulo 2 | CoeffsLength |
|--------------|-------------------------|--|
| True | 0 | $\text{NonlinearOrder} * (\text{MemoryOrder} + 1) + \text{CrossTermOrder} * K * K$ |
| True | Not 0 | $\text{NonlinearOrder} * (\text{MemoryOrder} + 1) + \text{CrossTermOrder} * K * (K - 1)$ |
| False | All | $K * (\text{MemoryOrder} + 1) + \text{CrossTermOrder} * K * (K - 1) / 2$ |

7.2.49 How to apply the coefficients to signal

The coefficient terms include three parts and $x(n)$ is the signal

The first $(M+1)$ terms are linear ones:

$$\sum_{m=0}^M A_m x(n - m)$$

1. The next $[(N-1)/2*(M+1)]$ terms are nonlinear memory ones:

$$\sum_{m=0}^M \sum_{\substack{n=3 \\ \text{odd}}}^N B_{mn} x(n - m) |x(n - m)|^{n-1}$$

2. Cross terms

$$\sum_{\substack{i=3 \\ \text{odd}}}^N \sum_{\substack{k=2 \\ \text{even}}}^{i-1} \sum_{m=1}^{M_c} C_{ikm} x(n) |x(n)|^{i-k-1} |x(n - m)|^k$$

N is nonlinear order (odd number), M is memory order, M_c is cross term memory order

According to the sample file above, $N=9$, $M=4$, $M_c=2$ and $\text{OddOrderOnly} = \text{True}$, the length of coefficients = 45 including 5 for linear items and 20 nonlinear items and 20 cross items

The DPD model coefficients are as below:

$$Y(n) = \sum_{m=0}^M A_m x(n - m) + \sum_{\substack{m=0 \\ \text{odd}}}^M \sum_{\substack{n=3 \\ \text{odd}}}^N B_{mn} x(n - m) |x(n - m)|^{n-1} + \sum_{\substack{i=3 \\ \text{odd}}}^N \sum_{\substack{k=2 \\ \text{even}}}^{i-1} \sum_{m=1}^{M_c} C_{ikm} x(n) |x(n)|^{i-k-1} |x(n - m)|^k$$

$Y(n)$ is the predistorted signal, $X(n)$ is the reference signal.

7.2.50 Loss Comp

Sets the import file type to Loss Compensation Before DUT Table or to Loss Compensation After DUT Table.

| | |
|------------------------------|---|
| Mode | NFIGURE |
| Parameter Name | Recall Loss Comp |
| Control Path | Recall |
| Parameter Type | ImmediateAction |
| SCPI Command | :MMEMory:LOAD:LOSS BEFore AFTEr,<file_name> |
| SCPI Example | :MMEM:LOAD:LOSS BEF,"C:\LossBefore.csv" :MMEM:LOAD:LOSS AFT,"C:\LossAfter.csv" |
| Notes | Three file formats are supported: <ul style="list-style-type: none"> - Loss Compensation file (.csv) - Legacy Loss Compensation file (.loss) - S parameter file (.s2p) |
| Soft Key Label | Loss Comp |
| Backwards Compatibility SCPI | :MMEMory:LOAD:LOSS |
| Initial S/W Revision | A.04.00 |

For **.s2p** files, only the **S21** component is used for the loss compensation.

The CSV format contains the following data:

File Type

Application Name: Measurement Name

Version and Model Number

Loss Comp Data

Below is an example of a valid CSV Loss Compensation file:

```
[Filetype LossCompensation]
```

```
[NF:NFIG]
```

```
Ver. ***, Model ***
```

```
10, 1.0000
```

```
20, 2.0000
```

```
30, 3.0000
```

```
40, 4.0000
```

```
50, 5.0000
```

```
60, 6.0000
```

7.2.51 Data Pattern

Lets you choose a file from which to import the data pattern for generating an NRZ waveform to be used by the Audio Generator ARB.

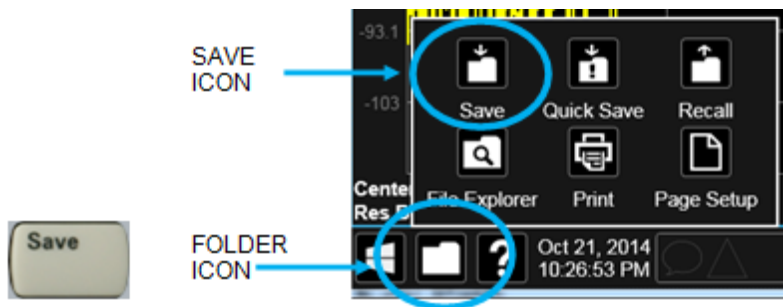

Data Pattern files are CSV files, containing the bit pattern data in a form that can be imported into Excel or similar spreadsheets.

Data Pattern files have the extension **.csv**.

| | |
|------------------------------|--|
| Remote Command | <code>:MMEMemory:LOAD:RTS:DATA:PATtern <filename></code> |
| Example | Import the data pattern from the file <code>myDataPattern.csv</code> in the current path: <code>:MME:LOAD:RTS:DATA:PATT "myDataPattern.csv"</code> |
| Dependencies | Errors are reported if the file is empty or missing, or if the file type does not match, or if there is a mismatch between the file type and the destination data type |
| Annotation | After recall is complete, an advisory is displayed in the message bar confirming the sync pattern strings were loaded |
| Status Bits/OPC dependencies | Sequential - aborts the current measurement |

7.3 Save

The **Save** dialog lets you save states, traces, screen images and other items from the instrument to files on the instrument's internal storage, to removable devices, and to directories on the network. You access the dialog by pressing the **Save** hardkey, or by pressing the folder icon at the bottom of the display and then pressing the **Save** icon.

The dialog has tabs running down the left side, which you use to specify what you want to save.

You choose the save item and then complete the save by choosing a register or file location to which to save the item.

Notes No remote command for this key specifically, but `:MMEM:STORE` is available for specific file types
Example: `:MMEM:STOR:STATE <filename>`

7.3.1 Save to File / Save As

For every Save type, a control appears labeled **Save to File** or **Save As**. **Save to File** appears for save types that also include registers (like State and Trace+State), and **Save As** appears for all other save types.

When you press **Save to File** or **Save As**, a dialog slides in from the right that allows you to see what files are already saved in the current directory.

The default directory is the internal directory for the current Mode and save type, on

the **D:** drive. You may also change to another Mode's state directory by pressing the dropdown in the upper right corner labeled **Mode**. Once you have chosen a directory, the files in that directory whose extension matches the current data type (for example, **.state** or **.trace**) are displayed in the right-hand window of the dialog. You can sort this list by name, date, file size or extension by tapping the Name, Date, Size, or Content header at the top of each column. A second tap toggles the sort order between Ascending and Descending.

Also displayed is a path depiction showing the path to the current directory. In the example above, the path is **D:\Users\Instrument\Documents\SA\screen**. Tapping any element of this path lets you select an alternate route. Tapping the **Computer** arrow lets you select a different drive.

Tapping the "Back" arrow navigates to the previously selected directory.

Note: Using the C: drive is strongly discouraged, due to the risk of data being overwritten during an instrument software upgrade.

If you plug in a removable drive (for example, a thumb drive), the browser immediately navigates to the root of that drive. Furthermore, if you had a thumb drive in and you were in a directory on the thumb, and then you exit the browser, when you come back in you are still in the same directory on that removable drive. If you remove the thumb drive, you return to the directory you had been in before the thumb drive was plugged in.

Note that for each data type there is a "current" directory, and it is the last directory used by either Save or Recall for that Mode. For example, if in SA Mode you save a Corrections file to a particular directory, then when you go to recall a Correction in SA Mode, you should be pointing at that directory. Or if in EMC Mode you recall a Limit from a particular directory then when in EMC Mode you go to save a Limit, it should be pointing at that same directory. There is one "current" directory for each data type for each Mode (not one for Save and one for Recall).

The Filename field, just below the Path field, shows the filename that will be used. The **File Name** field is initially loaded with an automatically generated filename specific to the appropriate Save Type. The automatically generated filename is guaranteed not to conflict with any filename currently in the directory. You may edit the filename by tapping it, which brings up the onscreen alpha keyboard. Press the "Done" button on this keyboard when you are done editing.

Select a file to overwrite, type in a file name, or use the name suggested by the instrument (guaranteed not to conflict with any file in the current directory), and press Save. If the file specified already exists, a dialog will appear that allows you to replace the existing file by selecting **OK**, or you can Cancel the request.

After a successful save, a message "File <filename> saved" or "State Register <register number> saved" is displayed in an info box for a few seconds.

See ["Quick Save" on page 2344](#) for details of the automatic file naming algorithm.

7.3.2 State

Selects a register or file for saving the state.

State files contain essentially all the information required to return the instrument to the measurement and settings that were in effect at the time of the save. **State** files are in a proprietary binary form (for speed) and cannot be read or edited by PC software, but can be loaded back into the instrument to restore the state.

State files contain all the settings of the **Input/Output** system as well, even though **Input/Output** variables are outside of the Mode's state and unaffected by **Mode Preset**, because these are needed to restore the complete setup.

Persistent System settings (for example, GPIB address) are affected by neither **Mode Preset** nor **Restore Mode Defaults**, nor are they included in a saved **State** file.

For rapid saving, the **State** menu lists 16 registers to which you can save states. Pressing a **Register** button initiates the save. You can also select a file to which to save by pressing **Save to File**.

The default path for all **State** files is:

`My Documents\<mode name>\state`

where `<mode name>` is the parameter used to select the Mode with `:INST:SEL` (for example, `SA` for Spectrum Analyzer Mode).

State files have the extension `.state`. The default filename is `State_0000.state`, where the 4-digit number is the lowest number that does not conflict with any filename in the current directory.

NOTE

In products that run multiple simultaneous instances of the X-Series Application, all instances share the same registers and file directories, so take care not to overwrite files and/or registers from one instance that were saved by another instance.

| | |
|----------------|--|
| Remote Command | <code>:MMEMory:STORe:STATe <filename></code> |
| Example | Store the current instrument state data in the file <code>MyStateFile.state</code> in the default directory: <code>:MMEM:STOR:STATe "MyStateFile.state"</code> |
| Notes | Both single and double quotes are supported for any filename parameter over remote After saving to a register, that register's menu key is updated with the date the time, unless a custom label has been entered for that key After saving to a register, you remain in the Save State menu, so that you can see the Register key update. After saving to a file, the instrument automatically returns to the previous menu and any Save As dialog goes away |

| | |
|-----------------------|--|
| Backwards | :MMEMory:STORe:STATe 1,<filename> |
| Compatibility SCPI | The "1" is simply ignored. The command is sequential |

7.3.3 Register 1 thru Register 16

Selecting any one of these register buttons causes the state of the currently active Mode to be saved to the specified **Register**. The registers are provided for rapid saving and recalling, since you do not need to specify a filename or navigate to a file. Each of the register menu keys annotates whether it is empty or at what date and time it was last modified. In addition, you can edit any of the register names to enter custom names for any register.

Although these 16 registers are the only registers available from the front panel, there are 128 state registers available in the instrument. Registers 17-128 are only available from the SCPI interface, using the ***SAV** command.

There is one set of 128 state registers in the instrument, not one set for each Mode. When a state is saved, the Mode it was saved from is saved with it; then when it is recalled, the instrument switches to that Mode.

NOTE

In products that run multiple simultaneous instances of the X-Series Application, all instances share the same registers and file directories, so take care not to overwrite files and/or registers from one instance that were saved by another instance.

The date displayed follows the format specified in the **Date Format** setting under the **Control Panel**. The time shows hours and minutes.

After the save completes, the corresponding register menu key annotation is updated with the date and time and the message **Register <register number> saved** is displayed.

| | |
|---------|--|
| Example | *SAV 1 |
| Range | 1-16 from front panel, 1-128 from SCPI |

7.3.4 Edit Register Names

You may enter a custom name for any of the **Registers**, to help you remember what you are using that state to save. To do this, press the **Name** field for the register you want to rename, which displays the onscreen alpha keyboard. Press **Done** on this keyboard when you are done editing.

The maximum number of characters for a register name is 30. If you delete all the characters in the custom name, it restores the default (time and date).

The register names are stored within the state files, but they are not part of the instrument state; that is, once you have edited a register name, loading a new state will not change that register name. Another consequence of this is that the names will be persistent through a power cycle. Also, if a named state file is transferred to another instrument, it will bring its custom name along with it.

If you try to edit the name of an empty register, the instrument first saves the state to have a file to put the name in. If you load a named state file into an instrument with older firmware, it ignores the metadata.

The ***SAV** and ***RCL** commands are not affected by the custom register names, nor are the **:MMEM** commands.

| | |
|----------------|--|
| Remote Command | <code>:MMEMory:REGister:STATe:LABel <reg number>,"label"</code> |
| Example | <code>:MMEM:REG:STAT:LAB 1,"my label"</code> |
| Notes | <p><code><reg number></code> is an integer from 1 to 16. If the SCPI specifies an invalid register number an error message is generated, -222, "Data out of range; Invalid register label number"</p> <p><code>"label"</code> is a string from 0 to 30 characters in length. If a label exceeds 30 characters, an error message is generated, -150, "String data error; Label clipped to 30 characters"</p> <p><code>"label"</code> of zero length erases the custom label and restores the default (time and date) label. For example, <code>:MMEM:REG:STAT:LAB 1,""</code></p> |
| Preset | The names are unaffected by Preset or power cycle but are set to the default label (time and date) on Restore System Defaults>Misc |

7.3.5 Trace+State

Selects a register or file for saving selected traces and the state.

Trace+State files contain essentially all the information required to return the instrument to the measurement and settings that were in effect at the time of the save, as well as the data for one or all traces. **Trace+State** files are in a proprietary binary form (for speed) and cannot be read or edited by PC software, but can be loaded back into the instrument to restore the state and trace(s).

Trace+State files contain all the settings of the **Input/Output** system as well, even though **Input/Output** variables are outside of the Mode's state and unaffected by **Mode Preset**, because these are needed to restore the complete setup.

Persistent **System** settings (for example, GPIB address) are affected by neither **Mode Preset** nor **Restore Mode Defaults**, nor are they included in a saved **Trace+State** file.

For rapid saving, the **Trace+State** menu lists 16 registers to which you can save trace+state files. The **Trace+State** registers are separate registers from the **State** registers. Pressing a **Register** button initiates the save. You can also select a file to which to save by pressing **Save to File**.

The default path for all **Trace+State** files is the same as that for **State** files:

My Documents\<<mode name>\state

where <mode name> is the parameter used to select the mode with **:INST:SEL** (for example, **BASIC** for IQ Analyzer Mode).

NOTE

In products that run multiple simultaneous instances of the X-Series Application, all instances share the same registers and file directories, so take care not to overwrite files and/or registers from one instance that were saved by another instance.

Trace+State files have the extension **.trace**. The default filename is **State_0000.trace**, where the 4-digit number is the lowest number that does not conflict with any filename in the current directory.

The **Trace+State** selection only appears for measurements that support trace saves. It is blanked for modes that do not support trace saves. Saving **Trace** is identical to saving **State** except a **.trace** extension is used on the file instead of **.state**, and internal flags are set in the file indicating which trace was saved.

See "[More Information](#)" on page 2388.

| | |
|----------------|---|
| Remote Command | <pre>:MMEMory:STORe:TRACe TRACE1 TRACE2 TRACE3 TRACE4 TRACE5 TRACE6 ALL,<filename> :MMEMory:STORe:TRACe:REGister TRACE1 TRACE2 TRACE3 TRACE4 TRACE5 TRACE6 ALL,<integer></pre> |
| Example | <p>Save the file myState.trace on the default path and flags it as a “single trace” file with Trace 1 as the single trace (even though all of the traces are in fact stored):</p> <pre>:MMEM:STOR:TRAC TRACE1,"myState.trace"</pre> <p>Save the file myState.trace on the default path and flags it as an “all traces” file:</p> <pre>:MMEM:STOR:TRAC ALL,"myState.trace"</pre> <p>Store trace 1 data in trace register 2:</p> <pre>:MMEM:STOR:TRAC:REG TRACE1,2</pre> |
| Notes | <p>This command actually performs a Save State, which in the Swept SA measurement includes the trace data. However, it flags it (in the file) as a “save trace” file of the specified trace (or all traces)</p> <p>Some Modes and measurements do not have available all 6 traces. The Phase Noise Mode command, for example, is:</p> <pre>:MMEMory:STORe:TRACe TRACE1 TRACE2 TRACE3 ALL,<filename></pre> <p>Some modes and measurements have more than 6 traces available. The Realtime SA Mode command, for example, is:</p> <pre>:MMEMory:STORe:TRACe TRACE1 TRACE2 TRACE3 TRACE4 TRACE5 TRACE6 TRACE7 TRACE8 TRACE9 TRACE10 TRACE11 TRACE12 ALL,<filename></pre> <p>The range for the register parameter is 1-5</p> <p>When you initiate a save, if the file already exists, a dialog will appear that allows you to replace the existing file by selecting OK or you can cancel the request. If you select OK, the file will be overwritten. Using the C: drive is strongly discouraged, since it runs the risk of being overwritten during an instrument software upgrade</p> |

Both single and double quotes are supported for any filename parameter over remote

After saving to a register, that register's menu key is updated with the date and time of the save

After saving to a register, you remain in the **Save Trace** menu, so that you can see the **Register** key update. After saving to a file, the instrument automatically returns to the previous menu and any **Save As** dialog goes away

More Information

In measurements that support saving **Traces**, for example, Swept SA, the **Trace** data is saved along with the **State** in the **State** file. When recalling the **State**, the **Trace** data is recalled as well. Traces are recalled exactly as they were stored, including the writing mode and update and display modes. If a Trace was updating and visible when the **State** was saved, it returns updating and visible, and its data will be rewritten right away. When you use **State** to save and recall traces, any trace whose data must be preserved should be placed in **View** or **Blank** mode before saving.

The following table describes the **Trace Save** and **Recall** possibilities:

| | | |
|--|---|---|
| You want to recall state and one trace's data, leaving other traces unaffected | Save Trace+State from 1 trace. Make sure that no other traces are updating (they should all be in View or Blank mode) when the save is performed | On recall, specify the trace you want to load the one trace's data into. This trace loads in view. All other traces' data will be unaffected, although their trace mode will be as it was when the state save was performed |
| You want to recall all traces | Save Trace+State from ALL traces | On recall, all traces come back in View (or Blank if they were in Blank or Background when saved) |
| You want all traces to load exactly as they were when saved | Save State | On recall, all traces' mode and data will be exactly as they were when saved. Any traces that were updating will have their data immediately overwritten |

7.3.6 Save From Trace

Selects the trace to be saved. The default is the currently selected trace, selected in this this or any other menu with Trace selection. If you have chosen All then it remains chosen until you specifically change it to a single trace, regardless of the trace selected in the **Trace** menu.

When you select a trace, it makes that trace the current trace, so it displays on top of all of the other traces.

7.3.7 Register 1 thru Register 16

Selecting any one of these register buttons causes the specified trace(s) and the state of the currently active mode to be saved to the specified register. The registers are provided for rapid saving and recalling, since you do not need to specify a filename or navigate to a file. Each of the register menu keys annotates whether it is empty or at what date and time it was last modified. In addition, you can edit any of the register names to enter custom names for any register.

There is one set of 16 trace+state registers in the instrument, not one set for each Mode. When trace+state is saved, the Mode it was saved from is saved with it; then when it is recalled, the instrument switches to that Mode.

NOTE

In products that run multiple simultaneous instances of the X-Series Application, all instances share the same registers and file directories, so take care not to overwrite files and/or registers from one instance that were saved by another instance.

The date displayed follows the format specified in the **Date Format** setting in **Control Panel**. The time shows hours and minutes.

After the save completes, the corresponding register menu key annotation is updated with the date and time and the message **Register <register number> saved** is displayed.

| | |
|---------|--------|
| Example | *SAV 1 |
| Range | 1-16 |

7.3.8 Edit Register Names

You may enter a custom name for any of the registers, to help you remember what you are using that trace+state to save. To do this, press the **Name** field for the register you want to rename, which displays the onscreen alpha keyboard. Press the **Done** button on this keyboard when you are done editing.

The maximum number of characters for a register name is 30. If you delete all the characters in the custom name, it restores the default (time and date).

The register names are stored within the trace+state files, but they are not part of the instrument state; that is, once you have edited a register name, loading a new state does not change that register name. Another consequence of this is that the names are persistent through a power cycle. Also, if a named state file is transferred to another instrument, it brings its custom name along with it.

7 Save/Recall/Print
7.3 Save

If you try to edit the name of an empty register, the instrument will first save the trace+state to have a file to put the name in. If you load a named state file into an instrument with older firmware, it ignores the metadata.

| | |
|----------------|---|
| Remote Command | <code>:MMEMory:REGister:TRACe:LABel <reg number>,"label"</code> |
| Command | <code>:MMEMory:REGister:TRACe:LABel? <reg number></code> |
| Example | <code>:MMEM:REG:TRAC:LAB 1,"my label"</code> |
| Notes | <p><code><reg number></code> is an integer from 1 to 16. If the SCPI specifies an invalid register number an error message is generated, -222, "Data out of range; Invalid register label number"</p> <p><code>"label"</code> is a string from 0 to 30 characters in length. If a label exceeds 30 characters, an error message is generated, -150, "String data error; Label clipped to 30 characters"</p> <p><code>"label"</code> of zero length erases the custom label and restores the default (time and date) label, e.g., <code>:MMEM:REG:TRAC:LAB 1,""</code></p> |
| Preset | The names are unaffected by Preset or power cycle but are set to the default label (time and date) on Restore System Defaults > Misc |

7.3.9 Screen Config + State

Saves the complete configuration of all your screens to a file. You choose a file to which to export the data.

| | |
|----------------|---|
| Remote Command | <code>:MMEMory:STORe:SCONfig <filename></code> |
| Example | Store the current screen configuration in the file <code>myScreenConfig.screen</code> in the default directory: <code>:MMEM:STOR:SCON "myScreenConfig.screen"</code> |

7.3.10 Measurement Data

Specifies a data type (for example, trace data) and choose a file to which to export the data.

Measurement Data files are comma-separated Value (CSV) files, and contain the requested data in a form that can be imported into Excel or similar spreadsheets, as well as header data that gives information on relevant instrument settings at the time the save occurred.

The main application of **Measurement Data** files is for importing data to a PC for analysis, but in some cases **Measurement Data** files can also be imported back into the instrument to recreate the data object that existed at the time of the save. For example, most **Trace** data files can be imported back into the instrument.

The default path for **Measurement Data** Files is:

`My Documents\<mode name>\data`

with the subdirectory reflecting the data type and where `<mode name>` is the parameter used to select the Mode with `:INST:SEL` (for example, `SA` for Spectrum Analyzer Mode) and `<measurement name>` is the parameter used to select the measurement with `:CONF` (for example, `SAN` for Swept SA). For example, a Peak Table file from Swept SA in SA Mode would be stored in:

`My Documents\SA\data\SAN\results`

Measurement Data files have extension `.csv`. The default filename is `Prefix_0000.csv`, where the 4-digit number is the lowest number that does not conflict with any filename in the current directory, and “Prefix” is dependent on the data type:

| Type | Default Prefix |
|--------------------|----------------|
| Traces | Trace_ |
| Measurement Result | MeasR_ |
| Capture Buffer | CapBuf_ |

For example, the default filename for a trace data file in an empty directory would be `Trace_0000.csv`

7.3.11 Save From

Selects the specific item to be saved, for example, if you are exporting trace data you may specify Trace 1, Trace 2, etc.

The default for traces is the currently selected trace, selected in this this or any other menu with Trace selection. If you have chosen **All** then it remains chosen until you specifically change it to a single trace, regardless of the trace selected in the Trace menu. The **All** selection saves all six traces in one CSV file with the x-axis data in the first column and the individual trace data in succeeding columns. The header data and x-axis data in this file reflect the current settings of the measurement. Note that any traces that are in **View** or **Blank** may have different x-axis data than the current measurement settings; but this different x-axis data is *not* output to the file.

| | |
|--------|--|
| Preset | Not part of Preset , but is reset to by Restore Mode Defaults Survives shutdown |
|--------|--|

7.3.12 Data Type

You choose the data type to save by using the radio button selection box. Below are the specifications for Data files for each measurement.

| | |
|--------------|---|
| Notes | There is no SCPI command for Data Type , as the type is implied in the SCPI command for each item |
| Dependencies | The Data Type menu for any given measurement only contains data types that are supported by that measurement |

7.3.13 Meas Results

Meas Results files contain information that describes the current state of the instrument, as detailed in Meas Result File Contents below.

This command is only available in certain measurements, such as:

- PowerSuite: Channel Power, OBW, ACP, Spectrum Emissions Mask, Spurious Emissions, Power Stat CCDF, Transmit Power, Monitor Spectrum, IQ Waveform
- IQ Analyzer: Complex Spectrum
- Phase Noise: Log Plot and Spot Frequency
- WCDMA: Code Domain, Mod Accuracy, Power Control, and QPSK EVM
- Analog Demod: AM, FM, PM and FM Stereo
- Noise Figure
- Pulse

In general, the data in the Meas Results file matches the data which is returned to a measurement data query (`:FETCh?`, `:READ?`, `:MEASure?`). These queries and the results they return are documented for each measurement, and can be found in the Help for that measurement (or in the manual for that measurement) in the section titled **Remote Command Results**.

In the `MeasResults` file, you will see a column for each value of `n`. Each column contains the value for the corresponding value of `n` in the **Remote Command Results** table.

For example, Complex Spectrum allows values of `n` up to 17, and the `MeasResults` file for Complex Spectrum has 17 columns. So, the data returned when you send `:FETCh:SPECTrum1?` matches the data in the column labeled `MeasResult1` of the Meas Results file. See the example below:

Response to FETCh:SPECTrum1?

```
2.125444221E+01,6.487077992E+07,2.050000000E+02,6.004725051E+07,3.9215

237
0
1.00E-07
1
2.36E-05
25

In addition, examples of the Meas Results files are given for each data type in the Help below.

| | |
|------------------------------|---|
| Remote Command | <code>:MMEMoRY:STORe:RESuLts <string></code> |
| Example | <code>:MMEM:STOR:RES "MeasR_0000.csv"</code> |
| Notes | <p>If the save is initiated via SCPI and the file already exists, the file will be overwritten</p> <p>The SCPI command exports measurement results to the file specified as the parameter in the current path. The default path is:</p> <p><code>My Documents\<current mode>\data\<measurement name>\results</code></p> <p>where <code><mode name></code> is the parameter used to select the mode with the <code>:INST:SEL</code> command (for example, <code>SA</code> for Spectrum Analyzer Mode) and <code><measurement name></code> is the parameter used to select the measurement with the <code>:CONF:</code> command (for example, <code>SAN</code> for the Swept SA measurement)</p> <p>Using the <code>C:</code> drive is strongly discouraged, since it runs the risk of being overwritten during an instrument software upgrade</p> <p>The SCPI parameter is a quoted string, which specifies the filename. Both single and double quotes are supported for any filename parameter over SCPI</p> |
| Annotation | After the save is complete, an advisory is displayed in the window so that the user can confirm which file was saved |
| Status Bits/OPC dependencies | Sequential – waits for the previous measurement to complete |

7.3.14 CHP Meas Results File Contents

The file contains measurement results, preceded by the following header information.

- File ID string, which is `MeasResult`
- Mode ID: Measurement ID, for example, `SA:CHP`
- Firmware rev and model number

7 Save/Recall/Print

7.3 Save

- Option string
- Auto Sweep Time Rules
- Average Mode
- Average Number
- Average State
- Center Frequency
- Detector
- Electrical Atten
- Electrical Atten State
- IFGain
- IFGainAuto
- Impedance
- Integ BW
- Internal Preamp
- Internal Preamp Band
- Mechanical Atten
- MechanicalAttenStepEnum
- PSD Unit
- Resolution Band Width
- Resolution Bandwidth Shape
- RRC Filter Alpha
- RRC Filter BW
- RRC Filter State
- Span
- Sweep Points

- Sweep Time
- Sweep Time Auto
- TriggerSource
- Video Bandwidth
- Y Axis Unit

Following the header entries above is a line containing only **MeasResult1** and **MeasResult2**, which flags the start of the measurement results. Each subsequent line consists of two comma-separated values, the **MeasResult1** value and the **MeasResult2** value.

- **MeasResult1** contains the same results as `:MEAS|:READ|:FETCh:CHPower1`
- **MeasResult2** contains the same results as `:MEAS|:READ|:FETCh:CHPower2`

The exported file is in CSV format. When imported into Microsoft Excel or a similar spreadsheet application, a typical file appears as follows:

MeasResult

7.3.15 OBW Meas Results File Contents

The first lines in the OBW Meas results file consist of header information, as follows.

- File ID string, which is "MeasResult"
- Measurement ID following Mode ID, which is "SA:OBW" for example.
- Firmware rev and model number
- Option string
- Auto Sweep Time Rules
- Average Mode
- Average Number
- Average State
- Center Frequency
- Detector
- Electrical Atten
- Electrical Atten State

- IFGain
- IFGainAuto
- Internal Preamp
- Internal Preamp Band
- Limit
- Limit State
- Max Hold
- Mechanical Atten
- MechanicalAttenStepEnum
- OBW Percent Pwr
- Resolution Band Width
- Resolution Bandwidth Shape
- Span
- Sweep Points
- Sweep Time
- Sweep Time Auto
- TriggerSource
- Video Bandwidth
- x DB

The data above is followed in the file by a line containing “MeasResult1” and “MeasResult2”. This line forms a header for each set of measurement results, which appear in subsequent lines. Each line of Measurement Results consists of two comma-separated values, for MeasResult1 and MeasResult2 respectively.

The MeasResult1 set in the file corresponds to the data returned by `:MEAS|:READ|:FETCh:OBwidth1`, and the MeasResult2 set corresponds to the data returned by `:MEAS|:READ|:FETCh:OBwidth2`.

The exported file is in CSV format, with a `.csv` extension.

- Video BW Mode (columns A thru K)

The data above is followed in the file by a line containing “MeasResult1” to “MeasResult42”. This line forms a header for each set of measurement results, which appear in subsequent lines. Each line of Measurement Results consists of 42 comma-separated values, from the MeasResult1 value to the MeasResult42 value.

The MeasResult1 set in the file corresponds to the data returned by MEAS/READ/FETCH:SPURious1; the MeasResult2 set corresponds to the data returned by MEAS/READ/FETCH:SPURious2, and so on.

The exported file is in CSV format, with a .csv extension.

Meas Results File Example

When imported into Excel, a typical Meas Results file will show the header information above followed by the data. A sample of what the data rows look like appears below. Only the columns for Meas Result 1 through 6 are shown, due to lack of space:

| MeasResult 1 | MeasResult 2 | MeasResult 3 | MeasResult 4 | MeasResult 5 | MeasResult 6 |
|-------------------------|-------------------------|-------------------------|-------------------------|-------------------------|-------------------------|

- RFBurst Trigger Level Abs
- RFBurst Trigger Level Rel
- RFBurst Trigger Level Type
- RFBurst Trigger Slope
- Scale/Div
- Trigger Holdoff
- Trigger Holdoff State
- TriggerSource

The header section is followed by a line containing items **MeasResult1** through **MeasResult4**. This line forms a header for each set of measurement results, which are listed in subsequent lines. Each line of Measurement Results consists of 4 comma-separated values, from the **MeasResult1** value to the **MeasResult4** value.

The **MeasResult1** set in the file corresponds to the data returned by **MEAS|READ|FETCh:PStatistic1**; the **MeasResult2** set corresponds to the data returned by **MEAS|READ|FETCh:PStatistic2**, and so on.

Meas Results File Example

When imported into Microsoft Excel or a similar spreadsheet application, a typical Meas Results file appears as shown in the example below.

MeasResult

7.3.19 IQ Waveform Meas Results File Contents

An IQ Waveform Meas Results File contains measurement results with the following header information:

- File ID string, which is "MeasResult"
- Measurement ID following Mode ID, for example, [WCDMA:WAV](#)
- Firmware rev and model number
- Option string
- Center Frequency
- Input Port
- Info BW
- Capture Time

The data above is followed in the file by a line containing [MeasResult0](#), [MeasResult1](#), and [MeasResult2](#). This line forms a header for each set of measurement results, which appear in subsequent lines. Each line of Measurement Results consists of 3 comma-separated values.

The [MeasResult0](#) set in the file corresponds to the data returned by [MEAS|READ|FETCh:WAVeform0](#); the [MeasResult1](#) set corresponds to the data returned by [:MEAS|READ|FETCh WAVeform1](#), and the [MeasResult2](#) set corresponds to the data returned by [:MEAS|READ|FETCh WAVeform2](#). See "[Remote Command Results](#)" on page 1741 for details.

The exported file is in CSV format, with a [.csv](#) extension.

Meas Results File Example

When imported into Microsoft Excel or a similar spreadsheet application, a typical Meas Results CSV file appears as shown in the example below.

```

7.3.46 Limit

Lets you choose a file to which to export the **Limit** data.

Limit files are CSV files, and contain the limit data in a form that can be imported into Excel or similar spreadsheets, as well as header data that gives information on the limit.

The default path for most Limits files is:

`My Documents\<mode name>\data\limits`

where `<mode name>` is the parameter used to select the mode with the `:INST:SEL` command (for example, `SA` for Spectrum Analyzer). Hence a **Limit** file from any measurement in Spectrum Analyzer Mode would be stored in:

`My Documents\SA\data\limits`

The default path for **Limit** files from the Log Plot measurement in Phase Noise Mode is:

`My Documents\PNOISE\data\LPL\limits`

The default filename is `Limit_0000.csv`, where the 4-digit number is the lowest number that does not conflict with any filename in the current directory.

For backwards compatibility, older limit files with the extension `.lim` can be read into the instrument, but you can only save limits as `.csv` files.

| | |
|------------------------------|--|
| Remote Command | <code>:MMEMory:STORe:LIMit LLINE1 ... LLINE6,<filename></code> |
| Example | Save the 2nd Limit Line to the file <code>myLimitLine2.csv</code> in the current path: <code>:MMEM:STOR:LIM LLINE2,"myLimitLine2.csv"</code> |
| Notes | If the save is initiated via SCPI, and the file already exists, the file will be overwritten Using the C: drive is strongly discouraged, since it runs the risk of being overwritten during an instrument software upgrade Both single and double quotes are supported for any filename parameter over SCPI |
| Dependencies | Only appears if you have the proper option installed in your instrument In the Log Plot measurement in Phase Noise Mode, there are only three Limit Lines, so the valid parameters are <code>LLINE1 LLINE2 LLINE3</code> |
| Preset | 1 Not part of Preset , but reset by Restore Mode Defaults Survives power cycles |
| State Saved | The selected Limit number is saved in instrument state |
| Status Bits/OPC dependencies | Sequential - waits for previous measurement to complete |

Limit File Contents

Limits may be exported into a data file with a `.csv` extension. They may be imported from that data file; they may also be imported from a legacy limit file with a `.lim` extension. The `.lim` files meet the specification for limit files contained in the EMI measurement guide, HP E7415A.

.csv file format

Except for information in quotes, limit line files are not case sensitive. Information in bold is required verbatim; other text is example text, and italic text is commentary which should not be present in the file.

The first five lines are system-required header lines, and must be in the correct order:

| | |
|-----------------------------|---|
| Limit | <i>Data file type name</i> |
| "FCC Part 15" | <i>File Description</i> |
| "Class B Radiated" | <i>Comment</i> |
| A.01.00.R0001,N9020A | <i>Instrument Version, Model Number</i> |
| P13 EA3 UK6 ,01 | <i>Option List, File Format Version</i> |

7 Save/Recall/Print

7.3 Save

The next few lines describe the parameters; on export they will be in the order shown, on import they can be in any order. If some parameters are missing, they will revert to the default.

| | |
|---|---|
| Type, Upper | <i>Upper Lower</i> |
| X Axis Unit, MHz | <i>MHz S; other units should be converted; this also specifies the domain</i> |
| Amplitude Unit, dBm | <i>dBm V; all other units should be converted appropriately</i> |
| Frequency Interpolation, Linear | <i>Logarithmic Linear</i> |
| Amplitude Interpolation, Logarithmic | <i>Logarithmic Linear</i> |
| X Control, Fixed | <i>Fixed Relative; on input we consider only the first three characters</i> |
| Y Control, Fixed | <i>Fixed Relative; on input we consider only the first three characters</i> |
| Margin, 0 | <i>Always in dB. A 0 margin is equivalent to margin off</i> |
| X Offset, 10 | <i>Expressed in the X axis units</i> |
| Y Offset, 5 | <i>Expressed in the Amplitude units</i> |

The Amplitude Unit line in the limits file may contain a transducer (formerly “antenna”) factor unit, for example:

Amplitude Unit=dBuV/m

Transducer factor units are dBuV/m, dBuA/m, dBpT, and dBG. In this case, the unit is treated exactly as though it were dBuV, meaning that all of the limits are interpreted to have units of dBuV. The box does NOT change Y Axis Units when such a limit is loaded in.

The X-Axis unit also specifies the domain (time or frequency). It is not possible to have both time-domain lines and frequency-domain lines at the same time; if a time-domain line is imported while the other lines are in the frequency domain (or vice-versa), all limit lines will be deleted prior to import.

If the sign of the margin is inappropriate for the limit type (for example a positive margin for an upper limit), the sign of the margin will be changed internally so that it is appropriate.

The remaining lines describe the data. Each line in the file represents an X-Y pair. The X values should be monotonically non-decreasing, although adjacent lines in the file can have the same X value as an aid to building a stair-stepped limit line. To specify a region over which there is no limit, use +1000 dBm for upper limits or -1000 dBm for lower limits.

The data region begins with the keyword **DATA**:

```
DATA
200.000000,-10.00
300.000000,-10.00
300.000000,-20.00
500.000000,-20.00
```

.lim file format

This is a legacy format which allows files saved from older instruments to be loaded into the X-Series. *Design of files in this format is not recommended.*

Except for name and description text (which is taken verbatim), limit line files are not case sensitive.

The file may optionally start with a description block, consisting of the single line **[DESCRIPTION]** followed by arbitrary text. If there is no Limit Line Name header, the description text will be used as the limit line description in the GUI. If there is a Limit Line Name header, the Limit Line Name will be used instead.

Arbitrary text

The header block begins with the single line **[HEADER]**, followed by some or all of the following fields, each with `<parameter name>=<parameter value>`. Excess white space around the “=” is ignored. If a field is not present or the data is invalid, the value is not changed when the limit line is loaded. Ordering of the fields is unimportant.

| | |
|--|---|
| Limit Line Name="FCC Part 15;Class B Radiated" | |
| Type =Upper | Upper Lower |
| Frequency Unit =MHz | For time domain limits, this should say "Time Unit" |
| Amplitude Unit=dBm | |
| Frequency Interpolation=Lin | Log Lin; on input we consider only the first three characters |
| Amplitude Interpolation=Log | Log Lin; on input we consider only the first three characters |
| Mode=Fixed | Fixed Relative |
| Margin=0 | Always in dB. A 0 margin is equivalent to margin off |
| Domain=Frequency | Frequency Time |
| Delimiter=TAB | |

The data block begins with the line **[DATA]**, and consists of any number of segments.

The Data lines represent segments – X1, Y1, X2, Y2. If the list of segments includes a gap in the middle on input, the space inside the gap will be set to ensure the limit does not fail: for upper limits maxtracevalue, for lower limits mintracevalue. If two segments overlap on input, the stricter of the two segments is used – for upper limits the lower segment, for lower limits the upper segment.

Thus, the following segments indicate into a –5 dB limit from 10 MHz to 20 MHz and 30 MHz to 40MHz:

| | | | |
|----|----|----|----|
| 10 | -5 | 20 | -5 |
| 30 | -5 | 40 | -5 |

If this was an upper limit, this would be translated into the following set of limit points:

7 Save/Recall/Print
7.3 Save

| | | | | |
|----|--|--|--|---------------|
| 10 | | | | -5 |
| 20 | | | | -5 |
| 20 | | | | maxtracevalue |
| 30 | | | | maxtracevalue |
| 30 | | | | -5 |
| 40 | | | | -5 |

| | | | | |
|-----|-------|------|-------|---|
| 30 | -29.5 | 88 | -29.5 | |
| 88 | -33 | 216 | -33 | note that we are stair-stepping the line |
| 230 | -35.6 | 960 | -35.6 | The gap between 216 MHz and 230 MHz will never fail |
| 960 | -43.5 | 5000 | -43.5 | |

7.3.47 Select Limit

Selects the specific Limit to be saved, for example, Limit 1.

| | |
|--------|---|
| Preset | Not part of Preset , but reset to LLINE1 by Restore Mode Defaults Survives shutdown |
|--------|---|

7.3.48 Correction

Exports Amplitude Corrections files in the PC-readable **.csv** format.

Amplitude Correction files contain the correction data in a form that can be imported into Excel or similar spreadsheets, as well as header data that gives information on the correction.

The default filename is **Ampcor_0000.csv**, where the 4-digit number is the lowest number that does not conflict with any filename in the current directory.

The default path for Corrections files is:

My Documents\amplitudeCorrections

For backwards compatibility, older limit files with the extensions **.amp**, **.cbl**, **.ant** and **.oth** can be read into the instrument, but you can only save corrections as **.csv** files.

See **"Correction Data File"** on page 2421

| | |
|----------------|--|
| Remote Command | :MMEMory:STORe:CORRection 1 ... 8, <filename> |
|----------------|--|

| | |
|---------|---|
| Example | Save Correction 2 to the file myAmpcor.csv on the current path: :MMEM:STOR:CORR 2 "myAmpcor.csv" |
|---------|---|

| | |
|------------------------------|---|
| Notes | <p>If the save is initiated via SCPI, and the file already exists, the file will be overwritten</p> <p>Using the C: drive is strongly discouraged, since it runs the risk of being overwritten during an instrument software upgrade</p> <p>Both single and double quotes are supported for any filename parameter over SCPI</p> |
| Dependencies | <p>Corrections are not supported by all measurements. If in a Mode in which some measurements support it, this key is grayed-out in measurements that do not. Does not appear at all if no measurements in the Mode support it</p> <p>Does not appear unless you have the proper option installed in your instrument</p> |
| Annotation | After save is complete, an advisory is displayed in the message bar confirming which file was saved |
| Backwards Compatibility SCPI | <p>:MMEMory:STORe:CORRection ANTenna CABLe OTHer USER, <filename></p> <p>For backwards compatibility, ANTenna maps to 1, CABLe maps to 2, OTHer maps to 3 and USER maps to 4</p> |

Correction Data File

A Correction Data File contains a copy of one of the instrument correction tables. Corrections provide a way to adjust the trace display for predetermined gain curves (such as for cable loss).

Corrections files are text files in **.csv** (Comma-Separated Values) form, to make them importable into Excel or other spreadsheet programs. The format for Corrections files is as follows:

| Line # | Type of field | Example | Notes |
|--------|---|---------------------------------|---|
| 1 | File type, must be "Amplitude Correction" | Amplitude Correction | May not be omitted |
| 2 | File Description (in quotes) | "Correction Factors for 11966E" | 60 characters max; may be empty but may not be omitted. If exceeds 60 characters, error -233 Too much data reported |
| 3 | Comment (in quotes) | "Class B Radiated" | 60 characters max; may be empty but may not be omitted. . If exceeds 60 characters, error -233 Too much data reported |
| 4 | Instrument Version, Model # | A.02.06,N9020A | May be empty but may not be omitted |
| 5 | Option List, File Format Version | K03 LFE EXM ,01 | May be empty but may not be omitted |
| 6 | Freq Unit to be used for all frequency values in the file | Frequency Unit, MHz | assumed to be Hz if omitted |
| 7 | Transducer Unit | Antenna Unit, None | If omitted leaves the Transducer unit unchanged. The amplitude unit in |

7 Save/Recall/Print
7.3 Save

| Line # | Type of field | Example | Notes |
|--------|---|---------------------------------|--|
| | | | the Transducer Unit field is a conversion factor that is used to adjust the Y Axis Units of the current mode, if the mode supports Transducer Units. For more details on transducer correction data, refer to the Input/Output, Corrections key description. Allowable values: dBuV/m, dBuA/m, dBG, dBpT, None |
| 8 | Freq Interpolation | Frequency Interpolation, Linear | if omitted leaves the Freq Interpolation unchanged. Allowable values: Linear, Logarithmic |
| 9 | Bias value in mA | Bias,0.00 | If omitted leaves the Bias value unchanged (added as of A.08.50) |
| 10 | Bias State | Bias State,On | If omitted leaves the Bias State unchanged. Allowable values: On, Off (added as of A.08.50) |
| 11 | Overlap, two values, Freq1 and Freq2, separated by commas | Overlap,33500,40000 | Uses Freq Unit from line 6. Thus, in this example Freq1=33.5 GHz, Freq2= 40.0 GHz (see note below). If omitted leaves the overlap unchanged (added as of A.08.50) |
| 12 | DATA marker | DATA | Corrections data begins in the next line |

Lines 2 through 5 can be empty but must appear in the file. Lines 6 through 11 are optional, the lines can be left out of the file altogether.

The Overlap row and the two Bias rows apply only to external mixing. Both are read-only, they are never written by the instrument. The only way to insert or modify these rows is to edit the file with a text editor or a spreadsheet editor. These rows are intended for use by mixer manufacturers, as they allow the manufacturer to insert data about how the mixer corrections were generated and how they should be applied. The Bias rows allow you to specify whether to turn Bias on or off when the Correction is turned on and to specify a Bias value (turning off the Correction does not change the Bias, but turning it back on again sets it to the value specified in the file). The Overlap row allows you to specify an overlap region in which two different corrections may be applied. It is expected that in the corrections data itself, there will be TWO corrections values exactly at Max Freq, otherwise Overlap is ignored. The way the overlap is processed is as follows: if at any given time the current instrument Start Freq is greater than Freq 1 and lower than Freq 2, and the current Stop Freq is greater than Freq 2, extend the first correction point at or above Freq 2 down to Freq 1, rather than using the correction data between Freq1 and Freq2.

Only one Transducer units can be on at any given time. Note that this means that if a correction file with a Transducer Unit is loaded into a particular Correction, all other

Corrections are set to that same Transducer unit. Note that the legacy term “Antenna Unit” is still used in the correction file, even though the more modern term “Transducer Unit” is used in the user interface.

Similarly, the Bias rows can only be used in Correction register 1, because there can only be one setting for Bias at any given time. If a Correction file with a Bias or Bias State row is loaded into any Correction register but 1, an error is generated: Mass storage error; Can only load Bias Settings into Correction 1

The data follows the DATA row, as comma separated X, Y pairs; one pair per line.

For example, suppose you have an Antenna to correct for on an N9020A version A.02.06 and the correction data is:

- 0 dB at 200 MHz
- 17 dB at 210 MHz
- 14.8 dB at 225 MHz

Then the file will look like:

- Amplitude Correction
- "Correction Factors for 11966E"
- "Class B Radiated"
- A.02.06,N9020A
- P13 EA3 UK6,01
- Frequency Unit, MHz
- Antenna Unit, dBuV/m
- Frequency Interpolation, Linear
- DATA
- 200.000000,0.00
- 210.000000,17.00
- 225.000000,14.80

The choices for the 1 of N fields in the metadata are as follows:

- Frequency Unit: Hz, kHz, MHz, GHz
- Antenna Unit: dBuV/m, dBuA/m, dBG, dBpT, None

- Frequency Interpolation: Logarithmic, Linear

7.3.49 Select Correction

Selects the specific Correction to be saved, for example, Correction 1.

| | |
|--------|---|
| Preset | Not part of a Preset , but reset to Correction 1 by Restore Input/Output Defaults Survives a shutdown |
|--------|---|

7.3.50 SCPI Recorder

Contains controls to allow you to save SCPI recordings.

7.3.51 Save To File

Saves SCPI recording content to a file. For details of the SCPI Recording feature, see "[SCPI Recorder](#)" on page 2010.

There are two possible file formats:

| Type | Extension | Details |
|---------------|----------------------|---|
| Text | .txt | Default |
| Python Script | .py | Generates a Python script that can be executed in Python environment.. For details, see " Saving a SCPI Recording as a Python Script " on page 2424 |

The saved file content does not include the label of each recorded entry, just the SCPI mnemonics. The file is saved to the following folder:

`<user_name>:\Documents\Keysight\Infrastructure\ScpiRecording folder`

7.3.52 Saving a SCPI Recording as a Python Script

To execute the generated Python script:

- Install the Python version required by PyVisa
- Download the PyVisa library from: <https://pypi.org/project/PyVISA/>
- Modify the connection string, to specify *your* instrument's connection string

Example Script

An example of the generated script is shown below.

```
# _install location: https://pypi.org/project/PyVISA/
import pyvisa
import re
# connected instrument
_inst = ""
# SCPI Recording commands and queries
# Add/Modify the instrument address to execute the script
_connectionString = 'your instrument connection string here'
#Example SCPI Recording Entries
_recordingEntries = ['Active Mode & Measurement|':INST:CONF:SA:SANalyzer',
'Query Operation Complete|'*OPC?',
'Active Mode & Measurement|':INST:CONF:SA:SANalyzer',
'Query Operation Complete|'*OPC?',
'Center Frequency|':SENSe:FREQuency:CENTer 12000000000',
'Freq Offset|':SENSe:FREQuency:OFFSet 10',
'Ref Level|':DISPlay:WINDow:TRACe:Y:SCALE:RLEVel 5']
def ConnectToInstrument():
    rm = pyvisa.ResourceManager()
    _inst = rm.open_resource(_connectionString)
    _inst.read_termination = '\n'
    _inst.write_termination = '\n'
    idn = _inst.query('!IDN?')
    print("Sending Recording Entries to: " + idn)
def CheckError()
    err = _inst.query('SYST:ERR?')
    return err.lower.find("no error")
def SendCommand(recordingEntry):
    # split the recording entry into label and mnemonic
    labelAndMnemonic = recordingEntry.split('|')
    label = labelAndMnemonic[0]
```

7 Save/Recall/Print

7.3 Save

```
mnemonic = labelAndMnemonic[1]
# check and see if this is OPC query
opcIndex = mnemonic.find('OPC?')
#if OPC query send the query and get OPC query value
if opcIndex >= 0:
    opcQueryValue = _inst.query(mnemonic)
    print(opcQueryValue)
else:
    print(mnemonic)
    _inst.write(mnemonic)
err = CheckError()
# publish any errors from the previous command
if err:
    print('Error for command ' + label + ': ' + err)
for entry in _recordingEntries
    SendCommand(entry)
```

7.3.53 Mask

The **Mask** data type is used to import and export Mask files for measurements that use masks, such as cellular comms and real-time measurements.

7.3.54 Waveform Sequence

Saves waveform sequences from the ARB memory of an Internal Source. When you open the Save **Waveform Sequence** dialog and press **Save**, the current waveform sequence is saved to the selected directory.

| | |
|--------------|---|
| Notes | No remote command, front panel only |
| Dependencies | Only appears if your hardware includes an Internal Source, such as in VXT |

7.3.55 Demod Info

Lets you save various Demod Info data types for later recall.

7.3.56 Data Type (WLAN EVM / MIMO EVM Measurement)

You can save an OFDMA setup file for future recall.

See [RU Allocation Setup File \(*.csv\) Format](#) for more details.

| | |
|------------------------------|---|
| Remote Command | :MMEMory:STORe:RUAllocation <fileName> |
| Example | :MMEM:STOR:RUAl "mySetup.csv" |
| Status Bits/OPC dependencies | Sequential - aborts the current measurement |
| Backwards Compatibility SCPI | :MMEMory:STORe:AXConfig <fileName> |

7.3.57 Reference Symbols

Saves the Reference Symbols (I/Q data) to a file.

| | |
|------------------------------|--|
| Remote Command | :MMEMory:STORe:REFS <filename> |
| Example | :MMEM:STOR:REFS 'RefSymbols_0001.csv' |
| Notes | The file format interleaves I/Q ref symbols <i>without</i> commas, for example: I Q I Q ... |
| Status Bits/OPC dependencies | Sequential - aborts the current measurement |

7.3.58 Screen Image

Selects a file for saving the contents of the display.

Screen Image files are PNG (Portable Network Graphics) files with the same resolution as the data display. They contain the image that was on the screen before you opened the **Save** dialog. When the **Screen Image** key is pressed, a "thumbnail" of the captured image is displayed, with the note "This is the image that will be saved" below it.

After you have completed the save, a message "File image.png saved" (assuming [image.png](#) was the filename you used).

NOTE

As of firmware release A.17.50, sending ***CLS** (Clear Status) removes any message displayed on the screen. If you do not want to see the “File saved” message after sending **:MMEM:STOR:SCR** (described below), send the following sequence (substituting your file name for **filename.png**): **:MMEM:STOR:SCR “filename.png”;*CLS**

NOTE

As of firmware release A.19.50, saving a screen image removes any informational message displayed on the screen before it captures the screen. This is useful if you are sending “save image” commands in rapid sequence, as it keeps the “File saved” message from one screen capture from appearing in the next screen capture. Error messages are still captured.

If you send a succession of screen image commands *too* rapidly, the system may not have time to remove the previous message before the next screen capture. Sending screen image commands more rapidly than twice per second is not advised.

The default path for State Files is:

My Documents\<mode name>\screen

where **<mode name>** is the parameter used to select the mode with **:INST:SEL**, for example, **SA** for Spectrum Analyzer Mode.

Screen Image files have extension **.png**. The default filename is **Screen_0000.png**, where the 4-digit number is the lowest number that does not conflict with any filename in the current directory.

After you have completed the save, the **Quick Save** front-panel key lets you quickly repeat the last save performed, using an auto-named file, with new current screen data.

| | |
|----------------|---|
| Remote Command | :MMEMory:STORe:SCReen <filename> |
|----------------|---|

| | |
|---------|--|
| Example | Store the current screen image in the file MyScreenFile.png in the default directory: :MMEM:STOR:SCR "myScreen.png" |
|---------|--|

| | |
|------------------------------|---|
| Backwards Compatibility SCPI | :HCOPY:SDUMP:DATA? returns the screen image in a <DEFINITE LENGTH ARBITRARY RESPONSE DATA> element. The response data is IEEE Block format; the controlling computer can strip the header and store the result as a .png file |
|------------------------------|---|

Blocking Screen Capture (Remote Command Only)

This command works *only* when the measurement is in **Single** mode (see **"Sweep/Measure" on page 1856**). When the command is sent, it blocks the SCPI client, waits for the current refresh to complete, then captures the screen shot and

saves it. In some instances, a single measurement is taken, and a screen shot of that measurement is captured.

This command ensures that the last-measured data is refreshed on the screen before it is captured, by blocking the command and waiting for refresh to complete. The command may time out, in which case it must be re-sent.

If timeout occurs, or if the active measurement is in **Continuous** mode, an error is returned.

| | |
|----------------|--|
| Remote Command | <code>:MMEMory:STORe:SCReem:BLORked <filename></code> |
| Example | Wait for the current screen refresh to complete before capturing the screen shot, then store the current screen image in the file <code>MyScreenFile.png</code> in the default directory: <code>:MMEM:STOR:SCR:BLOR "myScreen.png"</code> |

7.3.59 Theme

Accesses a menu of functions that enable you to choose the theme to be used when saving the screen image. You can choose between themes to be used when saving the screen image.

See "[More Information](#)" on page 2429 for examples of the themes.

| | |
|-------------------------------|---|
| Remote Command | <code>:MMEMory:STORe:SCReem:THEMe FILLed OUTLine</code> <code>:MMEMory:STORe:SCReem:THEMe?</code> |
| Example | <code>:MMEM:STOR:SCR:THEM OUTL</code> |
| Preset | FILLed ; not part of Preset , but reset by Restore Misc Defaults or Restore System Defaults All |
| Backwards Compatibility SCPI | <code>:MMEMory:STORe:SCReem:THEMe TDCOLOR TDMonochrome FCOLOR FMONochrome</code> |
| Backwards Compatibility Notes | To permit code compatibility with A-model X-Series Signal Analyzer instruments, the command parameters from the A-models are mapped as follows: TDCOLOR and TDMonochrome are both mapped to FILLed (exact full color representation of what is on the screen) FCOLOR and FMONochrome are both mapped to OUTLine (uses color for traces and other items, but most filled areas are white) There is no Monochrome theme in B-models, so the A-models monochrome commands yield color <code>:MMEM:STOR:SCR:THEM?</code> always returns FILLed or OUTLine , never FCOLOR , FMONochrome , TDCOLOR , or TDMonochrome There is no monochrome theme in the X-Series Touch UI More Information |

- The **FILLed** theme is an exact representation of the information on the display
- The **OUTLine** theme eliminates most of the filled areas, in order to save ink when the image is printed. In addition, the yellow trace color is changed to be more orange, to improve visibility against a white background. Note that some objects remain filled. In particular, the selected marker remains filled with the green marker color, in order to distinguish it from the other markers. This is important, as it is the selected marker whose readout appears in the upper right corner of the display

7.3.60 Power Sensor Cal Factor

Selects a file to which to export the Power Sensor Cal factor data.

Cal Factor files are XML files, and contain the cal factor data and header data that gives information on the power sensor.

The default path for **Cal Factor** Files is:

`My Documents\<<mode name>\data\PSCF`

where `<mode name>` is the parameter used to select the mode with `:INST:SEL` (for example, `MRECEIVE` for Measuring Receiver Mode). Hence, a **Cal Factor** file from any measurement in the Measuring Receiver mode would be stored in:

`My Documents\MRECEIVE\data\PSCF`

Cal Factor files have the extension `.xml`. The default filename is `<Sensor Model>_<Sensor Serial Number>_0000.xml`, where the 4-digit number is the lowest number that does not conflict with any filename in the current directory. If the sensor model or serial number is blank, the default filename is `PSCF_0000.xml`.

| | |
|----------------|--|
| Remote Command | <code>:MMEMory:STORE:PSCFactor <file_name></code> |
| Example | <code>:MMEM:STOR:PSCF "myPSCF.xml"</code> |
| Notes | If the save is initiated via SCPI, and the file already exists, the file will be overwritten Using the C: drive is strongly discouraged, since it runs the risk of being overwritten during an instrument software upgrade Both single and double quotes are supported for any filename parameter over SCPI |
| Dependencies | Only appears if you have the proper option installed in your instrument |

7.3.61 Recording

Lets you save to a file data being acquired by the measurement, so that it can later be recalled and played back as though it were coming from the input.

You may specify a data type (for example, I/Q data) and choose a file to which to save the data.

The recording and playback of signal data files is a multi-step process that involves controls in several menus.

The menus that are involved in Record/Playback are:

- **Save, Recording** (this menu)
- **Recall, "Recording" on page 2370** (under the **Recall** hardkey or the **Recall** icon in the **File** panel)
- **Sweep, Recording** tab
- **Sweep, Playback** tab
- **Input/Output, "Data Source" on page 2223** tab

NOTE

A complete tutorial for the Record/Playback functionality, including how to load and save Recording files, can be found under the **Data Source** tab in **Input/Output**.

| | |
|--------------|--|
| Dependencies | <p>Only available in the following Modes and measurements:</p> <ul style="list-style-type: none"> - VMA (Digital Demod and Custom OFDM) - 5G NR (Modulation Analysis) - LTE (Modulation Analysis) - WLAN (Modulation Analysis, MIMO Modulation Analysis, Spectral Flatness) - Analog Demod - Bluetooth (Transmit Analysis) - IoT & SRComms (LoRa CSS Demod) |
|--------------|--|

7.3.62 Data Type

Lets you save IQ data from the measurement using a specified file type (**CSV**, **SDF**, **TXT**, **BIN**, **BINX**, **BINF**, **ORB**).

| | |
|------------|--|
| CSV | Comma-Separated Values. Excel compatible format. Plain text roughly three times the size of BINF |
| TXT | Text format. Plain text roughly three times the size of BINF |
| SDF | Format developed for Keysight 89600 VSA Software. Note that due to differences in the internal file structure, SDF files saved by X-Series are not guaranteed to work perfectly with 89600 |
| BIN | Interleaved 16-bit Q15 signed IQ file, in Big Endian format. Q15 is a DSP format in which |

7 Save/Recall/Print
7.3 Save

the most significant bit is the sign bit, followed by 15 bits of fraction. The Q15 number has a decimal range between -32768 and -32767. The data is scaled to fit within this decimal range

BIN files do not include sampling rate information inside the file, there will be associated txt file including sampling rate and scaling information

BINX Interleaved 16-bit Q15 signed IQ file, in Little Endian format. The data is scaled to fit within the decimal range

BINX files do not include sampling rate information inside the file, there will be associated txt file including sampling rate and scaling information

BINF 32-bit IEEE 754 floating-point number in Little Endian format. The data is raw IQ data

BINF files do not include sampling rate information inside the file, there will be associated txt file including sampling rate information

ORB Format developed for Keysight ORAN Studio. This format is only supported by 5G NR, LTEAFDD and LTEATDD Modulation Analysis measurements, LTEAFDD and LTEATDD CEVM measurements

Example `:MMEM:STOR:RECORDING "C:\TEMP\MyIQData.csv"`

7.3.63 Channel

Select data channels to save. This is only supported by 5G NR Mode's EVM, VMA Digital Demod, VMA Custom OFDM measurements, and by WLAN Mode's MIMO EVM measurement.

The `<meas>` param in the command must be replaced with the node of the active measurement:

| Parameter | Mode | Measurement |
|-----------|-------|---------------|
| EVM | 5G NR | EVM |
| EVMM | WLAN | MIMO EVM |
| DDEM | VMA | Digital Demod |
| OFDM | VMA | Custom OFDM |

Remote Command `:MMEMory:STOR: <meas>:RECORDING:CHANnel ALL | CH1 | CH2 | CH3 | CH4 | CH5 | CH6 | CH7 | CH8`
`:MMEMory:STOR: <meas>:RECORDING:CHANnel?`

Example `:MMEM:STOR:EVM:REC:CHAN CH1`
`:MMEM:STOR:EVM:REC:CHAN?`

Preset `ALL`

State Saved `No`

Range `ALL | CH1 | CH2 | CH3 | CH4 | CH5 | CH6 | CH7 | CH8`

7.3.64 Remote Only Commands

The following commands execute file system operations such as move, copy, and transfer data from a file.

7.3.65 Mass Storage Catalog (Remote Command Only)

| | |
|----------------|--|
| Remote Command | <code>:MMEMory:CATalog? [<directory_name>]</code> The string <code><directory_name></code> must be a valid logical path. If no string then it uses the current directory |
| Example | <code>:MMEM:CAT? "C:\"</code> |
| Notes | Queries disk usage information (drive capacity, free space available) and obtains a list of files and directories in a specified directory in the following format: <code><numeric_value>,<numeric_value>,\{<file_entry>\}</code> It returns two numeric parameters and as many strings as there are files and directories The first parameter indicates the total amount of storage currently used in bytes The second parameter indicates the total amount of storage available, also in bytes. <code><file_entry></code> is a string. Each <code><file_entry></code> indicates the name, type, and size of one file in the directory list: <code><file_name>,<file_type>,<file_size></code> As the Windows file system has an extension that indicates file type, <code><file_type></code> is always empty. <code><file_size></code> provides the size of the file in bytes. For directories, <code><file_entry></code> is surrounded by square brackets and both <code><file_type></code> and <code><file_size></code> are empty |

7.3.66 Mass Storage Change Directory (Remote Command Only)

| | |
|----------------|---|
| Remote Command | <code>:MMEMory:CDIRectory [<directory_name>]</code> <code><directory_name></code> must be a valid logical path <code>:MMEMory:CDIRectory?</code> |
| Example | <code>:MMEM:CDIR "C:\Program Files"</code> |
| Notes | Changes the current directory for a mass memory file system. The <code><directory_name></code> parameter is a string. If no parameter is specified, the directory is set to the <code>*RST</code> value At <code>*RST</code> , this value is set to the default user data storage area, that is defined as <code>System.Environment.SpecialFolder.Personal</code> Query returns full path of the current directory as a quoted string |

7.3.67 Mass Storage Copy (Remote Command Only)

| | |
|----------------|--|
| Remote Command | <code>:MMEMory:COpy <string>,<string>[,<string>,<string>]</code> <code><string></code> must be a valid logical path |
| Example | <code>:MMEM:COpy "C:\TEMP\Screen_0000.png","C:\\"</code> |
| Notes | <p>Copies an existing file to a new file or an existing directory to a new directory If no directory is specified, uses the current directory</p> <p>Two forms of parameters are allowed. The first form has two parameters. In this form, the first parameter specifies the source, and the second parameter specifies the destination</p> <p>The second form has four parameters. In this form, the first and third parameters specify the source. The second and fourth parameters specify the directories. The first pair of parameters specifies the source. The second pair specifies the destination. An error is generated if the source doesn't exist or the destination file already exists</p> <p>This command will generate an "access denied" error if the destination is a restricted folder (for example, <code>C:\Windows</code>) and you do not have Power User or Administrator privileges</p> |

7.3.68 Mass Storage Device Copy (Remote Command Only)

Transfers data to/from a file and a peripheral device.

| | |
|----------------|---|
| Remote Command | <code>:MMEMory:COpy:DEvice <source_string>,<dest_string></code> <code><source_string></code> and <code><dest_string></code> must be valid logical paths |
| Notes | <p>The strings must be a valid logical path or a valid device keyword. If <code>dest_string</code> is a device keyword, the data is copied from the source file to the device. If <code>source_string</code> is a device keyword, the data is copied to the source file from the device</p> <p>Valid device keywords are: <code>SNS</code> (smart noise source)</p> <p>An error is generated if the file or device is not found</p> |

7.3.69 Mass Storage Delete (Remote Command Only)

| | |
|----------------|---|
| Remote Command | <code>:MMEMory:DELeTe <file_name>[,<directory_name>]</code> <code><file_name></code> and <code><directory_name></code> must be valid logical paths |
| Example | <code>:MMEM:DEL "Screen_0000.png"</code> |
| Notes | <p>If no directory is specified, uses the current directory</p> <p>Removes a file from the specified directory. <code><file_name></code> specifies the file name to be removed. This command generates an "access denied" error if the file is in a restricted folder (for example, <code>C:\Windows</code>) and you do not have Power User or Administrator privileges</p> |

7.3.70 Mass Storage Data (Remote Command Only)

Creates a file containing the specified data or queries the data from an existing file.

| | |
|----------------|---|
| Remote Command | <code>:MMEMory:DATA <file_name>, <data></code> <code><file_name></code> must be a valid logical path <code>:MMEMory:DATA? <file_name></code> |
| Example | <code>:MMEM:DATA? "MyFile.txt"</code> |
| Notes | If no directory is specified, uses the current directory The command form <code>:MMEMory:DATA <file_name>, <data></code> loads <code><data></code> into the file <code><file_name></code> . <code><data></code> is in 488.2 block format. <code><file_name></code> is string data The response to <code>:MMEMory:DATA? <file_name></code> is the associated <code><data></code> in block format |

7.3.71 Mass Storage Make Directory (Remote Command Only)

| | |
|----------------|---|
| Remote Command | <code>:MMEMory:MDIRectory <directory_name></code> <code><directory_name></code> must be a valid logical path |
| Example | <code>:MMEM:MDIR "C:\TEMP\NewDir"</code> |
| Notes | Creates a new directory. <code><directory_name></code> specifies the name to be created Generates an "access denied" error if the new directory would be in a restricted folder (for example, <code>C:\Windows</code>) and you do not have Power User or Administrator privileges |

7.3.72 Mass Storage Move (Remote Command Only)

| | |
|----------------|--|
| Remote Command | <code>:MMEMory:MOVE <string>, <string>[, <string>, <string>]</code> <code><string></code> must be valid logical paths |
| Example | <code>:MMEM:MOVE "C:\TEMP\Screen_0000.png", "C:\\"</code> |
| Notes | Moves an existing file to a new file or an existing directory to a new directory Two forms of parameters are allowed. The first form has two parameters. In this form, the first parameter specifies the source, and the second parameter specifies the destination The second form has four parameters. In this form, the first and third parameters specify the source. The second and fourth parameters specify the directories. The first pair of parameters specifies the source. The second pair specifies the destination. An error is generated if the source doesn't exist or the destination file already exists This command generates an "access denied" error if the destination is a restricted folder (for example, <code>C:\Windows</code>) and you do not have Power User or Administrator privileges |

7.3.73 Mass Storage Remove Directory (Remote Command Only)

| | |
|----------------|---|
| Remote Command | <code>:MMEMory:RDIReactory <directory_name></code> <code><directory_name></code> must be a valid logical path |
| Example | <code>:MMEM:RDIR "C:\TEMP\NewDir"</code> |
| Notes | Removes a directory. The <code><directory_name></code> parameter specifies the directory name to be removed. All files and directories under the specified directory will also be removed This command generates an “access denied” error if the folder is a restricted folder (for example, <code>C:\Windows</code>) or is in a restricted folder and you do not have Power User or Administrator privileges |

7.3.74 Mass Storage Determine Removable Media (Remote Query Only)

Used to determine whether any removable media devices are connected to the instrument. Primarily, these are USB memory devices plugged-in to the front panel or rear panel USB ports. On instruments with PC6 or PC7 CPUs, one SD card slot is available for removable media. The instrument’s primary disk drive is *not* a removable media device.

| | |
|----------------|--|
| Remote Command | <code>:MMEMory:RMEDia:LIST?</code> |
| Example | <code>:MMEM:RMED:LIST?</code> |
| Notes | The return value is a string containing a list of partition identifiers, which are removable media devices. Each identifier will be separated by a comma. If no removable media is present, an empty string is returned Examples: <ul style="list-style-type: none">– One removable device present results in a return string of “F:”– Two removable devices present results in a return string of “F:,G:” No removable devices present results in a return string of “” |

7.3.75 Mass Storage Determine Removable Media Label (Remote Command Only)

Used to set or query a removable media device’s label.

| | |
|----------------|--|
| Remote Command | <code>:MMEMory:RMEDia:LABel <partition>,<string></code> <code>:MMEMory:RMEDia:LABel? <partition></code> |
| Example | <code>:MMEM:RMED:LAB "F:", "My Device"</code> |
| Notes | If the <code><partition></code> specified does not exist or is not a removable media device, the error -252, |

"Missing Media" is generated

Setting the removable media label requires Administrative privileges. If the currently logged-in user does not have appropriate privileges, error "-221, Settings conflict; Administrator privileges required" is generated

7.3.76 Mass Storage Determine Removable Media Write-protect status (Remote Query Only)

Used to query a removable media device's write-protect status.

| | |
|----------------|--|
| Remote Command | <code>:MMEMory:RMEDia:WPRotect? <partition></code> |
|----------------|--|

| | |
|---------|-----------------------------------|
| Example | <code>:MMEM:RMED:WPR? "F:"</code> |
|---------|-----------------------------------|

| | |
|-------|--|
| Notes | The return value is 1 if the device is write-protected, and 0 if the device is write-enabled If the <code><partition></code> specified does not exist or is not a removable media device the error -252, "Missing Media" is generated |
|-------|--|

| | |
|--------|---|
| Preset | The return value depends on the SD card installed |
|--------|---|

7.3.77 Mass Storage Determine Removable Media size (Remote Query Only)

Queries a removable media device's total memory size (not available memory size).

| | |
|----------------|--|
| Remote Command | <code>:MMEMory:RMEDia:SIZE? <partition></code> |
|----------------|--|

| | |
|---------|------------------------------------|
| Example | <code>:MMEM:RMED:SIZE? "F:"</code> |
|---------|------------------------------------|

| | |
|-------|--|
| Notes | The return value is integer value in GBytes. Any device that is less than 1 GB returns 0 GB If the <code><partition></code> specified does not exist or is not a removable media device, the error -252, "Missing Media" is generated |
|-------|--|

7.3.78 :SYSTem:SET (Remote Command Only)

Obtains the state of the currently active mode in a form that can then be loaded back into the instrument quickly.

| | |
|----------------|--|
| Remote Command | <code>:SYSTem:SET <instrument state in IEEE Block></code> <code>:SYSTem:SET?</code> |
|----------------|--|

| | |
|-------|--|
| Notes | The query returns current instrument state of the active mode in IEEE Block data format. The state is in a machine-readable format only, as follows: <code><syst set preamble><state block data></code> |
|-------|--|

Where:

7 Save/Recall/Print
7.3 Save

`<syst set preamble>` is the format:

`#NMMM`

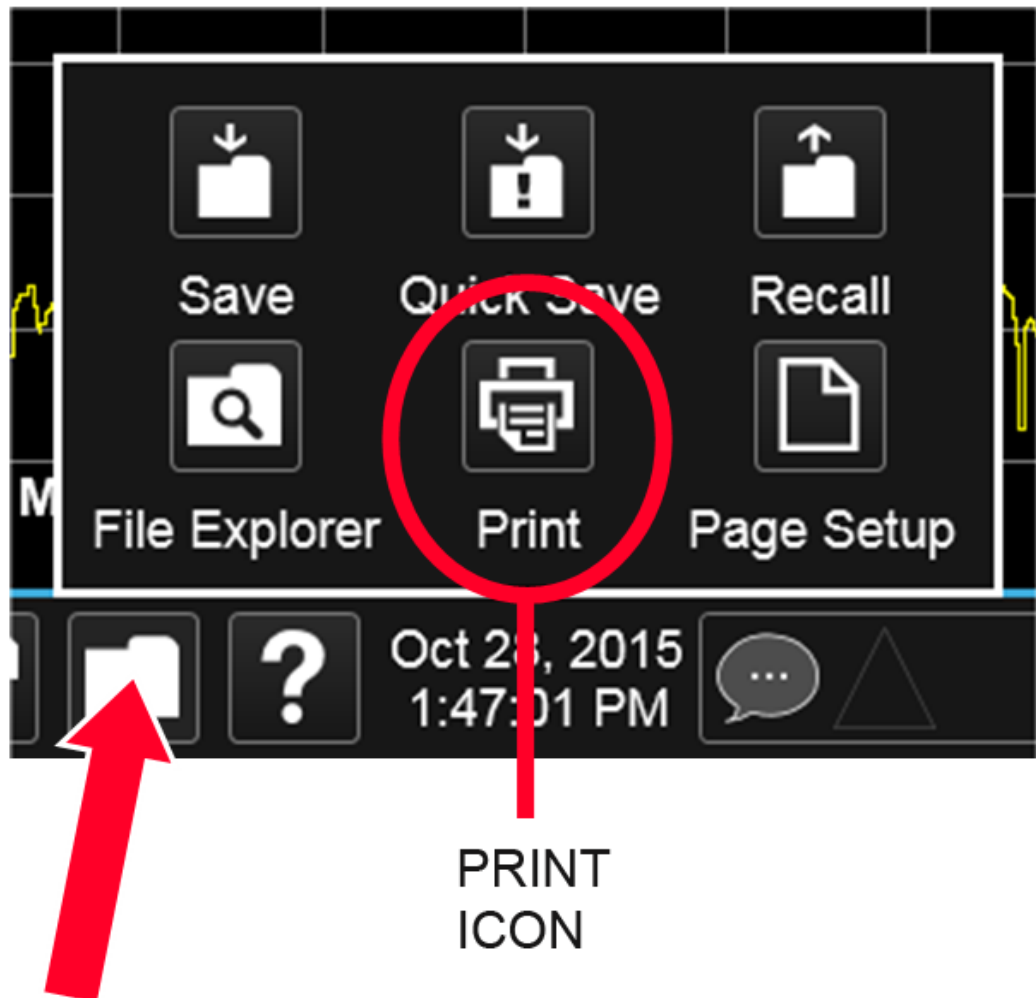

- `N` = number of digits that comprise `MMM`
- `MMM` = length in bytes of following data

`<state block data>` is machine readable state data

Example response: `#42016<state data>`

The state is recalled by sending the `:SYST:SET?` response data to the instrument. From example above: `:SYST:SET #42016<state data>`

7.4 Print

Opens a dialog for configuring printing (to the printer of your choice).

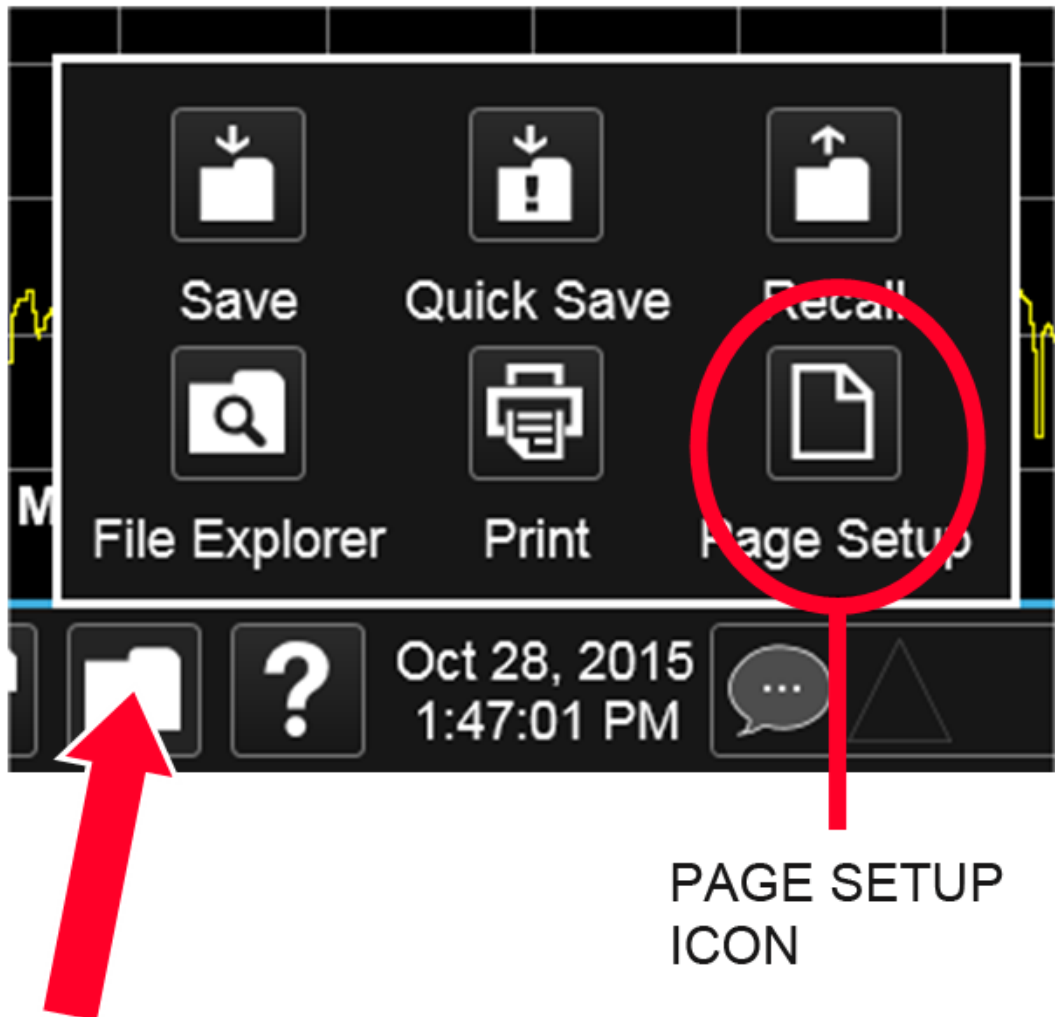

The `:HCOPY` command is equivalent to pressing the **PRINT** key.

Remote Command `:HCOPY[:IMMEDIATE]`

`:HCOPY:ABORT` can be used to abort a print that is already in progress. Sending `:HCOPY:ABORT` causes the instrument to stop sending data to the printer, although the printer may continue or even complete the print, depending on how much data was sent to the printer before you sent the `:ABORT` command.

Remote Command `:HCOPY:ABORT`

7.5 Page Setup

Opens a Windows Page Setup dialog that allows you to control aspects of the pages sent to the printer when the **PRINT** hardkey is pressed.

Depending on the abilities of the attached printer, paper size, paper source, page orientation and margins may all be set. There are no SCPI commands for controlling these parameters.

The dialog also has a dropdown control to let you select the Display Theme to use when printing. **Page Setup** themes are the same as those for **Screen Image** "Theme" on page 2429.

The **Theme** control has a corresponding SCPI command:

| | |
|-------------------------------|---|
| Remote Command | <code>:SYSTem:PRINt:THEMe FILLed OUTLine</code> |
| Command | <code>:SYSTem:PRINt:THEMe?</code> |
| Example | <code>:SYST:PRIN:THEM OUTL</code> |
| Preset | OUTL ; not part of Preset , but reset by Restore Misc Defaults or Restore System Defaults All and survives subsequent running of the modes |
| State Saved | No |
| Backwards Compatibility SCPI | <code>:SYSTem:PRINt:THEMe TDColor TDMonochrome FCOLor FMONochrome</code> |
| Backwards Compatibility Notes | <p>To permit code compatibility with A-model X-Series Signal Analyzer instruments, the command parameters from A-models are mapped as follows:</p> <p>TDColor and TDMonochrome are both mapped to FILLed: Exact full color representation of what is on the screen</p> <p>FCOLor and FMONochrome are both mapped to OUTLine: Uses color for traces and other items, but most filled areas are white</p> <p>There is no Monochrome theme in B-models, so the A-models' monochrome commands yield color</p> <p><code>:SYST:PRINt:THEM?</code> always returns FILLed or OUTLine; never FCOLor, FMONochrome, TDColor, or TDMonochrome</p> |

8 Trigger

Controls the **Trigger** system of the instrument. In general, these are functions associated with internal triggers or trigger inputs. Trigger Output functions are configured under **Input/Output**.

Trigger functions are common across multiple Modes and Measurements, although some controls appear only in certain Modes and/or certain Measurements. Additionally, some of the tabs on the **Trigger** menu are only available in certain Modes.

Many of the Trigger functions can be set graphically using the Trigger Setting Diagram. For more information see: "[Trigger Optimization](#)" on page 2488

In general, each Measurement can have a different Trigger, and each Measurement remembers its previous-trigger setting.

8.1 Trigger

Contains controls that let you select the trigger source, and setup of each of the trigger sources. The instrument is designed to allow triggering from many sources, for example, Free Run, Video, External, RF Burst, etc.

In general, each Measurement can have a different Trigger Source, and each Measurement remembers its previous-Trigger Source.

8.1.1 Select Trig Source

Specifies the trigger source for the currently selected instrument input (RF or I/Q). If you change inputs, the new input remembers the trigger source it was last programmed to for the current measurement and uses that trigger source. When in External Mixing, the instrument uses the RF trigger source. You can directly set the trigger source for the RF Input and for the I/Q input using SCPI commands; see ["Trigger Source Presets" on page 2451](#), ["RF Trigger Source \(Remote Command Only\)" on page 2453](#), and ["I/Q Trigger Source \(Remote Command Only\)" on page 2455](#).

In general, each Measurement can have a different Trigger Source, and each Measurement remembers its previously-set Trigger Source. Not every Trigger Source is available for every Measurement, so the available choices for Select Trig Source may vary from Mode to Mode and Measurement to Measurement. The trigger sources that are available for each measurement are shown in the "List of Available Trigger sources" dropdown below.

Note that the controls available on the Trigger Tab change depending on which trigger source is selected. Tap each trigger source in the table in the "List of Available Trigger sources" dropdown to see what parameters are available for that trigger source.

Note that most measurements require the inclusion of a <measurement> parameter in the Trigger Source command. However, for the Swept SA measurement and RTSA this is not the case; for backwards compatibility, no <measurement> parameter is used when setting the Trigger Source for the Swept SA measurement or RTSA.

Waiting for Trigger

After you select a trigger source, the instrument will start its next measurement when that trigger source is satisfied. For example, if you choose External 1, the next measurement will start when the appropriate signal appears at the Trigger 1 In connector.

If the trigger source is not satisfied (for example, if no signal at the appropriate level appears at the Trigger 1 In connector), after approximately 2 seconds a popup

message will appear that says, "Waiting for trigger". The trigger annotation in the Meas Bar will also turn amber, as shown below:

Tap anywhere on the screen (except on the message itself) to clear the popup. The annotation will remain amber until the trigger conditions are satisfied.

List of available Trigger sources

The tables show which Trigger sources are available for which Modes and Measurements, with the following exceptions:

- the Noise Figure Mode does not support Triggering at all
- the Disturbance Analyzer measurement in the EMI Mode does not support Triggering
- the Tx Band Spur measurement in the GSM/EDGE Mode does not support Triggering
- For some models (like N9042B) with ADC trigger: some IF Paths do not support Video trigger, instead they support ADC trigger

"Free Run" on page 2456

IMMediate

All Modes and measurements, except those measurements that support no triggers at all

"Video/ADC" on page 2456

VIDeo

All Modes except RTSA and Pulse
In Spectrum Analyzer Mode, all measurements except ACP and List Sweep
In WCDMA, MSR, Short Range Comms, VMA and LTE, all measurements

8 Trigger

8.1 Trigger

| | | |
|----------------------------|------------------|---|
| | | except ACP |
| | | In WLAN, all measurements |
| | | In Phase Noise, all measurements except Log Plot and Spot Frequency |
| "ADC Trigger" on page 2457 | ADC | All Modes and measurements supporting Video or Level, except Spectrum Analyzer mode |
| | | Only supported in certain model's IF Paths |
| "Line" on page 2458 | LINE | All Modes except EMI, Avionics and Analog Demod |
| | | In Spectrum Analyzer, all measurements except List Sweep |
| | | In WLAN and GSM/EDGE, all measurements except Power vs. Time |
| | | In LTE and 5G NR, all measurements except Transmit On/Off Power |
| | | In Short Range Comms, all measurements except Modulation Analysis |
| | | In MSR, all measurements |
| Level [Mode: RTSA, PULSEX] | LEVe1 | RTSA and Pulse Modes only |
| FMT [Mode: RTSA, PULSEX] | FMT | RTSA and Pulse Modes only |
| "External 1" on page 2458 | EXTernal1 | All Modes and measurements |
| "External 2" on page 2459 | EXTernal2 | All Modes and measurements |

| "Periodic" on page 2462 | FRAMe | All Modes except EMI |
| | | In Spectrum Analyzer, all measurements except List Sweep |
| TV [Mode: SA] | TV | Spectrum Analyzer Mode only, and only in the Swept SA measurement |

I/Q Triggers

| | | |
|---------------------------------------|-------------------|--|
| "I/Q Mag" on page 2464 | IQMag | All Modes except EMI, Avionics, RTSA, Analog Demod and Pulse In Spectrum Analyzer, only in Power Stat CCDF and Burst Power |
| "Input I" on page 2464 | IINPut | In WCDMA, only in Power Stat CCDF and IQ Waveform |
| "Input Q" on page 2465 | QINPut | In GSM/EDGE, only in EVM, GMSK Phase & Freq Error, Transmit Power and IQ Waveform In Phase Noise, only in IQ Waveform |
| "I (Demodulated)" on page 2465 | IDEMod | In Bluetooth, only in Transmit Analysis In LTE, only in Power Stat CCDF, Modulation Analysis, Conformance EVM, and IQ Waveform |
| "Q (Demodulated)" on page 2466 | QDEMod | In WLAN, only in Power Stat CCDF, Modulation Analysis, Spectral Flatness, and IQ Waveform In Short Range Comms, only in Power Stat CCDF and Modulation Analysis |
| "Aux I/Q Mag" on page 2466 | AIQMag | In VMA, only in Power Stat CCDF, Digital Demod and IQ Waveform In CQM, only in Group Delay, Power Stat CCDF, and IQ Waveform |
| "PXI" on page 2467 | PXI | All Modes and measurements (only found in modular analyzers) |
| "Internal" on page 2467 | INTernal | All Modes and measurements (only found in modular analyzers) |
| "Audio External" on page 2461 | AEXTernal | Via the TRIG IN connector on the M9260A Audio Analyzer module |
| "Prot Channel Detection" on page 2468 | PRTChandet | Base Station Emulation; valid UL signal detected (PUSCH/PUCCH/PRACH/SRS) |
| "Prot Frame Aligned" on page 2468 | PRTFrame | Base Station Emulation; periodic technology format radio frame with data frame aligned to the BSE timing |
| "Prot Event" on page 2469 | PRTEvent | Base Station Emulation events |

External 3 Support

Trigger Source **External 3** is available only in certain Modes and measurements, as follows:

| | |
|-----------------|--|
| 5GNR | Transmit On Off, Modulation Analysis, Power Stat CCDF, and IQ Waveform measurements only |
| ADEMODO | Not supported |
| AVIONICS | Not supported |
| BT | Not supported |
| CQM | Group Delay, Power Stat CCDF, and IQ Waveform measurements only |
| EMI | Not supported |
| GSMEDGE | IQ Waveform and Transmit Power measurements only |
| LTEAFDD, | Power Stat CCDF, IQ Waveform, and Transmit On Off measurements only |

8 Trigger

8.1 Trigger

| | |
|---------|---|
| LTEATDD | |
| MSR | Power Stat CCDF, and IQ Waveform measurements only |
| PA | Power Amplifier measurement |
| PNOISE | IQ Waveform measurement only |
| PULSEX | Pulse measurement only |
| SA | Power Stat CCDF and Burst Power measurements only |
| SRCOMMS | Modulation Analysis, Power Stat CCDF, and IQ Waveform measurements only |
| VMA | Digital Demod, Custom OFDM, IQ Waveform, and Power Stat CCDF measurements only |
| WCDMA | QPSK EVM, Power Stat CCDF, and IQ Waveform measurements only |
| WLAN | Spectral Flatness, Modulation Analysis, Power Vs Time, Power Stat CCDF, and IQ Waveform measurements only |

Backwards Compatibility SCPI

The following SCPI commands are provided for Backwards Compatibility:

| | |
|------------------------------------|---|
| Backwards Compatibility SCPI | :TRIGger[:SEQuence]:SOURCe EXTernal For backward compatibility, the parameter EXTernal is mapped to EXTernal1 [:SENSe]:<measurement>:TRIGger:SOURce This backwards compatibility alias command is provided for ESA/PSA compatibility This backwards compatibility command does not apply to the Swept SA measurement, for that just use :TRIGger:SOURce This backwards compatibility command does not apply to the monitor spectrum, log plot and spot frequency measurements [:SENSe]:<measurement>:TRIGger:SOURce IF In earlier instruments, the parameter IF was used by apps for the video trigger, so using the IF parameter selects VIDeo triggering. Sending IF in the command causes VID to be returned to a query [:SENSe]:ACPR:TRIGger:SOURce This backwards Compatibility SCPI command is provided to support the same functionality as [:SENSe]:ACPr:TRIGger:SOURce (PSA W-CDMA, PSA cdma2000 and PSA 1xEVDO) due to the fact that the ACPr node conflicts with the ACPower node The legacy command: :TRIGger[:SEQuence]:RFBurst:FSElectivity[:STATe] OFF ON 0 1 is not supported in the X-Series, as the hardware to do Frequency Selective burst triggers does not exist in X-Series |
|------------------------------------|---|

More Information

The **Trigger** menus let you select the trigger source and trigger settings for a sweep or measurement. In triggered operation (basically, any trigger source other than Free Run), the instrument will begin a sweep or measurement only when the

selected trigger conditions are met, generally when your trigger source signal meets the specified trigger level and polarity requirements. (In FFT measurements, the trigger controls when the data acquisition begins for FFT conversion.)

For each of the trigger sources, you may define a set of operational parameters or settings, which will be applied when that source is selected as the current trigger source. Examples of these settings are Trigger Level, Trigger Delay, and Trigger Slope. You may apply different settings for each source; so, for example, you could have a Trigger Level of 1v for External 1 trigger and -10 dBm for Video trigger.

Once you have established the settings for a given trigger source, they generally will remain unchanged for that trigger source as you go from measurement to measurement within a Mode (although the settings can change as you go from Mode to Mode). Furthermore, the trigger settings within a Mode are the same for the **Trigger** menu, the **Gate Source** menu, and the **Periodic Sync Src** menu. That is, if **Ext1** trigger level is set to 1v in the **Trigger** menu, it will appear as 1v in both the **Gate Source** and the **Periodic Sync Src** menus. For these reasons the trigger settings commands are not qualified with the measurement name, the way the trigger source commands are.

Trigger Setup Parameters:

The following examples show trigger setup parameters using an external trigger source.

Example 1 illustrates the trigger conditions with negative slope and no trigger occurs during trigger Holdoff time.

Example 2 illustrates the trigger conditions with positive slope, trigger delay, and auto trigger time.

8 Trigger
8.1 Trigger

vsd44

Remote Command Swept SA and RTSA measurements:
`:TRIGger[:SEquence]:SOURce EXTERNAL1 | EXTERNAL2 | EXTERNAL3 | IMMEDIATE | LINE | FRAME | RFBURST | VIDEO | TV | PXI | INTERNAL`
`:TRIGger[:SEquence]:SOURce?`

All other measurements
`:TRIGger:<measurement>[:SEquence]:SOURce EXTERNAL1 | EXTERNAL2 | EXTERNAL3 | AEXTERNAL | IMMEDIATE | LEVEL | FMT | LINE | ADC | FRAME | RFBURST | VIDEO | IQMAG | IDEMOD | QDEMOD | IINPUT | QINPUT | AIQMAG | PXI | INTERNAL | PRTCHANDET | PRTFRAME | PRTEVENT`
`:TRIGger:<measurement>[:SEquence]:SOURce?`

Example The following commands set the External 1 trigger input for various measurements

Swept SA and RTSA measurements:
`:TRIG:SOUR EXT1`

Other Spectrum Analyzer Mode measurements:
Harmonics:
`:TRIG:HARM:SOUR EXT1`

Power Suite measurements (appear in many Modes):
Channel Power:
`:TRIG:CHP:SOUR EXT1`

Occupied BW, Output Spectrum BW:
`:TRIG:OBW:SOUR EXT1`

| | |
|--------------|--|
| Notes | <p>For some of the trigger parameters, the tie-in to the parameter is not obvious. These are:</p> <ul style="list-style-type: none">IMMEDIATE, selects Free RunFRAME, selects Periodic TriggerFMT, selects Frequency Mask TriggerAEXTERNAL, selects Audio External trigger, using the TRIG IN connector on the M9260A Audio Analyzer module <p>For most measurements, the <code><measurement></code> keyword follows TRIGGER. For Swept SA and RTSA Modes, do <i>not</i> use the <code><measurement></code> keyword. Using the wrong command form will result in an Undefined Header error</p> <p>Other trigger-related commands are found in the :INITiate and :ABORT SCPI command subsystems</p> <p>*OPC should be used after requesting data. This will hold off any subsequent changes to the selected trigger source, until after the sweep is completed and the data is returned</p> <p>Available ranges and presets can vary from mode to mode</p> <p>FMT (Pulse and RTSA apps):</p> <p>The amplitude resolution of the Frequency Mask is coupled to the Scale/Division. There are 256 vertical points therefore the amplitude resolution is computed using the algorithm: $(10 * \text{Scale/Div}) / \# \text{ Vertical Points}$</p> |
| Dependencies | <p>Not all trigger sources are available for each input. See the "RF Trigger Source (Remote Command Only)" on page 2453 and "I/Q Trigger Source (Remote Command Only)" on page 2455 commands for detailed information on which trigger sources are available for each input</p> <p>In some models, there is no second External input. In these models, the External 2 selection is not shown and the EXTERNAL2 parameter will generate a "Hardware missing; Not available for this model number" message</p> <p>EXTERNAL3 is available only when Option H1G is installed</p> <p>For the E7760 the only available selections are: EXTERNAL1 IMMEDIATE INTERNAL RFBURST VIDEO</p> <p>For UXM the only available selections are: EXTERNAL1 IMMEDIATE PRTCHANDET PRTFRAME PRTEVENT</p> <p>In the Pulse app, when Option B2X and H1G are installed and Digital IF BW is greater than 255.176 MHz, only three trigger sources, IMMEDIATE, LEVEL, and EXTERNAL3 are available</p> <p>Level Trigger (Pulse and RTSA apps):</p> <p>Level trigger is allowed in average detector mode</p> <p>When Level Trigger is the selected Trigger Source in the Spectrum measurement, Spectrum minimum Acquisition Time is limited to the PVT minimum Acquisition Time. If the Spectrum Acquisition Time changed as a result of going into Level Trigger, a message is posted "Min Acq Time is 200 usec when Level Trigger is ON". When Level Trigger is no longer the selected Trigger Source, Spectrum minimum Acquisition Time is restored</p> <p>FMT (Pulse and RTSA apps):</p> <p>If you were not in Free Run when you entered the FMT Setup View, you can change Trigger Source to Free Run while in the editor. This will allow you to configure the mask with a continually updating trace. When exiting FMT Setup View, the Trigger Source will be changed back to FMT</p> |

8 Trigger

8.1 Trigger

For Power Stat CCDF and IQ Waveform in 5G NR and LTEATDD, switching the radio direction changes this parameter to the preset value

In Transmit On|Off Power in 5G NR and LTEATDD, the value changes as follows

- If changed to uplink: Periodic
- If changed to downlink: External 1 except for models with the H1G option. With the H1G option, it changes as follows
 - External 1, when Info BW \leq 255 MHz
 - External 3, when Info BW \geq 256 MHz

| | |
|------------------------------|---|
| Couplings | <p>FMT (Pulse and RTSA apps):</p> <p>A remote user can enter or access FMT data via :TRIGger[:SEquence]:FMT[1] 2:DATA</p> <p>The upper and lower masks can have different freq/ampl pairs therefore subop code 1 is for the upper mask and subop code 2 is for the lower mask</p> |
| Preset | See "Trigger Source Presets" below |
| Status Bits/OPC dependencies | The Status Operation Register bit 5 "Waiting for Trigger" is set at the same time as the Sweeping or Measuring bit is set. It is cleared when the trigger actually occurs (that is, after the trigger event occurs and all the applicable trigger criteria have been met). A corresponding pop-up message ("Waiting for trigger") is generated if no trigger signal appears after approximately 2 sec. This message goes away when a trigger signal appears |

Trigger Source Presets

The following Trigger Source presets are used for these measurements after a Mode Preset or Meas Preset:

| Meas | Mode | Preset for RF | Preset for IQ |
|--------------------------------|--|-----------------------------|-------------------------|
| Swept SA | SA | IMM | IQ not supported |
| CHP | SA, WCDMA, MSR, SRCOMMS, 5GNR, WLAN | IMM | IQ not supported |

RF Trigger Source (Remote Command Only)

Selects the trigger to be used for the specified measurement when RF is the selected input. The RF trigger source can be queried and changed even while another input is selected, but it is inactive until RF becomes the selected input.

Note the inclusion of the <measurement> parameter in the command below. Because each measurement remembers its own Trigger Source, the command must be qualified with the measurement name. Note that for the Swept SA measurement

this is not the case; for backwards compatibility, no <measurement> parameter is used when setting the Trigger Source for the Swept SA measurement.

Remote Command `:TRIGger:<measurement>[:SEQuence]:RF:SOURce EXTernal1 | EXTernal2 | IMMEDIATE | LEVel | FMT | LINE | FRAMe | RFBurst | VIDeo | IF | TV | PXI | INTernal | PRTChandet | PRTFrame | PRTEvent`
 `:TRIGger:<measurement>[:SEQuence]:RF:SOURce?`

Note that the available parameters are model number and hardware dependent

Example Select the external 1 trigger input for the ACP measurement and the RF input:
 `:TRIG:ACP:RF:SOUR EXT1`

Select video triggering for the **SANalyzer** measurement and the RF input. For **SAN**, do not use the <measurement> keyword:
 `:TRIG:RF:SOUR VID`

Notes Not all measurements have all the trigger sources available to them. Check the trigger source documentation for your specific measurement to see what sources are available

Note that not all trigger sources are available for each input, and that the available parameters are model number and hardware dependent

For the **RF Trigger Source**, the following trigger sources are available:

| | |
|--|--|
| IMMEDIATE | free run triggering |
| VIDeo | triggers on the video signal level |
| LEVel | triggers on the video signal level with time qualified triggering |
| FMT | triggers on the amplitude spectrum with frequency mask triggering |
| LINE | triggers on the power line signal |
| EXTernal1 or EXTernal | triggers on an externally connected trigger source marked "Trigger 1 In" on the rear panel of standalone instruments, "Trigger 3" on the front panel of EXM and VXT model M9421A, and "Trigger 1" on the front panel of VXT models M9410A/11A/15A/16A |
| EXTernal2 | triggers on an externally connected trigger source marked "Trigger 2 In" on the front panel of standalone instruments, and "Trigger 1" on the front panel of EXM and VXT model M9421A, and "Trigger 2" on the front panel of VXT models M9410A/11A/15A/16A. In some models, there is no second External input. In these models, the External 2 selection is not shown and the EXTernal2 parameter will generate a "Hardware missing; Not available for this model number" message |
| RFBurst | triggers on the bursted frame |
| FRAMe | triggers on the periodic timer |
| IF (video) | same as video, for backwards compatibility only |
| PRTChandet | triggers on Base Station Emulation detecting a valid UL signal (PUSCH/PUCCH/PRACH/SRS) |

8 Trigger

A corresponding pop-up message ("Waiting for trigger") is generated if no trigger signal appears after approximately 2 sec. This message goes away when a trigger signal appears</p> | | | | | | | | | | | | | | | | | | |

8.1.1.1 Free Run

Free Run triggering occurs immediately after the sweep/measurement is initiated.

| | |
|--------------|--|
| Example | <p>Swept SA measurement: :TRIG:SOUR IMM</p> <p>Measurements other than Swept SA: :TRIG:<meas>:SOUR IMM</p> |
| Annunciation | Free Run (in the Meas Bar) |

8.1.1.2 Video/ADC

The Video trigger condition is met when the video signal at the left edge of the graticule (the filtered and detected version of the input signal, including both RBW and VBW filtering) crosses the video trigger level with the chosen slope.

8 Trigger

8.1 Trigger

The Video trigger level is shown as a labeled line on the display. The line is displayed as long as Video is the selected trigger source. The Trigger Level line can be adjusted using the step keys, knob, or numeric keypad. It can also be dragged on the display with your finger or with a mouse.

When the detector selected for all active traces is the average detector, the video signal for triggering does not include any VBW filtering.

Log Plot and Spot Frequency measurements, in the Phase Noise Mode, do not support Video Trigger.

The **Trigger** tab contains the following Trigger Source dependent controls when Video Trigger is selected:

- "Prot Frame Aligned" on page 2468
- "Trigger Delay" on page 2471
- "Trigger Slope" on page 2475

Additional controls are also present, which are not dependent on the selected Trigger Source.

Note that Video Trigger is a software trigger of the acquired trace for some measurements and a hardware trigger of the IF envelope for others. Most measurements support one method or the other, although some (like ACP) don't support Video Trigger at all. For those measurements that support Video Trigger as a software trigger, the Trigger Level units will be dependent on the current Y Axis Unit for the measurement; for those that support Video Trigger as an IF Envelope trigger, the units are typically in dBm.

| | |
|---------|---|
| Example | Swept SA measurement: :TRIG:SOUR VID Measurements other than Swept SA: :TRIG:<meas>:SOUR VID |
|---------|---|

| | |
|--------------|-------------------------|
| Annunciation | Video (in the Meas Bar) |
|--------------|-------------------------|

8.1.1.3 ADC Trigger

Some IF Paths in certain models (like N9042B) in IQ Measurements have an ADC trigger. ADC is like the Video trigger, but with 2 limitations due to a lack of post-processing.

First, the trigger is not limited to the current measurement's setup IF BW. The trigger sees everything in the passband, so measurements like IQA Complex Spectrum can be triggered outside of the current Digital IF BW.

The final limitation is, due to lack of post-processing, the amplitude accuracy of the ADC trigger is less than the video trigger.

If ADC trigger is available for at least one IF Path on a model, then the ADC trigger will always be seen as a trigger option in IQ Measurements. However, it will only be available (not grayed out) to select when using IF Paths that support it.

If Video Trigger is selected and measurement setup (IF Path or IF BW) is changed to a path that only supports the ADC trigger instead, then ADC trigger will be selected and *vice versa*.

| | |
|---------|--|
| Example | Measurements other than Swept SA: :TRIG:<meas>:SOUR ADC |
|---------|--|

| | |
|--------------|-----------------------|
| Annunciation | ADC (in the Meas Bar) |
|--------------|-----------------------|

8.1.1.4 Line

When **Line** is selected, start of a new sweep/measurement will be synchronized with the next cycle of the line voltage.

Line trigger is not available when operating from a "dc power source", for example, when the instrument is powered from batteries.

Line trigger is not available when using modular instruments like the VXT.

The **Trigger** tab contains the following Trigger Source dependent controls when **Line** Trigger is selected:

- "Trigger Delay" on page 2471
- "Trigger Slope" on page 2475

Additional controls are also present that are not dependent on the selected Trigger Source.

| | |
|---------|---|
| Example | :TRIG:SOUR LINE Swept SA measurement :TRIG:<meas>:SOUR LINE Measurements other than Swept SA |
|---------|---|

| | |
|--------------|------------------------|
| Annunciation | LINE (in the Meas Bar) |
|--------------|------------------------|

8.1.1.5 External 1

When **External 1** is selected, a new sweep/measurement starts when the external trigger condition is met using the TRIGGER 1 IN input connector on the rear panel.

Grayed-out if Ext 1 is in use by Point Trigger in the Source Setup menu of Swept SA. Forced to "Free Run" on page 2456 if already selected and Point Trigger is set to External 1.

8 Trigger

8.1 Trigger

The **Trigger** tab contains the following Trigger Source dependent controls when External 1 Trigger is selected:

- ["Prot Frame Aligned" on page 2468](#)
- ["Trigger Delay" on page 2471](#)
- ["Trigger Slope" on page 2475](#)

Additional controls are also present that are not dependent on the selected Trigger Source.

| | |
|---------|---|
| Example | <code>:TRIG:SOUR EXT1</code> Swept SA measurement <code>:TRIG:<meas>:SOUR EXT1</code> Measurements other than Swept SA |
|---------|---|

| | |
|--------------|------------------------------|
| Annunciation | External 1 (in the Meas Bar) |
|--------------|------------------------------|

8.1.1.6 External 2

When **External 2** is selected, a new sweep/measurement starts when the external trigger condition is met using the TRIGGER 2 IN input connector on the rear panel.

Grayed-out if Ext 2 is in use by Point Trigger in the Source Setup menu of Swept SA. Forced to ["Free Run" on page 2456](#) if already selected and Point Trigger is set to External 2.

The **Trigger** tab contains the following Trigger Source dependent controls when External 2 Trigger is selected:

- ["Prot Frame Aligned" on page 2468](#)
- ["Trigger Delay" on page 2471](#)
- ["Trigger Slope" on page 2475](#)

Additional controls are also present that are not dependent on the selected Trigger Source.

| | |
|---------|---|
| Example | <code>:TRIG:SOUR EXT2</code> Swept SA measurement <code>:TRIG:<meas>:SOUR EXT2</code> Measurements other than Swept SA |
|---------|---|

| | |
|--------------|------------------------------|
| Annunciation | External 2 (in the Meas Bar) |
|--------------|------------------------------|

8.1.1.7 External 3

When **External 3** is selected, a new sweep/measurement starts when the external trigger condition is met using the TRIGGER 3 IN input connector on the rear panel.

This control only appears in certain instrument and option combinations, as follows.

- For N9042B, selects the Precision External Trigger, but available only when IF Path is 255 MHz or wider. The resolution will be within one sample count of the 4.8 GHz ADC sampling rate for 255 ~ 2 GHz IF Paths, and within one sample count of the 10.2 GHz sampling rate for the 4 GHz IF Path
- For all other instruments, available only if Option H1G is installed. It is only available when the 1 GHz path is chosen, either directly or indirectly; in all other paths it is visible but grayed-out. Direct and indirect selection of the 1 GHz path occurs as follows:
 - **Direct:** Measurements that directly support the 1 GHz path have a 1 GHz selection in the **IF Path** menu in **Meas Setup**
 - **Indirect:** Certain measurements, such as Power Statistics CCDF (**PST**), always choose the widest available path, and so will choose the 1 GHz path if it is available, even if there is no **IF Path** menu for the measurement. **External 3** will be visible when this results in the 1 GHz path being selected, even if there is no control or readout indicating that the 1 GHz path has been selected

For a full list of Modes and measurements that support **External 3**, see "[External 3 Support](#)" on page 2446 in the section "[Select Trig Source](#)" on page 2443.

When **External 3** is set, and then becomes disabled because you switched away from the 1 GHz path, the Trigger Source selection reverts to the default ("[Free Run](#)" on page 2456).

When **External 3** Trigger is selected, the **Trigger** tab displays the following Trigger Source dependent controls:

- "[Prot Frame Aligned](#)" on page 2468
- "[Trigger Delay](#)" on page 2471
- "[Trigger Slope](#)" on page 2475

Additional controls are also present that are not dependent on the selected Trigger Source.

| | |
|--------------|--|
| Example | :TRIG:SPEC:SOUR EXT3 Sets External 3 as the trigger source for the Complex Spectrum measurement |
| Annunciation | External 3 (in the Meas Bar) |

8.1.1.8 Audio External

When **Audio External** is selected, a new sweep/measurement starts when the external trigger condition is met using the TRIG IN input connector on the front panel of the M9260A Audio Analyzer module. This is a TTL level input (not analog) that supports both rising edge and falling edge triggers.

Only appears in modular instruments, and only when the M9260A Audio Analyzer module is installed, such as in M8920A.

The **Trigger** tab contains the following Trigger Source dependent controls when Audio External Trigger is selected:

- "Trigger Delay" on page 2471
- "Trigger Slope" on page 2475

Additional controls are also present that are not dependent on the selected Trigger Source.

| | |
|--------------|---|
| Example | <code>:TRIG:RTES:SOUR AEXT</code> Sets Audio External as the trigger source for the Radio Test measurement |
| Annunciation | Audio Ext (in the Meas Bar) |

8.1.1.9 RF Burst

When **RF Burst** is selected, a new sweep/measurement starts when an RF burst envelope signal is identified from the signal at the RF Input connector.

In some models, a variety of burst trigger circuitry is available, resulting in various available burst trigger bandwidths. The instrument automatically chooses the appropriate trigger path based on the hardware configuration and other settings of the instrument.

The **Trigger** tab contains the following Trigger Source dependent controls when RF Burst is selected:

- "Trigger Level Absolute/Relative" on page 2476
- "Absolute Trigger Level" on page 2477
- "Relative Trigger Level" on page 2477
- "Trigger Delay" on page 2471
- "Trigger Slope" on page 2475

Additional controls are also present that are not dependent on the selected Trigger Source.

| | |
|--------------|---|
| Example | <code>:TRIG:SOUR RFB</code> Swept SA measurement <code>:TRIG:<meas>:SOUR RFB</code> Measurements other than Swept SA |
| Annunciation | RF Burst (in the Meas Bar) |

8.1.1.10 Periodic

When **Periodic** is selected, the instrument uses a built-in periodic timer signal as the trigger. Trigger occurrences are set by the **Periodic Timer** parameter, which is modified by the **Offset** and Periodic Sync Src.

Use this trigger when there is a periodic signal but no reliable signal on which to trigger. You can synchronize the periodic signal with outside events (using the Periodic Sync Src) to get closer to a reliable trigger signal (see ["More Information" on page 2463](#) below).

If you do not have a sync source selected (**OFF**), then the internal timer will not be synchronized with any external timing events.

The **Trigger** tab contains the following Trigger Source dependent controls when Periodic Trigger is selected:

- ["Period" on page 2479](#)
- ["Offset" on page 2480](#)
- ["Reset Offset Display" on page 2481](#)
- ["Sync Source" on page 2482](#)
- ["Trigger Delay" on page 2471](#)

Additional controls are also present that are not dependent on the selected Trigger Source.

| | |
|--------------|---|
| Example | <code>:TRIG:SOUR FRAM</code> Swept SA measurement <code>:TRIG:<meas>:SOUR FRAM</code> Measurements other than Swept SA |
| Annunciation | Periodic (in the Meas Bar) |

More Information

The graphic below shows the action of the periodic timer trigger.

A common application is measuring periodic burst RF signals for which a trigger signal is not easily available. For example, we might be measuring a TDMA radio that bursts every 20 ms. Let's assume that the 20 ms period is very consistent. Let's also assume that we do not have an external trigger source available that is synchronized with the period, and that the signal-to-noise ratio of the signal is not high enough to provide a clean RF burst trigger at all of the analysis frequencies. For example, we might want to measure spurious transmissions at an offset from the carrier that is larger than the bandwidth of the RF burst trigger. In this application, we can set the Periodic Timer to a 20.00 ms period and adjust the offset from that timer to position our trigger just where we want it. If we find that the 20.00 ms is not exactly right, we can adjust the period slightly to minimize the drift between the period timer and the signal to be measured.

A second way to use this feature would be to use **Sync Source** temporarily, instead of **Offset**. In this case, we might tune to the signal in a narrow span and use the RF Burst trigger to synchronize the periodic timer. Then we would turn the sync source off so that it would not miss-trigger. Miss-triggering can occur when we are tuned so far away from the RF burst trigger that it is no longer reliable.

A third example would be to synchronize to a signal that has a reference time element of much longer period than the period of interest. In some CDMA applications, it is useful to look at signals with a short periodicity, by synchronizing that periodicity to the "even-second clock" edge that happens every two seconds. Thus, we could connect the even-second clock trigger to Ext1 and use then Ext1 as the sync source for the periodic timer.

The figure below illustrates this third example. The top trace represents the even-second clock. It causes the periodic timer to synchronize with the leading edge

shown. The instrument trigger occurs at a time delayed by the accumulated offset from the period trigger event. The periodic timer continues to run, and triggers continue to occur, with a periodicity determined by the instrument time base. The timer output (labeled "late event") will drift away from its ideal time due to imperfect matching between the time base of the signal being measured and the time base of the instrument, and also because of imperfect setting of the period parameter. But the synchronization is restored on the next even-second clock event. ("Accumulated offset" is described in the in the **Offset** function section.)

8.1.1.11 I/Q Mag

When **I/Q Mag** is selected, the trigger condition is met when the I/Q magnitude crosses the I/Q magnitude trigger level. The magnitude is measured at the output of the main I/Q digital receiver.

This trigger type is only valid for measurements that support the I/Q inputs.

The **Trigger** tab contains the following Trigger Source dependent controls when I/Q Mag Trigger is selected:

- ["Prot Frame Aligned" on page 2468](#)
- ["Trigger Delay" on page 2471](#)
- ["Trigger Slope" on page 2475](#)

Additional controls are also present that are not dependent on the selected Trigger Source.

| | |
|--------------|--|
| Example | <code>:TRIG:<meas>:SOUR IQM</code> |
| Annunciation | I/Q Mag (in the Meas Bar) |

8.1.1.12 Input I

When **Input I** is selected, the condition is met when the voltage at the I Input crosses the trigger level.

This trigger type is only valid for measurements that support the I/Q inputs.

The **Trigger** tab contains the following Trigger Source dependent controls when Input I Trigger is selected:

- ["Prot Frame Aligned" on page 2468](#)
- ["Trigger Delay" on page 2471](#)
- ["Trigger Slope" on page 2475](#)

8 Trigger

8.1 Trigger

Additional controls are also present that are not dependent on the selected Trigger Source.

| | |
|---------|---|
| Example | <code>:TRIG:<meas>:SOUR IINP</code> |
|---------|---|

| | |
|--------------|---------------------------|
| Annunciation | Input I (in the Meas Bar) |
|--------------|---------------------------|

8.1.1.13 Input Q

When **Input Q** is selected, the condition is met when the voltage at the I Input crosses the trigger level.

This trigger type is only valid for measurements that support the I/Q inputs.

The **Trigger** tab contains the following Trigger Source dependent controls when Input Q Trigger is selected:

- ["Prot Frame Aligned" on page 2468](#)
- ["Trigger Delay" on page 2471](#)
- ["Trigger Slope" on page 2475](#)

Additional controls are also present that are not dependent on the selected Trigger Source.

| | |
|---------|---|
| Example | <code>:TRIG:<meas>:SOUR QINP</code> |
|---------|---|

| | |
|--------------|---------------------------|
| Annunciation | Input Q (in the Meas Bar) |
|--------------|---------------------------|

8.1.1.14 I (Demodulated)

When **I (Demodulated)** is selected, the trigger condition is met when the I voltage crosses the I voltage trigger level.

This trigger type is only valid for measurements that support the I/Q inputs.

The **Trigger** tab contains the following Trigger Source dependent controls when I (Demodulated) Trigger is selected:

- ["Prot Frame Aligned" on page 2468](#)
- ["Trigger Delay" on page 2471](#)
- ["Trigger Slope" on page 2475](#)

Additional controls are also present that are not dependent on the selected Trigger Source.

| | |
|---------|---|
| Example | <code>:TRIG:<meas>:SOUR IDEM</code> |
|---------|---|

| | |
|--------------|-----------------------------|
| Annunciation | I (Demod) (in the Meas Bar) |
|--------------|-----------------------------|

8.1.1.15 Q (Demodulated)

When **Q (Demodulated)** is selected, the trigger condition is met when the Q voltage crosses the Q voltage trigger level.

This trigger type is only valid for measurements that support the I/Q inputs.

The **Trigger** tab contains the following Trigger Source dependent controls when Q (Demodulated) Trigger is selected:

- "Prot Frame Aligned" on page 2468
- "Trigger Delay" on page 2471
- "Trigger Slope" on page 2475

Additional controls are also present that are not dependent on the selected Trigger Source.

| | |
|---------|---|
| Example | <code>:TRIG:<meas>:SOUR QDEM</code> |
|---------|---|

| | |
|--------------|-----------------------------|
| Annunciation | Q (Demod) (in the Meas Bar) |
|--------------|-----------------------------|

8.1.1.16 Aux I/Q Mag

When **Aux I/Q Mag** is selected, the trigger condition is met when the auxiliary receiver's I/Q magnitude output crosses the Auxiliary I/Q magnitude trigger level.

This trigger type is only valid for measurements that support the I/Q inputs.

The **Trigger** tab contains the following Trigger Source dependent controls when Aux I/Q Mag Trigger is selected:

- "Prot Frame Aligned" on page 2468
- "Trigger Delay" on page 2471
- "Trigger Slope" on page 2475
- "Trigger Center Frequency" on page 2485
- "Trigger BW" on page 2485

Additional controls are also present that are not dependent on the selected Trigger Source.

| | |
|---------|---|
| Example | <code>:TRIG:<meas>:SOUR AIQM</code> |
|---------|---|

| | |
|--------------|-------------------------------|
| Annunciation | Aux I/Q Mag (in the Meas Bar) |
|--------------|-------------------------------|

8.1.1.17 PXI

When **PXI** is selected, a new sweep/measurement will start when detecting the signal from the PXI backplane trigger line.

This trigger type is only found in the modular instrument products.

The **Trigger** tab contains the following Trigger Source dependent controls when PXI Trigger is selected:

- "Select PXI Line" on page 2486
- "Trigger Delay" on page 2471
- "Trigger Slope" on page 2475

Additional controls are also present that are not dependent on the selected Trigger Source.

| | |
|--------------|---|
| Example | Swept SA measurement: :TRIG:SOUR PXI Measurements other than Swept SA: :TRIG:<meas>:SOUR PXI |
| Annunciation | PXI (in the Meas Bar) |

8.1.1.18 Internal

When **Internal** is selected, the trigger condition is met when detecting the signal from the internal RF Source module.

This trigger type is only found in the modular instrument products.

The **Trigger** tab contains the following Trigger Source dependent controls when Aux I/Q Mag Trigger is selected:

- "Prot Frame Aligned" on page 2468
- "Trigger Delay" on page 2471
- "Trigger Slope" on page 2475

Additional controls are also present that are not dependent on the selected Trigger Source.

For an Internal trigger to occur, there must be a trigger output from the internal RF source. This means that you must configure the Source Trigger Output before selecting Internal as the Trigger Source. To enable the Source Trigger Output,

output trigger should not be off if internal source works as list sequence mode and Trig 2 Out should not be off if internal source works as MXG mode. Otherwise, no trigger occurs, and measurement does not start.

| | |
|--------------|---|
| Example | Swept SA measurement: :TRIG:SOUR INTernal Measurements other than Swept SA: :TRIG:<meas>:SOUR INTernal |
| Annunciation | Internal (in the Meas Bar) |

8.1.1.19 Prot Channel Detection

Selects a protocol channel detection Base Station Emulation as the trigger. When Prot Channel Detection is selected, a new sweep/measurement will start when the protocol channel detection trigger condition is met.

Protocol Channel Detection Trigger is defined as the Base Station Emulation protocol channel detection event of PUSCH, PUCCH, PRACH or SRS. With this trigger, the IQ data, and therefore the measurement, is aligned at the beginning of the LTE sub-frame where the particular event was detected. Channel transmission is aligned to the sub-frame boundary; therefore, the measurement is aligned with its transmission with the exception of SRS, which might not start at the beginning of the sub-frame containing the SRS as it might have an offset from the start of the sub-frame base on the SRS configuration, In this case, the trigger and measurement are aligned to the beginning of the sub-frame containing SRS as defined by this trigger type (which is not the beginning of the SRS itself due to the offset).

This trigger type is only available in UXM.

| | |
|--------------|---------------------------------|
| Example | :TRIG:<meas>:SOUR PRTC |
| Annunciation | Prot Chan Det (in the Meas Bar) |

8.1.1.20 Prot Frame Aligned

Selects a protocol frame aligned Base Station Emulation as the trigger. When Prot Frame Aligned is selected, a new sweep/measurement will start when the protocol frame aligned data trigger condition is met.

Prot Frame Aligned Trigger is aligned with the Base Station Emulation Protocol uplink frame timing boundary. It depends on the technology format of the base station call processing.

This trigger type is only available in UXM.

| | |
|--------------|------------------------------|
| Example | :TRIG:<meas>:SOUR PRTF |
| Annunciation | Prot Frame (in the Meas Bar) |

8.1.1.21 Prot Event

Selects a protocol frame aligned Base Station Emulation as the trigger. When Prot Frame Aligned is selected, a new sweep/measurement will start when the protocol frame aligned data trigger condition is met.

Prot Event Trigger is defined as the Base Station Emulation protocol internal event such as the starting of a predefined uplink pattern for a relative power control ramp. With this trigger, the IQ data, and therefore the measurement, is aligned with the start of the desired uplink pattern.

This trigger type is only available in UXM.

| | |
|--------------|---|
| Example | <code>:TRIG:<meas>:SOUR PRTF</code> |
| Annunciation | Prot Frame (in the Meas Bar) |

8.1.2 Trigger Level

Sets the amplitude level for Trigger and Gate sources that use level triggering. When the video signal crosses this level, with the chosen slope, the trigger occurs.

For any given Trigger, Gate, or Periodic Sync Src, the same Trigger Level is used for the Trigger source in the Trigger menu, for the Gate source in the Gate Source menu, and for the Periodic Sync source in the Periodic Sync Src menu.

If **Video** is the selected trigger source, the trigger level displays as a green horizontal line with the label TRIG LVL just above it on the right:

If the value of trigger level is off screen low this line displays along the bottom of the graticule. If the value of trigger level is off screen high this line displays above the graticule but no farther above than 1.5 % of the graticule height (the same as the trace itself). Note that the TRIG LVL label cannot display above the graticule so the label itself stops at the top of the graticule.

For the I/Q Triggers, the I/Q reference impedance is used for converting between power and voltage.

Trigger Level Parameters

| Source | Example | Min | Max | Prese t | Resoluti on | Step Key Incr | Knob Incr |
|------------------|------------------------------------|---|--|------------|----------------------|-----------------------------|-----------------------------|
| Video | <code>TRIG:VID:LEV -40 dBm</code> | -170 dBm | +30 dBm | -25 dBm | .01 dB | Scale/Div (Log), 1 dB (Lin) | Step/10, but never < 0.1 dB |
| Level | <code>TRIG:LEV:LEV -40 dBm</code> | -170 dBm | +30 dBm | -25 dBm | .01 dB | Scale/Div (Log), 1 dB (Lin) | Step/10, but never < 0.1 dB |
| External 1 2 | <code>TRIG:EXT1:LEV 0.4 V</code> | -5 V VXT models M9410A/11A/15A /16A: 0 V | 5 V VXT models M9410A/11A/15A /16A: 2.5 V | 1.2 V | 10 mV | 0.5 V | 0.1 V |
| I/Q Mag | <code>TRIG:IQM:LEV -30 dBm</code> | -200 dBm | 100 dBm | -25 dBm | .1 dB | Scale/Div (Log), 1 dB (Lin) | Step/10, but never < 0.1 dB |
| I (Demod) | <code>TRIG:IDEM:LEV 0.5 V</code> | -1 V | 1 V | 0.25 V | 4 significant digits | Scale/Div | Step/100, but never < 1 μV |
| Q (Demod) | <code>TRIG:QDEM:LEV 0.5 V</code> | -1 V | 1 V | 0.25 V | 4 significant digits | Scale/Div | Step/100, but never < 1 μV |
| Input I | <code>TRIG:IINP:LEV 0.5 V</code> | -1 V | 1 V | 0.25 V | 4 significant digits | Scale/Div | Step/100, but never < 1 μV |
| Input Q | <code>TRIG:QINP:LEV 0.5 V</code> | -1 V | 1 V | 0.25 V | 4 significant digits | Scale/Div | Step/100, but never < 1 μV |
| Aux Chan I/Q Mag | <code>TRIG:AIQM:LEV -30 dBm</code> | -200 dBm | 100 dBm | -25 dBm | .1 dB | Scale/Div (Log), 1 dB (Lin) | Step/10, but never < 0.1 dB |
| Internal | <code>TRIG:INT:LEV 1.2 V</code> | -5 V VXT models M9410A/11A/15A /16A: 0 V | 5 V VXT models M9410A/11A/15A /16A: 2.5 V | 1.2 V | 10 mV | .5 V | .1 V |
| ADC | <code>TRIG:ADC:L</code> | -170 dBm | 30 dBm | -25 | .01 dB | Scale/Div | Step/10, |

8 Trigger

8.1 Trigger

| Source | Example | Min | Max | Prese t | Resoluti on | Step Key Incr | Knob Incr |
|--------|------------|-----|-----|------------|----------------|----------------------------|--------------------------|
| | EV -30 dBm | | | dBm | | iv (Log), 1 dB (Lin) | but never < 0.1 dB |

More Information

For Video Trigger Level, when sweep type = FFT, the video trigger uses the amplitude envelope in a bandwidth wider than the FFT width as a trigger source. This can be useful but does not have the same relationship between the displayed trace and the trigger level as in swept triggering.

For Video Trigger Level the settable resolution of the function is 0.01 dB, even when the Y Axis Unit is linear. In Linear Y Axis Unit (for example, Volts) this requires 4 significant digits to display on the control.

For the Level trigger source, used in RTSA and other measurements, External Gain and Ref Level Offset modify the actual trace data as it is taken and are taken into account by Trig Level.

| | |
|--------------------|--|
| Remote Command | <pre>:TRIGger[:SEquence]:<trig_source>:LEVel <ampl> :TRIGger[:SEquence]:<trig_source>:LEVel?</pre> <p>where <trig_source> is one of:</p> <pre>EXTerna1 EXTerna2 EXTerna3 VIDEo ADC LEVel IQMag IDEMod QDEMod IINPut QINPut AIQMag INTerna1</pre> |
| Example | <pre>:TRIG:VID:LEV -40 dBm</pre> |
| Dependencies | Only appears when Video, External 1 2, or an I/Q trigger is selected as the Trigger Source |

8.1.3 Trigger Delay

Controls a time delay that the instrument will wait to begin a sweep after meeting the trigger criteria, for Trigger and Gate sources that support Trigger Delay.

For any given Trigger, Gate, or Periodic Sync source, the same Trigger Delay is used for the Trigger source in the Trigger menu, for the Gate source in the Gate Source menu, and for the Periodic Sync source in the Periodic Sync Src menu.

Negative trigger delays can be used. Negative trigger delay makes intuitive sense in time domain and works well in FFT mode where the bandwidth of the filter before the video trigger is about 1.25 span. You can use negative delay to pre-trigger the instrument in the time domain or FFT, but not in swept spans. Video trigger delay may be set to negative values, in time domain, FFT and even swept, but in swept spans, negative settings of Trig Delay are treated as a zero setting within the internal hardware and the advisory message "Neg. Trig Delay unavailable in Swept Mode, zero delay used." is generated when such a delay is set.

| | |
|-------------------------------|---|
| Remote Command | <pre>:TRIGger[:SEquence]:<trig_source>:DElay <time> :TRIGger[:SEquence]:<trig_source>:DElay?</pre> <p>where <trig_source> is one of: LINE EXTernal1 EXTernal2 EXTernal3 AEXTernal VIDeo ADC RFBurst FRAME LEVel FMT IQMag IDEMod QDEMod IINPut QINPut AIQMag PXI INTernal</p> |
| Example | <pre>:TRIG:VID:DEL:STAT ON :TRIG:VID:DEL 100 ms</pre> |
| Dependencies | Only appears when Video, Line, External 1 2, RF Burst, Periodic Timer or an I/Q trigger is selected as the Trigger Source |
| Couplings | When FMT Trigger Criteria is INSIDE or OUTSIDE , FMT Trigger Delay State is forced to OFF FMT Trigger Delay MaxValue is dependent on the current AcquisitionTime. The equation is: MaxValue = 2 ¹⁶ x AcqTime, but never to exceed 70 sec. Ex: In PVT View with a min PVT Acq Time of 200 us, this Trigger Delay MaxValue is 13.26 sec. In RT Spectrum and Spectrogram with a min Acq Time of 100 us, this Trigger Delay MaxValue is 6.55 sec. When the Acq Time is increased, this MaxValue also increases |
| State Saved | Saved in instrument state |
| Annotation | Trig Delay (in the Measurement Bar) |
| Backwards Compatibility Notes | <p>For backward compatibility with VSA/PSA comms apps</p> <pre>:TRIGger[:SEquence]:IF:DElay :TRIGger[:SEquence]:DElay</pre> <p>The legacy <code>:TRIGger[:SEquence]:DElay</code> command affects the delay for the VID, LINE, EXT1, EXT2, and RFB triggers</p> <p>Auto Function</p> |

Backwards Compatibility Commands

| | |
|-------------------------|---|
| Example | <code>:TRIG:DEL 1 ms</code> |
| Preset | 1 us |
| State Saved | Saved in instrument state |
| Backwards Compatibility | <code>:TRIGger[:SEquence]:DELay <time></code> |
| SCPI | <code>:TRIGger[:SEquence]:DELay?</code> <code>:TRIGger[:SEquence]:DELay:STATE OFF ON 0 1</code> <code>:TRIGger[:SEquence]:DELay:STATE?</code> |

| | |
|---------|---|
| Example | <code>:TRIG:OFFS ON</code> <code>:TRIG:OFFS -100 ms</code> |
|---------|---|

Notes
ESA commands for trigger offset, which allowed you to use a positive or negative delay when in zero span and in a Res BW \geq 1 kHz. For ESA compatibility, X-series instruments keep track of this offset and adds it to the Trigger Delay for VIDEO, LINE, EXTERNAL1 or EXTERNAL2 whenever the value is sent to the hardware, if in Zero Span and RBW \geq 1 kHz

| | |
|-------------------------|--|
| Preset | Off, 0 s |

|----------------|--|

| | |
|--------|-----|
| Preset | OFF |
|--------|-----|

Trigger Delay Parameters

Note: in Swept SA, when transitioning from Zero Span to Swept spans, the trigger delay is clipped to -150 ms if it had been longer in Zero Span.

| Source | Example | Preset | Min | Max | Resolution |
|--------|---|------------|---|-------------|-----------------|
| Video | <code>TRIG:VID:DEL:STAT ON</code> <code>TRIG:VID:DEL 100 ms</code> | Off, 1 us | -150 ms (-10s in Swept SA Zero Span) | +500 ms | 100 ns |
| Level | <code>TRIG:LEV:DEL:STAT ON</code> | Off, 30 ms | 0 ms | 70 sec (but | Multiple of Acq |

| Source | Example | Preset | Min | Max | Resolution |
|------------------------|---|------------|---|---|----------------------------------|
| | TRIG:LEV:DEL 100 ms | | | dependent on Acq Time like FMT) | Time (as is FMT) |
| FMT | TRIG:FMT:DEL:STAT ON TRIG:FMT:DEL 100 ms | Off, 30 ms | 0 ms | 70 sec (but dependent on Acq Time like FMT) | Multiple of Acq Time (as is FMT) |
| External 1 2 | TRIG:EXT1:DEL:STAT ON TRIG:EXT2:DEL 100 ms | Off, 1 us | -150 ms (-10s in Swept SA Zero Span) | +500 ms | 100 ns |
| Line | TRIG:LINE:DEL:STAT ON TRIG:LINE:DEL 100 ms | Off, 1 us | -150 ms (-10s in Swept SA Zero Span) | +500 ms | 100 ns |
| RF Burst | TRIG:RFB:DEL:STAT ON TRIG:RFB:DEL 100 ms | Off, 1 us | -150 ms (-10s in Swept SA Zero Span) | +500 ms | 100 ns |
| Periodic Timer | TRIG:FRAM:DEL:STAT ON TRIG:FRAM:DEL 100 ms | Off, 1 us | -150 ms (-10s in Swept SA Zero Span) | +500 ms | 100 ns |
| I/Q Mag | TRIG:IQM:DEL:STAT ON TRIG:IQM:DEL 10 ms | Off, 1 us | -2.5 s | +10 s | 10 ns |
| I (Demod) | TRIG:IDEM:DEL:STAT ON TRIG:IDEM:DEL 10 ms | Off, 1 us | -2.5 s | +10 s | 10 ns |
| Q (Demod) | TRIG:QDEM:DEL:STAT ON TRIG:QDEM:DEL 10 ms | Off, 1 us | -2.5 s | +10 s | 10 ns |
| Input I | TRIG:IINP:DEL:STAT ON TRIG:IINP:DEL 10 ms | Off, 1 us | -2.5 s | +10 s | 10 ns |
| Input Q | TRIG:QINP:DEL:STAT ON TRIG:QINP:DEL 10 ms | Off, 1 us | -2.5 s | +10 s | 10 ns |
| Aux Chan I/Q Mag | TRIG:AIQM:DEL:STAT ON TRIG:AIQM:DEL 10 ms | Off, 1 us | -2.5 s | +10 s | 10 ns |
| PXI | TRIG:PXI:DEL:STAT ON TRIG:PXI:DEL 10 ms | Off, 1 us | -150 ms | +500 ms | 100 ns |
| Internal | TRIG:INT:DEL:STAT ON TRIG:INT:DEL 10 ms | Off, 1 us | -150 ms | +500 ms | 100 ns |
| Prot Channel Detection | TRIG:PRTC:DEL:STAT ON TRIG:PRTC:DEL 1 ms | Off, 1 ms | -10 ms | +10 ms | 100 ns |

8 Trigger

8.1 Trigger

| Source | Example | Preset | Min | Max | Resolution |
|--------------------|---|-----------|--------|--------|------------|
| Prot Frame Aligned | <code>TRIG:PRTF:DEL:STAT ON</code> <code>TRIG:PRTF:DEL 1 ms</code> | Off, 1 ms | -10 ms | +10 ms | 100 ns |
| Prot Event | <code>TRIG:PRTE:DEL:STAT ON</code> <code>TRIG:PRTE:DEL 1 ms</code> | Off, 1 ms | -10 ms | +10 ms | 100 ns |

Note: in Bluetooth Mode, the preset value of Trigger Delay is always (On, -20us).

More Information

Here is the diagram for Frequency Mask Trigger (FMT) Trigger Delay:

8.1.4 Trigger Slope

Sets the trigger polarity for Trigger and Gate sources that support Trigger Slope. It is set positive to trigger on a rising edge and negative to trigger on a falling edge.

For any given Trigger, Gate, or Periodic Sync source, the same Trigger Slope is used for the Trigger source in the Trigger menu, for the Gate source in the Gate Source menu, and for the Periodic Sync source in the Periodic Sync Src menu.

Remote Command `:TRIGger[:SEquence]:<trig_source>:SLOPe POSitive | NEGative`
`:TRIGger[:SEquence]:<trig_source>:SLOPe?`

where `<trig_source>` is one of:

`LINE` | `EXTernal1` | `EXTernal2` | `EXTernal3` | `AEXTernal` | `VIDeo` | `ADC RFBurst` |

| | |
|------------------------------|---|
| | IQMag IDEMod QDEMod IINPut QINPut AIQMag PXI INternal |
| Example | :TRIG:VID:SLOP NEG :TRIG:VID:SLOP? :TRIG:EXT1: SLOP NEG |
| Dependencies | Only appears when Video, Line, External 1 2, RF Burst or an I/Q trigger is selected as the Trigger Source |
| Preset | POSitive |
| State Saved | Saved in instrument state |
| Backwards Compatibility SCPI | :TRIGger[:SEquence]:IF:SLOPe NEGative POSitive :TRIGger[:SEquence]:IF:SLOPe? For backward compatibility with VSA/PSA comms apps :TRIGger[:SEquence]:EXTernal:SLOPe For backward compatibility, the parameter EXTernal is mapped to EXTernal1 :TRIGger[:SEquence]:FRAMe:EXTernal1:SLOPe :TRIGger[:SEquence]:FRAMe:EXTernal2:SLOPe |

| | |
|------------------------------|---|
| Example | :TRIG:SLOP NEG |
| Preset | POSitive |
| State Saved | Saved in instrument state |
| Backwards Compatibility SCPI | :TRIGger[:SEquence]:SLOPe POSitive NEGative :TRIGger[:SEquence]:SLOPe? |

Note: when transitioning from Zero Span to Swept spans, the trigger delay is clipped to -150 ms if it had been longer in Zero Span.

8.1.5 Trigger Level Absolute/Relative

Selects either Absolute or Relative Burst Triggering.

| | |
|----------------|---|
| Remote Command | :TRIGger[:SEquence]:RFBurst:LEVel:TYPE ABSolute RELative :TRIGger[:SEquence]:RFBurst:LEVel:TYPE? |
| Example | Set the trigger level type of the RF burst trigger to Relative: :TRIG:RFB:LEV:TYPE REL |
| Dependencies | Only appears when RF Burst is selected as the Trigger Source |
| Preset | ABSolute |
| State Saved | Saved in instrument state |

8.1.6 Absolute Trigger Level

Sets the absolute trigger level for the RF burst envelope.

NOTE

When using the External Mixing path, the Absolute Trigger Level is uncalibrated because the factory default was set to accommodate the expected IF levels for the RF path.

| | |
|------------------------------|---|
| Remote Command | <code>:TRIGger[:SEquence]:RFBurst:LEVel:ABSolute <ampl></code> <code>:TRIGger[:SEquence]:RFBurst:LEVel:ABSolute?</code> |
| Example | Set the trigger level of the RF burst envelope signal to the absolute level of 10 dBm: <code>:TRIG:RFB:LEV:ABS 10 dBm</code> |
| Notes | Sending this command does not switch the setting from relative to absolute; to switch it you need to send <code>:TRIGger[:SEquence]:RFBurst:LEVel:TYPE</code> For Bluetooth Mode, the default value is -50 dBm |
| Dependencies | Only appears when RF Burst is selected as the Trigger, Gate or Periodic Sync Source |
| Couplings | This same level is used for the RF Burst trigger source in the Trigger menu, for the RF Burst selection in the Gate Source menu, and also for the RF Burst selection in the Periodic Sync Src menu |
| Preset | LTEA FDD/TDD modes: -40 dBm or -50 dBm depending on the hardware 5G NR mode: -40 dBm All other modes: -20 dBm |
| State Saved | Saved in instrument state |
| Min | -200 dBm |
| Max | 100 dBm |
| Backwards Compatibility SCPI | <code>:TRIGger[:SEquence]:FRAME:RFBurst:LEVel:ABSolute</code> |

8.1.7 Relative Trigger Level

Sets the relative trigger level for the RF burst envelope.

In some models, the relative burst trigger function is implemented in hardware. In other models, without the advanced triggering hardware required, the relative burst trigger function is implemented in software in some measurements, and is unavailable in other measurements.

When implemented in software, the relative RF Burst trigger function is implemented as follows:

1. The measurement starts with the absolute RF Burst trigger setting. If it cannot get a trigger with that level, auto trigger fires and the acquisition starts anyway.

After the acquisition, the measurement searches for the peak in the acquired waveform and saves it

2. In the next cycle of the measurement, the measurement determines a new absolute RF Burst level based on the peak value from the first measurement and the Relative RF Burst Trigger Level (always 0 or negative dB) set by the user. The following formula is used: absolute RF Burst level = peak level of the previous acquisition + relative RF Burst level
3. If the new absolute RF Burst level differs from the previous by more than 0.5 dB, the new level is sent to the hardware; otherwise, it is not updated (to avoid slowing down the acquisition)

Steps 2 and 3 repeat for subsequent measurements.

| | |
|------------------------------|--|
| Remote Command | <code>:TRIGger[:SEquence]:RFBurst:LEVel:RELative <rel_ampl></code> <code>:TRIGger[:SEquence]:RFBurst:LEVel:RELative?</code> |
| Example | Set the trigger level of the RF burst envelope signal to the relative level of -10 dB: <code>:TRIG:RFB:LEV:REL -10 dB</code> |
| Notes | Sending this command does not switch the setting from absolute to relative; to switch it you need to send <code>:TRIGger[:SEquence]:RFBurst:LEVel:TYPE</code> The relative trigger level is not available in some measurements. In those measurements the <code>RELative</code> parameter, and <code>:TRIGger[:SEquence]:RFBurst:LEVel:TYPE</code> generates an error if sent |
| Dependencies | This control is grayed-out and Absolute Trigger Level selected if the required hardware is not present in your instrument and the current measurement does not support Relative triggering Only appears when RF Burst is selected as the Trigger Source |
| Preset | -6 dB GSM: -25 dB |
| State Saved | Saved in instrument state |
| Min | -45 dB |
| Max | 0 dB |
| Backwards Compatibility SCPI | <code>:TRIGger[:SEquence]:RFBurst:LEVel</code> This legacy command is aliased to <code>:TRIGger[:SEquence]:RFBurst:LEVel:RELative</code> because PSA had <i>only</i> relative burst triggering In some models, a variety of burst trigger circuitry is available, resulting in various available burst trigger bandwidths. The instrument automatically chooses the appropriate trigger path based on the hardware configuration and other settings of the instrument. Here is the RF Burst Trigger Bandwidth table for Swept SA Measurement in SA mode: |

8 Trigger
8.1 Trigger

| Model | Option | Span | Swp Type | FFT Width | Trigger BW, -10 dB | Notes |
|-------|---------|---------|----------|-----------|--------------------|---------------|
| EXA | any | All | all | all | 16 MHz | |
| MXA | w/o B25 | All | all | all | 16 MHz | |
| MXA | B25 | Zero | N/A | N/A | 16 MHz | |
| MXA | B25 | All | Swept | N/A | 16 MHz | |
| MXA | B25 | < 8 MHz | FFT | all | 16 MHz | |
| MXA | B25 | ≥ 8 MHz | FFT | 25 MHz | 30 MHz | |
| PXA | any | all | all | all | > 80 MHz | Exceptions(*) |

(*) Exceptions: When the RF Burst Trigger Level Type is Absolute, the start frequency is below 300 MHz, and the sweep type is either Swept or FFT with an FFT width of less than 25 MHz, then the RF Burst Trigger Bandwidth is not >80 MHz. It would be 16 MHz except in the subcase of Sweep Type = FFT and FFT Width between 8 and 25 MHz inclusive, where it would be 30 MHz.

8.1.8 Period

Sets the period of the internal periodic timer clock. For digital communications signals, this is usually set to the frame period of your current input signal. In the case that sync source is not set to OFF, and the external sync source rate is changed for some reason, the periodic timer is synchronized at every external synchronization pulse by resetting the internal state of the timer circuit.

| | |
|----------------|--|
| Remote Command | <code>:TRIGger[:SEquence]:FRAMe:PERiod <time></code> <code>:TRIGger[:SEquence]:FRAMe:PERiod?</code> |
| Example | <code>:TRIG:FRAM:PER 100 ms</code> |
| Dependencies | The invalid data indicator turns on when the period is changed, until the next sweep/measurement completes Only appears when Periodic Timer is selected as the Trigger or Gate Source |
| Couplings | The same period is used in the Gate Source selection of the period timer |
| Preset | 20 ms unless noted below: GSM: 4.615383 ms 5G NR: 10 ms |
| State Saved | Saved in instrument state |
| Min | 100.000 ns |
| Max | 559.0000 ms |

8.1.9 Offset

Adjusts the accumulated offset between the periodic timer events and the trigger event. Adjusting the accumulated offset is different than setting an offset and requires explanation.

The periodic timer is usually not synchronized with any external events, so the timing of its output events has no absolute meaning. Since the timing relative to external events (RF signals) is important, you need to be able to adjust (offset) it. However, you have no direct way to see when the periodic timer events occur. All that you can see is the trigger timing. When you want to adjust the trigger timing, you will be changing the internal offset between the periodic timer events and the trigger event. Because the absolute value of that internal offset is unknown, we will just call that the accumulated offset. Whenever the Offset parameter is changed, you are changing that accumulated offset. You can reset the displayed offset using Reset Offset Display. Changing the display does not change the value of the accumulated offset, and you can still make additional changes to accumulated offset.

To avoid ambiguity, we define that an increase in the "offset" parameter, either from the knob or the SCPI adjust command, serves to delay the timing of the trigger event.

| | |
|----------------|---|
| Remote Command | <code>:TRIGger[:SEQuence]:FRAMe:OFFSet <time></code> <code>:TRIGger[:SEQuence]:FRAMe:OFFSet?</code> |
| Example | <code>:TRIG:FRAM:OFFS 1.2 ms</code> |
| Notes | <p>The front panel interface (for example, the knob), and this command, adjust the accumulated offset, which is shown on the control</p> <p>However, the actual amount sent to the hardware each time the offset is updated is the delta value, that is, the current accumulated offset value minus the previous accumulated offset value. Note that the accumulated offset value is essentially arbitrary; it represents the accumulated offset from the last time the offset was zeroed (with the Reset Offset Display key)</p> <p>Note that this command does not change the period of the trigger waveform. Note also that Offset is used only when the sync source is set to OFF, otherwise delay is used, see "Trigger Delay" on page 2471</p> <p>An increase in the "offset" parameter, either from the knob or the SCPI adjust command, serves to delay the timing of the trigger event</p> <p>When the SCPI command is sent the value shown on the control is updated with the new value. However, the actual amount sent to the hardware is the delta value, that is, the current accumulated offset value minus the previous accumulated offset value</p> <p>The SCPI query simply returns the value currently showing on the key</p> |
| Dependencies | <p>The invalid data indicator turns on when the offset is changed, until the next sweep/measurement completes</p> <p>Only appears when Periodic Timer is selected as the Trigger or Gate Source</p> |

8 Trigger

8.1 Trigger

| | |
|-------------|--|
| Couplings | The same offset is used in the Gate Source selection of the period timer |
| Preset | 0 s |
| State Saved | Saved in instrument state |
| Min | -10.000 s |
| Max | 10.000 s |

8.1.10 Reset Offset Display

Resets the value of the periodic trigger offset display setting to 0.0 seconds. The current displayed trigger location may include an offset value defined with the **Offset** key. Pressing this control redefines the currently displayed trigger location as the new trigger point that is 0.0 s offset. The **Offset** control can then be used to add offset relative to this new timing.

| | |
|----------------|--|
| Remote Command | <code>:TRIGger[:SEquence]:FRAMe:OFFSet:DISPlay:RESet</code> |
| Example | <code>:TRIG:FRAM:OFFS:DISP:RES</code> |
| Dependencies | Only appears when Periodic Timer is selected as the Trigger or Gate Source |

8.1.11 Offset Adjust (Remote Command Only)

Lets you advance the phase of the frame trigger by the amount you specify. It does *not* work in the same way as the related front panel keys.

The command does not change the period of the trigger waveform. If the command is sent multiple times, it advances the phase of the frame trigger an additional amount each time it is sent. Negative numbers are permitted.

| | |
|----------------|---|
| Remote Command | <code>:TRIGger[:SEquence]:FRAMe:ADJust <time></code> |
| Example | <code>:TRIG:FRAM:ADJ 1.2 ms</code> |
| Notes | <p>Note also that Offset is used only when the sync source is set to OFF, otherwise delay is used, see section "Trigger Delay" on page 2471</p> <p>An increase in the "offset" parameter, either from the knob or the SCPI adjust command, serves to delay the timing of the trigger event</p> <p>The front panel interface (for example, the knob) and the <code>:TRIG:FRAM:OFFS</code> command adjust the accumulated offset, which is shown on the active function display. However, the actual amount sent to the hardware is the delta value, that is, the current offset value minus the previous offset value</p> <p>When the SCPI command is sent the value shown on the control (and the Active Function, if this happens to be the active function) is updated by increasing it (or decreasing it if the value sent is negative) by the amount specified in the SCPI command</p> <p>This is no query for this command</p> |
| Dependencies | The invalid data indicator turns on when the offset is changed, until the next sweep/measurement |

| | |
|-------------|--|
| | completes |
| Couplings | The same offset is used in the Gate Source selection of the period timer |
| Preset | 0 s |
| State Saved | Saved in instrument state |
| Min | -10.000 s |
| Max | 10.000 s |

8.1.12 Sync Source

For convenience, you can select the Periodic Timer Sync Source using this dropdown. You can also select it from the Periodic Sync Src tab, which also contains controls that let you configure the Sync Source.

Selects a signal source for you to synchronize your periodic timer trigger to, otherwise you might be triggering at some arbitrary location in the frame. Synchronization reduces the precision requirements on the setting of the period.

| | |
|--------------|--|
| Example | <pre>:TRIG:FRAM:SYNC EXT1 :TRIG:FRAM:SYNC EXT2 :TRIG:FRAM:SYNC RFB :TRIG:FRAM:SYNC OFF</pre> |
| Dependencies | Only appears when Periodic Timer is selected as the Trigger or Gate Source |
| Preset | OFF |
| State Saved | Saved in instrument state |

8.1.13 TV Line

Selects the **TV Line** number on which to trigger. Line number range is dependent on the settings of the "**Standard**" on page 2484 and "**Field**" on page 2483 menus within the TV trigger setup functions. When the line number is incremented beyond the upper limit, the value will change to the lower limit and continue incrementing from there. When the line number is decremented below the lower limit, the value will change to the upper limit and continue decrementing from there.

| | |
|----------------|--|
| Remote Command | <pre>:TRIGger[:SEquence]:TV:LINE <integer> :TRIGger[:SEquence]:TV:LINE?</pre> |
| Example | <pre>:TRIG:TV:LINE 20 :TRIG:TV:LINE?</pre> |
| Dependencies | <p>Only available in the Swept SA measurement</p> <p>Only appears when TV is selected as the Trigger Source</p> |

8 Trigger

8.1 Trigger

| | |
|-------------|--|
| Preset | 17 |
| State Saved | Saved in instrument state |
| Min | 1 The minimum value is the minimum line and rolls over to the maximum value. The minimum line number depends on which Field and standard are selected |
| Max | The maximum value is the maximum line and rolls over to the minimum value. The maximum line number depends on which Field and standard are selected Field 1 (ODD): <ul style="list-style-type: none"> Maximum line is 263 for formats NTSC-M, NTSC-Japan, NTSC-4.43, PAL-M and PAL-60 Maximum line is 313 for formats PAL-B, D, G, H, I, PAL-N, PAL-N Combin, and SECAM-L Field 2 (EVEN): <ul style="list-style-type: none"> The maximum line 262 for formats NTSC-M, NTSC-Japan, NTSC-4.43, PAL-M and PAL-60 The maximum line is 312 for formats PAL-B, D, G, H, I, PAL-N, PAL-N Combin, and SECAM-L Field = ENTire Frame: <ul style="list-style-type: none"> 525, for formats NTSC-M, NTSC-Japan, NTSC-4.43, PAL-M and PAL-60 625, for formats PAL-B, D, G, H, I, PAL-N, PAL-N Combin, and SECAM-L |

8.1.14 Field

Selects the **Field** on which to trigger:

| | | |
|--------------|---------------|---|
| Entire Frame | ENTire | Causes the selected line number to be viewed as an offset into the entire frame starting with line 1, the first line in Field One |
| Field One | ODD | Causes the selected line number to be viewed as an offset into the first field starting with Line 1, the first line in Field One |
| Field Two | EVEN | Causes the selected line number to be viewed as an offset into the second field. If Line 1 is selected, it is the 264th line of the frame (NTSC-M, NTSC-Japan, NTSC-4.43, PAL-M, PAL-60) or the 314th line of the frame (PAL-B,D,G,H,I, PAL-N, PAL-N-Combin, SECAM-L) |

| | |
|----------------|---|
| Remote Command | <code>:TRIGger[:SEquence]:TV:FMODE ENTire ODD EVEN</code> <code>:TRIGger[:SEquence]:TV:FMODE?</code> |
| Example | <code>:TRIG:TV:FMOD ENT</code> <code>:TRIG:TV:FMOD EVEN</code> <code>:TRIG:TV:FMOD ODD</code> |
| Dependencies | Only available in the Swept SA measurement Only appears when TV is selected as the Trigger Source |

| | |
|--------|--|
| | This command is available only when Option B7B (TV trigger) is installed |
| Preset | <code>ENTire</code> |
| Range | <code>ENTire ODD EVEN</code> |

8.1.15 Standard

Accesses the **Standard** menu keys, which select from the following TV standards:

| | |
|---------------|----------------------|
| NTSC-M | <code>MNTSc</code> |
| NTSC-Japan | <code>JNTSc</code> |
| NTSC-4.43 | <code>NTSC443</code> |
| PAL-M | <code>MPAL</code> |
| PAL-B,D,G,H,I | <code>BPAL</code> |
| PAL-N | <code>NPAL</code> |
| PAL-N-Combin | <code>CPAL</code> |
| PAL-60 | <code>PAL60</code> |
| SECAM-L | <code>LSEC</code> |

As the TV standard is changed, the current line value is clipped as necessary to keep it valid for the chosen standard and field mode. For example, line 600 is selected in Entire Frame mode in PAL-N; if NTSC-M is selected, the line number is clipped to 525. Or, if line 313 is selected in Field 1 mode in PAL-N and NTSC-M is selected, the line number is clipped to 263. Changing back to the PAL-N standard will leave the line number at 263.

| | |
|----------------|--|
| Remote Command | <code>:TRIGger[:SEquence]:TV:STANdard MNTSc JNTSc NTSC443 MPAL BPAL NPAL CPAL PAL60 LSEC</code> <code>:TRIGger[:SEquence]:TV:STANdard?</code> |
| Example | Sets NTSC-M <code>:TRIG:TV:STAN MNTS</code> Queries Standard <code>:TRIG:TV:STAN?</code> |
| Dependencies | Only available in the Swept SA measurement Only appears when TV is selected as the Trigger Source |
| Preset | <code>MNTS</code> |
| State Saved | Saved in instrument state |
| Range | <code>MNTSc JNTSc NTSC443 MPAL BPAL NPAL CPAL PAL60 LSEC</code> |

8.1.16 Trigger Center Frequency

Sets the center frequency to be used by the auxiliary receiver for the **Auxiliary Channel I/Q Magnitude** trigger.

| | |
|----------------|--|
| Remote Command | <code>:TRIGger[:SEquence]:AIQMag:CENTer <freq></code> <code>:TRIGger[:SEquence]:AIQMag:CENTer?</code> |
| Example | <code>:TRIG:AIQM:CENT 10 MHz</code> |
| Notes | Trigger CF + 1/2 Trigger BW < Max Trigger CF - 1/2 Trigger BW > Min |
| Dependencies | Only appears when Aux Channel I/Q Mag is selected as the Trigger Source |
| Preset | 0 Hz |
| State Saved | Saved in instrument state |
| Range | -40 MHz to 40 MHz |
| Min | -40 MHz |
| Max | 40 MHz |

8.1.17 Trigger BW

Sets the information bandwidth used by the auxiliary receiver for the Auxiliary Channel I/Q Magnitude trigger.

| | |
|----------------|---|
| Remote Command | <code>:TRIGger[:SEquence]:AIQMag:BANDwidth <freq></code> <code>:TRIGger[:SEquence]:AIQMag:BANDwidth?</code> |
| Example | <code>:TRIG:AIQM:BAND 8 MHz</code> |
| Notes | The combined sample rate for the main and auxiliary receivers cannot exceed 100 MSa/sec. The bandwidth available to Trigger BW is limited to what is available after the main receiver's bandwidth (Info BW, sometimes pre-FFT BW) is set. Because of this limitation, the Max is not always achievable. The combination of " Trigger Center Frequency " on page 2485 and Trigger BW is also limited: <ul style="list-style-type: none"> - Trigger CF + 1/2 Trigger BW < Max - Trigger CF - 1/2 Trigger BW > Min |
| Dependencies | Only appears when Aux Channel I/Q Mag is selected as the Trigger Source |
| Preset | Bandwidth option dependent: <ul style="list-style-type: none"> - No Opt: 10 MHz - Opt B25: 25 MHz - Opt S40: 40 MHz |

| | |
|-------------|--|
| State Saved | Saved in instrument state |
| Range | 10 Hz to Maximum |
| Min | 10 Hz |
| Max | Bandwidth option & I/Q input path-dependent: <ul style="list-style-type: none"> - No Opt, I or Q Only: 10 MHz, I+jQ: 20 MHz - Opt B25, I or Q Only: 25 MHz, I+jQ: 50 MHz - Opt S40, I or Q Only: 40 MHz, I+jQ: 80 MHz |

8.1.18 Zero Span Delay Compensation On/Off

In **Zero Span**, there is a natural delay in the signal path, which comes from the RBW filter. This is usually desirable, as it lets you trigger on events and also see those events, because the signal is delayed from the trigger event. However, in some cases it is desirable to eliminate this delay, so that trigger events line up exactly with the zero-time point in **Zero Span**. You can use the **Zero Span Delay Comp On/Off** feature to enable or disable zero span delay compensation.

| | |
|----------------|--|
| Remote Command | <code>:TRIGger[:SEquence]:EXTernal1 EXTernal2 RFBurst:DELay:COMPensation OFF ON</code> <code> 0 1</code> <code>:TRIGger[:SEquence]:EXTernal1 EXTernal2 RFBurst:DELay:COMPensation?</code> |
| Example | <code>:TRIG:EXT1:DEL:COMP ON</code> <code>:TRIG:EXT1:DEL:COMP?</code> <code>:TRIG:EXT2:DEL:COMP ON</code> <code>:TRIG:RFB:DEL:COMP ON</code> |
| Dependencies | No effect except in zero-span, but not locked out in nonzero spans Zero Span Delay Compensation only appears in the Swept SA and List Power Step measurements. Only External and RF Burst triggers support it Does not appear in VXT If the SCPI command is sent when the control is not shown, an error is returned: -221, "Settings conflict; Feature not supported for this measurement" Only appears when External 1 2 or RF Burst is selected as the Trigger, Gate or Periodic Sync Source |
| Preset | <code>OFF</code> |
| State Saved | Saved in instrument state |

8.1.19 Select PXI Line

Controls which `PXI_TRIG[0..7]` backplane line is used for the trigger source.

Only found in modular analyzer products.

8 Trigger

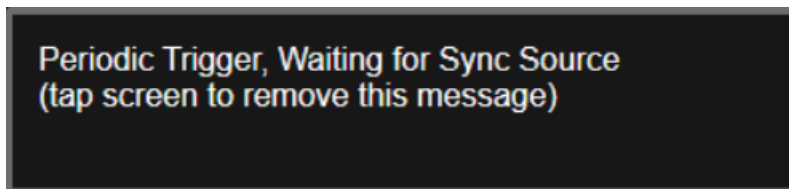

8.1 Trigger

| | |
|----------------|--|
| Remote Command | <code>:TRIGger[:SEquence]:PXI:LINE <line></code> <code>:TRIGger[:SEquence]:PXI:LINE?</code> |
| Example | <code>:TRIG:PXI:LIN 2</code> |
| Preset | 0 |
| State Saved | Saved in instrument state |
| Range | [0,7] |

8.1.20 Reset Sync Monitor

Lets you reset the status of Synchronization for **Periodic** trigger This control works together with bit 6 “Waiting for Periodic Sync Source” in the `:STATus:OPERation:CONDition` status register.

When you first switch to periodic trigger, RF Burst is the default Sync Source. The register will be set immediately. A “Periodic Trigger, Waiting for Sync Source” message will be generated after 2 seconds (if the instrument is not synchronized). The system is waiting for a RF Burst signal. You can tap the screen to remove the message.

Once RF burst signal is provided and the hardware synchronized, the register will be cleared and a “Periodic Trigger Synchronized” message will be generated.

When change to a new Sync Source other than Off, take External1 as an example. You'll get the condition register set to 1 and a pop-up message again. There are the possible following conditions:

- External1 is provided: the register is cleared, message is updated.
- External1 is not provided, you set the Sync Source to Off: the register is cleared, message is cleared.
- External1 is not provided, you set the Sync Source to External2: the register and message keep the same.

- External1 is not provided, you set the Sync Source back to RF Burst: the register is cleared, message is also cleared. That’s because the instrument is synchronized to RF Burst already. If you want to make a new synchronization, you have to press “Reset Sync Monitor” you send SCPI command “:TRIG:FRAM:SMON:RES”.

| | |
|------------------------------|---|
| Remote Command | :TRIGger[:SEquence]:FRAMe:SMONitor:RESet |
| Example | :TRIG:FRAM:SMON:RES |
| Notes | This control works together with bit 1 “Waiting for Periodic Sync Source” in the :STATus:OPERation:INSTRument:CONDition status register A “Periodic Trigger, Waiting for Sync Source” message will be generated after pressing this control, and the status bit will be set A “Periodic Trigger Synchronized” message will be generated after successfully synchronizing to Sync Source, and the status bit will be cleared |
| Dependencies | Only functional when Periodic Trigger is selected as the Trigger or Gate Source, and Sync Source is not Off Only available in VXT models M9410A/11A/15A/16A |
| Status Bits/OPC dependencies | Bit 6 of :STATus:OPERation:CONDition will be set after pressing this control |

8.1.21 Trigger Optimization

Sets the trigger behavior for various desired operation conditions.

| | |
|----------------|--|
| Remote Command | :TRIGger[:SEquence]:OPTimize:MODE NORMAL MJITter For option details, see " Options " on page 2488 :TRIGger[:SEquence]:OPTimize:MODE? |
| Example | Select trigger optimization for minimum jitter: :TRIG:OPT:MOD MJIT |
| Dependencies | Only appears in VXT models M9410A/11A/15A/16A Minimum jitter is functional only when digital IF BW is lower than 300 MHz. When Trigger Optimization is set to MJITter and it is not in effect, the following warning message appears in the status bar: Settings Alert; Minimum Jitter is not available |
| Preset | NORMAL |
| State Saved | Yes |
| Range | NORMAL MJITter |

Options

Trigger optimization options are:

8 Trigger

8.1 Trigger

| Trigger Optimization | SCPI | Notes |
|----------------------|----------------------|---|
| Normal | <code>NORMa1</code> | No optimization |
| Minimum Jitter | <code>MJITter</code> | Optimizes trigger for minimum jitter. A software resample method is provided to reduce jitter, at the expense of some measurement speed The acquisition jitter depends on the digital IF BW, the jitter will be smaller when digital IF BW gets larger. For example, when the digital IF BW is 98.3 MHz in 5GNR, the jitter varies under 15ns. When set MJITter as trigger optimization type, the jitter will be reduced to 1ns This setting applies to all the Trigger Sources |

8.1.22 Trigger Settings Diagram

Lets you configure the **Trigger** system using a visual utility.

First, select what you want to configure (the Trigger, Gate or Periodic Sync Source) by tapping the box for **Trigger**, **Gate** or **Periodic Sync Source**.

Next, tap any box in the gray row to choose a Trigger Source to connect to. For **Periodic Sync Source**, you can also tap **Off**.

The **Trigger Settings Diagram** changes depending on context. The Trigger Sources that are available change depending on which input you have selected.

8.2 Gate Source

Contains controls that let you select and configure Gate control signals.

This tab appears in the **Trigger** menu panel for measurements that support gating. In measurements that do not support gating, this tab does not appear.

The menus under the **Gate Source** tab are the same as those under the **Trigger** tab, with these exceptions:

A smaller set of sources is available for gating.

The Free Run and Video selections are not provided for Gate

- The Trig Delay controls are not present
- Relative RF Burst Triggering is not available, just Absolute
- There is an additional control, Sync Holdoff, under Gate Source

Any changes to the settings in the setup menus under each Gate Source selection (for example: Trigger Level, Trigger Delay, etc.) also affect the corresponding settings under the Trigger menu keys. The gate system uses the Trigger SCPI commands for the setup functions, since each setting affects both Gate and Trigger.

Example: to set the Trigger Level for External 1 Trigger you use the command `:TRIG:EXT1:LEV`; to set the Trigger Level for External 1 Gate you use the same command, `:TRIG:EXT1:LEV`. By the same token, once you set the External 1 Trigger Level to 1v, it is 1v whether External 1 is being used as a Gate Source or a Trigger Source.

If a command is sent to the **TRIG** node to set the functions that are omitted from the **Gate Source** menus (Auto Trig, Holdoff, Trig Delay), it is accepted and the values stored, but the values are not visible from the **Gate Source** menus.

8.2.1 Select Gate Source

Selects the source of the Gate signal for doing Gated Trigger measurements.

This version of the **Select Gate Source** function is used in all measurements except the Pulse measurement application.

For the selection of the gate source the SCPI node, `:TRIGger[:SEquence]:` is replaced by `[:SENSe]:SWEep:EGATe:` as shown in the remote command below. Because you can independently set the Gate Source and the Trigger Source, there is a separate SCPI command for the Gate Source.

Remote Command `[:SENSe]:SWEep:EGATe:SOURce EXTerna11 | EXTerna12 | LINE | FRAMe | RFBurst`

8 Trigger
8.2 Gate Source

| | |
|--------------|--|
| | TV VIDEo PXI INTernal [:SENSe]:SWEep:EGATe:SOURce? |
| Example | :SWE:EGAT:SOUR EXT1 :SWE:EGAT:SOUR? |
| Dependencies | Available selections differ depending on models as below |
| | Benchtop Line, External 1, External 2, RF Burst, Periodic, TV (Swept SA only) |
| | VXT Video, Internal, External 1, External 2, RF Burst, Periodic, PXI Internal and Periodic are not available in Spectrum Analyzer Mode - Internal is available only in M9410A/11A/15A/16A and unavailable in M9420/21A |
| | EXM Video, Internal, External 1, External 2, RF Burst, Periodic Not available in E7760 In some models, there is no second External input. In these models, the External 2 selection is not shown and the EXTERNAL2 parameter will generate a "Hardware missing; Not available for this model number" error |
| Preset | GSM/EDGE, Phase Noise: FRAM MSR: EXT1 LTEATDD, 5G NR: - Direction is Downlink: EXT1 - Direction is Uplink: FRAM All Others: EXT1 |

8.2.2 Sync Holdoff

Applies only to the Periodic Timer. Specifies the duration that the sync source signal for the Periodic Timer must be kept false before the transition to true to be recognized as the sync timing. The periodic timer phase is aligned when the sync source signal becomes true, after the Holdoff time is satisfied.

A holdoff of 2 ms works with most WiMAX signals, but there may be cases where the burst off duration is less than 1 ms and this value will need to be changed.

| | |
|----------------|--|
| Remote Command | :TRIGger[:SEquence]:FRAMe:SYNC:HOLDoff <time> :TRIGger[:SEquence]:FRAMe:SYNC:HOLDoff? |
| Example | :TRIG:FRAM:SYNC:HOLD 5 :TRIG:FRAM:SYNC:HOLD? |
| Dependencies | Only appears if Periodic is the selected Gate Source Does not appear in all Measurements. For example, does not appear in Swept SA |

| | |
|----------------|--|
| Preset | LTEATDD: ON, 1 ms 5G NR: ON, 250.0 us 1xEVDO: OFF, 0 ms (SCPI only) Other than above: OFF, 4 msec |
| State Saved | Saved in instrument state |
| Min | 0 ms |
| Max | +500 ms |
| Auto Function | |
| Remote Command | <code>:TRIGger[:SEquence]:FRAMe:SYNC:HOLDoff:STATe OFF ON 0 1</code> <code>:TRIGger[:SEquence]:FRAMe:SYNC:HOLDoff:STATe?</code> |
| Preset | LTEATDD, 5G NR: ON Others: OFF |

8.3 Gate Settings

Contains controls that let you control the gating function. The Gate functionality is used to view signals best viewed by qualifying them with other events.

This tab appears in the **Trigger** menu panel for measurements that support gating. In measurements that do not support gating, this tab does not appear.

In the Swept SA measurement, the Gate controls, and all SCPI under the `[:SENSe] :SWEep:EGATe` SCPI node are unavailable when Source Mode is set to Tracking. This is because the Gate circuitry is used to sync the external source. If the Tracking Source is turned on, the Gate is turned off.

Gate setup parameters are the same for all measurements – they do not change as you change measurements. Settings like these are called “Meas Global” and are unaffected by Meas Preset.

Note that Sweep Time auto coupling rules and annotation are changed when Gate is on.

8.3.1 Gate On/Off

Turns the gate function on or off.

When the Gate Function is **ON**, the selected Gate Method is used along with the gate settings and the signal at the gate source to control the sweep and video system with the gate signal. Not all measurements allow every type of Gate Methods.

If the Gate were to be turned **ON** without a gate signal present, Marker Count operation would be unreliable, so it is locked out whenever Gate is on for measurements that support Marker Count.

| | |
|----------------|--|
| Remote Command | <code>[:SENSe] :SWEep:EGATe [:STATe] OFF ON 0 1</code> <code>[:SENSe] :SWEep:EGATe [:STATe] ?</code> |
| Example | <code>:SWE:EGAT ON</code> <code>:SWE:EGAT ?</code> |
| Dependencies | The function is unavailable (grayed-out) and OFF when: <ul style="list-style-type: none"> – Gate Method is LO or Video and FFT Sweep Type is manually selected – Gate Method is FFT, and Swept Sweep Type is manually selected – Marker Count is ON <p>The following are unavailable whenever Gate is on:</p> <ul style="list-style-type: none"> – FFT under Sweep Type when Method=LO or Video or Swept under Sweep Type when Method=FFT |

- **Marker Count**

While Gate is on, the Auto Rules for Sweep Type are modified so that the choice agrees with the Gate Method: i.e., FFT for Method = FFT and Swept for Method = LO or Video

When in the ACP measurement:

- When Meas Method is RBW or FAST, this function is unavailable, and the control is grayed-out
- Whenever Gate is on, Meas Method, RBW, or FAST is unavailable and keys for those are grayed-out
- When Gate is on, Offset Res BW and Offset Video BW are ignored (if you set these values) and the measurement works as if all Offset Res BW and all Offset Video BW are coupled with the Res BW and the Video BW under the BW menu. When Gate is on, the Offset BW control in the Offset/Limit menu is grayed-out

| | |
|-------------------------------|--|
| Preset | LTEATDD Mode: ON Other modes: OFF |
| State Saved | Saved in instrument state |
| Range | OFF ON |
| Annunciation | Annunciated in the Meas Bar ; if Gate is on, the word "Gate:" followed by the gate type appears, where <ul style="list-style-type: none"> - LO = Gated LO - Vid = Gated Video - FFT = Gated FFT |
| Backwards Compatibility SCPI | [:SENSe] :SWEep :TIME :GATE [:STATE] Available in SA and SCPI LC Modes ESA compatibility |
| Backwards Compatibility Notes | In ESA, Trig Delay (On) and Gate (On) could not be active at the same time. This dependency does not exist in PSA or in the X-Series |

8.3.2 Gate View On/Off

Turning on Gate View puts the instrument into Gate View. When in Gate View, the regular view of the current measurement traces and results are reduced vertically to about 70% of the regular height. The Zero Span window, showing the positions of the Gate, is shown between the Measurement Bar and the reduced measurement window. By reducing the height of the measurement window, some of the annotation on the Data Display may not fit and is not shown.

| | |
|----------------|--|
| Remote Command | [:SENSe] :SWEep :EGATe :VIEW ON OFF 1 0 [:SENSe] :SWEep :EGATe :VIEW? |
| Example | Turn on the gate view: |

8 Trigger

8.3 Gate Settings

:SWE:EGAT:VIEW ON

| | |
|--------------|--|
| Dependencies | <p>In the Swept SA measurement:</p> <p>In Gate View, the regular Sweep Time (or Acquisition Time) control is grayed out, to avoid confusing the user who wants to set Gate View Sweep Time. When pressed, the grayed-out control puts up the informational message "Use Gate View Sweep Time in the Gate menu"</p> <p>In other measurements:</p> <p>When you turn Gate View on, the lower window takes on the current state of the instrument. Upon leaving Gate View, the instrument takes on the state of the lower window</p> <p>When you turn Gate View on, the upper window Sweep Time (or Acquisition Time) is set to Gate View Sweep Time (or Gate View Acquisition Time)</p> |
| Couplings | <p>These couplings apply to the Swept SA measurement:</p> <ul style="list-style-type: none"> - When Gate View is turned on, the instrument is set to Zero Span - Gate View automatically turns off whenever a Span other than Zero is selected - Gate View automatically turns off if you press the Swept Span toggle under Freq while in Gate View, and the instrument returns to the Span it was in before entering Gate View (even if that is Zero Span) - When Gate View is turned on, the sweep time used is the Gate View Sweep Time. This is set according to the rules in "Gate View Sweep Time" on page 2501 - When Gate View is turned off, Sweep Time is set to the normal Swept SA measurement sweep time - If Gate View is on and Gate is off, then turning on Gate turns off Gate View |
| Preset | OFF |
| State Saved | Saved in instrument state |
| Range | ON OFF |

Annunciation For Gate View to work properly, a gate signal must be present at the selected Gate Source. Therefore, in Gate View, any time more than 2 seconds passes with no gate signal, a pop-up message "Waiting for gate input" appears. This message goes away when a gate signal appears

Turning Gate View off returns the instrument to the Normal measurement view.

In Swept SA, the normal measurement view is the single-window Swept SA view. When returning to this view, the Swept SA measurement returns to the Span it was in before entering **Gate View** (even if that is Zero Span).

The **Gate View** window is triggered from the Gate Source, with zero trigger delay. Also, when updating the **Gate View** window, the Gate itself must not operate. So, it is internally shut off while the gate view window is being updated. For the Swept SA measurement, this means that the Gate is internally shut off whenever the gate view window is displayed. The measurement bar and controls continue to show the Trigger source for the main sweep window and give no indication that the Gate is shut off or that the Gate View window is triggered from the Gate Source.

When in **Gate View**, vertical lines are displayed in the Gate View window as follows:

Green lines labeled GATE START and GATE STOP are displayed at the gate edges as follows: in Edge Gate, a line is shown for Delay and one for the end of the Gate period, defined by Length. In Level Gate a line is shown only for Delay. You can adjust the position of the green lines by adjusting the gate length and the gate delay or by dragging them with your finger or the mouse.. These lines update in the Gate View window as the active function changes, even if the window is not being updated. In Gated LO and Gated Video, these lines are positioned relative to the delay reference line (not relative to 0 time). In Gated FFT, their location is relative to the left edge of the screen.

A blue line is displayed showing the delay reference, that is, the reference point for the Gate Delay within the Zero Span window. The blue line represents where (in time) the effective location of the gate start would be if the gate were programmed to zero delay.

- A second blue line is displayed at the location that represents the boundary between "compensated IF" and "compensated LO" operating modes. The second blue line is labeled "MIN FAST" because it represents the minimum Gate Delay for fast Gated LO operation. This line is only displayed in Gated LO. You cannot scroll (knob) or decrement (down key) the Gate Delay to less than that represented by the position of this line, it can only be set below this position manually, although once there it can be moved freely with the knob while below the line.

A yellow line in the Gated Video case only, is displayed at B_{length} , where B_{length} is the display point (bucket) length for the swept trace, which is given by the Sweep Time (or Acquisition Time) for that trace divided by number of Points - 1. So, it is referenced to 0 time, not to the delay reference. This line is labeled NEXT PT (it is not shown in the figure above because the figure above is for Gated LO). The yellow line represents the edge of a display point (bucket). Normally in Gated Video, the bucket length must be selected so that it exceeds the off time of the burst. There is another way to use the instrument in Gated Video measurements, and that is to set the bucket width much shorter than the off time of the burst. Then use the Max Hold trace function to fill in "missing" buckets more slowly. This allows you to see some of the patterns of the Gated Video results earlier, though seeing a completely filled-in spectrum later.

8.3.3 Gate Delay

Controls the length of time from the time the gate condition goes True until the gate is turned on.

| | |
|----------------|--|
| Remote Command | <code>[:SENSe] :SWEp :EGATe :DELay <time></code> |
| Example | <code>:SWE :EGAT :DELay 500ms</code> <code>:SWE :EGAT :DELay ?</code> |

8 Trigger

 ESA compatibility

8.3.5 Gate Method

Lets you choose one of the three different types of gating. Not all types of gating are available for all measurements.

| | |
|----------------|--|
| Remote Command | <code>[:SENSe] :SWEep :EGATe :METHod LO VIdEo FFT</code> For option details, see " "LO" on page 2498 ", " "Video" on page 2498 " or " "FFT" on page 2499 " <code>[:SENSe] :SWEep :EGATe :METHod?</code> |
| Example | <code>:SWE :EGAT :METH FFT</code> |
| Dependencies | This function is only available in the Swept SA measurement in Spectrum Analyzer Mode This control is unavailable when Gate is On and FFT Sweep Type manually selected When selected, Sweep Type is forced to Swept, and the FFT selection in Sweep Type is grayed-out Only the FFT method is supported in non-SA products Only the FFT method is supported by VXT models M9410A/11A/15A/16A |
| Preset | LO |
| State Saved | Saved in instrument state |
| Range | Video LO FFT |
| Annunciation | In Meas Bar |

LO

In [LO](#) gating, when Gate is [ON](#), the LO sweeps whenever the gate conditions as specified in the Gate menu are satisfied by the signal at the Gate Source.

This form of gating is more sophisticated, and results in faster measurements. With Gated LO, the instrument only sweeps while the gate conditions are satisfied. This means that a sweep could take place over several gate events. It would start when the gate signal goes true and stop when it goes false, and then continue when it goes true again. But since the LO is sweeping as long as the gate conditions are satisfied, the sweep typically finishes much more quickly than with Gated Video.

When in zero span, there is no actual sweep performed. But data is only taken while the gate conditions are satisfied. So even though there is no sweep, the gate settings will impact when data is acquired.

Video

In [Video](#) gating, when Gate is [ON](#), the video signal is allowed to pass through whenever the gate conditions as specified in the Gate menu are satisfied by the

signal at the Gate Source.

This form of gating may be thought of as a simple switch, which connects the signal to the input of the spectrum analyzer. When the gate conditions are satisfied, the switch is closed, and when the gate conditions are not satisfied, the switch is open. So we only look at the signal while the gate conditions are satisfied.

With this type of gating, you usually set the instrument to sweep very slowly. In fact, a general rule is to sweep slowly enough that the gate is guaranteed to be closed at least once per data measurement interval (bucket). Then if the peak detector is used, each bucket will represent the peak signal as it looks with the gate closed.

FFT

In **FFT** gating, when Gate is **ON**, an FFT is performed whenever the gate conditions as specified in the Gate menu are satisfied by the signal at the Gate Source. This is an FFT measurement that begins when the gate conditions are satisfied. Since the time period of an FFT is approximately $1.83/\text{RBW}$, you get a measurement that starts under predefined conditions and takes place over a predefined period. So, in essence, this is a gated measurement. You have limited control over the gate length, but it works in FFT sweeps, which the other two methods do not.

Gated FFT is not possible in zero span since the instrument is not sweeping, so in zero span the Gated LO method is used. Data is still only taken while the gate conditions are satisfied, so the gate settings do impact when data is acquired.

The Gate Length will be $1.83/\text{RBW}$.

This is a convenient way to make a triggered FFT measurement under control of an external gating signal.

8.3.6 Control Edge/Level

Sets the method of controlling the gating function from the gating signal.

- EDGE** The gate opens (after the Delay) on the selected edge (for example, positive) of the gate signal and closes on the alternate edge (for example, negative)
- LEVe1** The gate opens (after the Delay) when the gate signal has achieved a certain level and stays open as long as that level is maintained

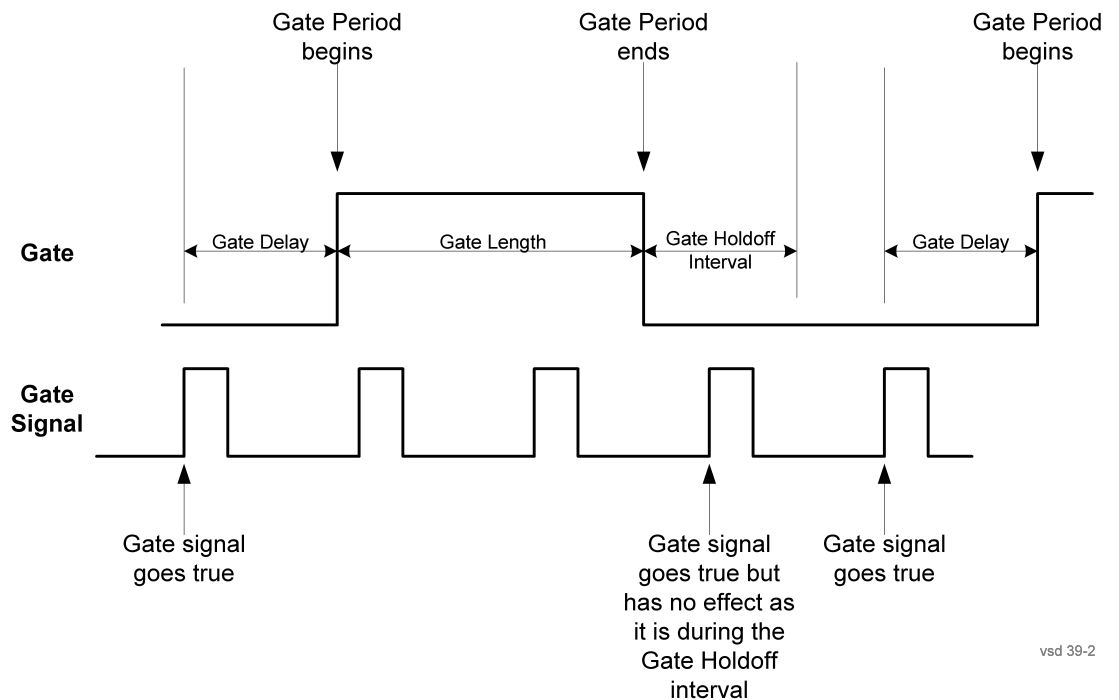

| | |
|----------------|---|
| Remote Command | <code>[:SENSe] :SWEp:EGATe:CONTRol EDGE LEVe1</code> <code>[:SENSe] :SWEp:EGATe:CONTRol?</code> |
| Example | <code>:SWE:EGAT:CONT EDGE</code> |
| Dependencies | If the Gate Method is FFT , this control is grayed-out and EDGE is selected If the Gate Source is TV, Frame, or Line, this control is grayed-out and EDGE is selected |

8.3.7 Gate Holdoff

Lets you increase or decrease the wait time after a gate event ends before the instrument will respond to the next gate signal.

After any Gate event finishes, the instrument must wait for the sweep system to settle before it can respond to another Gate signal. The instrument calculates a "wait time," taking into account a number of factors, including RBW and Phase Noise Optimization settings. The goal is to achieve the same accuracy when gated as in ungated operation. The figure below illustrates this concept:

vsd 39-2

When **Gate Holdoff** is Auto, the wait time calculated by the instrument is used. When Gate Time is in Manual, the user may adjust the wait time, usually decreasing it in order to achieve greater speed, but at the risk of decreasing accuracy.

8 Trigger
8.3 Gate Settings

When the **Method** control is set to **Video** or **FFT**, the **Gate Holdoff** function has no effect.

In measurements that do not support "**Auto Function**" on page 2501, the value shown when Auto is selected is "---" and the manually set holdoff is returned to a query.

| | |
|----------------|---|
| Remote Command | <code>[:SENSe]:SWEep:EGATe:HOLDoff <time></code> <code>[:SENSe]:SWEep:EGATe:HOLDoff?</code> |
| Example | <code>:SWE:EGAT:HOLD 0.0002</code> <code>:SWE:EGAT:HOLD?</code> |
| Couplings | <p>When Gate Holdoff is Auto, the Gate Holdoff control shows the value calculated by the instrument for the wait time</p> <p>Pressing the Gate Holdoff control while it is in Auto and not selected, causes the control to become selected and allows the user to adjust the value. If the value is adjusted, the setting changes to Man</p> <p>Pressing the Gate Holdoff key, while it is in Auto and selected, does not change the value of Gate Holdoff, but causes the setting to change to Man. Now the user can adjust the value</p> <p>Pressing the control while it is in Man and selected, cause the value to change back to Auto</p> <p>Pressing the control while it is in Man and not selected, causes the control to become selected and allows the user to adjust the value</p> <p>When Method is set to Video or FFT, the Gate Holdoff function has no effect</p> |
| Preset | Auto |
| State Saved | Saved in instrument state |
| Min | 1 μsec |
| Max | 1 sec |

Auto Function

| | |
|----------------|--|
| Remote Command | <code>[:SENSe]:SWEep:EGATe:HOLDoff:AUTO OFF ON 0 1</code> <code>[:SENSe]:SWEep:EGATe:HOLDoff:AUTO?</code> |
| Example | <code>:SWE:EGAT:HOLD:AUTO ON</code> <code>:SWE:EGAT:HOLD:AUTO?</code> |
| Preset | Auto/On |
| State Saved | Saved in instrument state |
| Range | Auto Man |

8.3.8 Gate View Sweep Time

Controls the Sweep Time in the Gate View window. To provide an optimal view of the gate signal, the instrument initializes **Gate View Sweep Time** based on the current settings of Gate Delay and Gate Length.

NOTE Since **Gate View Sweep Time** is used to calculate Gate Delay and Gate Length increments, it is maintained even when not in **Gate View**.

NOTE In instruments without sweeping hardware such as some modular analyzers, this control may be labeled **Gate View Acquisition Time**

| | |
|----------------|---|
| Remote Command | <code>[:SENSe] :SWEep:EGATe:TIME <time></code> <code>[:SENSe] :SWEep:EGATe:TIME?</code> |
| Example | <code>:SWE:EGAT:TIME 500 ms</code> |
| Dependencies | Gate View Sweep Time is initialized: <ul style="list-style-type: none"> - On Preset (after initializing delay and length) - Every time the Gate Method is set/changed <p>Additionally, in the Swept SA measurement, whenever you do a Preset, or leave Gate View, the instrument remembers the Gate Delay and Gate Length settings. Then, when returning to Gate View, if the current Gate Delay and/or Gate Length do not match the remembered values Gate View Sweep Time is re-initialized</p> |
| Preset | WiMAX OFDMA: 5 ms GSM/EDGE: 1 ms 5G NR: 10 ms Others: 800 μ s |
| State Saved | Saved in instrument state |
| Min | 1 μ s |
| Max | 6000 s |
| Annotation | The gate view Sweep Time is displayed in the lower-right corner of the gate view window |

8.3.9 Gate View Start Time

Controls the time at the left edge of the Gate View.

| | |
|----------------|--|
| Remote Command | <code>[:SENSe] :SWEep:EGATe:VIEW:STARt <time></code> <code>[:SENSe] :SWEep:EGATe:VIEW:STARt?</code> |
| Example | <code>:SWE:EGAT:VIEW:STAR 10ms</code> |
| Notes | Units of time are required or no units; otherwise, an invalid suffix error message is generated |
| Preset | 0 ms |
| State Saved | Saved in instrument state |
| Min | 0 |
| Max | 500 ms |

8.3.10 Gate Delay Compensation

Allows you to select an RBW-dependent value by which to adjust the gate delay, to compensate for changes in the delay caused by RBW effects. You can select between uncompensated operation and two types of compensation:

| | |
|---------------------------------------|----------------|
| Uncompensated | OFF |
| Delay Until RBW Settled | SETTled |
| Compensate for RBW Group Delay | GDElay |

For full details of these options, see ["More Information" on page 2503](#)

| | |
|----------------|--|
| Remote Command | <code>[:SENSe]:SWEep:EGATe:DELay:COMPensation:TYPE OFF SETTled GDElay</code> <code>[:SENSe]:SWEep:EGATe:DELay:COMPensation:TYPE?</code> |
| Example | <code>:SWE:EGAT:DEL:COMP:TYPE SETT</code> <code>:SWE:EGAT:DEL:COMP:TYPE?</code> |
| Notes | <p>Although this function is Meas Global, there are some measurements that do not support this function. In those measurements the control is not displayed, and the operation will be Uncompensated</p> <p>If some but not all measurements in a Mode support this function, then selecting a measurement that does not support it will not change the Meas Global selection; it will simply be “Uncompensated” while in that measurement. The SCPI command is still accepted while in that measurement</p> <p>If Gate Delay Compensation is not supported at all within a particular mode, the control is not displayed, and if the SCPI command is sent while in a measurement within that mode, an “Undefined Header” message is generated</p> <p>Note that, for modular products such as EXM and VXT, this function is not supported. In those products the control is not displayed and the SCPI is ignored, although it is accepted without error</p> |
| Preset | TD-SCDMA, LTEA FDD/TDD, 5G NR Modes: GDElay All other Modes: SETTled |
| State Saved | Saved in instrument state |
| Range | OFF SETTled GDElay |

More Information

Selecting **Uncompensated** means that the actual gate delay is as you set it.

Selecting **Delay Until RBW Settled** causes the gate delay to be increased above the user setting by an amount equal to $3.06/\text{RBW}$. This compensated delay causes the GATE START and GATE STOP lines on the display to move by the compensation amount, and the actual hardware gate delay to be increased by the same amount. All the other gate lines (for example, MIN FAST) are unaffected. If the RBW subsequently changes, the compensation is readjusted for the new RBW. The value shown on the **Gate Delay** control does *not* change.

Delay Until RBW Settled allows excellent measurements of gated signals, by allowing the IF to settle following any transient that affects the burst. Excellent measurements also require that the analysis region not extend into the region affected by the falling edge of the burst. Thus, excellent measurements can only be made over a width that declines with narrowing RBWs, which is achieved by decreasing the gate length below the user setting by an amount equal to $2.53/\text{RBW}$. Therefore, for general purpose compensation, you will still want to change the gate length with changes in RBW even if the gate delay is compensated. The compensated Gate Length is limited by the instrument so that it will never go below 10% of the value shown on the Gate Length key, as otherwise the sweep times could get very long. Anytime the **Gate Length** and **RBW** values combine in such a way that this limiting takes place, a warning is displayed. For measurements that contain multiple sweeps with different RBW like SEM and SPUR, the smallest RBW is used for this limiting.

Selecting **Compensate for RBW Group Delay** causes the gate delay to be increased above the user setting by an amount equal to $1.81/\text{RBW}$. This compensated delay causes the GATE START, GATE STOP lines on the display to move by the compensation amount, and the actual hardware gate delay to be increased by the same amount. All the other gate lines (for example, MIN FAST) are unaffected. If the RBW subsequently changes, the compensation is readjusted for the new RBW. The value shown on the **Gate Delay** control does *not* change. **Compensate for RBW Group Delay** also includes gate length compensation; the gate length itself is adjusted as necessary to attempt to compensate for delay effects imposed by the RBW.

Compensate for RBW Group Delay is similar to **Delay Until RBW Settled** but compensates for the group delay of the RBW filter, rather than the filter settling time. As the RBW gets narrow, this can allow the settling tail of the RBW to affect the beginning part of the gated measurement and allow the beginning of the RBW settling transient to affect the end of the gated measurement. These two effects are symmetric because the RBW response is symmetric. Because the gate length is not automatically compensated, some users might find this compensation to be more intuitive than compensation for RBW settling.

8.3.11 Min Fast Position Query (Remote Query Only)

Queries the position of the MIN FAST line, relative to the delay reference (REF) line. See "[Gate View On/Off](#)" on page 2494. If this query is sent while not in Gate view, the MinFast calculation is performed based on the current values of the appropriate parameters and the result is returned. Reading this value lets you set an optimal gate delay value for the current measurement setup.

| | |
|---------------------------------|---|
| Example | <code>:SWE:EGAT:MIN?</code> |
| Backwards Compatibility SCPI | <code>[:SENSe] :SWEep:EGATe:MINFast?</code> |

8.3.12 Gate Preset (Remote Command Only)

Presets the time-gated spectrum analysis capability.

This command sets gate parameter values to the ESA preset values, as follows:

- Gate trigger type = edge
- Gate polarity = positive
- Gate delay = 1 us
- Gate length = 1 us

| | |
|-------------------------|--|
| Backwards Compatibility | <code>[:SENSe] :SWEEp :TIME :GATE :PRESet</code> |
| SCPI | ESA Compatibility |

8.3.13 Gate Level (Remote Command Only)

Sets the gate input transition point level for the external **TRIGGER** inputs on the front and rear panel. This is a legacy command for PSA compatibility. It is simply an alias to the equivalent trigger level command.

| | |
|-------------------------|--|
| Notes | This command is simply an alias to <code>:TRIGger [:SEQuence] :EXTErnal [1] 2 :LEVe1</code> |
| Backwards Compatibility | <code>[:SENSe] :SWEEp :EGATe :EXTErnal [1] 2 :LEVe1 <voltage></code> |
| SCPI | <code>[:SENSe] :SWEEp :EGATe :EXTErnal [1] 2 :LEVe1?</code> |

8.3.14 Gate Polarity (Remote Command Only)

Sets the polarity for the gate signal. This setup is now done using the gate trigger's slope setting.

When **POSitive** is selected, a positive-going edge (Edge) or a high voltage (Level) will satisfy the gate condition, after the delay set with the Gate Delay key. When **NEGative** is selected, a negative-going edge (Edge) or a low voltage (Level) will satisfy the gate condition after the delay.

| | |
|---------|--|
| Example | <code>:SWE :EGAT :POL NEG</code> <code>:SWE :EGAT :POL ?</code> |
|---------|--|

| | |
|--------|-----------------|
| Preset | POSitive |
|--------|-----------------|

| | |
|-------------|---------------------------|
| State Saved | Saved in instrument state |
|-------------|---------------------------|

| | |
|---------------------------------|---|
| Backwards Compatibility SCPI | <pre>[:SENSe]:SWEep:EGATe:POLarity NEGative POSitive</pre> <pre>[:SENSe]:SWEep:EGATe:POLarity?</pre> <p>This backwards-compatibility command is available in Modes that support Gate Polarity parameter</p> <pre>[:SENSe]:SWEep:TIME:GATE:POLarity</pre> <p>This backwards-compatibility command is available in SA and SCPI LC Modes</p> <p>ESA compatibility</p> |
|---------------------------------|---|

| | |
|--------|-------------|
| Preset | HIGH |
|--------|-------------|

| | |
|---------------------------------|--|
| Backwards Compatibility SCPI | <pre>[:SENSe]:SWEep:TIME:GATE:LEVel HIGH LOW</pre> <pre>[:SENSe]:SWEep:TIME:GATE:LEVel?</pre> <p>ESA compatibility</p> |
|---------------------------------|--|

8.4 Enables the hardware accelerated stepped FFT gating feature (Display only)

Enables or disables the hardware-accelerated stepped FFT gating feature:

- Enabling the Hardware Acceleration feature means that the Stepped FFT algorithm will run on the FPGA for configurations where speed improvements are possible
- Disabling the hardware-accelerated stepped FFT gating means the Stepped FFT software algorithm will always run on the CPU instead of the FPGA

When enabled it is only used when applicable and determined by the current sweep configuration.

The default value is **ON** and its value is power-on persistent.

| | |
|----------------|--|
| Remote Command | <code>[:SENSe] :SWEep:EGATe:HACCeLerate:ENABle OFF ON 0 1</code> |
| Example | <code>:SWEep:EGATe:HACCeLerate:ENABle ON</code> |
| Notes | Value ON means the hardware accelerated stepped FFT gating is used intelligently Value OFF means the hardware accelerated stepped FFT gating is always disabled |
| Dependencies | Only valid in ACP, CHP and SEM measurements |
| State Saved | Saved in instrument state |

8.5 Periodic Sync Src

Contains controls that let you select and configure the sync signal for the **Periodic Timer** Trigger.

For convenience controls for adjusting the level and slope of the selected sync source are provided here. Note that these settings match those in the **Trigger** and **Gate Source** menus; that is, each trigger source has only one value of level and slope, regardless of which menu it is accessed from.

8.5.1 Select Periodic Timer Sync Source

Selects a signal source for you to synchronize your periodic timer trigger to, otherwise you are triggering at some arbitrary location in the frame. Synchronization reduces the precision requirements on the setting of the period.

Note that, with Sync Source **OFF**, the timing will drift unless the signal source frequency is locked to the instrument frequency reference.

| | |
|------------------------------|---|
| Remote Command | <code>:TRIGger[:SEquence]:FRAMe:SYNC EXTeRnal1 EXTeRnal2 RFBurst PXI INTeRnal OFF</code> <code>:TRIGger[:SEquence]:FRAMe:SYNC?</code> |
| Example | <code>:TRIG:FRAM:SYNC EXT1</code> <code>:TRIG:FRAM:SYNC EXT2</code> <code>:TRIG:FRAM:SYNC RFB</code> <code>:TRIG:FRAM:SYNC OFF</code> |
| Dependencies | PXI and INTeRnal triggers are only found in modular analyzers such as VXT Not available in E7760 or UXM In some models, there is no second External input. In these models, the External 2 selection is not shown, and the EXTeRnal2 parameter generates a “Hardware missing; Not available for this model number” message |
| Preset | OFF GSM/EDGE, LTE, LTETDD, 5G NR: RFBurst |
| State Saved | Saved in instrument state |
| Backwards Compatibility SCPI | <code>:TRIGger[:SEquence]:FRAMe:SYNC EXTeRnal</code> For backwards-compatibility, the parameter EXTeRnal is mapped to EXTeRnal1 |

8.6 Auto/Holdoff

Contains controls that let you adjust Auto Trigger and Trigger Holdoff parameters
This tab does not appear in Spectrum Analyzer Mode in VXT model M9421A.

8.6.1 Trig Holdoff

Sets the holdoff time between triggers. When the trigger condition is satisfied, the trigger occurs, the delay begins, and the holdoff time begins. New trigger conditions will be ignored until the holdoff time expires. For a free-running trigger, the holdoff value is the minimum time between triggers.

| | |
|----------------|---|
| Remote Command | <code>:TRIGger[:SEquence]:HOLDoff <time></code> <code>:TRIGger[:SEquence]:HOLDoff?</code> |
| Example | <code>:TRIG:HOLD:STAT ON</code> <code>:TRIG:HOLD 100 ms</code> |
| Dependencies | Unavailable if the selected Input is BBIQ . If this is the case, the control is grayed-out if it is pressed the informational message "Feature not supported for this Input" is displayed. If the SCPI command is sent, the error "Settings conflict; Feature not supported for this Input" is generated |
| Preset | All modes except GSM/EDGE, LTEAFDD/TDD and 5G NR: 100 ms GSM/EDGE, Bluetooth: 10 µs LTEATDD: 19 ms 5G NR: 4 ms |
| State Saved | Saved in instrument state |
| Min | 0 s |
| Max | 0.5 s VXT models M9410A/11A/15A/16A: 2.86 s |
| Auto Function | |
| Remote Command | <code>:TRIGger[:SEquence]:HOLDoff:STATe OFF ON 0 1</code> <code>:TRIGger[:SEquence]:HOLDoff:STATe?</code> |
| Preset | All modes but GSM/EDGE: OFF GSM/EDGE mode: ON |

8.6.2 Auto Trig

Sets the time that the instrument will wait for the trigger conditions to be met. If they are not met after that much time, then the instrument is triggered anyway.

| | |
|----------------|--|
| Remote Command | <code>:TRIGger[:SEquence]:ATRigger <time></code> <code>:TRIGger[:SEquence]:ATRigger?</code> |
| Example | <code>:TRIG:ATR:STAT ON</code> <code>:TRIG:ATR 100 ms</code> |
| Notes | The "time that the instrument will wait" starts when the instrument is ready for a trigger, which may be hundreds of ms after the data acquisition for a sweep is done. The "time" ends when the trigger condition is satisfied, not when the delay ends |
| Dependencies | Not available in Real Time Spectrum Analyzer Mode |
| Preset | Off, 100 ms |
| State Saved | Saved in instrument state |
| Min | 1 ms |
| Max | 100 s |
| Auto Function | |
| Remote Command | <code>:TRIGger[:SEquence]:ATRigger:STATe OFF ON 0 1</code> <code>:TRIGger[:SEquence]:ATRigger:STATe?</code> |
| Preset | OFF |

8.6.3 Holdoff Type

Enables you to set the Trigger **Holdoff Type**.

NOTE

Holdoff Type is not supported by all measurements. If the current measurement does not support it, this control does not appear, and **Holdoff Type** is Normal. If **Holdoff Type** SCPI is sent while in such a measurement, the SCPI is accepted and the setting remembered, but it has no effect until a measurement is in force that supports **Holdoff Type**.

Trigger Holdoff Type functionality

| | |
|---------------|---|
| NORMa1 | This is the "oscilloscope" type of trigger holdoff and is the setting when the Holdoff Type control does not appear. In this type of holdoff, no new trigger will be accepted until the holdoff interval has expired after the previous trigger |
| ABOVe | If the trigger slope is positive, a trigger event is generated only if the signal characteristic of interest crosses the trigger threshold (with positive slope) and then remains above the threshold for at least the holdoff time. For negative slope, the trigger event is generated if the signal characteristic crosses the threshold (with negative slope) after having been above the threshold for at least the holdoff time. In either case, the trigger event is associated with the time the level was crossed |
| BELow | If the trigger slope is positive, a trigger event is generated only if the signal characteristic of interest crosses the trigger threshold (with positive slope) after |

8 Trigger
8.6 Auto/Holdoff

having been below the threshold for at least the holdoff time. For negative slope, the trigger event is generated if the signal characteristic crosses the threshold (with negative slope) and then remains below the threshold for at least the holdoff time. In either case, the trigger event is associated with the time the level was crossed

| | | |
|----------------|--|----------------|
| Remote Command | :TRIGger[:SEquence]:HOLDoff:TYPE NORMa1 ABOVe BELow :TRIGger[:SEquence]:HOLDoff:TYPE? | |
| Example | :TRIG:HOLD:TYPE NORM | |
| Preset | Modes | Setting |
| | GSM/EDGE | BELow |
| | Bluetooth | |
| | All others | NORMa1 |
| State Saved | Saved in instrument state | |

9 Programming the Instrument

This section provides information about the instrument's SCPI programming interface. You can also operate the instrument remotely using some legacy programming languages by running the N9061C Remote Language Compatibility measurement application and the N9062C SCPI Language Compatibility measurement application.

9.1 List of Supported SCPI Commands

The SCPI commands available while using this application are listed below.

To find a command in the list, search according to its first alphanumeric character, ignoring any leading ":" or "[" characters. The sole exception to this is the asterisk [*] prefix, identifying IEEE 488.2 Common commands and queries; all these appear at the start of the list.

Note that most commands also have query forms. In cases where a command and its query are described in the same topic, the list below includes the command and query as a *single* item, with no suffix.

| Suffix | Interpretation |
|-----------|---|
| No suffix | Command & Query, <i>or</i> Command only For details, click the link to view the command definition |
| ? | Query only |

9.2 IEEE 488.2 Common Commands

The instrument supports the following subset of IEEE 488.2 Common Commands, as defined in Chapter 10 of [IEEE Standard 488.2–1992](#). As indicated below, some of these commands correspond directly to instrument front-panel functionality, while others are available only as remote commands.

- ["*CAL? - Calibration Query" on page 2559](#) (Align Now All equivalent)
- ["*CLS - Clear Status" on page 2560](#)
- ["*ESE - Standard Event Status Enable" on page 2560](#)
- ["*ESR? - Standard Event Status Register Query" on page 2561](#)
- ["*IDN? - Identification Query" on page 2561](#)
- ["*OPC? - Operation Complete" on page 2562](#)
- ["*OPT? - Query Instrument Options" on page 2563](#)
- ["*RCL - Recall Instrument State" on page 2563](#) (Recall State equivalent)
- ["*RST - Reset" on page 2563](#) (Mode Preset equivalent)
- ["*SAV - Save Instrument State" on page 2564](#) (Save State equivalent)
- ["*SRE - Service Request Enable" on page 2564](#)
- ["*STB? - Status Byte Query" on page 2565](#)
- ["*TRG - Trigger" on page 2565](#)
- ["*TST? - Self Test Query" on page 2565](#)
- ["*WAI - Wait-to-Continue" on page 2566](#)

9.2.1 *CAL? - Calibration Query

***CAL?** Performs a full alignment and returns a number indicating the success of the alignment. A zero is returned if the alignment is successful. A one is returned if any part of the alignment fails. The equivalent SCPI command is [:CALibrate\[:ALL\]?](#)

See ["Align Now All" on page 1927](#)

Remote Command

***CAL**

| | |
|------------------------------|--|
| Example | *CAL? Runs a full alignment and returns 0 if no problems encountered |
| Status Bits/OPC dependencies | See "Align Now All" on page 1927 |

9.2.2 *CLS - Clear Status

Clears the ["Status Byte Register" on page 2596](#), by emptying the error queue and clearing all bits in all of the event registers, and consequently all bits in the Status Byte Register.

The Status Byte Register summarizes the states of the other registers. It is also responsible for generating service requests.

| | |
|------------------------------|---|
| Remote Command | *CLS |
| Example | *CLS Clears the error queue and the Status Byte Register |
| Notes | For related commands, see :SYSTEM:ERROR[:NEXT]? See also :STATUS:PRESet and all commands in the "Status Register System & STATUS Subsystem" on page 2587 |
| Status Bits/OPC dependencies | Resets all bits in all event registers to 0, which resets all the status byte register bits to 0 also |

9.2.3 *ESE - Standard Event Status Enable

Sets the desired bits in the Event Enable sub-register of the ["Standard Event Status Register" on page 2600](#), which enables the corresponding bits in the Standard Event Status Register. This register monitors I/O errors and synchronization conditions such as operation complete, request control, query error, device-dependent error, status execution error, command error, and power on. The selected bits are **ORed** to become a summary bit (bit 5) in the ["Status Byte Register" on page 2596](#), which can be queried.

The query returns the state of this register.

Numeric values for bit patterns can be entered using decimal or hexadecimal representations (0 to 32767, equivalent to **#H0** to **#H7FFF**).

| | |
|----------------|---|
| Remote Command | *ESE <integer> *ESE? |
| Example | *ESE 36 Enables the Standard Event Status Register to monitor query and command errors (bits 2 and 5) |

| | |
|-------------|--|
| | *ESE? |
| | Returns a 36 indicating that the query and command status bits are enabled |
| Notes | For related commands, see the "Status Register System & STATus Subsystem" on page 2587 and :SYSTem:ERRor[:NEXT]? |
| Preset | 255 |
| State Saved | Not saved in state |
| Min | 0 |
| Max | 255 |

9.2.4 *ESR? - Standard Event Status Register Query

Queries and clears the ["Standard Event Status Register" on page 2600](#). (This is a destructive read.) The value returned is a hexadecimal number that reflects the current state (0/1) of all the bits in the register.

| | |
|------------------------------|--|
| Remote Command | *ESR? |
| Example | *ESR? Returns a 1 if there is either a query or command error, otherwise it returns a zero |
| Notes | For related commands, see "Status Register System & STATus Subsystem" on page 2587 |
| Min/Max | 0 / 255 |
| Status Bits/OPC dependencies | Standard Event Status Register (bits 0 – 7) |

9.2.5 *IDN? - Identification Query

Returns a string of instrument identification information. The string contains the model number, serial number, and firmware revision.

The response is organized into four fields separated by commas. The field definitions are as follows:

1. Manufacturer
2. Model
3. Serial number
4. Firmware version

| | |
|----------------|--------------|
| Remote Command | *IDN? |
|----------------|--------------|

| | |
|------------------------------|--|
| Example | <p>*IDN?</p> <p>Returns instrument identification information, such as: Keysight Technologies,N9040B,US01020004,A.15.02</p> <p>Backwards Compatibility Command</p> |
| Example | <p>:ID?</p> <p>Returns model number, such as: N9040B</p> |
| Notes | <p>Provided for backwards compatibility: In Remote Language Compatibility Mode, ID? returns the model number of the emulated instrument In any other Mode, the returned model number is that of the actual instrument</p> |
| Backwards Compatibility SCPI | <p>:ID?</p> |

9.2.6 *OPC? - Operation Complete

Sets bit 0 in the "Standard Event Status Register" on page 2600 (SESR) to "1" when pending operations have finished, that is when all overlapped commands are complete. It does not hold off subsequent operations. You can determine when the overlapped commands have completed either by polling the OPC bit in SESR, or by setting up the status system so that a service request (SRQ) is asserted when the OPC bit is set.

***OPC?** returns "1" after all the current overlapped commands are complete, so it holds off subsequent commands until the "1" is returned, then the program continues. This query can be used to synchronize events of other instruments on the external bus.

| | |
|----------------|--|
| Remote Command | <p>*OPC</p> <p>*OPC?</p> |
| Example | <p>Select single sweeping: :INIT:CONT 0</p> <p>Initiate a sweep: :INIT:IMM</p> <p>Hold off any further commands until the sweep is complete: *OPC?</p> |
| Notes | <p>Not global to all remote ports or front panel. *OPC only affects operations that were initiated on the same port that the *OPC command was issued from</p> <p>*OPC is an overlapped command, but *OPC? is sequential</p> <p>*OPC? does <i>not</i> holdoff the completion of GUI update commands , such as :MMEM:LOAD:SCON "myScreenConfig.screen"</p> |

9.2.7 *OPT? - Query Instrument Options

Returns a string of all installed instrument options. It is a comma-separated list, with quotes, for example:

```
"550,B25,B40,BBA,CRP,CRW,EA3,EDP,ESC,EXM,FBP,LNP,MPB,NF2,RTS,EMC,FP2"
```

| | |
|----------------|--------------------|
| Remote Command | <code>*OPT?</code> |
|----------------|--------------------|

9.2.8 *RCL - Recall Instrument State

Recalls the instrument state from the specified instrument memory register.

- If the state being loaded has a newer firmware revision than the revision of the instrument, no state is recalled and an error is reported
- If the state being loaded has an equal firmware revision than the revision of the instrument, the state will be loaded
- If the state being loaded has an older firmware revision than the revision of the instrument, then the instrument will only load the parts of the state that apply to the older revision

| | |
|------------------------------|--|
| Remote Command | <code>*RCL <register #></code> |
| Example | Recall the instrument state that is currently stored in register 7 (register 8 in the UI): <code>*RCL 7</code> |
| Notes | Registers 0 through 15 are accessible from the front panel in menu keys for Recall Registers. Register 0 corresponds to front panel Register 1 |
| Min | 0 |
| Max | 127 |
| Status Bits/OPC dependencies | The command is sequential |

9.2.9 *RST - Reset

`*RST` is equivalent to `:SYST:PRES;:INIT:CONT OFF`, which is a Mode Preset in the **Single** measurement state. This command is preferred over the Mode Preset command `:SYST:PRES`, because optimal remote programming occurs with the instrument in the **Single** measurement state.

`*RST` clears all pending OPC bits and sets the Status Byte to 0.

| | |
|------------------------------|--|
| Remote Command | <code>*RST</code> |
| Notes | Sequential |
| Couplings | <code>*RST</code> causes the currently running measurement to be aborted and causes the default measurement to be active. <code>*RST</code> gets the mode to a consistent state, with all of the default couplings set |
| Status Bits/OPC dependencies | Clears all pending OPC bits. The " Status Byte Register " on page 2596 is set to 0 |

9.2.10 *SAV - Save Instrument State

Saves the current instrument state and mode to the specified instrument memory register.

| | |
|------------------------------|--|
| Remote Command | <code>*SAV <register #></code> |
| Example | Save the instrument state in register 9 (register 10 in the UI): <code>*SAV 9</code> |
| Notes | Registers 0 through 15 are accessible from the front panel in menu keys for Save Registers. Register 0 corresponds to the front panel Register 1 |
| Min/Max | 0 / 127 |
| Status Bits/OPC dependencies | The command is sequential |

9.2.11 *SRE - Service Request Enable

Enables the desired bits of the "[Service Request Enable Register](#)" on page 2599.

The query returns the value of the register, indicating which bits are currently enabled.

Numeric values for bit patterns can be entered using decimal or hexadecimal representations (0 to 32767, equivalent to `#H0` to `#H7FFF`).

| | |
|----------------|---|
| Remote Command | <code>*SRE <integer></code> <code>*SRE?</code> |
| Example | Enable bits 1, 2, and 4 in the service request enable register: <code>*SRE 22</code> |
| Notes | For related commands, see " Status Register System & STATus Subsystem " on page 2587 and <code>:SYSTem:ERRor[:NEXT]?</code> |
| Preset | 0 |
| Min/Max | 0 / 255 |

| | |
|------------------------------|---|
| Status Bits/OPC dependencies | Service Request Enable Register (all bits, 0 – 7) |
|------------------------------|---|

9.2.12 *STB? - Status Byte Query

Returns the value of the "Status Byte Register" on page 2596 without erasing its contents.

| | |
|------------------------------|--|
| Remote Command | *STB? |
| Example | Return a decimal value for the bits in the Status Byte Register: *STB? For example, if 16 is returned, it indicates that bit 5 is set and one of the conditions monitored in the standard event status register is set |
| Notes | See related command " *CLS - Clear Status " on page 2560 |
| Status Bits/OPC dependencies | Status Byte Register (all bits, 0 – 7) |

9.2.13 *TRG - Trigger

Triggers the instrument. Use `:TRIGger[:SEquence]:SOURce` to select the trigger source.

| | |
|----------------|--|
| Remote Command | *TRG |
| Example | Trigger the instrument to take a sweep or start a measurement, depending on the current instrument settings: *TRG |
| Notes | See related command <code>:INITiate:IMMEDIATE</code> |

9.2.14 *TST? - Self Test Query

Performs the internal self-test routines and returns a number indicating the success of the testing. The value returned is 0 if the test is successful, or 1 if it fails.

| | |
|----------------|--------------------------------------|
| Remote Command | *TST? |
| Example | Run the self-test routines: *TST? |

9.2.15 *WAI - Wait-to-Continue

Causes the instrument to wait until all overlapped commands are completed before executing any additional commands. There is no equivalent query.

| | |
|------------------------------|--|
| Remote Command | <code>*WAI</code> |
| Example | Set the instrument to single sweep. Start a sweep, then wait for its completion: <code>:INIT:CONT OFF;INIT;*WAI</code> |
| Notes | <code>*WAI</code> does <i>not</i> wait for the completion of user-interface-related commands, such as <code>:MMEM:LOAD:SCON "myScreenConfig.screen"</code> |
| Status Bits/OPC dependencies | Not global to all remote ports or front panel. <code>*OPC</code> only considers operation that was initiated on the same port that the <code>*OPC</code> command was issued from |

9.3 SCPI Operation and Results Query

You can use SCPI commands for remote control of measurements and querying of measurement results data. There are several alternative commands you can use to control the measurement, depending on how you wish to operate the instrument. There are also a number of queries that you can use to extract the measurement data.

In this section, “Mode” refers to a Measurement Application, for example, Spectrum Analyzer or 5G NR.

9.3.1 Mode Control

Use either `:INSTrument:SElect` or `:INSTrument:NSElect` to select the Mode. See ["Mode" on page 90](#).

`:INSTrument:CONFigure` causes a Mode *and* Measurement switch at the same time. This results in faster overall switching than sending `:INSTrument:SElect` and `:CONFigure` separately, as described in ["Mode" on page 90](#).

9.3.2 Measurement Control

This section describes the measurement control commands listed below, and their functions.

| | |
|--|--|
| "CONFigure" on page 2568 | Switches to the desired measurement. Presets all measurement settings to their defaults, <i>unless</i> <code>:NDEFault</code> is specified |
| "INITiate" on page 2569 | Starts the measurement |
| "FETCh" on page 2569 | Queries the data without starting the measurement. If a measurement is already in progress, waits for completion |
| "READ" on page 2570 | Starts the measurement with the current settings and queries the data |
| "MEASure" on page 2571 | Switches to the desired measurement, presets all measurement settings to their defaults, starts the measurement and queries the data |

The relationship between the command forms is illustrated in the diagram below. `:FETCh`, `:READ` and `:MEASure` are queries that return measurement data.

9.3.2.1 CONFigure

Stops the current measurement (if any) and sets up the instrument for the specified measurement using the measurement’s default settings. Does not initiate the collection of measurement data unless `:INIT:CONT` is `ON`. If you change any measurement settings after using `:CONFigure`, `"READ"` on page 2570 can be used to initiate a measurement without changing the settings back to their defaults.

Normally `:CONFigure` presets the measurement after selecting it; but, if sent with the `NDEFault` parameter, it selects it without performing a Preset.

| | |
|----------------|---|
| Remote Command | <code>:CONFigure:<measurement>[:NDEFault]</code> <code>:CONFigure?</code> |
| Example | Select and preset the Swept SA measurement: <code>:CONF:SAN</code> Select the Swept SA measurement <i>without</i> presetting: <code>:CONF:SAN:NDEF</code> Query the current measurement: <code>:CONF?</code> |
| Remote Command | <code>:CONFigure:CATalog?</code> |
| Example | <code>:CONF:CATalog?</code> returns a quoted string of all licensed measurement names in the current mode. For example, <code>"SAN, CHP, OBW, ACP, PST, TXP, SPUR, SEM, LIST"</code> for the Spectrum Analyzer mode |

9.3.2.2 INITiate

Initiates a trigger cycle for the specified measurement, but does not output any data. You must then use `:FETCh<meas>` to return data. If a measurement other than the current one is specified, the instrument will switch to that measurement and then initiate it.

Remote Command `:INITiate:<measurement>`

Example Switch to the **SANalyzer** (Swept SA) measurement if not already there, then start the measurement:

`:INIT:SAN`

`:INITiate` does not change any of the measurement settings. For example, if you have already run the ACP measurement and you send `:INIT:ACP?` it initiates a new ACP measurement using the same instrument settings as the last time ACP was run.

If another measurement is running, `:INIT` switches to the specified measurement. For example, suppose you are running the channel power measurement. If you send `:INIT:ACP?` it changes from channel power to ACP and initiates an ACP measurement.

If your selected measurement is currently in the idle state, it restarts the measurement. Depending upon the measurement and the number of averages, there may be multiple data acquisitions, with multiple trigger events, for one full trigger cycle.

CAUTION

`:INIT` allows additional commands *while* the measurement is in progress.

Be aware that such additional commands may change measurement settings. They may cause the measurement in progress to be discarded, and a new measurement may start.

To wait for the completion of a measurement after sending `:INITiate`, send `"*WAI - Wait-to-Continue"` on page 2566, or `"*OPC? - Operation Complete"` on page 2562, or use `"FETCh"` on page 2569.

9.3.2.3 FETCh

Places selected data from the most recent measurement into the output buffer. Use `:FETCh` if you have already made a valid measurement and you want to retrieve data. You can issue `:FETCh` multiple times with differing `[n]` values without restarting or re-making the measurement, for example, both scalars and trace data from a single measurement.

Remote Command `:FETCh:<measurement>[n]?`

Example Fetch item 2 (Trace 2) from the **SAN** (Swept SA) measurement when the measurement completes. If not in the Swept SA measurement, returns an error:

:FETCh:SAN2?

:FETCh does not change any of the measurement settings, it simply reads the results of the current measurement. **:FETCh** may be used to return results other than those specified with the original **:READ** or **:MEASure** query that you sent.

You can only **:FETCh** results from the measurement that is currently active, it does not change to a different measurement. An error message is reported if a measurement other than the current one is specified.

If you need to get new measurement data, use **"READ"** on page 2570, which is equivalent to **"INITiate"** on page 2569 followed by **:FETCh**.

The measurement results for **n = 1** (usually the scalar result) will be returned if the optional **[n]** value is not included, or is set to 1. If the **[n]** value is set to a value other than 1, the selected data results will be returned. See each measurement for details of what types of scalar results or trace data results are available. The binary data formats should be used for handling large blocks of data since they are smaller and transfer faster than the ASCII format. See **"Format Data: Numeric Data (Remote Command Only)"** on page 2575.

Note that the data returned by **:FETCh?** uses the data setting specified by **"Format Data: Numeric Data (Remote Command Only)"** on page 2575 and **"Format Data: Byte Order (Remote Command Only)"** on page 2576 commands, and can return real or ASCII data. If the format is set to **INT, 32**, it returns **REAL, 32** data.

9.3.2.4 READ

Initiates a trigger cycle for the specified measurement and outputs the requested data. If a measurement other than the current one is specified, the instrument will switch to that measurement before it initiates the measurement and returns results.

Remote Command **:READ:<measurement>[n]?**

Example Switch to the **SANalyzer** (Swept SA) measurement if not already there, start the measurement, and return item 2 (Trace 2) from the measurement when the measurement completes:

:READ:SAN2?

:READ does not change any of the measurement settings. For example, if you have already run the ACP measurement and you send **:READ:ACP?**, it initiates a new ACP measurement using the same instrument settings as the last time ACP was run.

:READ switches to the specified measurement if the instrument is not already there. For example, suppose you have already run the ACP measurement but now you are running the Channel Power measurement. When you send **:READ:ACP?**, it changes

from Channel Power back to ACP and, using the previous ACP settings, initiates the measurement and return results.

The measurement results for $n = 1$ (usually the scalar result) will be returned if the optional `[n]` value is not included, or is set to 1. If the `[n]` value is set to a value other than 1, the selected data results will be returned. See each measurement for details of what types of scalar results or trace data results are available. The binary data formats should be used for handling large blocks of data since they are smaller and transfer faster than the ASCII format. See ["Format Data: Numeric Data \(Remote Command Only\)" on page 2575](#).

Note that the data returned by `:READ?` uses the data setting specified by ["Format Data: Byte Order \(Remote Command Only\)" on page 2576](#) and ["Format Data: Numeric Data \(Remote Command Only\)" on page 2575](#), and can return real or ASCII data. If the format is set to `INT, 32` it returns `REAL, 32` data.

`:READ` blocks other SCPI communication, waiting until the measurement is complete before returning results.

For more details of how measurements proceed, see also ["INITiate" on page 2569](#).

9.3.2.5 MEASure

Stops the current measurement (if any) and sets up the instrument for the specified measurement using the measurement's default settings, initiates a trigger cycle for the specified measurement, and outputs the requested data.

| | |
|----------------|---|
| Remote Command | <code>:MEASure:<measurement>[n]?</code> |
| Example | <p>Switch to the <code>SANalyzer</code> (Swept SA) measurement, start the measurement, and read back item 2 (Trace 2) when the measurement completes</p> <pre><code>:MEAS:SAN2?</code></pre> <p>This is a fast single-command way to make a measurement using the measurement's default settings. These are the settings and units that conform to the Mode Setup settings (for example, Radio Standard) that you have currently selected.</p> <p>Stops the current measurement (if any) and sets up the instrument for the specified measurement using the measurement's defaults.</p> <p>Initiates the data acquisition for the measurement.</p> <p>Blocks other SCPI communication, waiting until the measurement is complete before returning results.</p> <p>Depending on the measurement and the number of averages, there may be multiple data acquisitions, with multiple trigger events.</p> |

After the data is valid, returns the scalar results, or the trace data, for the specified measurement. The type of data returned may be defined by an `[n]` value that is sent with the command.

If the optional `[n]` value is not included, or is set to 1, scalar measurement results will be returned. If the `[n]` value is other than 1, the selected trace data results will be returned. See each command for details of which types of scalar results or trace data results are available.

The default format for data output is ASCII. (Older versions of Spectrum Analysis and Phase Noise mode measurements only use ASCII.) The binary data formats should be used for handling large blocks of data, because transfers are smaller and faster than when using the ASCII format. See ["Format Data: Numeric Data \(Remote Command Only\)" on page 2575](#) for more information.

If you need to change some of the measurement parameters from the measurement's default settings, you can set up the measurement with `:CONFigure`. Use the commands in the `:SENSe:<measurement>` and `:CALCulate:<measurement>` subsystems to change the settings, then you can use `:READ?` to initiate the measurement and query the results.

Measurement settings persist if you initiate a different measurement and then return to a previous one. Use `:READ?` if you want to use those persistent settings. If you want to go back to the default settings, use `:MEASure?`.

Note that the data returned to `:MEASure?` uses the data setting specified by ["Format Data: Byte Order \(Remote Command Only\)" on page 2576](#) and ["Format Data: Numeric Data \(Remote Command Only\)" on page 2575](#), and can return real or ASCII data. If the format is set to `INT, 32` it returns `REAL, 32` data.

9.3.3 Trace Formatting Commands

The following commands and queries are available to format and manipulate trace data.

9.3.3.1 Clear Trace (Remote Command Only)

Clears the selected trace (from the front panel) or the specified trace (from SCPI). Does not affect the state of any function or variable in the instrument. Loads `mintracevalue` into all of the points in the selected trace, unless the trace is in Min Hold in which case it loads `maxtracevalue`. This occurs even if `Update = Off`.

| | |
|----------------|---|
| Remote Command | <code>:TRACe:CLEAr TRACE1 ... TRACE6</code> |
| Example | Clear Trace 1: <code>:TRAC:CLE TRACE1</code> |

9.3.3.2 Send/Query Trace Data (Remote Command Only)

Allows trace data to be sent to the instrument or queried from the instrument. The response to the query is a list of the amplitude points which comprise the requested trace in the current Y Axis Unit of the instrument. The X Axis Unit is that of the destination trace (for send) or the source trace (for query).

See:

- "Query Trace Data" on page 2573
- "More Information" on page 2574

| | |
|----------------|--|
| Remote Command | <code>:TRACe[:DATA] TRACE1 TRACE2 TRACE3 TRACE4 TRACE5 TRACE6, <data></code> |
| Notes | <p>The <code>TRACe[:DATA]</code> command is of the form: <code>:TRACe:DATA <trace>,<data></code></p> <p>where <code><trace></code> can be one of the following parameters: <code>TRACE1, TRACE2, TRACE3, TRACE4, TRACE5, TRACE6</code></p> <p>and where <code><data></code> can be</p> <ul style="list-style-type: none"> - ASCII data, which consists of a string of values separated by comma or - <code>REAL</code> or <code>INTEger</code> sent as a definite length block, with a header describing the data to follow |
| Couplings | <p>Sweep points will affect the amount of data</p> <p><code>:FORMat:DATA</code> describes the different types of data formats that can be used with trace data</p> <p>Use <code>:FORMat:BORDER</code> to set the byte order</p> |

Query Trace Data

| | |
|-------------------------------|--|
| Remote Command | <code>:TRACe[:DATA]? TRACE1 TRACE2 TRACE3 TRACE4 TRACE5 TRACE6</code> |
| Example | <p>Send five points to Trace 1. Assuming that <code>:FORMat:DATA</code> is set to <code>ASCIi</code>, Y Axis Unit is set to dBm, and sweep points is set to 5, this will result in Trace 1 consisting of the five points -1 dBm, -2 dBm, -3 dBm, -4 dBm, and -5 dBm:</p> <p><code>:TRAC TRACE1, -1, -2, -3, -4, -5</code></p> <p>Query the instrument for the contents of trace 2:</p> <p><code>:TRAC? TRACE2</code></p> |
| Backwards Compatibility Notes | In X-Series, the legacy <code>RAWTRACE, LLINE1, LLINE2</code> parameters for trace data query are no longer available |

More Information

The format and byte order of the sent or received data depend on "[Format Data: Numeric Data \(Remote Command Only\)](#)" on page 2575 and "[Format Data: Byte Order \(Remote Command Only\)](#)" on page 2576. **ASCII** data consists of a string of comma separated values. **REAL** or **INTEger** data is sent as a definite length block, with a header describing the data to follow.

For example, a four point trace might look like this if in ASCII (**FORMat:DATA ASCii**):

```
-5.87350E+01, -5.89110E+01, -5.87205E+01, -5.12345E+01<NL><END>
```

and like this if in **INTEger** with 4 bytes per point (**FORMat:DATA INT, 32**):

```
#216<16 bytes of data><NL><END>
```

where the 2 in the #216 means "2 digits of numeric data to follow", and the 16 is the 2 digits and means "16 binary bytes to follow" (this is the definite length block format).

Note that the data is terminated with **<NL><END>**. (For GPIB this is newline, or linefeed, followed by EOI set true. For LAN, this is newline only.)

The data format set by "[Format Data: Numeric Data \(Remote Command Only\)](#)" on page 2575 and "[Format Data: Byte Order \(Remote Command Only\)](#)" on page 2576 is used both for sending data to the instrument and receiving data from the instrument.

When sending data to the instrument, the data block must contain exactly the number of points currently specified in **Sweep, Points** or an error message will be generated and there will be no change to the target trace.

No units terminator (for example, dB or V) is used when sending data; the data is taken as being in the current Y Axis Unit of the instrument.

When a trace is sent to the instrument, it immediately overwrites all of the data in the target trace. Consequently the trace should be inactive in order to achieve predictable results. If you send trace data while a trace is active, and particularly if a sweep or an **Average** or **Max/Min Hold** sequence is already in progress, you may end up with a trace that combines the data you sent with measurement data. Similarly, when querying trace data, it is best if the instrument is not sweeping during the query.

Therefore, it is generally advisable to be in **Single** sweep, or have the trace in **View**, when sending trace data to the instrument or querying trace data from the instrument.

9.3.3.3 Format Data: Numeric Data (Remote Command Only)

Specifies the format of the trace data input and output.

Specifies the formats used for trace data during data transfer across any remote port. Affects only the data format for setting and querying trace data for `:TRACe[:DATA]`, `:TRACe[:DATA]?`, `:CALCulate:DATA[n]?` and `:FETCh:SANalyzer[n]?`.

| | |
|-------------------------------|---|
| Remote Command | <code>:FORMat[:TRACe][:DATA] ASCii INTeger,32 REAL,32 REAL,64</code> <code>:FORMat[:TRACe][:DATA]?</code> |
| Notes | <p>The query response is:</p> <p><code>ASCii</code>: ASC,8 <code>REAL,32</code>: REAL,32 <code>REAL,64</code>: REAL,64 <code>INTeger,32</code>: INT,32</p> <p>When the numeric data format is REAL or ASCii, data is output in the current Y Axis unit. When the data format is INTeger, data is output in units of m dBm (.001 dBm)</p> <p>The <code>INT,32</code> format returns binary 32-bit integer values in internal units (m dBm), in a definite length block</p> |
| Dependencies | <p>Sending a data format spec with an invalid number (for example, <code>INT,48</code>) generates no error. The instrument simply uses the default (8 for <code>ASCii</code>, 32 for <code>INTeger</code>, 32 for <code>REAL</code>)</p> <p>Sending data to the instrument which does not conform to the current <code>FORMat</code> specified, results in an error. Sending ASCII data when a definite block is expected generates message -161 "Invalid Block Data" and sending a definite block when ASCII data is expected generates message -121 "Invalid Character in Number"</p> |
| Preset | <code>ASCii</code> |
| Backwards Compatibility Notes | <p>Note that the <code>INT,32</code> format is only applicable to <code>:TRACe:DATA</code>. This preserves backwards compatibility for the Swept SA measurement. For all other commands/queries that honor <code>:FORMat:DATA</code>, if <code>INT,32</code> is sent the instrument will behave as though it were set to <code>REAL,32</code></p> |

The specifications for each output type are:

| | |
|----------------------|---|
| <code>ASCii</code> | <p>Amplitude values are in ASCII, in the current Y Axis Unit, one ASCII character per digit, values separated by commas, each value in the form: <code>SX.YYYYYEsZZ</code>, where:</p> <p>S = sign (+ or -) X = one digit to left of decimal point Y = 5 digits to right of decimal point E = E, exponent header s = sign of exponent (+ or -) ZZ = two digit exponent</p> |
| <code>REAL,32</code> | Binary 32-bit real values in the current Y Axis Unit, in a definite length block |
| <code>REAL,64</code> | Binary 64-bit real values in the current Y Axis Unit, in a definite length block |

9.3.3.4 Format Data: Byte Order (Remote Command Only)

Selects the binary data byte order for data transfer and other queries.

Controls whether binary data is transferred in normal or swapped mode. Affects only the byte order for setting and querying trace data for `:TRACe[:DATA]`, `:TRACe[:DATA]?`, `:CALCulate:DATA[n]?` and `:FETCh:SANalyzer[n]?`.

By definition, any command that depends on this setting uses *any* format supported by `:FORMat:DATA`.

- **NORMal** order is a byte sequence that begins with the most significant byte (MSB) first, and ends with the least significant byte (LSB) last in the sequence: 1|2|3|4
- **SWAPped** order is when the byte sequence begins with the LSB first, and ends with the MSB last in the sequence: 4|3|2|1

| | |
|----------------|--|
| Remote Command | <code>:FORMat:BORDER NORMal SWAPped</code> <code>:FORMat:BORDER?</code> |
| Preset | <code>NORMal</code> |

9.3.3.5 Calculate/Compress Trace Data Query (Remote Command Only)

Returns compressed data for the currently selected measurement and sub-opcode `[n]`.

`n` = any valid sub-opcode for that measurement. See the `:MEASure:<measurement>?` query description of your specific measurement for information on the data that can be returned.

The data is returned in the current Y Axis Unit of the instrument. The command is used with a sub-opcode `<n>` (default = 1) to specify the trace. With trace queries, it is best if the instrument is not sweeping during the query. Therefore, it is generally advisable to be in **Single** sweep, or Update = Off.

This command is used to compress or decimate a long trace to extract and return only the desired data. A typical example would be to acquire N frames of GSM data and return the mean power of the first burst in each frame. The command can also be used to identify the best curve fit for the data.

| | |
|----------------|---|
| Remote Command | <code>:CALCulate:DATA<n>:COMPRESS? BLOCK CFIT MAXimum MINimum MEAN DMEan RMS SAMPLE SDEVIation PPHase [,<soffset>[,<length>[,<roffset>[,<rlimit>]]]]</code> |
|----------------|---|

Notes The command supports 5 parameters, but the last 4 (`<soffset>`, `<length>`, `<roffset>`, `<rlimit>`) are optional. The optional parameters must be entered in the specified order. For example, if you want to specify `<length>`, then you must also specify `<soffset>`. See details below for a definition

of each of these parameters

This command uses the data in the format specified by "[Format Data: Byte Order \(Remote Command Only\)](#)" on page 2576, returning either binary or ASCII data

As an example, to query the mean power of a set of GSM bursts:

- Supply a signal that is a set of GSM bursts
- Select the IQ Waveform measurement (in IQ Analyzer Mode)
- Set the sweep time to acquire at least one burst
- Set the triggers such that acquisition happens at a known position relative to a burst
- Query the mean burst levels using, `:CALC:DATA2:COMP? MEAN, 24e-6, 526e-6` (These parameter values correspond to GSM signals, where 526e-6 is the length of the burst in the slot and you just want 1 burst)

BLOCK or block data

Returns all the data points from the region of the trace data that you specify. For example, it could be used to return the data points of an input signal over several timeslots, excluding the portions of the trace data that you do not want. (This is x,y pairs for trace data and I,Q pairs for complex data.)

CFIT or curve fit

Applies curve fitting routines to the data. `<soffset>` and `<length>` are required to define the data that you want. `<roffset>` is an optional parameter for the desired order of the curve equation. The query will return the following values: the x-offset (in seconds) and the curve coefficients ((order + 1) values).

`MIN`, `MAX`, `MEAN`, `DME`, `RMS`, `SAMP`, `SDEV` and `PPH` return one data value for each specified region (or `<length>`) of trace data, for as many regions as possible until you run out of trace data (using `<roffset>` to specify regions), or they return the number of regions you specify (using `<rlimit>`) ignoring any data beyond that.

MINimum

Returns the minimum data point (y value) for the specified region(s) of trace data. For I/Q trace data, the minimum magnitude of the I/Q pairs is returned.

MAXimum

Returns the maximum data point (y value) for the specified region(s) of trace data. For I/Q trace data, the maximum magnitude of the I/Q pairs is returned.

MEAN

Returns a single value that is the arithmetic mean of the data point values (in dB/ dBm) for the specified region(s) of trace data. For I/Q trace data, the mean of the magnitudes of the I/Q pairs is returned. See the following equations.

NOTE

If the original trace data is in dB, this function returns the arithmetic mean of those log values, not log of the mean power which is a more useful value. The mean of the log is the better measurement technique when measuring CW signals in the presence of noise. The mean of the power, expressed in dB, is useful in power measurements such as Channel Power. To achieve the mean of the power, use the RMS option.

Equation 1: Mean Value of Data Points for Specified Region(s)

$$\text{MEAN} = \frac{1}{n} \sum_{X_i \in \text{region}(s)} X_i$$

where X_i is a data point value, and n is the number of data points in the specified region(s).

Equation 2: Mean Value of I/Q Data Pairs for Specified Region(s)

$$\text{MEAN} = \frac{1}{n} \sum_{X_i \in \text{region}(s)} |X_i|$$

where $|X_i|$ is the magnitude of an I/Q pair, and n is the number of I/Q pairs in the specified region(s).

DMEan

Returns a single value that is the mean power (in dB/ dBm) of the data point values for the specified region(s) of trace data. See the following equation:

Equation 3: DMEan Value of Data Points for Specified Region(s)

$$\text{DME} = 10 \times \log_{10} \left(\frac{1}{n} \sum_{X_i \in \text{region}(s)} 10^{\frac{X_i}{10}} \right)$$

RMS

Returns a single value that is the average power on a root-mean-squared voltage scale (arithmetic rms) of the data point values for the specified region(s) of trace data. See the following equation.

Equation 4: RMS Value of Data Points for Specified Region(s)

$$\text{RMS} = \sqrt{\frac{1}{n} \sum_{X_i \in \text{region}(s)} X_i^2}$$

where X_i is a data point value, and n is the number of data points in the specified region(s).

For I/Q trace data, the rms of the magnitudes of the I/Q pairs is returned. See the following equation.

NOTE

This function is very useful for I/Q trace data. However, if the original trace data is in dB, this function returns the rms of the log values which is not usually needed.

Equation 5: RMS Value of I/Q Data Pairs for Specified Region(s)

$$\text{RMS} = \sqrt{\frac{1}{n} \sum_{X_i \in \text{region}(s)} X_i X_i^*}$$

where X_i is the complex value representation of an I/Q pair, X_i^* its conjugate complex number, and n is the number of I/Q pairs in the specified region(s).

Once you have the rms value for a region of trace data (linear or I/Q), you may want to calculate the mean power. You must convert this rms value (peak volts) to power in dBm:

$$10 \times \log[10 * (\text{rms value})^2]$$

SAMPLE

Returns the first data value (x,y pair) for the specified region(s) of trace data. For I/Q trace data, the first I/Q pair is returned.

SDEViation

Returns a single value that is the arithmetic standard deviation for the data point values for the specified region(s) of trace data. See the following equation.

Equation 6: Standard Deviation of Data Point Values for Specified Region(s)

$$\text{SDEV} = \sqrt{\frac{1}{n} \sum_{X_i \in \text{region}(s)} (X_i - \bar{X})^2}$$

where X_i is a data point value, X is the arithmetic mean of the data point values for the specified region(s), and n is the number of data points in the specified region(s).

For I/Q trace data, the standard deviation of the magnitudes of the I/Q pairs is returned. See the following equation.

Equation 7: Standard Deviation of I/Q Data Pair Values for Specified Region(s)

$$SDEV = \sqrt{\frac{1}{n} \sum_{X_i \in \text{region}(s)} (|X_i| - \bar{X})^2}$$

where $|X_i|$ is the magnitude of an I/Q pair, X is the mean of the magnitudes for the specified region(s), and n is the number of data points in the specified region(s).

PPHase

Returns the x,y pairs of both rms power (dBm) and arithmetic mean phase (radian) for every specified region and frequency offset (Hz). The number of pairs is defined by the specified number of regions. This parameter can be used for I/Q vector ($n=0$) in Waveform (time domain) measurement and all parameters are specified by data point in [PPHase](#).

The rms power of the specified region may be expressed as:

$$\text{Power} = 10 \times \log [10 \times (\text{RMS I/Q value})] + 10.$$

The RMS I/Q value (peak volts) is:

$$\sqrt{\frac{1}{n} \sum_{X_i \in \text{region}} X_i X_i^*}$$

where X_i is the complex value representation of an I/Q pair, X_i^* its conjugate complex number, and n is the number of I/Q pairs in the specified region.

The arithmetic mean phase of the specified region may be expressed as:

$$\frac{1}{n} \sum_{Y_i \in \text{region}} Y_i$$

where Y_i is the unwrapped phase of I/Q pair with applying frequency correction and n is the number of I/Q pairs in the specified region.

The frequency correction is made by the frequency offset calculated by the arithmetic mean of every specified region's frequency offset. Each frequency offset is calculated by the least square method against the unwrapped phase of I/Q pair.

Sample Trace Data - Constant Envelope

(See below for explanation of variables.)

Sample Trace Data - Not Constant Envelope

(See below for explanation of variables.)

- <soffset> Optional real number, in seconds for time-domain traces, and is a dimensionless index 0 to Npoints - 1, for frequency-domain traces
 Specifies the amount of data at the beginning of the trace that will be ignored before the decimation process starts. It is the time or frequency change from the start of the trace to the point where you want to start using the data. The default value is zero
- <length> Optional real number, in seconds for time-domain traces, and is a dimensionless index 0 to Npoints - 1, for frequency-domain traces
 Defines how much data will be compressed into one value. This parameter has a default value equal to the current trace length
- <roffset> Optional real number, in seconds for time-domain traces, and is a dimensionless index 0 to Npoints - 1, for frequency-domain traces
 Defines the beginning of the next field of trace elements to be compressed. This is relative to the beginning of the previous field. This parameter has a default value equal to the <length> variable. Note that this parameter is used for a completely different purpose when curve fitting (see "CFIT or curve fit" on page 2577 above)

`<rlimit>` Optional integer
Specifies the number of data items that you want returned. Ignores any additional items beyond that number. You can use the Start offset and the Repeat limit to pick out exactly what part of the data you want to use. The default value is all the data

9.3.3.6 Calculate Peaks of Trace Data (Remote Command Only)

Returns a list of all the peaks for the currently selected measurement and sub-opcode `[n]`. The peaks must meet the requirements of the peak threshold and excursion values.

`n` = any valid sub-opcode for the current measurement. See the `:MEASure:<measurement>` command description of your specific measurement for information on the data that can be returned.

The command can only be used with specific sub-opcodes with measurement results that are trace data. Both real and complex traces can be searched, but complex traces are converted to magnitude in dBm. In many measurements the sub-opcode `n = 0`, is the raw trace data, which cannot be searched for peaks, and sub-opcode `n = 1`, is often calculated results values which also cannot be searched for peaks.

This command uses the data setting specified by "[Format Data: Byte Order \(Remote Command Only\)](#)" on page 2576 and "[Format Data: Numeric Data \(Remote Command Only\)](#)" on page 2575, and can return real or ASCII data. If the format is set to `INT, 32`, it returns `REAL, 32` data.

The command has four types of parameters:

1. Threshold (in dBm)
2. Excursion (in dB)
3. Sorting order (amplitude, frequency, time)
4. Optional in some measurements: Display line use (all, > display line, < display line)

| | |
|----------------|--|
| Remote Command | <p>For Swept SA measurement:</p> <pre>:CALCulate:DATA[1] 2 ... 6:PEAKs? <threshold>,<excursion>[,AMPLitude FREQuency TIME[,ALL GTDLine LTDLine]]</pre> <p>For most other measurements:</p> <pre>:CALCulate:DATA[1] 2 ... 6:PEAKs? <threshold>,<excursion>[,AMPLitude FREQuency TIME]</pre> |
| Notes | Parameters: |

| | |
|--------------------------------|--|
| <code><n></code> | The trace that will be used: <code>[1] 2 ... 6</code> |
| <code><threshold></code> | The level below which trace data peaks are ignored Note that the threshold value is required and is always used as a peak criterion. To effectively disable the threshold criterion for this command, provide a substantially low threshold value such as -200 dBm Note also that the threshold value used in this command is independent of and has no effect on the threshold value stored under the Peak Criteria menu |
| <code><excursion></code> | The minimum amplitude variation (rise and fall) required for a signal to be identified as peak Note that the excursion value is required and is always used as a peak criterion. To effectively disable the excursion criterion for this command, provide the minimum value of 0.0 dB Note also that the excursion value used in this command is independent of and has no effect on the excursion value stored under the Peak Criteria menu |

Values must be provided for threshold and excursion. The sorting and display line parameters are optional (defaults are **AMPLitude** and **ALL**)

Note that there is always a Y-axis value for the display line, regardless of whether the display line state is on or off. It is the current Y-axis value of the display line which is used by this command to determine whether a peak should be reported

Sorting order:

| | |
|------------------|---|
| AMPLitude | Lists the peaks in order of descending amplitude, with the highest peak first If this optional parameter not sent, this is the default |
| FREQuency | Lists the peaks in order of occurrence, left to right across the x-axis |
| TIME | Lists the peaks in order of occurrence, left to right across the x-axis |

Peaks vs. Display Line:

| | |
|----------------|---|
| ALL | Lists all of the peaks found (default if optional parameter not sent) |
| GTDLIne | Lists all of the peaks found above the display line |

Greater than display line

| | |
|----------------|---|
| LTDLine | Lists all of the peaks found below the display line |
|----------------|---|

Less than display line

For example, for Swept SA measurement in Spectrum Analyzer Mode:

`:CALC:DATA4:PEAK? -40,10,FREQ,GTDL`

Identifies the peaks of trace 4 that are above -40 dBm, with excursions of at least 10 dB. The peaks are returned in order of increasing frequency, starting with the lowest frequency. Only the peaks that are above the display line are returned

Query Results:

If `:FORMat:DATA REAL,32` is selected, returns a list of floating-point numbers. The first value in the list is the number of peak points that are in the following list. A peak point consists of two values: a peak amplitude followed by its corresponding frequency (or time)

If no peaks are found, the peak list consists of only the number of peaks, (0)

9.3.3.7 Smooth Trace Data (Remote Command Only)

Included for ESA compatibility. Not recommended for new designs. Use `:CALCulate:DATA:COMPRESS` instead.

Smooths the trace according to the number of points specified in `:TRACe:MATH:SMOoth:POINTs`. There is no equivalent front panel function.

The purpose of this function is to perform a spatial video averaging, as compared to the temporal version supplied by the video-average command

`[:SENSe]:AVERAge:TYPE VIDEo`. The functions of `:TRACe:MATH:SMOoth <trace>` and `[:SENSe]:AVERAge:TYPE VIDEo|POWer` are not interchangeable.

Backwards Compatibility `:TRACe:MATH:SMOoth TRACE1 | ... | TRACE6`
SCPI

Each point value is replaced with the average of the values of the selected number of points, with half of those points located on each side of any particular point (when possible). Refer to the illustration below, which shows a 401 point trace with a smoothing number of 31. Think of the trace points as “buckets” of data. To smooth (arbitrary) point 273, the instrument averages buckets 258 through 288 and applies that value to point 273.

Increasing the number of points increases smoothing at the cost of decreasing resolution.

The amount of smoothing decreases at the end points. Because `:TRACe:MATH:SMOoth <trace>` averages values that occur before and after the data point in time, display irregularities can be caused at the start and stop frequencies. To avoid possible irregularities (signal distortion) at the ends of the trace, use small values for the smooth parameter.

Smoothing With 401 Trace Points and 31 Smoothing Points

Refer to the illustration above for a discussion of this end-point smoothing phenomena. With 31 smoothing points and a 401 point trace, point 16 will be the first point to have full 31-bucket smoothing. Likewise, point 386 will be the last point with full 31-bucket smoothing. Under the conditions stated, points 2 through 15 will be smoothed as follows: Point 2 is derived from averaging buckets 1 through 3. Point 3 is derived from averaging buckets 1 through 5, Point 4 is derived from averaging buckets 1 through 7, and so forth until point 16 is reached. The quantity of buckets used for the smoothing running average increases at the rate of 2 buckets per point, from point 1 to point $([\text{smoothing number}+1]/2)$, at which time the full number of smoothing points is utilized. The same characteristic occurs at the completion of the trace, beginning at point 386, beyond which the number of averaging buckets begins to decrease until point 401 is reached.

By replacing the value of each point in a trace with the average of the values of a number of points centered about that point, any rapid variations in noise or signals are smoothed into more gradual variations. It thereby performs a function similar to reducing the video bandwidth without the corresponding changes in sweep time; as such, frequency resolution is decreased. Also, signal peaks are reduced with large smoothing values. This can cause the amplitude to appear to be less than its actual value.

9.3.3.8 Number of Points for Smoothing (Remote Command Only)

Included for ESA compatibility. Not recommended for new designs. Use `:CALCulate:DATA:COMPRESS` instead.

Specifies the number of points that will be smoothed. Increasing the number of points increases smoothing at the cost of decreasing resolution. If the number of points is an even number, then the number of points is increased by one. If the number of points is larger than the number of sweep points, then the number of sweep points is used, unless the number of sweep points is even, in which case the number of points will be the sweep points minus one. The number of points smoothed is always an odd number.

| | |
|---------------------------------|---|
| Example | <code>:TRAC:MATH:SMO:POIN 501</code> |
| Notes | Only odd values are allowed If an even value of <code><integer></code> is specified, adds 1 unless <code><integer></code> = number of sweep points, in which case subtract 1 Used with <code>TRACe:MATH:SMOoth</code> |
| Preset | 11 |
| Min | 3 |
| Max | Number of sweep points |
| Backwards Compatibility SCPI | <code>:TRACe:MATH:SMOoth:POINTs <integer></code> <code>:TRACe:MATH:SMOoth:POINTs?</code> |

9.3.3.9 Mean Trace Data (Remote Command Only)

Included for ESA compatibility. Not recommended for new designs. Use `:CALCulate:DATA:COMPRESS` instead.

Returns the mean of the amplitudes of the trace amplitude elements in measurement units.

| | |
|---------------------------------|--|
| Example | <code>:TRAC:MATH:MEAN? TRACE2</code> |
| Backwards Compatibility SCPI | <code>:TRACe:MATH:MEAN? TRACE1 ... TRACE6</code> |

9.4 Status Register System & STATus Subsystem

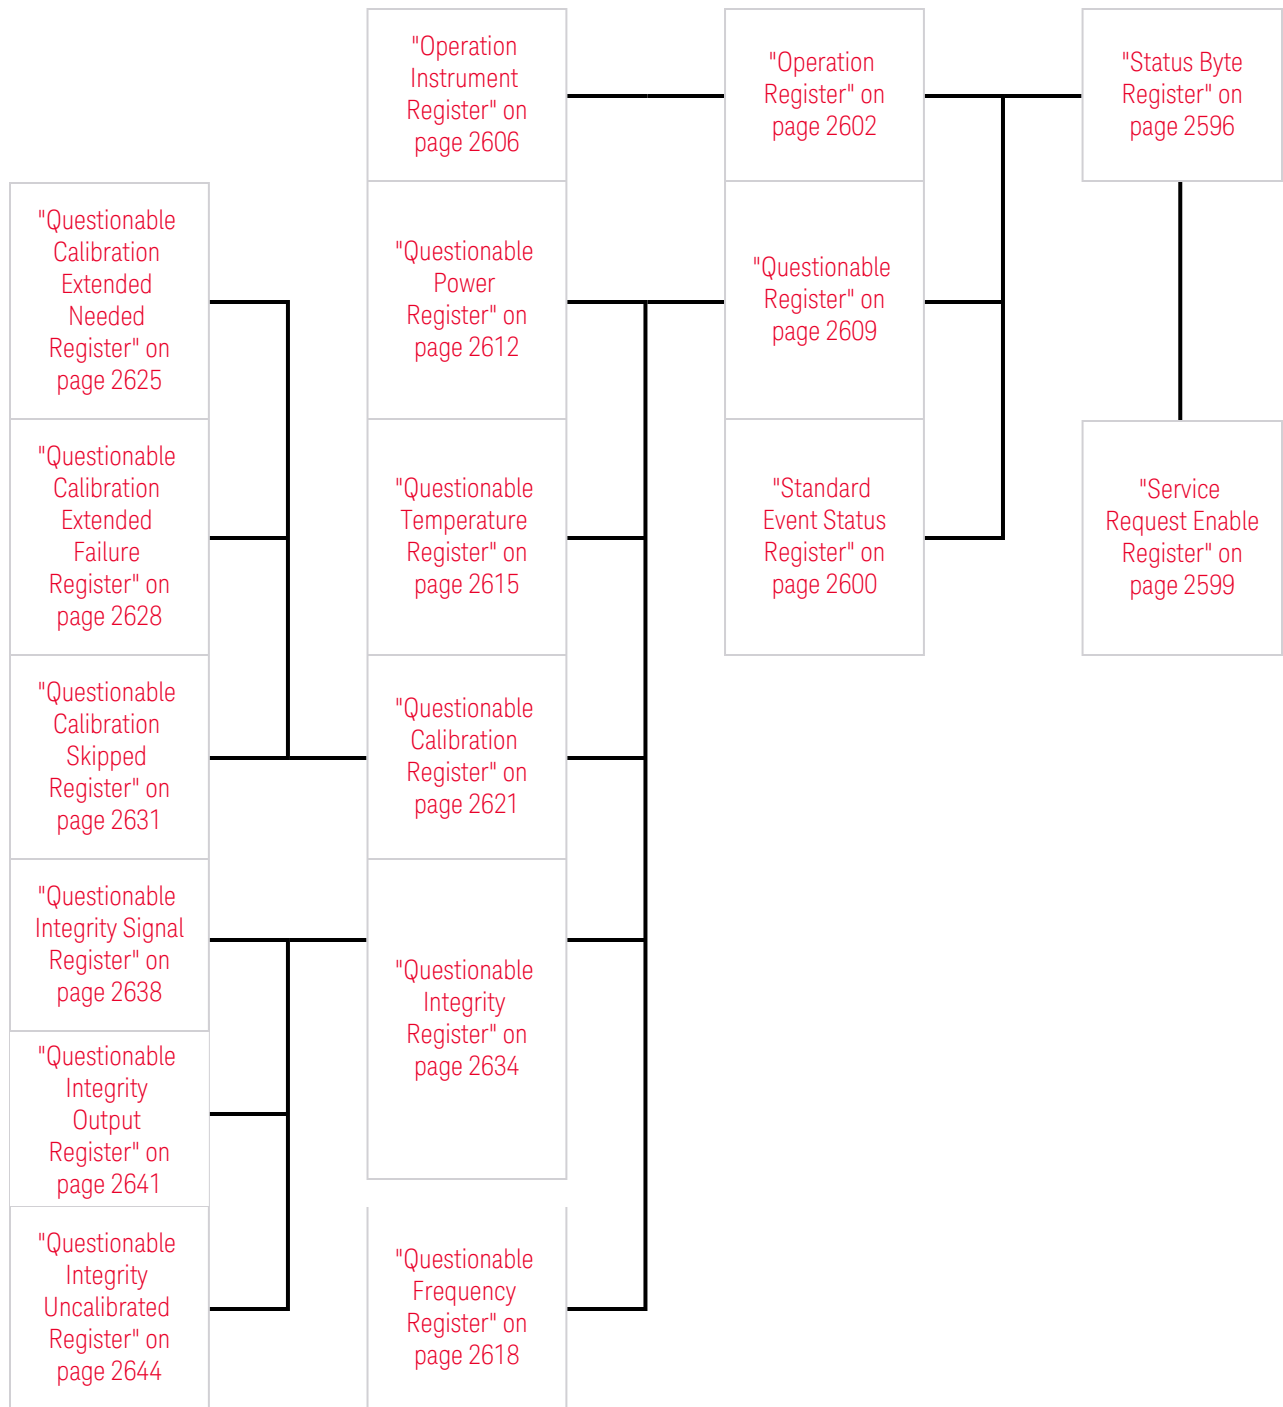

This section provides an overview of the X-Series SCPI status register system, and how to manage the registers. For detailed programming information on each status register, see ["Status Subsystem Registers and Commands" on page 2596](#).

The SCPI **STATus** Subsystem allows you to monitor a number of status conditions within the instrument through the use of a hierarchy of status registers containing bits which go true or false depending on various conditions.

9.4.1 Status Register System Diagram

The diagram below provides a top-level overview of all the Status Registers and their interconnections.

To navigate to detailed information about each Register, click on a register name:

Detailed System Diagram

As from the **X-Apps 2023** update, the fully-detailed system diagram that previously appeared here is still available, but, for improved readability, it is now published as a separate high-resolution PDF. You can download the document from Keysight's web site at:

<http://literature.cdn.keysight.com/litweb/pdf/N9040-90056.pdf>

9.4.2 Status Register Hierarchy

The Status Register system contains multiple registers, arranged in a hierarchy. The lower-level registers propagate their data to the higher-level registers in the data structures by means of summary bits.

The "**Status Byte Register**" on page 2596 is at the top of the hierarchy and contains general status information for the instrument's events and conditions. All other individual registers are used to determine the specific events or conditions.

The "**Operation Register**" on page 2602 and "**Questionable Register**" on page 2609 are sets of registers that monitor the overall instrument condition. They are accessed using **:STATus:OPERation** and **:STATus:QUEStionable** commands in the **STATus** subsystem. Each composite status register set consists of five sub-registers:

| | | |
|---|------------------------------|---|
| 1 | Condition Register | Reports the real-time state of the signals monitored by this register set. There is no latching or buffering for a condition register |
| 2 | Positive Transition Register | Transition Filter Register Controls which signals will set a bit in the event register when the signal makes a low to high transition (when the condition bit changes from 0 to 1) |
| 3 | Negative Transition Register | Transition Filter Register Controls which signals will set a bit in the event register when the signal makes a high to low transition (when the condition bit changes from 1 to 0) |
| 4 | Event Register | Latches any signal state changes, in the way specified by the filter registers. Bits in the event register are never cleared by signal state changes. Event registers are cleared when read. They are also cleared by *CLS and by presetting the instrument |
| 5 | Event Enable Register | Controls which of the bits, being set in the event register, will be summarized as a single output for the register set. Summary bits are then used by the next higher register |

Each status register produces a summary message bit.

The diagram below shows how the sub-registers relate to each other.

The settings of the Transition Filter registers determine whether or not a bit set in a Condition register ripples through to the Event register, as follows:

- If a bit is set in the Positive Transition register, then the corresponding bit in the Event register is set when the condition bit goes from low to high (false to true, off to on)
- Conversely, if a bit is set in the Negative Transition register then the Event register bit is set when the condition bit goes from high to low
- If *both* Transition Filter registers are set true, then the event bit for that condition is set whenever there is any change in the bit. If an event bit is set, the Event Enable register determines whether or not it will **OR** into the summary bit that is sent to the next level of register. If this bit is set, then the corresponding event bit will be included

Note that the Event register is "Clear-on-Read": when any bit is read, it is automatically cleared.

Questionable Registers

These registers report abnormal operating conditions. The status register hierarchy is:

- The summary outputs from the six [QUESTIONable:<keyword>](#) detail registers are inputs to the ["Questionable Register" on page 2609](#)
- The summary output from the ["Questionable Register" on page 2609](#) is an input to the Status Byte Register
- The summary output from the is an input to the ["Operation Register" on page 2602](#). The inputs to the ["Operation Condition Query" on page 2603](#) Register indicate the real time state of the instrument. The ["Operation Event Query" on page 2604](#) Register summary output is an input to the Status Byte Register

Note that, in E4406A only, the ["Operation Enable" on page 2604](#) Register has an additional function. It is **ANDed** with the ["Operation Condition Query" on page 2603](#) Register to determine the instrument busy state, which is checked by ["*OPC? - Operation Complete" on page 2562](#) and ["*WAI - Wait-to-Continue" on page 2566](#) . If the **ANDed** result is non-zero, the instrument is considered busy.

9.4.3 Status Register SCPI Commands

Monitoring of instrument conditions is done at the highest level using the following IEEE 488.2 common commands.

For complete command descriptions, see ["IEEE 488.2 Common Commands" on page 2559](#). Individual status registers can be set and queried using the commands described in ["Status Subsystem Registers and Commands" on page 2596](#).

| | | |
|-----------------------|-----------------------|---|
| *CLS | Clear Status | Clears the status byte by emptying the error queue and clearing all the event registers |
| *ESE | Event Status | Sets and queries the bits in the enable register part of the standard event status register |
| *ESE? | Enable | |
| *ESR? | Event Status Register | Queries and clears the event register part of the standard event status register |
| *OPC | Operation | Sets the standard event status register to monitor the completion of all commands. The query stops any new commands from being processed until the current processing is complete, then returns a '1' |
| *OPC? | Complete | |
| *PSC | Power-on | Sets the power-on state so that it clears the service request enable register and the event status enable register at power on |
| *PSC? | State Clear | |

| | | |
|-------|------------------------|--|
| *SRE | Service Request Enable | Sets and queries the value of the service request enable register |
| *SRE? | | |
| *STB? | Status Byte | Queries the value of the status byte register without erasing its contents |

9.4.4 How to Use Status Registers

A program often needs to be able to detect and manage error conditions or changes in instrument status.

There are two methods you can use to programmatically access the information in status registers:

- The "[Polling Method](#)" on page 2592
- The "[Service Request \(SRQ\) Method](#)" on page 2593

The Polling Method works well if you do not need to know about changes the moment they occur. To detect a change using this method, the program must repeatedly read the registers.

The SRQ Method should be used if you must know immediately when a condition changes.

Either method allows you to monitor one or more conditions.

9.4.4.1 Polling Method

In this method, the instrument has a passive role. It only tells the controller that conditions have changed when the controller asks the right question.

Use this method when:

- your programming language/development environment does not support SRQ interrupts
- you want to write a simple, single-purpose program and don't want the added complexity of setting up an SRQ handler

To monitor a condition:

- Determine which register contains the bit that reports the condition
- Send the unique SCPI query to read that register
- Examine the bit to see if the condition has changed

Monitoring Options

You can monitor conditions in various ways:

- | | | |
|---|---|---|
| 1 | Check the current instrument hardware and firmware status | Do this by querying the condition registers, which continuously monitor status. These registers represent the current state of the instrument. Bits in a condition register are updated in real time When the condition monitored by a particular bit becomes true, the bit is set to 1. When the condition becomes false, the bit is reset to 0 |
| 2 | Monitor a particular condition (bit) | You can enable a particular bit(s), using the "Standard Event Status Enable Register" on page 2601 . The instrument will then monitor that particular condition. If the bit becomes true (0 to 1 transition) in the Event Register, it will stay set until the Event Register is cleared. Querying the Event Register allows you to detect that this condition occurred, even if the condition no longer exists. The Event Register can only be cleared by querying it, or by sending <code>*CLS</code> |
| 3 | Monitor a particular type of change in a condition (bit) | By default, the Transition Registers are set if the condition goes from 0 to 1 (false to true, or a positive transition), but you can change this behavior so the selected condition is detected if the bit goes from 1 to 0 (true to false, or a negative transition) You can also detect <i>both</i> types of transitions, or neither If both Transition Registers are set to 0 for a particular bit position, that bit is <i>not</i> set in the "Standard Event Status Enable Register" on page 2601 for either type of change |

9.4.4.2 Service Request (SRQ) Method

In this method, the instrument takes a more active role, by informing the controller when there has been a condition change, without the controller asking.

Use this method when:

- you need time-critical notification of changes
- you are monitoring more than one device which supports SRQs
- you need to have the controller do something else while waiting
- you can't afford the performance penalty inherent to polling

Using the Service Request (SRQ) Method

Your language, bus, and programming environment must be able to support SRQ interrupts, for example, BASIC used with VXI-11.3 (GPIB over LAN). When you monitor a condition with the SRQ method, you must:

- Determine which bit monitors the condition
- Determine how that bit reports to the request service (**RQS**) bit of the status byte
- Send SCPI commands to enable the bit that monitors the condition and to enable the summary bits that report the condition to the **RQS** bit
- Enable the controller to respond to service requests

When the condition changes, the instrument sets its **RQS** bit. The controller is informed of the change as soon as it occurs. As a result, the time the controller would otherwise have used to monitor the condition can be used to perform other tasks. Your program determines how the controller responds to the SRQ.

Bit 6 of the "Status Byte Register" on page 2596 is the request service (**RQS**) bit. Use ***SRE** to configure the **RQS** bit to report changes in instrument status. When such a change occurs, the **RQS** bit is set. It is cleared when the Status Byte Register is queried using ***SRE?** (with a serial poll.) It can be queried *without* erasing the contents by using ***STB?**.

When a register being set causes a summary bit in the status byte to change from 0 to 1, the instrument can initiate the service request (SRQ) process. However, the process is only initiated if *both* the following conditions are true:

The corresponding bit of the service request enable register is also set to 1

The instrument does not have a service request pending. (A service request is considered to be pending between the time the instrument's SRQ process is initiated and the time the controller reads the status byte register)

The SRQ process sets the SRQ true. It also sets the status byte's request service (**RQS**) bit to 1. Both actions are necessary to inform the controller that the instrument requires service. Setting the SRQ line *only* informs the controller that some device on the bus requires service. Setting the **RQS** bit allows the controller to determine which instrument requires service.

If your program enables the controller to detect and respond to service requests, it should instruct the controller to perform a serial poll when the SRQ is set true. Each device on the bus returns the contents of its Status Byte Register in response to this poll. The device whose **RQS** bit is set to 1 is the device that requested service.

NOTE

When you read the instrument's Status Byte Register using a serial poll, the **RQS bit is reset to 0. Other bits in the register are not affected.**

If the status register is configured to SRQ on end-of-measurement, and the measurement is in **Continuous** mode, then restarting a measurement (via **:INIT**) can cause the measuring bit to pulse low. This causes an SRQ even though you have not actually reached the "end-of-measurement" condition. To avoid this:

- Set `:INITiate:CONTinuous OFF`
- Set/enable the status registers
- Restart the measurement (send `:INIT`)

9.4.5 Status Register Bit Parameters

The diagram below shows a typical status register, in this case the "Operation Enable" on page 2604 Register. Each bit in a register is represented by a numerical value based on its location. When a command requires a bit pattern to be sent as its parameter, that can be entered as a numeric value using decimal or hexadecimal representations. (where 0 to 32767 is equivalent to `#H0` to `#H7FFF`). If you want to enable more than one bit, you send the sum of all the bits that you want to monitor.

`STATus:OPERation:ENABLE <num>`
`STATus:OPERation:ENABLE?`

Standard Operation Event Enable Register

ck730a

NOTE Bit 15 is not used to report status.

Example 1

To enable bit 0 and bit 6 of standard event status register, you would send the command `*ESE 65` because $1 + 64 = 65$

The results of a query are evaluated in a similar way. If the `*STB?` command returns a decimal value of 140, ($140 = 128 + 8 + 4$) then bit 7 is true, bit 3 is true and bit 2 is true

Example 2

Suppose you want to know if an Auto-trigger Timeout occurs, but you only cared about that specific condition. So you would want to know what was happening with bit 10 in the Status Questionable Integrity register, and not about any other bits

It is usually a good idea to start by clearing all the status registers, using `*CLS`

Sending `:STAT:QUES:INT:ENAB 1024` lets you monitor only bit 10 events, instead of the default monitoring all the bits in the register. The register default is for positive transition events (0 to 1 transition), that is, when an auto-trigger timeout occurs. If instead, you want to know when the Auto-trigger timeout condition is cleared, then you set `:STAT:QUES:INT:PTR 0` and `:STAT:QUES:INT:NTR 32767`

Now, the only output from the "Questionable Integrity Register" on page 2634 will come from a bit 10 positive transition, and goes to the Integrity Sum bit 9 of the "Questionable Register" on page 2609

If you want only to monitor bit 9 of the same register, send `:STAT:QUES:ENAB 512`

The "Questionable Register" on page 2609 output goes to the "Status Questionable Summary" bit 3 of the "Status Byte Register" on page 2596. The output from this register can be enabled using `*SRE 8`.

Finally, you can use the serial polling functionality available for the particular bus/software that you are using to monitor the Status Byte Register, or you could use `*STB?` to poll the Status Byte Register.

9.4.6 Status Subsystem Registers and Commands

The Status Subsystem registers monitor various events and conditions in the instrument. Software written to control the instrument may need to monitor some of these events and conditions.

To set and query status registers, you can use the `STATus` subsystem SCPI commands and queries.

NOTE

All status register commands are sequential. You can send them in the middle of an ongoing overlapped command to get the current status. You can also send them following a sequential command. In this case, the status register command waits for the completion of the previously-sent sequential command before performing the action.

Most commands are sequential commands; only a few are overlapped.

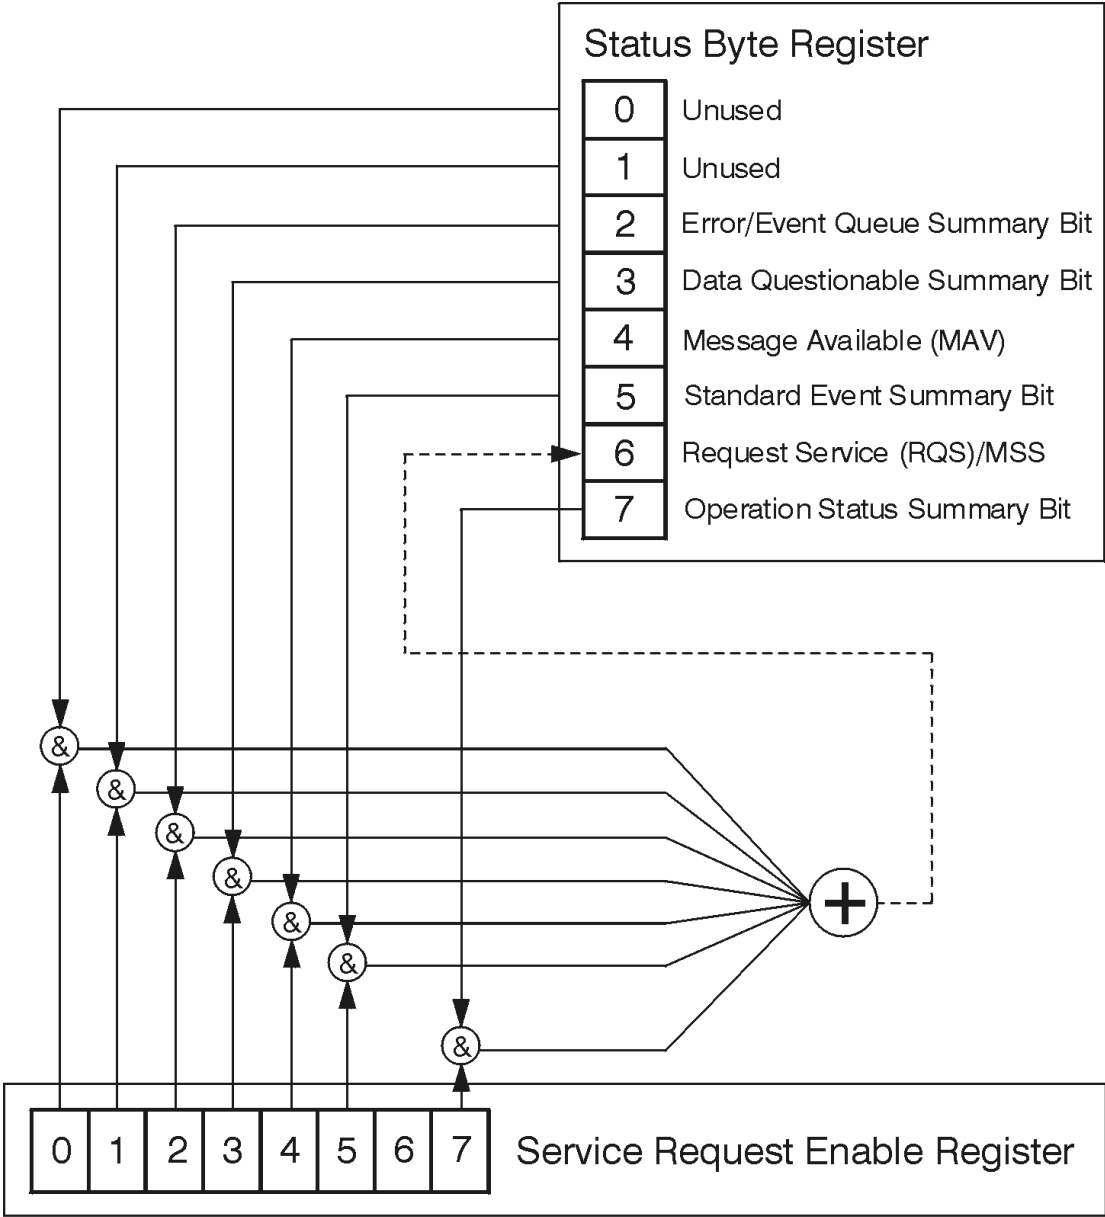

If a command *is* overlapped, then that is explicitly stated in the command description.

See also the [Keysight X-Series Signal Analyzers Instrument Messages](#) manual for more detail on the instrument conditions that can cause these bits to be set.

9.4.6.1 Status Byte Register

Provides a one-byte overview of the entire `STATus` subsystem. All the other registers funnel into this register via summary bits, as shown in the "Status Register System

Diagram" on page 2587.

ck776a

| Bit Number | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
|-------------|---------------------------------------|-----------------------------------|-----------------------------------|-------------------------|--------------------------------------|-------------------------------|--------|--------|
| Description | Standard Operation Status Summary Bit | Request Service (RQS) Summary Bit | Standard Event Status Summary Bit | Message Available (MAV) | Data Questionable Status Summary Bit | Error/Event Queue Summary Bit | Unused | Unused |

*STB?

Status Byte Register

ck725a

| Bit | Description |
|------|--|
| 0, 1 | These bits are always set to 0 |
| 2 | A 1 in this bit position indicates that the SCPI error queue is not empty which means that it contains at least one error message |
| 3 | A 1 in this bit position indicates that the data questionable summary bit has been set. The data questionable event register can then be read to determine the specific condition that caused this bit to be set |
| 4 | A 1 in this bit position indicates that the instrument has data ready in the output queue. There are no lower status groups that provide input to this bit |
| 5 | A 1 in this bit position indicates that the standard event summary bit has been set. The standard event status register can then be read to determine the specific event that caused this bit to be set |
| 6 | A 1 in this bit position indicates that the instrument has at least one reason to report a status change. This bit is also called the master summary status bit (MSS) |
| 7 | A 1 in this bit position indicates that the standard operation summary bit has been set. The standard operation event register can then be read to determine the specific condition that caused this bit to be set |

To query the Status Byte Register, send **"*STB? - Status Byte Query"** on page 2565. The response will be the decimal sum of the bits that are set to 1. For example, if bit number 7 and bit number 3 are set to 1, the decimal sum of the 2 bits is 128 plus 8, so the decimal value 136 is returned.

***STB** does *not* clear the status register.

The **RQS** bit is read and reset by a serial poll. The same bit position (**MSS**) is read non-destructively by ***STB?**. If you serial-poll bit 6, it is read as **RQS**, but if you send ***STB**, it reads bit 6 as **MSS**. For more information refer to Section 11 of: **IEEE Standard 488.2-1992**

In addition to the Status Byte Register, the status byte group also contains the "Service Request Enable Register" on page 2599, which lets you select which bits in the Status Byte Register will trigger a service request.

Service Request Enable Register

Enables the desired bits of the Service Request (SRQ) subsystem.

Send `*SRE <integer>`, where `<integer>` is the sum of the decimal values of the bits you want to enable plus the decimal value of bit 6. For example, assume that you want to enable bit 7 so that whenever the standard operation status register summary bit is set to 1 it will trigger a service request. Send the command `*SRE 192` (because $192 = 128 + 64$). You must always add 64 (the numeric value of RQS bit 6) to your numeric sum when you enable any bits for a service request.

`*SRE?` returns the decimal value of the sum of the bits previously enabled with `*SRE <integer>`.

This register presets to zeros (0).

`*SRE <num>`
`*SRE?`

Service Request Enable Register

ck726a

See also "`*SRE - Service Request Enable`" on page 2564

Preset the Status Byte

Sets bits in most of the enable and transition registers to their default state.

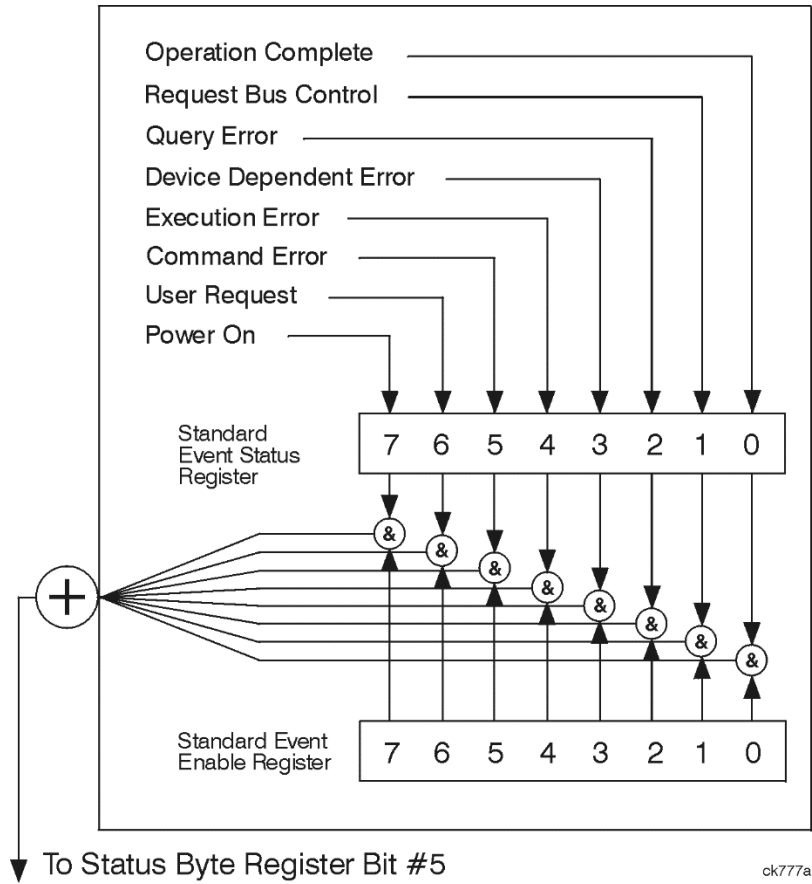

- Presets:
- All Transition Filters
- All Enable Registers
- Error/Event Queue Enable

Has no effect on Event Registers, Error/Event QUEue, IEEE 488.2 ESE, and SRE Registers, as described in: [IEEE Standard 488.2-1992](#)

Remote Command :STATus:PRESet

Example :STAT:PRES

9.4.6.2 Standard Event Status Register

The standard event status register contains the following bits:

| | | | | | | | | | |
|-------------------|--------------------|----------|--------------------------|---------------|-----------------|------------------------|-------------|-----------------|--------------------|
| | Description | | | | | | | | |
| | | Power On | User Request Key (Local) | Command Error | Execution Error | Device Dependent Error | Query Error | Request Control | Operation Complete |
| Bit Number | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 | |

*ESR?

Standard Event Status Register

ck727a

| Bit | Description |
|-----|---|
| 0 | A 1 in this bit position indicates that all pending operations were completed following execution of the *OPC command |
| 1 | For GPIB handshaking to request control. Currently it is set to 0, because there are no implementations where the spectrum analyzer controls another instrument |
| 2 | A 1 in this bit position indicates that a query error has occurred. Query errors have SCPI error numbers from -499 to -400 |
| 3 | A 1 in this bit position indicates that a device dependent error has occurred. Device dependent errors have SCPI error numbers from -399 to -300 and 1 to 32767 |
| 4 | A 1 in this bit position indicates that an execution error has occurred. Execution errors have SCPI error numbers from -299 to -200 |
| 5 | A 1 in this bit position indicates that a command error has occurred. Command errors have SCPI error numbers from -199 to -100 |
| 6 | A 1 in this bit position indicates that the LOCAL key has been pressed. This is true even if the instrument is in local lockout mode |
| 7 | A 1 in this bit position indicates that the instrument has been turned off and then on |

The Standard Event Status Register is used to determine the specific events that set bit 5 in the "Status Byte Register" on page 2596. To query this register, send *ESR?. The response will be the decimal sum of the bits that are enabled (set to 1). For example, if bit number 7 and bit number 3 are enabled, the decimal sum of the 2 bits is 128 plus 8, so the decimal value 136 is returned. See also "*ESR? - Standard Event Status Register Query" on page 2561

Standard Event Status Enable Register

In addition to the "Standard Event Status Register" on page 2600, the Standard Event status group also contains a Standard Event Status Enable Register. This

register lets you choose which bits in the standard event status register will set the summary bit (bit 5 of the status byte register) to 1. Send `*ESE <integer>`, where `<integer>` is the sum of the decimal values of the bits you want to enable. For example, to enable bit 7 and bit 6 so that whenever either of those bits is set to 1, the standard event status summary bit of the status byte register will be set to 1, send `*ESE 192` (128 + 64). `*ESE?` returns the decimal value of the sum of the bits previously enabled with `*ESE <integer>`.

The standard event status enable register presets to zeros (0).

`*ESE <num>`
`*ESE?`

Standard Event Status Enable Register

ck728a

See also ["*ESE - Standard Event Status Enable" on page 2560](#)

9.4.6.3 Operation Register

This register and the ["Questionable Register" on page 2609](#) are sets of registers that monitor the overall instrument condition. They are accessed using `:STATus:OPERation` and `:STATus:QUESTionable`.

This register monitors the current instrument measurement state and various instrument operations for a quick summary of what is happening within the instrument. It checks to see if the instrument is calibrating, sweeping, or waiting for a trigger (see also ["*OPC? - Operation Complete" on page 2562](#)).

STATus:OPERation Register

| Bit | Condition | Operation |
|-----|----------------------------------|--|
| 0 | Calibrating | The instrument is busy executing its Align Now process |
| 1 | Settling | The instrument circuitry is settling |
| 3 | Sweeping | The instrument is busy taking a sweep |
| 4 | Measuring | The instrument is busy making a measurement. Measurements often require multiple sweeps. They are initiated by user-interface keys or with the MEASure group of commands The bit is valid for most X-Series Modes |
| 5 | Waiting for trigger | The instrument is waiting for the trigger conditions to be met, then it will trigger a sweep or measurement |
| 6 | Waiting for Periodic Sync Source | The instrument is waiting for the Periodic trigger Sync Source conditions to be met, then the sweep or measurement period will be synchronized |
| 8 | Paused | The measurement is paused |
| 9 | Source Sweeping | The List Sequencer is running, or Freq Scan results are available The List Sequencer or Waveform Sequences are running, specifically, in VXT models: M9410A/11A/15A/16A, M9410E/11E/15E/16E, E6680A/80E/81A, S9110A/01A/06A/08A/15A/30A, M8920B |
| 10 | DC Coupled | The instrument is DC coupled |
| 11 | Instrument Summary | The summary bit for the "Operation Instrument Register" on page 2606 |
| 12 | Source Waiting for Trigger | The built in source is waiting for a trigger |

Filter Registers

- **"Operation Condition Query"** on page 2603
- **"Operation Enable"** on page 2604
- **"Operation Event Query"** on page 2604
- **"Operation Negative Transition"** on page 2605
- **"Operation Positive Transition"** on page 2605

Operation Condition Query

Returns the decimal value of the sum of the bits in the Status Operation Condition register.

NOTE

The data in this register is continuously updated and reflects the current conditions.

| | |
|------------------------------|---|
| Remote Command | <code>:STATus:OPERation:CONDition?</code> |
| Example | <code>:STAT:OPER:COND?</code> |
| Preset | 0 |
| Status Bits/OPC dependencies | Sequential command |

Operation Enable

Determines which bits in the "Operation Event Query" on page 2604 register will set the Operation Status Summary bit (bit 7) in the "Status Byte Register" on page 2596.

The variable `<integer>` is the sum of the decimal values of the bits you want to enable.

NOTE

The preset condition is to have all bits in this enable register set to 0. To have any Operation Events reported to the Status Byte Register, one or more bits need to be set to 1.

| | |
|------------------------------|---|
| Remote Command | <code>:STATus:OPERation:ENABle <integer></code> <code>:STATus:OPERation:ENABle?</code> |
| Example | <code>:STAT:OPER:ENAB 1</code> Sets the register so that Align Now events will be reported to the Status Byte Register |
| Preset | 0 |
| Min | 0 |
| Max | 32767 |
| Status Bits/OPC dependencies | Sequential command |

Operation Event Query

Returns the decimal value of the sum of the bits in the Operation Event register.

NOTE

The register requires that the associated PTRansition or NTRansition filters be set before a condition register bit can set a bit in the event register. The data in this register is latched until it is queried. Once queried, the register is cleared.

| | |
|----------------|---|
| Remote Command | <code>:STATus:OPERation[:EVENT]?</code> |
| Example | <code>:STAT:OPER?</code> |

| | |
|------------------------------|--------------------|
| Preset | 0 |
| Status Bits/OPC dependencies | Sequential command |

Operation Negative Transition

Determines which bits in the "Operation Condition Query" on page 2603 register will set the corresponding bit in the "Operation Event Query" on page 2604 register when the condition register bit has a negative transition (1 to 0).

The variable `<integer>` is the sum of the decimal values of the bits that you want to enable.

| | |
|------------------------------|--|
| Remote Command | <code>:STATus:OPERation:NTRansition <integer></code> <code>:STATus:OPERation:NTRansition?</code> |
| Example | <code>:STAT:OPER:NTR 1</code> Align Now operation complete will be reported to the Status Byte Register |
| Preset | 0 |
| Min | 0 |
| Max | 32767 |
| Status Bits/OPC dependencies | Sequential command |

Operation Positive Transition

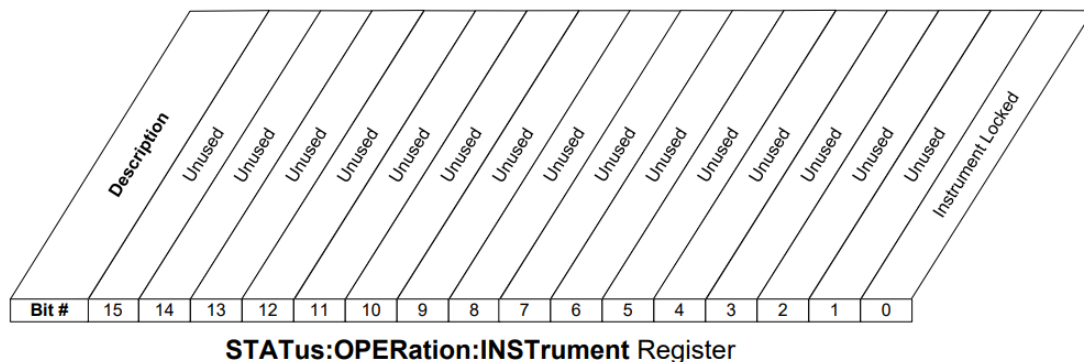

Determines which bits in the "Operation Condition Query" on page 2603 register will set the corresponding bit in the "Operation Event Query" on page 2604 register when the condition register bit has a positive transition (0 to 1).

The variable `<integer>` is the sum of the decimal values of the bits that you want to enable.

| | |
|------------------------------|---|
| Remote Command | <code>:STATus:OPERation:PTRansition <integer></code> <code>:STATus:OPERation:PTRansition?</code> |
| Example | <code>:STAT:OPER:PTR 1</code> Align Now operation beginning will be reported to the Status Byte Register |
| Preset | 32767 |
| Min | 0 |
| Max | 32767 |
| Status Bits/OPC dependencies | Sequential command |

9.4.6.4 Operation Instrument Register

Monitors instrument-related operations and summarizes them in bit 11 of the "Operation Register" on page 2602.

| Bit | Condition | Operation |
|-----|-------------------|--------------------------|
| 0 | Instrument Locked | The instrument is locked |

Filter Registers

- "Operation Instrument Condition" on page 2606
- "Operation Instrument Enable" on page 2607
- "Operation Instrument Event Query" on page 2607
- "Operation Instrument Negative Transition" on page 2608
- "Operation Instrument Positive Transition" on page 2608

Operation Instrument Condition

Returns the decimal value of the sum of the bits in the Status Operation Instrument Condition register.

NOTE The data in this register is continuously updated and reflects the current conditions.

| | |
|------------------------------|---|
| Remote Command | :STATUS:OPERation:INSTrument:CONDition? |
| Example | :STAT:OPER:INST:COND? |
| Preset | 0 |
| Status Bits/OPC dependencies | Sequential command |

Operation Instrument Enable

Determines which bits in the "Operation Instrument Condition" on page 2606 Register will set bits in the "Operation Instrument Event Query" on page 2607 register, which also sets the Instrument Summary bit (bit 11) in the "Operation Instrument Register" on page 2606.

The variable `<integer>` is the sum of the decimal values of the bits you want to enable.

NOTE

The preset condition is to have all bits in this enable register set to 0. To have any Instrument Events reported to the Status Byte Register, one or more bits need to be set to 1.

| | |
|------------------------------|--|
| Remote Command | <code>:STATus:OPERation:INSTrument:ENABle <integer></code> |
| | <code>:STATus:OPERation:INSTrument:ENABle?</code> |
| Example | <code>:STAT:OPER:INST:ENAB 1</code> |
| | Sets the register so that Instrument Locked will be reported to the Status Byte Register |
| Preset | 32767 |
| Min | 0 |
| Max | 32767 |
| Status Bits/OPC dependencies | Sequential command |

Operation Instrument Event Query

Returns the decimal value of the sum of the bits in the Operation Instrument Event register.

NOTE

The register requires that the associated PTRansition or NTRansition filters be set before a condition register bit can set a bit in the event register. The data in this register is latched until it is queried. Once queried, the register is cleared.

| | |
|------------------------------|--|
| Remote Command | <code>:STATus:OPERation:INSTrument[:EVENT]?</code> |
| Example | <code>:STAT:OPER:INST?</code> |
| Preset | 0 |
| Status Bits/OPC dependencies | Sequential command |

Operation Instrument Negative Transition

Determines which bits in the "Operation Condition Query" on page 2603 Register will set the corresponding bit in the "Operation Event Query" on page 2604 register when the condition register bit has a negative transition (1 to 0).

The variable `<integer>` is the sum of the decimal values of the bits that you want to enable.

| | |
|------------------------------|---|
| Remote Command | <code>:STATus:OPERation:INSTrument:NTRansition <integer></code> <code>:STATus:OPERation:INSTrument:NTRansition?</code> |
| Example | <code>:STAT:OPER:INST:NTR 1</code> Instrument Locked being cleared will be reported to the Instrument Summary of the Status Operation register |
| Preset | 0 |
| Min | 0 |
| Max | 32767 |
| Status Bits/OPC dependencies | Sequential command |

Operation Instrument Positive Transition

Determines which bits in the "Operation Condition Query" on page 2603 Register will set the corresponding bit in the "Operation Event Query" on page 2604 register when the condition register bit has a positive transition (0 to 1).

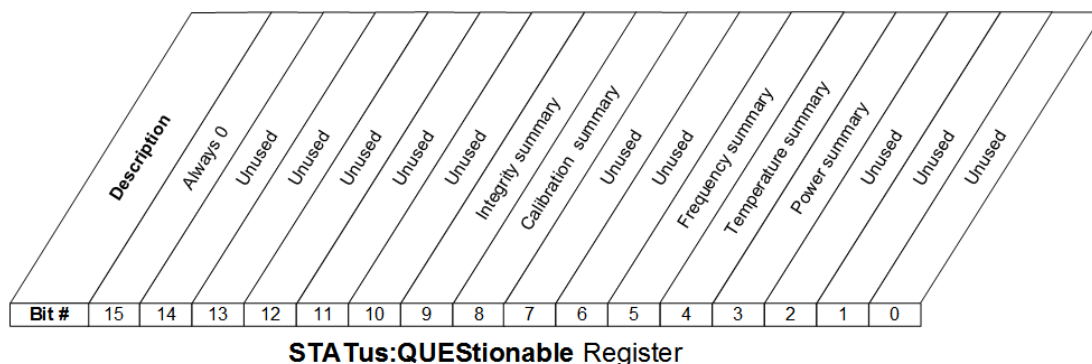

The variable `<integer>` is the sum of the decimal values of the bits that you want to enable.

| | |
|------------------------------|---|
| Remote Command | <code>:STATus:OPERation:INSTrument:PTRansition <integer></code> <code>:STATus:OPERation:INSTrument:PTRansition?</code> |
| Example | <code>:STAT:OPER:INST:PTR 1</code> Instrument Locked being set will be reported to the Instrument Summary of the Status Operation register |
| Preset | 32767 |
| Min | 0 |
| Max | 32767 |
| Status Bits/OPC dependencies | Sequential command |

9.4.6.5 Questionable Register

This register and the "Operation Register" on page 2602 monitor the overall instrument condition. They are accessed using :STATus:OPERation and :STATus:QUEStionable.

This register monitors the instrument's condition to see if anything questionable has happened. It detects anything that might cause an error or a bad measurement, such as a hardware problem, an out-of-calibration situation, or a unusual signal. All the bits are summary bits from lower-level event registers.

| Bit | Condition | Operation |
|-----|---------------------|--|
| 3 | Power summary | Summary bit for "Questionable Power Register" on page 2612 |
| 4 | Temperature summary | Summary bit for "Questionable Temperature Register" on page 2615 |
| 5 | Frequency summary | Summary bit for "Questionable Frequency Register" on page 2618 |
| 8 | Calibration summary | Summary bit for "Questionable Calibration Register" on page 2621 |
| 9 | Integrity summary | Summary bit for "Questionable Integrity Register" on page 2634 |

Filter Registers

- "Questionable Condition" on page 2610
- "Questionable Enable" on page 2610
- "Questionable Event Query" on page 2611
- "Questionable Negative Transition" on page 2611
- "Questionable Positive Transition" on page 2611

Questionable Condition

Returns the decimal value of the sum of the bits in the Questionable Condition register.

NOTE The data in this register is continuously updated and reflects current conditions.

| | |
|------------------------------|--|
| Remote Command | <code>:STATus:QUEStionable:CONDition?</code> |
| Example | <code>:STAT:QUES:COND?</code> |
| Preset | 0 |
| Status Bits/OPC dependencies | Sequential command |

Questionable Enable

Determines which bits in the "Questionable Event Query" on page 2611 Register will set the Questionable Status Summary bit (bit3) in the "Status Byte Register" on page 2596.

The variable `<integer>` is the sum of the decimal values of the bits you want to enable.

NOTE The preset condition is all bits in this enable register set to 0. To report any Questionable Events to the Status Byte Register, one or more bits need to be set to 1. The "Standard Event Status Register" on page 2600 should be queried after each measurement to check the Questionable Status Summary (bit 3). If it is equal to 1, a condition during the test may have made the test results invalid. If it is equal to 0, this indicates that no hardware problem or measurement problem was detected by the analyzer.

| | |
|-----------------|--|
| Remote Command | <code>:STATus:QUEStionable:ENABle <integer></code> <code>:STATus:QUEStionable:ENABle?</code> <code>:STATus:OPERation:ENABle <integer></code> <code>:STATus:OPERation:ENABle?</code> |
| Example | <code>:STAT:QUES:ENAB 16</code> Sets the register so that questionable temperature events will be reported to the Status Byte Register |
| Preset | 0 |
| Min | 0 |
| Max | 32767 |
| Status Bits/OPC | Sequential command |

dependencies

Questionable Event Query

Returns the decimal value of the sum of the bits in the Questionable Event register.

NOTE The register requires that the associated PTRansition or NTRansition filters be set before a condition register bit can set a bit in the event register. The data in this register is latched until it is queried. Once queried, the register is cleared.

| | |
|------------------------------|-------------------------------|
| Remote Command | :STATus:QUEStionable[:EVENT]? |
| Example | :STAT:QUES? |
| Preset | 0 |
| Status Bits/OPC dependencies | Sequential command |

Questionable Negative Transition

Determines which bits in the "Questionable Condition" on page 2610 Register will set the corresponding bit in the "Questionable Event Query" on page 2611 Register when the condition register bit has a negative transition (1 to 0).

The variable <integer> is the sum of the decimal values of the bits that you want to enable.

| | |
|------------------------------|--|
| Remote Command | :STATus:QUEStionable:NTRansition <integer> :STATus:QUEStionable:NTRansition? |
| Example | :STAT:QUES:NTR 16 Temperature summary 'questionable cleared' will be reported to the Status Byte Register |
| Preset | 0 |
| Min | 0 |
| Max | 32767 |
| Status Bits/OPC dependencies | Sequential command |

Questionable Positive Transition

Determines which bits in the "Questionable Condition" on page 2610 Register will set the corresponding bit in the "Questionable Event Query" on page 2611 Register when the condition register bit has a positive transition (0 to 1).

The variable `<integer>` is the sum of the decimal values of the bits that you want to enable.

| | |
|------------------------------|--|
| Remote Command | <code>:STATus:QUESTionable:PTRansition <integer></code> <code>:STATus:QUESTionable:PTRansition?</code> |
| Example | <code>:STAT:QUES:PTR 16</code> Temperature summary 'questionable asserted' will be reported to the Status Byte Register |
| Preset | 32767 |
| Min | 0 |
| Max | 32767 |
| Status Bits/OPC dependencies | Sequential command |

9.4.6.6 Questionable Power Register

Monitors power-related conditions within the instrument and summarizes them in bit 3 of the "Questionable Register" on page 2609.

| Bit | Condition | Operation |
|-----|---------------------|--|
| 0 | RPP tripped | (not currently in use) |
| 1 | Source Unleveled | The built-in source is not properly leveled |
| 2 | Source LO Unleveled | (not currently in use) |
| 3 | LO Unleveled | (not currently in use) |
| 6 | Input Port Overload | A power overload condition exists at an input port |
| 9 | Full Bypass Enabled | Frontend circuitry is bypassed, use caution to protect the mixer |
| 10 | Input Caution | Input circuitry is configured such that care is required to prevent damage |

Filter Registers

- "Questionable Power Condition" on page 2613
- "Questionable Power Enable" on page 2613
- "Questionable Power Event Query" on page 2614
- "Questionable Power Negative Transition" on page 2614
- "Questionable Power Positive Transition" on page 2614

Questionable Power Condition

Returns the decimal value of the sum of the bits in the Questionable Power Condition register.

NOTE The data in this register is continuously updated and reflects the current conditions.

| | |
|------------------------------|---------------------------------------|
| Remote Command | :STATus:QUESTionable:POWer:CONDition? |
| Example | :STAT:QUES:POW:COND? |
| Preset | 0 |
| Status Bits/OPC dependencies | Sequential command |

Questionable Power Enable

Determines which bits in the "Questionable Power Condition" on page 2613 Register will set bits in the Questionable Power Event register, which also sets the Power Summary bit (bit 3) in the "Questionable Register" on page 2609.

The variable `<integer>` is the sum of the decimal values of the bits you want to enable.

| | |
|------------------------------|---|
| Remote Command | :STATus:QUESTionable:POWer:ENABle <integer> |
| Example | :STAT:QUES:POW:ENAB 2 |
| | Source Unlevelled will be reported to the Power Summary of the Status Questionable register |
| Preset | 32767 |
| Min | 0 |
| Max | 32767 |
| Status Bits/OPC dependencies | Sequential command |

Questionable Power Event Query

Returns the decimal value of the sum of the bits in the Questionable Power Event Query register.

NOTE

The register requires that the associated PTRansition or NTRansition filters be set before a condition register bit can set a bit in the event register. The data in this register is latched until it is queried. Once queried, the register is cleared.

| | |
|------------------------------|-------------------------------------|
| Remote Command | :STATus:QUESTionable:POWer[:EVENT]? |
| Example | :STAT:QUES:POW? |
| Preset | 0 |
| Status Bits/OPC dependencies | Sequential command |

Questionable Power Negative Transition

Determines which bits in the "Questionable Power Condition" on page 2613 register will set the corresponding bit in the "Questionable Power Event Query" on page 2614 register when the condition register bit has a negative transition (1 to 0).

The variable <integer> is the sum of the decimal values of the bits that you want to enable.

| | |
|------------------------------|---|
| Remote Command | :STATus:QUESTionable:POWer:NTRansition <integer> :STATus:QUESTionable:POWer:NTRansition? |
| Example | :STAT:QUES:POW:NTR 2 Source Unlevelled being cleared will be reported to the Power Summary of the Status Questionable register |
| Preset | 0 |
| Min | 0 |
| Max | 32767 |
| Status Bits/OPC dependencies | Sequential command |

Questionable Power Positive Transition

Determines which bits in the "Questionable Power Condition" on page 2613 register will set the corresponding bit in the "Questionable Power Event Query" on page 2614 register when the condition register bit has a positive transition (0 to 1).

The variable `<integer>` is the sum of the decimal values of the bits that you want to enable.

| | |
|------------------------------|---|
| Remote Command | <code>:STATus:QUEStionable:POWer:PTRansition <integer></code> |
| | <code>:STATus:QUEStionable:POWer:PTRansition?></code> |
| Example | <code>:STAT:QUES:POW:PTR 32</code> Source Unlevelled being set will be reported to the Power Summary of the Status Questionable register |
| Preset | 32767 |
| Min | 0 |
| Max | 32767 |
| Status Bits/OPC dependencies | Sequential command |

9.4.6.7 Questionable Temperature Register

Monitors temperature-related conditions within the instrument and summarizes them in bit 4 of the "Questionable Register" on page 2609.

| Bit | Condition | Operation |
|-----|--|---|
| 0 | Reference Oscillator Oven Cold | (not currently in use) |
| 1 | Instrument overheated (over temperature) | Excessive heat has been detected in some part of the instrument |
| 2 | Instrument over current | Excessive heat has been detected in some part of the instrument, the instrument should be restarted |

Filter Registers

- "Questionable Temperature Condition" on page 2616
- "Questionable Temperature Enable" on page 2616

- "Questionable Temperature Event Query" on page 2617
- "Questionable Temperature Negative Transition" on page 2617
- "Questionable Temperature Positive Transition" on page 2617

Questionable Temperature Condition

Returns the decimal value of the sum of the bits in the Questionable Temperature Condition register.

NOTE

The data in this register is continuously updated and reflects the current conditions.

| | |
|------------------------------|---|
| Remote Command | :STATus:QUEStionable:TEMPerature:CONDition? |
| Example | :STAT:QUES:TEMP:COND? |
| Preset | 0 |
| Status Bits/OPC dependencies | Sequential command |

Questionable Temperature Enable

Determines which bits in the "Questionable Temperature Condition" on page 2616 Register will set bits in the "Questionable Temperature Event Query" on page 2617 register, which also sets the Temperature Summary bit (bit 4) in the "Questionable Register" on page 2609.

The variable `<integer>` is the sum of the decimal values of the bits you want to enable.

| | |
|------------------------------|--|
| Remote Command | :STATus:QUEStionable:TEMPerature:ENABle <integer> :STATus:QUEStionable:TEMPerature:ENABle? |
| Example | :STAT:QUES:TEMP:ENAB 2 Instrument Overheated will be reported to the Temperature Summary of the Questionable Register |
| Preset | 32767 |
| Min | 0 |
| Max | 32767 |
| Status Bits/OPC dependencies | Sequential command |

Questionable Temperature Event Query

Returns the decimal value of the sum of the bits in the Questionable Temperature Event register.

NOTE The register requires that the associated PTRansition or NTRansition filters be set before a condition register bit can set a bit in the event register. The data in this register is latched until it is queried. Once queried, the register is cleared.

| | |
|------------------------------|---|
| Remote Command | :STATus:QUESTionable:TEMPerature[:EVENT]? |
| Example | :STAT:QUES:TEMP? |
| Preset | 0 |
| Status Bits/OPC dependencies | Sequential command |

Questionable Temperature Negative Transition

Determines which bits in the "Questionable Temperature Condition" on page 2616 Register will set bits in the "Questionable Temperature Event Query" on page 2617 register, when the condition register bit has a negative transition (1 to 0).

The variable <integer> is the sum of the decimal values of the bits that you want to enable.

| | |
|------------------------------|--|
| Remote Command | :STATus:QUESTionable:TEMPerature:NTRansition <integer> :STATus:QUESTionable:TEMPerature:NTRansition? |
| Example | :STAT:QUES:TEMP:NTR 2 Instrument Overheated being cleared will be reported to the Temperature Summary of the Status Questionable register |
| Preset | 0 |
| Min | 0 |
| Max | 32767 |
| Status Bits/OPC dependencies | Sequential command |

Questionable Temperature Positive Transition

Determines which bits in the "Questionable Temperature Condition" on page 2616 Register will set bits in the "Questionable Temperature Event Query" on page 2617 register, when the condition register bit has a positive transition (0 to 1).

The variable `<integer>` is the sum of the decimal values of the bits that you want to enable.

| | |
|------------------------------|--|
| Remote Command | <code>:STATus:QUESTionable:TEMPerature:PTRansition <integer></code> <code>:STATus:QUESTionable:TEMPerature:PTRansition?</code> |
| Example | <code>:STAT:QUES:TEMP:PTR 2</code> Instrument Overheated being set will be reported to the Temperature Summary of the Questionable register |
| Preset | 32767 |
| Min | 0 |
| Max | 32767 |
| Status Bits/OPC dependencies | Sequential command |

9.4.6.8 Questionable Frequency Register

Monitors frequency-related conditions within the instrument and summarizes them in bit 5 of the "Questionable Register" on page 2609.

| Bit | Condition | Operation |
|-----|------------------------------|---|
| 0 | Source Synth Unlocked | The synthesizer in the built-in source is not locked |
| 1 | Frequency Reference Unlocked | The instrument's frequency reference is unlocked |
| 2 | 2 nd LO Unlocked | The instrument's second LO (local oscillator) is unlocked |
| 4 | LO Unlocked | The instrument's main LO (local oscillator) is unlocked |
| 6 | IF Synth Unlocked | The synthesizer in the IF is not locked |
| 7 | Cal Osc Unlocked | The oscillator used for internal calibrations is not locked |
| 9 | Demodulation | Demodulation cannot be performed due to an out of range frequency |

| Bit | Condition | Operation |
|-----|-----------------------------------|--|
| 10 | Reference missing or out of range | The signal being fed to a reference input is missing or too high or low in frequency for the reference to lock |

Filter Registers

- "Questionable Frequency Condition" on page 2619
- "Questionable Frequency Enable" on page 2619
- "Questionable Frequency Event Query" on page 2620
- "Questionable Frequency Negative Transition" on page 2620
- "Questionable Frequency Positive Transition" on page 2621

Questionable Frequency Condition

Returns the decimal value of the sum of the bits in the Questionable Frequency Condition register.

NOTE The data in this register is continuously updated and reflects the current conditions.

| | |
|------------------------------|---|
| Remote Command | :STATus:QUEStionable:FREQuency:CONDition? |
| Example | :STAT:QUES:FREQ:COND? |
| Preset | 0 |
| Status Bits/OPC dependencies | Sequential command |

Questionable Frequency Enable

Determines which bits in the "Questionable Frequency Condition" on page 2619 Register will set bits in the "Questionable Temperature Event Query" on page 2617 register, which also sets the Frequency Summary bit (bit 5) in the "Questionable Register" on page 2609.

The variable `<integer>` is the sum of the decimal values of the bits you want to enable.

| | |
|----------------|---|
| Remote Command | :STATus:QUEStionable:FREQuency:ENABle <integer> |
| Example | :STAT:QUES:FREQ:ENAB 2 |
| | Frequency Reference Unlocked will be reported to the Frequency Summary of the Status Questionable |

| | |
|------------------------------|--------------------|
| | register |
| Preset | 32767 |
| Min | 0 |
| Max | 32767 |
| Status Bits/OPC dependencies | Sequential command |

Questionable Frequency Event Query

Returns the decimal value of the sum of the bits in the Questionable Frequency Event register.

NOTE

The register requires that the associated PTRansition or NTRansition filters be set before a condition register bit can set a bit in the event register. The data in this register is latched until it is queried. Once queried, the register is cleared.

| | |
|------------------------------|--|
| Remote Command | <code>:STATus:QUESTionable:FREQuency[:EVENT]?</code> |
| Example | <code>:STAT:QUES:FREQ?</code> |
| Preset | 0 |
| Status Bits/OPC dependencies | Sequential command |

Questionable Frequency Negative Transition

Determines which bits in the "Questionable Frequency Condition" on page 2619 register will set the corresponding bit in the "Questionable Frequency Event Query" on page 2620 register when the condition register bit has a negative transition (1 to 0).

The variable `<integer>` is the sum of the decimal values of the bits that you want to enable.

| | |
|----------------|---|
| Remote Command | <code>:STATus:QUESTionable:FREQuency:NTRansition <integer></code> <code>:STATus:QUESTionable:FREQuency:NTRansition?</code> |
| Example | <code>:STAT:QUES:FREQ:NTR 2</code> Frequency Reference 'regained lock' will be reported to the Frequency Summary of the Status Questionable register |
| Preset | 0 |
| Min | 0 |
| Max | 32767 |

Status Bits/OPC dependencies Sequential command

Questionable Frequency Positive Transition

Determines which bits in the "Questionable Frequency Condition" on page 2619 register will set the corresponding bit in the "Questionable Frequency Event Query" on page 2620 register when the condition register bit has a positive transition (0 to 1).

The variable `<integer>` is the sum of the decimal values of the bits that you want to enable.

| | |
|------------------------------|---|
| Remote Command | <code>:STATus:QUESTIONable:FREQUENCY:PTRansition <integer></code> |
| Example | <code>:STAT:QUES:FREQ:PTR 2</code> Frequency Reference 'became unlocked' will be reported to the Frequency Summary of the Status Questionable register |
| Preset | 32767 |
| Min | 0 |
| Max | 32767 |
| Status Bits/OPC dependencies | Sequential command |

9.4.6.9 Questionable Calibration Register

Monitors calibration-related conditions within the instrument and summarizes them in bit 8 of the "Questionable Register" on page 2609. Three of the bits are summary bits from lower-level event registers.

| Bit | Condition | Operation |
|-----|--------------------------------|---|
| 2 | TG Alignment Failure | The Tracking Generator failed to align properly |
| 3 | RF Alignment Failure | The RF section (frontend) failed to align properly |
| 4 | IF Alignment Failure | The IF section failed to align properly |
| 5 | LO Alignment Failure | The LO (local oscillator) failed to align properly |
| 6 | ADC Alignment Failure | The ADC section failed to align properly |
| 7 | FM Demod Alignment Failure | The FM Demod section failed to align properly |
| 8 | Extended Align Needed Summary | Summary bit for "Questionable Calibration Extended Needed Register" on page 2625 |
| 9 | Extended Align Failure Summary | Summary bit for "Questionable Calibration Extended Failure Register" on page 2628 |
| 11 | Align Skipped Summary | Summary bit for "Questionable Calibration Skipped Register" on page 2631 |
| 12 | "Align Now RF" required | Go to the System, Alignments, Align Now menu and perform an "Align Now RF" |
| 14 | "Align Now" required | Go to the System, Alignments, Align Now menu and perform an "Align Now All" or an "Align Now Expired" |

Filter Registers

- "Questionable Calibration Condition" on page 2622
- "Questionable Calibration Enable" on page 2623
- "Questionable Calibration Event Query" on page 2623
- "Questionable Calibration Negative Transition" on page 2624
- "Questionable Calibration Positive Transition" on page 2624

Questionable Calibration Condition

Returns the decimal value of the sum of the bits in the Questionable Calibration Condition register.

NOTE

The data in this register is continuously updated and reflects the current conditions.

| | |
|------------------------------|---|
| Remote Command | :STATus:QUEStionable:CALibration:CONDition? |
| Example | :STAT:QUES:CAL:COND? |
| Preset | 0 |
| Status Bits/OPC dependencies | Sequential command |

Questionable Calibration Enable

Determines which bits in the "Questionable Calibration Condition" on page 2622 Register will set bits in the "Questionable Calibration Event Query" on page 2623 register, which also sets the Calibration Summary bit (bit 8) in the "Questionable Register" on page 2609.

The variable <integer> is the sum of the decimal values of the bits you want to enable.

| | |
|------------------------------|---|
| Remote Command | :STATus:QUEStionable:CALibration:ENABle <integer> :STATus:QUEStionable:CALibration:ENABle? |
| Example | :STAT:QUES:CAL:ENAB 16384 Can be used to query if an alignment is needed, if you have turned off the automatic alignment process |
| Min | 0 |
| Max | 32767 |
| Status Bits/OPC dependencies | Sequential command |

Questionable Calibration Event Query

Returns the decimal value of the sum of the bits in the Questionable Calibration Event register.

NOTE

The register requires that the associated PTRansition or NTRansition filters be set before a condition register bit can set a bit in the event register. The data in this register is latched until it is queried. Once queried, the register is cleared.

| | |
|------------------------------|---|
| Remote Command | :STATus:QUEStionable:CALibration[:EVENT]? |
| Example | :STAT:QUES:CAL? |
| Preset | 0 |
| Status Bits/OPC dependencies | Sequential command |

Questionable Calibration Negative Transition

Determines which bits in the "Questionable Calibration Condition" on page 2622 register will set the corresponding bit in the "Questionable Calibration Event Query" on page 2623 register when the condition register bit has a negative transition (1 to 0).

The variable `<integer>` is the sum of the decimal values of the bits that you want to enable.

| | |
|------------------------------|---|
| Remote Command | <code>:STATus:QUESTionable:CALibration:NTRansition <integer></code> <code>:STATus:QUESTionable:CALibration:NTRansition?</code> |
| Example | <code>:STAT:QUES:CAL:NTR 16384</code> "Align All Now Needed" being cleared will be reported to the Calibration Summary of the Status Questionable register |
| Preset | 0 |
| Min | 0 |
| Max | 32767 |
| Status Bits/OPC dependencies | Sequential command |

Questionable Calibration Positive Transition

Determines which bits in the "Questionable Calibration Condition" on page 2622 register will set the corresponding bit in the "Questionable Calibration Event Query" on page 2623 register when the condition register bit has a positive transition (0 to 1).

The variable `<integer>` is the sum of the decimal values of the bits that you want to enable.

| | |
|------------------------------|---|
| Remote Command | <code>:STATus:QUESTionable:CALibration:PTRansition <integer></code> <code>:STATus:QUESTionable:CALibration:PTRansition?</code> |
| Example | <code>:STAT:QUES:CAL:PTR 16384</code> "Align All Now Needed" being set will be reported to the Calibration Summary of the Status Questionable register |
| Preset | 32767 |
| Min | 0 |
| Max | 32767 |
| Status Bits/OPC dependencies | Sequential command |

9.4.6.10 Questionable Calibration Extended Needed Register

Monitors conditions that occur because a calibration or alignment is required to guarantee accurate measurements. It summarizes them in bit 8 of the "Questionable Calibration Register" on page 2621.

| Bit | Condition | Operation |
|-----|--|--|
| 1 | Align 9kHz-30MHz required | EMI receiver alignment required, 9kHz-30 MHz (conducted band) |
| 2 | Align 30MHz-1GHz required | EMI receiver alignment required, 30 MHz-1 GHz (radiated band) |
| 4 | Input Attenuation not calibrated | The input attenuator is uncalibrated |
| 5 | Align current frequency range required | Alignment for current set frequency range is needed. It is suggested to process Align Selected Freq Range for the frequency range in use |
| 8 | MPA Align required | The Multiport Adaptor must be calibrated (EXT only) |
| 11 | Characterize Preselector required | Go to the System, Alignments, Advanced menu and perform a "Characterize Preselector" |
| 12 | Characterize Noise Floor required | Go to the System, Alignments, Advanced menu and perform a "Characterize Noise Floor" |

Filter Registers

- "Questionable Calibration Extended Needed Event Query" on page 2627

- "Questionable Calibration Extended Needed Negative Transition" on page 2627
- "Questionable Calibration Extended Needed Positive Transition" on page 2627

Questionable Calibration Extended Needed Condition

Returns the decimal value of the sum of the bits in the Questionable Calibration Extended Needed Condition register.

NOTE

The data in this register is continuously updated and reflects the current conditions.

| | |
|------------------------------|---|
| Remote Command | :STATus:QUESTionable:CALibration:EXTended:NEEDed:CONDition? |
| Example | :STAT:QUES:CAL:EXT:NEED:COND? |
| Preset | 0 |
| Status Bits/OPC dependencies | Sequential command |

Questionable Calibration Extended Needed Enable

Determines which bits in the "Questionable Calibration Extended Needed Condition" on page 2626 will set bits in the "Questionable Calibration Extended Needed Event Query" on page 2627 register, which also sets bit 14 of the "Questionable Calibration Register" on page 2621.

The variable `<integer>` is the sum of the decimal values of the bits that you want to enable.

| | |
|------------------------------|---|
| Remote Command | :STATus:QUESTionable:CALibration:EXTended:NEEDed:ENABle <integer> :STATus:QUESTionable:CALibration:EXTended:NEEDed:ENABle? |
| Example | :STAT:QUES:CAL:EXT:NEED:ENAB 2 Can be used to query if an EMI conducted alignment is needed |
| Preset | 32767 |
| Min | 0 |
| Max | 32767 |
| Status Bits/OPC dependencies | Sequential command |

Questionable Calibration Extended Needed Event Query

Returns the decimal value of the sum of the bits in the Questionable Calibration Extended Needed Event register.

NOTE The register requires that the associated PTRansition or NTRansition filters be set before a condition register bit can set a bit in the event register. The data in this register is latched until it is queried. Once queried, the register is cleared.

| | |
|------------------------------|---|
| Remote Command | :STATus:QUESTionable:CALibration:EXTended:NEEDed[:EVENT]? |
| Example | :STAT:QUES:CAL:EXT:NEED? |
| Preset | 0 |
| Status Bits/OPC dependencies | Sequential command |

Questionable Calibration Extended Needed Negative Transition

Determines which bits in the "Questionable Calibration Extended Needed Condition" on page 2626 register will set the corresponding bit in the "Questionable Calibration Extended Needed Event Query" on page 2627 register when the condition register bit has a negative transition (1 to 0).

The variable <integer> is the sum of the decimal values of the bits that you want to enable.

| | |
|------------------------------|---|
| Remote Command | :STATus:QUESTionable:CALibration:EXTended:NEEDed:NTRansition <integer> :STATus:QUESTionable:CALibration:EXTended:NEEDed:NTRansition? |
| Example | :STAT:QUES:CAL:EXT:NEED:NTR 2 Conducted alignment required bit being cleared will be reported |
| Preset | 0 |
| Min | 0 |
| Max | 32767 |
| Status Bits/OPC dependencies | Sequential command |

Questionable Calibration Extended Needed Positive Transition

Determines which bits in the "Questionable Calibration Extended Needed Condition" on page 2626 register will set the corresponding bit in the "Questionable Calibration

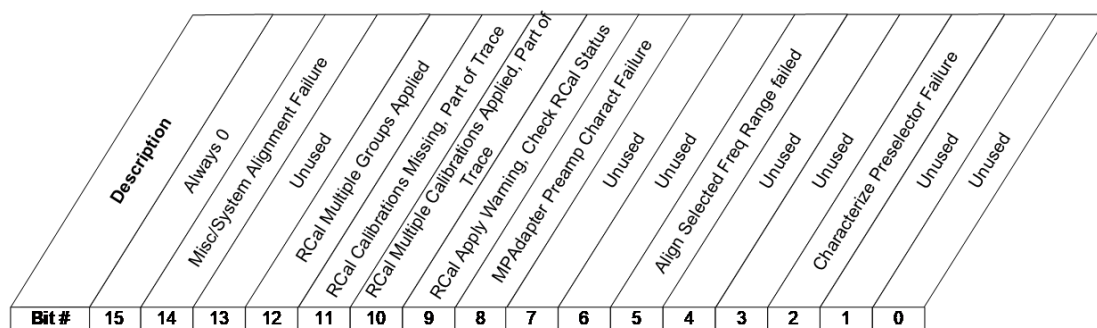

Extended Needed Event Query" on page 2627 register when the condition register bit has a positive transition (0 to 1).

The variable `<integer>` is the sum of the decimal values of the bits that you want to enable.

| | |
|------------------------------|---|
| Remote Command | <code>:STATus:QUESTIONable:CALibration:EXTended:NEEDED:PTRansition <integer></code> <code>:STATus:QUESTIONable:CALibration:EXTended:NEEDED:PTRansition?</code> |
| Example | <code>:STAT:QUES:CAL:EXT:NEED:PTR 2</code> Conducted alignment required bit being set will be reported |
| Preset | 32767 |
| Min | 0 |
| Max | 32767 |
| Status Bits/OPC dependencies | Sequential command |

9.4.6.11 Questionable Calibration Extended Failure Register

Monitors conditions that occur because a calibration or alignment has failed to complete properly. It summarizes them in bit 9 of the "Questionable Calibration Register" on page 2621.

STATus:QUESTIONable:CALibration:EXTended:FAILURE Register

| Bit | Condition | Operation |
|-----|---------------------------------------|--|
| 2 | Characterize Preselector Failure | The preselector characterization failed |
| 5 | Align Selected Freq Range failed | The alignment for selected frequency range failed |
| 8 | MPAdapter Preamp Charact Failure | The Multiport Adaptor must be calibrated (EXT only) |
| 9 | RCal Apply Warning, Check RCal Status | The calibration request sent to the RCal module failed |

| Bit | Condition | Operation |
|-----|---|--|
| 10 | RCal Multiple Calibrations Applied, Part of Trace | More than one calibration is being applied to part of the trace for current measurement |
| 11 | RCal Calibrations Missing, Part of Trace | The calibration being applied is not being applied to all of the trace for the current measurement |
| 12 | RCal Multiple Groups Applied | More than one calibrated rows are being applied to the current measurement |
| 14 | Misc/System Alignment Failure | Miscellaneous/System alignments have failed |

Questionable Calibration Extended Failure Condition

Returns the decimal value of the sum of the bits in the Questionable Calibration Extended Failure Condition register.

NOTE

The data in this register is continuously updated and reflects the current conditions.

| | |
|------------------------------|--|
| Remote Command | <code>:STATus:QESTionable:CALibration:EXTended:FAILure:CONDition?</code> |
| Example | <code>:STAT:QUES:CAL:EXT:FAIL:COND?</code> |
| Preset | 0 |
| Status Bits/OPC dependencies | Sequential command |

Questionable Calibration Extended Failure Enable

Determines which bits in the ["Questionable Calibration Extended Failure Condition" on page 2629](#) Register will set bits in the ["Questionable Calibration Extended Failure Event Query" on page 2630](#) register, which also sets bit 9 of the ["Questionable Calibration Register" on page 2621](#).

The variable `<integer>` is the sum of the decimal values of the bits that you want to enable.

| | |
|------------------------------|---|
| Remote Command | <code>:STATus:QUESTionable:CALibration:EXTended:FAILure:ENABle <integer></code> <code>:STATus:QUESTionable:CALibration:EXTended:FAILure:ENABle?</code> |
| Example | <code>:STAT:QUES:CAL:EXT:FAIL:ENAB 1</code> Can be used to query if an EMI conducted alignment failed |
| Preset | 32767 |
| Min | 0 |
| Max | 32767 |
| Status Bits/OPC dependencies | Sequential command |

Questionable Calibration Extended Failure Event Query

Returns the decimal value of the sum of the bits in the Questionable Calibration Extended Failure Event register.

NOTE

The register requires that the associated PTRansition or NTRansition filters be set before a condition register bit can set a bit in the event register. The data in this register is latched until it is queried. Once queried, the register is cleared.

| | |
|------------------------------|---|
| Remote Command | <code>:STATus:QUESTionable:CALibration:EXTended:FAILure[:EVENT]?</code> |
| Example | <code>:STAT:QUES:CAL:EXT:FAIL?</code> |
| Preset | 0 |
| Status Bits/OPC dependencies | Sequential command |

Questionable Calibration Extended Failure Negative Transition

Determines which bits in the "Questionable Calibration Extended Failure Condition" on page 2629 register will set the corresponding bit in the "Questionable Calibration Extended Failure Event Query" on page 2630 register when the condition register bit has a negative transition (1 to 0).

The variable `<integer>` is the sum of the decimal values of the bits that you want to enable.

| | |
|----------------|---|
| Remote Command | <code>:STATus:QUESTionable:CALibration:EXTended:FAILure:NTRansition <integer></code> <code>:STATus:QUESTionable:CALibration:EXTended:FAILure:NTRansition?</code> |
| Example | <code>:STAT:QUES:CAL:EXT:FAIL:NTR 1</code> |

| | |
|------------------------------|---|
| | Conducted alignment failed bit being cleared will be reported |
| Preset | 0 |
| Min | 0 |
| Max | 32767 |
| Status Bits/OPC dependencies | Sequential command |

Questionable Calibration Extended Failure Positive Transition

Determines which bits in the "Questionable Calibration Extended Failure Condition" on page 2629 register will set the corresponding bit in the "Questionable Calibration Extended Failure Event Query" on page 2630 register when the condition register bit has a positive transition (0 to 1).

The variable `<integer>` is the sum of the decimal values of the bits that you want to enable.

| | |
|------------------------------|---|
| Remote Command | <code>:STATus:QUESTionable:CALibration:EXTended:FAILure:PTRansition <integer></code> <code>:STATus:QUESTionable:CALibration:EXTended:FAILure:PTRansition?</code> |
| Example | <code>:STAT:QUES:CAL:EXT:FAIL:PTR 1</code> Conducted alignment failed bit being set will be reported |
| Preset | 32767 |
| Min | 0 |
| Max | 32767 |
| Status Bits/OPC dependencies | Sequential command |

9.4.6.12 Questionable Calibration Skipped Register

Monitors conditions that occur because a calibration or alignment has been skipped due to various settings or conditions. It summarizes them in bit 11 of the "Questionable Calibration Register" on page 2621.

| Bit | Condition | Operation |
|-----|------------------|---|
| 0 | Align RF skipped | During an alignment, the calibration of the RF section (frontend) of the instrument was not performed. This can be caused by an interfering user signal present at the RF Input See "Align Now" on page 1925, "Align Now All" on page 1927 |

Filter Registers

- "Questionable Calibration Skipped Condition" on page 2632

- "Questionable Calibration Skipped Event Query" on page 2633
- "Questionable Calibration Skipped Negative Transition" on page 2633
- "Questionable Calibration Skipped Positive Transition" on page 2634

Questionable Calibration Skipped Condition

Returns the decimal value of the sum of the bits in the Questionable Calibration Skipped Condition register.

NOTE The data in this register is continuously updated and reflects the current conditions.

Remote Command :STATus:QUESTIONable:CALibration:SKIPPed:CONDition?

Example :STAT:QUES:CAL:SKIP:COND?

Preset 0

Status Bits/OPC dependencies Sequential command

Questionable Calibration Skipped Enable

Determines which bits in the "Questionable Calibration Skipped Condition" on page 2632 Register will set bits in the "Questionable Calibration Skipped Event Query" on page 2633 register, which also sets bit 11 of the "Questionable Calibration Register" on page 2621.

The variable `<integer>` is the sum of the decimal values of the bits that you want to enable.

| | |
|------------------------------|--|
| Remote Command | <code>:STATus:QUESTIONable:CALibration:SKIPped:ENABle <integer></code> |
| | <code>:STATus:QUESTIONable:CALibration:SKIPped:ENABle?</code> |
| Example | <code>:STAT:QUES:CAL:SKIP:ENAB 1</code> Can be used to query if an RF alignment skipped condition is detected |
| Preset | 32767 |
| Min | 0 |
| Max | 32767 |
| Status Bits/OPC dependencies | Sequential command |

Questionable Calibration Skipped Event Query

Returns the decimal value of the sum of the bits in the Questionable Calibration Event register.

NOTE

The register requires that the associated PTRansition or NTRansition filters be set before a condition register bit can set a bit in the event register. The data in this register is latched until it is queried. Once queried, the register is cleared.

| | |
|------------------------------|--|
| Remote Command | <code>:STATus:QUESTIONable:CALibration:SKIPped[:EVENT]?</code> |
| Example | <code>:STAT:QUES:CAL:SKIP?</code> |
| Preset | 0 |
| Status Bits/OPC dependencies | Sequential command |

Questionable Calibration Skipped Negative Transition

Determines which bits in the "Questionable Calibration Skipped Condition" on page 2632 register will set the corresponding bit in the "Questionable Calibration Skipped

Event Query" on page 2633 register when the condition register bit has a negative transition (1 to 0).

The variable `<integer>` is the sum of the decimal values of the bits that you want to enable.

| | |
|------------------------------|---|
| Remote Command | <code>:STATus:QUESTIONable:CALibration:SKIPped:NTRansition <integer></code> <code>:STATus:QUESTIONable:CALibration:SKIPped:NTRansition?</code> |
| Example | <code>:STAT:QUES:CAL:SKIP:NTR 1</code> RF Align Skipped bit being cleared will be reported |
| Preset | 0 |
| Min | 0 |
| Max | 32767 |
| Status Bits/OPC dependencies | Sequential command |

Questionable Calibration Skipped Positive Transition

Determines which bits in the **"Questionable Calibration Skipped Condition" on page 2632** register will set the corresponding bit in the **"Questionable Calibration Skipped Event Query" on page 2633** register when the condition register bit has a positive transition (0 to 1).

The variable `<integer>` is the sum of the decimal values of the bits that you want to enable.

| | |
|------------------------------|---|
| Remote Command | <code>:STATus:QUESTIONable:CALibration:SKIPped:PTRansition <integer></code> <code>:STATus:QUESTIONable:CALibration:SKIPped:PTRansition?</code> |
| Example | <code>:STAT:QUES:CAL:SKIP:PTR 1</code> RF Align Skipped bit being set will be reported |
| Preset | 32767 |
| Min | 0 |
| Max | 32767 |
| Status Bits/OPC dependencies | Sequential command |

9.4.6.13 Questionable Integrity Register

Monitors measurement integrity-related conditions within the instrument and summarizes them in bit 9 of the **"Questionable Register" on page 2609**. Two of the bits are summary bits from lower-level event registers.

9 Programming the Instrument
 9.4 Status Register System & STATus Subsystem

| Bit | Condition | Operation |
|-----|----------------------|---|
| 0 | Signal Summary | The summary bit for the "Questionable Integrity Signal Register" on page 2638 |
| 1 | No Result | The current measurement is incompatible with a setting or combination of settings, such as the selected Input, Radio Standard, etc. |
| 2 | Output Summary | The summary bit for the "Questionable Integrity Output Register" on page 2641 |
| 3 | Uncalibrated Summary | The summary bit for the "Questionable Integrity Uncalibrated Register" on page 2644 |
| 4 | Input Overload | A signal overload condition exists |
| 5 | Over Range | The signal at the input for this measurement is too high. You should increase the attenuation or decrease the signal level |
| 6 | Under Range | The signal at the input for this measurement is too low. You should decrease the attenuation or increase the signal level |
| 7 | Insufficient Data | Signal or settings conditions did not allow enough data to be taken during an acquisition for a valid measurement |
| 8 | Meas Error | (not currently in use) |
| 9 | Memory Error | There is not enough memory to perform the desired operation |
| 10 | I/O Error | I/O settings are preventing communication with an instrument or peripheral |
| 11 | Trigger Error | Signal or settings conditions did not allow enough data to be taken during an acquisition for a valid measurement |
| 12 | Invalid data | The Invalid Data indicator (* in upper right of display) is on, indicating that onscreen data may be stale and not match the current settings |
| 13 | Settings Alert | Settings are not right for a valid measurement, but the instrument is nonetheless allowing a measurement to be taken |
| 14 | Setting Modified | Settings are not right for a valid measurement, and the instrument is using different settings than the ones you entered in order to take a measurement |

Filter Registers

- "Questionable Integrity Event Query" on page 2637
- "Questionable Integrity Negative Transition" on page 2637
- "Questionable Integrity Positive Transition" on page 2637

Questionable Integrity Condition

Returns the decimal value of the sum of the bits in the Questionable Integrity Condition register.

NOTE

The data in this register is continuously updated and reflects the current conditions.

| | |
|------------------------------|---|
| Remote Command | :STATus:QUESTionable:INTEgrity:CONDition? |
| Example | :STAT:QUES:INT:COND? |
| Preset | 0 |
| Status Bits/OPC dependencies | Sequential command |

Questionable Integrity Enable

Determines which bits in the "Questionable Integrity Condition" on page 2636 Register will set bits in the "Questionable Integrity Event Query" on page 2637 register, which also sets the Integrity Summary bit (bit 9) in the "Questionable Register" on page 2609.

The variable `<integer>` is the sum of the decimal values of the bits that you want to enable.

| | |
|------------------------------|---|
| Remote Command | :STATus:QUESTionable:INTEgrity:ENABle <integer> :STATus:QUESTionable:INTEgrity:ENABle? |
| Example | :STAT:QUES:INT:ENAB 8 Uncalibrated Summary will be reported to the Integrity Summary of the Status Questionable register |
| Preset | 32767 |
| Min | 0 |
| Max | 32767 |
| Status Bits/OPC dependencies | Sequential command |

Questionable Integrity Event Query

Returns the decimal value of the sum of the bits in the Questionable Integrity Event register.

NOTE

The register requires that the associated PTRansition or NTRansition filters be set before a condition register bit can set a bit in the event register. The data in this register is latched until it is queried. Once queried, the register is cleared.

| | |
|------------------------------|---|
| Remote Command | :STATus:QuesTionable:INTEgrity[:EVENT]? |
| Example | :STAT:QUES:INT? |
| Preset | 0 |
| Status Bits/OPC dependencies | Sequential command |

Questionable Integrity Negative Transition

Determines which bits in the "Questionable Integrity Condition" on page 2636 register will set the corresponding bit in the "Questionable Integrity Event Query" on page 2637 register when the condition register bit has a negative transition (1 to 0).

The variable <integer> is the sum of the decimal values of the bits that you want to enable.

| | |
|------------------------------|--|
| Remote Command | :STATus:QuesTionable:INTEgrity:NTRansition <integer> :STATus:QuesTionable:INTEgrity:NTRansition? |
| Example | :STAT:QUES:INT:NTR 8 Uncalibrated Summary being cleared will be reported to the Integrity Summary of the Status Questionable register |
| Preset | 0 |
| Min | 0 |
| Max | 32767 |
| Status Bits/OPC dependencies | Sequential command |

Questionable Integrity Positive Transition

Determines which bits in the "Questionable Integrity Condition" on page 2636 register will set the corresponding bit in the "Questionable Integrity Event Query" on page 2637 register when the condition register bit has a positive transition (0 to 1).

The variable `<integer>` is the sum of the decimal values of the bits that you want to enable.

| | |
|------------------------------|---|
| Remote Command | <code>:STATus:QUEStionable:INTEgrity:PTRansition <integer></code> <code>:STATus:QUEStionable:INTEgrity:PTRansition?</code> |
| Example | <code>:STAT:QUES:INT:PTR 8</code> Uncalibrated Summary being set will be reported to the Integrity Summary of the Status Questionable register |
| Preset | 32767 |
| Min | 0 |
| Max | 32767 |
| Status Bits/OPC dependencies | Sequential command |

9.4.6.14 Questionable Integrity Signal Register

Monitors conditions that occur because a measurement may not be able to return an accurate or valid result due to signal conditions. It summarizes them in bit 0 of the "Questionable Integrity Register" on page 2634.

| Bit | Condition | Operation |
|-----|---------------------------------|---|
| 2 | Burst not found | The instrument is expecting a bursted signal but such a signal cannot be detected because of inappropriate parameter settings or incorrect signal content |
| 3 | Timing Error | The instrument cannot establish appropriate timing from the signal |
| 4 | Carrier(s) incorrect or missing | The instrument cannot find the expected carrier(s) within the frequency ranges in which it is looking |
| 5 | Frequency out of range | One or more system or signal input frequencies are out of range |
| 6 | Sync error | The instrument cannot establish sync with the measured signal |
| 7 | Demod error | The instrument cannot demodulate the signal due to inappropriate |

| Bit | Condition | Operation |
|-----|------------------|--|
| | | signal or settings conditions |
| 8 | Signal Too Noisy | The instrument cannot measure the desired signal because it is too noisy |
| 9 | Slot Error | No valid signal slot found in captured data |

| | |
|------------------------------|---|
| | Oversweep (Meas Uncal) is reported to the Integrity Summary of the Status Questionable register |
| Preset | 32767 |
| Min | 0 |
| Max | 32767 |
| Status Bits/OPC dependencies | Sequential command |

Questionable Integrity Output Event Query

Returns the decimal value of the sum of the bits in the "Questionable Integrity Output Condition" on page 2642 register.

NOTE The register requires that the associated PTRansition or NTRansition filters be set before a condition register bit can set a bit in the event register. The data in this register is latched until it is queried. Once queried, the register is cleared.

| | |
|------------------------------|--|
| Remote Command | :STATus:QUESTionable:INTEgrity:OUTPut[:EVENT]? |
| Example | :STAT:QUES:INT:OUTP? |
| Preset | 0 |
| Status Bits/OPC dependencies | Sequential command |

Questionable Integrity Output Negative Transition

Determines which bits in the "Questionable Integrity Output Condition" on page 2642 register will set the corresponding bit in the "Questionable Integrity Output Event Query" on page 2643 register when the condition register bit has a negative transition (1 to 0).

The variable <integer> is the sum of the decimal values of the bits that you want to enable.

| | |
|------------------------------|---|
| Remote Command | :STATus:QUESTionable:INTEgrity:OUTPut:NTRansition <integer> :STATus:QUESTionable:INTEgrity:OUTPut:NTRansition? |
| Example | :STAT:QUES:INT:OUTP:NTR 1 |
| | Oversweep cleared is reported to the Integrity Summary of the Status Questionable register |
| Preset | 0 |
| Min | 0 |
| Max | 32767 |
| Status Bits/OPC dependencies | Sequential command |

Questionable Integrity Output Positive Transition

Determines which bits in the "Questionable Integrity Output Condition" on page 2642 register will set the corresponding bit in the "Questionable Integrity Output Event Query" on page 2643 register when the condition register bit has a positive transition (0 to 1).

The variable `<integer>` is the sum of the decimal values of the bits that you want to enable.

| | |
|------------------------------|---|
| Remote Command | <code>:STATus:QUESTionable:INTEgrity:OUTPut:PTRansition <integer></code> <code>:STATus:QUESTionable:INTEgrity:OUTPut:PTRansition?</code> |
| Example | <code>:STAT:QUES:INT:OUTP:PTR 1</code> Oversweep set is reported to the Integrity Summary of the Status Questionable register |
| Preset | 32767 |
| Min | 0 |
| Max | 32767 |
| Status Bits/OPC dependencies | Sequential command |

9.4.6.16 Questionable Integrity Uncalibrated Register

Monitors conditions that occur because a measurement may not be able to return an accurate or valid result due to a mismatch between instrument settings and the signal, placing the instrument in an uncalibrated state for that signal. It summarizes them in bit 3 of the "Questionable Integrity Register" on page 2634.

| Bit | Condition | Operation |
|-----|--------------|---|
| 0 | Meas Uncal | A Meas Uncal warning is being displayed; generally this means the sweep time must be reduced or the RBW increased |
| 1 | Signal ID on | In external mixing, the Sig ID function is on, which will impact the |

| Bit | Condition | Operation |
|-----|--|--|
| | | trace results |
| 2 | No Long Code Phase | The long code phase that identifies an access channel cannot be found (WCDMA) |
| 3 | AC coupled: Accy unspec'd <10 MHz | The instrument is AC coupled but is operating below 10 MHz, where the blocking capacitor will impact measurement accuracy |
| 4 | User cal issue | In noise figure measurements, the User Cal has not been performed or has been invalidated |
| 5 | Calibration issue | In noise figure measurements, one or more calibration or measurement frequency point exceeds the currently loaded Cal or Meas ENR Table frequency ranges |
| 6 | Source uncal | While using a Tracking Source, settings are putting it into an uncalibrated operational state |
| 7 | Preamp accuracy unspecified below XX MHz | The preamp is being used but is operating below frequencies for which its accuracy is specified |

Questionable Integrity Uncalibrated Condition

Returns the decimal value of the sum of the bits in the Questionable Integrity Uncalibrated Condition register.

NOTE

The data in this register is continuously updated and reflects the current conditions.

| | |
|------------------------------|---|
| Remote Command | <code>:STATus:QUESTionable:INTegrity:UNCalibrated:CONDition?</code> |
| Example | <code>:STAT:QUES:INT:UNC:COND?</code> |
| Preset | 0 |
| Status Bits/OPC dependencies | Sequential command |

Questionable Integrity Uncalibrated Enable

Determines which bits in the "Questionable Integrity Uncalibrated Condition" on page 2645 Register will set bits in the "Questionable Integrity Uncalibrated Event Query" on page 2646 register, which also sets the Data Uncalibrated Summary bit (bit 3) in the "Questionable Integrity Register" on page 2634.

The variable `<integer>` is the sum of the decimal values of the bits that you want to enable.

| | |
|------------------------------|---|
| Remote Command | <code>:STATus:QUESTionable:INTEgrity:UNCalibrated:ENABle</code> |
| Example | <code>:STAT:QUES:INT:UNC:ENAB 1</code> Oversweep (Meas Uncal) is reported to the Integrity Summary of the Status Questionable register |
| Preset | 32767 |
| Min | 0 |
| Max | 32767 |
| Status Bits/OPC dependencies | Sequential command |

Questionable Integrity Uncalibrated Event Query

Returns the decimal value of the sum of the bits in the "Questionable Integrity Uncalibrated Condition" on page 2645 register.

NOTE

The register requires that the associated PTRansition or NTRansition filters be set before a condition register bit can set a bit in the event register. The data in this register is latched until it is queried. Once queried, the register is cleared.

| | |
|------------------------------|---|
| Remote Command | <code>:STATus:QUESTionable:INTEgrity:UNCalibrated[:EVENT]?</code> |
| Example | <code>:STAT:QUES:INT:UNC?</code> |
| Preset | 0 |
| Status Bits/OPC dependencies | Sequential command |

Questionable Integrity Uncalibrated Negative Transition

Determines which bits in the "Questionable Integrity Uncalibrated Condition" on page 2645 register will set the corresponding bit in the "Questionable Integrity

"Uncalibrated Event Query" on page 2646 register when the condition register bit has a negative transition (1 to 0).

The variable `<integer>` is the sum of the decimal values of the bits that you want to enable.

| | |
|------------------------------|---|
| Remote Command | <code>:STATus:QUESTionable:INTEgrity:UNCalibrated:NTRansition <integer></code> <code>:STATus:QUESTionable:INTEgrity:UNCalibrated:NTRansition?</code> |
| Example | <code>:STAT:QUES:INT:UNC:NTR 1</code> Oversweep cleared is reported to the Integrity Summary of the Status Questionable register |
| Preset | 0 |
| Min | 0 |
| Max | 32767 |
| Status Bits/OPC dependencies | Sequential command |

Questionable Integrity Uncalibrated Positive Transition

Determines which bits in the "Questionable Integrity Uncalibrated Condition" on page 2645 register will set the corresponding bit in the "Questionable Integrity Uncalibrated Event Query" on page 2646 register when the condition register bit has a positive transition (0 to 1).

The variable `<integer>` is the sum of the decimal values of the bits that you want to enable.

| | |
|------------------------------|---|
| Remote Command | <code>:STATus:QUESTionable:INTEgrity:UNCalibrated:PTRansition <integer></code> <code>:STATus:QUESTionable:INTEgrity:UNCalibrated:PTRansition?</code> |
| Example | <code>:STAT:QUES:INT:UNC:PTR 1</code> Oversweep set is reported to the Integrity Summary of the Status Questionable register |
| Preset | 32767 |
| Min | 0 |
| Max | 32767 |
| Status Bits/OPC dependencies | Sequential command |

10 Hardware-Accelerated Fast Power Measurement (Remote Command Only)

The **Fast Power** option (FP2) enables very fast channel power measurements for instruments with the prerequisite hardware (DP2 and/or B40). It accomplishes this by performing real-time overlapped FFTs at the hardware layer, using software for basic post-processing before returning the result. The upshot of this approach is improved throughput for user applications that require many sequential power measurements.

The analysis bandwidth of FP2 may be limited by the licenses in the instrument.

NOTE

FP2 is remote-only, which means the instrument does not switch to any particular Mode or measurement. FP2 commands can be sent while another application is in use on the front panel.

Each Fast Power measurement can be predefined using an array index, and up to 1000 measurements can be stored. In the following documentation, instances of [1,2,...,999] can be substituted with a particular measurement index, for example, `:CALC:FPOW:POW1?`, `:CALC:FPOW:POW2?`, `:CALC:FPOW:POW134?`. In this way, power measurements can be defined one time in a batch, and then executed multiple times without having to redefine them, similar to “list mode” on other measurements.

In addition to basic channel power measurements, there are several other measurement “functions” for each channel, including peak power, peak frequency, and power spectral density.

10.1 Reset Fast Power Measurement (Remote Command Only)

Resets the measurement configuration to the defaults.

| | |
|----------------|---|
| Remote Command | <code>:CALCulate:FPOWer:POWer[1,2,...,999]:RESet</code> |
|----------------|---|

| | |
|---------|----------------------------------|
| Example | <code>:CALC:FPOW:POW1:RES</code> |
|---------|----------------------------------|

| | |
|-------|------------------------|
| Notes | Option FP2 is required |
|-------|------------------------|

10.2 Reset Fast Power Measurement (Remote Command Only)

Resets the measurement configuration to the defaults.

| | |
|----------------|---|
| Remote Command | <code>:CALCulate:FPOW:POW[1,2,...,999]:RESet</code> |
| Example | <code>:CALC:FPOW:POW1:RES</code> |
| Notes | Option FP2 is required |

10.2.1 Acquisition Time

| | |
|---------|--|
| Example | <code>:CALC:FPOW:POW1:DEF "AcquisitionTime=0.002"</code> |
| Notes | Sets the time in which the entire spectrum is measured. An increase in the acquisition time yields an improvement in measurement repeatability |
| Preset | 0.001 s |
| Range | 0 s to 1 s |

10.2.2 Center Frequency

| | |
|---------|--|
| Example | <code>:CALC:FPOW:POW1:DEF "CenterFrequency=2e9"</code> |
| Notes | Sets the frequency in which the measurement is centered around. "Channel Offset Frequency Array" on page 2658 is calculated relative to the center frequency |
| Preset | 1 GHz |
| Range | 0 Hz to maximum instrument frequency |

10.2.3 DC Coupled

| | | | | | |
|--------------------|--|-------------------|------------|--------------------|------------|
| Example | <code>:CALC:FPOW:POW1:DEF "DCCoupled=True"</code> | | | | |
| Notes | Lets you specify whether the DC blocking capacitor is utilized. Set to <code>True</code> when measuring frequencies below 10 MHz | | | | |
| Preset | <code>False</code> | | | | |
| Range | <table border="0"> <tr> <td><code>True</code></td> <td>DC Coupled</td> </tr> <tr> <td><code>False</code></td> <td>AC Coupled</td> </tr> </table> | <code>True</code> | DC Coupled | <code>False</code> | AC Coupled |
| <code>True</code> | DC Coupled | | | | |
| <code>False</code> | AC Coupled | | | | |

10.2.4 Detector Type

| | |
|---------|--|
| Example | <code>:CALC:FPOW:POW1:DEF "DetectorType=Peak"</code> |
| Notes | Option FP2 is required Lets you specify whether an RMS average or peak value is used during the measurement |
| Preset | <code>RmsAverage</code> |
| Range | <code>RmsAverage, Peak</code> |

10.2.5 Do Noise Correction

| | |
|---------|--|
| Example | <code>:CALC:FPOW:POW1:DEF "DoNoiseCorrection=True"</code> |
| Notes | When noise correction is enabled, the linear noise power contributed by the instrument is subtracted from all measurements. This effectively lowers the noise floor of the instrument When noise correction is enabled, the first measurement for a given set of input parameters will take extra time. This is because the instrument takes an extra acquisition with the RF input disconnected from the instrument's front end to measure the noise of just the instrument. The measured noise floor is stored in a cache so the noise acquisition will occur only once for the same state settings. In other words, if noise correction was turned on and the instrument made an acquisition at frequency A, then frequency B, and back again to frequency A, the hidden initial noise floor acquisition would only occur for the first acquisition at frequency A and the cached noise floor would be used the second time frequency A was measured |
| Preset | <code>False</code> |
| Range | <code>True</code> Enable noise correction <code>False</code> Disable noise correction |

10.2.6 Do Spur Suppression

| | |
|---------|---|
| Example | <code>:CALC:FPOW:POW1:DEF "DoSpurSuppression=True"</code> |
| Notes | When measuring very low-level signals, or when large out-of-band inputs are input into the instrument, sometimes unwanted spurs and residuals can appear in the measured spectrum. Spur suppression is a method to help minimize the levels of these internally generated spurs and residuals When spur suppression is enabled, the instrument will automatically take two acquisitions using two different internal analog LO frequencies. The FFT spectrums from both acquisitions are combined by taking the minimum power between both traces on a per FFT bin basis. External signals will have the same amplitude for both traces and therefore will return the expected amplitudes. However, low level spurs and residuals generated internally to the instrument tend to move to different FFT bins depending on the internal analog LO frequency used, and therefore tend to be suppressed using this spur suppression method |

| | | |
|--------|--|--------------------------|
| | Because two acquisitions, rather than a single acquisition, are made when spur suppression is enabled, the measurement time will always be slower when spur suppression is enabled | |
| Preset | False | |
| Range | True | Enable spur suppression |
| | False | Disable spur suppression |

10.2.7 Electronic Attenuator Bypass

| | | |
|---------|--|------------------------------|
| Example | :CALC:FPOW:POW1:DEF "ElecAttBypass =False" | |
| Notes | Lets you either utilize or bypass the electronic attenuator. The electronic attenuator is only available for frequencies up to 3.6 GHz. Set to True when using frequencies above 3.6 GHz. Set to False when using the preamp | |
| Preset | True | |
| Range | True | Bypass electronic attenuator |
| | False | Use electronic attenuator |

10.2.8 Electronic Attenuation

| | | |
|---------|---|--|
| Example | :CALC:FPOW:POW1:DEF "ElecAttenuation=10" | |
| Notes | Option EA3 is required The electronic attenuation value parameter sets the amount of electrical attenuation from 0 to 24 dB (1 dB steps) Set ElecAttBypass = False to make sure the electronic attenuator path is enabled | |
| Preset | 0 dB | |
| Range | 0 – 24 dB (1 dB steps) | |

10.2.9 External Reference Frequency

| | | |
|---------|--|--|
| Example | :CALC:FPOW:POW1:DEF "ExternalReferenceFrequency=10" | |
| Notes | This is the user-specified frequency of the external reference. Used when "Frequency Reference Source" on page 2653 is set to ExternalFrequencyReference, or AutoExternalFrequencyReference when the external source is present. Unused if FrequencyReferenceSource is set to InternalFrequencyReference | |
| Preset | 10 MHz | |

10.2.10 Frequency Reference Source

| | |
|---------|--|
| Example | <code>:CALC:FPOW:POW1:DEF "FrequencyReferenceSource= InternalFrequencyReference"</code> |
| Notes | Specifies which frequency reference source should be used for this request: <ul style="list-style-type: none"> - If <code>ExternalFrequencyReference</code> is selected and no external reference is present, the frequency reference unlocks but the data acquisition will continue - If <code>AutoExternalFrequencyReference</code> is selected, the hardware senses whether an external source is present before starting the data acquisition. If no external source is present then the internal source is selected, and the data acquisition will continue |
| Preset | <code>InternalFrequencyReference</code> |
| Range | <code>InternalFrequencyReference, ExternalFrequencyReference, AutoExternalFrequencyReference</code> |

10.2.11 IF Gain

| | |
|---------|---|
| Example | <code>:CALC:FPOW:POW1:DEF "IFGain=10"</code> |
| Notes | Lets you specify the gain at the IF stage anywhere from -6 to 16 dB (1 dB steps). This is an advanced feature; for most cases this should remain at its default value of 0 dB |
| Preset | 0 dB |
| Range | -6 – 16 dB (1 dB steps) |

10.2.12 IF Type

| | |
|---------|---|
| Example | <code>:CALC:FPOW:POW1:DEF "IFType=B25M"</code> |
| Notes | Lets you select between different IF paths. For example, if the signal is less than 25 MHz wide, then you can select the B25M path to take advantage of additional filtering on this analog IF path |
| Preset | <code>B40M</code> |
| Range | <code>B10M, B25M, B40M</code> |

10.2.13 Include Power Spectrum

| | |
|---------|---|
| Example | <code>:CALC:FPOW:POW1:DEF "IncludePowerSpectrum=True"</code> |
| Notes | Lets you read data on the entire spectrum for diagnostic purposes. It is not recommended for production use For details of the binary format of the response, see "Diagnostic Binary Read Fast Power Measurement (Remote Command Only)" on page 2666 |

| | | |
|--------|--------------------|--|
| Preset | <code>False</code> | |
| Range | <code>True</code> | Returns both channel power and full power spectrum |
| | <code>False</code> | Returns only channel power |

10.2.14 Mechanical Attenuation

| | | |
|---------|---|--|
| Example | <code>:CALC:FPOW:POW1:DEF "MechAttenuation=10"</code> | |
| Notes | Sets the amount of mechanical attenuation anywhere from 0 to 70 dB (2 dB steps) | |
| Preset | 0 dB | |
| Range | 0 – 70 dB (2 dB steps) | |

10.2.15 Preamp Mode

| | | |
|---------|---|--|
| Example | <code>:CALC:FPOW:POW1:DEF "PreAmpMode=Low"</code> | |
| Notes | <p>The license for the appropriate preamp is required</p> <p>Specifies whether the preamps are being utilized. <code>Low</code> allows any preamps up to 3.6 GHz, and <code>Full</code> allows all licensed preamps. Set <code>ElecAttBypass = True</code> to utilize any preamps (see "Electronic Attenuator Bypass" on page 2652)</p> | |
| Preset | <code>Off</code> | |
| Range | <code>Off, Low, Full</code> | |

10.2.16 Resolution Bandwidth Mode

| | | |
|---------|--|--|
| Example | <code>:CALC:FPOW:POW1:DEF "PreAmpMode=Low"</code> | |
| Notes | <p>Lets you specify whether the RBW filter is automatically or manually set. The <code>BestSpeed</code> value minimizes measurement time, while the <code>Narrowest</code> value minimizes RBW size (minimum of two FFT bins per RBW)</p> <p>To manually specify an RBW, set this parameter to <code>Explicit</code>, and set "Resolution Bandwidth" on page 2655 to the desired value</p> | |
| Preset | <code>BestSpeed</code> | |
| Range | <code>BestSpeed, Narrowest, Explicit</code> | |

10.2.17 Resolution Bandwidth

| | |
|---------|--|
| Example | <code>:CALC:FPOW:POW1:DEF "ResolutionBW=25e3"</code> |
| Notes | Sets the 3-dB bandwidth of the RBW filter. "Resolution Bandwidth Mode" on page 2654 must be set to Explicit to manually set the RBW |
| Preset | 0 Hz |

10.2.18 Trigger Delay

| | |
|---------|--|
| Example | <code>:CALC:FPOW:POW1:DEF "TriggerDelay=0.025"</code> |
| Notes | Sets the time after an external trigger is detected until the measurement is performed |
| Preset | 0 s |
| Range | 0 – 1 s |

10.2.19 Trigger Level

| | |
|---------|---|
| Example | <code>:CALC:FPOW:POW1:DEF "TriggerLevel=2"</code> |
| Notes | Sets the voltage value at which an external trigger is detected |
| Preset | 1.2 V |
| Range | -5 to 5 V |

10.2.20 Trigger Slope

| | |
|---------|---|
| Example | <code>:CALC:FPOW:POW1:DEF "TriggerSlope=Negative"</code> |
| Notes | Specifies the direction of the edge trigger voltage for detection |
| Preset | Positive |
| Range | Positive, Negative |

10.2.21 Trigger Source

| | |
|---------|---|
| Example | <code>:CALC:FPOW:POW1:DEF "TriggerSource=Ext1"</code> |
| Notes | Lets you select whether the measurement triggers freely, or is controlled by an external input Ext1 and Ext2 correspond to Trigger 1 In and Trigger 2 In, respectively |
| Preset | Free |
| Range | Free, Ext1, Ext2 |

10.2.22 Trigger Timeout

| | |
|---------|---|
| Example | <code>:CALC:FPOW:POW1:DEF "TriggerTimeout=0.1"</code> |
| Notes | Sets the time in which the instrument will wait for a trigger before automatically performing the measurement |
| Preset | 1 s |
| Range | 0 – 1 s |

10.2.23 Signal Input

| | |
|---------|--|
| Example | <code>:CALC:FPOW:POW1:DEF "SignalInput=Fp50MHzCW"</code> |
| Notes | Lets you select between using the main RF input or the internal instrument reference CW signal of 50 MHz |
| Preset | <code>FpMainRf</code> |
| Range | <code>FpMainRf, Fp50MHzCW</code> |

10.2.24 Use Preselector

| | | | | | |
|--------------------|--|-------------------|-------------------------------|--------------------|----------------------|
| Example | <code>:CALC:FPOW:POW1:DEF "UsePreSelector=True"</code> | | | | |
| Notes | Lets you either utilize or bypass the front-end tunable filter at frequencies above 3.6 GHz. For frequencies below 3.6 GHz, the preselector is automatically bypassed, so you do not need to set this parameter to <code>False</code> in those cases | | | | |
| Preset | <code>False</code> | | | | |
| Range | <table border="0"> <tr> <td><code>True</code></td> <td>Use preselector above 3.6 GHz</td> </tr> <tr> <td><code>False</code></td> <td>Preselector bypassed</td> </tr> </table> | <code>True</code> | Use preselector above 3.6 GHz | <code>False</code> | Preselector bypassed |
| <code>True</code> | Use preselector above 3.6 GHz | | | | |
| <code>False</code> | Preselector bypassed | | | | |

10.2.25 Channel Bandwidth Array

| | |
|---------|---|
| Example | <code>:CALC:FPOW:POW1:DEF "Bandwidth=[3.84e6, 5e6, 3.84e6]"</code> |
| Notes | Defines the bandwidth of each channel that will be measured All array parameters should have the same number of elements. Alternatively, if all the elements are the same value, a single number with no square brackets can be used to define the parameter |
| Preset | <code>[1e6]</code> |
| Range | 0 to 40 MHz |

10.2.26 Channel Filter Type Array

| | |
|---------|--|
| Example | <code>:CALC:FPOW:POW1:DEF "FilterType=[RRC, IBW, RRC]"</code> |
| Notes | Lets you select either an integration bandwidth (IBW) filter, or a root-raised-cosine (RRC) filter. The integration bandwidth filter weighs all frequencies within the bandwidth equally. The root-raised-cosine filter has an associated shape parameter, defined by the FilterAlpha parameter All array parameters should have the same number of elements. Alternatively, if all the elements are the same value, a single value with no square brackets can be used to define the parameter |
| Preset | <code>[IBW]</code> |
| Range | <code>IBW, RRC</code> |

10.2.27 Channel Filter Alpha Array

| | |
|---------|--|
| Example | <code>:CALC:FPOW:POW1:DEF "FilterAlpha=[0.5, 0.0, 0.5]"</code> |
| Notes | Lets you adjust the alpha value associated with the root-raised-cosine (RRC) filter type. Set <code>FilterType</code> to <code>RRC</code> to utilize this parameter All array parameters should have the same number of elements. Alternatively, if all the elements are the same value, a single number with no square brackets can be used to define the parameter |
| Preset | <code>[0.22]</code> |
| Range | <code>0.0 - 1.0</code> |

10.2.28 Channel Measurement Function Array

| | |
|---------|--|
| Example | <code>:CALC:FPOW:POW1:DEF "Function=[BandPower, PeakPower, BandPower]"</code> |
| Notes | Defines what measurement is being made for each individually-specified channel. For details, see "Parameter Options" on page 2657 All array parameters should have the same number of elements Alternatively, if all the elements are the same value, a single value with no square brackets can be used to define the parameter |
| Preset | <code>BandPower</code> |
| Range | <code>BandPower, BandDensity, PeakPower, PeakFrequency, XdBBandwidth, OccupiedBandwidth</code> |

Parameter Options

| Option | Description | Unit |
|------------------------|---|------|
| <code>BandPower</code> | Total power within the specified bandwidth of the | dBm |

| Option | Description | Unit |
|--------------------------|---|--------|
| | channel | |
| BandDensity | Total power density within the specified bandwidth of the channel | dBm/Hz |
| PeakPower | The peak power value within the specified bandwidth of the channel | dBm |
| PeakFrequency | The frequency that corresponds to the peak power value within the specified bandwidth of the channel. This frequency is relative to the center frequency | Hz |
| XdBBandwidth | The half power (-3.01 dB) bandwidth of the highest amplitude signal that resides within the channel dB is configurable using " Channel x-dB Bandwidth Array " on page 2659 | Hz |
| OccupiedBandwidth | The bandwidth at which 99% of the total power resides within the channel Percentage is configurable using " Channel Occupied Bandwidth Percent Array " on page 2658 | Hz |

10.2.29 Channel Offset Frequency Array

| | |
|---------|---|
| Example | <code>:CALC:FPOW:POW1:DEF "OffsetFrequency=[-5e6, 0, 5e6]"</code> |
| Notes | Defines the difference between the center frequency to the center frequency of each channel All array parameters should have the same number of elements |
| Preset | [0] |
| Range | 0 to 20 MHz |

10.2.30 Channel Occupied Bandwidth Percent Array

| | |
|---------|--|
| Example | <code>:CALC:FPOW:POW1:DEF "OccupiedBandwidthPercent =[0.95, 0.95, 0.95]"</code> |
| Notes | Only applies to channels whose " Channel Measurement Function Array " on page 2657 is set to OccupiedBandwidth . The occupied bandwidth percent parameter specifies the percent of total power in these channels. The valid range for this parameter is 0.0 to 1.0, where 1.0 represents 100%. The default for this parameter is 0.99, which will return the bandwidth that contains 99% of the total channel power |
| Preset | [0.99] |
| Range | 0 – 1.0 |

- 10 Hardware-Accelerated Fast Power Measurement (Remote Command Only)
- 10.2 Reset Fast Power Measurement (Remote Command Only)

10.2.31 Channel x-dB Bandwidth Array

| | |
|---------|---|
| Example | <code>:CALC:FPOW:POW1:DEF " XdBBandwidth =[-6.02, -3.01, -1.0]"</code> |
| Notes | Only applies to channels whose "Channel Measurement Function Array" on page 2657 is set to <code>XdBBandwidth</code> . The X dB bandwidth parameter is used to specify the power relative to the peak channel power over which the bandwidth is calculated. The parameter value must be a negative number |
| Preset | <code>[-3.01]</code> |
| Range | -200 to 0 dB |

10.3 Define Fast Power Measurement Query (Remote Command Only)

Retrieves a list of all defined parameters in an ASCII string format

The following is an example of returned results:

```
"DCCoupled=False,ElecAttBypass=True,ElecAttenuation=0,IFGain=0,MechAttenuation=0,PreAmpMode=Off,PreSelectorOffset=0,UsePreSelector=False,ExternalReferenceFrequency=10000000,FrequencyReferenceSource=AutoExternalFrequencyReference,IFType=B40M,LOMode=SLW,SignalInput=FpMainRf,AcquisitionTime=0.001,CenterFrequency=100000000,ResolutionBW=0,ResolutionBWMode=BestSpeed,DetectorType=RmsAverage,Bandwidth=[1000000],OffsetFrequency=[0],Function=[BandPower],FilterType=[IBW],FilterAlpha=[0.22],OccupiedBandwidthPercent=[0.99],XdBBandwidth=[3.01],DoNoiseCorrection=False,DoSpurSuppression=False,MeasurementMethod=HardwareFFT,IncludePowerSpectrum=False,TriggerDelay=0,TriggerLevel=1.2,TriggerSlope=Positive,TriggerSource=Free,TriggerTimeout=1,Trigger1Output=Off,Trigger1OutputPolarity=Positive,Trigger2Output=Off,Trigger2OutputPolarity=Positive"
```

| | |
|----------------|---|
| Remote Command | :CALCulate:FPOWer:POWer[1,2,...,999]:DEFine? |
| Example | :CALC:FPOW:POW1:DEF? |
| Notes | Retrieves a list of all defined parameters in an ASCII format |

10.4 Configure Fast Power Measurement (Remote Command Only)

Begins hardware setup and returns immediately, with no acquisition made. This can be used in parallel with other hardware operations to effectively hide the hardware setup time.

| | |
|----------------|---|
| Remote Command | <code>:CALCulate:FPOWer:POWer[1,2,...,999]:CONFigure</code> |
| Example | <code>:CALC:FPOW:POW1:CONF</code> |
| Notes | Option FP2 is required |

10.5 Initiate Fast Power Measurement (Remote Command Only)

Begins an acquisition and returns immediately. The results of the measurement can be retrieved using `:FETCh`.

| | |
|----------------|--|
| Remote Command | <code>:CALCulate:FPOWer:POWer[1,2,...,999]:INITiate</code> |
| Example | <code>:CALC:FPOW:POW1:INIT</code> |
| Notes | Option FP2 is required |

10.6 Fetch Fast Power Measurement (Remote Command Only)

Used to retrieve the results of an acquisition initiated by `:INIT`. The returned results are in *ASCII string* format. The string begins and ends with quotation marks.

| | |
|----------------|--|
| Remote Command | <code>:CALCulate:FPOWer:POWer[1,2,...,999]:FETCh?</code> |
| Example | <code>:CALC:FPOW:POW1:FETC?</code> |
| Notes | <p>Option FP2 is required</p> <p>Returns m comma-separated ASCII values, where m corresponds to the number of bandwidths defined</p> <ol style="list-style-type: none">1. Declared function return in the 1st specified channel2. Declared function return in the 2nd specified channel <p>...</p> <ol style="list-style-type: none">m. Declared function return in the last specified channel <p>The <code>INIT</code> and <code>FETC?</code> command sequence has the same effect as a single <code>CALC:FPOW:POW[n]?</code> query. Units of the returned values depend on "Channel Measurement Function Array" on page 2657 for each channel</p> |

10.7 Execute Fast Power Measurement (Remote Command Only)

Shorthand for `:INIT` immediately followed by `:FETC?`. The returned results are in *ASCII string* format. The string begins and ends with quotation marks.

| | |
|----------------|--|
| Remote Command | <code>:CALCulate:FPOWer:POWer[1,2,...,999]?</code> |
| Example | <code>:CALC:FPOW:POW1?</code> |
| Notes | Option FP2 is required For return format, see notes for "Fetch Fast Power Measurement (Remote Command Only)" on page 2663 |

10.8 Binary Read Fast Power Measurement (Remote Command Only)

Shorthand for `:INIT` immediately followed by `:FETC?`. The returned results are in *binary format*.

| | |
|----------------|--|
| Remote Command | <code>:CALCulate:FPOWer:POWer[1,2,...,999]:READ?</code> <code>:CALCulate:FPOWer:POWer[1,2,...,999]:READ1?</code> |
| Example | <code>:CALC:FPOW:POW1:READ?</code> <code>:CALC:FPOW:POW1:READ1?</code> |
| Notes | Option FP2 is required Returns m 4-byte floating point binary values (Little-Endian), where m corresponds to the number of bandwidths defined |

10.9 Diagnostic Binary Read Fast Power Measurement (Remote Command Only)

Shorthand for `:INIT` immediately followed by `:FETC?`. The returned results are in *binary format*. This command is used primarily for diagnostic purposes, to test for ADC overloads and to visibly inspect the spectrum.

| | |
|----------------|--|
| Remote Command | <code>:CALCulate:FPOwer:POWer[1,2,...,999]:READ2?</code> |
| Example | <code>:CALC:FPOW:POW1:READ2?</code> |
| Notes | <p>Option FP2 is required</p> <p>Note that Spectrum data is only returned if <code>IncludePowerSpectrum</code> is set to <code>True</code> (see "Include Power Spectrum" on page 2653). If <code>IncludePowerSpectrum</code> is <code>False</code>, the number of spectrum points is zero (0)</p> <p>Units of the returned values are dependent on the <code>Function</code> parameter per channel (e.g. dBm for <code>BandPower</code>, Hz for <code>PeakFrequency</code>)</p> <p>Returns binary data (Little-Endian) that contains information on m amount of channels, along with ADC over range and full spectrum data</p> <p>The following is the binary format of the response</p> <p>Bandwidth Return Value</p> <ol style="list-style-type: none"> 1. Number of channels specified, m [4-byte int] 2. Declared function result for the 1st specified channel [4-byte float] 3. Declared function result for the 2nd specified channel [4-byte float] ... (m + 1). Declared function result for the last (mth) specified channel [4-byte float] <p>ADC Over Range</p> <ol style="list-style-type: none"> 1. ADC over-range occurred (1: true, 0: false) [2 byte short] <p>Spectrum Data</p> <ol style="list-style-type: none"> 1. Number of points in the spectrum data, k [4-byte int] 2. Start frequency of spectrum data (Hz) [8-byte double] 3. Step frequency of spectrum data (Hz) [8-byte double] 4. FFT bin at 1st point (dBm) [4-byte float] 5. FFT bin at 2nd point (dBm) [4-byte float] ... (k + 3). FFT bin at last (kth) point (dBm) [4-byte float] |
